ADDITIONS AND CORRECTIONS

- P. 13^b, l. 5, read: Nr. 24 and 31, instead of Nov. 24 and 31.
 P. 18^a, l. 32, read: 1894, Nr. 1, instead of Nov. 1, 1894.
 P. 38^b, l. 4 from beneath: the words "The *Bustān*... and" are to be cancelled.
 P. 74^b, l. 23, instead of 1385, to be read 1386.
 P. 88^b, l. 30, instead of Nov. 2, to be read: Sept. 3.
 P. 109^b, l. 3, read: 637, instead of 620 (Feb. 2, 1222).
 l. 49, 64, instead of Nāblūs, to be read Nāblus.
 P. 112^a, l. 46, 69, instead of v., to be read iv.
 P. 203^a, l. 23, 26, 37, instead of Kaifa, to be read Kaifā.
 P. 234^b, l. 42, to be added: or ISHBĪLIYA.
 P. 238^a, l. 9, instead of 275, to be read 235.
 l. 62, instead of *i. o.*, to be read *della nascita*.
 P. 256^a, l. 33 and 39, read: third, instead of second.
 P. 272^a, l. 46, instead of *Khallikān*, to be read *Khallikān*.
 P. 308^a, l. 28, read: two, instead of a.
 P. 308, addition of the author to the art. SHAMMAR. Palgrave may be relied on for the main facts. He certainly went to Shammār, Kašīm and Riyād; Doughty was convinced of this. He is untrustworthy in details. He sketched in times, distances, incidents very imperfectly remembered. (Kindly communicated by Dr. D. G. Hogarth).
 Art. SHAṬṬĀRIYA. Cf. further: Muḥammad Ghushī b. Ḥasan b. Mūsā Shaṭṭārī, *Gulzār-i Abrār*, Cod. Calc., especially fol. 92 sqq.; Ethé, *Cat. Pers. MSS. India Office*, N^o. 1913; Iwanow, *Cat. Pers. MSS., A. S. B.*, N^o. 1303; do., *Curzon Coll.*, N^o. 434.
 P. 314^b, l. 6, instead of Constantine, read: Constantius.
 P. 330^a, l. 53, 56, instead of Dérénbourg, to be read Derenbourg.
 P. 389^a, Art. SHUBĀT. The last sentence is to be read as follows: In the year 1300 of the era of the Seleucids (989 A. D.), according to al-Birūnī, the stars of the 9th and 10th stations set on the 3rd of Shubāt, those of the 23rd and 24th rose on the 16th of that month.
 P. 414^b, l. 5, instead of 434, to be read: 454.
 P. 506^b, l. 10, Add: The place occurs on a map by Rawlinson, in *J. R. G. S.*, x. (1841).
 l. 8 beneath, insert: According to R. Bell (cf. his *The Origin of Islam in its Christian Environment*, London 1926, p. 52, note) *sūra* is derived from Syriac *sūrā*, also found in the forms *šūrtā* and *sūrtā*, which is used in the sense of "writing", especially "a portion of scripture".
 P. 612^b, l. 38, instead of: naiveté of his language, when expressing terror, read: naiveté of his dialectal language.
 P. 636^a, l. 5, instead of *Muḥāḍirah*, to be read *Muḥāḍara*.
 P. 660^b, l. 2, instead of 1101, to be read 1099.
 P. 679^b, l. 44, instead of Kalā'ūn, to be read Ḳalā'ūn.
 P. 689^a, l. 18, instead of Černyaev, to be read: Černyiew.
 P. 735, Art. THA'LAB. To be added: cf. Ign. Kratchkovsky, *Le manuscrit du "kitāb al-muḡālasāt" de Ta'lab au Musée Asiatique (Comptes Rendus de l'Ac. des sciences de l'U. R. S. S., 1930, p. 211—217)*.
 P. 804^b, l. 62, instead of *Orgine*, to be read *Origine*.
 P. 855^b, l. 45, instead of Ghat and Ghadames, read: el-Barkat and Fehout and an important rectification of the frontier in the region of Ghat and Ghadames.
 P. 885^a, l. 9, instead of 'Uḡud, to be read: 'Uḡūd.
 l. 10, instead of *Mohammedan*, to be read: *Mohammadan*.
 P. 976^a, l. 42, instead of Nūḥ I, to be read Naṣr b. Aḥmad.
 P. 980^a, to the first alinea to be added: The building of the monument of Firdawsī has been taken in hand by the Committee for the Preservation of National Monuments (*Andjuman-i āthār-i millī*).
 P. 987^b, l. 28, instead of Aḥwas, read: Aḥwaš.
 P. 988^b, l. 7, instead of 826, read: 282.
 P. 990^a, l. 17, add: Sismondi (1813), Fauriel (1846), von Schack (1865), Burdach (1918), Singer, Asín (1919) and Nykl (1931) have made enquiries into the possibilities of contact between Orient and Occidens regarding this point.
 l. 58, add: Finally the 'udhri love became an abstract idea of beauty.
 l. 60 sq., read: Zāhiri, *Kitāb al-Zahra*; extracts have appeared in my *Recueil de textes inédits* (Paris 1929), p. 232—240; the text will be edited by Nykl, who has also translated the *Ṭawḡ* of Ibn Ḥazm (*The Dove's Neck-ring*, Paris 1931).

ADDITIONS AND CORRECTIONS

- P. 994^a, l. 43, to be read: Umayyad period. Creswell thinks that it was rebuilt by the 'Abbāsīd prince 'Isā b. Mūsā; this would lead to its identification with Kaṣr Muḳātil, which was one of the last stations of Ḥusain before Karbalā' (cf. my *Mission*, i. 47, col. 2).
- P. 1048^a, l. 35, instead of Salier, to be read: Sallier.
l. 37, after "by", insert: G. R. Potter (London 1929, following Derenbourg and Schumann) and by.
l. 60, read: many, instead of any.
l. 63, to be added: cf. *al-Muḳtaṭaf*, xxxiv. (1908), p. 308 sq.
- P. 1049^b, l. 3, instead of Salier, to be read: Sallier.
l. 9, to be added: and Ph. Hitti, in *R. A. A. D.*, x. (1930), p. 513—525, 592—603.
l. 52, instead of 1200, read: 1136^b.
- P. 1052^b, l. 52, to be added: a Waḳūf-Me'arīf Direction ("Vakufsko-mearifsha direkcija").
- P. 1063, Art. 'UZAIR. To be added to the *Bibliography*: Joshua Finkel, in *Macdonald Presentation Vol.*, Princeton 1933, p. 162
- P. 1177^a, art. YÜRÜKS, *Bibliography*. To be added: *Türkmen 'Ashiretleri*, ed. by the General direction of the affairs of the nomads and the emigrants, Istanbul 1334 (by دوقتر قراييليج ومهندس راوليغ; with the addition: "translated from German"), esp. p. 33—45 and p. 178—184; Ahmet Refik, *Anadolu'da Türk Aşiretleri (966—1200)*, Istanbul 1930 (contains several documents concerning the Turkish nomadic tribes in the period between 1559 and 1786); Ali Riza, *Cemupta Türkmen Oymakları*, i., Istanbul 1931—1932 (review by T. Kowalski, in *Archiv Orientalni*, vi. 296—304); E. M. Hoppe, *The Yuruks*, in *J. R. A. S.*, 1933, p. 25—28; vols. ii. and iii. of the work of Ali Riza have been published at Ankara in 1933; they contain further interesting discussions and photographs regarding the Yürüks. (F. BAJRAKTAREVIĆ)
- P. 1183^a, l. 22, to be read as follows: and Zābag are ruled by the same king. Ishāk b. 'Imrān, d. in 907, mentions etc.;
l. 7 *ab infra*, in stead of Sumatrabhūmi, read: Sumutrabhūmi.
- P. 1183^b, l. 24, in stead of *Wai*, read: *wai*;
l. 32, in stead of eastern, read: western;
l. 35, to be added: G. Coedès, *Les inscriptions malaises de Grivijya*, *Bull. de l'Ec. franç. de l'Extrême-Orient*, xxx., 1930, p. 337—380; G. Ferrand, *Quatre textes épigraphiques de Sumatra et de Banka*, *J. A.*, 1932, p. 271—326 and the literature cited there.
l. 37, in stead of Malaya, read: Malayu;
- P. 1213^b, *Bibliography*. To be added: Malati (d. 377 = 987), *Kitāb al-Tanbih wa 'l-Radd*, MS. Damascus (private copy. Makes the chief of the Z. a Zaidi, a political opponent of the *saiyids* and the Arabs); Ibn Abi 'l-Hadīd, *Sharḥ Nahḍj al-Balāgha*, Cairo, n. d., ii. 310—362. — The *Shu'ūbi* author Aḥmad b. al-Mu'allī 'Ammī, from Basra, has written a *Kitāb Akhbār Ṣāhib al-Zandj*, which is lost (Astarābādī, *Manḥadī al-Makāl*, lith. Teheran 1306, p. 30). The orthodox *Shi'is* emphasise, as an apocalyptic coincidence, the *zuhūr* of this rebel and the *ghaiba* of their mahdī (Ibn Zainab Nu'māni, *Kitāb al-Ghaiba*, lith. Teheran, p. 73—75).

ṢĀ' (Ṣuwā'; m. or f. in Arabic) a measure for grain "of the value of 4 *mudd* (*modius*) according to the custom of Medina" (*Lisān*). If the cubical contents of the ṣā', like that of the *mudd*, varied with town and district as far as commercial transactions were concerned, the value of the ṣā' was from the canonical point of view fixed in religious law by the Prophet in the year 2 A.H. when he laid down the ritual details of the orthodox feast of 'Id al-fiṭr, which carried with it the compulsory giving of alms called *Zakāt al-fiṭr*, the value of which in grain was one ṣā' for each member of a family. It was, of course, the ṣā' of Medina that was chosen as the standard measure and the *mudd* of Medina henceforth was called *mudd al-nabi*.

This primitive *mudd* of orthodox Islām was standardised by Zaid b. Thābit; and it is from this standard that the *mudd*'s and ṣā's made henceforth for religious use seem to have been copied more or less accurately. This is, at least, what I have been able to prove for the Maghrib from various documents. According to these documents, the official capacity of the *mudd al-nabi* would be approximately 5 gills and that of the ṣā' 5 pints.

The Muslim jurists give the following estimates of this measure. For them the value of the ṣā' is $26 \frac{2}{3}$ riṭl, the riṭl being equivalent to 128 Meccan drams and the dram $50 \frac{2}{5}$ grains of barley. We see how lacking in precision this definition is. If there is no *mudd* or ṣā' available the quantity of grain to be distributed for the *Zakāt al-fiṭr* is measured with the hands held together, half open, with palms upwards.

Lastly, besides this use of the ṣā' and of the *mudd al-nabi*, these measures are further used in certain measurements required by religious law: 1. to calculate the *Zakāt* and 2. to measure the minimum quantity of water necessary for an ordinary ablution (*wuḍū'*, a *mudd*) and for general (*ghusl*, a ṣā').

Bibliography: The Arabic dictionaries, especially the *Muḥiṭ al-Muḥiṭ* (Beyrout 1870), ii. 1221, col. 1; the treatises on Muḥammadan law and the collections of Ḥadīth; Alfred Bel, *Note sur trois anciens vases en cuivre gravés, trouvés à Fès et servant à mesurer l'aumône légale du Fiṭr* (Bull. Archéolog., Paris 1917, p. 359—387, illustrated), where further references are given. (ALFRED BEL)

SĀ'A (A.), a time, a period of time, especially the hour. Following the custom of the Greek astronomers, a distinction is made between the equal or astronomical (sidereal) hour, *sā'a falakiyya*, which corresponds to a revolution of the heavens of the fixed stars through 15° and is also

called *mustawiya* (uniform), and the unequal, curved, *mu'waddiyya*, also an hour of time, *zamāniya*, which is the result of dividing day and night each into 12 hours and therefore varies with latitude and season and in the higher latitudes becomes quite absurd. — In the language of religion *sā'a* is also the hour of death and the hour of the resurrection (see *ḲIYĀMA*). To measure the course of the hours of day and night "hour-machines" (*ālāt al-sā'āt*) are used. Just as the German word *Uhr* from *hora* (Greek *ῥα*) exists alongside of *horologium* (*horloge*), so in Arabic we have *sā'āt* and *sā'a* as names of the clock. Other names may be recognised as corruptions of Greek loan-words, like *binkām* or *pingān* from *πινγκας*, *mangāna* from *μαγγανον*, or translations like *sarrāḳat al-mā* from *κλήψυρα*; others are of Persian origin like *targahūra* (from *tarkihār* = patena). That the quadrant and the astrolabe were used for measuring astronomical time is well known and will not be discussed here nor will the use of the gnomon or sun-clock in its various forms as a horizontal or vertical clock. What we call clocks in the stricter sense are the sand and water clocks and similar mechanisms known from ancient times, which had already been provided by the Byzantines with arrangements to cause balls to fall, to strike bells, to extinguish lamps, to cause figures or musical automatons to work and thus call the attention of a person to the passage of time without his paying special attention or make him hear or see it from a distance. It is noteworthy that the oldest account of a clock from the Muslim East is found in Einhard's *Annals*. He tells us under the year 806/807 that the Emperor Charlemagne's Ambassador Radbert died on the way back from the Caliph's court, while Abdella, the envoy of the "king of the Persians", i.e. the Caliph Hārūn al-Rashīd arrived with monks from Jerusalem and brought with him a wonderful clock, a description of which is given by Einhard. E. Wiedemann and F. Hauser have devoted special attention to the investigation and explanation of Arabic sources. The most important work on clocks is Ismā'il b. al-Razzāz al-Djazarī's *Kitāb fī ma'rifaṭ al-Ḥiyāl al-handasiyya* of the year 602 = 1205/6 (cf. Suter, *Die Mathematiker und Astronomen der Araber*, p. 137, N^o. 344; cf. p. 226 sq.). The author describes here in all detail of construction ingenious clocks, which get their name from the particular figure that appears on them (ape-clock, elephant-, sharpshooter-, writer-, drummer-clock, etc.). Another important work is Riḍwān b. Muḥammad al-Ḳhurāsānī's treatise on the clock on the Ghairūn Gate at Damascus (cf. Suter, *op. cit.*, p. 136 sq., N^o. 343). Of clocks with wheels, which first reached the East in the xvth century,

an account is given by Taḡl al-Dīn in a work composed in 1552/3. The clocks of King Alfonso of Castile owe their perfection to Moorish skill.

(J. RUSKA)

SA'ĀDA (A.) felicity, good fortune. The root *s-d'* and some of its derivatives is associated in various connections with pre-Islamic Arab conceptions. Its general meaning is given as "auspicious, fortunate (*y-m-n*, opposite *n-h-s*). The proper name Sa'd (feminine Su'ād, see the article SA'D) may therefore be synonymous with Hebrew names like Benjamin and Gad. Sa'd is also found as the name of a god; Wellhausen (*Reste arabischen Heidentums*², p. 65) suggests that al-Sa'ida (a house round which the Arabs used to run) was originally an epithet of al-'Uzzā. Sa'd followed by the genitive also often occurs as the name of a star (cf. also the articles SA'D, AL-SA'DĀN) and as the name of a tribe.

The form *Sa'daika* in the *talbiya* formula (which is especially used on the Ḥadjj but also in the ṣalāt, see the article TALBIYA) may be very closely connected with the root meaning (= *y-m-n*); cf., however, the Arabic dictionaries under *s-d'*.

Sa'āda (also with a following noun in apposition, in the proper name Sa'ādāt 'Alī Khān; see this article) seems to be a specifically Muslim term (opposite: *shakāwa*). It is not found in the Kor'an; in Ḥadīth it has an eschatological colouring (cf. *yawm al-sa'āda*, day of the resurrection, Dozy, *Supplément*, s. v.), especially in connection with predestination. It is said, for example, that the people of *sa'āda* are helped by God towards works of *sa'āda* (al-Bukhārī, *Ḍjanā'iz*, bāb 83; Muslim, *Ḳadar*, trad. 6; al-Tirmidhī, *Ḳadar*, bāb 3). As a result of a development of a train of thought common to monotheistic religions, the word in the combination *ahl-al-Sa'āda* = the Muslims (cf. Dozy, *op. cit.*) assumes a less exclusive meaning. In court language it means majesty, highness and *Dār al-S.* court (Dozy s. v.). *Der-i Sa'adet* is a name for Constantinople and *Sa'adetti* a title in the Turkish official hierarchy.

Bibliography in the article itself.

(A. J. WENSINCK)

SA'ĀDAT 'ALĪ KHĀN, Nawāb of Oudh (q. v.), from 1798 to 1814; on the death of his brother, Āṣaf al-Dawla, in September 1797, a reputed son, Wazīr 'Alī Khān, who had been purchased by the late Nawāb but never formally adopted, had been appointed to succeed, but four months later he was set aside as incompetent, and the British Governor-General, Sir John Shore, installed in his place Sa'ādāt 'Alī Khān, who had been living under British protection in Benares since 1776. His reign is noteworthy for the extension of British control over the Oudh territories. A treaty concluded with the late Nawāb in 1775 had placed these territories under the protection of the East India Company, which undertook to provide troops for their defence in return for an annual subsidy; in 1798, a fresh

treaty increased the subsidy to 76 lakhs a year and transferred the fort of Allāhābād to the Company as an arsenal, the Company undertaking to maintain a body of 10,000 men for the defence of the Nawāb's dominions both against internal and external enemies. The mutinous behaviour of the Nawāb's troops prompted the new Governor-General, the Marquis Wellesley (1798—1805), to propose that this useless and dangerous force, which Sa'ādāt 'Alī Khān had himself declared would be useful only to the enemy, should be disbanded and replaced by the Company's troops. Alarmed by the dangers that threatened his person, Sa'ādāt 'Alī Khān was at first eager for this reform, but afterwards refused his consent, and only in 1801 yielded to pressure and signed the Treaty of Lucknow; this relieved him from all pecuniary obligations to the Company, by the cession of six districts yielding a revenue equal to the cost of the Company's troops, and the Nawāb undertook to introduce into his territories a system of administration conducive to the prosperity of his subjects and calculated to check the ruin that threatened the resources of his country. He carried out his promise so effectually as to leave behind him the reputation of having been the wisest and strongest administrator that Oudh had ever known. He died in 1814 and was succeeded by his second son, Ghāzī al-Dīn Ḥaidar.

Bibliography: Saiyid Ghulām 'Alī, *Imād al-Sa'ādāt*, p. 169—174 (Lucknow 1897); Durgā Prasād, *Bustān-i-Awadh*, p. 99—109 (with portrait; Lucknow 1892); Sir C. U. Aitchison, *Collection of Treaties relating to India*, I, p. 118—137 (Calcutta 1909); Sir John Malcolm, *The Political History of India from 1784 to 1823*, I, p. 170—177, 273—283 (London 1826); *A Selection from the Despatches of the Marquess Wellesley*, ed. by S. J. Owen, p. 188—207 (Oxford 1877); H. C. Irwin, *The Garden of India, or chapters on Oudh history and affairs*, p. 100—111 (London 1880). The following sources appear to be still unpublished: Harsukh Rāe, *Madjma' al-Akhbār* (Brit. Mus., Or. 1624); Muhammad Muḥtashim Khān, *Ta'rikh-i-Muḥtashim* (Bankipore Public Library, N^o. 605).

SAB', SAB'A, the number seven, which has a special significance for Muslims as for other — Semitic and non-Semitic — peoples. The preference for this number in various conceptions and actions goes back in part to borrowing from Jews, Christians and other peoples but in part was already indigenous among the pre-Muḥammadan Arabs. The latter is doubtless true of the sevenfold ṭawāf around the Ka'ba, the sevenfold course between al-Ṣafā and al-Marwa (cf. SA'Y) and the sevenfold casting of stones at the Ḥadjj (see DJAMRA i. 1012 sq.). Another series of these beliefs is connected with peculiarly Muslim customs and views. As early as the Kor'an we find mention of the seven Maḥānī (xv. 87), which expression is usually referred to the *fātiha*, which consists of seven verses (cf. A. Geiger, *Was hat Mohammed aus dem Judenthume aufgenommen?*, p. 58). The Muslim community bases its right to acknowledge *variae lectiones* of the sacred text of the Qur'an on one (of many) explanations of the tradition, that the Kor'an was revealed in seven *ahruf* (Bukhārī, *Khushūmāt*, bāb 4; *Faḍā'il al-Kor'an*, bāb 4, 27; Muslim, *Ṣalāt al-Musāfirin*, trad. 270—274; Abu Dā'ūd, *Witr*, bāb 22; Nasā'ī, *Iftitāḥ* bāb

37 etc.; cf. Goldziher, *Die Richtungen der islamischen Koranlegung*, Leiden 1920, p. 37 sqq.). In matters relating to ritual purity the figure three has as a rule the preference (cf. THALĀTH). We are only told that soiled vessels should be cleansed seven times (e. g. Muslim, *Ṭahāra*, trad. 89—93; Abū Dā'ūd, *Ṭahāra*, bāb 37). Ritual prostration should take place on seven parts of the body (Bukhārī, *Adhān*, bāb 133, 134, 137, 138; Muslim, *Ṣalāt*, trad. 227; Abū Dā'ūd, *Ṣalāt*, bāb 150 etc.). In another case seven alternates with four, namely in the grouping of commands and prohibitions (Bukhārī, *al-Maḥālim wa'l-Ḥaḍāb*, bāb 5; Muslim, *Libās*, trad. 3 etc.; cf. Bukhārī, *Ṭahāra*, bāb 40; *Haid*, bāb 26, etc.); in the dating of the *Lailat al-Ḳadr* seven is found as well as the, in this case much more frequent, numeral ten (Bukhārī, *Lailat al-Ḳadr*, bāb 2).

On the Christian model the deadly sins are limited to seven (Bukhārī, *Waṣāyā*, bāb 23; *Hudūd*, bāb 44; Muslim, *Imān*, trad. 144); but other classifications are also found.

In cosmology also the number seven is a favourite, one which may be partly due to borrowing. There are seven heavens and seven earths (Sūra ii. 27; Bukhārī, *Bad' al-Khalq*, bāb 2). Hell has seven gates (Sūra xv. 44); Medina also ultimately has seven gates (Bukhārī, *Fitan*, bāb 26). Cf. further the article SAB'ĪYA. The number seven is particularly frequent in medicine and magic. Water was poured over the sick Muhammad in seven waterskins (Bukhārī, *Wuḍū'*, bāb 145); ulcerated parts of the body are cauterised seven times (Bukhārī, *Tamannī*, bāb 6). In Doutté, *Magie et religion dans l'Afrique du nord* (Algiers 1909), p. 154, there is an account of a *qadual* consisting of 7×7 squares, of which the upper row contains the "seven seals". In the same work the text of the amulet of the *ṣab'a uḥūd* is given (p. 112). Cf. further the same book, p. 91, 100, 118.

Numbers like seventy (*ṣab'ūna*), seven hundred, etc. have also a special significance. Earthly fire is described as one seventieth part of hell-fire in strength (Bukhārī, *Bad' al-Khalq*, bāb 10). The sweat of the children of men on the Day of Resurrection will percolate seventy ells into the earth (Bukhārī, *Riḳāḳ*, bāb 47). When a sevenfold *istiḡfār* is mentioned, we are probably to assume New Testament influence in this case (Sūra ix. 81). Seventy thousand members of Muhammad's *Umma* will go straight to Paradise without a day of reckoning (*ḥisāb*; Bukhārī, *Bad' al-Khalq*, bāb 8; Muslim, *Imān*, trad. 316; Tirmidhī, *Ḳīyāma*, bāb 12, 16); seventy thousand will enter with radiant countenance (Bukhārī, *Libās*, bāb 18; *Riḳāḳ*, bāb 50, 51; Muslim, *Ḍianna*, trad. 14—17); seventy thousand through the intercession of a member of the community (Dārimī, *Riḳāḳ*, bāb 87); seventy thousand in Paradise will be given the appendage to the liver of the fish to eat (Bukhārī, *Riḳāḳ*, bāb 44; Muslim, *Ṣifāt al-Munāfiḳīn*, trad. 30). The *Bait al-Ma'mūr* is entered daily by seventy thousand angels, who never return there again (Bukhārī, *Manāḳib al-Anṣār*, bāb 42).

We may safely assume that the number seven was regarded as a rounded whole; but it is going too far, following out this conception, to try to derive with Hehn the root *s-b-c* and its equivalents in other Semitic languages from the root *sh-b-c* (work quoted below, p. 91 sqq.).

Bibliography: J. Hehn, *Siebennzahl und Sabbat bei den Babyloniern und im alten Testament* (Leipzig. Semit. Stud., ii. 5, Leipzig 1907) (A. J. WENSINCK)

SABA', the name of the people and kingdom in South-western Arabia in the first millennium B.C., frequently mentioned in the Old Testament, in Greek, Roman and Arabic literature and especially in the South Arabian inscriptions; the old Arabic sources, which are mainly inscriptions, and isolated references in Greek sources, give us further information regarding the history of Saba' in the first centuries A. D. down to the period of Muḥammad. In Assyrian, on the evidence of the cuneiform inscriptions down to the eighth century, *Sab'u* was the name of a country, as was *Shabi(a)t* (also *Shabt(i)*, *Shaba*) in the hieroglyphic texts, although of a comparatively late date. In the Bible, *Shebā* was the name of a people and country and in the South Arabian inscriptions also *Saba'* means the land or kingdom and people (which is in keeping with the Sabaeen constitution).

The oldest known literary references to Saba' are, of course, the Semitic, especially those in the cuneiform inscriptions. While the oldest certain mentions only date from the eighth century, historical documents from Mesopotamia of a much earlier period seem to refer to Saba'. For example *Sabu* in a Sumerian inscription of Aradnannar, Patesi of Lagash, a contemporary of the last kings of Ur, of the second half of the third millennium B.C., is perhaps a name for the "land of the Sabaeans". Hommel (in Hilprecht's *Explorations in Bible Lands*, Philadelphia 1903, p. 739) speaks of *Sabum* of the time of the kings of Ur (after 2500 B. C.) as the *Seba* of the Old Testament "in Central Arabia"; on this see also *Die altisraelitische Überlieferung*, Munich 1897, p. 37). In the inscriptional narratives of the campaign of Tiglat-Pileser III (745—727) against North Arabia, among the tribes who offered their submission we find Sabaeans mentioned, the oldest certain reference for this people. Sargon II (722—705) in his *Annals* (for the year 715) mentions the Arabs of the desert dwelling afar off, the Queen Samst of Aribi already mentioned in the narrative of Tiglat-Pileser just quoted and the Sabaeen It'amar, who along with others brought rich gifts of tribute (gold, frankincense, jewels, etc.). With the latter name Lenormant compared It'amar, the name, known from inscriptions, of several rulers of the oldest period of Saba'. Schrader's *Keilinschriften und das Alte Testament*¹, (henceforth quoted as *K. A. T.*, p. 55) and Kiepert's (*Lehrb. d. alten Geogr.*, p. 187) suggestion that the reference here is not to the South Arabian Saba' has been rejected by D. H. Müller (*Burgen und Schlösser Südarabiens*, ii. (1881), p. 989 (do. in *Sabäische Denkmäler*, 1883, p. 108 against Delitzsch, *Wo lag das Paradies?* Leipzig 1881, p. 303, who sought to locate the Sab'u of Sargon's inscriptions in North Arabia; cf. Winckler in the *M. V. A. G.*, 1898, p. 18; but see also W. M. Müller, *Studien u. Vorderasiatischen Geschichte*, *ibid.*, p. 36); Glaser, *Skizze der Geschichte u. Geographie Arabiens*, ii. Berlin 1890, p. 263 and Grimm (*Mohammed*, Munich 1904, p. 18) from the fact that the tribute consisted of regular South Arabian products deduced that even in Tiglat-Pileser's time, as in Sargon's, the Sabaeans were South Arabians;

others have more recently been inclined again to transfer It'amar's abode to North Arabia (cf. M. Hartmann, *Die arabische Frage in Der islamische Orient*, ii. Berlin 1909, p. 131, 458).

From Sprenger's point of view, who maintained it to be certain that Arabia was the original home of the Semites (*Leben und Lehre des Mohammedi*, i. Berlin 1869, p. 241 sq. and *Die alte Geographie Arabiens*, Bern 1875, p. 293 sq.; following him Schrader, *Z. D. M. G.*, xxvii. 421 and other notable authorities), which is still the view most generally held (cf. E. Meyer, *Gesch. d. Altentums*, i³. 2, p. 386 sq.), one can understand his untenable suggestion that the Sabaeans and the Minaeans came from Ḥaḍramūt and that the kingdom of Saba' was founded from Shabwat (*Geogr.*, p. 162, 230, 246, 248, 301). More recently Winckler (e. g. *K. A. T.*³, 1903, p. 7, 11, 136 sq., 156; *Die Völker Vorderasiens in Der Alte Orient*, i². 1, 10) and Weber (*Arabien vor dem Islam*, p. 3 sq.; *Westasien* in Helmolt's *Weltgeschichte*, iii. 3, 5, 220, 225) have categorically declared Arabia to be the original home of the Semites. Hommel (*Grundr. der Geogr. u. Geschichte des alten Orients*², i. Munich 1904, p. 10 sq., 24, 80, 132) more cautiously sees in Eastern Arabia (including Chaldaea) at least the last starting point for the migration of all the Western Semites. Hartmann, *op. cit.*, p. 93 sqq. has adopted a decided position against this theory of the original home. There are well founded reasons against believing that Arabia should be regarded as the cradle of all Semitic peoples. Even with this hypothesis and the assumption of an Arab migration based upon it (see most recently *Westasien*, p. 226, but also the admission there p. 242) the relation between Arabia and Babylonia does not become absolutely clear. The reverse is really more probable, that the superfluous population of the fertile Euphrates region was forced towards Arabia, in the first place to the pasturelands bordering it on the west, from which Semites naturally found their way back from time to time. In spite of Nöldeke's arguments (*Die semitischen Sprachen*², Leipzig 1899, p. 11) it is as little probable that North Africa is the home of the Semites (so again Grimm, *op. cit.*, p. 6 sq., 9 and other writers) or that there was a south-northward tendency in the immigration of the Sabaeans towards Africa. On the contrary there are indications, according to Guidi's view (*Della sede primitiva dei popoli semitici*, in the *Atti della R. Acad. dei Lincei*, 1879), which is defended by Jacob (*Altarab. Beduinenleben*², Berlin 1897, p. 28 sq.), that the southern Euphrates territory was the oldest known home of the Semites, from which in the course of centuries migrations took place towards west and south. The way in which Arabia was peopled from there cannot, of course, be more definitely ascertained. Probably the Semites did not penetrate into Arabia by a single route but by two main routes; the one, which may have been taken by the tribes out of whom rose the Minaeans and Sabaeans of the historical period, seems to have led through the arable lands along the west coast to the south, somewhat on the line of the later caravan route, and the other along the western shore of the Persian Gulf to 'Omān and Ḥaḍramūt, roughly in the direction of the later eastern frankincense route. The Sabaeans, or their mother-stock, would naturally keep to the west and south coast regions, which offered the most suitable areas for

settlement on account of their good soil and water-supply. According to Hommel, the Sabaeans probably first entered South Arabia from Djōf in in North Arabia in the viiith century B. C. (see *Grundriss*, p. 142).

The Old Testament (Gen., x. 7, I Chr., i. 9) calls *Shebā* the eponym of the land and people of South Arabia, the first son of Ra'mā, therefore a Kūshite, but in Gen., x. 28 (I Chr., i. 22) he is called a son of Yoktān and in Gen., xxv. 3 (I Chr., i. 32) a son of Yokshān, son of Abraham. These are not, however, references to three different *Shebās*: a people with such extensive trading connections had obviously intermarried a good deal with neighbours on the sea, on the caravan routes or in the stations and could therefore easily be given different genealogical classifications (Dillmann on Gen., x. 7). According to some, *Sebā* is originally identical with *Shebā* and only dialectically differentiated from it to distinguish the African Sabaeans (e. g. v. Kremer, *Die süd-arabische Sage*, Leipzig 1866, p. 110 sq.; D. H. Müller in the tenth edition of Gesenius's *Hebr. Wörterb.*).

The etymology of the name Saba' is not certain (on the best known attempts to explain it, — those of Kremer, Hommel, D. H. Müller and Glaser — as well as on other points see my more comprehensive treatment of the subject in Pauly-Wissowa-Kroll's *Realencycl. der klass. Altentumswiss.*, s. v. *Saba*, henceforth quoted as *R. E.*, col. 1499. —

The Bible shows that the Sabaeans supplied Syria and Egypt with spices, especially with frankincense, and also exported gold and jewels thither (cf. Psalms, lxxii. 15; Ezek., xxvii. 22; Isaiah, lx. 6; Jerem., vi. 20) and the Greek and Roman accounts (see below) agree with this. Other Biblical passages, which describe the Sabaeans as a wealthy trading people — the essential feature of the Biblical account of Saba' — are Ezek., xxxviii. 13; Ps., lxxii. 10; Job, vi. 19 (referring to Sabaeans caravans), i. 15 [where the Sabaeans appear plundering in North Arabia; according to D. H. Müller, *Encyclopaedia Britannica*⁹, 1889, article *Yemen*, p. 738, colonists or caravans, which occasionally combined robbery with trading, at any rate according to a good source (*K. A. T.*, p. 150, and the story is not a bold poetic fiction, as W. M. Müller, *Studien*, p. 36, note 1 suggests); according to Winckler, *op. cit.* (cf. Hommel, *Explorations*, p. 748), in the passage in Job the Sabaeans are thought of as Beduins of the North Arabian desert]. Joel, iii. 8, mentions the Sabaeans as "a people far off" to whom the sons and daughters of Tyre and Sidon will be sold by Judah (cf. the mention of sacred slaves, e. g. from Gaza in South Arabian inscriptions; see Hartmann, *op. cit.*, p. 421). — To appreciate properly the much discussed story of the Queen of *Sheba* (I Kings, x. 1, 4, 10, 13; cf. II Chron., ix. 1 sq., 9, 12), who is said to have visited Solomon, it is decisive that all that we know of Saba' and Ma'in contradicts the supposition that there were queens there (*K. A. T.*, p. 237). In any case we are not to see in the story evidence of the existence of the rule of queens in Saba', in which Glaser still believed (*op. cit.*, p. 380, 384 sq., 403); also E. Meyer, *Gesch. des Altentums*, i. 2, p. 23), still less a support for the assumption that the oldest Sabaeans inscriptions belong to the ixth or xth century, or that in the time of Solomon there was only one great land of the Sabaeans stretching far to the north (Gla-

ser, *op. cit.*, p. 403). Nor have we to identify in the Sabaeen princess a queen of Yareb, the alleged ancestral home of the Sabaeans (Hommel, *Aufsätze und Abhandlungen*, henceforth quoted as *A.A.*, p. 231, note 1, 235, note 1, 272, 312 sq. and Weber, *Studien*, i. 32), but in all probability we have simply in the guise of fiction a memory of the existence of queens in North Arabia, of whom for example those of Aribi are known from history to have existed. The motif has also found a place among the Arabs (in *Korān* xxvii. 16 sq.) and has been developed in the legend of Bilqīs [q. v.], Queen of Saba'.

Next in chronological order come the references to Saba' in Greek and Roman literature. In the former the oldest is Theophrastus, *Hist. Plant.*, ix. 4, 2, a much discussed passage of great importance for history and topography, in which (on good authorities, perhaps even Androstenes) Saba' and three other South Arabian kingdoms are quoted as the place of origin of spices. In the sentence γίνεται ὁ λίβανος καὶ ἡ σμύρνα καὶ κασία καὶ ἐν τῷ κινάμωμον ἐν τῇ τῶν Ἀράβων χειρρονήσῳ περὶ τε Σαβὰ καὶ Ἀδραμύτα καὶ Κιτίβαινα (var. Κατάβαινα) καὶ Μαμάλι (var. Μάλι), Σαβὰ does not mean, as many think, a town (namely Σάβαι, the capital of the Sabaeans), but the land of Saba', just as Ἀδραμύτα means the land of Ḥaḍramūt (on the form of the name, the Greek representation of which has been wrongly interpreted among recent writers even by Th. Bent, *Expedition to the Hadramut* in the *Proc. R. Geogr. Soc.*, 1895, p. 316 and *Southern Arabia*, 1900, p. 71 sq., see *R. E.*, col. 1300) and Κιτίβαινα Katabān (see the art. KATABĀN). The expression περὶ Σαβὰ in this passage does not mean "around Saba'", as it has been translated e.g. by D. H. Müller, Hartmann (*op. cit.*, p. 420), and still more recently, but "in Saba'", i. e. "in the land of Saba'".

Theophrastus is obviously mentioning here the three well-known South Arabian territories and a fourth not so well-known, Mamali, as the areas which produce frankincense (λίβανος, name of tree and resin, also λιβανωτός, name of the resin, Arabic *luḥān*; on the other Semitic equivalents see *R. E.*, col. 1301), myrrh (σμύρνα, μύρον, etc., Arabic *murr*, also found in inscriptions), cassia and cinnamon (*zimt*: perhaps not Semitic). On wrong modern interpretations of this passage and the passage of similar content in Herodotos, iii. 107, particularly for a refutation of the utterly unfounded proposal to read in Theophrastus ΣΑΡΑ (said to be for *Shahr*, *Shehrāt*) instead of ΣΑΒΑ, and also in Pliny, *Nat. Hist.*, xii. 52, and Solin, 710, *Sara* for *Saba*, and finally on Glaser's (*op. cit.*, p. 41 sq.) extraordinary notion that Theophrastus's statements regarding the South Arabian kingdoms refer to Somaliland in its whole extent, see *R. E.*, col. 1302 sq. Noteworthy also are Theophrastus's details (ix. 4, 2-4, 7-10) regarding frankincense and myrrh (as regards which Theophrastus's statement regarding the area which produces them is wrongly limited to Ḥaḍramūt as a result of the already mentioned misinterpretation of the passage [in the above quoted *Grundriss d. Geographie*, p. 137 and following it again quite recently], ix. 4, 5 sq.; on the Sabaeans as dwellers in a mountainous area, which yields myrrh and frankincense, and as exporters of these products; on the honesty of the Sabaeans in intercourse with one another, which rendered the watching of the spice-bearing

trees unnecessary (cf. *Periplus Maris Erythraei*, p. 32); concerning the temple of Helios, the most sacred in the land of the Sabaeans, which was used as a place for keeping the whole harvest of myrrh and frankincense, an instructive testimony to the worship of the sun among the South Arabians; for further details, as well as for information regarding the actual occurrence of these spice-trees in South Arabia see *R. E.*, col. 1307 sq. and the quotations from and collocation of the travellers' reports in A. Grohmann, *Südarabien als Wirtschaftsgebiet*, Vienna 1922, p. 128 sqq., 136 sqq.; lastly on the attempt to connect Saba' with the land of frankincense, Punt, see *R. E.*, col. 1312 sq.).

The next most ancient Greek authority on Saba' is contained in the much more copious statements of Eratosthenes preserved in Strabo, xvi. iv. § 2, still very important for the historical side of Sabaeen studies, which in combination with the Theophrastus passage give a fairly clear picture of the oldest configuration of the South Arabian kingdoms as known to the Greeks and Europeans in general in the time of Eratosthenes. According to this authority, who, like Theophrastus, was able to make use of the results of the campaigns of Alexander as well as itineraries of sailors and caravan-travellers, there lived in South Arabia four main peoples: the Μείναιοι on the Red Sea with their capital Κάρνα, next to them the Σαβαῖοι with their capital Μαρίαβα, then the Καταβανεῖς down to the straits and passage into the Arabian Gulf with the capital Τάμνα, and farthest east the Κατραμωτίται with their (chief) town (πόλις) Καβάταρον. All these towns were under absolute rulers (kings) and were prosperous. This passage (with the others in Strabo) contains the oldest known account of the respective topographical situation of the four South Arabian kingdoms with a complete list of the four principal nations and the capitals. The Sabaeans, according to Eratosthenes, were neighbours of the Minaeans (see the article ΜΑΪΝ for further information). It does not follow from his statement that the latter lived in the territory on the Red Sea, that he thought the Sabaeans did not also live on the sea, as Glaser (*Skizze*, p. 16) deduced and Weber (i. 9 in the main text) was also inclined to conclude. The correct interpretation is in agreement with the evidence of Arabic sources and of other Greek and Roman authors, for example Agatharchides (Diodoros, iii. 46) and Pliny (vi. 145) on Sabaeen places on the Red Sea and the reference in Stephanus Byzantinus, *Μαρίαβα μητρόπολις Σαβαίων πρὸς τῇ Ἐρυθρᾷ θαλάσῳ*, referring expressly to the passage in Strabo, in which we can still see the correct idea that Saba' stretched down to the sea. According to the description of Eratosthenes, which naturally begins with the north (this disposes of W. M. Müller's doubts, *Studien* etc., p. 36, note 2), Saba' was in his time bounded on the north by the kingdom of Ma'in, on the south (and south-west) by Katabān and by Ḥaḍramūt in the east. At that time the land of the Sabaeans stretched to the west and south coasts, as it did in the time of Pliny (vi. 154; *ad utraque maria porrectis gentibus*); only their territory on the south coast, concerning which D. H. Müller, *Burgen*, ii. 987, was rather doubtful, was larger. It apparently included the Raidān coast between 'Aden and Ḥawar (according to Glaser, p. 20). Glaser's disbelief in the statement of Theophrastus to the effect that the Sabaeans also owned a part

of the frankincense coast, was unfounded and quite wrong, as well as the alteration in the text which he proposed to suit his hypothesis in two passages in Theophrastus *Σαβαῖος* for *Σαβαῖος* (Glaser, *Punt*, p. 45 sq.; cf. above). Pliny also (xii. 52), which Glaser, following Sprenger, had also to alter, repeats that the Sabaeans had possession in the frankincense region, which Sprenger himself acknowledged (*Bemerkungen* etc., *Z D M G*, xlv. 505). *Μαρίαβα*, the name of the capital of the Sabaeans according to Eratosthenes and Artemidoros, reproduces the Arabic name (inscriptions Maryab, Mārib, in the authors Ma'rib) as accurately as possible with the suffixed vowel *a*.

In the time of Eratosthenes, the part of the west coast south of Saba' and the most western part of the south coast was inhabited by the *Καταβανής*; the eastern neighbours of the Sabaeans were the *Χατράμωντιται* whom he mentions last (see *R. E.*, col. 1324 sq. and the article ΚΑΤΑΒΑΝ).

A comparison of the passage in Strabo with the list of South Arabian peoples in Theophrastus (see above) shows that three of them are mentioned by both authors, the peoples of Saba', Ḥaḍramūt and Qatabān, while our two authorities differ regarding the name of the fourth people, whom Theophrastus calls the *Μαμάλι* (var. *Μάλι*) and Strabo the *Μινάιοι*. The assumption of a corruption in the text would easily restore perfect agreement between the two. Mordtmann for example in the *Z D M G*, xxx. 323 has explained *Μαμάλι* as a corruption of *Μινάιοι* and D. H. Müller also (*R. E.* in the articles *Arabia*, ii. 348 and *Chatramis*, where Eratosthenes is confused with Pliny, and *Anzeiger Ak. Wien*, 1909, p. 4) has assumed that the reading MAINAIA may be restored with absolute certainty for MAMAIA in Theophrastus; that is to say both authors are referring to the Minaeans. But this proposed alteration in the text, which would take the oldest mention of the Minaeans among the Greeks back to the time of Alexander the Great, need not be considered absolutely necessary (Hommel, *Grundriss*, p. 138 has also argued against it). The two Greek authors are writing from different points of view: the botanist is not so concerned as the geographer with giving a full list of South Arabian kingdoms but is only interested in those regions which yield spices. The form Mamali also finds support in the *Μαμάλα καμή* of Ptolemy, vi. 7, 5. Sprenger who sticks to *Μάλι* (*op. cit.*, p. 92, 263, 266) identifies the latter without giving any evidence with Mahra (as does Hommel, *op. cit.*, p. 137: "probably the Mahra coast"). Hartmann, *op. cit.*, p. 420, simply takes Mali for the land of the Minaeans without giving the slightest proof.

Following the passage from Eratosthenes, we have in Strabo xvi. iv. § 5 sq. the relatively short account by a later authority, Artemidoros, of the land of the Sabaeans. The people — very fortunately (cf. Agatharchides in Photius, § 97 and K. Müller, *Geogr. Graec. Minores*, i. 186) — are called "a very powerful people" in whose land myrrh, frankincense and cinnamon grow and on the coast — a fact confirmed by modern travellers — the balsam tree also (cf. Theophrastus, iv. 4, 14 *δποβάλαμον*) and other aromatic trees and plants. Then follows information regarding the abundance of fruits in the land, regarding the capital Mariaba, laws and duties of the king, commerce and the wealth gained by the Sabaeans through trading, as well as their agriculture and other details,

which are repeated in almost the same words by Diodoros (iii. 47) from Agatharchides, who was also Artemidoros's authority — a fact which does not seem to have been appreciated in modern writers, who regard Artemidoros as an independent source. The above quoted reference to the occurrence of frankincense among the Sabaeans seems to be contradictory to Strabo's (xvi. iv. § 2) note *φέρει δὲ λιβανὸν μὲν ἡ Καταβαλία σμύρναν δὲ ἡ Χατράμωντις*, following Eratosthenes; to remove the difficulty it has been assumed sometimes that there was confusion on the part of Eratosthenes and sometimes, as in quite recent writers, that the Qatabānians had lands in the frankincense region and that there was later a change in their ownership by which part at least of Qatabān passed to Saba'. However possible this may be and however little misgiving one may have about it in this case, it must also be borne in mind that Strabo's sentence cannot be taken from its context and placed in another context as an argumentum ex silentio. From the statement that Katabania produced frankincense it does not follow that Katabania alone produced it and that it was not found elsewhere in South Arabia. Besides the substance of Eratosthenes's remark is only found in Strabo's version.

Strabo (xvi. iv. § 23) goes on to give an account of the campaign against South Arabia of Aelius Gallus in the year 24 B. C., based on direct information; he is the earliest authority on the campaign (cf. also ii. 118, xvii. 819; Pliny, vi. 160 and Dio Cassius, liii. 29 [= Zonaras, x. 33]). The complete failure of this campaign, which was the first and most important direct contact between Rome and distant Saba' and which had been undertaken by Augustus, as Strabo tells us, in the hope of winning the wealth of the Arabs, especially of the Sabaeans, was, as Glaser (*op. cit.*, p. 45 sq.) has already emphasised in contradiction to Strabo's version, the result of the ignorance of the Romans regarding the country and people and the want of any special preparations (on the specialist literature on the subject and modern critics of the eastern policy of Augustus like Flügel, Mommsen, Winckler, Glaser, Weber, Hartmann, on the accounts of the fighting in Strabo and Pliny, the route of Gallus's march — which Sprenger for example gives wrongly — and the minor military successes of the Romans regarding which the accounts differ cf. *R. E.*, col. 1344 sq., 1380 sq.). In disagreement with the usual accounts (in d'Anville, Gibbon, Karl Müller, Sprenger, whom almost all recent writers followed, Kiepert, Mommsen, Zehme, Mordtmann, Aug. Müller, D. H. Müller, Winckler, Weber) I only mention here that the farthest point reached by the Roman expedition, which Strabo (§ 24) calls *Μαρούαβα*, the town of the *Ῥαμ(μ)ανίται* who were ruled by Ilasaros, the *Monumentum Ancyranum*, v. 22 and Pliny vi. 160 call Mariba, was not the Sabaeen capital Mārib, as, following Vincent, Forbiger and Ritter, Glaser has again recently (*op. cit.*, p. 57 sq.) rightly emphasised and Landberg also, according to whom (*Arabica*, v. 82) Strabo's *Μαρίαβα* (as it has generally been written since the time of v. Kremer instead of *Μαρούαβα*, although without any justification) is undoubtedly the Maryama the ruins of which lie in the district of Baiḥān al-Qaṣīb on the Wādī Baiḥān (south-east of Mārib; see the description in Landberg, *op. cit.*, p. 21 sq.; full information

regarding this district *ibidem*, p. 3—63; the old contrary view is still championed by Grimme, *Mohammed*, p. 20). Glaser was, however, wrong in his attempt to locate this town exactly, which he, thinking of Caripeta in Pliny, vi. 160 which, as Fresnel had already pointed out, recalls the Arabic *ḵharība* 'ruins', saw in the later Sabaeans capital Širwāḥ (west of Mārib). Caripeta, however, goes back not to *Ḵharība* but to the place-name Ḥarīb. Much more worthy of attention is Landberg's connection of the Ramanite city, — the name of which, it is true, he wrongly reads Mariaba and erroneously considers to be the Mariaba Baramalacum in Pliny, vi. 157 — with the Arabic Maryama and with *Μαρίαμα* in Ptolemy, vi. 7, 37, as well as with Mariamat in the inscriptions, with which is to be identified the *Μαρίαμα* of Ptolemy, vi. 7, 38, presumably the modern Maryama in Ḥaḍramūt (not as Mordtmann-Müller, *Sabäische Denkmäler*, p. 104, thought). But he wrongly records it as a city of the *Μαρίται*, the Arabic Ma'n (p. 24). Landberg is wrong also in his location (in Baiḥān al-Dawla, a district south of Baiḥān al-Kaṣāb) of the limit reached by the Roman expedition, mentioned by Dio Cassius, the name of which he wrongly (following Glaser) considered to be Adula. *Ἀδουλα*, as the name should rather be written, is, according to D. H. Müller's suggestion, the *ΥΤΛ* (usually read Yathil) of the Minaean inscriptions. Mommsen wrongly (*Monumentum Ancyranum*, v. 22) found a contradiction between the statement of Augustus regarding the terminus of the campaign ("*usque in Sabaeorum fines*") and those of Strabo and Pliny and sought to explain it by saying that Augustus was describing South Arabia with a generalising but not correct expression as the "land of the Sabaeans". The farthest point reached by the expedition was actually — as Augustus rightly says — in the land of the Sabaeans and, according to Strabo, in the land of the Ramanitai i.e. of the Radmān or the Rhadami of Pliny, which is in agreement with the *Monumentum*. Ilasaros, whose name and person have been wrongly interpreted, is the Ilsharḥ Yaḥḍib, whom we know from inscriptions, regarding whose attitude to the political situation in Saba' during the Roman campaign Hartmann (p. 153 sq., 173 sq. etc.) has made erroneous suggestions (see *R. E.*, col. 1371 sq.).

The reports of this campaign, the military and political importance of which for the history of Saba' has been very much overestimated by Sprenger, Dillmann and Fabricius, brought the Roman world a better knowledge of the land and people of South Arabia — among other information a correction of the Greek statements hitherto current regarding the spices which Arabia exported. As a result of the information obtained from Gallus, Strabo (§ 24) was able to distinguish the divisions of South Arabia according to the predominant activity or quality of its inhabitants — in contrast to the earlier political division of South Arabia based on Eratosthenes (Strabo, § 2) —, a division made from the social and economic point of view which included for example the caste-system that still exists to-day in Arabia, similar to Pliny's account, vi. 161, who also relies on Gallus. Strabo goes on to deal with family life in South Arabia, including community of women, a testimony, with which passages in the inscriptions have been compared, as evidence for polyandry in Saba', the

occurrence of which Hartmann (*op. cit.*, p. 7) has wrongly denied; it must be granted, however, that many inscriptions, when properly interpreted, can no longer be used as evidence for the existence of polyandry.

Copious information regarding the land and the capital, the customs, mode of life and constitution of the Sabaeans and about South Arabia generally are contained in the two excerpts from Agatharchides (*περί τῆς Ἐρυθρᾶς θαλάττης*, vol. 5, probably concluded about the year 132/1) preserved in almost identical terms in the *Bibliotheca Photius'* and in Diodoros (iii. 38—48). Agatharchides was the source used by Artemidoros also. The statements regarding spices which filled the whole land with natural, pleasant odours may be compared with Herodotos, iii. 113, Pliny, xii. 86, and Wrede's report (*Reisen*, p. 80 on the Wādī Muntish, p. 77 on the Djabal Šidāra, p. 82 on the Wādī Ḵhilāfat). Noteworthy also is the information he gives regarding the Sabaeans royal city *Σάβαι*, on the constitution, on the laws and duties of the kings, whose rule was hereditary in a particular family (which is confirmed by the South Arabian inscriptions), regarding customs and activities of the people, who are praised as brave soldiers, industrious tillers of the soil and traders and skilful sailors, and regarding the trade with Egypt, Syria and Phoenicia and the resultant wealth and luxury of the Sabaeans which surpassed that of all other Arabs (cf. the above mentioned statements of Strabo following Artemidoros). *Σάβαι* and *Μαρίαβα* in Strabo, xvi. iv. § 2 (following Eratosthenes), § 19 (following Artemidoros), in Stephanus Byzantinus, s. v., as well as *Μαριβάτα* (corrupted from *Μαριάβα*, according to Mordtmann) in Pliny, vi. 155 are (what Glaser, *op. cit.*, p. 53, 62, 153, 287 has not noticed) only two different names of the same town, the capital of Saba', Mārib [q. v.]. The name *Σάβαι* finds an analogy in the fact that Arab writers also sometimes call the Sabaeans capital Saba', e.g. al-Idrisi, Abu 'l-Fidā', as well as Ibn Ḵhordādhbeh and the Turks (see Mordtmann, *Sabäische Denkm.*, p. 3, note 1). The statement in Photius that the capital stood on a not high hill has been erroneously doubted by Kremer (*op. cit.*, p. 9, note 2) and confirmed by the observation of modern travellers, like Arnaud, Halévy and Glaser (Strabo's remark; "on a hill covered with trees" may be considered a sign of the decline in vegetation). — From the statement in Photius (§ 101, middle of the page) Ritter (*Erdkunde*, xii. 249), Kremer (*op. cit.*, p. 9) and Glaser, *op. cit.*, p. 10) have wrongly deduced that the Sabaeans sent out colonies or at least trading settlements into foreign lands, especially India; we are rather to understand trading voyages by sea by *στέλλειν* (intransitive) *ἀπ' οἰκίας*.

The literary references to Saba' and Arabia in general, as well as the reports of merchants and travellers, influenced the later literature of the Greeks and that of the Romans from the first century A.D. It is to them — particularly to poets of the time before the expedition of Gallus — that we owe the typical conception of the rich and fortunate Sabaeans in a remote Eldorado. I shall here pass over these references in poetic literature, as they have not the importance of independent sources and only observe that as a result of this conception of Saba', the chief country in Arabia, — as is intelligible with poetic lan-

guage — *Sabaus* gradually came to be used, not with the limited application to Saba², but in the general sense of "Arabian", so that even expressions like Vergil, *Georgica*, i. 57, *molles sua tura Sabaci (mittunt)* ii. 117, *solis est turea virga Sabaeis*, etc., are not to be used as arguments in the reconciliation of apparent differences in the nomenclature of South Arabian areas, that produced frankincense, and it cannot be deduced from them that Vergil allotted the frankincense tree to the Sabaeans alone as distinct from other South Arabians.

The amplification of the previous knowledge of the country from first-hand accounts, as a result of the Roman campaign, is also reflected in Pliny's references, which augment the extracts preserved from the older Greek writers by many details, although they are in parts confused and corrupt. The majority of the towns mentioned by him in vi. 160, which Gallus is said to have destroyed, can be proved to have existed from the South Arabian inscriptions, or from al-Hamdānī, the first author who mentions them after Pliny, or from other geographical sources. Pliny's account, based on new information regarding Arabia, which goes back to Gallus or reached Rome by other ways from time to time, is of historical importance in as much as it mentions a people, not mentioned by Strabo or Agatharchides, who produced a lasting alteration in political conditions in Saba². After giving (probably from Juba) in vi. 158 the *Homeritae* after the Minaei (Ma'in) and Rhadamaei (Radmān) among the Arabian peoples, in 161 Pliny, expressly quoting the explorations of Gallus as his authority for this period, calls attention with the words *numerissimos esse Homeritas* to a fact which forms a turning point in the history of Saba², the rise of the Hīmyars (Homeritae, the *Ḥumayrāt* of the Greeks). This is the oldest reference preserved to the Hīmyars and their strength. At the time of Gallus, political supremacy in South Arabia was no longer in the hands of the Sabaeans under the ancient dynasty of the "Kings of Saba²", but had passed to the Hīmyars under rulers with the title "Kings of Saba² and Dhū Raidān". The definite report of Gallus, who says that the Hīmyars were a predominating people in South Arabia and the legitimate conclusion that they were at this time already in possession of the hegemony, agrees at once and convincingly with Glaser's deduction (cf. *Die Abessinier*, p. 31) from the inscriptions that the beginning of Hīmyar rule is to be placed in the second — at latest the first — century B. C., and is evidence against the attempt (made by Mordtmann, Mommsen, Hartmann and others) to shift the beginning of the Hīmyar period to a date after the beginning of the Christian era, nor does it even help the endeavours of others, like Kremer and D. H. Müller, to place it towards the end of the first century B. C. Glaser (*op. cit.*, p. 38) would not pronounce definitely for this date of about 70 B. C., but talks of "somewhere after 175 B. C., but certainly not after the birth of Christ" it is tempting, he says, to take 115 B. C., but there are objections (p. 31 sq.; so also Weber, *Arabien vor dem Islam*, p. 33; Hommel, *Geschichte des alten Morgenlandes*³ (Sammlung Göschen, Leipzig 1908, p. 148 and cf. here the article ARABIA, i. 377 sqq. etc.). Sprenger's (*op. cit.*, p. 76 sq., 225), Dillmann's (*op. cit.*, p. 204) and Hartmann's (*op. cit.*, p. 469,

note 1) hypotheses of the contemporaneousness of and even of a causal connection between the rise of the Hīmyar power and the Roman campaign thus lose any basis.

A further reference to the kingdom of the Hīmyars is in Pliny, vi. 104, *intus oppidum, regia eius, appellatur Sapphar*, i. e. Zafār, the capital of the Hīmyars. We see, however, from Pliny that the Sabaeans in the time of Juba still held an important position — although they were no longer the lords of Southern Arabia — and the land ruled by them was no smaller in area than in the time of Eratosthenes. Of minor points, we shall only mention here that of Pliny's references (vi. 161) to their economic life and their wealth the expression *agrorum rigua* finds confirmation in the testimony of the inscriptions to the old irrigation works of South Arabia (wells, canals, dams and cisterns) and in the statements of al-Hamdānī regarding irrigation (see below), the mention immediately afterwards of *mellis ceraeque proventus* (cf. Strabo, xvi., iv. § 2) agrees with the fact that almost all the mountain regions of South Arabia are rich in honey (cf. Sprenger, *op. cit.*, p. 249; Glaser, *op. cit.*, p. 69 — evidence for honey and wax in the Raidān district; also Landberg, *Arabica*, v. 238; Bent, *Expedition*, p. 330, *Southern Arabia*, p. 117; Harris, *A Journey*, p. 22 and other travellers' narrations; cf. the statements in al-Hamdānī, *Djāzirat al-'Arab*, p. 103, 105, 123, 194). The words preceding in Pliny, *silvarum fertilitas odorifera* (cf. Agatharchides in Photius, § 95 and Diodoros) refer to the Sabaeans wealth in the frankincense region (Sprenger, *op. cit.*, p. 250), *auri metalla* to the occurrence of gold, namely in the coast regions (cf. Agatharchides, § 95, on the land of the Debai rich in gold; Strabo, xvi., iv. § 18; Pliny, vi. 150 on the *auri metalla* of the *litus Hamacum* and especially al-Hamdānī, p. 153, 177 etc. on gold mines in South Arabia and modern travellers such as Halévy and Glaser (Glaser, *op. cit.*, p. 69, *Punt*, p. 77) would look for the gold mines in 'Asir only or in Saso (East Somāliand), but there can be no possibility of a reference to East Africa in the Pliny passage. Sprenger, *op. cit.*, p. 249, would also locate the mines in the interior of the country (see further discussion below). Pliny's note (xii. 58) on the gathering of frankincense may be compared with the statements of Yāḳūt (*Mu'djam*, iii. 577). Of importance for the history of civilisation also is the fact reported in xii. 54 that the collection of frankincense was considered a religious act, that only the Sabaeans as lords of the land of frankincense and with them the Minaeans were allowed to look upon the frankincense tree (when it was being ceremonially treated), that there were said to be not more than 3,000 privileged families who claimed the hereditary right to the sole possession of frankincense trees for themselves and their descendants: *sacros vocari ob id nec ullo congressu feminarum funerumque, cum incidant eas arbores aut metant, pollui*, where Sprenger (*op. cit.*, p. 92) and Glaser (*op. cit.*, p. 3; *Punt*, p. 44) proposed quite unjustifiable alterations in the text. *Congressus feminarum funerumque* are to the present day in Islām more or less connected with *djanāba* (pollution; cf. Sprenger, *op. cit.*, p. 219). Hartmann, *op. cit.*, p. 415, remarks that the passage in Pliny appears to throw some light on the aversion of the Muslims to burning fragrant spices etc. at funerals, which is discussed

by de Goeje (*L'encensement des morts chez les anciens Arabes in Actes du 14^e Congrès intern. des Orientalistes*, iii./i.), and concludes that it was forbidden in South Arabia to use frankincense in the funeral service, while nothing was known of this in North Arabia; but so early a writer as Pliny, xii. 82 talks of the *hominum etiam in morte luxuria* in Arabia Felix and modern travellers also confirm the use of incense at interments.

It is instructive for the ancient history of South Arabia that Pliny still gives for the time of Juba and Gallus the same four peoples that Eratosthenes gives as the chief peoples with a regal constitution, the Sabaei, Minaei, Catábanes and Atramitae (Chatramotitae); see the articles *QATARĀN* and *MA'IN*. The words in vi. 154, following the mention of the Sabaeans: *pars eorum* (Sabaeorum) *Atramitae quorum caput Sabota* etc., and xii. 52: *Atramitae pagus Sabaeorum in monte excelso, a quo octo mansionibus distat regio eorum turifera* (similarly Solin, p. 710: *Atramitae pagus Sabaeorum*, who is dependent on Pliny, a fact which Sprenger, *op. cit.*, p. 296 and Glaser, *Punt*, p. 47 have not recognised), show that Ḥaḍramūt in the time of Juba (not only in the first century A.D., as Glaser, *Punt*, p. 46 thought) had become a part of Saba², and that Saba² extended farther to the east, so that a change in the balance of power in South Arabia had set in while the Sabaeans efforts at expansion were being continued (Bent, *Southern Arabia*, p. 49, 240, 265 and 269 speaks of ruins of Sabaeans antiquity in the coast area of Zafār near Mirbāt). The following words: *regia tamen omnium Marelibata* (*Marciaba*, see above) again emphasise Saba²'s suzerainty over Ḥaḍramūt and the position of Ma'rib as the capital of the whole kingdom (on erroneous alterations in the text of Pliny and Solin see above). The principal passage on the transport of frankincense is xii. 63 (*tus collectum Sabotam . . . convectitur . . . ibi decumas deo quem vocant Sabim mensura non ponderi sacerdotes capiunt nec ante mercari licet*). The frankincense was therefore bound to pass through the capital of Ḥaḍramūt, Sabota (*Shabwat* in the inscriptions, also mentioned by al-Ḥamdānī, now a ruined site between Baiḥān and Shibām) and pay duty there. This custom of levying tolls still survives among many tribes, Glaser (*op. cit.*, p. 27) informs us. An analogy to the statement that taxes were levied on spices by the temple is quoted by D. H. Müller from the inscriptions, *Burgen*, ii. 1024, note 3 (on the inscription Halévy, *op. cit.*, p. 187); see also Rhodokanakis, *Studien*, i. 6 (on Glaser, 480 = Arnaud, 53); compare also Theophrastus's statement (ix. 4) regarding the tithes paid out of the frankincense harvest for the priests of the temple of Helios of the Sabaeans (and Landberg, *Dathina*, p. 457 on the harvest tithes to the *Mashā'ikā*). The God Sabis was considered by Mordtmann (*Sabäische Denkmäler*, p. 57) to be the moon-god Sin, indeed, he later regularly explained the name Sabis as Sin (*ZDMG*, xlv. 186). Quite recently the Pliny passage has been again referred to the moon-god, sometimes with proper caution, and sometimes as if it were an established fact. Not only, however, has it no connection with the moon-god, but the context of Pliny suggests that Sabis refers to Sabota; besides, Theophrastus speaks of the sun-god, from which it does not, of course, follow that

Sabis is to be identified with the sun-god, as do Ritter, Sprenger, Glaser, etc. The name also, in these identifications, would remain unexplained. Probably Sabis is a form of name which appears to have arisen neither through a misunderstanding nor through a corruption of the text, but is simply "the (Lord, God) of Sabota" (*Shabwat*; either *Dhū Shabwat* or regularly "*Shab(a)wi*"; cf. *R.E.*, s. v. Sabis).

It is not the above quoted mention of the Homeritae in Pliny that is to be regarded as the oldest known reference in literature to the Ḥimiyars, but the *Periplus Maris Erythraei*, which is older than Pliny's work, but younger than his principal literary sources, and, indeed, as I have endeavoured to show in *R.E.*, col. 1462 sq., differing from previous dates proposed by Dillmann, Mommsen, Hartmann, Glaser etc., seems to have been composed between 40 and at latest 51 A.D., probably between 40 and 45. A light is thrown on the political situation by the statement in the *Periplus*, § 23, that Charibaël, the lawful king of two peoples, the Homeritae and their neighbours, the Sabaites i. e. Sabaeans, was ruling in the capital Saphar. Saba², therefore, was under Ḥimiyarite rule at the time of the composition of the work. Saphar is Zafār (near Yarīm), the capital of the "kings of Saba² and *Dhū Raidān*", an identification which Landberg, *Arabica*, v. 50, could not upset. Ma'rib was no longer the royal capital. *Sabaeirne*, the Egyptian form for *Sabaïos*, is also found in the Axum inscription and this too supports the manuscript reading *Sabaeirou* against the emendation proposed by the editor (Fabricius, p. 60 following Salmasius). The Ḥimiyarite king Charibaël is probably the Kariba'il Watar Yuhā'im, King of Saba² and *Dhū Raidān*, known from inscriptions and coins. Hartmann's attempt to identify him (*op. cit.*, p. 154 sq., 173 sq.) collapses with his baseless premises.

A tremendous revolution in the history of Saba² took place in the period between the erection of the inscription of Adulis (*Corpus inscr. Graec.*, iii. 5127 B) in about the first third of the second century A.D., about 127, and that of the bilingual inscription of Axum of the middle of the fourth century (before 356). In the former the King of the Axumites mentions that he has waged war from *Λευκή κόμη* (al-Ḥawrā') southwards as far as the land of the Sabaeans. While he was thus forced to halt in his campaign on the northern frontier of Saba², Aizanas ('Ezānā), who erected the bilingual inscription, already calls himself "King of Axum and Ḥimyar and Saba²", etc. The most important parts of South-west Arabia had therefore been conquered by the Axumites since the beginning of the second century A.D. The doubts of Dillmann, Hartmann and others regarding the actuality of this conquest, with the inscriptional testimony for which the mention of ambassadors *ad gentem Axumitarum et Homeritarum* (Cod. Theod., xii. 12, a) agrees, are unfounded. The fact that Ḥimyar occurs before Saba² in the series of titles enables one to deduce that the former was the kingdom proper, beside which Saba² occupied the second place, having not yet sunk into insignificance. With the official title of the inscriptions may be compared the double title of the Ḥimyar king in the *Periplus*.

The testimony of the Abyssinian inscriptions, that Aizanas was king of Ḥimyar and Saba², agrees, as Glaser (*Die Abessinier*, p. 5 sq.) emphasises,

with the fact that the South Arabian inscriptions from the end of the third to the last quarter of the fourth century mention no Yemeni rulers; the latter do not appear again until 378 A. D. and then occur uninterruptedly until the first quarter of the sixth century, when (525) the Abyssinians again conquered South-west Arabia. The foundation of the power of the Axumite kingdom was an interruption of the last period of the South Arabian kingdom, from the beginning of which, about 300 A. D., the kings assumed the longer title "of Saba', Dhū Raidān and Ḥaḍramūt and Yemnat" in place of the previous title "of Saba' and Dhū Raidān".

From the statements of Ptolemy, who, apart from unimportant references, is the Greek literary source for Saba' that follows the *Monumentum adulitanum* in order of time, it may be deduced that in his map the Sabaeans (vi. 7, 23) no longer occupied so large an area as they still did even in the time to which Strabo and Pliny refer, but seem to have become limited to the northern half of their former territory; the Ḥimyarites, on the other hand, occupied a considerable part of the south coast, and other smaller peoples are also mentioned as inhabiting the South Arabian territory, which must have belonged to the Sabaeans as late as the end of the second century A. D. Quite recently the words of Ptolemy: *Κοτταβανοὶ μέχρι τῶν Ἀσάβων ὁρίων, ὑφ' οὗς ἡ λιθωντοφόρος χώρα* have been erroneously interpreted to mean that after the Sabaeans the frankincense region was under the rule of the Ḳatabānians, and further assumptions were based on the statement that Ḳatabānians were still settled there, although an independent kingdom of Ḳatabān then no longer existed. The lucid syntax and the linguistic practice of Ptolemy, according to which ὑπό with the accusative means "south of", "situated below", shows that it is just the reverse that is the case. Ptolemy separates geographically the frankincense region and the homes of the Ḳatabānians. Sprenger (p. 264 etc.), from his likewise erroneous point of view, has difficulty with the statement that the Ḳatabānians in the time of Ptolemy were "thrust out of this possession" (cf. the article ḲATABĀN).

In agreement with the Arabic sources, Ptolemy introduces us to a period of progressive decline of Saba'. The occasional mentions of Saba' in the Greek topographers of the first centuries A. D. are of no independent value. The name Saba' disappears from Greek and Roman literature from the end of the fourth century A. D. After this date we only have an occasional isolated reference to the Homeritae, whose name became gradually applied to the whole of South Arabia.

Only half a century ago, Sprenger (*op. cit.*, p. 246) was able to say that the Greeks and Pliny were the only sources that gave us information regarding the Sabaeans. Our knowledge of the history of ancient South Arabia which, until quite recently, could only be supplemented a little by the isolated references in the Old Testament and the quite insufficient, because utterly unhistorical, traditions of the Arabs, was increased in an extraordinary fashion by finds of inscriptions, principally in South Arabia, and the increasing progress in the study of the ancient history of the east has also thrown new light on the history of Saba'.

Yet the explorer Glaser (*op. cit.*, p. 159), famous for his epigraphical finds, does not hesitate to say that the correct interpretation of the few statements

in the classical authors is no less necessary than the elucidation of the inscriptions of Saba', and that the latter and the passages in classical writers supplement and explain one another. In any case we must not lose a sense of perspective in face of the decisive importance of the inscriptions for the study of political and cultural history; being the only direct historical source they form our most important material for research into the past of Saba' and South Arabia generally. The history of the opening of this rich and still unexhausted mine of material for research is associated with very few names. Carsten Niebuhr, a member of the expedition sent out by the Danish government in 1763, who travelled through South Arabia from Lohaiya to Mokhā, Ta'izz and Ṣan'ā', being more particularly engaged in geographical, ethnographical and natural history work, first reported, as the result of enquiries, the existence of old inscriptions in the ruins of Ṣafār (south-west of Yarīm) near Ṣan'ā' (*Beschreibung von Arabien*, Copenhagen 1772, p. 94), without having seen the text itself, except for a copy of an inscription which a Dutchman had sent him; after him the first knowledge of South Arabian inscriptions was brought to Europe by Seetzen, a native of Oldenburg, who, stirred by Niebuhr's information, copied inscriptions in and around Ṣafār on his return from Ṣan'ā' to 'Aden (1810). The copies sent by him to Europe of five short, unimportant, Sabaean texts were published in 1811 and, though at first not understood, formed the humble beginning of the science of Sabaean studies, the future importance of which was as yet quite unrealised. Further progress was made by Wellsted (1834/5: (discovery of the inscription of Ḥisn al-Ḡurāb on the Ḥaḍramūt coast and of Naḳab al-Ḥaḍjar), Cruttenden (1836: five short Sabaean fragments in Ṣan'ā'), both Englishmen, by Wrede (1843; but the report of his travels in Ḥaḍramawt and the copy of the Ḥaḍramawt inscription of 'Obne were only published in 1870 from his papers after his death by Maltzan) and others, among whom special mention must be made of Arnaud who in 1843 was the first European to visit Mārib and to pave the way for later more successful discoverers (ignored by Glaser, *Petermann's Mitteil.*, 1887, p. 27), and there as well as in Ṣan'ā' and Ṣirwāḥ prepared copies of 56 inscriptions in all, mainly short ones. A valuable addition to our knowledge was the acquisition of inscribed stones and bronze plates from 'Amrān by Choghlan (1860). Gesenius (1841), Rödiger (1841, 1842) and Oslander (1856, 1863/4) then gained renown by deciphering and elucidating the material found. The *Eben Safir* is only of importance as a description of Yemen; this is the Hebrew account of the travels of Jacob Saphir (i., 1861; ii., 1866) who went from al-Hodaïda via Ṣan'ā' to 'Amrān and then back to 'Aden; the book was first made generally known through D. H. Müller (*Burgen*, i. 6 sg.) and formed a kind of guide-book for Halévy. A new epoch in the study of inscriptions is marked by the rich results of the memorable journey of Jos. Halévy, who, one may say, was the first European since Aelius Gallus to succeed (in 1869) in travelling from Ṣan'ā' right up to the Wādī Naḍjran and entering the land of the South Arabian Dīfōf, the centre of the ancient Minaean country, and visiting several very ancient Arabian sites, rich in inscriptions, which so far no other European since him has seen. The con-

crete scientific yield of this journey of exploration, not sufficiently appreciated by his immediate contemporaries, consisted of 686 copies of inscriptions of which about 50 (some 30 Minaean) were fairly long (published in the *J. A.*, 1872), the most important addition to our store of inscriptions yet made, which, marking a tremendous advance on the initial stages, helped to lay the true scientific foundation for Sabaeen research and the knowledge of the sources for the study of the ancient history of South Arabia. Some new inscriptions were made known through the journey of Captain Miles (and Werner Munzinger) in the Wādī Maifa'at (1870). The travels of Heinrich von Maltzan (1870/1, in the coast regions of Yemen and Ḥaḍramawt), Millingen (1873, from al-Ḥodaida to Ṣan'a'), R. Manzoni (1877—80, between 'Aden, Ṣan'a' and al-Ḥodaida), Schapira (1879, from 'Aden to Ṣan'a' and district and back to al-Ḥodaida) and Harris's more recent *Journey through the Yemen* (London 1893) are not of interest from the epigraphical point of view but from the geographical; Manzoni's work and Maltzan's later contributions are also valuable for the study of dialects. The Austrian S. Langer (1882), who sacrificed his life to the spirit of research on his epigraphical journeys from al-Ḥodaida first to Ṣan'a', then to 'Aden, as did Seetzen before him and Huber after him, gained copies of 22 inscriptions (Nos. 19—22 only odd letters). Further details of the history of discovery in Arabia are given in Weber's monographs, *Arabien vor dem Islam*, p. 10 sqq. (which also contains information regarding the history of civilisation and religion, contents, alphabets and language of the inscriptions) and more especially his *Forschungsreisen in Südarabien bis zum Auftreten Eduard Glaser's* (*Der Alte Orient*, viii. 4, 1907) and Hommel's account in Hilprecht's *Explorations*, p. 693 sqq. (see also his *Chrestomathie*, p. 63 sqq. with bibliography). A new era in this branch of research was introduced by the Arabian travels of the Austrian Glaser whose epigraphic discoveries (in all over 2,000 inscriptions) far surpassed all previous efforts in this field. D. H. Müller's prophecy (*Burgen*, i. 340): "There will still be courageous men, who will place themselves in the service of science and undertake the exploration of the country and collection of inscriptions", was realised in Glaser in an undreamed-of fashion. On his first three journeys alone, (1882—1884 (from al-Ḥodaida to Ṣan'a' and from there three tours of exploration north and west from this neighbourhood), 1885—6 (from al-Ḥodaida to Ṣan'a' and from there to the south-east and east as far as 'Aden; exploration of the ruins of Zafār), 1887—8 (from 'Aden to Ṣan'a' and thence to Ma'rib, where alone he copied nearly 400 inscriptions, while Arnaud and Halévy together only got 44 copies mostly of small fragments), he enriched our knowledge by some 1032 inscriptions, by sketch maps and philological observations and some 616 Arabic manuscripts. A portion of the manuscripts was published by the French Academy (*C. I. S.*, IV, i.—iii.), numerous inscribed stones (mostly Minaean) are in London, others in Berlin (published by Mordtmann in 1893). The manuscripts for the most part went to Berlin and to the British Museum (see C. Rieu, *Suppl. to the Cat. of Arabic MSS. in the B. M.*, London 1894). Of his epigraphical discoveries special mention may be made of the Ḥadaḡān inscription, the great

Ṣirwāḥ inscription, one of the most important historical documents from South Arabia (on his fourth journey he brought back a further and perfect squeeze of it), and the two great inscriptions from Ma'rib relating to the bursting of the dam. His fourth journey was the most successful (1892—1894, from 'Aden to Ṣan'a', from which natives were sent out to prepare squeezes; among the new inscriptions were nearly 100 Ḳatabānī; linguistic studies; acquisition of 251 Arabic manuscripts). A portion of the treasures acquired for Vienna, a valuable collection of 39 inscribed stones, coins, numerous sculptures and other antiquities, was published by D. H. Müller. Further particulars are given by Weber in *Eduard Glaser's Forschungsreisen in Südarabien in Der Alte Orient*, x. 2, 1909 (cf. Hommel, *Explorations*, p. 717, 720 sqq.). Glaser could not make further use of the opportunity he still had for further journeys and discoveries because he no longer found the necessary comprehension of the importance of scientific work at the Ministry concerned. Immeasurable treasures were thus irrevocably lost to science.

Working on the epigraphic material that has been gradually accumulating since Halévy's time, Halévy, Praetorius, Mordtmann, D. H. Müller, Glaser and others (for details see *Bibliography*) have made important contributions to the elucidation of the language and contents of the inscriptions. As to later journeys of exploration in South Arabia, A. Defer's journey in Yemen in 1887 was only planned to study botany. L. Hirsch, who in 1893 was, so far as we know, the first European to visit Shibām, the modern capital of Ḥaḍramawt, and Tarīm, was only studying natural history, with topography and ethnography. Soon after him in 1893—4, J. Theodore Bent with his wife travelled in Ḥaḍramūt as far as Shibām and in 1895 in the frankincense country (Zafār to Mirbāt), likewise without being particularly interested in epigraphy. Carlo Landberg in 1896 took a squeeze and photograph of the already known inscription of Ḥiṣn al-Ḡurāb; the results of his enquiries made in 'Aden in 1895—97 regarding previously little known regions between Yemen proper and Ḥaḍramūt, particularly regarding Dathīna, 'Awāliḳ, al-Ḥaḡina and also regarding Baiḥān, Maryama, Raidān, Ḥarīb, Timna' and even Shabwa are given in his valuable work *Arabica* (iv. and v.). The South Arabian expedition of the Vienna Academy in 1898—9, which was also supported by the King of Sweden, only succeeded in reaching 'Azzān in the Wādī Maifa'at and did not get to Shabwa. While the epigraphical results of this expedition fell behind expectations, its members took the opportunity in 1899 of making linguistic and natural history researches on the island of Socotra (see *soḳoṭrā*) [G. W. Bury, who went to Baiḥān on behalf of the expedition, brought back from Ḳohlān (Ḳatabān) squeezes and photographs of inscriptions]. In 1902 W. Hein collected linguistic material in Gishin in Ḥaḍramūt on behalf of the Vienna Academy and at the same time collected information there and later in Vienna from natives regarding Ḥaḍramūt. His collected notes, published without any editing in 1914 after his death, contain much that is new and noteworthy. Hartwig Derenbourg was able from squeezes obtained by the French Academy to publish a few *Nouveaux textes yéménites inédits* in the *Rev. d'Assyr. et d'Arch. Or.*, v. 117 sqq.

Glaser's finds, epoch-making of their kind, are not yet completely published (a survey of the inscriptions discovered by Glaser was given so far as then known by Hommel, *Chrestomathie*, p. 59—62; see also Glaser, *Altjemenische Nachrichten*, i., 1908, 1 A sq.). The great work prepared by him on Saba' (announced, for example, in Hommel, *Explorations*, p. 722, and Weber, *Glaser's Forschungsreisen*, p. 15, on Glaser's authority) has not yet been published. The great mass of documents left by him (consisting of copies of about 1,000 inscriptions, of geographical and archaeological notes, diaries, sketches and maps), the importance of which may be summed up by saying that it is the first duty of Sabaean studies to arrange them methodically and publish them scientifically, was handed over to D. H. Müller to edit. But neither was he spared to publish this material. After his death in 1910, N. Rhodokanakis in Graz was given the task. The latter calls his treatise *Der Grundsatz der Öffentlichkeit in den süd-arabischen Urkunden* (S. B. Ak. Wien, clxxvii. Abh. 2, 1915; interpretation of inscr. Glaser N°. 890 = Halévy 49, Gl. 904 = Halévy 51, Gl. 1548/9 [Sabaean], Gl. 1606 [Katabānian] and Osiander 4, with systematic discussion of the problems of debt, taxation, ownership and legislation raised by the inscriptions) the first preliminary study to the "Corpus Glaserianum", the publication of which the Vienna Academy has in hand; he describes as a second preliminary study the first part of his *Studium sur Lexikographie und Grammatik des Altjemenischen* (S. B. Ak. Wien, clxxviii. Abh. 4, 1915; explanation of passages in the Habish inscription, Glaser 1076 and Gl. 480 [cf. above] and especially a grammatical essay on the so-called parasitic *k* in South Arabic, for the phonetic explanation of which he postulates a double accent in Minaeo-Sabaean; the appendix contains annotations to various inscriptions). Next came his *Die Bodenwirtschaft im alten Südarabien* (Ans. Ak. Wien, 1916, N°. xxvi., a survey of the results of the researches contained in the second part of his *Studien sur Lexikographie* etc.) and the second part itself (S. B. Ak. Wien, clxxxv. Abh. 3, 1917, discussion of Minaeo-Sabaean inscriptions relating to buildings, boundaries and irrigation, and of inscriptions relating to agriculture with explanatory notes on the dedication and erection of buildings, on legal questions relating to water supplies and the possession of land, on taxation and administration). The next three publications of Rhodokanakis contain hitherto unpublished Katabānian inscriptions: *Katabānische Texte zur Bodenwirtschaft* (S. B. Ak. Wien, xciv. Abh. 2, 1919, five inscriptions from the Glaser collection: edicts of Katabānian kings on the management of state properties, with a thorough investigation, into Katabānian economy and administration) and *Katabānische Texte zur Bodenwirtschaft*, Series 2 (S. B. Ak. Wien, cxviii. Abh. 2, 1922, three inscriptions with far reaching investigations, particularly as regards the third, Glaser 1693 [concerning date, locality and character of the language of the text] with observations on the Hamdānids and dynasties in South Arabia generally, and lastly *Die Inschrift an der Mauer von Kōhlān-Timna* (S. B. Ak. Wien, cc. Abh. 2, 1924, discussion of the inscription Glaser 1404 [remains of a building protocol], 1397 sq. [a criminal and taxation law] and, to explain the *mukarriḥ* title among the Katabā-

nians, still more texts); on the inscription Gl. 1005 sq. see *W. Z. K. M.*, xxxi. 22 sq. In *Katab. Texte*, i. 6, note 3, it is mentioned that O. Weber is preparing an abbreviated edition of the "work on inscriptions" left by Glaser. The work collecting all South Arabian inscriptions in which references are also given to earlier, less important publications, is Part iv. of the *Paris Corpus Inscriptionum Semiticarum (Inscriptiones Hamyariticas et Sabaeas continens)*, Tomus I, in four fascicles, 1889, 1892, 1900, 1908; of Tomus II the first two parts, 1911, 1914, have appeared; after the death of H. Derenbourg the editorship was taken over by M[ayer] L[ambert]; Tomus III will contain the Minaean and Katabānian inscriptions). The language of the inscriptions which may be divided into two main dialects, the Minaean and Sabaean, is discussed by Hommel in the *Grundriss*, p. 133 sqq., who includes under the Minaean, along with the Minaean royal inscriptions proper, the Katabān and Haḍramūt inscriptions (so also *Explorations*, p. 728 sq.). On the grammar of Minaeo-Sabaean (which he considers the oldest representative of the "Arabic section of the Western Semitic", of which we have coherent texts, *Grundriss*, p. 78 sq.) see his fundamental account in his *Chrestomathie*, p. 9 sq. (on the language see also earlier contributions by D. H. Müller, *Encycl. Brit.*, article *Yemen*, p. 740 (brief); Weber, *Arabien*, p. 15 sq. (popular); on the script see Osiander in the *Z D M G*, xx. 205 sq.; D. H. Müller, *Seh. Denkm.*, p. 105 sq.; Hommel *Chrestom.*, p. 3 sq., *Explorations*, p. 730, *Grundriss*, p. 145 sq. (Weber, *Arabien*, p. 13 sq., *Westasien*, p. 235) etc.; on the religion, Osiander in the *Z D M G*, vii. 463 sq.; D. H. Müller, *Enc. Brit.*, 741 (*Burgen*, ii. 1032); Hommel, *A. A.*, i. 156 sq., *Explor.*, p. 733 sq., *Grundriss*, p. 85 sq., 143; cf. in this *Encycl.*, i. 377 sqq. (Weber, *Arabien*, p. 18 sq. [popular]; Grimme, *Mohammed*, p. 29 sq.); on symbols of deities on the monuments Grohmann (see below, *Bibliography*).

Important material is also yielded by the Minaean, Lihyān, Nabataean and Ḥamūdān (proto-Arabic) inscriptions in North-Western Arabia, which Doughty discovered in 1876—78, and the texts of the copies prepared by Euting (1883: 4) — in some cases for a second time, after Doughty and Huber — of the Minaean and Lihyān inscriptions of al-ʿUlā (published by D. H. Müller, *Epigraphische Denkmäler aus Arabien*, 1889; the Minaean have again been published by Mordtmann, *Beiträge*, 1897).

One of the principal questions raised by the sources for the history of ancient Saba' is what is known as the Minaean question, i. e. the relation in order of time of the inscriptions of the Minaean kings to the Sabaean and with this the relation of the two kingdoms to one another. Working on the material available just before Glaser's travels, D. H. Müller (*Burgen*, ii. 935 sq., 981 sqq., 985 sqq.) had for the first time attempted to prepare a list of Sabaean rulers (cf. Hartmann, *op. cit.*, p. 133 sq., 137 sq.) and divided the history of Saba' into three periods (a survey is given also in the article *Yemen* in the *Encycl. Brit.*). These periods are known as 1) the *Mukarriḥ* period (the pronunciation *Mukarriḥ* selected by him and afterwards retained of the word *m-k-r-ḥ*, the vocalisation of which is uncertain, the name of the priest-kings, is not to be used;

others read *mukarrab*, *makrub*, *makrib*, plur. *makārib*; see Mordtmann, *Anzeige*, *Z. D. M. G.*, xlv. 189; Glaser, *Abessinier*, p. 65; Hommel, *A. A.*, p. 134; cf. above i. 399 sq.; Hartmann, *op. cit.*, p. 132, 599 etc.); 2) the period of the kings of Saba', and 3) the period of the kings of Saba' and Raiddān. According to him, the beginning of the kingdom of Saba' would be placed in the eighth century B. C., to which period also belongs the mention of the Sabaeen Iti'amar in the Sargon inscription, and its end in the first century A. D. While the chronology of the Sabaeen kingdom and its dynasties may be laid down with an accuracy that is fairly satisfactory, the question of the age of the Minaean kingdom is incomparably more difficult to settle, because there is no clue available for the definite dating of the inscriptions of the Minaean kings. In their attempts to arrange also the Minaean kings Mordtmann, *Z. D. M. G.*, xlvii. 407 sq., Weber, *Studien*, p. 44 sq. and Hartmann, *op. cit.*, p. 126 sq. (cf. also Hommel, *A. A.*, p. 26, *Chrestomatie*, p. 90, *Grundriss*, p. 136) have come to conclusions essentially different from that reached by D. H. Müller (*Burgen*, ii. 1021 sq.) before them. The latter thought that the two kingdoms of Saba' and Ma'in existed side by side with one another and were rivals (p. 1031). In direct opposition to this view Glaser (in 1889) in the first part of his *Skizze* argued that the Minaean kingdom preceded the Sabaeen in time and was destroyed by the latter which thereupon assumed the hegemony over South Arabia. Bearing in mind the number (about 29) of the names of Minaean kings so far discovered and a supposed duration of their rule of about 750 years, he was forced to put the beginning of Minaean rule back before 1500 B. C., indeed, he even went back as far as 2000 B. C. (i. 55). In several passages of the second volume of his *Skizze* and in later publications he again comes back to the subject of his Minaean theory. He claimed to have proved that the Minaean inscriptions date far back into the second, probably even the third, millennium B. C. (ii. 110; cf. 330). He had no misgivings about supposing that we have to take the Minaean kingdom back to the beginning of the Hyksos period, i. e. the twenty-second century B. C., Glaser's theory was defended by Hommel (first in the *Beilage zur Münchener Allgem. Zeitung*, 1889, N^o. 291, and in his later works, e. g. in the *A. A.*, p. 2 sq., 10, 40, 235, in the *Altisrael. Überlieferung*, p. 77, in his *Chrestomathie*, p. 2 (p. 86 further bibliographical references), in *Explorations*, in the *Grundriss*, p. 134, 150, in his *Gesch. des alten Morgenl.*, p. 106, 123, 148, in this *Encyclop.*, i. 399 sq., also notably by Winckler (*M. V. A. G.*, 1898, p. 19, 43 sq.; 1906, p. 89 sq.) in his *Geschichte Israels*, his *Altorientalische Forschungen*, in *K. A. T.*, p. 140 sq., 150 and in Helmolt's *Westasien*¹, iii. 247 sq.) and by Weber (in his monographs [already mentioned], in *Der Alte Orient* and in his edition of Winckler's *Westasien*, p. 235 sq.), Grimme, *op. cit.*, p. 16 sq. and Benzing, *Geschichte Israels*, p. 16. H. Derenbourg, *Nouveau mémoire sur l'épigraphie minéenne*, Paris 1895, p. 7 also puts the Minaeans before the Sabaeans.

A survey of the essential points in the lively controversy raised by Glaser's bold proposals has been given by Weber, *Studien*, i., and he has at the same time collected everything that seems to

support Glaser. Immediately after the appearance of the first part of Glaser's *Skizze*, Halévy raised objections to this Minaean theory; D. H. Müller then reiterated his view (*Beilage zur Münch. Allgem. Zeitung*, 1890, Nov. 24 and 31; *W. Z. K. M.*, viii. 6, 161). The following also declared themselves against Glaser: Mordtmann (*Anzeige*, p. 182 sq.; *Z. D. M. G.*, xlvii. 400; *Beiträge*, p. 105 sq., 115); Sprenger, *Bemerkungen*, p. 502 sq.; E. Meyer, *Geschichte d. Altertums*, ii. 382; Lagrange in the *Rev. bibl.*, 1902, xi. 256 sq.; Lidzbarski, *Ephemeris f. semit. Epigraphik*, ii. 101 sq.; Hartmann, *Z. A.*, x. 25 sq. and in his main work, p. 4, 131 sq.; Huart, *Geschichte der Araber*, i. 46 sq. etc. Meyer further pointed out that all previous assumptions regarding the history of the Semitic alphabet would be upset by Glaser's placing the Minaean inscriptions in the second millennium B. C. We can hardly place the origin of the Phœnician alphabet before 1000 B. C.; the date of origin of the Minaean script, which is characterised by the regular, almost technical formation of geometrical figures, is certainly not earlier. This seems at once to take the ground from Glaser's theory. We must describe the dating of this alphabet to 2000 B. C. (Hommel, *Grundriss*, p. 109, 146; Weber, *Westasien*, p. 163; cf. Hommel, *Explorations*, p. 730) or even "at the latest far back into the third millennium" (Weber, *Arabien*, p. 15) as a quite improbable hypothesis, in spite of all that has been ascertained in recent time regarding the oldest form of the Hebrew alphabet. Nor have the speculations regarding the South Arabian epigraphy which have been renewed by the discovery of what are known as the Kenite Sinai inscriptions led to anything. Against the views of Hommel, Weber, Winckler, etc. Huart also says regarding the supposed age of the alphabet that the date 1500 is certainly much too high for the period of Minaean rule.

Graeco-Roman tradition also affords arguments on the Minaean question, notably the above quoted testimony of Eratosthenes in Strabo, xvi. 768, which has already been cited against Glaser by Halévy, D. H. Müller and others and of which Mordtmann has said that he cannot see how this passage is to be explained away. Weber, *op. cit.*, p. 9 betrays the precariousness of his case when he says that he must assume without giving any reason that Eratosthenes was probably "mistaken"; i. e. in his account true and false, past and present conditions are confused. Glaser, *op. cit.*, p. 15 had previously sought to dispose of the contradiction between his views and the clear evidence of Eratosthenes by asserting without proof that the latter was wrongly informed. For the interpretation of this passage, for suspecting which neither Glaser nor Weber give any ground of proof or probability and, indeed, none can be given, it is decisive that according to it all four leading South Arabian peoples — including, of course, the Minaeans whom our author mentions first, as well as the Sabaeans and the other two — were under absolute rulers (*μοναρχοὺνται*). The fact that Eratosthenes gives for the time of his authority irrefutably the same kind of constitution, namely the regal, for Minaeans and for Sabaeans, cannot be disposed of by any artifice. It also shows what value there is in Glaser's assertion (Weber, *op. cit.*, p. 7 sq.) "that the classical authors nowhere mention a kingdom, but always only a land of Minaea", or in Winckler's

(*op. cit.*, p. 45) statement that between 500 and 200 B. C., there were no Minaeans in North Arabia because there never had been any at any time. Grimme's doubts (*op. cit.*, p. 17) as to whether the Minaeans of the Greeks are the people in question in the inscriptions are also unfounded.

Against Glaser's theory the circumstance is also decisive (cf. Hartmann, *op. cit.*, p. 131 sq., 136) that, as we can deduce with absolute certainty from the mention of kings and kingdoms together in the inscriptions, there were kings of Ma'in and kings of Saba' reigning alongside of one another. To Glaser's argument that the two kingdoms practically never mention each other in their inscriptions, even Weber (*op. cit.*, p. 18) was forced to confess that "the Minaeans actually brought themselves on two or three occasions to break the mysterious silence", and the Sabaeans likewise. But this means confessing the impossibility of holding this theory in any form.

Glaser's view that the Minaeans had already begun to decline soon after the Hyksos period (*op. cit.*, p. 451) and had sunk into barbarism towards the end of the first century B. C. (p. 22, 69, 93, 95, 232), or were actually an extinct people (Weber, *Arabien*, p. 31) is disposed of by the statement of Artemidoros (Strabo, xvi. 776) and extracts by others from Agatharchides (§ 87, 97, in the middle) on the commercial activity and the wealth of the Minaeans and further by Pliny's statement regarding their independent position alongside of Saba' and their competition with the Sabaeans in the frankincense trade (see above), still more palpably by the significant fact that Ptolemy calls the Minaeans alone "a very great people" out of all the peoples of Southern Arabia.

The inscription of the Minaean sarcophagus of Gize, which shows that Minaeans were still supplying spices for the Egyptian temples in the Ptolemaic period, and the Minaean and Greek inscription on Delos of the second century B. C., which records the erection of an altar to Minaean gods, are likewise, as Praetorius has rightly observed (*Z D M G*, lxiii. 220), unfavourable to Glaser's theory, and, agreeing with the Greek and Roman evidence, are proofs that the people, language and culture of the Minaeans survived into the second century B. C. and certainly to a still later period.

The palaeography and grammar of the inscriptions likewise give no support to the Minaean theory. D. H. Müller was the first to point out that of the Sabaeen inscriptions those written boustrophedon belong to the oldest period of Sabaeen history and at the same time show the earliest forms of letters. Contradicting Hommel's (*A. A.*, p. 22 sq., *Chrestomathie*, p. 2, 6) suggestion that the Minaean inscriptions are older in grammar and epigraphy than the Sabaeen, Mordtmann (*Beiträge*, p. 107) held that the Minaean inscriptions that have survived to us are later than the oldest Sabaeen texts and older than the Sabaeen texts of the later period (*ibid.* p. xi., note 2) and that Hommel's deductions from the palaeography of the Minaean inscriptions were very wide of the mark.

He also insisted (*op. cit.*, p. 106, *Z D M G*, xlvii. 400) that the fact that only one of the extant (or so far known) Minaean inscriptions is written boustrophedon, is not very much in favour of the claim for a very high antiquity for these

inscriptions in contrast to the Sabaeen. It must, of course, be remembered that there are texts written boustrophedon which are later than normal ones written from right to left. But although the Minaean alphabet may show occasional less developed forms, it is recognised (e. g. by Weber, p. 11) that the forms of the Minaean letters on the whole agree perfectly with the Sabaeen of the oldest period. In spite of the archaic features of the Minaean language in comparison with the Sabaeen (on the dialectal distinctions between the two see D. H. Müller, *Burgen*, p. 1009; specially thorough, especially from the lexical point of view, is Mordtmann, *op. cit.*, p. 107 sq., *Z D M G*, lii. 400; Hommel, *Grundriss*, p. 133, note 3), Hommel, *A. A.*, p. 23, asserted that the Minaean inscriptions might nevertheless be later than the Sabaeen or contemporary with them, as in them older forms — as happens elsewhere — might have survived into the latest period (see also Mordtmann, p. 115 on the more conservative retention of the older vocabulary in Minaean and (p. xi.) of archaic forms of the script); we need not take account of mixed forms of earlier and later origin occurring in one and the same text.

None of the grounds on which Glaser bases his theory are convincing, (they are detailed in Weber, *op. cit.*, p. 7). That Sabaeans are so rarely mentioned in Minaean texts and Minaeans even more rarely in Sabaeen sources, facts on which Glaser and his supporters lay so much stress, is explained partly from the relations of the two rivals (D. H. Müller, *Burgen*, p. 1031; Hartmann, *op. cit.*, p. 135), partly from the fact that the "subject matter of the inscriptions, which are not in any sense annals, afford little opportunity for mentioning such matters" (Mordtmann, *op. cit.*, p. 115, note 1), as the texts preserved from this period deal mainly with the buildings and religious matters, being occasional or ad hoc inscriptions, and only rarely touch on foreign affairs (Lidzbarski, *op. cit.*, p. 102). But these few references are quite sufficient to settle the main question. It is noteworthy that, although Grimme (*op. cit.*, p. 17) still proposed to put the date of the earliest Minaean kings far beyond 1500 B. C., other champions of this theory, in calculating the earliest initial date for the Minaean kingdom, have now gone in the other direction and put it much below Glaser's figure. While Winckler in the first edition of *Helmolt's Westasien*, p. 244 still held that the Minaean period could hardly have begun after 1500 B. C. (cf. p. 245), Weber significantly wrote in the second edition in the same passage (p. 235) "hardly after 1200 B. C." (cf. p. 237, "from about 1200 B. C."). Hommel, although he still put the collapse of the Minaean kingdom about 650 B. C. (*ibid.*, p. 396), and, according to him, the South Arabian (p. 394) inscriptions "begin from at least 800 B. C., but more probably many centuries earlier", also later (here above i. 399 sqq.), says that Glaser's assumption would presuppose the placing of the Minaean kingdom from 1200 to 700 B. C. at least (in *Explorations*, p. 729 he still puts it at 1400—700 B. C.), and that at most it may be granted that "the oldest Sabaeen inscriptions were contemporary with the latest Minaean" (above i. 399 sqq.). On Weber's clever defence, Lidzbarski (p. 101) says that it will hardly gain further adherents for the Minaean theory and Weber himself has to confess (*Glaser's*

Forschungsreisen, p. 30) that "no obvious proof for Glaser's view has yet been produced".

Against the theory, in perfect agreement with the Greek and Roman authorities and the ancient South Arabian sources, most readily agreeing with them, and following D. H. Müller, we must insist that the kingdom of Ma'in existed contemporaneously with that of Saba' and at the very earliest began in the eighth century B.C. (see, for example, Mordtmann in *W. Z. K. M.*, viii. 371; Hartmann, *op. cit.*, p. 132 etc.). Its end did not come about 230 B.C. (so Hartmann, *op. cit.*; similarly Mordtmann, *Anzeige, Z D M G*, xlv. p. 184 and *Beiträge*, p. 106: "soon after Eratosthenes"), but it existed at least down to the second century B.C. Saba's rivalry first with Ma'in (and Ḳatabān) as well as with the Ḥimyar was of far reaching significance for its history. The period of transition from its oldest period, the so-called *mukarrib* period, the period of the priest-kings, and the next epoch, whose rulers residing in Ma'rib, contemporaries of the kings of Ḳatabān and Ḥaḍramūt, bear the title "kings of Saba'" (expressing the emancipation of the kingship from the priesthood) and whose beginning may be placed about 500 B.C., is represented for us by the great Širwāḥ inscription (Glaser, N^o. 1000). The following (the Ḥimyarite) period, that of the "kings of Saba' and Dhū Raidān" (from the hill or ancestral citadel of Raidān; the name occurs in Sanskrit also as *Duryōdhana* [in the second book of the *Mahābhārata*]) and the last period (from 300 A.D. to the end of the independence of Ḥaḍramūt, that of "the kings of Saba' and Dhū Raidān and Ḥaḍramūt and Yemnat") have been sketched above.

At the period of the rise of Islām, Saba' was beginning to disappear from the memory of the Arab world. For Islām, which kindled new wars in the land and brought about the final collapse of the ancient kingdom, the decline of which had been begun by the Persians and Abyssinians, Saba' soon became an echo of the past, indeed, the very essence of the pre-Muḥammadan period, with which only scholars still concerned themselves. The new creed had the greatest interest in obliterating all recollection of the pagan period, not only in the stone monuments which still survived the natural weathering — these were destroyed to provide material for new buildings, or to be burned for lime or sometimes out of sheer vandalism — but also in literature, and even in consigning the ancient language to oblivion. This explains why, as Sprenger (*op. cit.*, p. 244) rightly remarks, it would be useless labour to seek for any reliable information regarding the Sabaeans in Arabic sources. The relative value of the various sources for our knowledge of Saba' was estimated with equal accuracy by the most successful discoverer of inscriptions (Glaser, *Skizze*, ii. 159) in his verdict that it was not the legendary tradition of the Arabs, containing very little matter of value and usually misleading, and not the poetry of the time shortly before and after Muḥammad, which would give us a true picture of the past, but "simply and solely the ancient inscriptions and the few statements in the classical authors". The relatively scanty references in Arabic authors may be divided for our purpose into two main groups. The one consists of valuable geographical and historical statements regarding architectural remains of Saba's past and details

of ancient Sabaeen history, including archaeological matter and the other far less valuable legendary elements, which survived in tradition after the disappearance of Sabaeen culture and which also permeated the quasi-historical references to the affairs of the Ḥimyar state which lay nearer in point of time. The supreme authority for information of the first category, who, of all Muslim authors, gives us the most numerous and most valuable items of information regarding Saba', is al-Ḥamdānī whose "Description of the Peninsula of Arabia" is our main literary source for the geography of Arabia in general and who (he was a Yemeni, a native of Ṣan'ā), out of patriotic interest in the old buildings and other antiquities of South Arabia that still existed in his time, has collected everything associated with them, often, indeed, already interwoven with legend, in his *Ikhl*, a history of Yemen and a description of its antiquities. The part of the eighth book of the *Ikhl*, which still exists, describing the citadels was, edited for the first time (Arabic text and German translation with explanatory notes) by D. H. Müller (*Die Burgen und Schlösser Südarabiens nach dem Ikhl des Ḥamdānī*, S. B. Ak. Wien, 1879, xciv. 335 sqq. and xcvi. 1881, p. 955 sqq.), who added additional notes from the tenth book, which deals with the genealogy of the Ḥamdān, as well as illuminative passages from the *Ṣifa Djasirat al-'Arab*. Part i. gives in the first place al-Ḥamdānī's account of Ḡhumdān and Ṣan'ā; al-Ḥamdānī quotes verses on Ḡhumdān and then gives the story of the foundation of the building by Šem and South Arabian traditions regarding Ṣan'ā; he goes on to give further information regarding the temperature of the country, the preservation of food in it; details regarding the topography of Ṣan'ā, the ruins of the citadel of Ḡhumdān, and quotes verses relating to it, which reflect the legends clinging to the castle as a wonder of architecture. He next deals with *Šhibām-Yaskhum*, the old monuments and great palaces in *Šhibām*, *Šhibām Bait Akyān* (cf. the descriptions in the *Djasira* and *Yākut*, *Mu'djam*, iv. 437, iii. 248 sq.). Next comes the district of *Ḍahr*, *Bait Ḥanbaṣ* (cf. al-Bakrī, ed. Wüstenfeld, p. 198 and the *Djasira*), *Ḥadaḳān* and *Riḍā'*, *Širwāḥ*, one of the most celebrated castles of Yemen (verses are quoted), *Ḡhaimān* (the Ḥimyar tradition regarding As'ad Tubba' is quoted, given in full in Kremer, *op. cit.*, p. 86 sq.), *Dāmigh*, *Zafār* and other citadels. This is followed by a short list of the citadels of *Sarw* (highlands of the Ḥimyars) and *Ḥaḍramūt*. Al-Ḥamdānī's description of Ma'rib and Saba' is important for its subject matter, on the basis of which Müller (in Part ii.) endeavoured on several points to throw a brighter light on ancient Saba' and in particular to show that it is the inscriptions which must be used for the reconstruction of the lists of Sabaeen kings, rather than the statements of Arab tradition. Al-Ḥamdānī's description deals with the state of the remains of the dam, the inundation which spoiled the dam, the citadels of Ma'rib (with quotations from the poets). Al-Ḥamdānī's unhistorical statements regarding the builder of the dam (*Luḳmān b. 'Ād*, a mythical personage) are corrected by the evidence of inscriptions which mention *Itiḥamar Baiyin* as the builder. It is worthy of note that Arnaud's description of the remains of the dam and Halévy's report agree with al-Ḥamdānī's account in the main details. Of

the Yemenī citadel of Rawḥān (between al-Djōf and Ma'rib) al-Hamdānī says that it at one time belonged to the family of the Naṣḥk (on which he also gives information in the tenth book; following him also Naṣḥwān, *Shams al-ʿulūm*; Müller, *op. cit.*, ii. 1001, note 3). In the Minaean area he mentions the citadels of Barākīsh and Maʿīn (with quotations from the poets).

The *Diasira* also contains geographical details regarding the territory of Saba', which, however, no more enables us to form a comprehensive impressive picture than the scattered notices in later Arab geographers, because they consist almost entirely of isolated names; and it is difficult to form a general idea from them. D. H. Müller, in editing the text (2 vols., Leiden 1889—1891) had therefore to struggle with extraordinary difficulties. Glaser, who, like Sprenger before him, had made very great use of al-Hamdānī, was later able to test the readings of this edition on the spot for the areas in which he travelled from his own observations and the evidence of natives.

The few memories of the history of the Sabaeen period that have survived in the prose or poetic traditions of the Arabs are beyond the range of our consideration, as they have more or less assumed the form of legend. A. v. Kremer, *op. cit.* (cf. his *Altarabische Gedichte über die Volkssage von Jemen*, Leipzig 1867), has collected the essential matter on the subject. In tradition also we find analogies to the Greek stories (cf. e. g. von Kremer, p. 150 on Dhū Fa'īsh). The building of the dam at Ma'rib or at least its improvement was attributed to Queen Bilkīs (cf. above); legends also became associated with the inundation. In the division of the pre-Muḥammadan history of Yemen in the Arab historians into three periods (the first down to Tubba' Abū Karīb, the second to Dhū Nuwās and the third to Islām) still reflects the actual division into Sabaeen, Ḥimyarite and Abyssinian-Persian epochs (Müller, *Burgen*, i. 338). Even the lists of Ḥimyarite kings preserved by these historians have no scientific value and at most give us a few old names which were adopted by the genealogists, but can have no claim to historical accuracy. Besides, these lists of kings refer only to the later period of Ḥimyarite history (*ibid.* ii. 981, 997).

More important for us are the items of information found in Muslim literature regarding the social and economic life of ancient and more modern Saba', which link up with the inscriptions and Graeco-Roman sources. The finds made in the country itself are in harmony with the various classical literary sources, which agree in showing that the Sabaeans attained the greatest importance of all Arab peoples of the pre-Muḥammadan period, in particular of the four leading peoples of South Arabia who were known even to the Greeks; these still extant monuments of the once highly developed civilisation, to which Sabaea mainly owed its historical importance, consist of the inscriptions found since Arnaud's journey of exploration, sculptures and remains of colonnades, palaces, temples, city-walls, towers, public works, especially water-works etc., which confirm the brilliant picture of Sabaeen culture given by Agatharchides and the writers after him (see above) and at the same time show that even the legends of Islāmic tradition concerning the former glory of the Ḥimyar kingdom have a historical basis.

Striking evidence of this in Arabic literature is the above mentioned description of Ghumdān in al-Hamdānī and the poetic references to this much admired citadel (see Müller, *Burgen*, i. 345 sqq.) as well as to other citadels in Saba', e. g. Salḥīn and Bainūn. Agatharchides's remarks on the splendid buildings of the kings and private individuals in Saba' and the descriptions of Sabaeen castles by the Arabs are confirmed by the testimony of the inscriptions, which to a great extent commemorate the building of houses (palaces) and fortifications. Of public works built to assist agriculture like barriers and dams, the most celebrated was the dam of Ma'rib. The ancient South Arabians achieved great things in the way of irrigation works in view of the dependence of their agriculture on artificial irrigation. In the South Arabian inscriptions these are frequently mentioned (cf. the references collected by Hartmann, *op. cit.*, p. 398 sq. and the discussions in Rhodokanakis, *Studien*, ii. (e. g. p. 78 sq. etc.). Cisterns of the Ḥimyar period may still be seen in South Arabia to-day.

This civilisation, on which since Arnaud's time the finds and observations of Halévy and especially of Glaser have thrown new light, owed its rise to the industry and commerce of the Sabaeans, in particular to the cultivation of frankincense. The land offered all the necessary conditions for its cultivation. According to al-Hamdānī (*Diasira*, p. 51, 8) Yemen was called *al-Khadra'* "the green", on account of its wealth in trees, fruits and crops (cf. Ibn al-Faḥīh, *Kitāb al-Buldān*, BG A, v. 34). Even Agatharchides's description of the richness of the flora of Saba' is quite satisfactorily explained by the natural formation of the country. The healthy, temperate interior of Yemen and Ḥaḍramūt produces a rich vegetation on the slopes of the hills and in the valleys. Accounts of modern journeys also bear testimony to the fertility of the soil of Yemen, and also to diminution in its woods. Al-Mas'ūdī's description, based on older authorities, of Saba' as "the most luxurious and most fertile part of Yemen, rich in gardens, plantations and meadows", with a "splendid climate" (cf. Kremer, *op. cit.*, p. 10, note 1) is in close keeping with Agatharchides's praise of the wealth of Saba'.

The uniformity of the temperature in the region of Ṣan'ā' is emphasised by al-Hamdānī (Müller, *Burgen*, i. 343). Glaser and other travellers record that the temperature of the higher regions of Yemen is temperate and favourable to vegetation.

A parallel to the statement of Agatharchides that the Sabaeans provided the Ptolemies and Syrians with gold and the Phoenicians with costly wares of the most varied kinds, is found in the Biblical passages already mentioned, relating to the Sabaeen exports of frankincense, gold and jewels to Egypt and Syria. South Arabia from the earliest times had been the very land of frankincense and the Sabaeans in particular, as inhabitants of the most fertile parts of the southern half of Yemen and owners of the frankincense country, were naturally destined to trade especially in spices. The idea — expressed in Strabo (xvi. iv. § 19, 22) — that the trade in spices was the source of the wealth of the Sabaeans is already found in I Kings, x. 1 sq. Adana was the great centre for trade with India and Egypt (Εὐδαίμων Ἀραβία,

Periplus, p. 26; Ptolemy, vi. 7, 9; Mela, iii. 8, 6; Pliny, vi. 159; Philostorgius, *Hist. eccl.*, iii. 5), and 'Aden [q. v.] still is "the natural centre of the circle formed by Africa, Arabia, Mesopotamia and India" (W. Schmidt, *Das südwestl. Arabien*, Frankfurt a. M. 1913, p. 101, who, like Mommsen, *Römische Geschichte*³, v. 611) wrongly speaks of a destruction of Adana by the Romans in the first century A. D.). The references in inscriptions to sacred vessels of gold and silver, mediaeval finds of gold (al-Hamdānī, *Djazīra*, p. 79; cf. Müller, *Burgen*, ii. 1008, *Südarabische Studien*, p. 135 sq., Sprenger, *op. cit.*, p. 56 sq.), modern gold-washing, reported by Halévy and Glaser, and lastly the archaeological finds of Sabaean silver and gold coins and gems (on gems see al-Hamdānī, *op. cit.*; Müller, *Burgen*, i. 366, 374, *Südarabische Altertümer*, Vienna 1899; Glaser, *op. cit.*, p. 367; Landberg, *Arabica*, v. 128; on finds of coins see Schlumberger, *Le trésor de Sanā'*, Paris 1880; D. H. Müller, *Südarabische Altertümer*, Vienna 1899, pp. 65—78, Pl. xiv; E. S. G. Robinson in the *Numismatic Chronicle*, 1923, pp. 365—368; G. F. Hill, *Brit. Mus. Cat. Coins of Arabia*, 1922, *passim*; do., *Ancient Coins of South Arabia*, in the *Proceed. of Brit. Acad.*, London 1915), all corroborate the accounts preserved in Diodorus from Strabo (following Agatharchides) of gates, walls, ceilings, pillared walls of Sabaean houses embellished with gold, silver and jewels, and of the gold and silver drinking vessels and other valuable household utensils and (the above-mentioned) Greek, Roman and Arabic literary references to the occurrence of natural gold (and silver, according to al-Hamdānī [cf. Sprenger, *op. cit.*, p. 58, 283 sq.] and other sources, also to modern authorities [*ibid.*, p. 158]).

Research has recently been devoted to the economic life of ancient South Arabia also. Rhodokanakis was the first to deal systematically with economic and the associated legal questions from the inscriptions (*Die Bodenwirtschaft in Studien*, vol. ii., and in his later [above mentioned] articles). From these studies it is clear that there existed in ancient South Arabia a strict system of regulation and administration of agriculture, dictated by national interests, especially a strict regulation of the distribution of water and of the actual tilling of the soil, and we gain an insight into a strictly regulated organisation of labour, into conditions of ownership and legal views, into the economic organisation of the state and of the temples. Historically important is the fact that the system of land administration and the constitution were (in the main at least) the same in all ancient South Arabian states.

Rhodokanakis's investigations into the economic conditions inspired A. Grohmann to his researches the results of which he has given in his work already mentioned (an earlier specimen was given in his *Die altorientalische Agrarwirtschaft* in the *Berichte des Forschungsinstitutes für Osten und Orient*, ii. Vienna 1918, p. 34 sq.). It deals with the land (geology, climate, water-supply), population, indigenous products (especially aromatic plants), mineral wealth, hunting, cattle-rearing and agriculture. Especially valuable are the many references from inscriptions and literary sources and from records by travellers (including works by Glaser still in manuscript). Grohmann gave himself a much wider subject than W. Schmidt, who

laid most stress on economic geography in his work (above quoted) and writes with special knowledge on modern trade and commerce; his historical observations suffer from the fact that he is not an Orientalist.

Bibliography: Of the literature to be

consulted, the sources have already been quoted in the article, especially the inscriptions (the main collection is the *Paris Corpus Inscript. Semit.*, iv) and the principal historical, geographical and linguistic works, Sprenger, *Geographie*; D. H. Müller, *Burgen und Schlösser*; Hommel, 1) *Aufsätze und Abhandlungen* (3 parts, 1892—1901), 2) *Chrestomathie*, 3) *Explorations in Arabia*, 4) *Grundriss*; Glaser, *Skizze*, ii. (Part i. of the year 1889 was published privately); J. H. Mordtmann-D. H. Müller, *Sabäische Denkmäler*, Vienna 1883; J. H. Mordtmann, *Beiträge zur minäischen Epigraphik (Semitist. Studien*, ed. by C. Bezold, part 12, Weimar 1897); M. Hartmann, *Die arabische Frage*; Otto Weber's monographies (on Arabia and journeys of exploration in *Der Alte Orient*) and *Studien zur südarabischen Altertumskunde*, i—iii., *Mitt. VAG*, 1907); Rhodokanakis, *Abhandlungen*, also Kremer's two works and Landberg's *Arabica*, Leiden 1897, 1898; and of Arabic literature al-Hamdānī's *Ikhlāl* and *Šifa Djazīrat al-ʿArab* (in D. H. Müller's edition). An almost complete bibliography of the antiquities of South Arabia (including Soḳoṭrā) from 1774 to 1892 was given by Hommel in his *Chrestomathie* (p. 63—88) and a continuation (down to 1907) by Weber (*Studien*, iii., 1908, where on p. 70 he promised supplements to Hommel; some are given below). Here we must confine ourselves to quoting books and articles which in their succession form milestones of progress in the investigation of the land and people of Saba', and to more recent literature (since 1908) and for the hundreds of special articles, mainly linguistic in their nature, and for the publication and interpretation of separate inscriptions we must refer the reader to these two collections and to the reviews in the *Z. D. M. G.* (from 1908 onwards). Of travellers' narratives we may here mention: *Auszug aus einem Briefe... Seetzen's an Herrn v. Hammer* (with 1 plate) in the *Fundgruben des Orients*, ii. Vienna 1811, p. 275 sqq.; J. R. Wellsted, 1) *Account*.... (1 plate), *JASB*, iii. (1834), 554 sq., 2) *Narrative of a Journey... to the ruins of Naḳab al-Ḥajjar* (1 plate) in the *J. R. Geogr. Soc.*, 1837, vii. 20 sqq.; do., *Travels in Arabia*, London 1838; Wellsted's *Reisen in Arabien*, Germ. edit. etc. by E. Rödiger, Halle 1842; Carter, *Transactions of the A. S. B.*, 1834; C. J. Cruttenden, 1) *Narrative of a Journey from Mokhā to Šanā'* (1 plate), *J. R. Geogr. Soc.*, 1838, viii. 267 sqq., 2) *Journal of an Excursion to Šanā'*..., *Proceed. of Bomb. Geogr. Soc.*, 1838; P. Botta, *Relation d'un voyage dans l'Yémen*, Paris 1841; Th. S. Arnaud, *Relation d'un voyage à Mareb*, *J. A.*, 1845, series 4, vol. v. 211 sqq., 309 sqq. (publ. by Mohl; see below under Fresnel); *Mission dans l'Yémen, Rév. d'Egypte*, i., 1894, ii., 1895; F. Fresnel, *Notice sur le voyage de M. de Wrède dans la vallée de Doān*, *J. A.*, 1845, series 4, vol. vi. 386 sqq.; *Lettre de M. de Wrède sur son voyage en Arabie*, *Bull. de la Soc. de Géogr.*, 1845, series 3, vol.

iii. 41 sq. (from his papers: *A. v. Wrede's Reise in Hadhramaut*, by H. v. Maltzan, Braunschweig 1870, with plate); K. Ritter, *Erdkunde*, viii., Berlin 1847 (comprehensive survey based on all then known accounts of Arabia); *Eben Safir* (see above); J. Halévy, 1) *Rapport sur une mission archéologique dans le Yémen*, *J. A.*, 1872, series 6, vol. xix. (*Itinéraire*, p. 8 sqq., *Classement des inscriptions*, p. 60 sqq., *Inscriptions Sabéennes*, p. 129 sqq., *Traduction*, p. 489 sqq.), 2) *Voyage du Nedjran*, *Bull. de la Soc. de Géogr.*, 1873, series 6, vol. vi., 1877, vol. xiii.; S. B. Miles and W. Munzinger, *Account of an Excursion into the Interior of Southern Arabia*, *J. R. Geogr. Soc.*, 1874, xli.; H. v. Maltzan, *Reise nach Südarabien*, Braunschweig 1873; Ch. Millingen, *Notes of a Journey in Yemen*, *J. R. Geogr. Soc.*, 1874, xlv.; K. Manzoni, *El Yemen, Tre anni nell' Arabia Felice*, Rome 1884; H. Kiepert, *Schäpiras Reise in Yemen in Globus*, 1880, xxxviii. 183 sqq.; S. Langer, *Reiseberichte aus Syrien und Arabien*, Vienna 1883; E. Glaser, 1) *Meine Reise durch Arhab und Häschiid*, *Petermanns Geogr. Mitt.*, 1884, xxx. 170 sqq., 204 sqq., 2) *Von Hodeida nach San'a*, *ibid.*, 1886, xxxii. 1 sqq., 33 sqq., 3) *Über meine Reisen in Arabien*, *M. G. G. W.*, 1887, p. 18 sqq., 77 sqq., 4) *E. Glaser's Reise nach Murib*, by F. Hommel, *Beil. z. Münch. Allg. Ztg.*, 1888, No. 293, 294, 5) *Bericht über die vierte Reise*, *Mittteil. der Ges. z. Förderung deutscher Wissenschaft. ... in Böhmen*, Nov. 1, 1894, 6) *Bericht über einen Vortrag Glaser's über seine vierte Reise*, *Beil. z. Münch. Allg. Ztg.*, 1894, No. 97, 7) *E. Glaser's Reise nach Märib*, ed. by D. H. Müller and N. Rhodokanakis, Vienna 1913 (*Sammlung E. Glaser*, i.); A. Desfers, *Voyage au Yémen*, Paris 1887; F. T. Haig, *A Journey through Yemen in the Proc. R. Geogr. Soc.*, 1887, vol. ix.; (Harris see above); L. Hirsch, 1) *Reisen in Süd-Arabien, Mahra-Land und Hadramaut*, Leiden 1896 (on it cf. Glaser, *Peterm. Mitt.*, xliii. 1297, *Litteraturber.*, p. 37 sq.), 2) *Neue Wanderungen in Yemen in Globus*, lxxiv. (1898), ii. 204 sqq., 221 sqq.; C. Landberg, *Die süd-arab. Expedition der Akad. der Wissensch. in Wien*, Munich 1899; D. H. Müller, 1) *Die süd-arab. Expedition der Akad. in Wien*, Vienna 1899, 2) *Zur Geschichte der süd-arab. Expedition*, Vienna 1907; P. Charnay, *Une excursion au Yémen*, *Bull. Soc. Géogr. Anvers*, 1899, xxiii. 79 sq.; A. Bardey, *Rapport sur El-Yemen*, *Bull. de Géogr. hist.*, 1899; Th. Bent, *Southern Arabia*, London 1900; H. Burchard, *Reiseskizzen aus dem Yemen*, *Z. G. E. B.*, 1902, p. 593 sqq.; W. Hein, 1) *Vorläufiger Bericht über die Reise nach Aden und Gischin*, *Anz. Akad. Wien*, 1902, xxxix. 107 sq., 2) *Südarabische Itinerarien*, *MGG Wien*, iv. 1914, p. 32 sqq.; A. Beneyton, *Mission d'études au Yémen in La Géographie*, xxvii., 1913. — From Glaser's still unpublished papers Grohmann very frequently quotes; his diaries and "in addition also G. W. Bury's description of his journey to Baihān in 1899" (*op. cit.*, p. ix.; p. 56, note 1: *Expedition to Bēhān*, *MS.*; also p. 4, note 1 etc.; Bury, *Arabia Infelix*, London 1915; also passim: *The Land of Us*, London 1911, and *Notes*); also Glaser's unpublished essay *Ost-jemen und Nordhadramaut*, p. 139 etc. — The following are exclusively concerned with present day conditions in the area once covered by the

ancient Sabaeo-Himyar kingdom which roughly corresponds to the modern Yemen (from about 19° N. Lat., Djebel Tathlith, to the south coast and in the east as far as Hawra): Zwemer, *Arabia*, Chicago 1901; Raif Fuad-Bey, *Land und Leute im heutigen Yemen in Peterm. Mitt.*, 1912, lviii., part 2; E. Behn, *Yemen, Grundzüge der Bodenplastik und ihr Einfluss auf Klima und Lebewelt*, Diss. Marburg 1910, apart from meteorological, astronomical and natural history researches and several monographs by Glaser, Bent and others. W. Schmidt's and A. Grohmann's books have been already mentioned. On commercial activity on the south coast at the present day information is given by the *Report of the Aden Chamber of Commerce* (Aden from 1898 onwards). To the works mentioned in the beginning of the bibliography we may here add the following: J. Halévy, *Études Sabéennes*, *J. A.*, 1873, series 7, vols. i.; ii.; A. Zehme, *Arabien und die Araber seit 100 Jahren*, Halle 1875; D. H. Müller, 1) *Südarabische Studien*, *S. B. Ak. Wien*, 1877, lxxvi. 103 sqq., 2) *Epigraphische Denkmäler aus Abessinien*, *Denkschr. Ak. Wien*, xliii. (1894); E. Glaser, 1) *Zwei Inschriften über den Dammbruch von Märib*, *M. V. A. G.*, 1897, 2) *Altjemenische Nachrichten*, Munich 1906, 3) *Die Abessinier in Arabien*, Munich 1895, 3) *Punt und die süd-arabischen Reiche*, *M. V. A. G.*, 1899, p. 51 sqq.; H. Grimme, *Mohammed*, Munich 1904; Hogarth, *The Penetration of Arabia*, London 1905; J. Tkač, *Saba (R. E.)*, s. v., cols. 1298—1511 where this material has been dealt with by me with special reference to Greek and Roman literature).

The earlier publications of inscriptions (Bird, Fresnel [to supplement the statement *R. E.*, col. 1400, reference should be made to col. 1402; the copies as well as the transcriptions of the inscriptions with the philological observations 194 sq. in letters to Mohl are from Fresnel], Prideaux, Rehatek, Langer [published by D. H. Müller, *Z. D. M. G.*, 1883, xxxvii. 319 sq.], Mordtmann, Derenbourg, etc.) are given in greater detail in the *Paris Corpus* (see above) and in the more recent publications. Of these we will mention the more comprehensive here: J. H. Mordtmann, 1) *Himjarische Inschriften und Altertümer in den Königl. Museen zu Berlin*, Berlin 1893, 2) *Musée Imperial Ottoman, Antiquités Himyarites ...*, Constantinople 1898; D. H. Müller, *Südarabische Altertümer im Kunsthistorischen Hofmuseum*, Vienna 1899; H. Derenbourg, 1) *Les monuments sabéens et himyarites du Musée ... de Marseille*, *Rev. Archéol.*, 1899, series 3, vol. xxxv; 2) *Répert. d'Épigraphie sem.*, i. (1901 sq.), ii. (1907). Of the *Inschriften der süd-arabischen Expedition der Akademie in Wien* (collected in 1899) so far only a few have been published (in the publications of Rhodokanakis). — For Sabaeen studies, the researches made on the modern dialects of South Arabia are also important. Beginnings were made as early as H. v. Maltzan in the *Z. D. M. G.*, 1873, xxvii. and others have followed him. Count C. Landberg, *Études sur les dialectes de l'Arabie méridionale*, i., *Hadramout*, ii., *Dathina* (Leiden 1901—1913) are valuable. Rich material is contained in the "*Schriften der süd-arabischen Expedition*" of the Academy in Vienna,

i.—x. (1900—1910, Somālī, Mehri, Hadramī, Sokotri, Zfar, ed. by L. Reinisch, D. H. Müller, A. Jahn, N. Rhodokanakis) finally M. Bittner's *Studien* on Mehri, Sokotri and Shāwri in *S B Ak. Wien*, clxii. 1909 sqq. (J. TKATCHI)

[All previous works on the extensive ancient coinages of South Arabia have been superseded by G. F. Hill, *Catalogue of Greek Coins of Arabia, Mesopotamia and Persia in the British Museum*, London 1922, pp. xlv.—lxxxiv., 45—80, Plates VII—XI, L and LV. A full bibliography is given on p. xlv. It is now certain that the greater part of the coins hitherto vaguely classed as "Himyarite" are really Sabaeen and that small groups of coins may also be attributed to the Minaeans and Katabānians. — Editorial].

ŠABANDJA, chief place of the *nāhiya* of the same name, picturesquely situated on the South-eastern bank of lake Šabandja which is well known for its clear water and its many fishes. S. belongs to the *wilāyet* Stambul and to the *Şandjak* İsmid. It is the residence of a *Mudir* and has about 8000 inhabitants (of whom three-quarters are Muslims), 15 mosques, 2 *Madrasa's*, 15 schools and about 1200 houses (cf. V. Cuinet, *La Turquie d'Asie* iv. 378). Of the history of the town little is known; there are remains from the Byzantine period, not however from antiquity. The origin of the name is obscure; Ewliyā Celebi reports that a certain Šabandjī Kudja founded the town (cf. *Travels*, transl. by J. v. Hammer, London 1850, ii. 91); but this report is probably not trustworthy and the personage mentioned is apparently a *hero eponymus*. More trustworthy seems the statement that the grand-wazir of Sulaimān the Great, Şāfī Rustem Paşa, founded a mosque, a public bath and an inn with 170 rooms in the town, a statement which concords with local tradition (cf. M. Kleonimos and Chr. Papadopoulos, *βιβλικά*, Constantinople 1861, p. 41). The place was only of some importance as a post-station; nowadays it is a railway halting-place. Of greater importance is the lake, especially because of the projected canalisation which was planned long ago, but never was carried out. Pliny (*Epist. ad Trajanum*, ed. Kukula, Leipsic 1912, N^o. 41, 42, 61 and 62) mentions ancient remains (*op. cit.*, p. 290 a8); he proposed to Trajan to bring about a communication with the Gulf of İsmid. The lake is 15 km long and reaches a breadth of 5 km; it occupies an area of 98 sq. km and has a circumference of 36 km (cf. Cuinet, o.c. iv. 334). It is already mentioned by Ammianus Marcellinus, xvii. 8, 3 under the name of lacus sumonensis (= suphonensis?); cf. W. Tomaschek (*S B Ak. Wien*, vol. 124, 1891, N^o. 8, p. 7). In mediaeval authors the mountain at the lake is called Siphones (G. Pachymeres, ed. Bekker ii. 332. 8), Siphon (Anna Comnena who calls the lake Βαδών λίμνη; cf. ed. Reifferscheid ii. 72, 23; the reading Βαδών λίμνη in Euagrius ii. 14 is to be corrected into Κιανή λίμνη; cf. J. Bidez and L. Parmentier in *Revue de l'instruction publ. en Belgique* xl. [1897], p. 13-15 and *Bys. Zeitschrift* vi. 457), Sophon (Georg. Cedrenus, *Hist.*, ed. Bekker ii. 371, 628; Skylitzes, p. 710; Niceph. Bryenn. p. 77, 79, 82; Michael Att., p. 189; Theophanes, p. 610). Šabandja is perhaps a popular transformation of Sophon.

The project of the canal (see above) was discussed several times, but without success, in the Muslim era, e. g. during the reign of Murād III

in 999/1591 (the year 909 in Hādjđjī Khalifa, *Diḥānnumā*, p. 666, 12 is due to a printer's error and has given rise to mistakes, cf. J. v. Hammer, *Gesch. d. Osmanischen Reiches*, iv. 200 note; further during the reign of Muṣṭafā III in 1578 and later also (cf. Baron de Tott [Tóth], *Mémoires*, i. 97). Cf. further the

SABBIḤ, title of Sūra lxxxvii. of the *Qur'ān*, which is also called al-ʿAlā, after the last word of the first verse.

AL-ŠABI', ABU IŞHĀK IBRĀHĪM B. HİLĀL B. IBRĀHĪM B. ZAHRŪN AL-ĤARRĀNĪ was an adherent of the sect of Šābi'āns [see the art. ŠABI'Ā] and was born on the 5th of Ramaḍān, 313 A.H., according to the most trustworthy authority, his grandson Hilāl, while the *Fihrist* gives the year 320, which is certainly too late a date. His father Hilāl was a skilful doctor and in the service of Tūzūn, who died in 324 A. H. Ibrāhīm was brought up to the same sciences as other members of his family, who were all skilled in medicine, astronomy and mathematics. He is stated to have made an astrolabe of the size of a large silver coin for al-Muṭahhar b. ʿAbd Allāh, the Wazīr of the Būyid Amīr ʿAḡud al-Dawla. At an early date, however, he gave up these pursuits and became

a secretary in the State-chancellery, and here he came into prominence when the Būyid Mu'izz al-Dawla (died 356 A.H.) sent a messenger to the Wazīr al-Muhallabī asking him to draw up without loss of time a letter to Muḥammad b. Ilyās, governor of Kirmān, to ask his daughter in marriage for prince Bakhtiyār, the later Amīr 'Izz al-Dawla. The Wazīr, his friends and secretaries had been having a heavy drinking-bout and only Ibrāhīm al-Šābī was capable of drawing up the desired document, which found general approval. He must have come prominently to the notice of Mu'izz al-Dawla, who in the year 349 A.H. on the death of Abū Ishāq Ibn Thawāba appointed him chief secretary of the department of State-documents (Dīwān al-Inshā'). The Amīr tried his utmost to convert him to Islām, offering him even the post of Wazīr as a reward, but he refused and remained true to his religious convictions till his death. However, he was a man of good manners and complied as such as much as possible with Muslim customs and fasted during the month of Ramaḍān; besides, his knowledge of the Qur'ān was perfect and he quoted from it frequently in his official letters. Upon the death of Mu'izz al-Dawla he retained his post in the Chancellery under his son 'Izz al-Dawla and in the year 364 A.H. when the latter's uncle 'Aḍud al-Dawla came to Baghdād it was part of Ibrāhīm's duty to draw up the contract for an amicable settlement about their respective positions. 'Aḍud al-Dawla had at first been very favorably disposed towards Ibrāhīm and invited him to come to Shirāz, which he refused to do as he feared his relations during his absence might be converted to Islām. The document, however, contained terms which offended 'Aḍud al-Dawla, especially as 'Izz al-Dawla was given the prerogatives of his father Mu'izz al-Dawla, which incurred the hatred of 'Aḍud al-Dawla. The quarrel between the uncle and his nephew was disastrous for Ibrāhīm, for when 'Izz al-Dawla was killed in 367 A.H. and 'Aḍud al-Dawla entered Baghdād, he was apprehended on Saturday, the 26th of Dhū'l-Ka'da. 'Aḍud al-Dawla had vowed that he would have him trampled to death by elephants, but several prominent persons, among them the Wazīr al-Muṭahhar b. 'Abd-Allāh interceded for him and he was cast into prison, where he lingered several years. To give him a chance to regain the favour of 'Aḍud al-Dawla he was ordered while in prison to write a history of the Būyid dynasty, which was to have the title *Kitāb al-Tādji*, after the new title of 'Aḍud al-Dawla, Tādji al-Milla. The Amīr made it his business to read the sheets of the work himself as they were composed and to make such corrections as he desired. Ibrāhīm, annoyed at the mode in which the work was composed, had the indiscretion to tell a friend upon his enquiry how the work was proceeding, that what he was writing was lies and bagatelles which he was scribbling. This remark was conveyed to 'Aḍud al-Dawla and only the death of the latter saved Ibrāhīm from violent death. After the accession of Sharaf al-Dawla he was released from prison on the 20th of Djumādā I, 371 A.H. He was compelled to live the remainder of his days in retirement and died on Thursday the 12th of Shawwāl, 384 at the age of 71 years. Some authorities state that he attained the age of 91 years, but both the date of his death and his age are confirmed by the superscriptions of the elegy which the Sharif al-Raḍī composed upon his

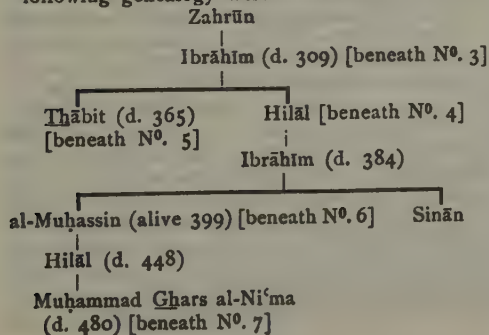

death (ed. Beirut, i. 294; British Museum, Add. 25750 and Add. 19410). He was buried in the Shūnizī cemetery at Baghdād. The elegy of al-Raḍī was a token of a long and sincere friendship and when reproached about mourning an unbeliever, he replied that he mourned him for his personal merits. The poem is also quoted in extenso by Tha'alibi in the *Yatima* (ed. Damascus, ii. 81—85). Of the works of Ibrāhīm the *Kitāb al-Tādji* is lost, but it is quoted occasionally by later historians e.g. Mirkhwānd, *Geschichte der Sultane aus dem Geschlechte Būjeh* (ed. Wilcken, Berlin 1832), p. 13 of the Persian text, and anonymously by Ibn Miskawaih, Arabic text ii. 21—22, 23, 53, 59, 86, 87, 404. The genealogy of the Būyids quoted by Mirkhwānd l.c., seems to confirm the statement of Ibrāhīm. Ibn Abi Usaibi'a (i. 224, 22) attributes the *Kitāb al-Tādji* erroneously to Sinān b. Thābit. Ibrāhīm's other works are: 2) a history of his own family, which is also lost. His reputation rests rather upon his 3) *Rasā'il* or official letters which were collected and have come down to us (MS. Leiden 345, Paris 3314) and of which many examples are quoted in the *Yatima*, the *Irshād* of Yāqūt, the *Ṣubḥ al-Ashā* of Kalkashandī and the *Ma'āhid al-Tanqīḥ*. They are historically of the highest importance as they supplement our knowledge of the period of the decay of the caliphate. Though the Persian influence is noticeable in the diffuseness of his style, it is free from Saḍī, and lucid when compared with later specimens of the same art. 4). His poems, of which ample specimens are quoted in the works mentioned above and in many anthologies, are not to be distinguished from the productions of other poets of his time. They contain verses in praise of notable persons of the age, among them the wazīr al-Muhallabī (died 358 A.H.), al-Muṭahhar b. 'Abd Allāh, wazīr of 'Aḍud al-Dawla (committed suicide in 369 A.H.), 'Aḍud al-Dawla, Sābūr b. Ardashir, wazīr of Bahā' al-Dawla (deposed 381 A.H.), 'Abd al-'Azīz b. Yūsuf, successor of Sābūr, Shams al-Dawla (reigned 372—388) and others; among his elegies is one upon his son Sinān.

2. HILĀL B. AL-MUḤASSIN AL-ŠĀBĪ, the grandson of Ibrāhīm b. Hilāl was born in Shawwāl 359 A.H. and was a Šābi'ān like the other members of his family. His mother was the sister of the physician and historian Thābit b. Sinān b. Qurra. He was the first member of his family who forsook

his old faith and became a Muslim. This was in the year 399 in consequence of a dream he had. He was secretary of Fakhr al-Mulk Abū Ghālib Muḥammad b. Khalaf, who at his death had with him on deposit the sum of 30,000 dīnārs. He was afraid to make use of the money, fearing the interference of the wazīr Mu'ayyid al-Mulk al-Ḥasan al-Rukh-khadjī (died 430 A. H.); but when the latter found it out, he allowed him to keep the money. He did not use it, however, as he was in State-employ and left it to his son Ghars al-Ni'mat. He died on Thursday the 17th of Ramaḍān, 448 A. H. The nine works which he composed have all been lost except the fragments edited by H. F. Amedroz, Leiden 1904. They consisted of the following: 1) *Ta'rikh*, a history in continuation of that of his father-in-law Thābit b. Sinān, containing the events of the years 360—447. Of this the fragment published contains events of the years 389—393 only, and the portion preserved makes us regret the loss of the remainder. He relied for the earlier parts upon much valuable information supplied by his grandfather, who for so many years had access to all the most important documents. 2) *Kitāb al-Wuzarā'*, a continuation of the works of al-Šūlī and al-Djahshiyārī. Of this only the beginning is preserved in the printed edition and some of the most important lives of wazīrs are lost. This work is quoted under the title *Kitāb al-A'yān wa'l-Amthal* by Ibn Zāfir in the *Baḍ'ī' al-Baḍ'īh* (Cairo 1316, i. 63, 169; ii. 102), where fragments of a later portion are preserved. Ibn Khallikān calls this work by the longer title *Kitāb al-Amthal wa'l-A'yān wa Mutanadda 'l-Awāṭif wa'l-Iḥsān* and states that it is in one volume and contains pleasant stories and rare anecdotes. 3) *Ghurar al-Balāgha fi'l-Rasā'il*, a collection of his own epistles. 4) *Kitāb Risālat 'an il-Mulūk wa'l-Wuzarā'*, a collection of official letters, resembling that of his grandfather. 5) *Kitāb Rusūm Dār il-Khilāfa*, probably an exposition of the various public offices in Baghdād. 6) *Kitāb Akhbār Baghdād*, chronicle of the city of Baghdād. 7) *Kitāb Ma'āthir Ahliki*, chronicle of his own family. 8) *Kitāb al-Kutāb*, a manual for secretaries, probably after the model of the work with the same title by al-Šūlī. 9) *Kitāb al-Siyāsa*.

Bibliography: *Kitāb al-Wuzarā'*, Introduction, p. 5—7, 13; Khaṭīb, *Ta'rikh Baghdād*, Ms. B. M.; Ibn Khallikān, ed. Wüstenfeld, No. 756 = Cairo 1310, ii. 202.; Ibn Hiddjja, *Thamarāt al-Awrāk* (Cairo 1304), i. 76; *J. R. A. S.* 1901, p. 501 and 749; v. Kremer, *Denksch. Ak. Wien*, xxxvi. 283—362; Wüstenfeld, *Geschichtsschr.*, 198; Brockelmann, *Gesch. Arab. Lit.*, i. 323. Other members of the family according to the following genealogy were

3. ABU ISHĀK IBRĀHĪM B. ZAHRŪN was a skillful doctor and came from al-Raḡḡa to Baghdād where he died on the 20th of Šafar, 309 A. H. Ibn Abi Uṣaibi'a, i. 227; Kiftī, *Hukamā'* (ed. Cairo 1326), p. 55.

4. HILĀL B. IBRĀHĪM B. ZAHRŪN ABU 'L-ḤUSAIN, the father of Ibrāhīm, was a clever physician and in the service of the amīr Tūzūn. Kiftī, *Hukamā'* (ed. Cairo), p. 229.

5. THĀBIT B. IBRĀHĪM B. ZAHRŪN, also a physician, was an old man when 'Aḍud al-Dawla came to Baghdād in 364 A. H. Though at first not well received he was later granted a pension and died the 11th of Dhū'l-Ḳa'da, 365 A. H. He was born at al-Raḡḡa on the 27th of Dhū'l-Ḳa'da, 283 A. H. Ibn Abi Uṣaibi'a, i. 227—230; Yāqūt, *Iṣṣād*, i. 341.

6. AL-MUḤASSIN B. IBRĀHĪM ABU 'ALĪ transmitted the books of Sinān b. Thābit b. Kurra. Ibn Abi Uṣaibi'a, i. 224—227; Yāqūt, *Iṣṣād*, i. 339 sqq.

7. MUḤAMMAD B. HILĀL ABU 'L-ḤASAN GHARS AL-NI'MA, son of the historian Hilāl. He was born in 416 A. H. and inherited at the death of his father valuable property which was valued at 12,000 dīnārs; he lived a very quiet life and by improving his wealth he was worth 70,000 dīnārs when he died in 480 A. H. His children soon squandered this wealth, and with him the glory of his family ended. He had founded a small library of 400 volumes of which Ibn al-Akṣāsī was made librarian, but the latter proved to be dishonest and sold many of the books. Ghars al-Ni'mat was also for a time in the chancellery of the caliph al-Kā'im. He tried to continue the history of his father, but it was only a small volume and became towards the end very succinct, probably because he dared not write all he wanted to say. According to al-Šafadī, Hibat-Allāh b. al-Mubārak accuses him of having included many falsehoods in his history. We cannot verify this as all his works have been lost. His other works were 2) *al-Hafawāt al-Nādira min al-Mughaffilīn al-Maḥṣūṣīn wa'l-Safaṭāt al-Bārīda min al-Mughaffalīn al-Maḥṣūṣīn* which contained historical tales, and 3) *Kitāb al-Rabī'* which was after the model of the *Niṣṣawār al-Muḥāḍarat* of al-Tanūkhī. Ibn Khallikān (ed. Cairo 1310), ii. 202; Ibn al-Kiftī, *Hukamā'* (ed. Cairo), p. 77; Šafadī, *Wāfi'l-Wafayāt*, British Museum, MS. Or. 5320, fol. 110r.

(F. KRENKOW)

AL-ŠĀBĪ'A, the Sabaeans. This name has been given to two quite distinct sects. 1. The Mandaeans or Subbas, a Judaeo-Christian sect practising the rite of baptism in Mesopotamia (Christians of John the Baptist); 2. the Sabaeans of Harrān, a pagan sect which survived for a considerable period under Islām, of interest for its doctrines and of importance for the scholars whom it has produced.

The Sabaeans mentioned in the *Qur'ān*, who are on three occasions placed along with the Jews and Christians among the "people of the book", i. e. possessors of a revealed book, are apparently the Mandaeans. The name must come from the Hebrew root *š-b'* "to plunge, to immerse", by loss of 'ain and must mean 'baptists', those who practise baptism by immersion. The pagan Sabaeans, who did not know this rite at all, may have adopted this name as a measure of precaution to secure the advantages of the toleration accorded by the *Qur'ān* to Jews and Christians.

Arab writers from the fourth century A. H. onwards very frequently mention the Sabaeans of Harrān and always with interest. Al-Shahrastānī devotes a very long section to them and the exposition of their doctrines. He classes them among those who admit spiritual substances (*al-rūḥāniyūn*), especially the great astral spirits. They recognise as their first teachers two philosopher-prophets 'Adhimūn (Agathodemon = the good spirit) and Hermes who have been identified with Seth and Idris respectively. Orpheus was also one of their prophets. They believe in a creator of the world, wise, holy, not produced, and of inaccessible majesty, who is reached through the intermediary of the spirits. The latter are pure and holy in substance, in act and state; as regards their nature, they have nothing corporeal, neither physical faculties nor movements in place nor changes in time. They are our masters, our gods, our intercessors with the sovereign Lord; by purifying the soul and chastising the passions, one enters into relations with them. As to their activities they produce, renew and change things from state to state; they cause the force of the divine majesty to flow down towards the lower beings and lead each of them from his beginning to his perfection. Among them are the administrators of the seven planets, which are like their temples. Each spirit has a temple; each temple has a sphere and the spirit is to his temple as the soul is to the body. Sometimes they call the planets fathers and the elements mothers. Their activity consists in moving these spheres and in acting upon the elements and the physical world through them; from this result the mixtures in the compositions, then the corporeal faculties. The general beings proceed from the general spirits and the particular from the particular spirits; thus rain in general has its spirit, its spiritual master, and every drop of rain has its own. They preside over the phenomena of the world, winds, storms, earthquakes and give to each being its faculties and lay down laws for it; their condition is very spiritual and analogous to that of the angels.

Al-Shahrastānī distinguishes between the Sabaeans who worshipped the stars, called temples, directly and those who worshipped idols made with hands (*ashkhās*, persons), representing the stars in temples made by man. There is a very curious note on the temples and idols of the Sabaeans, as well as on their ceremonies in al-Dimishkī, (*Cosmographie*, ed. A. F. Mehren, 1866); the shape of the temples, the number of the degrees, the colour of the ornaments, the material of the idols and the nature of the sacrifices varied with the planets, and this is interesting for the history of the liturgy. Here and elsewhere we find the accusation of human sacrifices made, which undoubtedly is not to be maintained. The Jewish philosopher Maimonides says he had seen idols which resembled those of which al-Dimishkī speaks. Al-Shahrastānī further tells us that all the Sabaeans had three prayers; they purified themselves by ablation after contact with a corpse, forbade the flesh of swine, dogs, birds with talons and pigeons. They did not have circumcision, allowed divorce only by decree of the judge and forbade bigamy.

The Sabaeans were at first scattered throughout the north of Mesopotamia and had their principal centre at Harrān, the ancient Carrhae; their liturgical language was Syriac. The Caliph Ma'mūn

thought of persecuting and destroying them; but their intellectual merits gained them toleration. Towards 259 (872) the celebrated Thābit b. Qorra, having had a quarrel with his co-religionists, was excommunicated at Harrān and came to Baghdād, where he founded another branch of Sabaeism. The Sabaeans in Baghdād lived for some time in peace; but the Caliph Kāhīr began to persecute them and forced Sinān, son of Thābit, to embrace Islām. In about 364 (975) the Sabaeans Abū Ishāk b. Hilāl, who was secretary to the Caliphs Muṭ'ī and Tā'ī, caused an edict of toleration to be issued in favour of his co-religionists of Harrān, Raḡḡa and Diyār Moḡar and protected those of Baghdād. In the 11th century A.D. there were still many Sabaeans at Baghdād and at Harrān. In 424 (1033) there was left only a temple of the moon, which formed a citadel at Harrān; this temple was at that date taken by the Alid Egyptians. After the middle of the 11th century A.D. all trace of the Sabaeans of Harrān is lost; we still find them at Baghdād till the end of this century.

The great men who have rendered this sect illustrious are: Thābit b. Qorra, the eminent geometrician, original astronomer, translator and philosopher; Sinān b. Thābit, physician and meteorologist; other physicians and astronomers of the same family; Thābit b. Sinān and Hilāl b. al-Muḥassan, historians; Abū Ishāk b. Hilāl, vizier, and other members of the family; al-Battānī (Albategnus), the celebrated astronomer; Abū Dja'far al-Khāzin, mathematician; Ibn al-Wahshiya, the author of *Nabataean Agriculture*, although professing to be a Muslim, in every way belonged to the Sabaeans school; Djābir (Geber), the famous alchemist, about whom, it is true, there is very little known for certain, was probably a Sabaeans. Finally it may be mentioned that these scholars are quoted on mineralogy by al-Dimishkī.

(B. CARA DE VAUX)

SABĪL, a way, road, or path, is used in the *Kur'ān* (1) literally, e. g. *man istafā'a ilaihi sabīlan* (Sūra iii. 91 etc.) "he who is able to journey thither"; (2) figuratively, as in the expression *sabīl-Allāh*, for which see *DIHĀD*; (3) figuratively, in the sense of the true way, the Apostle's way, as in the passage *yā laitani ittakhadhtu ma'a 'l-rasūl sabīlan* (Sūra xxv. 29) "Oh! would that I had taken with the Apostle a path!" i. e. his

path, or the true path; (4) figuratively, in the sense of a means of attaining or acquiring an object, or a way out of a difficulty or trouble, as in the passage *aw yaḏ'alu 'llāhu laḥunna sabilan* (Sūra iv. 19) "or God make some way for them"; (5) in the expression *ibn al-sabil* "a son of the road", that is a traveller, or wayfarer, mentioned as a fit object of compassion, or charity. The word is now applied also to a public drinking fountain. The great merit naturally attached in arid countries and tropical climates to the provision of wells, cisterns and fountains for thirsty travellers is recognized in Islām, as in most oriental religions, and it is possible that the use of *sabil* in this sense is suggested by the expression *Sabil-Allāh*, applied to any work undertaken for the sake of God.

(T. W. HAIG)

SABİL ALLĀH. [See DJIHĀD].

SAB'İYA "Sevener", the name of various *Shi'a* groups who restrict the number of visible Imāms to seven. Confusion came upon the legitimist *Shi'a*, who believe that the character of Imām is transmitted by divine providence from father to son, when about 145 (762) Ismā'il, the (eldest?) son of the sixth Imām Dja'far al-Ṣādiq [q. v.] died before his father. While the majority replaced Ismā'il by another son of Dja'far, Mūsā al-Kāzim, the seventh in the series of the twelve visible Imāms of the *Ithnā-ashariya* [q. v.], "twelvers", and others attached themselves to the otherwise less prominent sons, Muḥammad, 'Abd Allāh and 'Alī, the strictest legitimists remained faithful to Ismā'il. They denied that he died before his father's death. The evidence brought forward in support of this view seems to have impressed even their opponents, for the latter found it necessary, in order to dispose of Ismā'il, to attack his character; they said that, on account of his evil life, his father had withdrawn from him the right of succession at first intended for him. These accusations, particularly that of wine-drinking, can be explained as an attack on the slackening of the law by the Seveners directed back against the Imām who gave them their name.

From the first the Sevener movement was not a united one. A Mubārakiya sect "stood fast" by Ismā'il, so that for them he is the last Imām and the Mahdī [q. v.]. But the majority continued the imāmate down to his son Muḥammad, who becomes *Kā'im al-Zamān* [q. v.] with the official title of al-Tāmm "finisher", a title which, in some of the minor systems, seems to be prejudiced by the fact that he is in turn followed by invisible Imāms, known only to the initiated. In spite of the position of Muḥammad al-Tāmm, however, the name of Ismā'il remains attached to the main groups. In their hierarchic view therefore the Seveners belong to the many "Wāḳifiya" "those who stand fast". This is, in part, naturally, explained by the political conditions of the period. In 145 the 'Abbāsīd Caliph al-Manṣūr had put down the rising at Medina led by al-Nafs al-Zakiya Muḥammad b. 'Abd Allāh b. al-Ḥasan b. 'Alī; in the following year, the latter's brother, Ibrāhīm of Baṣra, also fell. The 'Alid question was thus disposed of for the time and with such success that even in these activist circles, who chose their Imāms from the vigorous 'Alids, who actually took to the sword, a "Djārūdiya" sect "stood" by al-

Nafs al-Zakiya as the concealed Mahdī. The tendency to hope for a return increased still further among the legitimists, who were bound by their dogma to definite persons, as it would have been useless to carry on into active history an imāmate which had really become hopeless. There were "some who stood fast" by each of Ismā'il's brothers; the Mūsāwiya, nicknamed Mamṭūra, "rained upon", often called simply the Wāḳifiya, became of some importance. Strictly speaking, such groups also come under the head of Seveners. But, as a rule, Sab'īya is used identically with Ismā'iliya [q. v.]. For them steadfastness did not develop into the abandonment of political aims — although it was over a century before this became apparent — but rather into the very skilful plan of retaining the very effective idea of an Imām given by sacred birth and yet rejecting the individual that chance brought forward in the person of the often very incapable first-born of the seed of 'Alī and Ḥusain. The Sevener movement thus attained considerable importance in secular history also, through men who appeared as *dā'i* [q. v.] of the hidden seventh Imām, Muḥammad b. Ismā'il, like Ḥamdān Ḳarṣat, or his successor, who came forth from concealment, like the Fātimid Sa'id b. 'Abd Allāh b. Maimūn, or as his "return" himself, as Ṭabarī iii. 2218, the narrates of the Ḳarṣatīan missionary Yahyā b. Dhikrwaḥ. Karṣatians, Fātimids, Assassins and the Ismā'ilis of India, Persia and Central Asia are the groups through which the Sevener movement finds its place in secular history, but the Druses also and in a way the Mutāwila and Nuṣairis also may be traced back to the old Sab'īya.

The Sab'īya itself, however, is quite as much a religious — and an independent religious — movement as a political one. The remarkable feature that the number of Imāms was fixed at seven at the same time with the different sons of Dja'far is more simply understood if we assume that the political reasons already mentioned were further supported by a point of view which periodicated all cosmic and historical happenings by the sacred number of seven. The example of the *Khawābiya*, who worshipped Ismā'il's father, Dja'far, as a god, shows that in the early days of development of the Sab'īya the deification of Imāms was not entirely unprecedented. We cannot, of course, in the circumstances deal with the theology of the Seveners. We only know of a single one out of the different systems and even that is often obscure, through being known only from hostile representations. We may claim for the Seveners as their individual contribution to theology a gnostic cosmogony in which names and things are often, however, not used consistently. The steps of emanation are (1) God, (2) universal intelligence (*'aql*), (3) universal soul (*nafs*), (4) primeval matter, (5) space or the pleroma, (6) time or the kenoma, (7) the world of earths and man. This number seven recurs in the lower world in the 7 prophets or *nāfiq* "speakers" in the redemption story: Adam is the first *nāfiq*, but as a rule not the first man; then follow Noah, Abraham, Moses, Jesus, Muḥammad and Muḥammad al-Tāmm. Between each two of these *nāfiq* there are inserted seven "silent ones", *ṣāmit*, of whom the first, as special helpers of the *nāfiq*, under titles like *fātiq*, "releaser", or *asās*, "foundation", are particularly

important because it is only through the esoteric exposition attributed to them that the teachings and laws of the *nāṭik* receive their true meaning or are completely explained. These *fāṭik* are Seth — which reminds one of the gnosis of the Sethians — Shem, Ishmael (son of Hagar), Aaron, Peter, 'Alī and the seventh is the inaugurator of the particular Sevens group in question, e.g. 'Abd Allāh b. Maimūn. Alongside of the *ṣamīṭ*, there is a further lower hierarchy arranged in sevens or twelves, notably the *ḥudjāja* [q. v.] and the *dā'ir*. The system is, however, very much upset by a theory of incarnation which actually equates the seventh Imām to God; thus: Ibn Ṭāhir al-Baghdādī, p. 288 reports, on the authority of a man who had been for a period engaged in Ismā'īlī propaganda, that the latter had been expected to see in Muḥammad al-Tāmm Him who had revealed himself to Moses. In several groups, e.g. the Indian Ismā'īlīs, the cosmogony and with it the periodication after the sacred number seven has fallen into the background and 'Alī has become God as the first Imām. The way thus leads from the Seveners on to the 'Alī Ilāhī [q. v.]. Starting with 'Alī, they count right down to the 47th Imām, Agha Khān Muḥammad Shāh. Next to the Imām and in history often surpassing him in importance here is the *ḥudjāja*. Muḥammad the Prophet appears as the *ḥudjāja* of 'Alī. But he is substituted for political reasons for Salmān al-Fārisī, who is really intended.

For salvation the recognition of the concealed Imām known only to the initiated is absolutely necessary; consequently the "instruction" of them attains increased importance and they are accordingly also called Ta'limiyya. Initiation into the esoteric religion takes place through 7 or 9 initiatory stages. Ibn Ṭāhir, *l. c.*, 282 sqq. mentions (1) the *tafarrus*, the "exact investigation", a psychological method not particularly skilful, or almost a means of working oneself entirely into him who is to be won and of placing oneself on common ground with him. Then (2) the adept is "shown" in the *ta'nis* the whole "beauty" of his previous belief with the suggestion that it is much more splendid than he has suspected hitherto, after which (3) in the *taḥkik* he becomes "shaken by doubt" that he is not yet fully conscious of his belief. After such anthroposophical spiritual guidance, the moment arrives at which the novice is "bound" and "attached" to the secret authority with the formula that real knowledge only exists in the Concealed One and his organs through (4) the *rabf*. and (5) the *ta'lik*. In (6) the *tadlis* the real esoteric meaning is by allegorical explanations brought out of the external covering of the letter, under which all historical prophecies and laws are "obscured". (7) The "grounding" *ta'nis* can now begin in a novitiate proper of some length, after the expiry of which the disciple (8) subscribes himself body and soul by "agreements sealed by oaths", *mawāṭhiq bilaimān*, to the bond, in return for which he is "released" in the (9) *khal'* and *sulḥ* from all earlier dogmatic restraints and all external legislation outside these obligations.

The whole system is deliberately supported for form's sake on Ḳor'ān passages, which is the more easily done in consequence of the frequently obscure allusions made in the sacred book. Thus the adept is surprised to learn from Ḳor'ān xv. 99, "serve thy Lord till certainty comes to thee",

that his previous worship of God has only been a preliminary step. The passages in which the word *bāṭin* "inner" occurs are made to supply *dicta probantia* for an extravagant, and of its kind not exactly original, system of allegory, including an extensive alphabetic kabbala, which is not limited to the mysterious letters of the Sūra's and to names of Imāms or dogmatic formulae. — It has not contributed to the elucidation of the relations of Muslim sects that one group is called after many features and that, for example, the Seveners are also included as Bāṭiniyya [q. v.] along with other bodies of quite different tendencies, like the Khurramis (see KHURRAMIYA) and Mazdakis, and often even described as the Bāṭiniyya and on this account called by their opponents by the corresponding nickname Mu'aṭṭila, "emptiers, nihilists".

The actual origin of the speculative ideas of the Seveners is, so far, hardly better known to us than to the Muslim authors, whose opinions must be taken with particular caution as their point of view was vitiated by hatred of the heretics. The Sunnī symbolists usually insist on Jewish or Christian, still more Sabaeen and especially Parsī, origin; but as a matter of fact they already suspect also a connection with Hellenistic philosophy and Hermetic writings. The point still requires investigation as to how Neo-Platonic speculations, Parsī mysteries and such myths as are found in the Christian "treasure-cave" came to be clothed in a Ḳor'ānic covering and developed into Islāmic gnosis. The part played as an intermediary by the "Pure Brethren", *Ikhwān al-Ṣafā'* [q. v.] remains also to be investigated.

All classes of Seveners are very unfavourably criticised by the Muslims, even by the Shī'īs. They are regarded as extreme "exaggerators", *ghulāt* [q. v.] and usually are considered to be beyond the pale of Islām, so that some symbolists do not quote them at all. The main reason is that they drop the divinity of Allāh and the finality of Muḥammad's prophecy. It is, however, due to the great elasticity of Muslim names of sects, and to a polemical rather than matter-of-fact frame of mind that they are also called Dahris [q. v.] and associated with the materialists, who are essentially different from them. A contributory cause of the unfavourable opinion held of them was, of course, the bitterness felt at their revolutionary aims and their underground political propaganda in the name of the seventh Imām, but still more at their casting off the external law of religion, which is usually dismissed as sheer libertinism; the accusations commonly made against secret sects of sodomy and nightly orgies with wine and community of women also play a great part in the charges made against them. The charges of religious, moral and political nihilism made against them have also found a way into the European literature of the subject. Further investigation, which does not refuse to consider the possibility of syncretism, recognising that every religious system that has become concrete is a syncretic formation with ramifications, will alone be able to show how far the theology, or if one prefers the term, the theosophy of the Sevens movement represents an intelligible reaction against the theology of the God of Islām, so aloof from man, and in how far the libertinism, said to be general and certainly existing in many, is an attempt to

meet the disjointed total of the prescriptions of the *Sharī'a* with a system of ethics, such as is taught by Nāṣir i-Khusraw, for example, in verses 373 sqq. of his *rūṣṣanā-i-nāma*, regarding the seven sins of character and the seven cardinal virtues; in this investigation it will not much matter whether the "book of illumination" was written when the poet had already attained a very important place in the hierarchy of the Seveners as *ḥudjja* of the Ismā'īlis, or whether it was written before he joined them, and reveals the attitude of mind which definitely decided him to join this body. Individual bodies of the Seveners, like the Assassins and Karmatians, were certainly extremely intolerant to other Muslims; but in contrast to this we have the tolerant and wise administration of many of the Fāṭimids in Egypt. Some groups are occasionally said to have been communist, but this is certainly not a general feature. While in the fourth and fifth centuries the Muslim writers report their spread and their propagandist activities in the whole Muḥammadan world, the old groups have long become consolidated. But their ideas continued to be effective and were carried from Persia far to the north and from India especially to East Africa. In spite, however, of the consciousness of connection with the old Seveners, the nature of their beliefs has been essentially transformed. The political aspect has disappeared and the religious side is not so aggressive. It is noteworthy that the modern Sab'īya are often just those who are the strongest supporters of the feeling of solidarity in Islām.

(R. STROTHMANN)

ŠABR (A.). The significance of this conception could hardly be conveyed in a West-European language by a single word, as may be seen from the following. According to the Arabic lexicographers, the root *ṣ-b-r*, of which *ṣabr* is the *nomen actionis*, means to restrain or bind; thence *ḫatalahu ṣabrān* "to bind and then slay someone". The slayer and the slain in this case are called *ṣābir* and *maṣbūr* respectively. The expression is applied, for example, to martyrs and prisoners of war put to death; in the Ḥadīth often to animals which — contrary to the Muslim prohibition — are tortured to death (e. g. al-Bukhārī, *Ḍḥabā'iḥ*, bāb 25; Muslim, *Ṣaid*, trad. 58; Aḥmad b. Ḥanbal, *Musnad*, iii. 171). The word has a special technical application in the expression *yamīnu ṣābirin*, by which is meant an oath imposed by

the public authorities and therefore taken unwillingly (e. g. al-Bukhārī, *Manāḥib al-Anṣār*, bāb 27; *Aimān*, bāb 17; Muslim, *Imān*, trad. 176).

In the *Qur'ān* derivations from the root *ṣ-b-r* frequently occur, in the first place with the general meaning of being patient. Muḥammad is warned to be patient like the Apostles of God before him (xxxviii. 16; xli. 34: "for Allāh's threats are fulfilled", is added in xxx. 60). A double reward is promised to the patient (xxiii. 113; xxviii. 54; cf. xxv. 75). In xxxix. 16, it is even said that the *ṣābirūn* shall receive their reward without *ḥisāb* (which in this case is explained as measure or limitation).

The conception is given a special application to the holy war (e. g. iii. 140; viii. 66); in such connections it can be translated by endurance, tenacity. The eighth stem is also used in almost the same sense, e. g. Sūra xix. 66: "Serve him and persevere in his service". The third stem is also found (iii. 200; cf. below).

The word is next found with the meaning resignation, e. g. in the Joseph (xii. 18) where Jacob, on hearing of the death of his son, says: "Now goodly resignation is fitting" (*faṣabrūn ḏjāmīlūn*).

Sometimes *ṣabr* is associated with *ṣalāt* (ii. 42, 148). According to the commentators, it is in these passages synonymous with fasting and they quote in support the name *ṣahr al-ṣabr* given to the month of Ramaḍān.

As an adjective we find *ṣabbār* in the *Qur'ān*, associated with *ṣhakūr* (Sūra 14, 5 etc.); cf. thereon al-Ṭabarī, *Tafsīr*: "It is well with the man who is resigned when misfortune afflicts him, grateful when gifts of grace become his"; and Muslim, *Zuhd*, trad. 64: "Wonderful is the attitude of the believer; everything is for the best with him; if something pleasant happens to him, he is thankful and this proves for the best with him; and if misfortune meets him, he is resigned and this again is for the best with him." The ideas of *ṣabr* and *ṣhukr* are also associated in al-Ghazālī, cf. below.

The later development of the conception is, of course, also reflected in the commentaries on the *Qur'ān*; it is difficult to say in how far these interpretations are already inherent in the language of the *Qur'ān*. In any case, the conception *ṣabr*, in all its shades of meaning, is essentially Hellenistic in so far as it includes the *ἀνταρξία* of the Stoic, the patience of the Christian and the self-control and renunciation of the ascetic; cf. below. In place of many other explanations of the commentators, we will give here only that of Fakhr al-Dīn al-Rāzī (*Mafāṭiḥ al-Ghaib*, Cairo 1278, on Sūra iii. 200). He distinguishes four kinds of *ṣabr*: (1) endurance in the laborious intellectual task of dealing with matters of dogma, e. g. in the doctrine of *tawḥīd*, 'adl, *nubuwwa*, *ma'ād* and disputed points; (2) endurance in completing operations one is bound or recommended by law to do; (3) steadfastness in refraining from forbidden activities; (4) resignation in calamity, etc. *Muṣābara* is, according to him, the application of *ṣabr* to one's fellow-creature (like neighbours, people of the Book), refraining from revenge, the *Amr bil-ma'rūf wa'l-nahy 'ani'l-munkar*, etc.

The high value laid upon *ṣabr* is also seen in the fact that *Ṣabūr* is included among the beautiful names of Allāh. According to the *Lisān* (s. v.

ş-b-r), Şabūr is a synonym of *ḥalīm*; — with the difference that the sinner need not fear any retribution from the Ḥalīm, but he is not sure of such leniency from the Şabūr. Allāh's *şabr* is in the Ḥadīth increased to the highest degree in the saying that no one is more patient than He, towards that which wounds His hearing (al-Bukhārī, *Tawḥīd*, bāb 3).

In the Ḥadīth, *şabr* is, in the first place, found in general connections like: to him who practises *şabr* Allāh will grant *şabr*, for *şabr* is the greatest charisma (al-Bukhārī, *Zakāt*, bāb 50; *Rikāḥ*, bāb 20; Aḥmad b. Ḥanbal, iii. 93); in the Ḥadīth also, *şabr* is applied to endurance in the holy war. A man asked Muḥammad: "If I take part in the *Djihad* with my life and my property and I am killed *şābiran* and resigned, rushing forward without fleeing, shall I enter Paradise?" And Muḥammad answered: "Yes". (Aḥmad b. Ḥanbal, iii. 325); the word is found in other passages in the sense of enduring, e.g. towards the public authorities: "after my death ye shall suffer things, but exercise *şabr* until ye meet me at the heavenly pool" (*ḥawāḍ*) (al-Bukhārī, *Rikāḥ*, bāb 53; *Fitan*, bāb 2; cf. *Aḥkām*, bāb 4; Muslim, *Imāra*, trad. 53, 56 etc.). The word here usually has the meaning of resignation as in the oft recurring saying: "The (true) *şabr* is revealed at the first blow (*innamā* 'l-*şabr* 'inda 'l-*şadmati* 'l-*ūlā*, or *awwali* *şadmatin* or *awwali* 'l-*şadmati*, al-Bukhārī, *Djānā'iz*, bāb 32, 43; Muslim, *Djānā'iz*, trad. 15; Abū Dā'ūd, *Djānā'iz*, bāb 22 etc.).

Significant, in other respects also, is the story of the epileptic woman who asked Muḥammad for his *du'ā'* for her healing; he replied to her that if she refrained from her request and exercised *şabr*, paradise would be her portion (al-Bukhārī, *Mardā*, bāb 6; Muslim, *al-Birr wa'l-şila*, trad. 54). The word is often found in this connection associated with the proper word for resignation, viz. *iḥtisāb* (e.g. al-Bukhārī, *Aimān*, bāb 9; Muslim, *Djānā'iz*, trad. 11); with this should be compared the following *ḥadīth kuḥṣi*: "If my servant is deprived of the light of both his eyes, I grant him paradise in compensation" (al-Bukhārī, *Mardā*, bāb 67; Aḥmad b. Ḥanbal, iii. 283).

In conclusion we may remark that in the canonical Ḥadīth the meaning renunciation is exceedingly rare, which receives so great an importance in ethico-ascetic mysticism (cf. what has already been said above on *Sūra* 2, 42, 148). Bāb 20 of al-Bukhārī's *Kitāb al-Rikāḥ* (which, like the chapter *zuhd* in the other collections of traditions, represents the oldest stage of this tendency in Islām) has in the *tardjama*... 'Umar said: "We have found the best of our life in *şabr*." Here we already can trace the Hellenistic sphere of thought for which renunciation was the kind of life fitting the true man, the wise man, the martyr.

What the *Qur'an* and Ḥadīth say about *şabr* recurs in part again in ethico-mystical literature; but the word has here become, so to speak, a technical term and to a very high degree, as *şabr* is the cardinal virtue in this school of thought. As with other fundamental conceptions (see the series of definitions of *Sūfi* and *Sūfism* in Nicholson's essay in the *J. R. A. S.*, 1905), we find numerous definitions of *şabr*, definitions which often point rather to fertility of imagination

than give an exhaustive exposition of the idea, but are of great value for the light they throw upon the subject like lightning flashes. Al-Kūshairī in his *Risāla* (Bulāḥ 1287, p. 99 sq.) gives the following collection: — "The gulping down of bitterness without making a wry face" (al-Djunaid); — "the refraining from unpermitted things, silence in suffering blows of fate, showing oneself rich when poverty settles in the courts of subsistence"; — "steadfastness in fitting behaviour (*Ḥusn al-adab*) under blows of fate" (Ibn 'Atā); — "bowing before the blow without a sound or complaint"; — "the *şabbār* is he who has accustomed himself to suddenly meeting with forbidden things" (Abū 'Uḥmān); — "*şabr* consists in welcoming illness as if it were health"; — "steadfastness in God and meeting His blows with a good countenance and equanimity" (Amr b. 'Uḥmān); — "steadfastness in the ordinances of the Book and of the Sunna" (al-Khawwās); — the *şabr* of the mystics (literally: lovers) is more difficult than that of the ascetics" (Yaḥyā b. Mu'ādh); — "refraining from complaint" (Ru'waim); — "seeking help with God" (Dhu 'l-Nūn); — *şabr* is like His name (Abū 'Alī al-Dakḥāk); — "there are three kinds of *şabr*, *şabr* of the *muta-şabbir*, of the *şābir* and of the *şabbār* (Abū 'Abd Allāh b. Kḥafīf); — "*şabr* is a steed that never stumbles" (Alī b. Abī Ṭālib); — *şabr* is: not to distinguish between the condition of grace and that of trial, in peace of spirit in both; *taşabbur* is calm under blows, while one feels the heavy trial" (Abū Muḥammad al-Djurairī; cf. *ārapāṭiā*).

This literature, besides play on words and definitions, is also fond of producing shades of meaning by prepositions. Al-Shiblī asked a man: "what kind of *şabr* is the most difficult for him who practises it?" He answered: "*al-şabr fī 'llāh*". Then al-Shiblī said: "No". The man: "*al-şabr lillāh*". Al-Shiblī: "No". The man: "*al-şabr ma'a 'llāh*". Al-Shiblī: "No". The man: "But what then?" Then al-Shiblī said: "*al-şabr 'ani 'llāh*", and he added an explanation which threatened to drive his interrogator crazy (al-Kūshairī, *Risāla*, p. 100, 9).

Al-Ghazālī treats of *şabr* in the fourth part of the *Iḥyā'*, which describes the virtues that make blessed, Book II. We have seen that already in the *Qur'an* *şabr* and *shukr* are found in association. Al-Ghazālī discusses the two conceptions in the second book separately, but in reality in close connection. He bases the combination, not on the *Qur'anic* phraseology, but on the maxim: "belief consists of two halves: the one *şabr* and the other *shukr*". This again goes back to the tradition: "*şabr* is the half of belief" (cf. the traditions given above which also associate *şabr* and *shukr*).

Al-Ghazālī comprises the treatment of *şabr* under the following heads: (1) the excellence of *şabr*; (2) its nature and conception; (3) *şabr*, the half of belief; (4) synonyms with reference to the object of *şabr*; (5) kinds of *şabr* as regards strength and weakness; (6) opinions regarding the necessity of *şabr* and how man can never dispense with *şabr*; (7) convalescence of *şabr* and means of attaining it. — This division is virtually adopted by Bar-Hebraeus in his *Ethikon* for the *Mesai-berānūṭā* (see A. J. Wensinck, *Bar Hebraeus' Book of the Dove*, Leiden 1919, p. cxvii—cxix).

Only the following out of these sections can

be given here. *Şabr*, like all religious *maḥmūdāt*, consists of three parts, *ma'rifā*, *ḥāl* and *'amal*. The *ma'arif* are like the tree, the *aḥwāl* the branches and the *'amal* the fruits. Out of the three classes of beings man alone may possess *şabr*. For the animals are entirely governed by their desires and impulses; the angels, on the other hand, are completely filled by their longing for the deity, so that no desire has power over them and as a result no *şabr* is necessary to overcome it. In man, on the contrary, two impulses (*bā'ith*) are fighting: the impulse of desires and the impulse of religion; the former is kindled by Satan and the latter by the angels. *Şabr* means adherence to the religious as opposed to the sensual impulse.

Şabr is of two kinds: (a) the physical, like the endurance of physical ills, whether active, as in performing difficult tasks, or passive, as in suffering blows, etc.; this kind is laudable; (b) the spiritual, like renunciation in face of natural impulses. According to its different objects, it is called by synonyms like *'iffa*, *ṣabṭ al-nafs*, *ihwāḍi'a*, *ḥilm*, *sa'at al-ṣabr*, *hiṣmān al-sirr*, *suḥd*, *ḥanā'a*. From this wide range of meaning we can understand that Muḥammad, when asked, could answer: "*imān is ṣabr*". This kind is absolutely laudable (*maḥmūd tāmm*).

As regards the greater or less strength of their *şabr*, three classes of individuals are distinguishable: (a) the very few in whom *şabr* has become a permanent condition; these are the *ṣiddīkūn*, the *muḥarrabūn*; (b) those in whom animal impulses predominate; (c) those in whom a continual struggle is going on between the two impulses; these are the *muḍjahidūn*; perhaps Allāh will heed them. One of the gnostics (says al-*Ghazālī*) distinguishes three kinds of *ṣābirūn*: those who renounce desires, these are the *ra'ibūn*; those who submit to the divine decree, these are the *ṣāhidūn*; those who delight in whatever Allāh allows to come upon them, these are the *ṣiddīkūn*.

In section VI, al-*Ghazālī* shows how the believer requires *şabr* under all circumstances; (a) in health and prosperity; here the close connection between *şabr* and gratitude is seen; (b) in all that does not belong to this category, as in the performance of legal obligations, in refraining from forbidden things, in whatever happens to a man against his will, either from his fellow-men or by God's decree.

As *şabr* is an indication of the struggle between the two impulses, its salutary effect consists in all that may strengthen the religious impulse and weaken the animal one. The weakening of the animal impulse is brought about by asceticism, by avoiding whatever increases this impulse, e.g. by withdrawal, (*'azla*) or by the practice of what is permitted, e.g. marriage. The strengthening of the religious impulse is brought about (a) by the awakening of the desire for the fruits of the *Muḍjahada*, e.g. by means of the reading of the lives of saints or prophets; (b) by gradually accustoming this impulse to the struggle with its antagonist, so that finally the consciousness of superiority becomes a delight.

ŞABR or **ŞABIR**, the aloe, the dried juice from the leaves of a group of African aloes belonging to the Liliaceae; a bitter drug and strong purgative, described as early as by Dioscurides, which is highly esteemed in Arab medicine. At the present day the aloe of Sokotrā is considered the best quality. Al-Dimashqī (*Nukḥbat al-Dahr*, ed. Mehren, p. 81) gives a good description of the plant; and a description of how the sap is obtained is given by al-Nuwairī; see also the lexicons (Lane, *Lexicon*, ii. 1645)

SABT, the Arabic equivalent of the Hebrew *Shabbāt*, the name of the Jewish day of rest. According to the *Qur'ān*, *Sūra* iv. 153, the Sabbath was imposed upon the Jews on Sinai as a binding law; according to *Sūra* xvi. 125, upon those "who have differences of opinion regarding this", by which expression, according to the commentators, either the Jews or — which is more probable — the Jews and Christians are intended. *Sūra* vii. 163—166, ii. 61, iv. 50 contain allusions to a legend, according to which Jewish sabbath-breakers were punished by being turned into apes (or swine). This story is said to have happened at Aila (on the Red Sea) in the reign of David.

Muḥammad did not adopt the Sabbath commandment; on the contrary, he definitely rejected it. That the reason for it given in the Bible, namely that God rested from his labours on the seventh day, did not appeal to him, is indicated in the *Qur'ān* (l. 37) and in the *Ḥadīth* they are very fond of referring to this, as Goldziher shows in his essay quoted below. It is on this alleged "rest of God" that the reproach of anthropomorphism, continually made against the Jews, is very frequently based; as a result of the tendency of anti-Jewish polemics to culminate more and more on this point, the seventh day acquired an actually unfavourable character in many traditions and was characterized as a "day of deceit and treachery", or as a day intended for evil things.

That on the other hand the Jewish Sabbath formed the model for the institution of the Friday service may be regarded as certain. Tradition contains definite evidence of this (Wensinck, *Mohammed en de Joden te Medina*, p. 111 sq.). In its later development the Friday observance borrowed many of the Jewish Sabbath laws or at least adopted features that recall them, but Friday never acquired the character of a day of rest. For further information on this see the article *DIJMA*.

SABTA. [See CEUTA].

AL-SABTĪ, AHMAD B. DJĀ'FAR AL-KHAZRADJĪ ABŪ 'L-'ABBĀS AL-SABTĪ, a holy man famous for his virtues and his miracles, born at Ceuta in 540 (= June 24, 1145—June 12, 1146) and died on Monday Djumādā II 6, 601 (= Jan. 31, 1205) at Marrākish where he was buried near the Tāzrūt gate. He studied more particularly under Abū 'Abd Allāh al-Fakḥkhār, the pupil of the celebrated Kādī 'Iyād of Ceuta. He was eloquent and had no difficulty in convincing his questioners; he was very pious and used to recite the Qur'ān by day and night; he recommended the giving of alms. He himself kept nothing out of the numerous gifts he received, except what sufficed for his needs and those of his family for one day only. He returned good for evil and showed compassion to widows and orphans. At the beginning of his career he lived in a *fundūq*, where he taught and with his fees provided for the wants of foreign students. He used to go through the streets of the town reprimanding and even beating those who did not say their prayers.

The memory of the saint remained very vivid among the people but became surrounded by numerous legends. Thus he is said to have prophesied the capture of Ceuta by the Christians to punish his compatriots for their ill-treatment of him; legend relates that after his departure from this town, he was very badly received by the holy men of Marrākish who feared that his cult would one day eclipse theirs; he has actually become the principal patron saint of this town. But his power extends much farther. The popular belief in Morocco sees in him the master of the winds who is invoked at sea to calm a storm and to raise the necessary wind during a calm. In many places in Algeria as well as in Morocco, the first measure of new grain is given to the poor in his honour.

Khālid al-Nāṣiri al-Salāwī, *al-Istiqṣā*, Cairo 1312, i. 209; Ibn al-Mawakkīt al-Misfiwī, *Tuḥf al-Anfās fi 'l-Ta'rif bi Shaiḫh Abi 'L-'Abbās*, Fās 1336; do., *al-Sa'adat al-abadiya fi 'l-Ta'rif bi Mashāhir al-Hadrat al-Marrākushiya*, 1341, p. 115.

(MOH. BEN CHENEB)

AL-SABU', *Šurat al-Sabu'*, the constellation of the Wolf, and *Šura Kīṭus Sabu' al-Baḥr*, constellation of Cetus, *Kīroç* (cf. al-Birūnī, *al-Qānūn al-Ma'sūdi*, Berl. Ms. or. 8°. 275, p. 207 a and 220 ab). The *Šurat al-Sabu'* with the Arabs (just as with Ptolemy) consists of 19 single stars, none of which is of more than the third magnitude (according to modern star catalogues the brightest are of 2.8 and 2.9 magnitude). The Greeks called the constellation (undefined) *ṛd θυρίον* (= the beast); but even among the oldest Babylonians the suggestion of a *raging* beast seems to have been present. The name is in Babylonian (mul) UR.BE (= (mul) Ur-idim), but in

Sumerian: 𒌦 (kakkab) kalbu shegū, which means "raging dog" (*Wolf* probably = *Lupus* + *Centaurus* to the north-east); cf. F. X. Kugler, *Sternkunde und Sterndienst in Babel*, *Ergänzungen* (Münster 1913/14, p. 28, 32, 223); *al-Sabu'*, which is also used for *Lion* is in Arabic probably the direct reproduction of the Greek: *ṛd θυρίον*; J. J. Scaliger, as a matter of fact, is said to have found on his Turkish planisphere the name *al-Asada*, the lioness, applied to it.

The animal was formerly thought of in close connection with the centaur. The latter was thought to hold the animal by the forefoot. The Arabs then called the stars of the two configurations, on account of their accumulation *al-Shamārikh* (= branch of palm with bunch of dates, or a bunch of grapes).

SĀBŪN soap (cf. English soap), has penetrated through Latin *sapo* and Greek *σαπών* as a loan-word to the East also. According to Pauly-Wissowa, (*Realenz. d. klass. Altert.*, second series, iii. 1112, the ancients were not acquainted with our soap; in Pliny *sapo* means a hair-dye (*rutilandis capillis*) and also medical salves; for cleansing purposes certain poor earths were used, which were sometimes perfumed. There can, however, be no doubt that soap came into use in the middle ages along with other lathery lotions and in addition to its uses for cleansing the person and for washing was much used for external application in medicine. The statements made regarding its manufacture in Lane, *Lexicon*, iv. 1649 sound quite modern; the "Maghribi" soap, which is not cut into pieces but looks like boiled starch, is apparently our soft soap.

SĀBŪR. [See SHĀPŪR].

SĀBŪR B. ARDASHĪR, ABŪ NAṢR, vizier of the Būyid Bahā' al-Dawla [q. v.]. Sābūr was appointed vizier in 380 (990—991). He did not, however, remain long in office, for he was dismissed in the following year, but in 382 (992—993) was restored to his former rank. At the same time Bahā' al-Dawla also appointed Abū Maṣṣūr b. Šāliḥān vizier and the two then acted jointly as viziers of the Būyid Emir. After some time, however, the Dailami troops began to show their dissatisfaction with Sābūr; his house was sacked and he had to go into hiding (383 = 993—994). As his colleague Ibn Šāliḥān was not inclined to fill the office alone, Abū 'l-Kāsim 'Alī b. Aḥmad was given the post of vizier; but as soon as the Dailamis had settled down again Sābūr came back. In 386 (996—997) Bahā' al-Dawla again appointed him vizier; this time he remained only two months in office and then went to al-Baṭīḥa. His public activities did not come to an end with this, however, for by the year 390 (999—1000) we again find him in Baghdād as vizier of Bahā' al-Dawla. In Muḥarram of the following year (December 1000) the Turkish mercenaries mutinied and demanded that

they should be paid before taking the field. Sābūr had to fly; hostilities developed between the Turks and the rest of the populace in which the Sunnis took the side of the former and it was only after much bloodshed that the riots were quelled. After Sābūr had fled, he wrote to Bahā' al-Dawla and laid the blame for what had happened on an 'Alid, Abu 'l-Ḥasan b. Yaḥyā, and his companions and then appeared before Bahā' al-Dawla in Shīrāz and secured permission from him to arrest them. But when he went to Wāsiṭ to carry out this plan, he was outwitted and had to abandon it. In the meanwhile Abu 'l-Ḥasan had made his peace with Bahā' al-Dawla and when in the beginning of Djumādā I, 392 (end of March, 1002) Sābūr appeared in Baghdād, the latter had played his last card, so that he left the city within the same month and retired again to al-Baṭīḥa. He died in 416 (1025—1026). In the first period of his vizierate — in 381 (991—992) or, according to another statement, not till 383 (993—994) — he had founded a great library, to which he is said to have presented over 10,000 volumes. This existed down till Tughrulbeg's entry into Baghdād when it was set on fire.

(K. V. ZETTERSTÉEN)

ŠĀD, the fourteenth letter of the usual Arabic alphabet (numerical value: 90; cf. the article ABDJAD). How the now usual form of Šād developed out of the Nabataean (still closely resembling the primitive Semitic form) form of the letter may be seen from plate I of the article ARABIA, ARABIC WRITING). As to its pronunciation, Šād was even in ancient times and still is an unvoiced, velarised (and according to Meinhof "stopped") alveolar spirant, in which a groove is formed on the front part of the tongue. All these elements (except perhaps the last) were recognised and described as early as Sibawaihi. Of our European sounds the French *s* in *son* is nearest to it, if we add the so-called *itbāk* (velarisation: according to Meinhof, with "stopping" at the same time. — Sibawaihi only notes the transition from *s* into *z* (and further into *z*) before *d* (for example, *maḡdar* instead of *maḡdar*); at the present day it is also found before other voiced consonants (cf. Egyptian Arabic *zuḡḡaiyar* < *zuḡḡaiyri*). For further information see Schaade, *Sibawaihi's Lautlehre* (see Index). Cf. also Mattson, *Études phonologiques sur le dialecte arabe vulgaire de Beyrouth*² (Upsala 1911), p. 24 sq. and especially C. Meinhof, *Was sind emphatische Laute, und wie sind sie entstanden?* in the *Zeitschr. f. Eingeborenen Sprachen*, xi. 81—106 (especially p. 83—86). — Šād is also the title of Sūra xxxviii of the *Qur'ān*.

(A. SCHAADE)

SA'D, constellation of good fortune, a common name in Arab astronomy for small groups of stars. They are all in the three adjoining constellations of Pegasus, Aquarius and Capricorn and usually consist of two, sometimes of three or four stars of low magnitude. Four groups form four successive stations of the moon, namely 22. *Sa'd al-dhābiḥ* = αβ in Capricorn, 23. *Sa'd bulā'* = μνς in Aquarius, 24. *Sa'd al-su'ūd* = βξ in Aquarius and 25. *Sa'd al-akhbiya* = γξπ in Aquarius. A further four belong to Pegasus: *sa'd*

al-bahā'im (σν), *sa'd al-humām* (ξξ), *sa'd al-nāṣī'* (λμ) and *sa'd al-maḡar* (ηο). Lastly *sa'd al-mulk* = αο in Aquarius.

(J. RUSKA)

SA'D B. ABĪ WAḤKĀS, an Arab general. His father's full name was Mālik b. Wuhaib b. 'Abd Manāf b. Zuhra b. Kilāb b. Murra. Sa'd, who had become a convert to Islām at the age of seventeen (cf. al-Bukhārī, *Manāḡib al-Anṣār*, bāb 31; Ibn Mādja, *Sunan*, introductory chapter, bāb 11), was one of the oldest companions of the Prophet, being a special favourite of his and one of those who had been promised Paradise (Aḥmad b. Ḥanbal, i. 193; ii. 222); he took part not only in the battles of Badr and Uhud but also in the campaigns that followed. When al-Muthannā b. Ḥāritha, who assumed command in al-Ḥira after the departure of Khālīd b. al-Walīd, in view of the danger threatening of an encounter with the Persians, asked the Caliph 'Umar for reinforcements, the latter at first appeared inclined to take command of the army himself, probably simply in order to stir up the enthusiasm of the Muslims; in the end, however, he did not do so but gave the post of commander-in-chief to Sa'd, according to one version because Djarir b. 'Abd Allāh al-Baḡjalī, who had already been sent to the 'Irāk to support the hard pressed Muslims, would not consent to be subordinate to the Bakrī al-Muthannā. In spite of his proved bravery and ability, the Beduin al-Muthannā, who had not adopted Islām till after the death of Muḥammad, would, in view of the well known jealousy among the Arab tribes, probably have proved less suitable as commander-in-chief than Sa'd who belonged to an old Meccan family and was known to be one of the most faithful followers of the Prophet. Sa'd advanced against the Persians with a large army and encamped at al-Kādisiya [q. v., ii. 611 sqq.] on the frontiers of Persia and Arabia. Here — probably in the first half of the year 16 (summer of 637) — a great battle was fought, which is said to have lasted several days; the details of it have been much elaborated by the Arab historians. Illness prevented Sa'd from taking part in the battle personally and he had to confine himself to directing the whole operations, which, however, was not quite in accordance with the traditional Arab custom. After the Sāsānian leader Rustam had fallen, the slaughter ended in the complete defeat of the Persians and Sa'd was now master of the whole of 'Irāk al-'Arabī; nor were the Persians able to hold permanently al-Mada'in [q. v.], the capital of the provinces east of the Tigris. The young Sāsānian king Yazdejdird had to flee and abandon his capital to Sa'd. When the latter entered the city, he obtained countless booty and made al-Mada'in his headquarters for the time being. At the end of the same year his nephew Hāshim b. 'Uṭba b. Abī Waḥkās again inflicted a disastrous defeat on the Persians at Djalūlā [q. v.].

To this period also belongs the foundation of Kūfa. To Sa'd likewise is due the credit of having made a strong military camp here, which in course of time grew into an important city; Sa'd was appointed first governor of the rapidly growing settlement. He seems, however, not to have paid

due attention to the Caliph's insistence on the maintenance of old-fashioned simplicity. At any rate we are told that Sa'd built a splendid palace in Kūfa modelled on the Ṭāk-i Khusrāw at al-Madā'in; but when 'Omar, who feared the injurious influence of Persian luxury on the simple habits of the Arabs, heard of this, he is said to have administered a sharp rebuke to Sa'd and even to have had the palace burned by Muḥammad b. Maslama. Sa'd was dismissed from his post as early as the year 20 (640/641) because the fickle and turbulent inhabitants of Kūfa — of all possible elements, Arabs and Persians, Jews and Christians — accused him of being unjust and tyrannical. When, however, Muḥammad b. Maslama appeared in Kūfa by the Caliph's order to investigate Sa'd's conduct in his office, only one or two individuals dared to appear against him. Nevertheless Sa'd was dismissed and 'Ammār b. Yāsir appointed his successor; but the latter only remained a short time in office and was followed by al-Mughīra b. Shu'ba [q. v.]. The great military and administrative services of Sa'd were, however, later fittingly recognised by 'Omar. When on his deathbed the latter empowered six of Muḥammad's most trusted companions to choose a new ruler within three days, he chose Sa'd as one of his advisers and is even said to have added that if Sa'd was not given the office himself, he would recommend the future Caliph to compensate him with a governorship, because he had been removed from his post neither for incompetence nor for treacherous conduct. Following this suggestion, 'Othmān in 25 (645/6) restored to him the governorship of Kūfa; again, however, he was dismissed after a short period of office and his place given to al-Walīd b. 'Ukba b. Abi Mu'ait. After the assassination of 'Othmān, Sa'd was requested to come forward as a claimant to the throne but declined, because he wished to live in peace; nor was he inclined to take any steps to take vengeance on the murderers. When 'Alī was chosen Caliph, Sa'd declined to pay homage to him and retired to his estate in al-'Aḳīḳ, where he lived till his death remote from politics, which one of his sons made a reproach against him (Muslim, *Zuhd*, trad. 11; Aḥmad b. Ḥanbal, *Musnad*, i. 168, cf. 177). According to the usual statement he died in 50 (670/671) or 55 (674/675), aged about 70. He is said to have left vast wealth behind him and was buried in Medina.

(K. V. ZETTERSTÉEN)

SA'D B. MU'ADH B. AL-NU'MĀN B. IMRU' AL-KĀIS B. ZAID B. 'ABD AL-AḤḤAL AL-ANṢĀRĪ AL-AWSĪ, a contemporary of Muḥammad's. He was head of the great clan of the Banū 'Abd al-Aḥḥal in Medina. Sa'd was won over to the new faith by Maṣ'ab b. 'Umair, who accom-

panied the twelve Medina participants in the first meeting at al-'Aḳaba [q. v.] when they returned home and made a successful propaganda for Islām. From the very first he showed great zeal for the faith and when Muḥammad undertook an expedition against Buwāṭ, he appointed Sa'd (or, according to a different report al-Sā'ib b. 'Uthmān b. Maz'un) to be his deputy in Medina. The latter carried the standard in the battle of Badr and with Sa'd b. 'Ubāda [q. v.] he went to the assistance of the Prophet when the latter was wounded in the battle of Uhud. Like Sa'd b. 'Ubāda and Usaid b. Ḥuḍair, he protested against the negotiations with the Ghatafan in the "war of the ditch", but was soon afterwards severely wounded in the hand by the arrow of a Kuraishi. After the retreat of the confederates Muḥammad decided to rid himself of the troublesome Banū Kuraiza and began to besiege them in Medina, although their only crime lay in the fact that they had remained neutral during the "war of the ditch". The negotiations, which they were soon forced to begin with the Prophet, ended in their surrendering unconditionally, probably in the hope that they could save themselves through the intervention of their former allies, the Awsis. When Muḥammad asked them whether they would leave the decision to a man of the tribe of Aws they declared their readiness to do so. Sa'd, who lay mortally wounded in the mosque where he was being tended by a woman, was then asked for his opinion and after he had secured a promise from the Prophet and all present that they would obey his decision implicitly, he declared that the men should be killed, the women and children sold as slaves and their property divided. The verdict was put into execution the next day. Over 600 Jews are said to have sacrificed their lives for their faith and soon afterwards Sa'd also died of his wound; he is represented in Tradition as a glorified hero of the faith.

SA'D B. MUḤAMMAD. [See ḤAIṢA BAIṢA].

SA'D B. 'UBĀDA B. DULĀIM B. ḤARITHA B. ABĪ ḤAZĪMA B. ṬHĀLABA B. ṬARĪF AL-KHAZRADJĪ, a contemporary of Muḥammad's. The distinguished and prosperous Sa'd was one of the few people who were able to write in Arabia in his time; he was besides celebrated as a fine swimmer and archer. In the history of Islām we first meet with his name in the accounts of the second meeting at al-'Aḳaba [q. v.] where he is mentioned among the nine Khazradjis who were chosen to be guarantors (*naḳīb*) of the new converts. He then fell into the hands of the Meccans and was severely handled by them; it was only through the intervention of two Meccan friends, to whom he had once done valuable service, that he succeeded in escaping. During Muḥammad's expedition against al-Abwā' [q. v.] Sa'd remained

behind as his deputy in Medina. In the battle of Badr, according to the most reliable authority, he did not take part; on the other hand he was at the battle of Uhūd where with Sa'd b. Mu'adh [q. v.] he tended the wounded Prophet. In the other military enterprises of Muhammad also, he proved himself an exceedingly energetic champion of Islām, and several times acted as standard-bearer. In particular he distinguished himself by great liberality. During the siege of the Banū Naḍir he distributed dates among the Muslims at his own expense; the troops besieging the Banū Kuraiza were likewise supplied with provisions by him. He supported the expedition to Tabūk by a particularly handsome contribution. When the Prophet began secret negotiations with the two chiefs of the Ghatafan in the "war of the ditch", 'Uyaina b. Ḥiṣn and al-Ḥārith b. 'Awf and promised them a third of the next date-harvest of Medina if they would retire and the Ghatafan declared their readiness to do so, his plan met with opposition from those Muslims who were inclined for fighting; the most ardent opponents of the attempt to bring about an agreement are said to have been Sa'd b. 'Ubāda, Sa'd b. Mu'adh and Usaid b. Ḥudair. In the intended campaign against Mecca which led to the treaty of al-Ḥudaibiya Sa'd's energy and thirst for fighting were clearly seen. Although he insisted that Muhammad should take the necessary precautions and provide the Muslims with the necessary weapons, the Prophet declined to follow his advice. After the death of 'Abd Allāh b. Ubaiy [q. v.] Sa'd became undisputed head of the Khazrajis and it need cause no surprise that he was proposed as successor to the Prophet. As soon as the news of Muhammad's death had spread through Medina, the Aws and Khazraj assembled; Sa'd addressed them and recommended some one among the Anṣār. The majority of those present were already inclined to pay homage to him at once. Then other Muslims appeared, notably Abū Bakr and 'Omar, and after fairly heated negotiations which threatened to end in open fighting, Abū Bakr received homage as Caliph. Henceforth Sa'd retired from public life and later went to al-Hawrān where he died "two and a half years after the accession of 'Omar" i. e. about the year 15 (636/637).

SA'D B. ZANGI ABU SHUJĀ' MUẒAFFAR AL-DĪN, Salgharid Atābeg of Fārs. According to the *Ta'rikh-i Guzida* he claimed the throne at the death of his elder brother, Takla b. Zangī, but his claim was contested by his cousin Ṭughril, the son of his father's elder brother Sunḳur, who had founded the dynasty. Ṭughril retained the royal title for nine years, but throughout that period warfare between him and his cousin continued without a decisive result for either, the country was wasted and depopulated, none would till the ground, and famine and pestilence smote the people. At length, in 599/600 (1203), Sa'd captured his cousin and as-

cended the throne of Fārs according to Mirkhwānd this happened in 693 A. H., after Ṭughril had been defeated by Takla) but at the beginning of his reign the famine was so sore in the land that the strong slew and ate the weak, and even when the famine had abated the pestilence remained, but Sa'd gradually restored prosperity to his people, and, having completed this task, conquered Kirmān from the Shabānkāras. In 612/13 (1216) he invaded 'Irāq, but was taken prisoner by the army of Sulṭān Muḥammad Khwārizmshāh, and in order to regain his freedom was obliged to pay a ransom of two thirds of a year's revenue of his kingdom, to surrender Iṣṭakhr and Ashkūrān, and to agree to pay tribute annually. On his return to Shirāz his son Abū Bakr, who had occupied the throne during his captivity, opposed his restoration, and a battle was fought between father and son, in which Sa'd was wounded in the eye with an arrow, but the citizens admitted him into the city by night, and he seized and imprisoned his son. When Sulṭān Djalāl-al-Dīn Khwārizmshāh passed through Fārs on his return from India in 1224 he interceded for Abū Bakr, and succeeded in persuading Sa'd to release him.

Sa'd b. Zangī died in 629/630 (1231), or, according to Mirkhwānd on the 21st of Djumādā I 623 (May 20th 1226), and was succeeded by his son, Abū Bakr.

SA'D AL-DAWLA. [See ḤAMDĀNIDS].

SA'D AL-DĪN. [See SA'DIYA].

SA'D AL-DĪN B. ḤASAN DJĀN. [See KHODJA EFENDI].

SA'D AL-DĪN AL-HAMAWĪ, MUHAMMAD B. AL-MU'AYYAD B. ABI 'L-ḤASAN B. MUHAMMAD B. HAMAWAIH, born in 587 (1191) or 595 (1198/9). The surname of al-Ḥamawī has nothing to do with the town of Ḥamā but comes from his great-grandfather Ḥamawaih or Ḥamōye; in some old texts the more correct form Ḥamūyī is found (*ḥ-m-w-y-y*). According to al-Yāfi'ī, he was a native of Djuwain. In his youth he joined in Khwārizm the Dervish body called *Dhahabiya-i Kubrawiya* which had gathered round the great Ṣūfī Naḍīm al-Dīn Kubrā and he became one of the twelve great *Khalifa* of the *Shaikh*. Like many of the latter's disciples he emigrated during the period of Mongol domination. After leading a retired and devout life in Syria in the Djabal Kāsiyūn, he returned to Khorāsān and settled at Bahrābād. He died on Friday 10th Dhu 'l-Hijja (on the day of the 'Id al-ḳurbān) in 658 A. H. (Nov. 10, 1260), according to the author of the *Ta'rikh-i Guzida*, or in 650 (Feb. 11, 1252), according to the *Nafahāt al-Uns* (whose statements are based on al-Yāfi'ī). His tomb is also at Bahrābād.

Sa'd al-Dīn was one of the famous mystics of his time. Šadr al-Dīn al-Ḳonyawī took part while a young man in his mystic gatherings. Al-Yāfi'ī also speaks of his disciples, of his miracles and of sayings attributed to him. In the collections of legendary lives we read that his soul quitted his body for 13 days. Sa'd al-Dīn composed mystical poems in Arabic and Persian, especially *rubā'i*; he was also the author of several treatises on the

taṣawwuf, such as the *Maḥbūb al-Awliyā* and the *Saḡandjāl al-Arwāḥ wa-Nuḡūḥ al-Awāḥ*; according to Ḥādījī Khalīfa, this last work was written at Hims. In the opinion of several Muslim authors who deal with mysticism, however, these treatises are very obscure because of the great number of veiled allusions.

His son Sulṭān al-Muḥaddithīn Ṣadr al-Dīn Ibrāhīm had been summoned from Baḥrābād by the Amīr Nawrūz, at the time of the conversion of Ghāzān Khān to Islām (*Dawlat-Shāh*, ed. Browne, p. 213, on the authority of al-Banākātī). Down to the eleventh century of the Hidjra (eighteenth A.D.). We find at Baḥrābād dervishes whose *silsila* dated back to Sa'd al-Dīn; among them was Mu'ini-i Djuwainī, author of an imitation of the *Gulistan* (*Dawlat-Shāh*, p. 241). The Ṣūfī Mawlānā Sa'd al-Dīn of Baḥrābād, mentioned by al-Nawā'ī continually recited the sayings of the Shaikh. The tradition of the Yasawīs wrongly regards him as one of the *khālifas* of Aḥmad al-Yasawī.

(KÖPRÜLÜ ZADE FU'AD)

SA'D AL-DİN KÖPEK or GÖBEK (in early texts and inscriptions: *K-y-b-k ibn Muḥammad*), a very important personage in the history of the Saldjūks of Asia Minor. There is a tradition according to which he was himself a convert to Islām but this is contradicted by the fact that his father was called Muḥammad. His origin and date of birth are unknown. We first meet with him as *tardjumān* in the palace of 'Alā' al-Dīn Kaiḡubād and next, in connection with 'Alā' al-Dīn's building operations at Kūbadābād (on this place and its buildings see Khalīl Edhem, *Kaṣariye Shehri*, Constantinople 1334, p. 50), as *mī'mār* and as *amīr shikār*. As the office of *amīr shikār* was of considerable importance in the Saldjūk palaces, we may deduce that in the reign of 'Alā' al-Dīn, Sa'd al-Dīn was already one of the most important personages in the state. Indeed, there still stands in a plain three hours from Konya on the road from Konya to Aḡ-Sarai a large *khān* which Sa'd al-Dīn built, the interior of which was completed in the last year of 'Alā' al-Dīn (638 = 1237); at that date then he already occupied an important position. It is not, however, till the early years of the reign of Ghiyāth al-Dīn Kaiḡhusraw that we find Sa'd al-Dīn playing an important part in history. He had attached himself to Ghiyāth al-Dīn and supported the latter's claim to the throne against 'Izz al-Dīn Kīlḡj Arslān; it is to his influence also that we must attribute the fact that Ḥusām al-Dīn Kīr Khān, one of the

Amīrs of Khwārizm, who had taken refuge with the Saldjūks and who was governor of Siwās, was accused of belonging to 'Izz al-Dīn's party and imprisoned. As a result of that event the Amīrs of Khwārizm, settled in Asia Minor, laid waste the Saldjūk empire with thousands of Khwārizmīs and went on into Syria and Mesopotamia where after numerous adventures they were in the end wiped out completely (cf. Kamāl al-Dīn, *Histoire d'Alep*, ed. Blochet, Paris 1900, p. 211; Köprülü Zāde Fu'ād, *Anadoluda Islāmīyet*, p. 60). With the principal amīrs of the time of 'Alā' al-Dīn, Sa'd al-Dīn was an accomplice of this Sulṭān in the execution of his mother-in-law, Malika 'Ādiliya, and her two sons; in this way he attained considerable influence. Ibn Bibi and the historians who follow him are wrong in making Sa'd al-Dīn exclusively responsible for these crimes, which were repeated in 634/5 = 1238/9. As public opinion was greatly shocked by these happenings, Sa'd al-Dīn Köpek was appointed commander of a military expedition; in the month of Dhu 'l-Hidjja, 635 (July-Aug., 1238) he captured Shumaiḡhāt. Profiting by the influence, which this victory secured him, he succeeded in having great amīrs like Ḥusām al-Dīn Kaimarī and Kamāl al-Dīn Kāmyār put to death. But the Sulṭān, who, on the one hand, wished to clear himself of the general repugnance which he had inspired by putting all the responsibility on Sa'd al-Dīn and, on the other, was anxious to get rid of an accomplice who threatened to become dangerous, had him put to death treacherously. Ibn Bibi gives a detailed account of this.

The great *khān* of Sa'd al-Dīn already mentioned is known among the people as the *Zāzādīn Khāny*. This imposing structure measuring 200—240 feet long and 200 feet broad is now in ruins. At the outer gate is an inscription of 634 A. H. dedicated to Ghiyāth al-Dīn Kaiḡhusraw. Tradition says that Köpek Oḡlu, who played a certain part in the history of Amasia during the reign of Sulṭān Mehmed I, was a grandson of Sa'd al-Dīn and that at the place now called Köpek Köyi in the vicinity of the town there is a *ṣiflik*, which belonged to the family. This tradition, however, is devoid of definite proofs.

SA'D AL-FIZR is the name by which a large section of the tribe of Tamīm is named. The curious name *Fizr* has received no satisfactory explanation and the philologist Abū Manṣūr al-Azhari asserts that he never met any person who could explain it. Some lexicographers explain it as meaning "more than one", others as "goats", but we may assume that Ibn Duraid is correct when he derives it from the verb "*fasara*" with the meaning "to split" and that "*fizr*" means "a chip" or "fragment". The Arab genealogists give the name of the common ancestor as Sa'd b. Zaid Manāt b. Tamīm and relate tales to account for the curious name which amount to the following: Sa'd had much cattle which he ordered his sons, by different mothers, to take to pasture; they refused and he invited the kindred tribesmen

of Mālik b. Zaid Manāt to come and rob the camels. Then when only goats remained he gave his sons the same order and they again refused to take them to pasturage. In his anger he called Arabs of every tribe together (or, according to another version, took his animals to the fair of 'Ukāz) and asked them to take each one goat as plunder (*intahaba*), but allowed no one to take more than one. Thus the goats were scattered all over the country and this is said to be the origin of the proverb: "I shall not do that till the goats of al-Fizr (are collected again into one herd)". The goats are probably imagined to have had the *wasm* or brand-mark of his clan. The underlying idea appears to be that the divisions of this tribe were found scattered over the whole of Eastern Arabia. The tribe of Tamīm is mentioned in the remotest antiquity, centuries earlier than the Arab genealogists can imagine, and the genealogies in their case are more fictitious than with other tribes, and all they can serve is to show which of the clans shortly before and after the introduction of Islām felt to possess a certain relationship. The poet al-Akhtal says: "In every wādī are Sa'd" pointing to their wide distribution. Of the many subdivisions mentioned by genealogists only those derived through his sons Ka'b and al-Ḥarith appear to have had a claim to pure descent, while the descendants of the other sons, 'Abd Shams, Djuṣham, 'Awf, 'Uwāfa and Mālik were called the "Abnā". There were doubts as to the purity of their descent; they were settled in Bahrain and had largely intermixed with the Persian settlers when this province was under Persian rule. They were as regards numbers perhaps the largest Arab tribe and for this reason played an important part in the wars shortly before Islām and during the conquests and many persons mentioned in the early times of Islām were members of the various clans of Sa'd al-Fizr. They sided with 'Alī during the struggle for the caliphate and were most prominent during the unruly times in Khurāsān under the later Omayyads and appear to have settled in Persia in large numbers. Others emigrated to North-Africa and the Aghlabī rulers of Ifrikiya claimed descent from them. The many subdivisions cannot be enumerated here, but it must be stated that the genealogists are far from unanimous in the affiliation of the various sections, and their names disappear early from history under the general name of Tamīm. — Importance may be attached to the tribe of Sa'd al-Fizr and their nearest kindred clans for having spoken that Arabic which forms the basis of the classic Arabic of literature, as the earliest philologists seem to have framed the rules of Arabic grammar upon the dialect of Tamīm. This was no doubt on account of their widespread diffusion through which their dialect was understood in most parts of Arabia.

(F. KRENKOW)

ŞA'DA, a town in South Arabia, the capital of the district of the same name in Yemen. It lies on the pilgrim road from Mekka to Şan'ā, 60 parasangs (180 miles) or five days' journey from the latter town. In the days of paganism the town is said to have been called *Djumā'* and to have been built on the site later occupied by Ḥiṣn Talammuṣ built by the Imām al-Mutawakkil 'ala 'llāh Aḥmad b. Sulaimān b. al-Muṭahhir. According to al-Hamdānī, the name Şa'da owes its origin to the following circumstance: — a man from the Ḥidjāz, who was passing by the strong castle that stood in *Djumā'* and lay down exhausted beside it, marvelling at its height called out twice *laḥad ṣa'adahu* "he has raised it in fine fashion". Similar popular etymologies are found in other places. Six minutes south of the modern Şa'da lay the village of al-Khānik, where the ruins of a great reservoir for irrigating the land and of other buildings survived into Muslim times. Near Şa'da is also the town of al-Qhail, which name al-Bīrūnī would regard as the ancient name of Şa'da.

Şa'da was and — in spite of the catastrophes that have overwhelmed it — still is a flourishing, populous and wealthy town, in which merchants from all parts, especially from al-Baṣra, met. The principal industry of the city has always been the dressing of hides and sole-leather which was exported mainly to the Ḥidjāz and Yemen, and the manufacture of leather water-skins of particularly fine quality. For Şa'da lies in the very centre of very vast plantations of the *karāz* tree (*acacia Arabica W.*), the leaves of which are used in dressing leather. In Şa'da excellent lances (*ṣā'idr*) and spear-heads used also to be made. Iron, which was brought to Şa'da from the vicinity in the form of dust and was purified there, must have been used for the latter. Iron is still found near Şa'da. Gold used also to occur in the neighbourhood — at al-Kuḥā'a —. The flourishing trade of the town and the busy caravan traffic as well as its native industry yielded large sums in dues and taxes to the treasury of the Zaidī Imāms, whose capital it was. Yāqūt estimated the yield at 100,000 dīnārs. The Imāms al-Hādī Yaḥyā b. al-Ḥusain (d. 298 = 910/911) and Yūsuf b. Yaḥyā (d. 430 = 1012/13) are buried in Şa'da.

ŞADĀK. [See MAHR].

ŞADAQA, alms, is so called, according to the Arab writers, from the verb *ṣadaqa*, because the Muslim's almsgiving shows the sincerity (*ṣidq*) of his religion; but it is, in point of fact, merely a

transliteration of the Hebrew word *ṣēdāqā*, which meant originally "honesty", but was used by the Pharisees for what they considered the chief duty of the pious Israelite, namely almsgiving, a meaning which it still retained at the time of the coming of Islām and afterwards. Its proper sense is, therefore, voluntary or spontaneous almsgiving or what we call "charity".

Arabic authors, however, use the word *Ṣadaqa* in two different senses. In the first place it is frequently employed as synonymous with *Zakāt* [q. v.], that is, the legal poor-rate, which is involuntary, and of which the amount is fixed. It is so used in the *Qurʾān*, ix. 58 sqq., x. 59 sq. (see Lane, s. v.). It is so used also in the *Muwattaʾ* of Mālik ibn Anas, in which, in the *Kitāb al-Zakāt*, *Ṣadaqa* is substituted for *Zakāt*. He does this apparently when it is a case of *Zakāt* upon quadrupeds (*mawāʾiḥ*, camels, flocks and herds), but also in other cases. In Bukhārī, on the other hand, *Ṣadaqa* seems to be put for *Zakāt* quite indiscriminately, and the two words are used simultaneously as synonyms. Instances will be found in the notes to Houdas and Marçais' translation. Thus in *bāb* 31 of the *Kitāb al-Zakāt* the two words are used indifferently. Bukhārī uses *Zakāt* where Mālik uses *Ṣadaqa* (e. g. *bāb* 43); he quotes the tradition "There is no *Ṣadaqa* on less than five *dhawd* of she-camels" in the same form as Mālik, yet speaks of the *Ṣadaqat al-Fiṭr* where Mālik uses the usual *Zakāt al-Fiṭr*. The same failure to distinguish between the two words is found also in later writers, both legal and historical (e. g. Ibn al-Aṭṭār, *al-Kāmil*, iii. 42, after Ṭabarī). If there were any doubt as to the identity of this *Ṣadaqa* and *Zakāt*, it would be removed by the fact that the six or seven classes of persons who are entitled to benefit by them are the same in each case, namely, the poor and needy, those engaged in the work of distributing the *Ṣadaqa* or *Zakāt*, Muslim captives in enemy hands, debtors, those engaged in the *Djihād*, travellers, and (originally) the *Muʾallafa Kutubuhum*.

The proper use of the word *Ṣadaqa* is, however, as has been said, in the sense of voluntary almsgiving. In this sense it is, for the sake of distinction, called *Ṣadaqat al-Taṭawwuf* ("alms of spontaneity"). Ibn al-ʿArabī thus defines this *Ṣadaqa*: "Voluntary *Ṣadaqa* is an act of worship arising from free choice mixed with authority; and if it be not so then is it no voluntary *Ṣadaqa*, for the man makes it obligatory upon himself, just as God makes mercy obligatory upon Himself towards those who repent, and corrects those who do ill in ignorance".

Ṣadaqa appears to be used in this sense in the remaining passages of the *Qurʾān* where it occurs, other than the two cited above. Alms may be given openly (ii. 273), so long as this is not done for ostentation (ii. 266); but alms given in secret are better. There is more profit in alms than in usury (ii. 277), but they must be given with goodwill (ii. 265). Those who are disposed to be charitable must not be discouraged (ix. 80), but the reverse (iv. 114). Voluntary alms, of which the amount was left to the giver, were prescribed to be given before interviewing the Prophet, but this impost was remitted provided the interviewers had paid their *Zakāt* (lviii. 13, 14). Alms might also be given in place of some other obligation, such as that of shaving the head after the pilgrimage (ii. 192). These passages naturally form a basis

for much that is found in the succeeding writers. In the *Kitāb al-Zakāt* of his *Muwattaʾ* Mālik ibn Anas frequently cites a certain "Letter" of ʿUmar ibn al-Khaṭṭāb in regard to the *Ṣadaqa*. This unfortunately refers to the *Ṣadaqa* in the sense of *Zakāt* only. Mālik himself treats of the *Ṣadaqa* in its etymological sense along with a variety of other matters in the closing paragraphs of his work. He does not use any distinctive term such as *Ṣadaqat al-Taṭawwuf*. What he says is as follows. Under the heading "Inciting to almsgiving" he records a saying of Muḥammad: "Whoever gives an alms out of honest gain (and God accepts only the honest) is only placing it in the palm of the Merciful, and He will make it grow for him, just as one of you lets his weanling foal or camel grow until it becomes like a mountain". Anas ibn Mālik [q. v.] used to tell how Abū Ṭalḥa, who was the richest Anṣārī in Medina, prized above all his wealth a well beside the mosque, from which Muḥammad was in the habit of drinking. When the verse "You shall never win piety until you spend of what you love" (iii. 86) came down, he wished to give this well. Muḥammad, however, persuaded him to keep it in his own family. Zaid ibn Aslam is the authority for the prophetic saying: "Give to the beggar, an if he come upon a mare". The wives of the believers are exhorted not to look down upon the alms given by their neighbour, "even if it be the burnt leg of a sheep". ʿĀʾisha [q. v.], when fasting, gave to a beggar the only loaf she had with which to break her fast. She received the timely present of a sheep. To some who were ever begging Muḥammad gave, but with the reproof that "the best of gifts is endurance". It was when speaking from the pulpit about almsgiving and about refraining from begging that the Prophet used the oft-quoted saying: "The upper hand is better than the lower hand". Mālik interprets that the upper hand is the hand that spends and the under hand is the hand that asks. ʿUmar even refused his stipend on the ground that Muḥammad had advised them not to take anything from another. Muḥammad explained that he was speaking of asking for gifts. ʿUmar replied that he would never ask, nor would he refuse what came without asking. Muḥammad also said: "By Him in whose hand my life is, it were better for one of you to take a rope and gather fuel upon his back, than to beg from one to whom God has given of his bounty, whether he give or refuse". A certain Asadī who had encamped in the Baḳʿ al-Gharḳad [q. v.] was urged by his family to seek something of Muḥammad. He went and found another applicant being sent away with the words: "The beggar who possesses an ounce of gold or its equivalent is guilty of importunity (*ilḥāṣ*)", the Prophet adding that he had nothing to give. Mālik explains that an ounce is 40 dirhams. He adds that the Asadī returned to his family without begging, but when the Prophet received fresh supplies, he was not forgotten.

Under the heading "What is disliked in regard to alms" Mālik notes that the family of Muḥammad may not accept alms, which are only "the offscouring of mankind" (*awṣāḳ al-nās*). It was not lawful for Muḥammad to give alms out of the *Ṣadaqa* (that is, the *Zakāt*). He might give only of his own. So too Aslam wished a man to

request of 'Umar to let him ride one of the she camels of the "Şadaqa", but the other asked him if he would like to drink the water in which a person had washed himself. Aslam exclaimed: "God forgive you! Do you say the like of this to me?" The other replied: "Alms are but the offscouring of men, which they wash from off them". There is some slight confusion here between the two senses of *Şadaqa*. So far Mālik.

Al-Bukhārī in the following century deals with *Şadaqa* in both its senses in the xxivth book of the *Şahīḥ*, on *Zakāt*, without perhaps being aware that he is speaking of two different things. Of the voluntary almsgiving he says in various *bāb*, that alms is the duty of a Muslim. If he lack the means to give alms, he must work and gain them. If he cannot find work, he must at least refrain from ill, and this will be counted to him for alms. The alms given should be according to his means, out of the surplus of his possessions. They must be given with the right hand, and not given to the wrong person. A wife may give alms out of her husband's substance, and a slave out of his master's. Begging is not to be indulged in; but alms may be taken from the rich and given to the poor. Almsgiving atones for sin.

Al-Ġhazālī discusses almsgiving in the *kitāb arrār al-Zakāt* of the *Ihyā' al-'Ulūm*, especially in the 8th *waḥīfa*, in which he defines the proper recipient of alms. He must be ascetic, learned, truthful, uncomplaining, necessitous and related to the giver. In the 4th *faṣl* he takes up *Şadaqat al-Taṭawwū'*. After recounting sayings ascribed to Muḥammad and others, he comes to the question raised in the *Qur'ān*, whether it is better to do alms in secret or openly. Those who prefer to give in secret, say that this preserves the self-respect of the recipient, and does not cause people to talk, nor excite the envy of others. Others hold that alms given openly prevent mistakes and misunderstanding, promote humility, and so on. Ġhazālī, like Sir Roger de Coverley, decides that much may be said on both sides, and that all depends on circumstances and motives. He then turns to the question whether it is better to accept *Zakāt* or *Şadaqa*. Some prefer the former because it is a legal due, and does not place those who accept it under an obligation. On the other hand the recipient of the *Zakāt* may not be worthy of help, and the element of friendliness is eliminated. Once more Ġhazālī declines to make a general rule. Cases differ.

Ibn al-'Arabī deals with this matter in the *Futūḥ al-Makkiya*, in *bāb* 70, on "the secrets of the *Zakāt*". He also discusses the question of secret or open alms. His definition of voluntary alms has been given above.

The Shī'ite views of *Şadaqa* and *Zakāt* are similar to those of the Sunnīs, but, while both debar the family of the Prophet from benefit of *Zakāt*, the Shī'ites permit them to share in the *Şadaqa*.

Care for the poor is a characteristic of the Semitic peoples, but the Arabs were not troubled by the feeling of pity. It is possible, therefore, that the provision made for those in need, whether by voluntary or involuntary aid, may have been borrowed from the Hebrews. Cf. Tobit, xii. 8 sq.; Matt. vi. 3, which certainly appear to be quoted. Alms are not a feature of Arabia before Islām, but Freytag gives (xxiv. 5) the proverb: "The best alms are words".

ŞADAQA B. MAṢŪR B. DUBAIS B. 'ALĪ B. MAZYAD, SAIF AL-DAWLĀ ABU 'L-ḤASAN AL-ASADĪ, ruler of al-Ḥilla. After the death of his father in 479 (1086/1087), Şadaqa was recognised by the Saldjūk Sultān as lord of the territory of Malik Şāḥ on the left bank of the Tigris. During the fighting between Sultān Barkiyārūk and his brother Muḥammad, Şadaqa was at first on the side of the former, but when Barkiyārūk's vizier, al-A'azz Abu 'l-Maḥāsīn al-Dihistānī, demanded a large sum of money from him in 494 (1100/1101) and finally threatened him with war, Şadaqa abandoned Barkiyārūk and had the *khutba* read in name of Muḥammad. The Sultān then tried to win him back by peaceful means; but Şadaqa demanded that the vizier should be handed over to him and as Barkiyārūk could not grant this, the negotiations fell through. Instead of agreeing with Barkiyārūk, Şadaqa drove the Sultān's governor out of Kūfa and himself occupied the town. In the following year al-Ḥilla [q. v.] was founded; previously the Banū Mazyad had lived in tents.

When Gümüştekin al-Kāişarī by Barkiyārūk's orders appeared in Baghdad in the middle of Rabī' I, 496 (end of December, 1102), İlghāzī b. Urtuġ, Muḥammad's governor there, made an alliance with Şadaqa. In the meanwhile the Caliph al-Mustazhir had Barkiyārūk again proclaimed Sultān; nevertheless Şadaqa still declined to acknowledge his suzerainty. Soon afterwards Barkiyārūk's name was again dropped from the *khutba* and the imāms confined themselves for the time being to praying for the Caliph only without mentioning by name either of the two contending Sultāns. But the war was continued; by Rabī' II, 496 (January, 1103) Gümüştekin had to evacuate Baghdad and as he was unable to hold out in Wāsiṭ either, Muḥammad was again recognised as Sultān in both cities. Şadaqa then extended his power over a great part of the 'Irāq; in the same year, he took the town of Hit on the Euphrates, which Barkiyārūk had granted as a fief to one of his followers, and appointed his cousin Thābit b. Kāmil governor of it. In Shawwāl, 497 (June—July, 1104), Wāsiṭ met the same fate and here Muḥaddhib al-Dawla al-Sa'id b. Abi 'l-Khair was appointed governor. Next came the turn of Basra, which had fallen into the hands of the Saldjūk Ismā'il b. Arslāndjīk during the war between

Barkiyārūk and his brothers. It was not till after the death of Barkiyārūk that Sulṭān Muḥammad was able to think of dislodging Ismā'il from it and in 499 (1105/1106) he asked Şadaqa to fight him. In Djumādā I of the same year (Jan.-Feb., 1106) Şadaqa took the field against Ismā'il, who was soon forced to surrender, whereupon Şadaqa appointed one of his grandfather Dubais's Mamlūks named Altūntāsh to govern Baṣra. But as the latter was very soon surprised and captured by Beduin bandits, the Sulṭān himself appointed another governor in his place. In Şafar, 500 (Oct., 1106) Kaiḫubādī b. Hazārasp al-Dailamī, lord of Takrit, had also to yield. After the death of Barkiyārūk, Muḥammad had sent the Emir Aḫsunḫur al-Bursuḫī [q. v.] to Takrit to occupy the town. As Kaiḫubādī would not obey, he was besieged. After several months had passed, he saw the impossibility of holding out any longer, and sent to Şadaqa and surrendered the city to him. Warrām b. Abī Firās was then appointed governor of Takrit. But Muḥammad could not always look on quietly while Şadaqa's power kept growing, especially as the latter never had any scruples about affording shelter to anyone who had fallen into disgrace with the Sulṭān. When Abū Dulaf Surḫāb b. Kaiḫusraw, lord of Sāwa, took refuge with him and Şadaqa refused to hand him over, long negotiations between Şadaqa and the Sulṭān only resulted in an open breach between suzerain and vassal. The Sulṭān set out in person from Baghdad with a large army and in the fierce battle which was fought (according to the most usual statement) in the latter half of Radjab, 501 (beginning of March, 1108) Şadaqa was killed at the age of fifty-nine. Like his ancestors he bore the title "Malik al-'Arab"; the highest praise is given him by Arab poets and historians for his virtues, notably his liberality and readiness to give assistance, and he is rightly described by A. Müller (*Der Islam im Morgen- und Abendland*, ii. 122) as "a true Beduin, brave, stubborn and wily".

AL-SA'DĀN, the two lucky stars, Jupiter and Venus in contrast to the two unlucky stars (*naḥṣān*), Saturn and Mars. Jupiter is called the great good fortune, *al-Sa'd al-akbar*; whoever is born under his rule will be among the happy ones in the future life and distinguished for devoutness, fear of God, uprightness and continence. Venus is called the little good fortune, *al-Sa'd al-aṣḡhar*; whoever is born under Venus may expect good fortune and success in this life, in all worldly pleasures, such as food and drink and especially in all love and matrimonial affairs.

(J. RUSKA)

SA'DI, Shaikh Muṣliḥ-al-Dīn, whose renown is second to that of no Persian poet, was born at Shīrāz in 580/1184. His father was in the service of the Salghurid Atābeg, Sa'd b. Zangi, from whom the poet took his *Taḡhalluṣ*, or poetical pseudonym, of Sa'di. It has been suggested that this name was taken from Sa'd II, son of Abū Bakr and grandson of Sa'd I, but this is improbable, for Sa'd II did not begin to reign until shortly after Sa'di, who was then sixty-seven years of age and had already written much, returned to Shīrāz from his travels, and he reigned for no more than twelve days. He had no opportunity of doing anything to earn Sa'di's gratitude, whereas his grandfather had been the patron of the poet's father. Sa'di began his studies in the famous Nizāmiya College at Baghdad, and continued his education by studying the mysticism of the Sūfis under Shaikh 'Abd-al-Kādir al-Djīlī (Djīlānī) [cf. the art.], with whom he made the pilgrimage to Mekka — a duty which he is said to have performed no less than fourteen times. Of his long life of 102 (lunar) years he spent the first thirty in study, the second thirty in travelling and the composition of poetry, the third thirty in religious seclusion and the completion and arrangement of his poems, and the last twelve in supplying wayfarers with food and water and in discourse on mysticism.

In the course of his travels he visited Asia Minor and India, and in both countries bore arms in dījhād against the misbelievers. He says of himself:

I have wandered afar in the ends of the earth,
I have consorted with all sorts and conditions
of men;

In every corner have I found both pleasure and profit,

From every harvest have I gleaned a sheaf.

Towards the end of the thirteenth century the Martyr Prince Muḥammad Khān, governor of Multān on behalf of his father, Ghiyāth al-Dīn Balban, invited Sa'di to visit India once more, and the poet was deterred only by his age from setting out on his travels again. Of his wit many stories are told. Khwādja Humām al-Dīn, a rich citizen of Tabriz and himself a poet, meeting him in the public baths, asked him whence he came, "From Shīrāz," said Sa'di. "It is strange that there should be more Shīrāzis than dogs in Tabriz," said the Khwādja. "It is not so at Shīrāz," replied Sa'di, "for there Tabrizis are less than dogs". The Khwādja left the bath but met Sa'di again in the street. "Do they recite the verses of Humām in Shīrāz?" he asked the traveller. "Yes", said Sa'di, looking at the handsome youth who was fanning the Khwādja, "especially this:

"Between me and my beloved Humām stands
as a veil;

It is time for me to draw this veil aside".

His wit betrayed him. "You are Sa'di", exclaimed the Khwādja. "Yes", was the reply; and the delighted Khwādja, having begged his pardon, took him home and feasted him royally.

Sa'di died at Shīrāz in September, 1292, at the great age of 102 lunar or nearly 99 solar years, and is buried in the environs of the city.

His best known works are the *Būstān* (Garden), written in 1257, and the *Gulistān* ("Rose-garden"), written in the following year, which are read wherever Persian literature is studied. The former is a collection of poems on ethical subjects and the latter is a collection of moral stories in prose,

plentifully interspersed with verse. He has also a *diwān* or volume of *ghazals* (short odes), a number of *Ḳaṣ'id* (long odes), and collections of poems known as *Tayyibāt* (Pleasantries), *Ḥazliyat* (jests) and *Khushiyāt* (obscenities). He is regarded as the master of the *ghazal*, or short ode. An unknown poet has written:

"There are three prophets in poetry,
Despite the saying: "There shall be no prophet
after me";

One in encomium, one in the *ḥajida*, and one
in the *ghazal*;

They are Firdaws, Anwarī and Sa'dī".

Bibliography: Dawlatshāh, *Tadhkir at al-Shu'arā'*, ed. E. G. Browne (1901); Lutf' Allāh. *Āḡā Khān Aḡhar, Alashkade*. MSS.; Ḥamd Allāh Mustawfī al-Ḳazwīnī, *Tarikh-i Guzida* (Gibb Memorial Series). For further details see beneath (T. W. HAIG)

Literary History. All MSS. of Sa'dī's works are based on the redaction of 'Alī ibn Aḥmad Abū Bakr of Bisutūn who flourished 50 years after Sa'dī's death. They are divided into a Persian-Indian and a Persian-Turkish family. On the first is based the Calcutta edition of the *Kulliyāt* in two volumes (1791 and 1795), containing also the preface of that redactor. Vol. i. of this edition begins with the seven so-called *Kisā's*, prose treatises of mystical and ethical contents. In the same volume follow *Gulistān*, *Būstān* and *Pand-nāma* (generally not considered as Sa'dī's own work; cf. Ethé, *Grundriss der iranischen Philologie*, ii. 295; it is a *mathnawī* after the fashion of 'Aḡār's *Pand-nāma*). Vol. ii. contains the *Diwān*, comprising the Arabic and Persian *Ḳaṣida's* (lyrical, didactical and panegyric), the *Marāthi*, the *Mulamma'āt* and *Tarḡi'āt* and the four collections of odes. Finally the *Ṣāhibiyya* or *Ṣāhib-nāma*, *Mubāṭṭa'āt*, *Khawāṭirāt*, *Mudhikāt*, *Rubā'iyyāt*, *Mufradāt*. All *Kulliyāt*, published since in Persia and India have about the same division.

Besides the many biographical works on Persian poets, Sa'dī's own works are valuable material to complete our knowledge of his life and the development of his literary production. Thus he must have composed a good deal of the *Ḳaṣida's* in later age, as they are addressed to personalities whom he had known only after his return to Shīrāz. If the four groups of odes have been arranged after the different periods in Sa'dī's life, in which they have originated, the *Tayyibāt*, the *Badā'i'* and the *Khawāṭim* are all to be placed after the poet's return to his native town; they contain a few allusions to events and persons connected with his later life. On the other hand, the *Ḥazaliyat-i Qadīm* appear to be a work of his youth. All this, however, is rather uncertain. The alphabetical arrangement according to the final letters of each poem makes chronology impossible; but some MSS., constitute an exception, e. g. the oldest known MS. described by Ethé under No. 1117 on p. 655—659 of his *Catalogue of the Persian Manuscripts in the Indian Office* (No. 876; cf. also p. ii. of White King's Introduction to his edition of the *Tayyibāt*, Calcutta 1919); so a careful examination of the older arrangement might give some results. The *Ṣāhib-nāma* (ed. and transl. by W. Bacher, *Sa'dī's Aphorismen und Sinngedichte*, Strassburg 1879) containing moralizing poems, was dedicated to the *Ṣāhib-Diwan* Shams al-Dīn Djuwainī and belongs equally to the last period of Sa'dī's life.

In the short stories of *Gulistān* and *Būstān* (also called *Sa'dī-nāma*) there occur many personal recollections of the author. In his monograph on Sa'dī, Massé has tried to restore a biography based on those informations. But he seems to have trusted Sa'dī's veracity too much. The truth of many of these stories has been doubted before (Barbier de Meynard, Rückert) and Sa'dī himself declares that whoever has been much about in the world, may lie a good deal. If we are not wholly to distrust the author, he must have lost his father in an early age, being old enough, however, to remember some of his wise lessons. The anecdote in the *Gulistān* about the poet's visit to *Kashgar*, when he was still very young, sounds rather improbable and has puzzled many orientalists; certainly the easiest way is to consider the whole story as fantastical (cf. Schaeder in *Der Islām*, xiv. 187). To the period of Sa'dī's youth must equally have belonged his sojourn in Syria as a prisoner of the Franks in Tripoli (Massé suggests of the siege of that town in 1221) and his ephemeral marriage with the daughter of a paternal friend who redeemed him from slavery. It is impossible to follow him closely during the period of his long journeys (± 1226—1255); it seems probable that he visited Central Asia, India, Syria, Egypt, Arabia (many of the short stories relate experiences in the desert on the way to or from Mecca), Abyssinia, Morocco. In India Sa'dī pretends to have passed through the well-known adventure in the temple at Somanāt, where he discovered the priest's trick in deceiving the people and afterwards killed him in order to escape his vengeance. This story too, however, has many intrinsic improbabilities (*Būstān*, ed. Graf, p. 388 sqq.). Sa'dī's second marriage in Yemen is also to be placed in this second period. In the last period of his life he was, as the *Ḳaṣida's* prove, in relation with the Atabak Abū Bakr ibn Sa'd ibn Zangī, on whose death he composed an elegy († 1260) and whom he has celebrated in the first pages of the *Būstān*. There is the Arabic *Marthiya* on the fall of Baghdad and in the same period his panegyrics on the Mongol conquerors and their satellites. The *Tayyibāt* are dedicated to the last Atabak of Fārs, Saldjūqshāh. There are also *Ḳaṣida's* dedicated to Anḳiyānū, the Mongol governor who succeeded that prince, and also to Sa'dī's exalted patrons 'Aṭā Malik and Shams al-Dīn Djuwainī (an anthology of these panegyrics is to be found on p. 67—70 of the Persian introduction to the Gibb Fund edition of the *Djahān-Gushā*). As in Sa'dī's works there is no allusion whatever to the tragical death of both the brothers Djuwainī (1282 and 1283) Massé thinks that the poet must have died before or very shortly after these events; in that case the informations of the biographers, varying between 1291 and 1292 give too late a date. Now if, as most authors do, the year 580/1184 is adopted as the year of Sa'dī's birth (Browne, *Lit. Hist. of Persia*, ii. 526), he may not yet have reached 100 (solar) years.

Sa'dī's tomb is outside Shīrāz, a little farther off than that of Ḥāfiz. The tombstone is not old, the original one having been destroyed by a fanatical *mudjtahid*, as Sa'dī is generally believed to have been a Sunnī. It is probable for this same reason that Sa'dī's tomb lies rather deserted, whereas many Shīrāzians have chosen for the place

of their last repose the neighbourhood of Hāfiz (Browne, *A year amongst the Persians*, London 1893, p. 281). According to the colophons in the oldest MSS., the name of the author must have been Muḡharriḡ al-Dīn ibn Muḡliḡ al-Dīn 'Abd-Allāh (Rieu, *Catalogue of the Persian MSS. in the British Museum*, ii. 595).

Ethé (*Grundriss der Ir. Phil.*, ii. 292) counts Sa'di among the poets that first have combined the originally separated mystical and didactical tendencies in Persian poetry. With Sa'di the didactical, moralizing element is predominant; to this it is that he owes his great popularity.

There is no doubt that he was well versed in the "science" of mystics. Besides 'Abd al-Kādir al-Djilāni, Shihāb al-Dīn Suhrawardī was his teacher in Baghdād (*Būstān*, ed. Graf, p. 150). According to an anecdote told by Afākī (transl. by Huart, i. 238 sq.), he even might have met with Djālāl al-Dīn al-Rūmī (cf. *Būstān*, p. 165 sqq.). For him as for other poets the often paradoxical mystical ideas must have been valuable literary material. The question whether Sa'di was himself susceptible of mystical feelings is probably to be answered in the negative, as his practical nature made him more inclined towards a moralizing attitude, in which he made mysticism only serve a higher moral conception of earthly life. In many instances he puts moderate common sense against exaggerated zeal for the life to come. In his *Būstān* the lofty mystical sentiments of the *Mathnawī* or the *Mantiq al-Tair* should not be sought for. Sa'di often speaks of the Šūfi's, but his attitude towards them is always more that of a moralist than of a fellow-mystic. His practical mystical ideal is realized in the *Šāhididān*, the truly wise people who do not care for the outer appearances of this world, without, however, despising it wholly. For it is precisely the world's perishableness that makes it valuable as a rare ruby, and in many places Sa'di shows himself a good Muslim, when he finds in the variety and beauty of earthly existence a reason for great thankfulness towards the Creator. He preaches a moderate fatalism and disapproves of exaggeration in the religious life: "Don't be more pious than Muḡammad!"

As a moralist Sa'di gained much profit from the vicissitudes of life through which he had passed. His knowledge of the world gives to his ideas and opinions a cosmopolitan character, reached by no other Persian poet. It is due, probably, to this fact, together with the elegance of his style, that he has earned his great popularity in his own country and abroad, so that he has been compared with Horace, Rabelais and Lafontaine. Sa'di looks upon the world with sympathetic humour and is seldom satirical; and he can never enough exhort his readers to follow his moral counsels. Now these moral precepts, chiefly to be found in *Gulistān*, *Būstān* and *Pand-Nāma*, are far from being uniform. For common mortals the author cites in the *Pand-nāma* a number of virtues and vices; as the chief virtue he seems to regard "goodness" (*niki*), great sympathy for our fellow-creatures without any egotistic view. He that obtains the qualification of good is really immortal. On the other hand Sa'di's social morals are sometimes quite different; here revengefulness is sometimes recommended instead of mercifulness, insincerity instead of veracity. Man is admonished

to guard by all means his independence from other people. Especially for princes several machiavellian precepts are given (the 2nd part of the 6th *risāla* is a short treatise on politics, dedicated to Anḡiānū), and for derwishes again other moral norms exist.

The different aspects of Sa'di's morality make it difficult to believe in his sincerity, the more so as his morality is considerably compromised by the obscenities uttered in some chapters of the *Gulistān* and in the *Khawāthir*, though, in an introduction to this collection, he tries to excuse himself in saying that he could not withdraw from an order given to him to compose these poems. However, with a Persian poet it is often difficult to separate what belongs to himself and what must be regarded as a concession to the taste of his patrons and of the public. The favour he has met with all through the eastern world should always be taken into serious consideration before judging too severely his character. In any case he has shown himself in all his humanity and he has amply satisfied the predilection for moralizing in literary form, which the Persians have had since pre-islamic times.

Moreover, his elegant style, his ease of expression, the way in which he knows how to make attractive the most tedious moral maxims, in short his art, would have been enough to gain him the admiration of his countrymen. The *Khawāthir* are considered to be his most perfect compositions; the Arabic *Qaṣida*'s are less appreciated by orientalists. Arabic and Persian lines follow alternately in his *Mulamma'āt*, and in one of his poems he uses 16 different languages and dialects (Bacher in the *ZDMG.*, xxx. 89).

In Persia Sa'di's *Diwān* is more read and appreciated than the *Būstān* and the *Gulistān* (Browne, *A year amongst the Persians*, p. 281). Still, nowadays, many Persians know one of both these works by heart and quite a number of Persian poets have followed Sa'di in writing similar works. They are enumerated by Ethé in the *Grundriss der Irānischen Philologie*, ii. 297. The most famous of the imitations of the *Gulistān* is Djāmi's [q. v.] *Bahāristān*. But none of them has been able to surpass the originals in popularity.

Outside Persia Sa'di's influence has been great in Indian and in Turkish literature. After the Calcutta edition the poet's works have often been printed in India, without and with commentaries by Indian scholars. The *Gulistān* has been translated several times into Hindustāni, the best known being the translation of Afśōs (1802). Garcin de Tassy's assertion that Sa'di must have been the first Hindustāni poet has been definitely refuted now (cf. Browne, *Literary History*, ii. 533). But a certain relation between Sa'di's way of composition, especially in the *Gulistān*, in which a prose story is everywhere followed by a short poem, and the old well known literary form of Indian tales, admits on the one hand of the supposition of Indian influences on Sa'di himself and may explain on the other hand his popularity in Hindustān.

Turkish translations of Sa'di's works were made at an early date. The *Būstān* was translated in 1354 by the learned Taftāzāni (Gibb, *History of Ott. Poetry*, i. 202) and there exists a translation of the *Gulistān*, made in 1391 by

Saif al-Sarayī in the Turkish dialect of Egypt (MS. Leiden, No. 476 in Dozy's *Catalogus*, i. 355; cf. also *Milli tettebb'lar medjmu'asi*, Sept.-Oct., 1331, p. 133). The Turkish poet Kemāl Pāshā Zāde († 1534) imitated the *Gulistān* in his Persian *Nigārīstān*. Sa'dī belonged to the poets whose works were much studied during the early period of Ottoman literature. In a way he has even been of some influence on the development of modern literature in Turkey, as Ziyā Pāshā, in his autobiography, tells that it was only when he read the *Gulistān* that he discovered what language was (Gibb, *Hist. of Ott. Poetry*, v. 53). In his *Kharabāt* (ed. Constantinople 1291, i. p. 22 of the introduction) Ziyā Pāshā puts Sa'dī above all other Persian poets: "When one reads the *Būstān*, then only does one understand what the world is like". He does not doubt of Sa'dī's sincerity and admires in him the fact, that even in his panegyrics he is still courageous enough to remind the mighty of the earth of moral precepts. During the sixteenth century several other Turkish translations have appeared. Turkish scholars have also undertaken to write commentaries on *Būstān* and *Gulistān*; such are Surtūrī († 1561), Sham'ī, Sūdī (both at the end of the xvth century), Hawā'ī, al-Bursawī and others. In the sixteenth century some of these commentaries were printed.

The existing translations of the *Gulistān* and the *Būstān* and sometimes of other of Sa'dī's works, in all modern languages, prove sufficiently the great renown he has obtained beyond the boundaries of Islām. First, the *Gulistān* became known through the French translation by André du Ryer (Paris 1634), followed by several editions in Latin (by Gentius, Amsterdam 1651), German (by Olearius, Hamburg 1654), Dutch (transl. from Olearius) and English (by Sullivan in 1774). The *Būstān* appeared later. In the xvth century Thomas Hyde is said to have made a translation of it. The oldest printed translation is in Dutch (Amsterdam 1688) by D. H(avart). So in West-European literature Sa'dī became familiar as early as the xvth century; mention need only be made here to the works of Lafontaine, Voltaire and Goethe.

The latest monograph on Sa'dī is Henri Massé's *Essai sur le poète Saadi* (Paris 1919), a dissertation for the doctorate of the Alger University. In his *Thèse Complémentaire*, called *Biographie de Saadi* (Paris 1919) Massé gives a very valuable bibliographical survey, to which reference may be made here. Since that date a new edition of Sa'dī's odes has begun to appear: Sir Lucas White King, *The Odes of Sheikh Muḥlisu -d-Dīn Sa'dī Shīrāzī* Part I (*Tayyibāt*), Fasc. i. (1919), ii. (1920), iii. (1921), published at Calcutta in the Bibliotheca Indica, New Series, No. 1424.

(J. H. KRAMERS)

AL-SA'DI, 'ABD AL-RAḤMĀN b. 'ABD ALLĀH b. 'IMRĀN b. 'AMIR, the historian of the Songhai kingdom in the Sūdān, belonged to an old family of scholars in Timbuktu where he was born on 1st Djumādā II, 1004 (1596); here he received his education from Aḥmad Bābā [q.v.]. On the conclusion of his studies he sought with his brothers a sphere of activity in Djenne [q.v.], the old commercial town which at that time rivalled Timbuktu as a commercial and intellectual centre. Here in 1036 (1626) he succeeded in obtaining the post of Imām of the Sankore Mosque,

i. e. of the mosque in the foreign quarter, having previously acted as deputy for his predecessor in the office. He extended his knowledge of the world at the end of 1039 (July 1630) by a journey to the Fulbe kingdom of Māsina north of Djenne on the left bank of the Niger, which at that time included the island of Djimbala in the Niger. It was the Kāḍī there who had invited him, but he received such an honourable reception from the Sultān himself and the notables of the kingdom, that he repeated his visit three years later. On this occasion he rendered diplomatic services to the Sultān by settling a feud between him and one of his vassals. He and his family, however, suffered a good deal from the tyranny of the Moroccan governors in Djenne. In 1044 (1634) one of his brothers was banished from his new home to Timbuktu and he had to go back there to intervene on his behalf. Two years later he himself was even dismissed from his office. On complaining to the Pasha in Timbuktu, the latter gave him this much satisfaction that he dismissed the Kāḍī who had been his enemy. But he gave up further claim to his office and preferred to live as a private individual and occasionally placed his knowledge at the disposal of the smaller vassals in the southern Songhai kingdom as secretary and teacher. In 1056 (1646), however, the Pasha of Timbuktu, Muḥammad b. Muḥammad b. 'Oṭmān, summoned him to be his Secretary of State, and he seems to have held this office under Muḥammad's successors also till his death. On several expeditions on which he had to accompany the Pasha, he became acquainted with the north and east of the Songhai kingdom which he did not hitherto know. He then decided to write a history of his native land which he entitled *Ta'rikh al-Sūdān*. He introduced his work with the early history of the tribes of the Songhai, Melli and Tuareg, and of the towns of Djenne and Timbuktu. In 1853/54 Barth was able to make extracts from the smaller half of this history in Timbuktu and G. Ralfs published these in a translation in the ZDMG., ix. 518 sqq. He interspersed these remarks with numerous ethnographical digressions — introduced as 'ādāt —, which Barth omitted. In chapter x. he gives a survey of the scholars of Timbuktu as a supplement to Aḥmad Bābā's *Dhail al-Dibāq*. The history proper begins with the establishment of Muslim rule by the Khārījī Sunnī 'Alī in the ninth (fifteenth) century. He then describes the rule of the orthodox Askīyā dynasty and the conquest of the kingdom by the Moroccans and their dominion down to the death of the author. The style is much interspersed with colloquialisms and is faulty in other respects also. The date of completion of the chronicle is given by him as Monday, Dhū 'l-Hijidja 5, 1063 (Oct. 28, 1653). On the following day he added a list of officials as an appendix. In a further appendix he detailed happenings down to Djumādā I 16, 1066 (March 14, 1656). He seems to have died soon afterwards. A continuation to his work, a history of the Moroccan governors in the Songhai kingdom entitled *Tadhkirat al-Nasyān*, was written in 1164 (1751) by an unnamed author, who was born in Timbuktu in 1112 (1700) and was a grandson of the Emīr Muḥammad b. Sūwū.

(C. BROCKELMANN)

SA'DIANS (BANŪ SA'D), the name of the dynasty of Sharifs in Morocco which in 1544 (951) replaced the Waṭṭāsīd dynasty on the throne of Fās.

From the beginning of the fifteenth century the expeditions of the Portuguese and Spanish against the Muslim lands in Spain or North Africa had raised to a great pitch the fanaticism of the Berbers and of the Arabs who reacted violently under the leadership of holy men, sharifs [q. v.] and marabouts [q. v.].

In a country organised according to tribes or divided into numerous little states of a feudal character, among peoples whose only link of solidarity was the bond of religion and who were often at war with one another, the powerless rulers had had to submit to the Christian invaders. Then under the influence and the guidance of marabouts, knowing only Islām, acting in its name and not in that of the State which they ignored, centres of resistance were formed nearly along the whole length of the coast of North-west Africa. In this revolution those dynasties which had not tried, or had not been able, to direct the movement into regular channels were swept away; new powers, with the support of the religious party, in their place established themselves, notably the Turks in Algiers and the Sa'dian Sharifs or Banū Sa'd in al-Sūs (district in Southern Morocco). Chronicles and traditions are quite in agreement regarding the fortunes of the latter.

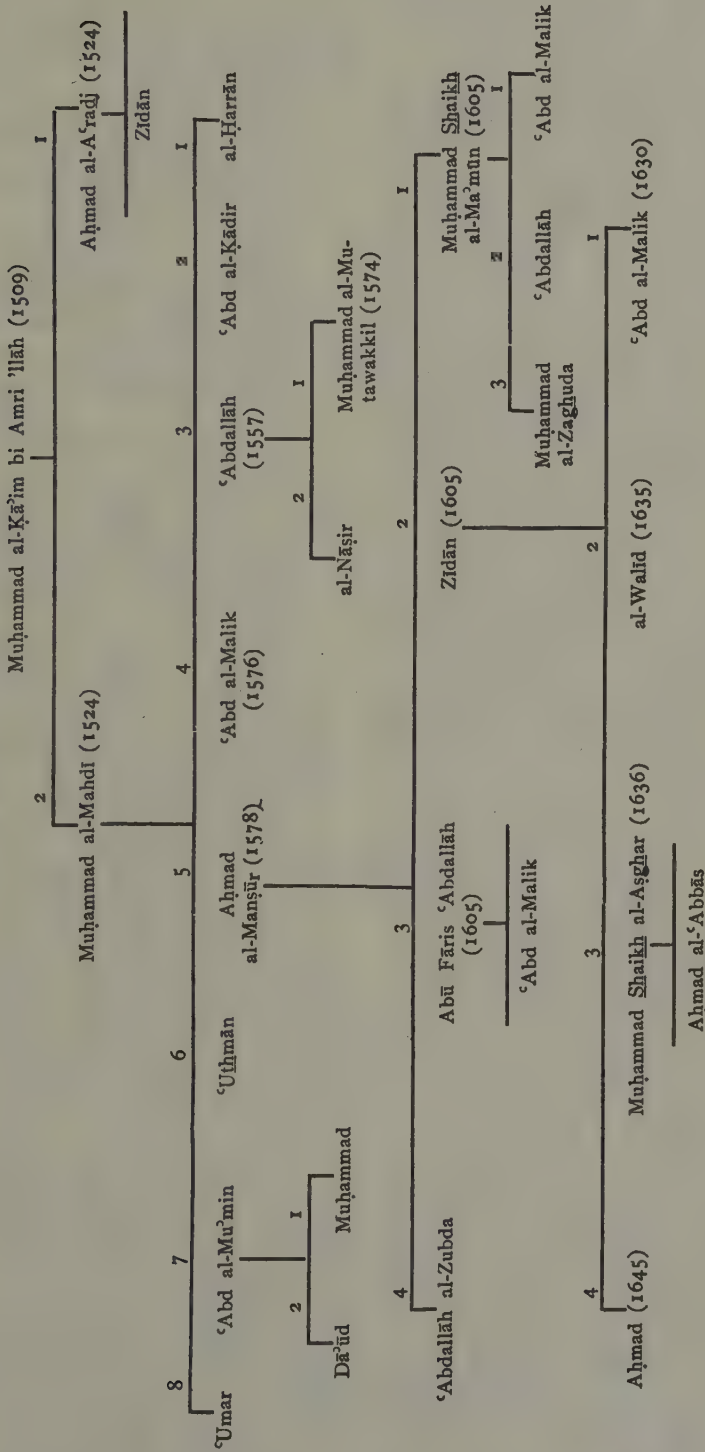

The first of the Banū Sa'd to come to power was a certain Muḥammad surnamed al-Mahdī and al-Kā'im bi Amri 'llāh. He practised magic, it appears. He had been put by Sidī 'Abdallāh U-mbarek, the most important holy man in al-Sūs, at the head of the tribes fighting against the Portuguese in this area. Some successes gained against the Christians and rather tactless pecuniary assistance given by the Waṭṭāsīd Sulṭān of Fās to the two sons of the sharif consolidated the latter's position. He took advantage of this to extend his power to the north of al-Sūs and had himself proclaimed sovereign in 1509 (915). He died at Afughāl in al-Haḥa about 1517/18 (924).

Aḥmad al-A'raḍī and Muḥammad (also surnamed al-Mahdī), his two sons, succeeded him. They fortified themselves first at Tarudant, capital of al-Sūs, on account of the inroads of the Christians who were masters of the coast to the south of Anfā (Casablanca); then they made an alliance against them with the governor of Marrākeṣh. The assassination of this governor enabled them to seize the town where Aḥmad al-A'raḍī was installed as ruler. The activities of the two sharifs had been facilitated by the conflict of duties and the rivalries between the Portuguese agents Nunho Mascarenhas and Yahyā ben Tahfūsa; their task was rendered still more easy when the latter, taken by surprise and killed, was disposed of. Henceforth masters of the capital of Southern Morocco and strongly supported by the majority of the marabouts, they gave offence to Muḥammad al-Bortgali, the Waṭṭāsīd Sulṭān of Fās, who laid

siege to them several times in Marrākeṣh but without success until he died in 1525 (971). Competition arose on the death of this ruler between three claimants to the throne from his family and the result was anarchy, civil war and progress by the Christians. The new Waṭṭāsīd Sulṭān Aḥmad in order to have freedom of action against the latter treated with the Sharifs, abandoning to them the government of Marrākeṣh and of its territory. But they feeling strong enough broke the agreement. The Sulṭān took the field against them and was defeated at the battle of Bū Akba (July, 1536/942). Fighting between the various tribes became more and more frequent; the country threatened to sink into anarchy while the menace of invasion by the Christians was always hanging over it. Then the marabouts intervened to impose peace by dividing the kingdom between the two rival factions. This is what was done.

Rivalry then broke out between the two brother Sharifs. Muḥammad al-Mahdī seized the lands of Aḥmad al-A'raḍī and exiled him, then continued the struggle with the Sulṭān of Fās, whose capital he took for the first time (1550/957). The Waṭṭāsīds were interned at Tarudant; but one of them, the former claimant Bū Ḥassūn, a refugee first in Spain, then at Algiers, succeeded in procuring the intervention of the Turks. With their support he captured Fās and was proclaimed there. But the massacre of the Waṭṭāsīds at Tarudant and the assassination of Bū Ḥassūn left the Sharif Muḥammad sole master of Morocco. He once more entered Fās where he was definitely proclaimed Sulṭān in 1554 (951). This prince, energetic, clever and adroit, and gifted with the qualities of an organiser, may be considered the real founder of the dynasty of the Banū Sa'd. He demanded from trade and from industrial monopolies the resources which war did not supply him in sufficient quantities. In exchange for his produce, England supplied him with arms. His successors followed his example in this respect. He also supported the policy of Spain against the Turks, which cost him his life, for they assassinated him in 1557 (965). His son 'Abd Allāh, called al-Ḥalīb, succeeded him, followed the same policy and tried to counteract the preponderating influence of the religious party. He died in 1574 (981). His son Muḥammad al-Mutawakkil had to fight for his throne against his two uncles, 'Abd al-Malik known as Mūlay Mulūk, and Aḥmad. It was a rare thing on the death of a Moroccan sovereign when the 'ulamā' of Fās proclaimed as his successor the same person as the 'ulamā' of Marrākeṣh. When one of the claimants was supported by the Turks, the other immediately sought the assistance of the Christians. This was a necessity imposed by the difficulty of obtaining military supplies. The Turks had another important reason for interfering in the affairs of Morocco; this was the claim of the Moroccan Sharifs to exclusive legitimacy in the government of Islām as sharifs descended from the Prophet and this meant a great deal to the Sulṭāns in Stambul.

The Christians, pursuing their policy of occupying the coast, took advantage of the confusion to get ports ceded to them. Their lack of a Muslim religious policy enabled the religious party to exasperate more and more the inhabitants of various districts and to bring about a divorce between them and the sovereigns of the Maghrib.

GENEALOGY OF THE SA'DIAN SULTANS¹⁾

1) The figures in brackets give the date of the first proclamation of the ruler.

The Arab tribes and the Berber tribes, never quite reconciled to one another, favoured sometimes one and sometimes the other pretender. Like the Christians, the Turks charged dearly for their services, and sometimes, to weaken their neighbours still more, lent their help to several competitors at the same time.

Mulāy Mulūk, supported by the Turks of Algiers, was proclaimed ruler of Morocco. But Muḥammad al-Mutawakkil attacked him with Portuguese assistance. A famous battle took place at Wād Maḥḥāzin (battle of the three kings) in which the king of Portugal, Don Sebastian, his ally Muḥammad al-Mutawakkil and Mulāy Mulūk were all three killed. The ex-pretender Aḥmad was then proclaimed sovereign of Morocco with the support of the Turks (1578 = 986).

The latter is known as Aḥmad al-Manṣūr, or Aḥmad al-Dḥahabī. He kept on good terms with the Turks and took advantage of the respite offered him by the Portuguese and Spaniards, who were exhausted or occupied in Europe, to conquer the Sūdān. This was the most remarkable episode in the history of the dynasty. This ruler died of the plague in 1603 (1012). His three sons at once disputed the succession; the one, Muḥammad Shaikh, known as al-Ma'mūn, was the candidate of Philip III; Zidān, proclaimed at Fās, was supported by the Turks while Abū Fāris was proclaimed at Marrākesh. The latter succeeded in defeating his rival of Fās, who took refuge with the Turks, then tried to reconquer Morocco from the south. But the people of Fās preferred to submit to al-Ma'mūn who was proclaimed in 1604 (1013). The assassination of Abū Fāris by 'Abd Allāh, son of al-Ma'mūn, disposed of one of the rivals but the struggle between the two surviving brothers continued. Zidān was proclaimed and dethroned three times in all.

The marabouts, to whom the Banū Sa'd had at first owed their elevation to the throne, took advantage of the situation to strengthen their personal power in their sphere of influence. Their attitude forced the Sultāns to take action against them. In 1610 (1018) the cession of Larache to the Spaniards by al-Ma'mūn became the signal for general risings. Piracy against the Christians developed at Tetwan and at Salā (Sla) [q. v.]. An adventurer, Abū Maḥallī, seized Tafilalt, Dra'a and Marrākesh. He was threatening to occupy the whole of Morocco when he was killed in 1613 = 1021. In the north-west the town of Sla and the surrounding country accepted the rule of a marabout, al-Ayāshī.

Sultān Zidān continued to reign, buffeted about by all these troubles, and died in 1627 = 1038. His three sons, 'Abd al-Malik, al-Walid and Muḥammad Shaikh al-Aṣghar, were equally the playthings of Christians, Turks and marabouts for over nine years. The latter reigned at this time quite without restraint: a certain 'Alī Bu Domaiya was master of al-Sūs; Tafilalt was ruled by a creature of the Turks, Muḥammad b. Ismā'il; the marabouts of the Zāwiya of Dila ruled Tedla and the region of Fās; al-Ayāshī, champion of the holy war against the Christians, had added al-Gharb and al-Habaṭ to his territory. Muḥammad Shaikh al-Aṣghar succeeded in getting himself proclaimed at al-Marrākesh in 1636 (1045) but he was confined to this one town of his. Even there Karṭum al-Ḥādīdī, a kind of mayor of the palace, seized the

power on the death of the Sultān. He imprisoned Aḥmad al-'Abbās, son and successor of the ruler Muḥammad Shaikh, and put him to death (1654 = 1064). With the latter the Sa'dian dynasty disappeared, after lasting about a century, just at the time when that of the 'Alawī Sharīfs, originally of Tafilalt, began to establish themselves in the north of Morocco.

Order of succession:

1. al-Kā'im, proclaimed in 1509 in al-Sūs;
 - { Muḥammad al-Mahdī, proclaimed with his brother in 1524;
2. { Aḥmad al-A'raḍī, proclaimed with his brother in 1524;
3. Muḥammad al-Mahdī alone; he was proclaimed at Fās in 1554;
4. 'Abd Allāh al-Ghālīb, proclaimed in 1554;
5. al-Mutawakkil, proclaimed in 1574;
6. 'Abd al-Malik, also called Mulāy Mulūk, proclaimed in 1576;
7. Aḥmad al-Manṣūr, proclaimed in 1578;
 - { Abū Fāris 'Abdallāh, proclaimed in 1605;
8. { Zidān
 - { Muḥammad Shaikh al-Ma'mūn, proclaimed in 1605;
9. 'Abd al-Malik b. Zidān, proclaimed in 1630;
10. al-Walid, proclaimed in 1635;
11. Muḥammad Shaikh al-Aṣghar, proclaimed in 1603. He died in 1654. His son, Aḥmad al-'Abbās, never reigned but was assassinated in the same year; with him the line became extinct.

ṢADIḲĪ, the name given by Tipū Sultān of Mysore (1197—1213 = 1782—99) to a gold coin of the value of two pagodas, weighing 106 grains (6.86 grammes). The name is derived from the well-known epithet of Abū Bakr [cf. the art. **ṢIDDĪQ**], in accordance with Tipū's custom of naming his denominations after *khalīfas* or *imāms*.

(J. ALLAN)

SA'DIYA or **DJIBĀWIYA**, an order of dervishes named after the founder SA'D AL-DĪN AL-DJIBĀWĪ, i. e. of Djibā, "between the Hawrān and Damascus". His death-date is variously given as 700 and 736 A. H.; and the accounts which we have of him are clearly fabulous. According to the *Kaw-lāṣat al-Aṭhar*, i. 34, his father was the Shaikh Yūnus al-Shaibānī, a pious man, whom in his youth he disobeyed, becoming a leader of banditti in the Hawrān; owing, however, to his father's prayers he was favoured with a vision which resulted in his conversion. The authority followed by Depont and Coppolani makes him practise severe asceticism, and visit various sanctuaries, including Mekka; after this he returned to Syria, and founded in Damascus the order which bears his name, but which is traced by a *silsila* through

Djunaid, Sarī Saḳaṭī and Ma'rūf al-Karkhī to the Imāms of the Prophet's house.

In the *Khulāṣat al-Aṭhar*, the author of which died in 1092 A. H., the Banū Sa'd al-Dīn appear as a society (*ṭā'ifa*) in Damascus, noted for their piety; there they held a service in the Umayyad Mosque after the Friday prayer, and they possessed a *sāwiya* in the district Kubaibāt, whence the descendants of the founder took the name Kubaibātī (i. 33 and ii. 208). The biography of Muḥammad known as Ibn Sa'd al-Dīn, who became *shaiḫh* of the society in 986 A. H. (ibid., iv. 160), seems to suggest that the institution began with him; for it records how having begun life as a trader he was miraculously converted at Mekka. With him one of his brothers was associated, and the two divided the duties of the headship between them; presently domestic disputes arose, and this Muḥammad became sole head of the society, in which capacity he acquired vast wealth, and became the most influential personage in Damascus. He died in 1020, and was succeeded by his son Sa'd al-Dīn, who died on pilgrimage in 1036.

In this account the Banū Sa'd al-Dīn specialized in the cure of insanity. "On a scrap of paper they draw some lines anyhow, and the patient is cured thereby (i. e. by drinking the water in which the scrap has been immersed). In order to drink it he must abstain from everything spirituous; they then write an amulet which the patient is to use (wear on his person) after he has drunk the potion. The words which they signify by the lines and which they write on the amulet are the *basmala*".

At some time — possibly later than this period — the society spread to Egypt and Turkey; Depont and Coppolani give a long list of its meeting-places in Constantinople and the neighbourhood. They regard the Sa'diya as a branch of the Rifā'iya; but the authorities of J. P. Brown make of it an original order, and, indeed, second in the list. He states (p. 56) that the Sa'dīs have twelve *terks* in their cap, wear turbans of a yellowish colour and perform on foot. The cloth of the cap which covers the head is in six gores (p. 214); and they wear long hair. They are supposed to possess special powers over snakes.

In Lane's time the order was well represented in Egypt, and on the day preceding the night of the Mawlid practised the ceremony called *dōsa*, wherein the *shaiḫh* of the order rode on horseback over the backs of the dervishes, who lay flat on the ground with their faces downwards for the purpose. It was supposed that none of them suffered any harm in consequence. This ceremony was forbidden by the khedive Tawfīk. After the *dōsa* there used to be an assembly wherein some of the dervishes ate live serpents; according to Lane, the serpents had first been deprived of their poisonous teeth or rendered incapable of biting; all that was eaten of the serpent was the head to the point about two inches further back where the thumb of the dervish pressed. By the time of Lane's second visit this practice had been forbidden by the *shaiḫh* of the order on the ground that such food was unlawful. The *dōsa* was then followed by a *dhikr*, where in the formulae employed were *Allāhu ḥaiy* and *Yā Dā'im*.

The *dōsa* resembles performances by Sūfīs of a much earlier period, who were supposed to override natural laws in a variety of ways. Egyptian historians do not appear to allude to it, unless al-Djābartī have it in mind when he commends the *Khālwatīya* system for not enforcing on its members more than they can bear (i. 294 ult.). It does not therefore seem possible at present to say when or whence it was introduced. The practice of snake-charming, whereby followers of the order are said to make their living still in Egypt, is attributed to the founder and explained by fables connected with his conversion.

Writers on Sūfism pay little attention to this order, though it is just mentioned in the *Djāmi' al-Uṣūl*, without any specification of its doctrines or practices. The founder is mentioned neither in the *Ṭabaqāt* of al-Sha'rānī, nor in the *Nafaḥāt al-Ums* of al-Djāmi, who suggests that one Sa'd al-Dīn al-Ḥamawī, d. 650 A. H., was the founder of a society. It would seem then that the society began with a medico-magical aim, and by process of development became a mystical order.

(D. S. MARGOLIOUTH)

SĀDJ, the teak tree, *tectona grandis*, a large tree belonging to the verbenaceae with broad lancet-like leaves, "like the shields of the Dailam". It is found principally in the drier parts of Further India, in Burma, Siam and Java and, according to Arabic sources, also in East Africa (Zandj). The dark coloured hard wood resists, as no other does, the effects of sea-water and has therefore from ancient times been the best wood for ship-building. Nor is it attacked by insects. The main markets for it were Basra and Egypt. Ibn al-Baitār (transl. Leclerc, ii.), p. 233, mentions the use in medicine of the powdered wood and of an oil obtained from the fruit.

Bibliography: O. Warburg, *Die Pflanzenwelt*, iii. 166, 167 (with illustrations); al-Mas'ūdī (ed. Paris), iii. 12, 56. (J. RUSKA)

SADJ is the name given to a peculiar mode of rhetoric in which at short intervals words occur which rhyme, though it is distinguished from poetry (*Shi'r*) by not being bound by a regular rhythm or metre. Probably this was the earliest mode of elevated expression practised by the Arabs before the development of the regular metres. There is ample evidence that it was this mode of expression practised by the *Kahins* [q. v.] of the times of Paganism for their oracles, though the examples cited in the *Sira* of Ibn Hishām and in the traditions can hardly have been handed down correctly. We can safely believe Ibn al-Kalbī that the Arabs remembered nothing of their ancient poetry except that which was composed very shortly before Islām (*Kitāb al-Aṣnām*, ed. Cairo 1332, p. 12, 5) and we must assume from this, that no very ancient *Sadj* has been preserved. I believe, however, that we are safe in allowing that the various *Talbiyāt*, or shouts uttered by pilgrims to the many shrines, as recorded by Ibn al-Kalbī (*Aṣnām*, p. 8) and elsewhere, are handed down correctly as they must have been in vivid memory at the beginning of Islām. Such *Talbiyāt* were, no

doubt, ancient ritual property of the tribes and go back to remoter antiquity than the Sadj'-speeches of Kuss b. Sa'ida and other rhetoricians of pre-Islamic times. We are told that Dāmra b. Dāmra, al-Akrā' b. Hābis and others used to give their judgments in Sadj' when they acted as judges (Djāhiz, *Bayān*, i. 113, 9). Muḥammad reproved a man who used Sadj' by saying: "Do you speak Sadj' like the Kāhins of Paganism?" (Djāhiz, *Bayān*, i. 112, 20); he also prohibited it to be used in prayers (Bukhārī, ed. Juynboll, iv. 194, 2). Yet the most striking of Sadj' is the *Qur'ān* itself; especially the older Sura's are kept in the same tone as the specimens of the oracles of the Kāhins quoted by Ibn Hishām, as e.g. the oracles of Shikk and Saṭh (*Sira*, p. 11 etc.). Later authors, Djāhiz, al-Kālī and others delight in citing descriptions of weather, persons etc. in Sadj' attributed as a rule to anonymous Beduins. These quotations are probably in all cases inventions by philologists to enable them to explain the many difficult words, which could not have been accumulated as easily in a forged poem of regular metre. There was, however, from early time a predilection for this style of prose, which found its fullest development in the literature of the Maḥmāt of Badī' al-Zamān, Harīrī and their imitators. The style unfortunately found its way into letter-writing, and while the earliest specimens of letters, both private and official, are remarkably free from Sadj', with progress of time its use increased to such an extent, that both private and official correspondence became conspicuous for the volume of rhymed sentences with very little meaning. It was considered the height of accomplishment in a secretary to write in Sadj'. The style was called Mamzūdī but the matter was the same. Sadj' invaded other branches of literature, even the chronicles, of which conspicuous specimens are in Arabic the *Ta'rikh al-Yamīni* and 'Imād al-Dīn's writings and in Persian the history of Waṣṣāf. In both these works everything is sacrificed for the jingling rhymes. This exuberance of Sadj' may be due to the bad taste of the Persians who from 'Abbāsīd times increasingly took a larger share in Arabic letters; the disease seems to spread gradually towards the West and has become one of the main causes why so much of Muhammadan literature, whether Arabic, Persian, Turkish or any other language under their influence, does not appeal to European tastes.

(F. KRENKOW)

SADJĀH, Umm Sādir bint Aws b. Hikm b. Usāma, or bint al-Hārith b. Suwaid b. 'Ukfān, prophetess and soothsayer, one of several prophets and tribal leaders who sprang up in Arabia shortly before and during the *rida*. The genealogy, which her history proves to be the true one, shows that she belonged to the Banū Tamīm. On her mother's side she was related to the Taghlib, a tribe which comprised many Christians. She was a Christian herself, or at least had learnt much concerning Christianity from her relatives. Next to nothing is known concerning the import of her revelations and doctrines; she delivered her messages from a *minbar*, in rhymed

prose, and was attended by a *mu'adhdhin* and a *ḥadjīb*. Her name, or one of her names, for God was "the Lord of the clouds" (*rabb al-saḥāb*).

Sadjāh came to the fore in 11 A. H., after Muḥammad's death. One account of her exploits describes her as a Taghlib upstart, who had arrived from Mesopotamia at the head of a band of followers belonging to Rabī'a, Taghlib, the Banū al-Namr, the Banū Iyād, the Banū Shāibān; she found the Tamīm divided, in consequence of the Prophet's death, by deep internal strife between apostates, Muslims and those who wavered between revolt and allegiance to Medina, and succeeded in converting by her revelations and uniting under her command both branches of Ḥanzalah (the Banū Mālik and the Banū Yarbū'), which she intended to lead against Medina. The extent of her influence on the Tamīm seems, however, to have been much greater than this version, intended to minimize their share in the *rida*, would have us believe. The prophetess was no outsider, she really belonged to the Tamīm, as the end of her career implies, and had gained, probably for some time before Muḥammad's death, the support of her whole tribe, whose conversion to Islām had been mainly a matter of expediency, easily shaken off.

Sadjāh's forces began by attacking the Banū Ribāb, in obedience to one of her revelations, and were severely beaten. Repairing to al-Nibādī (in Yamāma) they suffered a second defeat at the hands of the Banū 'Amr, and Sadjāh had to promise that she would leave the territory of the Tamīm. Followed by the Yarbū', she decided to join the prophet Musailima, who still controlled most of Yamāma, in order to unite their fortunes or to restore her own. Their encounter happened at al-Amwāh or at Hadjr. Musailima was menaced by the Muslim army, and the neighbouring tribes threatened to shake off his authority, so that the arrival of a vanquished, ambitious and desperate colleague, accompanied by many armed followers, proved a trying, indeed a dangerous visitation. There is no reliable account of the meeting: according to one version, the strange couple came to an understanding, recognized each other's mission and decided to unify their two religions and their worldly interests; they were actually married, and the prophetess stayed by Musailima to the hour of his tragic death. Al-Ṭabarī preserves obscene and very probably fictitious details concerning this union, which must have been rather a political alliance than a lustful orgy; the wedding, according to these legends, was celebrated in the same walled garden where Musailima was to meet his death.

Other accounts of the meeting are that Musailima, after having married Sadjāh, cast her off, and that she returned to her people; a third version does not mention the marriage, and says that the prophet tried to persuade his rival and would-be ally to attack the Muslims, hoping thus to get rid of her; on her refusal he offered, if she consented to depart, half the year's crops of Yamāma; she declined to go unless he promised half of the next year's harvest as well, set off with the first part of the booty, and left her representatives with Musailima to wait for the rest, repairing to her kinsfolk. The second part of the ransom was never collected, as Musailima was vanquished and massacred by Khālid before the next harvest.

Whatever the outcome of Sadjāh's relations with

The canonical HADITH gives us the following picture. Muḥammad performs the ṣalāt on his own garment, protecting his arms against the heat of the soil during prostration with one of its sleeves, his knees with one end and his fore-head with the *ʿimāma* or *ḥalansuwa* (al-Bukhārī, *Ṣalāt*, bāb 22, 23; Muslim, *Masāʿid*, trad. 191; Aḥmad b. Ḥanbal, *Musnad*, i. 320). On the passage quoted from Muslim, al-Nawawī observes that, according to al-Shāfiʿī, it is forbidden to prostrate oneself on the garment one is wearing. Al-Bukhārī (*Ṣalāt*, bāb 22) tells us that Muḥammad performed the *Ṣalāt* on his quilt (*firāsh*).

The Ḥadīth also informs us that the *ṣalāt* was performed on mats; e. g. al-Tirmidhī, *Ṣalāt*, bāb 131, where a *ḥisā* is mentioned (so also Ibn Mājjā, *Iḥkām al-Ṣalāt*, bāb 63; Aḥmad b. Ḥanbal, i. 232, 273; iii. 160, 171, 184, 212); in

the latter passage it is observed that this *ḥisā* was made out of palm-leaves, *ḥisā al-madī*. Al-Tirmidhī adds that most scholars permit the *ṣalāt* on *ṣayḥ* or *ḥisā*. A similar mat of palm-leaves on which the *ṣalāt* was performed is called

Fig. 1
Turkish Sadjdjāda
1.72 × 1.27 M.
Turkey, 16th century¹⁾

1) Reproduced from F. Sarre and F. R. Martin, *Die Ausstellung von Meisterwerken Muhammedanischer Kunst in München 1910* (Munich, F. Bruckmann A.-G., 1912). Here the characteristic outlines are given only.

ḥaṣīr (e. g. al-Bukhārī, *Ṣalāt*, bāb 20; Aḥmad b. Ḥanbal, iii. 52, 59, 130 *sq.*, 145, 149, 164, 179, 184 *sq.*, 190, 226, 291). This tradition is also found in Muslim, *Masāʾid*, trad. 266; al-Nawawī observes on this passage that the *ḥaṣīr* generally declared the performance of the *ṣalāt* permitted on whatever grows out of the earth. It is, however, evident from Abū Dāʾūd, *Ṣalāt*, bāb 91,

that at the end of the third (ninth) century dressed skins of animals were already being used (*ḥaṣīr maṣṭūḡa*).

At the same time we frequently find it mentioned that Muḥammad performed the *ṣalāt* on a *ḥaṣīr* (al-Bukhārī, *Ṣalāt*, bāb 21; Muslim, *Masāʾid*, trad. 270; al-Tirmidhī, *Ṣalāt*, bāb 129; Aḥmad b. Ḥanbal, i. 269, 308 *sq.*, 320, 358;

ii. 91 sq., 98; al-Nasā'ī, *Masādjīd*, bāb 43; Ibn Sa'd, I/ii. 160). The distinction between *khumra* and *ḥaṣīr* appears to have lain not in the material of which they were made but in the size. According to Muḥammad b. 'Abd Allāh al-'Alawī's marginal glosses to Ibn Mādjā, *Iḥāma*, bāb 63, 64, the *khumra* afforded just sufficient room for the

prostration, while the *ḥaṣīr* was of the length of a man.

The word *sadjdjāda* is found a century after the conclusion of the canonical Ḥadīth literature. Al-Djawharī, *Ṣaḥāḥ*, s. v., explains *sadjdjāda* to be synonymous with *khumra*. In his *Supplément*, Dozy quotes passages from the 1001 Nights

Fig. 2
Persian Sadjdjāda
1.58 × 1.10 M.
Persia, 16th century

and Ibn Baṭṭūṭa. The latter mentions among the customs of the inmates of a certain *zāwiya* in Cairo that the whole body went to the mosque on Friday, where a servant had laid his *sadjdjāda* ready for each one (ed. Paris, i. 73; cf. 72). The same traveller tells us something similar regarding Mālli, where every-one sends his servant with his *sadjdjāda* to the mosque to lay it ready on his place. He adds that they were made out of the leaves of a palm-like tree (iv. 422).

In modern Mekka every one in the great mosque performs the *ṣalāt* on a *sadjdjāda*, usually a small carpet, just large enough for the *sudjūd*. After use it is rolled up and carried off on the shoulder. The lower orders believe that it is not advisable to leave the *sadjdjāda* unrolled after use as Iblis would seize the opportunity to perform the *ṣalāt* on it. Well-to-do people have sometimes their *sadjdjāda* kept by a servant of the mosque but even among them this is not at

all general. In place of a carpet a towel is sometimes used, for example the one which has been used for drying oneself after the *wuḍūʿ*. The lines woven in the carpet are not symmetrical but run to a point on one of the short sides which is

placed in the direction of the *ḵibla* [q. v.]; cf. below Lane's "niche" (this information has been given me orally by Prof. C. Snouck Hurgronje). In Morocco the common people do not make any use of the *S.*; the middle classes favour small

Fig. 3

felt carpets (*lābda*) like saddle cushions, just large enough for performing the *sudjūd*. They are especially used by the *fakīhs*, so that they have almost become one of their distinctive marks. They fold them and bear them under their arm in an ostentative way, wherever they go, and

sit down on them especially when visiting Christians. Certain *fakīhs* from Morocco, when travelling in Algeria, even refuse to sit down on anything besides their *lābda*, a pretentiousness which hurts the feelings of people in Algeria. In the latter country the *S.* is very rarely used, except among

the heads of the *ṭarīḳa*'s and various *marabout*'s. Here the *Sadjdjāda*'s usually consist of simple skins of goats or gazelles. The common people ascribe miraculous powers to these skins; in legends the *marabout*'s are often represented as using them in order to have themselves transferred thereon to Mekka or to walk on the waves. Occasionally the pilgrims bring home from Mekka *sadjdjāda*'s analogous to those described above by Prof. Snouck Hurgronje; these rugs are nowadays often imported from Europe. The pilgrims do not seem to attach to them any particular value (this information has been given me by Prof. H. Basset).

According to Lane, *sadjdjāda*'s (carpets) are imported from Asia Minor into Egypt and used there only by the rich to perform the *ṣalāt* upon and also as saddle-covers. They are about the size of a wide hearth-rug. A "niche" is represented upon it, the point of which is turned towards the *ḫiḍla*. Persons of the lower orders often perform the *ṣalāt* upon the bare ground simply; and they seldom immediately wipe off the dust which adheres to the nose and forehead as a result of prostration (cf. the well-known traditions regarding the traces of the *ruḡḡūd*); but when a person has a cloak or any other garment, which he can decently take off, he spreads it upon the ground.

The usual practice in the Dutch Indies is described by Snouck Hurgronje. A number of long narrow mats and carpets are placed broadwise on the floor of the mosque before the beginning of the services. After the service these are rolled up and laid aside (*De Islam in Nederlandsch-Indië*, Baarn 1913, p. 10; *Verspreide Geschriften*, iv/jii. 366). But it is usual here also to bring one's own mat to the mosque.

As Dr. J. H. Kramers tells me, the carpet which covers the floor of the Aya Ṣofya is divided up by patterns into separate *sadjdjāda*'s, but in performing the *ṣalāt* this separation is not observed.

In the chapel in the Seraglio in Constantinople, in which are preserved the relics of the Prophet, the alleged *sadjdjāda* of Abū Bakr is preserved (d'Ohrson, *Tableau de l'Empire Othoman*, Paris 1787—1820, i. 267). In Barbier de Meynard, *Dict. Turc-français*, we find, s. v., a number of Turkish phrases in which the *sadjdjāda* plays a part.

The *sadjdjāda* has assumed special significance in the religious societies and in the Dervish orders. Among the latter — at least in Egypt — the word has become synonymous with order in the expression *Shaiḫ al-Sadjdjāda*, which is applied to the head of an order in Egypt.

In the terminology of these societies, *sadjdjāda* alternates with *bisāṭ* (cf. above) and expressions borrowed from other languages. According to the hierarchic legend, Gabriel brought Adam a *sadjdjāda* made out of the skins of the sheep of Paradise, on which he had to kneel during the *ṣhadd* ceremony. This *sadjdjādat al-ḫilāfa* was the one used by all succeeding generations in the same ceremony; Muḥammad, Abū Bakr, 'Umar, 'Uthmān and 'Alī are especially mentioned. From 'Alī it has been passed on to the *shaiḫs* of the order down to the present day. The *Shaiḫ* therefore sits on this *sadjdjāda* during the *ṣhadd* ceremony and the expression *bisāṭ al-ṭarīḳ(a)* makes the *sadjdjāda* in a certain sense the throne of the whole order. Before the beginning of the *ṣhadd* ceremony it is spread by the *naḫīb* whose duty

this is. The *Shaiḫ* sits down ceremonially after its seal, as it were, has been broken by its being spread out. The candidate on whose account the ceremony is being performed stands, on the other hand, on the *bisāṭ al-djām'*. From the descriptions it is not always clear, whether by candidate is meant an ordinary novice or rather a *naḫīb*.

A whole series of mystical interpretations is associated with the *sadjdjāda* or *bisāṭ*. Head, feet, etc. are ascribed to it as to a living animal; it has four letters, which are connected with the elements; references are found to the *sadjdjāda* of the paths of salvation and the *tawḥīd* profession is called the *sadjdjāda* of the faith. Accounts are given of the material of which the *sadjdjāda*'s of various people were made or are made, as well as of their colour (cf. the picture in *Der Islam*, 1916, vi. 170).

(A. J. WENSINCK)

SĀDJIDS, a family which takes its name from the founder of the dynasty, Abu 'l-Sadj, and which ruled in Ādharbaidjān under the nominal suzerainty of the 'Abbāsid Caliphs at the end of the third (ninth) century and the beginning of the fourth (tenth). It comprised five rulers:

1. Abu 'l-Sadj Diwād b. Yūsuf Diwdest, a native of Oghrusana, a Turkish general in the service of the Caliph al-Mutawakkil, who was appointed to take charge of the road to Mecca in 242 (856), returned to Baghdad in 252 (866) and was then sent to recover the taxes in al-Sawād on behalf of Muḥammad b. 'Abdallāh b. Tāhir; he was then appointed governor of Aleppo and Ḳinnasrīn under al-Mu'tazz in 254 (868) and of al-Ahwāz in 261 (874—875); in this capacity he wished to fight the Zandj, who, having defeated his son-in-law, 'Abd al-Raḥmān, had seized al-Ahwāz. Having taken the side of Yaḳub b. Laith, the Ṣaffārid, he lost his estates after the defeat of the latter by the vizier al-Muwaffaq in 262 (875—876). He was then recalled to Baghdad, but died on the way at Djundai-Sābūr in 266 (879—880).

Diwād in Persian means "given by the demon" and *Diwdest* "he who has the hands of a demon". The alternation of *i/ā* which is sometimes found in the manuscripts indicates an old pronunciation *dēwād*, *dēwdest*.

2. His son Muḥammad Afṣḥ In Abū 'l-Uḥaid took Mecca from the lieutenant of the chief of the Zandj, Abu 'l-Mughira 'Isā b. Muḥammad al-Maḫzūmī in 266 (880). Three years later he attacked Djidda and captured two ships filled with money and munitions from al-Maḫzūmī. He was given the governorship of Anbār, Ṭarīḳ al-Furāt and Raḥba. On the death of Aḥmad b. Tulūn [q. v.] in 270 (883—884) he tried to conquer Syria in alliance with Ishāk b. Kendādjik. They were assisted in this enterprise by the army of the Caliph, which defeated the Egyptian forces at Shaizar, but was itself defeated as the result of an

ambuscade at the battle of the mills (*ṭawāḥin*). After a quarrel with Ishāk b. Kendādīk, Muḥammad turned towards Khumārawaih, defeated his former ally on the Euphrates and conquered Mawṣil. In 274 (888) he quarrelled with the Egyptians, lost a battle near Damascus in Muḥarram, 275 (May–June, 888), lost Ḥims, Aleppo and al-Raḡḡa and retired to Takrit. He took the field again and defeated, before Mawṣil, Ishāk b. Kendādīk, who was pursuing him.

In 276 (889–890) al-Muwaffāq appointed him governor of Ādharbaidjān. He then took Marāḡha from ʿAbdallāh b. Ḥasan al-Hamaḡhānī (280=893) and was sent by the Caliph to carry gifts — a royal crown and other presents — to the Bagratid Sempad, king of Armenia. His brief rebellion against al-Muʿtaḍid in 284 (897) ended in his prompt submission and cost him nothing. He took Ḳars, which belonged to Sempad, as well as his capital Tovin. They then made peace. Muḥammad died of the plague at Berdaʿa in Rabīʿ I, 288 (March, 901).

3. Yūsuf, brother of Muḥammad Afshīn, after having forced his nephew Diwād, son of N^o. 2, to betake himself to the Caliph's court, entered into friendly relations with Sempad, and made an alliance with him; he then took the side of Kakig Ardzrūnī, captured several fortresses, put Sempad to death who had surrendered to him, captured Rai, Ḳazwīn, Zandjān, Abhar from Muḥammad b. ʿAlī Sulūk, governor for the Sāmānīd Naṣr b. Aḡmad. He defeated the troops sent against him by the Caliph in 305 (917–918). He was, however, forced to give up Rai. He defeated Muʿnis, who took refuge in Zandjān in 307 (919), but the latter defeated him before Ardabil, took him prisoner, treated him with consideration and brought him to Baghdād. He was set free in 310 (922) and was granted the governorship of Rai and Ādharbaidjān. The Caliph appointed him to fight the Ḳarmāṭians, but he was defeated and taken prisoner in the first battle, in spite of his valour. He was put to death with all the prisoners.

4. In Dhu ʿl-Hidjdja, 315 (Feb., 928) Abu ʿl-Musāfir Faṭḥ, son of Muḥammad Afshīn, was given his uncle's governorship and remained governor till his death; he was poisoned at Ardabil by one of his slaves in Shaʿbān, 317 (Sept., 929).

5. His son Abu ʿl-Faraḡj was a general of the Caliphs and a friend of the first Amīr al-Umarāʾ, Ibn Rāʾik.

ŞADR AẒAM (for *şadr-i-aẓam*), strictly "the greatest of the high dignitaries", a title which from the time of Sulaimān the Magnificent has been borne by the first minister or "grand

vizier" of the Ottoman empire, also called *şadr-i-ʿālī*, *şāhib-i-devlet*, *desfür-i-ekrem*, *şadaret-penāh*, *āṣaf-i-aẓam* (from the name of the legendary minister of Solomon), etc. (cf. below). Earlier he was called *wezīr* (see WAZIR), then *wezīr-i-ʿumwē* (*aẓam*, *ekber*). After the suppression of the "viziers of the dome" (*ḡubbe wezīrleri*) under Aḡmad III, the *Şadr aẓam* were appointed by no fixed rule, at the Sultān's pleasure. The official chosen received and kept always by him a gold ring with the Sultān's seal. In his capacity of *şāhib-i-mühr*, he was the plenipotentiary (*wekil-i-muṭlaḡ*) of the sovereign in civil and military matters and made appointments to all the military (*ehl-i-seyf*) and civil (*ehl-i-kālem*) offices. The legal officers (*ʿulemā*) were under the *Shaikh al-Islām* [q. v.], appointed, like the *Şadr aẓam*, by the Sultān himself.

The *Şadr aẓam* presided over the *Divān*, held monthly audiences, received the principal officials twice a week, made rounds (*ḡol*) periodically and rendered assistance in case of fire. He had the right to eight guards of honour (*şakāfir*), twelve led horses (*yedek*), a barge with thirteen pairs of rowers, with a green canopy. When he appeared in public the *ḡawwāḡ* shouted acclamations (*al-ḡiḡā*), the formula of which was Byzantine in origin. He had the privilege of being able to go to the Sultān personally at any hour of the day or night.

In case of war, the *Şadr aẓam* could become commander-in-chief — *Serdār-i-ekrem* (*efkhem*) — and carried with him the standard of the Prophet (*Sandjak-i-sherīf*) [q. v.]. A deputy (*ḡāʾim maḡām*) [q. v.] replaced him in the capital.

Like the Khedive of Egypt, the *Şadr aẓam* had the right to the honorary epithet of *devletli fekkhametli*, or "Highness", besides the other epithets to which he was entitled: *sāmī*, *ʿālī* "sublime" and *āṣafī*. Like the *kapudan paṣṣa*, before the reforms of Maḡmūd II, he wore a white hat (*ḡalawī* for *ḡullawī*), shaped like a truncated pyramid with rounded corners, adorned with an oblique band of gold.

The office — *şadaret-i-ʿusma* (*kübrā*) — was insecure and ephemeral. The dismissed *Şadr aẓam* handed over his seal at an audience and went into exile, when he was allowed to live. Not being hereditary, the office was only exceptionally continued in the same family (the *Köprülü*).

After the constitution of 1908 the Grand Vizier became responsible to parliament; the Sultān continued to nominate the *Shaikh al-Islām* as well as the *Şadr aẓam* and it was the latter who chose his other colleagues. These two dignitaries, however, disappeared with the Sultān himself in 1922 (law of Angora of Nov. 1). The last *Şadr aẓam*, Dāmād Ferid Paṣṣa, died at Nice on Oct. 6, 1923. The President of the Council is now called *Baṣṣ Wekil*, a title which Maḡmūd II had tried to establish in 1838.

ŞADR AL-DÎN, MUHAMMAD B. İBRÂHÎM, known as MULLÂ ŞADRÂ, a Persian theologian and philosopher of the Şafawîd period. He was the son of a governor of Fârs and owed his epithet to his superior merit; he is still called *Akhûnd*, "master". Born at Shîrâz, he spent a long time in retirement among the mountains of Kumm, travelled in Persia and was a pupil, at Ispahân, of Shaikh Bahâ'î and of Amîr Muhammad Bakîr Dâmâd, after the instructions of Saiyid Abu 'l-Kâsim Findirîskî.

When Allâh-Wardikhân, governor of Fârs, had finished building the madrasa erected by him in Shîrâz, he asked Şadrâ, then at Kumm, to return to his native land and made him professor in his new foundation.

Mullâ Şadrâ restored the teaching of Ibn Sînâ (Avicenna); to escape persecution from the *muđtahid*, he concealed his doctrines by the use of the *kitmân* under deliberately obscure expressions. Among his pupils were Muhsin Fâ'id, 'Abd al-Razzâk and Kađî Saiyid al-Kummî. He seven times made the pilgrimage to Mecca and died at Başra in 1050 (1642) on his way back from the seventh.

A prolific writer, he wrote some twenty volumes, of which some are commentaries on different chapters of the *Qur'ân*, a dissertation on authentic traditions, fifty treatises on theodicy, forty-four works on obscure points of doctrine, written in the mountains of Kumm, and four books of travels quoted by Riđâ-Kulî-Khân. The British Museum possesses the *Ta'n ber muđjahidin*, a polemic against the teachers of canon law and a defence of the dervishes, and *al-Waridât al-Kalbiya* "the intuitions of the heart".

AL-ŞAFÂ, a mound at Mecca which now barely rises above level of the ground. The meaning of the name is like that of the name of the eminence al-Marwa, which lies opposite to it: "the stone" or "the stones" (cf. al-Tabarî, *Tafsîr* to Sûra ii. 153).

As is well known, Muslims perform the *sa'y* between al-Şafâ and al-Marwa in memory, as the legend relates (e.g. al-Bukhârî, *al-Anbiyâ*, bâb 9), of the fact that Hâdjâr ran backwards and forwards seven times between these two eminences to look for a spring for her thirsty son. — It is certain that cults were located at al-Şafâ and al-Marwa even in the pagan period. According to most traditions there were two stone idols there, Isâf on al-Şafâ and Nâ'ila on al-Marwa, which the pagan Arabs on their *sa'y* used to touch. On the origin of these images the following story is given in the commentary of Nisâbüri on Sûra ii. 153, and al-Shâfi'î gives his approval to it: Isâf and Nâ'ila were guilty of indecent conduct in the Ka'ba and were therefore turned into stones, which were placed on the two pieces of raised ground al-Şafâ and al-Marwa to be a warning to all. In course of time the origin of the stone

figures was forgotten and people began to pay them divine worship. — According to another tradition there were copper images there (cf. Snouck Hurgronje, *Het Mekkaansche Feest*, p. 26); according to a third story demons lived on the two hills who shrieked at night (given in al-Tabarî, *Tafsîr*).

ŞAFAD, a town in Upper Galilee, 30 miles East of 'Akkâ and N.E. of the Lake of Tiberias, about 1600 feet above sea level on a hill which al-Dimashkî calls Kan'ân (so also Cuinet) and which is called Djibâl 'Amila in Yâkût, iii. 399 (whose statements are otherwise wrong; on this see Gaudefroy-Demombynes, p. 23). It was only through the Crusades that it first attained importance, for before the xiiith century it is not mentioned by any Arab geographer. But it must have already existed in the second century as Şephath is found in the Jerusalem Talmud (Tract. Rosh Hashana, ii. 2; in Schwab's translation, vi. 75); it is probably also identical with Σαφ in Josephus, *Bellum Judaeorum*, vol. ii., ch. xx. § 6. The older Arabic orthography *Şafat* or *Şifat* agrees with this. Al-Kalkashandî gives etymological notes on both forms of the Arabic name.

Şafad is one of the places where the Crusaders built fortresses to defend the strip of coast conquered by them against the amîrs of Damascus and later against the Aiyûbids; with the fortress of Belvoir (= Şafîk Arnûn) it formed a point of support for the hinterland of 'Akkâ. Its history is therefore closely associated with that of Acre. The citadel probably built about 1140 by the Crusaders was the special property of the Templars (al-Dâwiya); in 1157 King Baldwin of Jerusalem was forced to take refuge there when he was defeated by Nûr al-Dîn's troops as he returned from the town of Bânyâs. After Saladin's great victory over the Crusaders at Haţţîn (1187) he laid siege to Şafad and took personal direction of the operations next year, when he succeeded in capturing the town after five weeks' resistance on the 14th of Shawwâl, 584 (Dec. 6, 1188). Saladin's biographer, Ibn Shaddâd, describes in great detail how Saladin unceasingly took part in the siege operations. The garrison went off to Tyre. This capture was considered very important by the Muslims as the town lay "in the midst of their lands" (Ibn al-Athîr). In 1219 or 1220 the fortress was razed to the ground by the Muslims as they feared that the Franks might capture it again and, indeed, in 1240 Şafad was actually ceded by al-Şâlih Ismâ'îl, Sultân of Damascus, by treaty to the Templars (as was Şafîk Arnûn also) because Ismâ'îl thereby hoped to gain the Franks as allies against his cousin, the Egyptian Sultân. After the Khwarizmî storm had swept over Galilee in 1244, the Mamlûk Sultân Baibars [q. v.] advanced against the fortress and took it after eleven days' siege in 1266 (Sha'bân 19, 664 = May 26, 1266, according to Ibn al-Athîr; the European sources put it some years later). The whole garrison was put to death in spite of the pledge given. Baibars also strengthened the defences and built a mosque there. 'Akkâ next fell in 1291.

Under the Mamlūks Şafad remained an important centre. It was the capital of one of the large *mamlaka*'s or *niyāba*'s into which Syria was divided. The *niyāba* of Şafad comprised the whole of Galilee with 'Akkā. The town itself was the seat of a *nā'ib* and was a centre of literary life, as the nisba *al-Şafadī* of several Arab authors shows, notably that of the biographer Khalīl b. Aibak, who was born there in 696 (1296); the geographer al-Dimashkī is said to have died there in 1327 (Mehren, p. vi., infra). In this period there also flourished al-'Uthmānī, chief Kādī of the *mamlaka* of Şafad (d. 780 = 1378; cf. Brockelmann, *Gesch. Arab. Litt.*, ii. 91), who wrote a *Ta'rikh Şafad* now lost. Şafad was at the same time an important centre of Rabbinical learning.

The town gradually began to lose in importance. After surrendering to the Ottoman Sultān Selīm I in 1516 without striking a blow along with other towns in Palestine, the old *niyāba*'s at first remained intact but later, in the xviiith century, the whole of Palestine belonged to the great pashallīk of Damascus. Şafad was the capital of a sandjak to which also belonged 'Akkā and Tyre (Hādjdī Khalifa). During this period Şafad several times belonged to the sphere of influence of the Druse Amīr Fakhr al-Dīn of the Lebanon, who used it as a fortress to protect his possessions in Galilee. At Şafad in 1633 is also said to have taken place the battle in which 'Alī, the son of the Amīr, was killed.

When about 1750 'Akkā again became important under Shaikh Zāhir, the strategic importance of Şafad also increased once more. Zāhir himself came from Şafad where his father, Shaikh 'Umar al-Zaidānī, had been representative of the Amīr Bashīr; under his rule the town was almost completely destroyed by an earthquake (1759). Ahmad Djazzār, who succeeded Zāhir in 'Akkā in 1775, at the same time conquered Şafad, and Bonaparte before his unsuccessful siege of 'Akkā had first to take Şafad (1799), where he entrusted the authority to a son of Zāhir. Djazzār later revenged himself on the town by completely destroying the Jewish quarter.

The most important events of the sixth century were the earthquakes of 1819 and 1837 which wrought great damage. After the Turkish administrative reforms of 1880 Şafad became the capital of a *kaḍā'* in the sandjak of 'Akkā in the wilāyet of Bairūt. It is now within the mandated area of Palestine.

The population has varied greatly in course of time. In the xivth century it was a town of average size (Abu'l-Fidā'). After the earthquake of 1759 it was an almost deserted village (Volney). The later figures vary very much, which is probably due to the fact that the figures for the town and the *kaḍā'* were not kept separate. The population of the town in 1900 may be put at 15,000, of whom about a third are Jews. In 1492 there were still about 10,000 Jews there. After this their numbers declined very much down to the middle of last century, when a great influx of Moroccan, Algerian and Persian Jews took place, which has been increased since 1880 by Zionist immigration. Şafad is also a place of pilgrimage for Jews. According to Hādjdī Khalifa (p. 568), when the Jewish tribes immigrated the tribe of Zabulon is said to have settled near Şafad. In the vicinity of the town there are now many Druses (according to v. Oppenheim, 15,000 in the district of 'Akkā

and Şafad); their immigration from the Lebanon had already begun in al-Dimashkī's time.

The town itself is built on three hills, of which the Jews inhabit the north. The Muḥammadan part has four fair-sized mosques. In the valleys between the hills and on the slopes down to the lake of Tiberias lie fields and gardens belonging to the town, which yield rich crops of wheat, maize, olives, tobacco, cotton and many kinds of vegetables. The splendid view over the lake is generally admired. The ruins of the fortress lie high up the hill and are called *al-Kar'a* or *al-Kul'a*. Practically nothing is left of the castle of the Crusaders; of the more recent defences there are still to be seen only the foundations of a strong round tower, probably that which was built by Baibars (according to al-Dimashkī, while Conder and Kitchener consider it one of Zāhir's buildings). Below, close to the fort, is a well, of which al-Dimashkī gives a detailed description.

ŞAFADİ, ŞALĀḤ AL-DIN KHALİL B. AIBAK B. 'ABD ALLĀH ABU 'L-ŞAFĀ' was born in 696 or 697 = 1296/97 (*Durar al-Kāmina*, MS. (B. M., Or. 3034) has about the year 694 A. H.). He was of Turkish descent and, according to his own statement, his father did not give him a good education and it was only when he was 20 years of age, that he began the pursuit of studies. He wrote a very nice hand as is proved by several autographs which have come down to us. He attended the lectures of the very best teachers of his time, among whom are named the grammarian Abū Haiyān and the poets Shihāb al-Dīn Maḥmūd, Ibn Saiyid al-Nās and Ibn Nubāta. Later he became an intimate friend of the renowned authors Shams al-Dīn al-Dhahabī and Tādj al-Dīn al-Subkī. His first post was that of secretary in his native town

of Şafad, then at Cairo, later he was secretary at Halab, al-Rahba and finally he was in charge of the treasury at Damascus. He was of pleasant manners but towards the end of his life became deaf. He died at Damascus on the 10th of Şawwāl 764 = 1362/63. He was a most prolific author and stated himself in his autobiography that his compositions would fill 500 volumes and that the amount he had written as secretary would come to at least double that quantity. His biographers content themselves with mentioning only the most important of his works, many of them being nearly worthless compilations of verse and prose from modern authors. Besides a prodigious quantity of verse in his own anthologies and works of contemporary and later authors, the following works have come down to us either complete or in part. All are practically compilations from earlier authors, which he very frequently states faithfully. 1) *Al-Wāfi bi'l-Wafayāt*, an enormous biographical dictionary in about 30 volumes, of which some are found in many libraries, though I doubt whether the complete work has been preserved. Some volumes are numbered, but volumes with the same contents have at times different numbers, from which it appears that the material of the work was divided into volumes of varying size by different scribes (for the contents of some volumes see Horovitz, *M.S.O.S. As.*, x./ii. p. 45; while the newer MSS. in the British Museum contain: Or. 6587 'Ali, Or. 6645 Muḥammadūn, 5320 other Muḥammadūn). We find in the *Wāfi* many biographies for which we should look in vain in other works of a similar nature and a full index of the names of the persons of whom biographies are found in the known volumes, would form material for a volume of considerable size. The introduction to this work was published by Amar, *J. A.*, 1911-12, in vols. 17-18 and 19. The most exhaustive account of the *Wāfi*, based upon all known manuscripts, is by G. Gabrieli in *R. R. A. L.*, Series 5, vols. xx to xxv sqq. From this it appears that the work is preserved practically complete, except for two gaps and the preserved parts contain over 14,000 biographies. 2) *A'yān al-ʿAşr wa A'wān al-Naşr*, an extract from the preceding work in six volumes, containing biographies of contemporaries. This work has been largely extracted by Ibn Ḥadjar for his *Durar al-Kāmina*. MSS. are probably in the Escorial (Nº. 1717) and Berlin, while the volumes in the Aya Sofia (Nº. 2962-70) appear to be parts of the *Wāfi*. It is quoted in the printed edition (Cairo 1305) of the *Tabakāt al-Khirkāt al-Şūfiya* of 'Abd al-Raḥīm al-Wāsiṭi under the title of *Tarādjim A'yān al-ʿAşr*. 3) *Masālik al-Abşar fi Mamālik al-Amşār*, a book on geography, a MS. of which is in the Şādiqiya library in Tunis. 4) *Tārikh al-Awāfi*, probably another extract from the *Wāfi*, also in MS. in the same library as the preceding. 5) *Tuḥfat Dhawī 'l-Albāb*, an Urdjūza on the rulers of Egypt to his own time, abbreviated from a work of Ibn 'Asākir. 6) *Nukat al-Himyān fi'l-Nukat al-ʿUmyān*, biographies of celebrated blind persons. This work has recently appeared in print in Egypt in a very careful edition, based upon 4 MSS. It was edited by Aḥmad Zeki Paşa and dated 1911. After explaining that Şafadī was induced to write this book through finding a short account of blind persons of note in the *Kitāb al-Ma'ūrif* of Ibn Kūtaiba and a work of al-Djauzi, he enlarges on the

etymology of blindness and its limits. The principal portion of the work is occupied by a large number of biographies arranged in alphabetical order, among which figure a number of valuable notices of men of all ages of Islām. 7) *Kitāb al-Shu'ūr fi 'l-ʿUr*, biographies of persons who had lost one eye. 8) *Aḥsan al-Sawādji min al-Nadī wa'l-Rādji*, containing letters addressed by him and to him, giving in many cases the dates. The first letter in MS. (Brit. Mus., Or. 1203) is dated 745 A.H. 9) *Munsha'āt*, a collection of his own epistles. 10) *al-Tadhkirat al-Şalāḥiya*, a collection of extracts from other works, interspersed with his own compositions. It is difficult to ascertain of how many volumes the work consisted; the good old MS. (India Office, Arab. 3799) contains vols. 48 and 49. From these it appears that each volume commenced with the exposition of some verses of the Qur'ān, then was followed by extracts of the most varying character. For example B. M., Or. 1353, the contents of which were given by Flügel, *Z. D. M. G.*, xvi. 538-544, contain the *Kitāb al-Itbā' wa'l-Muzāwadjā* of Ibn Fāris, not used by Brünnow for his edition of that work, on fol. 53v-77v, examples of the poetry of al-Bākhārzi on fol. 77v and following; MS. Brit. Mus., Or. 7301 (named on title-page *Kitāb al-Maḥāsīn wa'l-ʿAddād*), contains extracts from the medical work of Djamāl al-Dīn Ibrāhīm b. Maḥmūd al-ʿAṭṭār entitled *Iktidāb fi'l-Maṣ'ala wa'l-Djavāb* (fol. 55r) MS. India Office, Arab. 3799, contains in vol. 48 extracts from the autograph *Diwān* of Amin al-Dīn Djūbān al-Kawwās entitled *Naḳ' al-Wakā'if wa Raḳ' al-Wasā'if* (fol. 20v-26v), extract from the book *al-Tadjianni 'alā Ibn Djinni* of Abū 'Alī Ibn Fūrādjdja (fol. 71v), extract from the *Rūnāmadi* of al-Şāhib Ibn 'Abbād (fol. 90v). Extracts of this work are found printed in the *Thamarāt al-Awrāk* of Ibn Hidjdja (Cairo 1304), vol. ii. 182, 183, 184 and 192. 11) *Diwān al-Fuṣḥā' wa Tarǧumān al-Bulaghā'*, an anthology composed for Malik al-Aşraf. 12) *Law'at al-Şāḥi wa Dam'at al-Bāki*, life of a paederast with poems to the boy he loved. This worthless composition has been printed repeatedly, first 1274, then 1280 in Tunis, later in Constantinople and Cairo, showing that the work is appreciated in many countries of Islām. 13) *al-Husn al-Sariḥ fi M'at Maliḥ*, another worthless anthology containing a hundred poetical quotations by contemporary poets and the author himself upon pretty youths. 14) *Kashf al-Hāl fi Wasf al-Khāl*, another small collection of poems containing words which have different meanings if vocalised differently. 15) *Ladhdhat al-Sam' fi Şifat al-Dam'*, a similar collection of verses of the author and contemporaries on tears in 37 chapters. 16) *Al-Rauḍ al-Nāsim wa'l-Thaḡhr al-Bāsim*, a similar collection of erotic extracts. 17) *Kushf al-Tanbīh 'alā'l-Wasf wa'l-Tashbīh*, anthology of metaphorical verses. 18) *Rashf al-Zulāl fi Wasf al-Hilāl*, anthology of verses on the New Moon (vide Nº. 33). 19) *Rashf al-Raḥiḳ fi Wasf al-Hariḳ*, a maḳāma on wine. 20) *Al-Ghaiṯ al-Musadǧjam fi Sharḥ Lāmiyat al-ʿAdjam*, commentary on the poem of Tuḡhrā'ī. He explains first every word, then the rhetorical figure quoting many verses, principally by modern poets. The work has also the title *Ghaiṯ al-ʿAdab alladhi insadǧjam fi Sharḥ Lāmiyat al-ʿAdjam* (printed Cairo 1305 in two vols. 4^{to}). 21) *Kitāb al-Arab min Ghaiṯ al-ʿAdab*, extract of the preceding work

(printed in Cairo without date, but recently). 22) *Kitāb Taṣṣiḥ al-Sam' bi Inkisāb al-Dam'*, printed in Cairo s. d.; perhaps similar or identical with N^o. 15. 23) *Nuṣrat al-Thā'ir 'ala 'l-Maṭhal al-Sā'ir*, against the well-known work of Ibn al-Aṭhīr entitled *al-Maṭhal al-Sā'ir*; cf. Hoogvliet, *Spec. Div. Script.* (Leiden 1839), p. 153. 24) *Qinān al-Qinūs fi 'Ilm al-Bad'f*, paranomasia consisting principally of the author's own verses (printed Constantinople 1299). 25) *Ikhṭirā' al-Khīrā'*, explanation of obscure verses lexicographically and as to their rhetorical figure. 26) *Faḍḍ al-Khitām 'ani 'l-Tawriya wa'l-Istikhḍām*, on metalepsis and the use of words which can be altered so as to give different meaning. 27) Commentary on the work of Ibn al-'Arabī entitled *al-Shaḍjarat al-Nu'māniya fi'l-Dawlat al-Uḥmāniya*, prophecies about the Turkish dynasty. 28) *Ṭawḥ al-Ḥamāma*, abbreviation of the commentary of Ibn 'Abdūn on the poem of Ibn Badrūn. 29) *Tamām al-Mutūn fi Sharḥ Risālat Ibn Zaidūn*, commentary on the celebrated epistle of Ibn Zaidūn, no doubt inspired by the work of his master, Ibn Nubāta. 30) *Kitāb Qhawāmid al-Saḥāḥ*, a small work on the obscurities of the *Saḥāḥ* of al-Djawhārī (autograph in the Escorial, N^o. 192, dated 757 A. H.). 31) *Nadīd al-Falāḥ fi Mukhtaṣar al-Saḥāḥ*, abbreviation of the *Saḥāḥ*, omitting the evidentiary verses and correcting errors. This work he completed in Ramaḍān 757 A. H. 32) *Ḥaly al-Nawāhid 'alā mā fi 'l-Saḥāḥ min al-Shawāhid*, explanation of the evidentiary verses quoted in the *Saḥāḥ*. 33) al-Suyūṭī composed a work containing verses of Şafadī and his contemporaries on the new moon, which he extracted from the *Tadhkira* of Şafadī and gave it the same title as N^o. 18; when he discovered this he re-named his book *Raṣf al-La'ālī fi Waṣf al-Hilāl*. This book was printed in Constantinople in the *Tuḥfat al-Bakiya*, p. 66—78.

Bibliography: Ibn Ḥadjar, *Durar al-Kāmina*, B. M., Or. 3043, fol. 120r; Ibn Qāḍī Shuhba, *Ṭabaḳāt*, B. M., Add. 23362, fol. 155; Subkī, *Ṭabaḳāt* (ed. Cairo), vi. 94—103; Khwāndamīr, *Ḥabīb al-Samīr* (ed. Bombay 1857), iii. part 2, p. 9; Amar, *J. A.*, series 10, vols. 17—19; Brockelmann, *Gesch. der arab. Lit.*, ii. 31—33; Hartmann, *Muwaṣṣā*, p. 81; Wüstenfeld, *Die Geschichtsschr. der Araber*, p. 423; Hoogvliet, *Div. Script.* (Leiden 1839), p. 152—158; *Notice sur Khalil, J. A.*, series 9, vol. 5 p. 392. Verses of Şafadī are quoted in nearly every anthology later than his own time; he is extensively cited in the *Ḥalbat al-Kumait* of Nawāḍī and the *Ma'āhid al-Taṣṣiḥ* of 'Abd al-Raḥīm al-'Abbāsī.

20. AL-ḤASAN B. ABĪ MUḤAMMAD 'ABD ALLĀH AL-ḤASHIMĪ AL-ŞAFADĪ appears from casual remarks in his work to have been an intimate courier of the Egyptian Sultān al-Nāṣir b. Qalā'ūn. It has been impossible to find any biography in any of the accessible works dealing with the history of his time. He must have died early in the eighth century of the Hījra as the last events recorded in his history are dealing with the year 711 = 1311/12 or perhaps as late as 714. From a statement fol. 62v Brit. Mus. it appears that he composed the history in the year 716. He probably had held earlier an appointment in the office of the wazīr for he tells (MS. Brit. Mus., fol. 69v) that in the year 694 he received instructions from the wazīr Ibn al-Khalīlī to investigate a case of cannibalism during the famine which prevailed in Egypt

during that and the following year. He composed a short history of Egypt which in the Paris MS., N^o. 1706 has the title: *Nuṣhat al-Mālik wa'l-Mamlūk fi Mukhtaṣar Sira man waliya Miṣr min al-Mulūk*, while in the other Paris MS., N^o. 1931, 22 it has the erroneous title of *Faḍḍ al-Miṣr*, yet the London MS. has another title from which it appears that probably the first is the correct one. The earlier part beginning with the natural and other advantages of Egypt gives a very succinct account of the earlier rulers consisting mainly of anecdotes, but the chief interest lies in the portion which deals with the Turkish Sultans; here he gives exact dates and facts which supplement our knowledge of the closing years of the 7th century of the Hījra. Perhaps the account of the great flood in Ba'labak in 717 found in the London MS. may be by him, but it is not found in the other two copies. The MS. in the British Museum written for the Egyptian caliph al-Mutawakkil proceeds to give events down to 795, but from fol. 113v it contains only matter concerning the family of the owner of the manuscript, first a genealogy of al-Mutawakkil (fol. 113v) and then a long list of his children, first the boys then the girls, indicating in each case the date and hour of their birth, and in cases where they died before 794, the dates of their death. The last entry by the same hand but with different ink records the birth of a son, in 795 A. H., the 25th of Sha'bān. The three MSS. all contain the same work in spite of their varying titles: Brit. Mus., Add. 23326; Paris 1706 and 1931, 22. **Bibliography:** in the article.

(F. KRENKOW)

ŞAFAR, name of the second month of the Muhammadan year, also called *Ş. al-khair* or *Ş. al-muṣaffar* because of its being considered to be unlucky (C. Snouck Hurgronje, *The Atchinese*, i. 206; do., *Mekka*, ii. 56). The Muhammadan Tigre-tribes pronounce the name *Shafar*, the Atchinese *Thapa*. According to Wellhausen in the old-Arabian year, Şafar comprised a period of two months in which Muḥarram (which name, according to this scholar is a Muslim innovation) was included. As a matter of fact, tradition reports that the early Arabians called Muḥarram Şafar and considered an 'umra during the months of the Ḥaḍḍj as a practice of an extremely reprehensible nature. They embodied this view in the following saying: *Idhā bara'a 'l-dabar wa-afa 'l-aṭhar wa 'nsalaḥha Şafar ḥallati 'l-'umra li-man f'tamar*, i. e.: When the wounded backs of camels are healed and the vestiges [of the pilgrims] are obliterated and Şafar has passed, then the 'Umra is allowed for those who undertake it.

ŞAFAWIDS, the most famous and glorious of the native dynasties of Persia since the introduction of Islām, which takes its name from Shaikh Şafī al-Dīn Ishāḳ [q. v.], from whom its founder, Ismā'īl Şafawī [cf. ISM'Ā'IL I], was sixth in descent. The family had long been settled at Ardabīl [q. v.] as hereditary spiritual instructors of the people, and at

the end of the sixteenth century Ismā'il, after the death of his two elder brothers, extended his authority by degrees over *Shirwān*, *Ādharbājdjān*, *Irāk* and the rest of Persia, "the ground having been assiduously prepared by widespread politico-religious propaganda". The *Shi'a* doctrine had always been popular in Persia, but Ismā'il was the first ruler to make it the state religion, and to propagate it among the Turkish tribes of the north, whom he enlisted in his service and distinguished by giving them red hats, whence they were known as *Kizil-bāsh* (Red-heads). He virtually extinguished the *Sunni* religion in Persia. He died on May 24, 1524, and was succeeded by his son, *Tahmāsp I*, who repeatedly expelled the *Uzbeks* from *Khurāsān*, waged a not entirely unsuccessful war against the *Uthmānli* Turks who, under *Salīm I*, had defeated his father, and helped *Humāyūn* to recover his Indian throne. On his death in 1576 the throne fell, after a contest, to his fourth son, *Ismā'il II*, a worthless and debauched tyrant, during whose shameful reign the kingdom was a prey to intestine strife and foreign aggression, but on his death he was succeeded by his youngest son, *Shāh 'Abbās I* (1585—1628), justly entitled the Great, who restored Persia to her legitimate place in the *Islāmic* world. He inflicted on the Turks a defeat which deterred them from molesting his kingdom, he drove the *Uzbeks* and *Turkmāns* from *Khurāsān*, and he recovered *Qandahār* from the emperor of India. He was just and tolerant, he imported an industrious colony of *Armenians* from *Djulfā* [q.v.] on the *Araxes* to *Isfahān*, where they built and inhabited the suburb of New *Djulfā*, he encouraged trade and intercourse with western nations, and he was a liberal patron of architecture. His grandson, *Šafi I*, who succeeded him, and reigned for fourteen years, was a blood-thirsty tyrant who disgraced the throne of his ancestors and was devoid of either justice or humanity. His armies repelled the raids of the *Turkmāns* in *Khurāsān*, but in his reign *Qandahār* was recovered by the emperor of *Dihli*. The *Turks*, encouraged by the disorders which his tyranny engendered, recovered *Baghdād* and even occupied *Tabriz*, but were compelled by the severity of the winter and the scarcity of supplies to withdraw from *Ādharbaidjān*. *Šafi* recovered *Eriwān* from the *Turks*, and died in 1642, when he was succeeded by his son, *'Abbās II* [q.v.], then only ten years of age. *'Abbās* recovered *Qandahār* from *Shāh Djahān* of *Dihli*, and a movement of his troops against an *Uzbek* chief on the *Khurāsān* frontier caused the *Indian* forces to evacuate *Balkh*. The relations of Persia with *Turkey* were greatly improved in his reign, and intercourse with the western powers was extended. He died on Oct. 26, 1666, and was succeeded by his elder son, *Šafi*, who frustrated an attempt of the *amirs* to exclude him from the throne, and assumed the name of *Sulaimān*. He was an enlightened and tolerant monarch and welcomed the ambassadors of European powers, even of the *Russians*, whose habits disgusted him. His health was always poor, but he reigned for twenty-nine years, and on his death in 1694 was succeeded by his son, *Sultān Husain*, a weak prince who permitted ecclesiastics to conduct all affairs of state. Those who refused to conform to the state religion — that of the *Shi'a* — were persecuted, and this fatuous policy provoked the hostility of the *Afghāns* who held *Qandahār*

for the King of Persia, so that in 1709 *Mir Wais*, governor of that province, proclaimed his independence. In 1722 *Maḥmūd*, son of *Mir Wais*, invaded Persia and besieged *Isfahān*. Famine compelled the city to surrender, and *Maḥmūd* deposed *Sultān Husain* but died soon afterwards. In 1729 *Ashraf*, the brother and successor of *Maḥmūd*, was expelled from Persia, and *Nādir Kuli* [see the art. *NĀDIR SHĀH*] placed *Tahmāsp III*, of the *Şafawi* family, on the throne, but shortly afterwards deposed him as being unfit to reign, and caused his son, then only eight months old, to be proclaimed under the title of *'Abbās II*. The child died soon afterwards and on Feb. 26, 1737, *Nādir Shāh*'s assumption of the royal title extinguished the *Şafawi* dynasty.

AL-SAFFĀH. [See *ABU 'L-'ABBĀS*].

ŞAFFĀRIDS, a dynasty founded by *Ya'qūb b. Laith al-Şaffār* which originated in *Sadjistān* and reigned in Persia for thirty-three years. *Ya'qūb*, who was a coppersmith (*şaffār*) by trade abandoned his handicraft and became a brigand, but his chivalrous conduct in his predatory calling, attracted the favourable attention of *Šālih b. Naşr* (or *Nadr*), and he gave him the command of his troops. *Ya'qūb* rebelled against *Dirham b. Naşr*. In 253 (867) he was master of the whole of *Sistān*. Having thus established himself in *Sistān* he captured *Herāt*, and *Muḥammad b. Tāhir b. Aḥmad*, governor of *Khurāsān*, attempted to divert his attention from this town by bestowing on him the government of *Kirmān*. In 253 (867), however, he recaptured *Herāt* and took some *Tāhirids* prisoner. He sent an embassy with magnificent presents to the *Caliph al-Mu'tazz*, tried to take possession of the province of *Fārs*, defeated the governor *'Alī b. al-Husain* and entered *Shirāz*, without injuring the population. Then he returned to *Sadjistān* without establishing his power in *Fārs*. — He then turned to the domain of the princes (*rutbāi*) of *al-Rukhkhadj*. In 256 (870) he conquered *Balkh*, *Bāmiyān* [q.v.] and *Kābul*. In 257 (871) *Ya'qūb* again tried to take possession of *Fārs*. In order to turn his attention from this province, *al-Muwaffaq* gave him *Balkh*, *Tukharistān* and *Sind* in fief. In 259 he marched against *Naisābūr*, which he captured in *Shawwāl*. There he took *Muḥammad b. Tāhir* prisoner. After an unsuccessful expedition in *Tabaristān*, he finally remained in possession of *Khorāsān*. The *Caliph* however, refused to acknowledge him. This induced him to conduct his army through *Khūzistān* against *Baghdād*, after having defeated the governor of *Fārs*. He was in his turn defeated at *Dair al-'Ākūl*, retired to *Khūzistān* and died at *Djundāi Shābūr* (*Shawwāl* 265 = June 879) where his tomb is still shown.

He was succeeded by his brother *'Amr* [q.v.], whose descendants maintained themselves in *Sistān* till 1163.

AL-ŞĀFFĀT, title of Sūra xxxvii. of the Qur'ān, after the first word *wa'l-Şaffāt*.

SAFĪ, more accurately Asfī, ethnic Masfīwī, a port in Morocco on the Atlantic Ocean, a few miles south of Cape Cantin, at the top of a very open bay. Safī has about 21,000 inhabitants of whom 3500 are Jews and a thousand Europeans.

Safī does not seem to date back to any great age. Al-Bakrī (ixth century A. D.) mentions it without attributing any great importance to its al-Idrīsī in the next century says it is a fairly busy port but the roads are not at all safe. In the beginning of the thirteenth century, a ribāṭ arose there. But the importance of Safī really date; only from the coming of the Portuguese, who, continuing their progress along the Moroccan coast, settled there in 1507. There they established a stronghold which in 1510 resisted a vigorous attack; with the help of a local chief, Yaḥyā ben Taḥfī, who seems to have, been a personage of considerable importance, the Portuguese for several years made Safī the principal centre of their operations. They established a regular protectorate there, gradually winning over the neighbouring tribes and daily advancing their outposts and their razzias further afield. They ultimately reached the very gates of Marrākush. But Portugal, with her hands full elsewhere, especially in the Indies, could not long sustain such an effort; on the other side too, the holy war movement gradually increased in force and the administration, in difficulties for funds, forced to exploit more and more the subdued country, became worse and worse. In 1516 the governor Lope de Barriga was taken prisoner; in 1517 Yaḥyā b. Taḥfī was killed in an ambush. The attacks of the Shorfa became more and more serious and after 1534 the question began to be considered of evacuating Safī and Azemmour (which had been occupied in 1513), to concentrate the defence on Mazagan. They were forced to this solution of the problem in December 1541 after the loss of Agadir in March of that year. The evacuation was made in good order under the direction of Joanno de Castro.

The Sa'dī Shorfa having occupied Safī made it their principal port: as a matter of fact it is the nearest to Marrākush, which was their usual residence. Safī thus attained great importance in the xvth and xviith centuries; a considerable part of the Christian trade was centred there. When the 'Alawids seized the power and moved their capital to the towns of the north, Meknes or Fās, Sale became the busiest port and Safī lost a great deal. In the xviiith century, however, Christian merchants were still numerous there; the representative of France, it may be noted, lived there for several years. In the xixth century its decline became more marked. It is now a fairly busy little town from which are exported the agri-

cultural products of the rich country of the 'Abda, of which Safī is the centre. Of the ancient ribāṭ it has retained the name of one of its two quarters while the name of the other is commemorated in walls for the most part Portuguese.

(HENRI BASSET)

ŞAFĪ, FAKHR AL-DĪN 'ALĪ B. AL-ḤUSAIN AL-WĀ'IZ AL-KĀSHĪFĪ, with the *takhalluṣ* ŞAFĪ, son of the preacher and man of letters al-Ḥusain al-Wā'iz al-Kāshifī (d. 910 = 1504/5), a Persian author. From the preface to his work *Laṭā'if al-Ṭawā'if* it appears that he was a prisoner in Herāt for a year and in 939 (1532/3) entered the service of Shāh Muḥammad, prince of Ghardjīstān where he composed the *Laṭā'if*. He must therefore have died after 1533; the exact date is not known any more than that of his birth.

Works: 1) a romantic poem, *Maḥmūd u Āyās*, as far as is known the oldest poetic version of the theme; 2) *Rashahāt-i 'Ainu'l-Hayāt, a taḥkīra* of the Naḡshbandī Shaikhs, ed. Taschkent 1329, finished in 919 (1513/4); a Turkish translation of it appeared at Constantinople in 1236, at Bülāḡ in 1256 (Ethé in the *Grundr. der Iran. Phil.*, ii. 365); 3) the above mentioned *Laṭā'if al-Ṭawā'if*, also called *Laṭā'if al-Zarā'if*, a narrative work found in a considerable number of manuscripts in European libraries, which contains in 14 bābs anecdotes regarding individuals of various classes of society (extracts in Schefer's *Chrest. Pers.*, i. 106 sqq.).

Bibliography: Ethé in the *Grundr. der Iran. Phil.*, ii. 250, 332, 334, 365; Sachau-Ethé, *Catalogue of the Persian... Manuscripts in the Bodleian Library*, i. 428 sqq.; Rieu, *Catalogue of the Persian Manuscripts in the British Museum*, p. 353, 757; do., *Supplement*, p. 69; Pertsch, *Die persischen Handschriften der Herz. Bibl. zu Gotha*, p. 121; do., *Verzeichnis der persischen Handschriften der Königlichen Bibliothek zu Berlin*, cf. Index iii. under 'Alī Ibn al-Ḥusain; de Goeje, *Cat. Cod. Orient. Bibl. Acad. Lugd. Bat.*, v. 295. (V. F. BÜCHNER)

ŞAFĪ AL-DĪN (Shaikh), ancestor of the Şafawids [q.v.] in Persia, was born at Ardabil [q.v.] in 650 = 1252/3, the son of Khwādja Kamāl al-Dīn 'Arabshāh and Dawlatī, said to be in the twenty-fifth line of descent from 'Alī and in the twentieth from Mūsā al-Kāẓim, the seventh Imām (on his genealogy see E. G. Browne in the *J.R.A.S.*, 1921, p. 397 and *Silsilat al-Nasab-i Şafawiya*, Berlin 1924). He was the fifth of seven children and his father died when he was six years old. He is described as a serious youth who grew up without comrades and early devoted himself to religious exercises. As he found no one among the learned men of Ardabil who pleased him as

a teacher he went to Shīrāz with the intention of attending the lectures of Shaiḫ Naḍīb al-Dīn Buzḡhūsh (d. 678 = 1279), but the latter died before he arrived there. He made the acquaintance of pious dervishes and devout men, including Shaiḫ Ruḡn al-Dīn al-Baiḍāwī and Amīr ‘Abdallāh, who finally referred him to Shaiḫ Zāhid, i. e. Tādj al-Dīn Ibrāhīm b. Rawshan Amīr b. Bābil b. Shaiḫ Bundār al-Kurḍī al-Sandjānī of Gilān, who was reported to live on the Caspian Sea. He is said to have spent four full years searching for him and ultimately discovered him in Hīlyakirān in the Khānbālī district of Gilān. Shaiḫ Zāhid gave him a kindly welcome and Safī al-Dīn remained 25 years with him until Zāhid died at the age of 85. Safī al-Dīn then became his successor in Zāhid's brotherhood until he in turn passed away, likewise aged 85, on Monday, Muḥarram 12, 735 = Sept. 12, 1334. Shortly before his death he had made the pilgrimage to Mekka and had previously designated his son Šadr al-Dīn as his successor. On his return he became ill, lay for twelve days in bed and then passed away. He had two wives, Bibī Faṭīma, daughter of Shaiḫ Zāhid, and the daughter of Akhī Sulaimān of Gīlkhwarān. The former was the mother of 1) Muḥyī al-Dīn, who died in 724 = 1324, 2) Šadr al-Dīn (born April 27, 1305 = Shawwāl, 704, died 794 = 1392), Šafī al-Dīn's successor and 3) Abū Sa‘īd. The second wife bore him two sons, ‘Alā’ al-Dīn and Šaraf al-Dīn, as well as a daughter, who was given in marriage to Shaiḫ Shams al-Dīn, a son of Shaiḫ Zāhid.

Safī al-Dīn was the founder of the Dervish order of the Šafawī which later attained political control of Persia. The organisation and history of this brotherhood have not yet been thoroughly investigated. It is closely connected in its political and religious history with the dervish bodies which later appeared in Anatolia and became powerful there, like the Akhis and the Bektāshīs [q. v.]. Its members later wore as a badge a twelve-pointed cap of scarlet wool (later called *rādjī ḥaidar*; cf. *Islam*, xi. 83), from which comes the Turkish name *kızıl-baş* “red head”. Of the religious system of the order it is certain that its later point of view was that of the Shī‘a, although it is said that Safī al-Dīn himself, the founder, was a Sunnī (cf. E. G. Browne, *Persian Literature in Modern Times*, p. 43 sq., following the *Aḥsan al-Tawārīkh*). Safī al-Dīn received numerous adherents from Persia and especially from Anatolia (cf. *J. R. A. S.*, 1921, p. 403—4) and it is to him that the order owes its great prestige in Šūfī circles and its later great extension, which was ultimately to prove almost fatal to the Ottoman Empire.

Bibliography: The principal source is Ibn al-Bazzāz, *Šafwat al-Šafā’*, lith. Bombay 1329 = 1911; MSS. in the British Museum, Add. 11745 and in King's College, Cambridge (cf. E. G. Browne, *op. cit.*, p. 35); this work, of which Browne, *op. cit.*, p. 38 sq., gives an excellent survey, deals exclusively with Safī al-Dīn's influence and neglects almost entirely the merely biographical data of his career. The *Silsilat al-Nasab-i Šafawiya*, extracts of which have been given by E. G. Browne in the *J. R. A. S.*, 1921, p. 395—418 (cf. thereon F. Babinger in the *Islam*, xii. 231 sqq.), and published by him in Persian at the Kavianī press in Berlin in 1924,

is also important; on it see the earlier article by von Khanikoff in the *Mélanges Asiatiques ... de St. Pétersbourg*, i. 850—853. On further Persian literature see P. Horn in the *Grundriss der iranischen Philologie*, ii., Strassburg 1896/1904, p. 586 sq., and v. Khanikoff in the *Mélanges Asiatiques*, i. 543 sq. On Shaiḫ Šafī al-Dīn cf. especially the very full account by E. G. Browne, *Persian Literature in Modern Times*, Cambridge 1924, p. 3—44; on his order, the *Kızılbaş*, and their connections with Anatolian dervish orders see F. Babinger, *Schejch Bedr ed-Din*, Leipzig and Berlin 1921, p. 78 sqq. (*Isl.*, xi. 78 sqq.), with the sources there quoted and also do., *Marino Sanuto's Tagebücher als Quelle zur Geschichte der Šafawīja in A Volume of Oriental Studies presented to Edward G. Browne*, Cambridge 1922, p. 28—50.

(FRANZ BABINGER)

ŠAFĪYA BINT ḤUYAĪY B. AKḤṬAB, Muḥammad's eleventh wife, was born in Medina and belonged to the Jewish tribe of the Banu ‘l-Naḍīr; her father and her uncle Abū Yāsīr were among the Prophet's most bitter enemies. When their tribe was expelled from Medina in 4 A. H., Huyaiy b. Akḥṭab was one of those who settled in Khaibar, together with Kināna b. al-Rabī‘, to whom Šafīya was married at the end of 6 or early in 7 A. H.; her age at this time was about 17. There is a tradition that she had formerly been the wife of Sallām b. Mashkam, who had divorced her.

When Khaibar fell, in Šafar 7, Šafīya was captured in a fortress, al-Qamūs or Nizar, together with two of her cousins. In the division of the spoils she had been assigned, or actually given, to Dihya b. Khalifa al-Kalbī, but when Muḥammad saw her he was struck by her beauty, and threw his mantle over her as a sign that he had chosen her for himself. He redeemed her from Dihya against seven heads of cattle, and induced her to embrace Islām. Her husband was condemned to a cruel death by Muḥammad for having refused to give up the treasure of the Banu ‘l-Naḍīr; the desire of marrying Šafīya may have influenced the Prophet, for the nuptials were celebrated with unseemly haste, either in Khaibar itself or at al-Šabbāḥ, some 8 miles from it, on the way back to Medina. Šafīya's dowry consisted in her emancipation, and she assumed the veil (*ḥiḍjāb*), thus establishing her position as a wife, which at the beginning appears to have been questioned.

In Medina Šafīya received a cold welcome: ‘Ā’isha and Muḥammad's other wives showed their jealousy with slights upon her Jewish origin. She seems to have lived aloof from her surroundings, for we find no further mention of her in the years preceding Muḥammad's death, except in an episode that shows how, during his last illness, she expressed her devotion to him, and was criticised by the other wives. With the Prophet's daughter Faṭīma she was, however, on good terms.

In 35 A. H. Šafīya sided with ‘Uthmān; while he was besieged in his house she made an unsuccessful attempt to reach him, and she used to bring him food and water by means of a plank placed between her dwelling and his. When ‘Ā’isha asked her to be present at ‘Uthmān's last interview with ‘Alī, Talḥa and al-Zubair, which took place in her house, Šafīya went, and tried to defend the unfortunate Caliph.

She died in 50 or 52, during Mu'awiya's caliphate, leaving a fortune of 100,000 dirham in land and goods, one third of which she bequeathed to her sister's son, who still followed the Jewish faith. Her dwelling in Medina was bought by Mu'awiya for 180,000 dirham.

In Cairo there is a xvii. century mosque dedicated to Sitt Şafiya, which gives its name to the surrounding quarter.

Bibliography: Ibn Hishām, ed. Wüstenfeld, p. 354, 653, 762, 766; Ibn Sa'd, viii. 85—92; L. Caetani, *Annali dell' Islām*, i. 379, 415; II/i. 29, 34; viii. 223; al-Ṭabari, ed. de Goeje, i. 173; Lammens, *Mo'awia*, p. 246. (V. VACCA) AL-ŞAHĀBA. [See AŞHĀB].

SAHARA (AL-ŞAHĀRA), an African desert. Şahrā is the feminine of the adjective *aşhar*, "of a fawn colour". The word is applied by some writers to a combination of stony soil, steppes and sands (cf. al-Idrīsī, ed. de Goeje, p. 37 note), while the word *muḍjiba*, is more particularly applied to areas covered with moving sands and absolutely devoid of water (cf. Abu 'l-Fidā, *Taḳwīm al-Bulḍān*, ed. Reinaud and de Slane, p. 137; transl. Reinaud, ii. 190). Leo Africanus uses it as a synonym for desert in general (Schefer I, i. 5).

The Sahara lies between Barbary, Tripolitania, Cyrenaica and Marmarica in the north, the Sūdān in the south, the Atlantic in the west and the Nile valley in the east. Some geographers even extend it as far as the Red Sea, and thus link it up with the Arabian deserts. Its area, if we leave out Egypt, may be estimated at three million square miles, or a quarter of the total surface of Africa.

The Sahara, as a whole, may be regarded as an ancient "plain" concealed in many parts by more recent geological formations. Its surface, far from being uniform, presents considerable variations of level. Some parts, in the vicinity of the Egyptian border, in the south of Tripolitania and in the south of Tunisia, are below the level of the sea; in other parts, however, there are high plateaux, and mountain ranges, for the most part of volcanic origin, tower up (Tibesti, Air, Hoggar), some of whose summits are over 10,000 feet high (Tibesti). On the whole, we may say that low-lying areas predominate in the western Sahara and the heights in the eastern.

The desert character of the Sahara is primarily due to the climate of this part of Africa. Rains are very rare and irregular there; the extreme dryness of the air produces an intense evaporation, which reduces to a minimum the rising of springs to the surface. The great variations of temperature and violence of the winds result in the break up of the rocks and the denudation of the surface. The conditions of animal and vegetable life are, in consequence, extremely precarious. It is, however, right to make a distinction in this respect between the border zones and the desert strictly speaking. In the north, indeed, the fairly abundant rainfalls have allowed the development of a zone of steppes suitable for stock-rearing, of which the high plateaux of Algeria show the most perfect type; in the south a border of savannah and bush rolls almost without interruption from the Atlantic to the Nile basin, and forms the transitional link between the Sahara and the fertile regions of Equatorial Africa. This is the "Sūdānese Sahara", in which the desert character lessens gradually as one goes southwards. The Sahara,

properly so called, occupies the whole area between these two zones and even in the north reaches to the Mediterranean in the region of Sidra and Marmarica. It presents very different aspects in its different parts. Sand-dunes cover enormous tracts (cf. the article 'AREG'), separated from each other by rocky plateaux (Hamada), bounded by steep slopes. In other parts we find river valleys, usually dried up, called *wādī* (weds) or flat plains of a soil sometimes perfectly uniform (Reg) as in the Algerian Sahara, sometimes filled with pebbles which makes walking very difficult, as in the Libyan desert. The most desolate parts are the "Tanezruft", absolutely sterile regions and totally without springs. On the other hand, wherever we find surface water and wherever sheets of subterranean waters are sufficiently near the surface to be reached by wells or irrigation channels, there have arisen centres of population and cultivation, known as "oases", some isolated, others grouped like the islands of an archipelago: Fezzān, Kawar, Wed Rir (*wādī Righ*), Zibān, Tidikelt, Tuāt, Gurara, Tafilelt etc.

The Arab authors only give us fragmentary and often vague information regarding the Sahara. The only region that they know with any exactness is the northern zone, adjoining Ifrīkiya and the Maghrib, the zone in which Ibn Khaldūn (*Les Berbères*, ed. de Slane, i. 120; transl. de Slane, i. 190) includes Tafilelt, Tuāt, Gurara, Fezzān and even Ghadames. The Arabs, however, do not agree as to the bounds of the Sahara. Al-Bakrī, for example, says that the sands mark the beginning of the "lands of the blacks" (*Ma-şālik*, Algiers 1911, p. 21; transl. de Slane, p. 49). Ibn Khaldūn, on the other hand, makes it clear that this country is separated from Barbary by a vast region of deserts, "in which one is in danger of dying of thirst"; here and there also we find some notes on the parts of the deserts traversed by caravan routes (e. g. on the western Sahara; cf. the description of the desert called *Nisar* or *Tisar* by al-Idrīsī, *Yasr* by Abu 'l-Fidā) or the accounts of commercial centres like Tadmakka, Audaghost (al-Bakrī, *op. cit.*, p. 339).

Leo Africanus gives a resumé of the data supplied by his predecessors. He identifies the Sahara with the Libya of the ancients (Bk. i. 5) and attempts a division into regions based on their populations. He distinguishes five different areas in the Sahara: (1) the desert of the Zenaga (زنقة), from the ocean to the salt beds of Tegaza; (2) the desert of Wanzigha from the salt-beds of Tegaza at the Air in the east to the desert of Sidjilmāsa in the north; (3) the desert of the Targa (تارقة = Tuareg), bounded in the west by Ighidi, in the north by Tuāt, Gurara and Mزاب, in the south by the kingdom of Agades; (4) the desert of the Lamta bounded on the north by the deserts of Wargla and Ghadames, in the south by deserts which reach as far as Kano; (5) the desert of the Bardāwa lying between the desert of the Lamta in the west, the desert of Awjila in the east, Fezzān in the north, Bornū in the south (Leo Africanus, Bk. vi.; transl. Schefer, iii. 267 sqq.).

In spite of the sparsity of its resources, the Sahara has always been the home of man. The discovery on numerous places, at a great distance from one another, of wrought flints, pottery, rock carvings, etc. testify to the presence of man there

at a very remote epoch. The ancients gave these Saharan people the name of Ethiopians (Herodotos) or Libyans. They peopled the Sahara in the strict sense of the word, while Fezzān was occupied by the Garamantes, negroids, perhaps related to the present day Bornūans. In the northern border zone, Berbers of a white stock lived; gradually, however, the negroes were pushed southwards and had to give way to the whites. According to E. Gautier (*Le Sahara*, p. 93 sqq.) this ethnic change was the result of the introduction into North Africa in the Imperial period of the camel which supplied the Berbers with the indispensable means for the conquest of the Sahara. In any case, from this time onwards the Berbers never ceased to advance into the interior. When the Arabs came, the Zanāta were already settled in the oasis of the Wed Rir, while the Ṣanhādja were leading a nomadic life to the south of the great Atlas as far as Senegal. In the fifth century A. H. the Almoravids [q. v.] ruled the whole of the western Sahara. Three centuries later the Berber tribes (Guadala, Lamtūna, Uzīga, Masūfa, Lamta and Targa) formed from west to east a cordon stretching to the borders of the land of the negroes (Ibn Khaldūn, *Les Berbères*, ed. de Slane, i. 21; transl. de Slane, p. 104). The advance continues in the centuries following. In the sixteenth century A. D. the Tuareg occupied the Air, in the seventeenth and eighteenth they settled in Adrār and reached the banks of the Niger.

Arab penetration followed the Berber penetration. In the first century A. H. the Arabs first arrived in Fezzān; during the period following, they found their way into the central Sahara and into the western Sahara, as missionaries and merchants. But it was the Hilālī invasion that brought in whole tribes, who, finding the Maghrib too small for them, overflowed into the desert, thrusting forward the Berber tribes and forcing them to go further south, so that by the time of Ibn Khaldūn, Arab tribes were occupying the border country north of the desert. Certain later happenings contributed to the diffusion of the Arab element, for example the expulsion of the Moors from Spain, which brought refugees even as far as Shingit in Adrār, and the conquest of the Sūdān by the Saʿdians at the end of the sixteenth century A. D. The Arab expansion has gone on into our own times; witness, for example, the settlement in Bordū about 1820 of the Awlād Sulaimān (Uled Sliman), who came from the shores of the Gulf of Sidra. The existence of fairly active commercial relations between the two sides of the Sahara has always contributed to facilitate this infiltration. From the early centuries of the Hīdjra, caravan routes connected Fezzān with Tchad, Southern Tunisia with Nigeria, and the extreme Maghrib with the empire of Ghāna. In the seventh century A. H. Walata was in regular connection with Morocco and Tuāt, Kanem with Ifrīkiya. In the sixteenth century A. D. Timbuktu traded with Morocco and Tunisia; in the nineteenth the routes from Tripoli to Bornū and Wadāi were still busy and Arab traders were settled at all the caravan stations.

This Arab and Berber penetration has, however, been checked from time to time by return offensives by the Sūdānese. At more than one period, indeed, negro empires have extended over the Sahara. The Soninke empire of Ghāna stretched

over all Mauritania; the Mande empire reached to Tuāt; the authority of the Sultāns of Kanem has been recognised around Wargla, that of the Askia of Gao even to beyond Timbuktu.

This ebb and flow of peoples has left its trace in the present ethnography of the Sahara. We find in it the elements of white and black, either pure or altered by mixture in different degrees. The first, numerically the most important, is represented by the Arabs and the Tuareg [q. v.]. In spite of the differences of origin and of language which distinguish them, they both present some features in common. They lead the same kind of life, a purely nomadic one, to which a kind of secular selection has wonderfully adapted them; as regards politics, they have not advanced beyond the rudimentary organisation into tribes and confederacies of tribes. Their geographical areas, however, are quite distinct. The Tuareg predominate in the Central Sahara from which they have advanced, gradually mixing more and more with black blood, as far as the bend of the Niger. The Arabs predominate on the frontiers of the Maghrib and especially in the western Sahara, which they have arabicised, and where their intermarriage with the Berbers has given birth to a mixed population, the Moors. The families who have preserved their Arab descent almost intact and who bear, as a rule, the name of "Hasan", constitute an aristocracy among them, while the other sections of the population, with the exception of some groups of Ṣanhādja and Almoravid descent, are treated as an inferior caste (cf. the article MAURITANIA).

The black population also includes elements of various origins. The aboriginal population, gradually thrust back by the whites, seems to be represented at the present day only by the Tibu [q. v.], who, numbering barely 10,000 or so, occupy Tibesti and the neighbouring regions [see the article TIBESTI]. The vast majority consists of individuals of different origins (Hausa, Bornūans, etc.), whose ancestors were settled in the Sahara as the result of the Sūdānese conquests, or who have been brought into the country as slaves. The intermarriage of these negroes among themselves and with Berbers seems to have given birth to a particular type, the "hartani" (plur.: *harratin*), among whom black blood predominates; they play a very important part in the economy of the Sahara, especially in the villages and oases of the Northern Sahara. In contrast to the essentially nomadic white, the black is a settler; he cultivates the oases, a work for which the whites are unfitted by their inclinations as well as their physiological organisation. The black tiller of the soil secures for the nomads the means of subsistence, without which they could not do, but he is kept by them, whether Arab or Berber, in a state of dependency and service.

If it has not opposed an insurmountable obstacle to the relations between the Mediterranean region and the Sūdān, the Sahara has been no more a barrier to the diffusion of Islām, the progress of which coincides with that of the white element in the desert. Introduced into Fezzān in the first century A. H., Islām was spread by the Arab traders, who frequented the caravan routes and commercial centres, and by the nomad Berbers, like the Lamta and the Lamtūna. The conquests of the Almoravids gained for Islām a vast

area in the western Sahara and up to the borders of the Sūdān. This Islām, quite superficial by the way, like that still professed by the Tuareg, allowed traces of previous beliefs and practices contradictory to Korānic law to go on; on the other hand, it met with centres of resistance like the Tuāt, where Judaeo-Berbers maintained themselves till the fifteenth century A. D. At this period the religious revival which began in North Africa had its repercussions in the Sahara. Marabouts and *Shorfa*, coming for the most part from Morocco, appeared in all places of any importance, exterminated all who differed from them, preached the orthodox doctrine and themselves became founders of Marabout factions, whose members enjoyed great material and moral prestige. The activity of the religious brotherhoods became added to that of individuals, and is still felt at the present day. The western Sahara is under the influence of brotherhoods attached to the Kādīriya order and, in a smaller degree, to the Tīdjāniya; the eastern Sahara to that of the Sanusiya.

SAHĀRANPŪR, a city of northern India, situated in 29° 57' N. and 77° 33' E., was founded about 1340, in the reign of Muḥammad b. Tughlaq, and was named after a local Muḥammadan saint, *Shāh Haran Čishti*. The city and district suffered severely during the invasion of Timūr; and in 1526 Bābur traversed them on his way to Pānīpat, and some local Mughal colonies trace their origin to his followers. Muslim influence gained much by the proselytizing zeal of 'Abd al-Ḳuddūs, who ruled the district until the reign of Akbar. In the reigns of Djahāngīr and Shāh Djahān, Sahāranpūr was a favourite summer resort of the court, owing to the coolness of its climate and the abundance of game in its neighbourhood. Nūr Djahān had a palace in the village of Nūrāgar, which perpetuates her name, and the royal hunting seat, Pādshāh Maḥall, was built for Shāh Djahān. After the death of Awrangzib the district suffered severely from the inroads of the Sikhs, who massacred Hindūs and Muslims indiscriminately, until, in 1716, they were temporarily crushed by the imperial authority. The upper Doāb then passed into the hands of the Sayyids of Bārha, and on their fall in 1721 into those of several favourites. In 1754 Aḥmad Shāh Durrānī conferred it on the Rohilla, Nadītb Khān, as a reward for his services at the battle of Kotila. Before his death, in 1770, it was overrun by Sikhs and Marāṭhās. His son Zābiṭ Khān revolted from Dīhli, but was reconciled, and his son Ghulām Kādir, who succeeded him in 1785, established a strong government and dealt firmly with the Sikhs. He was a coarse and brutal chief and in 1788 he blinded the emperor Shāh 'Ālam and was justly mutilated and put to death by Sindhya. Sahāranpūr remained nominally in the hands of the Marāṭhās, but actually in those

of the Sikhs, until its conquest and occupation by the British after the fall of 'Algaṛh and the battle of Dīhli in 1803.

(T. W. HAIG)

ŞAHİB, the participial form of *ṣ-h-b*, to be the companion of, meant originally to be on equal terms of friendship, and was especially used of all those who came into contact with Muḥammad, and died in the faith of Islām [cf. the art. *Aṣḥāb*]. But also in Muslim literature it often has the common meaning of companion. Muḥammad calls himself *ṣāhibukum* when he addresses his companions; and the Kaibar is called *Ṣāhib al-Rūm*, the governor of al-Buṣrā *Ṣāhib al-Buṣrā*. By 167 = 783/84 the Caliph al-Mahdi created an Inquisitor and gave to him the title of *Ṣāhib al-Zanādika*. Still, for Governors, the term Ḥākim was preferred. It is probable that the sacred association with the Prophet's Companions led to this preference.

The term *Şahib* is used universally in India to-day to designate Europeans, and is a formal mark of respect. When applied to Indians of high station it is an added honour, e.g. *Khān Şahib*.

Curiously enough the Arabic feminine form is seldom in use, and not in an honorific sense. In the Creed of Al-Ash'ari (Spitta, *Zur Geschichte Al-Ash'ari's*, p. 133 sqq.) he says of God: "He has taken to Himself no companion (*ṣāhibā*)". This use, however, is very exceptional. In India at present the feminine is obtained by prefixing *Madam*, with an elided d, and pronouncing *mem-sahib*, and this is the form by which all European women are addressed.

On the use of *ṣāhib* in the Mekkan dialect, cf. Snouck Hurgronje, *Mekkanische Sprichwörter*, No. 23.

ŞAHİB KİRÂN, a title, meaning "Lord of the (auspicious) conjunction". *Kirān* means a conjunction of the planets, *Kirān al-sādain* (cf. the art. *SA'DĀN*) a conjunction of the two auspicious planets (Jupiter and Venus), and *Kirān al-naḥsain* a conjunction of the two inauspicious planets (Saturn and Mars). In the title the word refers, of course, to the former only. The Persian *i* of the *iḳāfa* is omitted, as in *Şahib-dil*, by *fakk-i-iḳāfa*. The title was first assumed by the Amīr Timūr, who is said to have been born under a fortunate conjunction, but with whom its assumption was, of course, an afterthought. After his death poets and flatterers occasionally applied it to lesser sovereigns, even to so insignificant a ruler as Burhān Nizām Shāh II, of Ahmadnagar, but it was officially assumed by Timūr's descendant, the emperor Shāh Djahān, who styled himself *Şahib Kirān-i-Thānī*, "the second Lord of the Conjunction".

Şahib-Kirān was also, in Persia, where it has since been corrupted into *Kirān* or *Krān*, the name of a coin of 1000 *dinārs*, the tenth part of a *tūmān*.

(T. W. HAIG)

ŞAHİH, sound, free from defect or blemish, is the name given to (a) a tradition whose chain of guarantors or transmitters is unassailable; and (b) the collections which contain nothing but *ṣaḥîḥ* traditions, namely those compiled by al-Bukhârî [q. v., i. 783] and Muslim b. al-Hadîdjâdj.

(a) The *ṣaḥîḥ* tradition, according to al-Djurdjânî (d. 816) embraces categories so wide apart as the *musnad* (supported by authorities resting on the prophet) and the *fard* (peculiar to one district or one reporter).

(b) The *Ṣaḥîḥ* of al-Bukhârî contains 7,397, or, according to other authorities, 7,295 traditions. These were selected by the author from the 600,000 *ḥadîth* current in his day and the 200,000 it is asserted that he memorized. A remarkable feature of his *Ṣaḥîḥ* is the chapter heading or *tardjama* which is often tendentious and sometimes misleading; e. g. when he prefaces a tradition which professes to record the equal efficacy of a pilgrimage to the mosques of Mecca, Medina and Jerusalem with the words "Of the superiority of prayer in the mosques of Mecca and Medina". (*Bâb Faḍl al-Ṣalât*, ed. Krehl, i. 299).

The contents of Muslim's *Ṣaḥîḥ* are practically the same as al-Bukhârî's except that the *ismûds* differ considerably; and instead of the chapter headings so characteristic of al-Bukhârî, the author gives us a valuable preface in which he discusses the conditions which a tradition must fulfil before it can be regarded as authentic.

Both works (al-Bukhârî's more systematically) are planned to provide, where possible, apostolic *ḥadîth* on which to ground the existing laws and regulations of Islâm. So great waxed the reputation of al-Bukhârî's *Ṣaḥîḥ* that it was regarded as a charm against shipwreck and other calamities and the author's tomb became the resort of believers in distress.

(ALFRED GUILLAUME)

SÂHİL is a reversed word, of the measure *fâ'il* instead of the measure *maf'ûl*, and its original meaning is "abraded (by the sea)". Hence, the shore of the sea or of a great river, a sea-shore, sea-coast, or sea-board; also a tract of cultivated land, with towns or villages, adjacent to a sea or great river, and the side of a valley.

SÂHIR, DJELÂL, a notable modern Ottoman poet and author. Born in 1883 in Constantinople, the son of Ismâ'il Hakkî Pasha who died in Yemen, he early showed literary inclinations and a talent for declamation. Through his writings he

was very soon able to procure for himself a prominent position among Turkish men of letters. He acted as a teacher of French and of belles-lettres and was for a time employed in the Foreign Office. Later he acted chiefly as editor of various periodicals, e. g. the literary part of the *Therwet-i fûnûn*, the ladies' newspaper *Demet* (the Nosegay), founded by him in 1909 but which expired after 7 numbers, the *Fedjir-i âti*, the *Türk sözü*, the *Müşavver Muhîr*, the monthly *Bilgi* (knowledge), also founded by him (1913) — he was president of the *Türk Bilgi Dirneyi* —, the *İktisâdiyet Medîmûsasy* (journal of national economy) (1916), etc. His undeniable flair for practical business is in remarkable contrast to his sensitive, elegiac, very tender style of poetry. He takes first place among the younger poets as regards perfection of language and depth of feeling. The euphony of his verse is fascinating. As a prose writer a simple and brilliant diction best fits him.

With a sure instinct he at once attached himself to the modern school of the *Therwet-i fûnûn* (*Tewfîk Fikret* — *Khâlid Ziyâ*). He actively championed the simplification of the language. As regards prosody, however, he adhered strictly to the old classical form (*'arûḡ*). That for a period he also wrote in the national metre which counts the syllables (*parmak hisâbî*), obeying the national tendency, was only an interlude. His early period of extravagant and fantastic descriptions of nature was followed by a transition to psycho-analysis. His true sphere, in which he is considered a master, is woman and love, which he sings in an inexhaustible variety of ways. He celebrates them in inspired, indeed feverishly tender poems. For him "the poem is a woman and woman a poem". This praise of woman is done in a perfectly pure, morally noble and ideal way. Only reluctantly does he turn to other themes, although here also he has produced many fine poems. A certain tendency to the morbid, to weltschmerz, foreboding of death and longing for death is strongly marked in him. It is no wonder that many, while fully recognising the merits of his charming personality, cannot regard him as a poet such as New-Turkey needs in her period of transition.

With the constitution a somewhat more vigorous national tone entered his work. Since then he has been above all a champion of women's rights, for which he fights with tongue and pen. He was president of the *Fedjir-i âti* (the coming dawn), Sturm und Drang club, which, comprising about 20 men of letters of the *therwet-i fûnûn* circle, endeavoured to control the direction of development of Turkish literature but collapsed owing to internal dissensions after only seven months. Besides numerous poems and articles in the most varied papers and periodicals he has published the following books: a collection of poems entitled *Beyâd Kögeler* ("White Shadows") (1325) and the collections of mingled prose and poetry entitled *Buḡrân* ("Crisis") (1325) and *Siyâh* ("black") (1328), all in the series, so important for modern literature, called *Edebiyât-i dîjede Kütüb-khânesi* (Nos. 13, 19 and 27); and a work entitled *Simûn*. His *İstambul itûn meb'ûth nâmâsederimiz*, published anonymously in 1335, contains political and satirical verses.

(TH. MENZEL)

SAHL B. HÄRÜN, an Arab author and poet who flourished at the end of the second and beginning of the third century A. H. (= beginning of the ninth century A. D.). According to the *Fihrist*, he was of Persian descent and born in Dastmaisān, between Baṣra and Wāsiṭ. Al-Ḥuṣrī makes him come from Maisān, which is quite near it, and gives him also the kunya Abū 'Amr (on the margin of the *ʿIqd*, ii. 190). The name of his grandfather is variously given: Rāmūy, Rāhyūn (both in the *Fihrist*) or Rāhyūnī (al-Djāhīz, *Kitāb al-Bayān*, i. 24; cf. also van Vloten's note to p. 10 of his edition of al-Djāhīz' *Kitāb al-Bukhālāʾ*). Sahl later settled in Baṣra from which he is said to have taken his *nisba* (al-Ḥuṣrī); the *Fihrist*, however, calls him al-Dastmaisānī. Exact details of his life are lacking and we have to rely mainly on anecdotal references. He held high offices in the Chancellery at the Caliph's court. We find him already in the reign of Hārūn al-Rashīd, secretary to the Barmecid Yaḥyā b. Khalīd, whom he is said to have succeeded as *ṣāhib al-dawāwīn* (Ibn Badrūn). Whether he retained this high office under al-Amīn, we do not know, but under al-Ma'mūn he was again in great esteem although the latter had at first little regard for him. By revealing his *Shu'ūbī* predilections, he then gained the Caliph's favour. Along with other men of letters such as Sa'īd b. Hārūn and Salm (or Salmā, cf. *Fihrist*) he was engaged by al-Ma'mūn in his treasury or house of wisdom (*khiṣānat al-ḥikma*, *Dār al-ḥikma*).

Sahl b. Hārūn was a fanatical adherent of the *Shu'ūbīya* [q. v.]; it was no doubt as such that he gained the favour of the Barmecid Yaḥyā, whom he praises in some much quoted lines for his abstemiousness, just as the same sentiments later gained him favour with al-Ma'mūn (cf. the anecdote in al-Ḥuṣrī, *op. cit.*). Together with Ibn al-Mukaffā' and others, Sahl belongs to those authors who continued Persian tradition in Arabic literature. As an author, Sahl was popular in his day for two kinds of literary product. He wrote a *Kitāb Tha'la wa-Afrā* (so in the *Fihrist*; other sources give very varied spellings of these words); in this work he imitates the celebrated book of fables *Kalīla wa-Dimna* [q. v.] by making animals speak and also retaining its divisions into sections. Al-Ḥuṣrī (*op. cit.*) gives a few quotations from this book. Sahl was next famous for his praise of avarice and misers. The

only work of his that has survived is a *Risālat al-Bukhālāʾ*; it is incorporated in the *ʿIqd* (iii. 335 sq.) and forms the beginning of the *Kitāb al-Bukhālāʾ* of Djāhīz. In this *Risāla* Sahl defends avarice or rather wise frugality and economy, the rational form of avarice, as al-Djāhīz says. It is dedicated to Sahl's nephews who had reproached him with some remarks he had made in praise of avarice. It is very probable that these remarks were made in the *Kitāb Tha'la wa-Afrā*, as is suggested by the above mentioned passage in al-Ḥuṣrī. Sahl was (according to al-Djāhīz, *al-Bukhālāʾ*, p. 114) with Abū Raḥmān al-Thawrī the first to devote a special book to avarice; this style of book was later imitated by several authors, e. g. by al-Djāhīz himself. Goldziher sees in his praise of avarice a *Shu'ūbī* attack on the national Arab virtue of generosity. He is also said to have written several *Rasā'il* on this subject and al-Ḥuṣrī thinks he wished to show his literary power thereby. An anecdote reports that the vizier al-Ḥasan b. Sahl [q. v.], who had sent him by Sahl a treatise on avarice dedicated to him, replied that he had taken the lesson given him to heart; and therefore did not send him the expected reward.

The list of Sahl's other works is given in the *Fihrist*; al-Djāhīz (*Kitāb al-Bayān*, i. 24) mentions three: *Kitāb al-Ikhwān* (in the *Fihrist*: *K. Asbāsiyūs fī Ittiḥād al-Ikhwān*), *K. al-Masā'il* (perhaps the same as *K. Diwān al-Rasā'il* of the *Fihrist*) and *K. al-Makḥzūmī wa 'l-Hudḥaliya* (the same in the *Fihrist*). The greater part of his works presumably belonged to the domain of belles-lettres; the *Kitāb Tadbīr al-Mulk wa 'l-Siyāsa* mentioned in the last place in the *Fihrist* shows, however, that Sahl also dealt with political science. He was also esteemed as a poet, as some poems of his quoted by various authors show. According to the *Fihrist*, however, he did not leave more than 50 pages of poetry. Besides his reputation as a wit, he seems to have achieved fame as a connoisseur (anecdote in Ibn Khallikān); indeed, in Arabic literature there is connection between the *Bukhālāʾ* and the *Akala*.

Sahl b. Hārūn found his greatest admirer and successor in his younger contemporary al-Djāhīz [q. v.] who even published several books under his name and in his *K. al-Bukhālāʾ* followed him in taking avarice as his subject. He praises Sahl as a brilliant representative of all branches of literature (*K. al-Bayān*, *loc. cit.*); whether he was personally acquainted with him is a doubtful question. Sahl's name later became widely known through the *1001 Nights*.

SAHL AL-TUSTARĪ, ABŪ MUḤAMMAD SAHL B. 'ABDALLĀH B. YŪNUS, a Sunnī theologian and mystic, whose language was Arabic, born at Tustar (al-Ahwāz) in 203 (818) and died in exile at Baṣra in 283 (896).

A pupil, through his master Ibn Sawwār, of strict Sunnis like Ṭhawrī and Abū 'Amr b. al-'Alā', Sahl was above all an ascetic of a very strict moral discipline. He was also a theologian with a vast store of intellectual knowledge.

Of his life, apparently quiet and solitary, only one detail is known: his exile to Baṣra at the time of the revolt of the Zindj (about 261=874) when the 'ulamā' of al-Ahwāz condemned his doctrinal treatise on the obligatory character of contrition (*tawba fard*).

Sahl wrote nothing, but his "thousand sayings", collected and edited by his pupil, Muḥammad Ibn Sālim (d. 297/909), presented sufficient dogmatic coherence to give rise to a theological school, the Sālīmiya [q. v.]. It is from Sahl that this school derives its characteristics: experimental introspection practicing the rites of worship and a technical semi-gnostic vocabulary tending to monism.

Sahl's argumentation is purely dialectic (*istidlāl*; *aṣl*, *far'*) like that of the *mutakallimūn*; he does not yet argue in syllogisms in the Greek fashion as his old pupil Ḥallādj [q. v.] was to do after leaving him. In psycho-physics he teaches that man is composed of four elements (*ḥayāt, rūḥ, nūr, ʿim*), that the *rūḥ* is superior to the *nafs* (against the view of the Hellenisers) and that it survives after death (against the view of Mubarrad).

In Qur'anic exegesis each verse has four meanings, literal (*ẓāhir*), allegorical (*bāʿin*), moral (*ḥadd*) and anagogical (*muṭtala*); he admits the Imāmī theory of *al-jafr*. The examples of the prophets should be meditated upon in order that we may gradually attain their state of soul.

For Sahl, as for Ibn Karrām and al-Ash'arī, the "Islamic community" comprises all believers, provided they turn towards the *qibla* (the Sunnī view; opposed to that of the Mu'tazilis and Imāmīs). The word "faith" (*imān*) signifies at once acquiescence with the lips (*ḥawl*), conformity of conduct (*'amal*), identity of intention (*niya*) and inner enjoyment of the real (*yaqīn*).

The true worshipper of God ought first to obey the state and strictly observe the rites: "to love is to extend obedience" (al-Tustarī, also, said "*perinde ac cadaver*"). He is bound to produce actions, in imitation of the Prophet (semi-Mu'tazilī notion of *iktisāb*, opposed to the quietist *tawakkul* of Shāḥik and Ibn Karrām), but he ought continually to turn towards God (*Allāh qiblat al-niya*) with incessant contrition (*tawba fard fi kull waqt*). The analysis that Sahl makes of the stages of the voluntary act, derived from that of al-Muḥāsibī and adopted by al-Ghazālī, remains classic. In the supreme degree the ascetic "expatriated" from the world ought to possess the essential reality of God (*yaqīn*) beyond rites of worship (*ghayba bi 'l-madhkur 'an al-dhikr*); an adumbration of the Ḥallādjī doctrine of mystic union.

In eschatology Sahl uses with discretion the semi-gnostic data of Imāmī origin; the "column

of light" (*'amūd al-nūr*, '*adl makhlūq bihi*'), a kind of "mass of primordial adoration", composed of all the souls of saints to be (as opposed to ordinary men, *adamīyūn*), an adumbration of the *nūr muḥammadiya* of the later mystics. The saints alone are predestined to possess *sirr al-rubūbiya* or *sirr al-anā*, "mystery of the sovereign personality", or "divine right to say 'I'". This idea is an adumbration of the *huwa huwa* [q. v.]. From it Sahl deduced the probability of final rehabilitation for Satan; an idea later developed by Ibn al-'Arabi and 'Abd al-Karīm Jīlī [q. v.].

The *dhikr*-formula which Shāikh Sanūsī ascribes to Sahl (*Salsabil*, s. v. *Suhūliya*) is of modern origin.

Na'sānī, Cairo 1326 (artificial compilation); Abu 'l-Kāsim al-Sakallī (who wrote in Kairawān in 390/999 and also left a *ṣifat al-awliyā'*), *Sharḥ wa-bayān limā aṣḥkal min kalām Sahl*, and *Kitāb al-mu'araqa wa'l-radd 'alā ahl al-firāk min kalām Sahl*, MS. Köpr. 727, Stambul; al-Hudjwiri, *Kashf al-mahjūb*, transl. Nicholson, London 1911, Index, s. v.; R. Hartmann, *al-Kuschairis Darstellung des Šifitums*, Berlin 1914, Index, s. v.; L. Massignon, *Essai sur les origines de la mystique musulmane*, Paris 1922, p. 264—70; do., *La passion d'al-Hallaj*, Paris 1922, Index, s. v.

(L. MASSIGNON)

AL-SAHM, the arrow. *a.* Geometrical term. If one erects a perpendicular *cb* in the middle of a chord of an arc, which reaches to the arc, this is called *al-sahm*, the versed sine (*al-djaib al-ma'kūs*) of the arc *ab*; the sine (*al-djaib al-mustawī*), which corresponds to our sine, is *a c*

(see — in addition to many other passages — *Mafātiḥ al-'Ulūm* (ed. v. Vloten), p. 205. The versed sine played a much more impor-

tant part in the older mathematics from the Hindus onwards than it does in modern mathematics (cf. e. g. A. von Braunmühl, *Geschichte der Trigonometrie*). Sine and versed sine are measured in the parts of the radius of the circle, the latter being taken as equal to 60 parts or = 1.

b. Astrological term: Ibn al-Kiftī says that the expression *sahm al-ghaib* (the arrow, the hitting of the secret of the future, see *op. cit.*, p. 327, 338, 410) is astrological. (E. WIEDEMANN)

c. Astronomical term: *Šurat al-Rāmi*, constellation of Sagittarius, and also *al-Kaws*, bow of Sagittarius (cross-bow), a southern constellation of the ecliptic, which, according to Ptolemy and the Arabs, consists of 31 stars mainly of southern latitude, which are almost all of the 3rd to 6th degrees of magnitude. Ptolemy gives only star 24 of Sagittarius (Arabic: *rukbat al-yad al-yusrā*, elbow of the left arm) the magnitude 2—3, while al-Bīrūnī (*al-Kānūn al-Ma'sūdī*, Berl. MS. 275, fol. 205b) gives magnitude 2 for stars 24 and 23 (*ka'b al-yad al-yusrā* = knuckle of the left hand); of Sagittarius in Ulug Beg, however, except star 3 of Sagittarius (*'ala 'l-djanīb al-djanūbi min al-kaws* = the one south of the bow), which, according to him, is 3—2 in magnitude, they are only of the 3rd or lower degrees of magnitude. This 20th Sagittarii is really of 1.9 magnitude (on 'Urkūb al-rāmi see C. A. Nallino, *Opus astronomicum*, ii. 163). The following stars of Sagittarius are also noteworthy: *Naṣl al-sahm*

= point of the arrow, and the so-called "eye of the archer", 'Ain al-rāmi, or, according to al-Bīrūnī (*op. cit.*), al-Saḥā'ib al-muḍa'af 'ala 'l-'ain = the nebulous double-star which is in the eye. Neither in al-Bīrūnī nor in Ulug-Beg is there any mention of ostriches (the ostrich going to drink and coming back from drinking) which are mentioned by L. Ideler (see below).

Among the Greeks Sagittarius was called *δ τοξότης*, among the Romans Sagittarius, Sagittifer and Arcitenens. There is no evidence that the ancient Egyptians or Babylonians knew of al-*Ḳaws* as a bow-constellation. The bow-constellation of the latter was the bow shaped-group of stars $\epsilon\delta\tau$ Canis majoris + $\kappa\lambda$ Puppis.

SAḤNA, a little township in the Persian province of Kermānshāh on the great road between Kangāwar and Bisutūn. The district of Saḥna contains about 28 villages inhabited by settled Turks belonging to the tribe of Khodā-bandelū (of Hamadān). At Saḥna there are a few Ahl-i-Ḥaḳḳ (see the article 'ALĪ ILĀHĪ), who are in touch with their spiritual superiors in Dīnawar (see DĪNAWAR), a frontier district in the north. Saḥna must not be confused with Senne, the capital of the Persian province of Kurdistān, the former residence of the Walis of Ardilān [q. v.]. Quite near Saḥna on the steep bank of the stream are two funerary chambers carved out of the rock and dating in all probability from the Achaemenid period. A Saḥna (with S, not with Ṣ) near An-bār [q. v.] is mentioned by Yāqūt.

SAHNÜN, 'ABD AL-SALĀM B. SA'ĪD B. ḤABĪB AL-TANŪKHĪ, was nicknamed Sahnün after the name of a sprightly bird on account of his quick wit. His father Sa'īd had come as a soldier from Ḥims to Ḳairawān, where Sahnün was born in 160 = 776/77. Apparently his father was not rich but Sahnün enjoyed the teaching of the best scholars of his native city, especially al-Buhlūl b. Rāshid (d. 183; Ibn Farḥūn, p. 104), and when Sahnün went to Tunis to pursue his studies there his teacher wrote a letter of recommendation to 'Alī b. Ziyād (d. 183) in consequence of which 'Alī, out of respect for al-Buhlūl, used to come to the lodgings of Sahnün to teach him what he had learned from Mālik. In the year 178, according to his son Muḥammad, he went to Egypt to study under the pupils of Mālik b. Anas and met there 'Abd al-Raḥmān b. al-Ḳāsim, Ibn Wahb and Aḡḡhab, who were prominent followers of Mālik. This was the year before the death of

Mālik and Sahnün had brought with him from Ḳairawān the portions of the *Muwatta'* of Mālik which Anas b. al-Furāt had heard under the master. When some questions arising out of the study of the *Muwatta'* were discussed before 'Abd al-Raḥmān b. al-Ḳāsim, Sahnün required further information and he was asked why he did not travel to hear Mālik himself. He replied that his poverty and lack of money alone prevented him. This association with 'Abd al-Raḥmān was of far-reaching consequences for the spread of the Mālikī school of law in the West. Most authorities place the journey of Sahnün to the East in 188, but this is an evident error, as it is also stated that he went there during the life of Mālik, who died in 179 A. H. He later had the gratification of travelling further and performed the pilgrimage in company of 'Abd al-Raḥmān, Aḡḡhab and Ibn Wahb riding on the camel behind the latter. Later he visited also al-Medīna and Syria studying under the most prominent followers of Mālik. He returned to Ḳairawān in 191 and made it his calling to spread the doctrines of Mālik. Some of his biographers state that he was the first who introduced these doctrines into the West, but before him 'Alī b. Ziyād, al-Buhlūl and Asad b. al-Furāt had taught the *Muwatta'* or at least parts of it. Sahnün worked out the doctrines in a large work, the *Mudawwana*, the basis of which was the text of Asad b. al-Furāt, which he commented by questioning 'Abd al-Raḥmān b. al-Ḳāsim upon the most trivial points. Here the acumen of Ibn al-Ḳāsim and Sahnün come into prominence. Sahnün asks: "Is this point confirmed by tradition or the teaching of Mālik?" and Ibn al-Ḳāsim answers: "This was the teaching of Mālik" or "this is my own opinion" (*hadḥa ra'yī*). We see that great scope was given in the *Mudawwana* to rational judgment and no attempt is made to introduce genuine or forged traditions to affirm a point of law. In consequence the *Mudawwana* is quite a readable book in clear language and a safe guide to the genius of the compiler and his teacher. When Wahb, a foster-brother of Sahnün, died, Ibn Abi 'l-Djawād, who preceded Sahnün in the office of judge, said the prayers and Sahnün refused to say them after him because Ibn Abi 'l-Djawād was a Mu'tazilī. When the ruler Ziyād Allāh (reigned 201—223) heard of this he commanded the governor of Ḳairawān to give him 500 stripes. His wazīr 'Alī b. Ḥumaid hearing this stopped the messenger bearing the order and went to the amīr to get the sentence revoked. He pointed out that al-Buhlūl had succumbed to a similar punishment (in 183) inflicted by order of the governor Muḥammad b. Muḳātil. Ziyādāt Allāh then forgave him. During the short usurpation of Aḡḡhab b. al-Aḡḡlab (231—232) he introduced the inquisition about the creation of the *Ḳur'ān* and Sahnün fled from Ḳairawān to the hermitage of an ascetic named 'Abd al-Raḥīm at Ḳaṣr Ziyād. Aḡḡhab sent a courtier named Ibn Sulṭān to arrest Sahnün, because he knew that the latter hated Sahnün, like most courtiers, on account of his severe criticism concerning the licentious life at Court. The malevolence of Aḡḡhab, however, made Ibn Sulṭān to lean towards Sahnün. He was apprehended and led captive to Ḳairawān, but when they were about a mile from the city they received news that Muḥammad b. al-Aḡḡlab had regained his

power and that Aḥmad had been killed. This caused Sahnūn to be liberated. One of the first acts of Muḥammad b. al-Aghlab was to depose the Qaḍī 'Abd Allāh Ibn Abī 'l-Djawād. This act met with the approval of Sahnūn, who exclaimed in the presence of both: "May God reward the amir for freeing the people of their oppressor". Muḥammad now, in 233 A. H., offered the office of judge to Sahnūn who for a whole year, refused to accept it but finally accepted it in Ramaḍān 234. He said on that occasion to his daughter Khadija: "To-day thy father has been stabbed without a knife". Others had proposed Sulaimān b. 'Imrān for the post, but he refused, saying that while Sahnūn lived no one else was competent to fill the office. Sahnūn accepted no presents or salary from the amir, but defrayed his expenses and those of his officials from the poll-tax imposed upon non-Muslims. To perform his duties as judge undisturbed he had a room built adjoining the mosque and admitted only the litigants and their witnesses. One of his first acts was also to exclude all heretical sects from the mosque, as there were many Šufriis, Ibāḍiis and Mu'taziliis at Ẕairawān; he was also the first to appoint a regular Imām for the mosque and the first who placed pledged property with trustworthy persons in the town, while up to his time pledges had been kept in the house of the judge. Sahnūn as a judge treated all parties with the utmost courtesy and did his utmost to appease any fears of litigants and witnesses by telling them to say frankly what they knew. In answering legal questions he was very careful, as he believed that hasty replies led to more trouble than anything else. Biographers of later times know of many *karāmāt* (blessings accruing through his influence), which proves the veneration in which he was held. He died on Sunday the 6th or 7th of Rāḍjab, 240 A. H. and his death in spite of his great age caused general consternation in Ẕairawān. Brockelmann in his History of Arabic Literature says that it was due to Asad b. al-Furāt and Ibn al-Kāsim that the doctrine of Mālik spread in the West, but, as already mentioned, the merit is principally due to the work of Sahnūn in arranging and publishing the *Mudawwana*, which, though based upon the *Muwatta'* of Mālik, is a much more comprehensive work. Manuscripts are comparatively scarce, but the work has been printed in two editions in Cairo, one in 4 volumes 4^{to} printed 1324/5 and the other in 16 parts dated 1905/6 in 8^{vo}. There exist in private hands seven parts written on parchment in Ẕairawān about the year 400, which I have been able to consult and which, I hope, will find their way into a public library.

The work of Sahnūn being too large for quick reference was abbreviated by Abū Muḥammad 'Abd Allāh b. Abī Zaid (died 386 A. H.), whose work has been printed several times. I have also seen an early manuscript written before 400 A. H., in private ownership, entitled *Mukhtaṣar al-Mudawwana*. This work contains also a few additions by Ibn Abī Zaid. Another abbreviation is by Abū Sa'īd Khālaf b. al-Kāsim al-Azdī al-Barādhī, who was one of the principal pupils of Ibn Abī Zaid. He re-arranged the abbreviation in the order of the *Mudawwana* and omitted the additions of Ibn Abī Zaid. This work has found many commentators (Ibn Farḥūn, ed. Fās, p. 115). Among the many commentaries written upon the

Mudawwana is one by Sahnūn's son Muḥammad, 2) by Abū 'l-Kāsim 'Abd al-Khalīk al-Suyūrī, who died in Ẕairawān in 460. 3) By Abū Ishāq 'Abd al-Rahmān b. Abī 'Imrān al-Fāsi, who died in 443. 4) Abū 'l-Ḥasan 'Alī b. Muḥammad al-Raba'ī, who died in Sfāx in 478. 5) Abū Muḥammad 'Abd al-Ḥamid Ibn al-Šā'igh. 6) Abū 'l-Ḥasan 'Alī b. Muḥammad al-Zarwīlī al-Šughair, who died in 719. The latter's commentary consists of 12 volumes. Abū 'l-Walid Muḥammad b. Aḥmad b. Ruṣḥd wrote an exposition of difficult passages of the *Mudawwana* entitled *al-Muḥaddamāt al-mumahhidāt*, which has been printed in Cairo (1325) in two vols. 4^{to}.

SAḤŪL, a village in South Arabia, in Bilād al-Kalā' in the Yemen, half a day's journey from Ẕafār. Saḥūl, which was called *Miṣr al-Yemen* on account of its wealth in corn, was celebrated for the Saḥūlī cloaks (*saḥūliya*) made there of white cotton.

ŠAHYŪN. [See ŠIHYAWN].

ŠĀ'IB, MİRZĀ MUḤAMMAD 'ALĪ, whose *takhalluṣ* was ŠĀ'IB, a Persian poet, born about 1012 (1603) near Iṣfahān, hence called Iṣfahānī, though also called Tabrizī, because his father Mīrzā 'Abd al-Rahīm came from Tabriz. This 'Abd al-Rahīm moved to 'Abbāsābād near Iṣfahān, where he was appointed *kadkhudāy* of the merchants of 'Abbāsābād. Ḥakīm Ruknāyī Kāshī and Ḥakīm Shifā'ī Iṣfahānī are mentioned as Šā'ib's masters in poetry. He spent a considerable time in India, where the governor of Kābul, Ẕafār Khān, became his patron and obtained his introduction to the court of Shāh Djahān. He afterwards followed Ẕafār Khān to Kāshmir, whence he ultimately returned home to Persia. Shāh 'Abbās II gave him the title *Maliku 'l-Shu'arā'*. He died at Iṣfahān in 1080 (1677) but other dates are also given (see *Catalogue Bankipore*, iii. 148).

Šā'ib was one of the most prolific Persian poets of the later period; Oriental critics place him very high; according to them, he was the creator of a new style. His works are, in addition to a romantic poem, *Mahmūd u Āyaz* (Éthé in the *Grundr. der iran. Phil.*, ii. 250), *kaṣida's*, *ghazals* (in Persian and in Turki), *maṭn awī's* and shorter

poems. On account of the great bulk of his *Diwān* anthologies from it have been compiled: *Wādību 'l-Hifz-i Mīrsā Şa'ib* of Darwish 'Amīlā al-Balkhī; *Mīr'ātu 'l-Djāmāl*; one author makes the remarkable assertion that these anthologies were compiled by the poet himself (*Cat. Bankipore*, iii. 149). The *Diwān* was published in Lucknow in 1292 A. H.

(V. F. BÜCHNER)

SA'ID B. AL-ĀŞ B. SA'ID B. AL-ĀŞ B. UMAIYA B. 'ABD ŞHAMS B. 'ABD MANĀF B. KUŞAIY, governor of Kūfa and Medīna. At the death of Muḥammad, Sa'īd was about nine years old; his father had fallen among the unbelievers at Badr. Sa'īd was a member of one of the most prominent families of the *Kuraish* and was especially noted for his liberality and eloquence. He was held in high respect by 'Othmān and when the latter had decided to establish a definite text for the *Korān*, Sa'īd was nominated to the committee appointed for the purpose. In the year 29 (649/650) or 30 (650/651) 'Othmān appointed the young and inexperienced Sa'īd to be governor of Kūfa in place of al-Walīd b. 'Ukba who had made himself impossible. During his governorship he undertook expeditions against *Tabaristān* and *Djurdjān* and suppressed unrest there but aroused unpopularity among the people of Kūfa by his aggressive demeanour. The Kūfans complained, but without success, to the Caliph, but when Sa'īd's attitude continued to give cause for discontent ten men of Kūfa, among them the respected and influential *Malik al-Ashtar*, appeared before 'Othmān and demanded the dismissal of Sa'īd, who was with the Caliph at the time. 'Othmān declined to pay heed to the complaint and ordered Sa'īd to return to his post at once. But al-Ashtar was not satisfied with this; he returned without delay to Kūfa and stirred up the easily roused inhabitants, and when Sa'īd was on his way back to Kūfa, al-Ashtar's emissaries met him with a strong force and compelled him to return to Medīna at once. Al-Ashtar then went into the mosque in Kūfa and proclaimed *Abū Mūsā al-Ash'arī* [q. v.] governor on his own initiative. After those present had taken the oath of fealty to the Caliph, al-Ash'arī agreed to be chosen as governor and 'Othmān confirmed the appointment. Sa'īd had remained in Medīna and when the rebels attacked the Caliph in his house Sa'īd fought for him until he was himself severely wounded. When *Talḥa*, al-Zubair and 'Ā'isha left Mecca after the assassination of 'Othmān and went to Baṣra to raise the troops there for their cause Sa'īd at first went with them;

but when he reached Marr al-Zahrān or, according to another authority, *Dhāt 'Irq*, he declined to accompany the others any farther, because he did not believe in the honourable intentions of the two leaders of the enterprise, *Talḥa* and al-Zubair, and endeavoured to dissuade the others from the project. Marwān b. al-Hakam contradicted his assertions, but al-Mughira b. *Shu'ba* joined Sa'īd, whereupon these two with a few others separated from the other members of the party. Sa'īd then settled in Mecca and did not take part in the battle of the Camel nor in the battle of *Ṣiffin*. During the reign of Mu'āwīya he was governor of Medīna alternately with Marwān b. al-Hakam. Marwān filled the office first; then came Sa'īd's turn and when he was dismissed the former received the post again. But after a time he was again dismissed and Sa'īd once more appointed his successor. Sa'īd died on his estate in al-'Aḳīk, according to the most usual statement in 59 (678/679), according to others, as early as 53 (672/673) or 57 (676/677) or 58 (677/678).

SA'ID B. AWS. [See *ABU ZAID*].

SA'ID B. MAS'ADA. [See *AL-AKHFAH*].

SA'ID B. ZAID B. 'AMR B. NUFAIL B. KA'B B. LU'AIY, one of Muḥammad's earliest companions. His mother was *Fāṭima bint Ba'dja* b. Umaiya of the clan of *Khuzā'a*. His *kunya* is *Abu 'l-A'war* or *Abū Thawr*. He was one of 'Umar b. al-Khaṭṭāb's cousins and at the same time his brother-in-law through his wife, who was 'Umar's sister, as well as through 'Umar's wife who was his sister. He assumed *Islām* before Muḥammad entered the house of *Zaid b. al-Aḳkam* and 'Umar's conversion is said to have taken place under the influence of Sa'īd and his family.

His father, *Zaid b. 'Amr*, was one of the *ḥanīf's*; he was much interested in monotheism, refused to worship idols, warned his contemporaries against idolatry and confessed the "religion of Abraham" (cf. *ZAID B. 'AMR*). It is said that he died in the year when the *Ka'ba* was rebuilt, an event in which also Muḥammad is said to have taken part.

Sa'īd migrated with the Muslims to Medīna, where Muḥammad allied him with *Rāfi' b. Malik al-Zurāqī*, or, according to others, with *Ubayy b. Ka'b*.

When the rumour of the return of the *kuraishite* caravan from Syria reached Medīna, Sa'īd, together with *Talḥa b. 'Ubaid Allāh*, was sent on scouting service. They met the caravan at al-*Hawrā'* and hurried back to Medīna to report the news. But Muḥammad was already on the way to Badr and the battle took place without their taking part in it. They nevertheless obtained their portion from the booty. Sa'īd was present at all the other *ma-shāhid* and distinguished himself in the battle of *Adjnādain* (13 A. H.), where he was at the head of the cavalry, in the battle of *Fijl* (13 A. H.), where the infantry was under his command, and in the battle of the *Yarmūk* (15 A. H.).

At 'Umar's death Sa'id belonged to those who promoted 'Uthmān's election as Caliph. Yet he was not content with his government, though he did not join the 'Alid party.

He died in 50 or 51 A. H. in 'Aḳīḳ near Medina, where he was buried. It is said that he reached the age of over 70 years. According to others, he died as governor of al-Kūfa under Mu'āwīya.

Sa'id never played the first role in the Muslim community. He was honoured because of his early conversion and belongs to the ten who were promised Paradise (*'aṣḥāra mubārakihara*). Muḥammad is sometimes (Aḥmad b. Ḥanbal, *Musnad*, i. 187 sq.) represented as ascending mount Hira' or Uhud with some of his companions. As the mountain begins to tremble, he says: "Stand fast, oh mountain, for on thee walk a prophet, a *siddīq* and witnesses." Then he proceeds to testify his companions, among whom Sa'id mentions himself in a veiled manner in some traditions. Some of the forms of this report remind us of Jesus' transfiguration on the mountain (Matthew 17).

Sa'id belonged to those whose curse (*du'ā'*) is efficacious. This is illustrated in the story of a woman who, being cursed by him, became blind and was drowned in a well into which she happened to fall because of her blindness.

Sa'id's *musnad*, i. e. the traditions handed down on his authority, is to be found in Aḥmad b. Ḥanbal's *Musnad*, i. 187—190.

(A. J. WENSINCK)

SA'ID PASHA, called KÜÇÜK (the "little"), not so much to indicate that he was particularly small in body as simply to distinguish him from numerous other Sa'id's, was with the reformer and organiser Aḥmed Midḥat Pasha the greatest statesman in Turkey of the last half century. He was born in 1254 (1838) in Erzerüm and died in Constantinople on March 1, 1914; he was the son of 'Alī Nāmıḳ Efendi, at one time "controller of expenditure on the eastern frontier" and trusted adviser to the governor of the day, who had been for a period consul and later Turkish *chargé d'affaires* in Teherān (d. Oct. 4, 1853); Sa'id came from a pure Turkish family of Angora, the Seb'a-zāde. He is buried in the cemetery in Eiyüb near the Ḥaǧret-i Khālid mosque. His twin brother Reḥid died prematurely and his younger brother Mehmed Ferid at his death in 1882 was *Tahrir-i Emlāk Mūdiri*.

Sa'id received his early education in Erzerüm. When 16 he entered the civil service there, in which he was destined to have a brilliant career and pass through all stages up to the very highest office. Two years later he was moved to a post in the military administration of Anatolia, then came in the course of his duties to Constantinople, where his versatility procured him a post in the office of the Supreme Council. He accompanied the Inspector-General to Salonica, Monastir, Janina and Trikkala. He next became general-secretary for Janina, and then for Salonica, after which he filled successively the offices of Director of the Imperial Printing Press in Constantinople, Manager of the official newspaper, *Takvīm-i Waḳāyif*, General-Secretary to the Council of State, to the Ministry of Commerce, to the Grand-Vizierate, to the

Ministry of Education and in 1875 Councillor of the Ministry of Commerce and Agriculture and Member of the Commission on reforms. From Sept. 1, 1876, to Jan. 10, 1878, he occupied the important and influential position of trust of First Secretary to 'Abd al-Ḥamid.

After acting for a short time as Wall of Angora and of Brussa (*Khındāwendigār*) he became Grand Vizier in 1879, an office which he filled nine times in all, a record attained by no other Grand Vizier, although, as regards length of tenure of the office, many others have considerably exceeded his total period of 7 lunar years and 15 days. He was also at different times Minister of the Civil List, of the Interior, of Foreign Affairs and of Justice.

The list which he himself gives of his first seven periods of office as Grand Vizier, in his *Ṣadr-i ṣabāḥ Sa'id Paṣhanın ghaṣetalarile neṣir ettiyi mektublerin färeleri-dir: sene 1324 (1908)*, a collection of his articles published in the *Ṭanin* and in the *Ṣabāḥ*, contains a number of discrepancies in the dates which we shall endeavour to remedy here. The dates are not without importance for the history of the Young Turk movement.

Sa'id Pasha was Grand Vizier (after the introduction of the so-called Constitution of Midḥat the title "First Minister" was used until Sa'id in 1882 again introduced the traditional title Grand Vizier, *Ṣadr a'zam* [q. v.]) as follows:

- 1) October, 1879—June, 1880;
- 2) September, 1880—May, 1882;
- 3) June, 1882—November, 1882;
- 4) December 2, 1882—September 25, 1885;
- 5) June 9, 1895—October 3, 1895;
- 6) November 18, 1901—January 15, 1903;
- 7) July 22, 1908—August 6, 1908: restoration of the Constitution;
- 8) October 4, 1911—December 30, 1911;
- 9) December 31, 1911—July 17, 1912.

Sa'id was a trustworthy guide to his country at a very difficult time, the period of continual endeavour to link up with modern European development, although his abilities as statesman and organiser could not obtain full scope in view of the special conditions of the times. He was a statesman of the old school, conservative, but quite friendly to reforms. To 'Abd al-Ḥamid he was a faithful and indispensable councillor and he seems to have brilliantly seconded him in his aim of gathering all power into his own hands and making the Yıldız the political centre of gravity to the exclusion of the Sublime Porte. At all events he is silent in his "Memoirs" regarding his activities as First Secretary to the Sultān, although the Young Turks for a time laid special emphasis on his work during this period. He seems also to have been not unconnected with the notorious document in defence of 'Abd al-Ḥamid's regime by Aḥmed Midḥat Efendi (*Üss-i İnḳılāb* and supplement *Zübde al-Ḥaḳā'iq*, 1877 and 1878). Except for Aḥmed Wefik Pasha, Sa'id was the only real personality among the creatures of the Sultān and he was able to retain the respect and esteem of both friends and opponents.

In a way quite unusual in a Turkish statesman he laid stress on his pure Turkish blood and on a specifically Turkish patriotism. He sought as far as possible to limit the spread of foreign influence in Turkey although he was regarded as Anglophile and progressive. On Dec. 4, 1895 he had to seek refuge in the British Embassy at Constantinople to escape an order from the Sultān for his arrest,

until 'Abd al-Hamid gave a written guarantee of safety. He spent the next six years, however, in his *konak* in Nishantash in a retirement which was practically confinement to the house until he was again summoned to power.

During his "English flight" he drew up his scheme for writing his reminiscences, although he could hardly expect to publish such a work during the regime of 'Abd al-Hamid.

In spite of many attacks by the court camarilla, among whom he had many opponents, and the open enmity of Kamil Pasha, his great antagonist from 1886 to 1913, he had been able to make himself indispensable; in any situation of particular difficulty they always came back to him, who possessed an unusual degree of energy and an unfailing breadth of vision in matters of policy, in spite of his submissive disposition. He never prejudiced himself in the slightest but retired as soon as his own views became too much in contrast to those of the Sultan. As early as 1896 he had had the courage to demand an independent responsible ministry.

At the outbreak of the revolution of 1908 he was entrusted by 'Abd al-Hamid with the restoration of the constitution. But he retired as soon as the Young Turks demanded an entire change of system and complete breach with the past and handed over the Grand Vizierate to Kamil Pasha. But when the Italian campaign in Tripoli had to be settled and the Balkan War, which had taken so unexpectedly a tragic turn, as a result of the destruction of the whole organisation of state and army in Turkey by the doctrinaire Young Turks, seriously threatened the stability of the Empire, it was again Sa'id who was called upon to save what was still left to save. His power of adaptation was so great that he was now regarded as a Young-Turkish statesman.

In the first three sessions of the new parliament he was President of the Senate. In this capacity also he presided over the National Assembly in S. Stefano on April 22, 1909, which declared that the proceedings of the besieging army were in accordance with the wishes of the people, whereupon 'Abd al-Hamid was deposed on April 27, 1909.

When the Young-Turk party came to political power, he became President of the Council of State but later handed over this office to Khalil Bey and retained only the presidency of the Senate, which he had received after the assassination of Mahmud Shefkat Pasha in succession to the Albanian Ferid Pasha on June 11, 1913. He was still President when he died after a month's long illness at the age of 76.

Sa'id is probably the first Turkish statesman who left his memoirs, a work of the first historical importance. It was published in 3 volumes in Constantinople (1328) under the title *Sa'id Pashanin Khafirati*, but this does not seem to be complete. The circumstances of the time prevented these reminiscences being fully utilised; although biassed in many directions, they form documentary material of inestimable value for contemporary history and were published to defend his policy, when he took refuge in publicity. Only Kamil Pasha, whom he exposed more than any other of his opponents (d. Nov. 14, 1913 at Larnaca in Cyprus), at once replied in his pamphlet *Kamil Pashanin A'yan Re'isi Sa'id Pashaya Djewableri*, 2nd ed., Constantinople 1328, and followed this up with his own

memoirs, *Sadr-i sabik Kamil Pashanin Khafirati*, Constantinople 1329; *Ta'rikhi siyasi-i Dewlet-i 'aliye*. Zihni Pasha also replied ("Presentation of the Truth", Constantinople 1327).

(TH. MENZEL)

SA'ID PASHA, Viceroys (Khedive) of Egypt from 1854 to 1863. Muhammad Sa'id, youngest son of Muhammad 'Ali Pasha, was born in 1822. His father had a very high opinion of this, his fourth, son whom he sent when only 19 to Constantinople to conduct negotiations regarding the tribute to be paid by Egypt.

Sa'id, who was francophil, was not on good terms with his nephew and predecessor, 'Abbās I [q.v.]. The latter had done everything possible to induce the Porte to alter the law of succession formulated by the Sultan's firmān in favour of Muhammad 'Ali and to secure the succession in direct line for his own descendants by abolishing the law by which the eldest living descendant of the founder of the dynasty was always called to succeed to the throne. Sa'id would thus have been excluded but 'Abbās died before he could realise his project. By an intrigue, however, the death of 'Abbās was kept secret for a week and it was only then that Sa'id was able to enforce his claim to the throne (July, 1854).

Sa'id was a well intentioned prince and quite popular, although he had not the energy of his father, perhaps on account of his indifferent health. In November, 1856, he created a kind of Council of State, composed of princes of the blood, four generals and four high dignitaries. He relaxed the extreme centralisation of the administration instituted by Muhammad 'Ali and contributed considerably to relieve the economic position of the people by promulgating an agrarian law which granted all his subjects the right henceforth to own landed property and to dispose of it freely (1858). It was he who first attempted to abolish the trade in negro-slaves (visit to Khartūm in 1857). In the reign of Sa'id as in that of his predecessor the policy of expansion southwards was not continued. The Sudan received certain privileges and prince Halim was appointed governor. Sa'id kept up the Egyptian contingent of 18,000 men which 'Abbās had sent to reinforce the Turkish army in the Crimean War and he also allowed a regiment of fallāḥin to take part in an expedition sent by Napoleon III to Mexico. By making it, however,

possible for the fallāḥīn to obtain the rank of officer, he began the gradual diminution of the power of resistance of the Egyptian army.

In his reign the railway between Cairo and Suez was finished and a telegraph concession granted to the Eastern Telegraph Company. The Bank of Egypt was founded in 1854. The most important act of his reign was undoubtedly the concession which he granted to Ferdinand de Lesseps in 1856 to construct the Suez Canal. Although English diplomacy was able for two years to prevent the Sublime Porte from ratifying the concession, it was owing to the perseverance of the Khedive that the work could be begun in 1859, the necessary labour being supplied by levies raised by conscription from the fallāḥīn. The town of Port Said situated at the northern exit of the canal is called after Sa'īd Pāshā.

Finally, it was in the reign of Sa'īd that Egypt's foreign debt originated. The financial embarrassment resulting from the military help given to Turkey and from public works necessitated a loan of over £ 3,000,000 sterling from a London banking-house. This was the first step on the disastrous path later followed by Ismā'īl Pāshā.

In 1860 Sa'īd Pāshā travelled to Europe; during his absence his place was taken by the heir presumptive Ismā'īl Pāshā, his nephew. He died at Alexandria on Jan. 17, 1863, and was buried in that town.

KRAMERS)

AL-ŞA'ID or ŞA'ID MIŞR, the Arabic name for Upper Egypt. The region thus named extends from the south of Cairo to the cataract of Assuan: at the present day the expression has no administrative significance and, indeed, has not had since the time of the Mamlūks. Besides, the political frontier of Egypt now extends to within reach of Wādī Halfā, thus including the whole of Lower Nubia. The expression, however, is still used, for it preserves a very marked geographical distinction, which contrasts the long narrow valley of the Nile above Cairo to the large fan-shaped area of alluvial deposits of Lower Egypt, in Arabic, the low [country] (*asfal al-arḍ*). Indeed, the word Şa'īd has always been limited in application to the cultivated regions bordering on the river, excluding the Faiyūm and the Oases of the Libyan Desert. This strip, about 600 miles long, extremely narrow in places (3 to 6 miles on an average), reduced to the bed of the river only at certain points between Edfū and Assuan, reaches its maximum breadth in the neighbourhood of Banī Su'ēf (15 miles). Upper Egypt is now divided into 8 *mudiriyyas* called, with one exception, after their chief towns: Gizeh (Djize), Banī Su'ēf, Faiyūm, Minya, Asyūt (to which are attached the Oases of Dākhle and Khārgē), Gīrgā (chief town Sōhāg), Kenā and Assuan.

The Arabs after the conquest of Egypt retained

the division into pagarchies, which they called *kūra's*, a transcription of the Greek *χώρα*. Upper Egypt corresponded to the duchies of Arcadia and the Thebaid, a memory of which is still retained in the division of the Şa'īd into *a'lā* (upper) and *adnā* (lower); Yākūt even makes three divisions: *Şa'īd a'lā* from Assuan to Akhmīm, an intermediate region stretching northwards as far as Bahnasā and the *Şa'īd adnā* which stretched to Fustāt. As a matter of fact there were three Byzantine duchies, of which two were in the Thebaid, and the frontier between the latter lay south of Panopolis (Akhmīm).

If we compare the list of the *kūra's* preserved by al-Maḡrīzī with that of the pagarchies given by Hierocles, we find that the alterations are quite insignificant. In course of time certain towns fell into decay and gave place to younger ones; for example Philai which became supplanted by Assuan. An administrative redistribution took place under the Fātimids. They introduced a division into large provinces (*'amal*) which has survived in its main lines to the present day. The nine or ten provinces of the Fātimids, the Aiyūbids and the Mamlūks, corresponded to the eight *mudiriyya's* of to-day. The most notable differences were the following: the provinces of Aṭfīhiya and of Bū-ṣṣiriya combined into one province from the Mamlūk period under the name of Aṭfīhiya have given place to the *mudiriyya* of Banī Su'ēf. Minya has succeeded to Bahnasā, now an insignificant town. The former districts of Ashmūnain and Manfalūt (the latter intermittently) have gone to increase the province of Asyūt. In the south we still find the two mediaeval subdivisions but their capitals have been removed from Akhmīm and Kūš to Gīrgā and Kenā. On account of the frequent Nubian inroads, Assuan down to the end of the Mamlūk period was considered as a limes (*thaghr*) without administrative autonomy, being under the governor of the province of Kūš, whose authority extended eastwards as far as 'Aidhāb. The Oases sometimes formed an independent province and sometimes were administered by officers who held them as *ikhṭā'* (as part salary).

Although we find under the Fātimids the title *wālī 'l-Şa'īd al-a'lā*, we cannot say with certainty that the reference is not to the governor of the province of Kūš, which was in the middle ages the most important in Upper Egypt. It is certain, on the other hand, that under the Mamlūks the various provincial governors were under a governor-general of Upper Egypt called at first *kāshif al-waḍiḥ al-kibī*, then *nā'ib al-waḍiḥ al-kibī* when Barḳūḳ gave this official the rank of *nā'ib al-salṭana*. Al-Kāḷkashandī gives the following account of the administration of Upper Egypt at the beginning of the ixth/xvth century: two governors of different ranks shared the authority there; alongside of the *nā'ib*, who administered the Nile valley, there was a *kāshif*, who governed the Faiyūm and the province of Bahnasā, the latter having at its head a *wālī*. Below the *nā'ib*, who lived at Asyūt, there were three governors of the first class, at Ashmūnain, Kūš and Assuan, and three of the second class, at Gizeh, Aṭfīh and Manfalūt.

Under Turkish administration Upper Egypt comprised 24 *kāshiflik*, a list of which is given us by Vansleben.

The population of Egypt has almost doubled in the last 35 years:

1882	6,818,000 inhabitants
1897	9,734,405 "
1907	11,287,359 "
1917	12,750,918 "

Although none of the great centres of population are in Upper Egypt, the figures for certain towns are quite high and a comparison with the figures for 1897 shows that the towns of the Ša'īd have in general prospered in the last 20 years except in the extreme south: Asyūt 51,431 (compared with 42,000); Madīnat al-Faiyūm 44,000 (31,000); Minya 34,945 (20,400); Banī Su'ef 31,986 (15,000); Kenā 23,357 (27,500); Sōhāg 20,760 (14,000); Gīzeh 18,714 (16,820); Kūs 13,000 (14,200); Assuan 11,293 (13,000). The population was greater in the middle ages as we may deduce from the figures given for the deaths during the drought of 806 (1403); there were 17,000 deaths at Kūs, 11,000 at Asyūt, 15,000 at Hū, now a wretched little hamlet about 20 miles west of Kenā.

The settled population of Upper Egypt is in the main autochthonous, whether converts to Islām or Jacobite Copts. The latter are especially numerous in the Ša'īd, especially between Asyūt and Esne. Al-Kalkashandī and al-Maḥrizī give in detail the list of Arab tribes who were settled in Upper Egypt; the principal were the Balī, Djuhaina, who penetrated right into Central Africa, and especially the Banū Hilāl and Banū Sulaim, whose ultimate emigration into North Africa is celebrated in history. Their old names do not seem to have survived and the descendants of these tribes are now known by other names (*Fāwāiya*, *Ma'za*, *Banū Wāṣil*, *Aṣṭuwānī*). The Banu 'l-Kanz alone, an isolated branch of the Rabī'a, still exist in the Assuan region under the name of Kunūz. There is no longer any trace of the Berber tribes who accompanied the Fātimids into Egypt (Luwāta, Hawwāra). On the other hand, we still find in the southern part of Upper Egypt the nomadic Bedja who have often been identified with the ancient Blimmys. Their principal subdivisions at the present day, the *ʿAbāde* and the *Bishārīn*, lead a nomadic life in the Arabian desert from the latitude of Asyūt to beyond Nubia, leading a miserable existence on the products of their camels and goats.

The Bedja played an important role during the period of Arab domination, for they held the flourishing port of ʿAidhāb where one embarked for Djidda, Yemen and the Indies. This town was linked by caravan routes with Assuan, Zafū and Kūs; this last road Kūs—ʿAidhāb was the most frequented and assumed considerable importance during the Crusades from 460 to 660 (1068—1262), for it was the usual road for pilgrims. This road is now nothing but a memory. This is not the case with the Kenā—al-Ḳoṣair road, which is still in use at the present day: the starting point on the Nile used to be Kūs, which had taken the place of the ancient Coſitos (Ḳeſt). The Bedja country aroused the cupidity of the Egyptian government which under the Mamlūks succeeded in exploiting on its own account the gold mines of al-ʿAllāḳī in Lower Nubia. Farther north in the desert between Keft and Assuan (granite quarries) the Mamlūk sultāns also worked an emerald mine. The valley of the Nile in the strict sense of the word, an alluvial formation, is an excellent soil for the growth of cereals: agricultural

development has been improved in recent years by the construction of the barrages of Assuan, Esne and Asyūt which allow more perfect use to be made of the waters of the Nile. Industry is almost non-existent here and here again we have a contrast with the prosperity in the middle ages. The looms (wool for clothes and carpets, cotton, silk and linen) were then extremely numerous: we may mention those of al-Ashmūnain, Akhmīm, Asyūt and Bahnasā.

Muḥammadan art is poorly represented in Upper Egypt: at Madīnat al-Faiyūm, Asyūt and Gīrgā, however, we find mosques with a certain amount of character. We must also mention the mosques of al-Bāb and Bilāl, south of Assuan, built of unbaked bricks which have a minaret surmounted by a small dome — a fairly frequent type in this region even in the villages (e.g. Shanhūr, south of Kūs). The Fātimid minbars of Kūs and Bahnasā should not be omitted. As to epigraphy, Asyūt, Kūs and Sōhāg have preserved Kūfic inscriptions and we find Mamlūk decrees at Edfū, Minya, Madīnat al-Faiyūm, Asyūt, Sōhāg, Kūs and Kūṣiya. This is not the place to discuss the monuments of ancient Egypt: it is sufficient to say that the Arab authors describe the temples in their fashion and have localised here a series of legends. We may note, however, that they paid no attention to the buildings of Thebes-Carnac and that in compensation we have a fine description of the temple of Akhmīm, destroyed in the xvth century.

Dja'far Aduwī, a writer of the viiith century A.H., composed a dictionary of famous men of Upper Egypt, preceded by a brief geographical summary, the *Ṭalī' al-Ša'īd* (publ. in Cairo 1333 = 1914); its interest is not great. In the domain of folklore, we may note the stories of Ibn al-Hawā at Assuan, of Abu 'l-Ḥadīdjādī at Luḳṣor, of the princess of China at Gīrgā, to which we may add the legend of the serpent of the Djabal Ḥarīdī.

Without going into details, the following is a rapid enumeration of the main historical facts relating to Upper Egypt. The conquest of Egypt by the Arabs became an established fact after the fall of Babylon and Alexandria. Al-Baladhurī mentions treaties made with certain towns of Middle Egypt. The Arabs seem to have taken no notice of the Faiyūm for some time and their advance towards this region must have been impeded by very heavy fighting which gave rise to the historical novel, the *Futūḥ al-Bahnasā*. In 23 (644) there was an unsuccessful invasion of Nubia which was resumed in 27 (648) and concluded in 31 (652) by an advantageous treaty, which ʿUmar ibn ʿAbd al-ʿAzīz renewed in 100 (719). A census of the population was taken in 112 (730); the governor of Egypt, al-Walīd ibn Rifā'a, took charge of this in person and conducted a six months' tour of inspection of Upper Egypt as far as Assuan and we possess a papyrus containing his instructions. During the Umayyad period, the Ša'īd seems to have enjoyed more peace than the Delta which was often agitated by risings; one is noted for 121 (739). It was in Upper Egypt that the Umayyad dynasty collapsed in the person of its last Caliph, Marwān. There was a rising of the Umayyad-pretender Dīhya ibn Muṣ'ab who became master of the whole of the Ša'īd in 167 (784); he was defeated and put to death in 169 (785); Upper Egypt felt the consequences — though less than the

Delta — of the struggle between al-Amīn and al-Ma'mūn. There was a rising of the Bedja in 241 (855) and a successful expedition against them under Muhammad al-Kumml. Some years later 'Abdallāh al-'Umarī invaded the gold-mining area and ultimately declared himself independent there; he was put to death but the contingents of the Rabī'a which he had taken there remained amalgamated with the Bedja. In 256 (870) there was an unsuccessful rising led by Ibn al-Sūfi at Esne and Akhmīm. In 308 (920) a Fātimid invasion; fighting at al-Ashmūnain and Bahnasā. The king of Nubia invaded the Oases in 339 (950), took Assuan in 345 (956) and in a third expedition in 353 (964) advanced as far as Akhmīm. Towards the end of the ivth century, Abū Rakwa rose against the Caliph al-Hākim. Order was disturbed after the great dearth in the reign of al-Mustanşir: Badr al-Djamālī set out in person for Upper Egypt to re-establish peace (inscriptions at Asyūt and Esne). Towards the end of the Fātimid period, several statesmen, like Ṭalālī ibn Ruzzik and Shāwar, served their apprenticeship to political life in Upper Egypt. It was against Shāwar, who was assisted by a body of Franks, that Shirkūh fought the battle of al-Bābain near al-Ashmūnain. This region continued to be much disturbed by Fātimid propaganda, which was kept up in the extreme south by the Banu 'l-Kanz. Saladin subjected them in 568 (1173) sending his brother Turān Shāh against them, who advanced as far as Ibrim. Other risings were crushed with great severity in 570 (1174) and in 572 (1176). There was a very serious rebellion in the whole of the land in 651 (1253), led by an important individual, the Sharif Ḥiṣn al-Dīn Tha'lab, which was an episode in the struggle between the Arab tribes and the Mamlūk government. In 671 (1272) and in 674 (1275) Baibars intervened in the domestic affairs of Nubia and sent an army which reached Dongola, which was again occupied by a second expedition in 686 (1287). Upper Egypt in 701 (1302) suffered from the brigandage of the Arab tribes, which necessitated the despatch of a powerful force against them. They were suppressed in a most bloody fashion. During the anti-Christian movement of 721 (1321) churches were destroyed in the provinces of Atfīḥ and Bahnasā, at Minya, Asyūt, Kūṣ and Assuan. Violent disturbances are again mentioned in 815 (1412), mainly at Assuan, and again in 825 (1422). The reign of Kā'it-Bey was filled with risings by the Hawwāra tribe which it took three years to subdue (881—883 = 1476—1478). As to the events after the Turkish conquest and especially the rising of 'Alī Bey and the French occupation, information will be found in the European travellers and historians.

(G. Wiet)

SAĪDA, a town in Algeria (department of Oran), 110 miles from Oran and 60 miles S. S. E. of Mascara, 2900 feet above sea-level, on the Wādī Saïda, a branch of the Habra, in a fertile and well-watered country, suitable for the cultivation of cereals and vines. Population: 12,232 inhabitants of whom 5,410 are Europeans. Saïda is the chief town of a mixed commune of 42,469 inhabitants of whom 39,500 are natives.

Owing to its position on the very edge of the high plateaux, Saïda has always been of considerable military importance. There was a Roman station here. 'Abd al-Qādir built a fortress here in order to control the nomad tribes of the district, but destroyed it on the approach of the French in 1841. In 1844 General Lamoricière, struck by the advantages of this position, built a stronghold 1¼ miles north of the Saïda of 'Abd al-Qādir, around which the modern town has grown up. (G. YVER)

SAĪDĀ. [See SIDON].

SAIF B. DHĪ YAZAN, of the Himyarite royal line, played a part in Arabian history in the expulsion of the Abyssinians from South Arabia, where they had held sway since the time of Dhū Nuwās. Native tradition records that he first sought assistance against the foreign yoke of the Abyssinians at the Byzantine court and later at the court of the Persian Khusrāw. The latter, however, would not risk anything in an enterprise with such hopeless prospects; so he only gave Saif a number of criminals out of the jails under a leader named Wahriz to assist him. The Abyssinians under Masrūk were defeated and driven out of the country by them and Saif's countrymen who rose against the foreign yoke, whereupon Saif was installed by the Persians as king. From this tradition and several Arabic poems relating to the story there results as a certain historical fact that Saif b. Dhī Yazan conquered the Abyssinians with the help of the Persian king Khusrāw Anūshirwān, broke their rule over Yemen and held sway over the land of his ancestors under a Persian protectorate. His victory over the Abyssinians may be dated about 570 A. D. The victory over the Abyssinians is wrongly ascribed not to Saif himself but to his son Ma'dikarib.

That South Arabian history and with it the story of Saif b. Dhī Yazan was studied and transmitted among the Muslims from the beginning of the Islāmic period onwards we know from several sources. It is, therefore, no wonder that Saif b. Dhī Yazan found a place in the Arab saga on account of his successful struggle with the Abyssinians, who in the period of Islām particularly became dangerous and lasting enemies to the new international movement starting in Arabia. In the romance which bears his name, the *Sīrat Saif ibn Dhī Yazan*, the war between the Muslim Arabs and the pagan negroes and Abyssinians occupies considerable space. The king of the latter, whose conflict with Saif b. Dhī Yazan runs almost throughout the book and forms a considerable part of the subject matter, gives us a clue to the date of origin of the *Sīra*. He is called Saif Ar'ad and corresponds to the Ethiopian king Saifa Ar'ad whom we know from history and who reigned in

Abyssinia from 1344—72. From this reference we may deduce with considerable certainty that the existing versions of the *Sira* date from about the xvth century, in any case not earlier than the end of the xivth century. The rest of the positive and negative data agree with this, while telling practically nothing separately and having only some value when taken cumulatively; among them are several clearly discernible borrowings from the cycle of the 1001 Nights. It does not, of course, follow that the whole romance arose at this time; isolated parts may very well have been composed and put into circulation earlier. The place of origin of the *Sira* is Egypt, to be more definite Cairo. This is clear from the many personal and place-names which all point to localisation mainly in Egypt and in part even presuppose an accurate knowledge of its topography. This statement is not invalidated by the occurrence of a few place-names from Damascus and its neighbourhood. As regards contents also, Egypt is the most satisfactory place of origin of the romance; the strong undercurrent of superstition and belief in the marvellous is perhaps also an indication of an African birthplace for the romance.

The contents of the book are in keeping with the fact that it was composed and related, if not by the people, at least for them. It is therefore easily explained why we find alongside the good Muslim general tendency so many ideas which are rather to be described as pagan, and which can only with difficulty and superficially be brought into harmony with Muslim principles. The new religion of Islām did not by any means penetrate so quickly or thoroughly among the masses as among the educated classes, whose intellectual sustenance was for the most part confined to a science and literature permeated to a great degree by Islām; among the masses the old beliefs and customs did not have any counterpoise great enough to have driven them out. As has already been mentioned, in the *Sirat Saif* a great part is played by the war of the Muslim Arabs against the pagan Abyssinians and negroes. As it is assumed to be known by every one that the hero of the struggle, Saif b. Dhi Yazan, lived in the pre-Islamic period, he has first of all to be transformed into a warlike predecessor of Muḥammad and a professing Muslim. The generally accepted possibility of obtaining a glimpse into the future by magic oracles, dreams etc., and by the guidance of pious *shaiḥs* disposes of the difficulty. Saif, like his father Dhi Yazan before him, becomes convinced of the truth of Islām before Muḥammad's coming and is won over to the new religion. In his struggle mainly directed against the Abyssinians and negroes the antagonism of race now gives place to that of religion. On his many wanderings and campaigns in the lands of men and djinns he spreads by force the religion of Islām, often with the support of helpful spirits. As Muḥammad has not yet appeared, in place of his name in the profession of faith we find that of Ibrāhīm, the *Khatil-Allāh*. The campaigns thus are no longer waged for the satisfaction of the ambitions of Saif and the Arabs but with the object of gaining recognition for the unity of Allāh and his "friendship" with Ibrāhīm. As soon as the quondam enemies satisfy this demand by repeating the profession of faith, they are accepted into the Muslim community. The superiority of the Semitic over the Hamitic

race is, of course, not thereby done away with. It is the South Arabians in particular and in them the alleged ancestors of the later Muslims of Egypt, who have the honourable task of preparing the way for the last and greatest prophet, while the Abyssinians and negroes either remain in their ancient paganism and thus show themselves unworthy of Islām or with their adoption of Islām play a passive rather than an active role in the religious movement. It is further remarkable that in the whole romance there is not the slightest trace of the Abyssinians professing Christianity. While the worship of Saturn is ascribed to them, the other non-Muslim religions are traced back to the worship of fire, of idols, rulers claiming divine worship, and of different animals (a ram, an ostrich, cows, bugs, hens). Many of these notions may have originated in the unlimited fancy of the narrators; but in part at least vague memories of the old Egyptian mythology may have crept in. The mention of fire-worship points to the old Persian religion. A knowledge of Christianity gleams through only in the mention of crosses, sometimes of stone, which are worshipped and at which oaths are taken. The motives of the *Sira* are not exhausted with the stories of the spread of Islām. The common people are also interested in profane history and in stories of events with as much action as possible. Thus in the romance we find stories of the origins of famous towns, places and buildings, of the bringing of the river Nile into Egypt etc. We further find an account of the many travels and adventures which Saif b. Dhi Yazan and his sons, paladins and spirits have to go through, of the love affairs of Saif and others which continually appear in new guise, of the splendid buildings, regions and men which are described to the hearers, and of much else. The imagination that is called upon to arouse the astonishment of the public becomes unbounded towards the end of the *Sira*, as the extraordinary is in the end no longer effective and must be surpassed again. Considerable space is further taken up — as already mentioned — by magic and superstition and all connected with it. Mention is very often made of divination by sand to ascertain the unknown past, present and future. Purely magical also is the oft recurring idea that from the act of Saif's marriage with his first wife Shāma the destruction of the Abyssinians and negroes will result, and the latter therefore endeavour to prevent the marriage at any cost. Countless are the magic treasures mentioned in the course of the story, the possession of which assures wonderful powers or control over powerful spirits. Dangerous magicians form the greatest obstacles to the spread of Islām. Their power is not denied, only they are weaker than their colleagues on the Muslim side, and if this is not the case, al-Khidr, the helper of the Muslims in need, takes up the cause of those commended to his charge and overcomes the powerful magicians. When they are converted their activities do not cease, but they place all their skill and knowledge at the disposal of the new religion. Belief in spirits is exceedingly prominent in the *Sira*. Endless troops of djinns of all classes fight for or against Islām. They are in much closer relationship with men than in the period after Muḥammad's preaching and constitute a considerable if not the greatest part of Saif's followers. If we were to cut out of the *Sira* all the passages that deal with or are

connected with spirits or magic, we should have barely half of it left.

Taken all in all, the *Sirat Saif b. Dhī Yazan* gives a faithful picture of the popular mind in Muslim Egypt at the end of the middle ages and forms therefore a valuable source for the history of Islām in its widest sense.

(R. PARET)

SAIF B. 'UMAR AL-ASADI AL-TAMIMI, an Arab historian, who, according to the *Fihrist* (ed. Flügel, i. 94), composed two books: *Kitāb al-Futūḥ al-Kabir wa 'l-Ridda* and *Kitāb al-Djāmāl wa-Masir 'Aisha wa-'Alī*. Neither of these books has survived to our times. Al-Ṭabarī, however, was still able to use Saif as principal authority for the period of the *Ridda* and the early conquests (ed. de Goeje, i. 1794—3255) i.e. from 11—36 A. H. A fairly full discussion of Saif's value as a historian is given by Wellhausen, *Skizzen und Vorarbeiten*, vi. 3—7. He is not favourable to Saif. Although he impresses us by the wealth of his details, it is evident from a comparison of his data with those of other Arab historians and with the Christian chroniclers that his 'Irāq tradition is less reliable than that of the Ḥidjāz. Caetani makes a critical use of the fragments of Saif in the course of his *Annali*, indices to vols. iii., iv. and v., s. v. Saif b. 'Umar.

Bibliography: see the references in the article; cf. also Brockelmann, *Gesch. der arab. Litt.*, i. 516.

SAIF AL-DAWLA, **ABU 'L-HASAN 'ALĪ IBN ḤAMDĀN**, the most important ruler of the Ḥamdānid dynasty, lord of Aleppo, famous for his military activities, his struggle with the Greeks and the protection which he gave to scholars.

He was born in 303 (915/916) or perhaps in 301. He was the grandson of Ibn Ḥamdān, who owned the fortress of Mārdīn and rebelled against the Caliph al-Mu'taḍid in 281. His father Abu 'l-Haidja' in 302 received the governorship of Mawṣil and of Mesopotamia from the Caliph al-Muktadir; he fought against the Ḳarmāṭians in 315 and saved Baghdād by having the bridge of al-Anbār destroyed. His power increased under al-Ḳāḥir; he perished during the troubles in Baghdād in the course of which the Caliph was deposed.

Abu 'l-Ḥasan 'Alī at first owned Wāsiṭ and the country round it; his eldest brother held Mawṣil. In 330, under al-Muttaḳī, these princes took part in the murder of Ibn Ra'īq, who was entitled Amīr al-Umarā'; the Caliph then gave this rank to the prince of Mawṣil; he gave him the surname of Nāṣir al-Dawla and to his brother 'Alī that of Saif al-Dawla. Nāṣir al-Dawla only held the office of Amīr al-Umarā' for thirteen months in Baghdād; he was dispossessed of it by the Turk Tūzūn. The situation of the Caliphate was then very precarious

and the empire divided into numerous factions. The Caliph, wishing to escape from the tutelage of Tūzūn, asked for the protection of the Ḥamdānid princes. He took refuge with his harem and all his court at Mawṣil and went from there to al-Raḳqa in 332. Tūzūn begged him to return to his capital and made him many promises of loyalty. The Caliph consented against the advice of Saif al-Dawla; but hardly had he reached the neighbourhood of Baghdād than he was seized by Tūzūn, who deposed and blinded him in 333. The Caliph's stay with the Ḥamdānid princes had cost them enormous sums.

The same year Saif al-Dawla took Aleppo from a lieutenant of al-Ikḥshid, who was ruler of Egypt. The latter sent against him an army commanded by Kāfur: Saif al-Dawla met this army near Ḥims and then besieged but did not take Damascus. In the following year 334, al-Ikḥshid having died at Damascus, Kāfur, the negro eunuch, went back to Egypt. Saif al-Dawla seized the opportunity to attack Damascus again, which he captured. He then advanced on Egypt, took Ramla, but encountered the Egyptian forces, who defeated him on the Jordan. A peace was concluded between him and the Ikḥshidids; the Ḥamdānid prince retained Aleppo and the Egyptians Damascus.

In 337, Saif al-Dawla carried war into the land of Rūm and from this date till his death, a period of nearly twenty years, never a year passed without his invading Greek territory or fighting some battle with the Greeks. He was defeated this year; the Byzantines took Mar'ash and massacred the inhabitants of Tarsūs. In 339 he advanced a considerable distance into the land of Rūm, captured several strongholds and great booty; but as he returned, the Greeks closed the passes against him and regained the baggage and prisoners they had lost. Saif al-Dawla, with a few companions, succeeded in escaping (al-Maṣṣīṣa expedition). In 342, he took the field against the Praetorian-prefect Barzos Focas, who had collected a large army which included Russians, Bulgars and Ḳhazars, and defeated him outside Mar'ash. He captured Constantine, son of Focas, and brought him to Aleppo. The latter died in captivity. By Saif al-Dawla's orders the Christians gave him a magnificent funeral. In 343 Saif al-Dawla again defeated Focas near the castle of al-Ḥadath, which he rebuilt. This fortress was destroyed again three years later. In 347, the Greeks Basil and Yānis, sons of Tsimitsēs, captured Sumaisāt and inflicted a severe defeat on Saif al-Dawla near Aleppo. Seventeen hundred Muslim horsemen were taken captive to Constantinople.

In the same year, Saif al-Dawla arranged a peace between his brother, Nāṣir al-Dawla, and the Būyids who had taken Mawṣil. He guaranteed them the payment of an annual tribute and kept Mawṣil for his family along with Raḥba and Diyār Rabī'a.

In 351, Nicephoros, now Praetorian-prefect, advanced on Aleppo with 200,000 men; a battle was fought near the town before the gate of the Jews, in which Saif al-Dawla was defeated. The town was captured, except the citadel, which held out, defended by Dailamites. The Greeks took 1,200 prisoners, whom they put to death at once, ravaged the country, plundered and destroyed the palace of Saif al-Dawla which lay outside the town; after a week they retired.

Next year Saif al-Dawla was paralysed in hand

and foot. Nevertheless he continued to fight the Greeks and defeated them, notably in the vicinity of Aleppo, to which they had returned in 353. In 355 he presided over an important exchange of prisoners on the banks of the Euphrates. He died at Aleppo in 356 of retention of the urine. His body was brought to Maiyāfāriqin and buried in the *turbe* of his mother outside the town. He had given orders for a brick made of soil that he had won in his campaigns to be placed under his head in his coffin.

Saif al-Dawla was a strong-minded prince, little liking advice, but brave, generous and eloquent; like other members of his family he was a poet. Abu 'l-Mahāsīn and Ibn Khallikān quote a delicate little poem on the rainbow by him, which gives a very high idea of his talents. He surrounded himself with poets and scholars. The most celebrated are the sceptical poet al-Mutanabbi, who was his panegyrist and afterwards that of Kāfir, and al-Fārābī, the great philosopher and musician, who died while accompanying him on a journey to Damascus. The author of the "Book of Songs" (*Kitāb al-Aghāni*) dedicated to him the autograph manuscript of this celebrated work.

(B. CARRA DE VAUX)

SAIF AL-DAWLA. [See ŞADAKA B. MANŞÜR].

SAIF AL-DĪN AL-BĀKHARZĪ, ABU 'L-MA'ĀNĪ **SHAIKH** SA'D AL-DĪN SA'ĪD B. MUẒAFFAR AL-BĀKHARZĪ, a native of the Bākhaz district between Nishāpūr and Herāt (Le Strange, *Lands of the Eastern Caliphate*, Cambridge 1905, p. 357). After having finished his studies, he joined the great Ṣūfī Naḍm al-Dīn Kubrā at Khwārizm. The latter after interrupting Saif's second retreat (*arba'in*) sent him to Bukhārā as *khalīfa*. Al-Bākhazī occupies an important place among the *khalīfa*'s of Naḍm al-Dīn Kubrā; he lived for a considerable time in Bukhārā where he attained great fame and gathered round him a large number of disciples; he even took the surname of **Shaiikh** 'Ālam. The mother of the Mongol emperor Mangū Khān, Sirkūytay Biki (or Siyurkhokhataitai Beigi, according to Blochet) (d. in *Dhu 'l-Hijja*, 649 = Febr.-March, 1252; see *Tārīkh-i Dīkhāngushā*, ed. Gibb Mem. Series, ii. 256), had, during her son's reign, given 1,000 *bālīsh* of silver to build a *madrasa* at Bukhārā and had entrusted its administration to Saif al-Dīn al-Bākhazī (Howorth, *History of the Mongols*, London 1876, i. 188). This shows the fame of the **Shaiikh** in his life-time, just as some anecdotes in the *Nafahāt al-Uns* testify that he was an object of veneration on the part of the great men and princes of his time. Well-known Ṣūfī's of the period, like Khwādja Gharīb and Hasan al-Bulghārī, showed him respect (al-Kāshifī, *Rashahāt 'Ain al-Hayāt*, Turkish transl., p. 37—38). His mystic Persian quatrains are very popular among the dervishes. The death of the **Shaiikh**,

according to the most probable tradition, took place in 658 (1259/60). His tomb is at Bukhārā, at Fathābād, the place where his *tekke* is situated. His poems are preserved in several manuscript collections: 51 of his quatrains have been published in the Z. D. M. G., 1905, lix. 345—354 by S. Khuda Bakhsh.

This monastery of the **Shaiikh** in the suburb of Fathābād remained famous for centuries. His descendants there held the rank of **shaiikh**. Ibn Baṭṭūta, who visited the *tekke* in the viiith century A. H., found as **Shaiikh** there Yaḥyā al-Bākhazī, grandson of Saif al-Dīn, and relates that a repast was prepared for him at which the principal inhabitants of the town gathered together and Turkish and Persian songs were recited in addition to the recitation of the *Qur'an* and sermons. A Persian writer who visited Bukhārā in 1316 (1898/9) says that the tomb and the monastery of the **Shaiikh** are half a *farsakh* from the *Karshī* gate (cf. the article BUKHĀRĀ) and face the east, and that the *tekke* and the monument were built in 788 (1385) by order of Timūr and ornamented with tiles of precious faience; since then, however, these tiles have been torn off and sold. He adds that the descendants of the **Shaiikh** are buried there along with the calligrapher Mīr 'Alī. The tradition of the Yasawīs, according to which Saif al-Dīn al-Bākhazī was a follower of Aḥmad al-Yasawī, is contradicted by historical facts.

SAIF AL-DĪN GHĀZĪ. [See GHĀZĪ].

SAIFĪ, Mawlanā, of Bukhārā, is also known as 'Arūḍī, "the Prosodist," from his work *'Arūḍ-i-Saifī*. Little is known of his life, but he lived for many years at Hirāt, at the courts of the Timūrids, Sultān Abū Sa'īd (1459—1469), great-grandson of Timūr and grandfather of Bābur, and Abū 'l-Ghāzī Sultān Ḥusain Mirzā (1473—1506), great-grandson of Timūr's second son, 'Umar **Shaiikh** Mirzā. As a poet he was of little consideration, and his poems are trivial. His fame rests on his work *'Arūḍ-i-Saifī*, ed. Blochmann, Calcutta 1867 ("Saifi's Prosody"), also known as *'Arūḍ-i-Kāfiya* (the amply sufficient Prosody) and *Misāl al-Ashkār* (the Measure of Poems), written, as he tells us, to supply the want of a work on an art which was a favourite subject of discussion between him and his friends. The poet Djāmi had already written on this subject, but Saifi's work is the fuller and more detailed of the two, and is one of the best works on Persian prosody which we have. Saifi died in 1504.

2. Saifi was also the *takhalluṣ* or pen-name of

a poet of Nishapur, the encomiast of Takash Khan, Khwarezm Shah.

Bibliography: Dawlatshah, *Tadhkirat al-Shu'ara'*, ed. E. G. Browne (London 1901); Lutf 'Ali b. Akā Khān, *Atashkuda*, MSS.; Hādjdj Khalifa, *Kashf al-Zunūn*, ed. Fluegel, iii. 419; Rieu, *Cat. of the Persian Manuscr. in the Brit. Museum*, ii. 525^b. (T. W. HAIG)

SAIHĀN, one of the larger mountain rivers in the south-east of Asia Minor, the Saros of the ancients. It rises on the Koramaz Daghi not far from Kaṣariya (cf. Mehmed Edib, *Manāsik al-Hādjdj*, Stambul 1232, p. 41; also al-Mas'ūdi in the *B.G.A.*, viii. 58, 7 sqq., 183, 7 sqq.: "at the town of Saihān ... not far from Malatya"), enters the Cilician plain of Adana, which lies on its bank, whence it makes straight for the sea, receiving a number of tributaries on its way; it enters the sea by several mouths (the *Capita Sari* of the ancients) below Tarsus. On the course of the river which remained for long uninvestigated see Tchatcheff, *Asie Mineure*, i. 293—299, and C. Ritter, *Kleinasiens*, ii. 133. The name Saihān is most probably, like the name of the neighbouring river Djaihan, an "arbitrary transference" (cf. Nöldeke in the *Z. D. M. G.*, xlv. 700), an assimilation to the Muslima names of the two Central Asian rivers Oxus and Jaxartes. The Saihān was considered one of the rivers of Paradise (cf. al-Mas'ūdi, ed. Paris, ii. 358 sq., *B.G.A.*, viii. 295; Yāqūt, i. 179, ii. 82, iv. 558, 579; al-Iṣṭakhri, *B.G.A.*, i. 63, 64; Ibn Hawkal, *B.G.A.*, ii. 122; al-Balādhuri, ed. de Goeje, p. 165, 166, 168). Under the Umayyads it was one of the rivers on the frontier against the Byzantine empire, at which prisoners taken during the Arab wars of conquest were ransomed. There was a famous bridge over the Saihān between al-Maṣṣīsa and Adana called Djisr al-Walid, which dated from the time of Justinian and was renovated in 125 (743) and again in 225 (840) (cf. G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 131 sq.). See also the article DJAIHAN.

(F. BABINGER)

SAIHŪN. [See SĪR DARYĀ].

SAIMARA. [See SEIMERRE].

ŠĀIN-KALĀ, a little town and district in southern Ādharbaidjān, on the right bank of the Djaghātū. In the south the boundary runs a little over the river Sāruk, a tributary on the right bank of the Djaghātū. In the north it is bounded by the district of Ādjārī, in the east by the province of Khāmse. The name is derived from the Mongol *sain* = good.

Population: The Turkish Afshar tribe, of which a part had to emigrate to Urmia to make room for the Čardawri (Čardowli) tribe of Lūr origin (the district of Čardawr on the Seimerre) whom Fath 'Ali Shah brought from Shirāz at the beginning of the nineteenth century. The chief of the Čardowli lives at Mahmūdjdjik and commands about 5,000 men. The town of Šāin-Kalā has 2,500—3,000 inhabitants and a small bazaar. In 1830 it was destroyed by a Kurdish invasion under Shaikh 'Ubaidallah. Šāin-Kalā, formerly occupied by a Persian garrison, guarded the entrance to Ādharbaidjān through the Djaghātū valley. The caves of Kereftū with a Greek inscription described by Ker Porter (*Travels*, ii. 538—552; Ritter, ix. 816) as well as the site of Takhti Sulaimān (the ancient Gazaka; al-Shīz of the Arabs; cf. Marquart, *Erānshahr*, p. 108) are in the territory of the Afshars of Šāin-Kalā. The lake of Čamlī Göl (near the village of Bāderli) with a floating island is likewise well known. A section of the Afshars belong to the Ahl-i Haḳḳ sect (cf. the article 'ĀLI ILĀHI) the local chiefs of whom in Bent's time lived at Nazar-bābā and Gendjābād (cf. V. Minorsky, *Notes sur la secte des Ahl-i Haḳḳ*, *R. M. M.*, 1920, xl.—xli. 19—97; reprint of the *R. M. M.*, 1922, p. 53, 76).

Another fortress of the same name on the river Abhar, east of Sulṭāniya, and mentioned in the fourteenth century by Mustawfi (see Le Strange, *The Lands of the East. Caliph.*, p. 222), should not be confused with this Šāin-Kalā.

Bibliography: H. Rawlinson, *J. R. G. S.*, 1841, x. 40; H. Schindler, *Z. G. E. B.*, 1883, xviii. 327; Th. Bent, *Scotch Geogr. Magazine*, 1890, p. 91; A. F. Stahl in *Petermann's Mitteilungen*, 1905, p. 33 (with a map of the district and indications of its mineral wealth); Jackson, *Persia Past and Present*, p. 121 sqq.

(V. MINORSKY)

SA'IR. [See AL-NĀR].

SA'UN (Sē'un, Sēwūn, Seyōn, Sēōn), a town in Ḥaḍramūt in South Arabia on the side of the hill of the same name, four hours' ride from Shibām on the right bank of the Wādī Masila. The town lies in the centre of luxurious vegetation;

far and wide one can see palm-groves and well-tilled fields with *ṭām* and wheat. The town is surrounded by a wall, is densely populated and has about 4,500 inhabitants. The streets are broad and clean. Within the town also there are fields and palm-groves, mainly the endowments of the mosques, of which there are said to be not less than 300 in the town. The most beautiful were built by families of the Saiyids after whom they are named; among them are the mosque of Ḥabīb 'Abdallāh Saḡḡāf with a fine dome and a beautiful carefully whitewashed minaret, a cemetery and a garden of palms and dōm-trees surrounded by a wall. The mosque of Ṭahā is kept in the same way and has also a garden. Of the other mosques the Maṣḥūr with its beautiful pierced minaret and the al-Riyād of Ḥabīb 'Alī al-Ḥabshī Bā 'Alawī are worthy of mention. The saint is very hospitable and is said to feed no less than 6,000 persons once a year. He was the founder of a new centre of Muslim learning here which came to overshadow the old celebrated school of Tarīm. Contributions from all parts, especially from Java and India, came to the support of the school which 'Alī built at his own expense and maintained himself at first. It now enjoys great prestige far and near. The palace of the Sultān lies on an eminence surrounded by a wall with projecting *kūt's* and flanked by round towers, while the roof is crowned by three watch-towers. Immediately adjoining it are the principal mosque and the bazaar.

(ADOLF GROHMANN)

SAIYID (A., plur. *Sāda*), a prince, lord, chief, or owner: one who is eminent by means of his personal qualities, his possessions, or his birth. In this last sense it is used throughout the Muslim world almost exclusively of the descendants of Muḥammad (see the art. *SHARIF*). It occurs only twice in the *Kur'ān*, where it is used once (iii. 34) of John the Baptist, and once (xii. 25) of the husband of Zulaikḥā. By the Arabs it is applied not only to men, but to the *ḡinn*, to animals, and to inanimate objects. A verse refers to "*ḡinn*, who are aroused by night, summoning their chief (saiyid)", the wild ass is called the saiyyid of his female, and al-Zadjdjādī calls the *Kur'ān Saiyyid al-Kalām*, "the paragon of speech". Of its application to non-Muslims the best known instance is Rodrigo Diaz, "el Cid Campeador". But for Sid, Sidi etc. cf. the art. *SID*.

Bibliography: E. W. Lane, *Lexicon*, s. v. (T. W. HAIG)

AL-SAIYID AL-HIMYARĪ, ABU ḤĀSHIM, ISMĀ'ĪL B. MUḤAMMAD B. YAZĪD B. RABĪ' A. B. MUFARRIGH (according to others Rabī' A. Mufarrigh), born in 105 (723) at Baṣra, an Arab poet, belonged to an Ibādī [q. v.] family, but quite early in life he went over to the Shī'a "by the grace of God", as he prided himself. He became an adherent of

the Kaisāniya sect [q. v.], but not only did he expect with them the return of their Imām, Muḥammad b. al-Ḥanafīya, but held the doctrine of metempsychosis etc. in both forms, belief in the *radī'a* (return in human form) and the *tanāsukḥ* (change into animal form). He even proclaimed himself the reincarnation of the Prophet Jonah. His attitude on religious and political questions forced him to move from Baṣra to Kūfa, but did not prevent him, after the rise of the 'Abbāsids, from offering them poetical tributes also: he enjoyed the favour of al-Manṣūr in particular. He also placed his art at the service of provincial governors, e. g. Abū Budjair of al-Aḥwāz. Poetical talent was hereditary in his family; his grandfather Yazīd had been dreaded as a satirist, who had lashed the governor Ziyād with his lampoons. He himself was distinguished not only as a prolific composer (over 1,000 *qaṣīda's* by him are said to have been current among the Banū Ḥāshim), but also for the gracefulness of his language. Like Abu 'l-ʿAtāhiya, he avoided embellishing his poems with strange words, but aimed rather at being generally understood. With the latter and al-Baḥshār, he is considered the most distinguished of the later poets, but the peculiarity of his political and religious views prevented the wider circulation of his poems, of which not even a *Dirwān* has survived. He died in Wasīt in 173 (789).

(BROCKELMANN)

AL-SĀḲ, the leg, the thigh, is used in several senses in Arab geometry: (1) *Sāḡ* means the perpendicular of a right-angled triangle; (2) the side of an equilateral triangle. Thus we find in al-Bīrūnī for example *al-Ḳānūn al-Maṣ'ūdī*, 3rd Maḳāla, Ch. 1: *muḡallath HBC, al-mutasawwī sāḡai HB, HC*; (3) *Sāḡ* means the foot or the leg of a pair of compasses and is then synonymous with *riḡl* (foot). This is shown by the following text: "And you place the compass's "foot" on the line on the wall which is near the meridian and this span is the curve of the *inḥirāf*. Place this arc in the compasses in such a way that one of its legs stands in one and the other in the other end of the angle (arc) (Muḥ. Sibṭ al-Māridīnī († 1495 Cairo), *On the calculation of tables for the construction of Munḥarifāt (inclining sundials)* (Oxford MS., Bodl. Or. II, N^o. 285, fol. 26, 70). (4) The Western Arab astronomer Abu 'l-Ḥasan 'Alī al-Marrākushī († c. 1260 in Morocco) speaks in his *Djāmī al-Mabādī wa'l-Gḥayāt* (transl. by J. J. Sedillot and published by L. Am. Sedillot under the title: *Traité des instruments astronomiques des Arabes*, Paris 1834—35, p. 446) of a *Sāḡ al-djarāda* (locust-leg) and means by this an hour-line traced in the plane by a cylinder, whose course in the plane has some resemblance to the shape of a locust's leg. (5) In names of constellations we also find the word *Sāḡ* used to name a star, in the leg of an animal (or man), e. g. *Sāḡ*

al-ʿUwā (γ Boötes), *Sāk pāi* = Ophiuchus 20, *Sākū al-Asad* (in Leo = Arcturus and Spica).

(C. SCHOY)

ŠAKĀLIBA, Slavs. The name *Šakāliba* (the singular forms are *šaklab*, *šaklabi* and *šiklabi*, also with initial *s* instead of *š*) is usually applied by the Arab geographers of the Middle Ages to the peoples of various origins who lived in the lands adjoining the territory of the *Khazars*, between Constantinople and the land of the *Bulghars*. See the articles *BULGHĀR*, *KHAZAR*, *SLAVS*.

The Slavs of al-Andalus. In Muslim Spain the word in its plural form is found very early as the generic name of the foreign private bodyguard of the Umayyad Caliphs of Cordova. Originally, it was applied to all the prisoners brought by German armies back from their expeditions against the Slavs and then sold by them to the Muslims of al-Andalus. But as early as the time of the traveller Ibn Ḥawqāl, the name *Šakāliba* was given in Spain to all the foreign slaves enrolled in the army or appointed to various services in the royal palaces and harems. The geographer tells us that at the time he went through the Iberian Peninsula, the "Slavs" who were there did not come only from the shore of the Black Sea but also from Calabria, Lombardy, the country of the Franks and from Galicia. Indeed, it seems that they were largely supplied by the raids conducted by Maghribi and Andalusian pirates on the European shores of the Mediterranean. Those who were intended to guard the *ḥarīm* were the objects of a special trade in the hands of Jewish merchants who had important "manufactures d'eunuques", to use Dozy's expression, in France and particularly at Verdun. The majority of these prisoners were still young men when they arrived in Andalusia. They very soon began to speak Arabic and became Muslims.

Their number soon became very large. According to al-Maḳkārī, in the reign of ʿAbd al-Raḥmān III, successive censuses of them in the capital gave the figures 3,750, 6,087 and 13,750. In spite of their condition of servitude, we find them at this time holding a considerable position in society. Some attained wealth and even owned vast estates and had slaves of their own. They became cultured through contact with the brilliant Andalusian civilisation; among them were scholars of note, poets and bibliophiles and one of them — if we may believe Ibn al-Abbār and al-Maḳkārī —, Ḥabīb al-Šiklābi, composed in the reign of Hishām II, a whole book devoted to the merits of the literary Slavs or Andalusia; it was called *Kitāb al-istiḡḥār wa'l-mughālabā ʿalā man ankara faḍl al-Šakāliba*.

Like the praetorians in the Roman empire and the ʿAbid at a later date in the Morocco of the Sharīfī dynasties, the Slavs in Spain, in proportion as their numbers increased and they occupied a more important place in Andalusian society, came to play a predominating part in politics. It is in the reign of ʿAbd al-Raḥmān III that we first find them definitely occupying high civil offices in the state and even military commands. The Caliph used them to counterbalance and combat the influence which the Arab aristocracy had retained in his empire. He thus had no hesitation — in spite of the discontent in his court — in trusting to the Slav Nadjda in 939 the command of the expedition which he sent against the King of Leon — an expedition which, however, ended

disastrously in the catastrophes of Simancas and Alhandega and the pursuit of the Muslim army by the forces of Ramiro II and his allies of the kingdom of Navarre.

ʿAbd al-Raḥmān III's successor, al-Ḥakam II, allowed the *Šakāliba* a no less important role in his empire and his indifference to their more and more arrogant or even insolent conduct did not fail to arouse the wonder of the chroniclers of the reign of this enlightened prince. At his death the Slavs felt themselves masters of the situation. According to the author of *al-Bayān al-Mughrib*, there were then in the palace over a thousand eunuchs and at Cordova a body of *Šakāliba* guards was entirely at the disposal of two very important individuals, Faṭḥ al-Nizāmī, grand master of the wardrobe, and piś assistant *Djawdhar*, grand jeweller and grand falconer. These two Slav eunuchs kept the death of al-Ḥakam secret and tried to prevent the proclamation of the heir-presumptive, who was still an infant; but they were opposed by the viziers al-Mušḥaff and Ibn Abī ʿAmir, whose popularity was only increased by punishing them.

Space will not allow me to trace in detail the part played by the Slavs during all the period of the decline of the Umayyad Caliphate of Spain; we find them taking part in all the plots hatched at Cordova, or in the rest of Andalusia, sometimes on the winning side, sometimes on the losing, but showing always the same spirit of initiative, the same ambition and the same despotism; we may mention from among them the eunuch *Khairān* who, at the beginning of the eleventh century A.D., was the leader of the Slav party in the capital.

After the end of the Caliphate of Cordova, the Arab historians are much less detailed regarding the political and social role of the Slavs in al-Andalus; but it is probable that the latter, having by now been Muslims for several generations, became absorbed in the rest of the population and lost, along with the memory of their foreign origin, the importance which they had been able to claim in the period of decline of the Umayyads of Spain.

(E. LÉVI-PROVENÇAL)

SAKĀRYA (sometimes *Šakārya*), a river in Asia Minor. It rises near Bayāt in the north-east of Āfiyūn Kara Hişār. In its eastward course it enters the wilāyet of Angora through which it runs to a point above Çahmak after receiving on its left bank the Saiyid Ghāzī Sū and several other tributaries on the same side. It then turns northwards describing a curve round Siwri Hişār. Here it receives on the right bank the Engürü Sūyu from Angora and near this confluence the Pursak on the opposite bank. A little to the south of this point is the bridge of the Eski-Shehir-Angora rail-

way. Farther on, towards the north, the Sakārya receives on its right bank the Kirmir Sū and then taking a sudden turn it runs westwards to Lefke, traversing the wilāyets of Kutahia and Khudāwendigār. At Lefke the Sakārya is joined on the left by the Gök Sū from Bursa. After Lefke it turns sharply to the north, entering the sandjak of Izmid near Mekedje, having now run 250 miles. The most flourishing part of its course now begins, and we have fine crops of cotton, wheat, vegetables, besides vineyards and the rearing of silkworms. It now runs in a north-easterly direction through the kaḍā's of Geiwe, Ada Bazār and Kāndere, to enter the Black Sea near İndjirli. The stretch of its course in the sandjak of Izmid is 70 miles; near Ada Bazār it receives the waters of the Mudirni Sū from Kaṣtamūni on the right bank and of the Çarkh Sū from lake Şabandja on the left, 1¼ miles north of Geiwe is a bridge of six arches built by Sultān Bāyazid I and at Lefke Ewliyā Çelebi (iii. 11) also mentions a fine bridge of wood. The train crosses the river four times between Izmid and Biledjik.

The Sakārya is the ancient Sangarius (see Pauly-Wissowa, *Real-Enzyklopädie*, Ser. 2, i., col. 2269) it has changed its course since the Byzantine period, as is shown by the great bridge built by Justinian over it in 561, which is now two miles from Ada Bazār. This bridge is now called *Besh Köprü* (in classical times Pentegephyra or Pontogephyra; see Ramsay, *The Historical Geography of Asia Minor*, London 1890, p. 214, 215), but at the present day the river no longer runs below its arches.

The Sakārya is not navigable; its lower course is only used for transporting to the Black Sea the wood from the thick forests of the neighbourhood. In prehistoric times the river ran westwards into the Sea of Marmora; the lake of Şabandja and the Gulf of Izmid mark the track of its ancient course. In 909 (1503) Sultān Salim I conceived the idea of reestablishing communication between the Sakāria, the lake (the level of which is above that of the river) and the gulf in order to bring more easily to his capital the wood required for the building of his fleet. Being convinced of the feasibility of the project by the report of experts, he gave orders for its execution but the opponents of the scheme were able to frustrate it by the argument of the *riṣḥwet* (Hādjdjī Khalifa, *Djihānnumū*, Constantinople 1145, p. 660).

For a period, in the reign of Osman, the Sakārya formed the frontier of his territory on the west and south and for his conquests he had to cross the river (for example for the capture of Aḳ-Ḥişār in 1308; see 'Ashik Pashazāde, *Ta'riḳh*, Constantinople 1332, p. 12, 24). Since then the Sakāria had not played an important part in Ottoman history until the famous battle on the Sakārya from Aug. 24, to Sept. 10, 1921, when the Greek army was defeated in a last great effort to reach Angora. By the counter-offensive of Sept. 10, the Greeks were thrown back to the west of the Sakārya and forced to take up the line Eski-Şehir-Afyon-Ḳara-Ḥişār. In August, 1922, the Turkish army was victorious for a second time near the Sakāria; this was the beginning of the Turkish offensive which ended in the complete reconquest of Anatolia.

AL-SAKĪNA is a loan-word borrowed from the Hebrew (*shekinā*). There it signifies the presence of God, in the purely spiritual sense, sometimes made clear by a sign like fire, cloud, or light, which can be appreciated by the senses. Muḥammad was apparently not quite clear regarding the true meaning of the word, when he says (Sūra ii. 249) that the *sakina* along with some relics was in the sacred ark of the Israelites. Possibly he associated with this Hebrew loan-word conceptions from pagan demonology; many Qur'anic exegesis at any rate give here quite a djinn-like description of *sakina* (cf. al-Ṭabarī, *Tafsir*, ii. 385 sq.; it is noteworthy that on this point Wahb b. Munabbih relies on a Jewish source; he also confuses the ark of the covenant with the oracle of the 'Urim W'tummim). Where else the word is found in the Qur'an, it is generally explained by the commentators as the subjective condition of peace of soul and security (see the commentaries on ix. 26, 40, and xlviii. 4, 18, 26). From this a secular meaning of the word gradually develops: *sakina* means the quality of calm and dignity in character (e.g. al-Bukhārī, *Bad' at-Ḳhalq*, bāb 15) and then simply: to keep quiet, e.g. at the *ṣalāt* (al-Bukhārī, *Djum'a*, bāb 18) or at the *ifāda* (al-Bukhārī, *Ḥadjdj*, bāb 94). Besides this there is a change of meaning of the word in its religious use as the Jewish meaning of the word gradually penetrates into Islām. Thus the *sakina* is said to come benevolently down when the Qur'an is recited (al-Bukhārī, *Faḍl al-Ḳur'ān*, bāb 11 and 15). As among the Jews the Ruah Ḥaḳḳōdesh, which rests on the Prophets, gradually develops out of the *shekinā*, so we find in Islāmic writers also *sakina* occasionally used with the meaning "Holy Ghost" (see Goldziher, p. 149 sq.).

Bibliography: A. Geiger, *Was hat Mohammed aus dem Judentume aufgenommen?* 2, Leipzig 1902, p. 53 sq.; I. Goldziher, *Über den Ausdruck "sakina" in den Abhandlungen zur arabischen Philologie*, Leiden 1896; the same in *RHR*, xxxviii. 1—13. (B. JOEL)

SAKİZ, the Turkish name of the island of Chios (corrupted from the Greek *εἰς Χίος*) and at the same time the word for mastic (*μαστίχην*) which is only found on this island and is obtained in excellent quality from the *Pistacia Lentiscus* L. and was very popular in the East as a valuable drug in the middle ages and, indeed, still is in modern times. How old the form *sākiz* is, is shown by the occurrence of the word as an appellative in Kuman and Old Turkish (Houtsma, *Türkisch-Arabisches Glossar*, p. 37) and in Persian (Josaphat Barbaro, *Viaggio in Persia* — Anno 1471 —, Venice 1543, p. 59b: Syo è luogo molto nominato ne la Persia, & in tutte quelle parti & è chiamato Seghex, che vuol dir in nostro idioma mastico; Vullers, *Lexicon pers.-lat.*, s. v. sekiz). In Syriac also mastic is called *ḳiyā* i. e. Chios from its place of origin (Löw, *Aramäische Pflanzennamen*, p. 70). By the reverse process the Arabs have named the island from its best known product "mastic island" (*Djazīrat al-Masṭiki*); Abu'l-Fidā, *Taḳwīm al-Buldān*,

ed. Reinaud, ii/i. 268 and al-Dimashqī, ed. Mehren, p. 228, the first Arab geographers to mention it, know it only by this name.

In the middle ages Chios had attained very great importance as a station on the sea-route for pilgrims and merchants to eastern lands (Palestine, Syria and Egypt). On the decline of the Byzantine empire in the second half of the middle ages the rich island became exposed to the raids of the petty Saldjūk princes of the opposite coast of Asia Minor and in 1089 Tzachas, father-in-law of Kılıdji Arslān I and lord of Smyrna, which is not far away, succeeded in establishing a temporary footing there (Anna Comnena, *Alexias*, vii. Ch. 8). In 1303 the Emperor entrusted the Catalan mercenaries with the defence of the island against the raids of the Turks (Muntaner, *Chronik*, Ch. 203 and 206; Pachymeres, ed. Bonn, ii. 344, 346). A few years later — in 1307 or 1308 — and after the Genoese Benedetto Zaccaria had usurped rule over Chios (from 1304) 30 "Turkish" ships laid waste the island (Pachymeres ii. 510) and Martino Zaccaria, who had succeeded Benedetto Zaccaria in 1314, had much hard fighting with the Turks; in 1329 he was dispossessed by Andronicus III but by 1346 another Genoese, the Admiral Simone Vignosi had seized the island, which remained till 1566 under the rule of the Giustiniani, the family of the Genoese "Maone" of Chios, as the legal successors of the conquerors called themselves. But in order to maintain their position the latter were forced to pay tribute to the local Turkish dynasts in Asia Minor and later to the Ottoman Sultāns and occasionally to support them with their fleet. They paid the Aidin-oghlu 500 ducats yearly and the same to the Şārukhān-oghlu of Magnesia. The first intercourse with the Ottomans was of a hostile nature: after the overthrow of the petty princes of Aidin, Şārukhān and Menteshē, about the year 1397, Bāyazīd I stopped the export of corn from Asia Minor to the islands of the Archipelago and with 60 ships undertook a campaign against Chios and laid the island waste with fire and sword (Ducas, ch. xiii). After the capture of Smyrna by Timūr (Dec., 1402) the Maonese, like the Frankish lords of Lesbos, did not fail to pay homage to the conqueror (Sharaf al-Dīn 'Alī Yazdī, *Zafar-nāma*, Calcutta edition ii. 482; Ducas, ch. xvii; *Historia del Gran Tamorlan*, Madrid 1782, p. 230). They repeatedly lent their galleys to Sultān Mehemmed I and his successor Murād II for the defeat of Djunaid (1415 and 1421); the yearly tribute was fixed at 4,000 ducats. After the fall of Constantinople the Maonese hastened to pay homage to Mehemmed the Conqueror; the Sultān left them their autonomy but raised the tribute to 6,000 ducats and some years later, as the result of an encounter of the islanders with the admiral of Gallipoli, to 10,000 ducats, with 2,000 in addition to dignitaries of the Porte. The island was able to retain its independence for over 100 years but when it fell two years in arrears with the tribute, this omission and the fact that it served as an asylum for escaped Christian slaves was used as a pretext for sanctions. At Easter 1566 the Admiral Piāle Pasha landed unnoticed on the island and took possession of it without a blow being struck. The churches in Castro were destroyed or turned into mosques and the Genoese dignitaries led away into a miserable captivity. It was said that the Greek population, dissatisfied

with Frankish rule, had called in the Turks. On the intercession of the French Ambassador, the exiles received permission to return a few years later and the island was granted a limited degree of self-government (Hādjdjī Khalifa, *Tuhfat al-Kibār*, p. 37^b sq.; Leunclavius, *Annales*, p. 110 sq.; Gerlach, *Tage-Buch*, p. 50, 123; Zinkeisen, *Gesch. des Osm. Reichs*, ii. 900 sqq.). Very serious consequences, especially for the Frankish inhabitants, followed the disastrous attempts of Virginio Orsino, Duca di Bracciano, who landed in April, 1599, with five Tuscan galleys in Castro, but had to begin an ignominious retreat a few hours later. The efforts of the French Ambassador de Brèves secured for the Catholics the preservation of their churches; the skulls of 400 soldiers whom the Tuscan admiral had left in the lurch on the mainland on his retreat, long adorned the battlements of the fort of Castro (Na'imā, *Tārikh*, ed. 1280, i. 212; Sandys, *Travailes*, London 1658, p. 9 sqq.; D[es Hayes de] C[ourmenin], *Voyage de Levant en l'année 1621*, Paris 1632, p. 346 sq.; Sagredo, *Memorie istoriche de Monarchi Ottomanni*, p. 766 sqq.; v. Hammer, *Gesch. des Osm. Reiches*, iv. 297 sq.). In July, 1681, the harbour of Castro was the scene of an encounter between a French squadron and Tripolitanian corsairs, in which many buildings in the town and several mosques were destroyed by the fire of the ships' guns (Zinkeisen, *op. cit.*, v. 43; von Hammer, *op. cit.*, vi. 371 sqq.).

During the great war of the allied Austrians and Venetians against Turkey at the end of the xviiith century, the town of Chios was temporarily occupied by the Venetians under Antonio Zeno; the fort of Castro capitulated after a short resistance on Sept. 21, 1694; but after a few months the Venetians were forced to retreat after the unfortunate naval battles at the Spalmadore islands, 9 and 18 Feb., 1625. The Roman Catholic inhabitants were accused by the Orthodox of having brought about the foreign invasion and they lost what remained of their privileges; their churches were closed and handed over to the Greek Orthodox (Rāshid, *Tārikh*, i. 199^a sq., 207^b—209^a; Rycaut, *History of the Turks*, London 1700, p. 518, 525 sq.; Kantemir, *Gesch. d. Osmanischen Reichs*, Hamburg 1745, p. 646 sqq., 661 sqq.; Sathas, *Τουρκοκρατουμένη Ἑλλάς*, Athens 1869, p. 401 sqq., 414 sqq.). But the island was far more seriously affected by the Greek war of independence. On March 22, 1822, Samiote irregulars landed on Chios and besieged the Turkish garrison in the fort of Castro; on April 11, the Kapudan Pasha Naşūh Zāde 'Alī appeared with a strong fleet, relieved the besieged garrison, who had put up a heroic defence under the Muḥāfiẓ Wahīd Pasha, and drove out the Samiotes. The defenceless island was terribly punished and, although only a few natives had joined the Samiotes, it was ravaged like an enemy country with fire and sword. Of the over 100,000 inhabitants which Chios numbered at the beginning of the century, 23,000 are said to have been massacred and 47,000 carried off into slavery. The responsibility for these excesses was assumed by Wahīd Pasha in his report to the Sublime Porte; the Kapudan Pasha, who had in vain opposed them, was blown up by Kánaris in the night of 18/19 June before Česhme with his flagship; Wahīd Pasha was degraded and banished to 'Alāya (Djawardat, *Tārikh*, xii. 40—48; K. Mendelssohn Bartholdy, *Geschichte Griechenlands*, Leipzig 1870, i. 250 sqq.).

The prosperity of the island was destroyed and to this day it has not recovered from this catastrophe. Chios was visited by a severe earthquake on April 3 and 11, 1881; the number of dead was estimated at 5,000, that of the injured at 1,000 (*S. B. Pr. Ak. W.*, 1881, p. 801 sqq.). As a result of the Balkan War the island was ceded to Greece in 1913.

Under Turkish rule Chios in the older period was under the jurisdiction of the Kapudan Pasha; later it formed a sandjak of the wilāyet of the archipelago (*Diazā'ir Baḥr-i Safīd*); in 1910 its population (almost exclusively Greek, a few Jews) was estimated at 80,000 souls.

The Chiotese have been famous from early times for their intelligence and enterprise; especially as merchants and bankers but also as physicians, apothecaries and skilled gardeners, they were scattered all over the Levant; of their scholars the learned Leon Allatius and the Hellenist Korais have attained a European reputation. The products of their industries (silks, the so-called *khifā'i*, a cotton cloth) were much in demand; among the products of the soil we might mention mastic and southern fruits of all kinds.

(J. H. MORDTMANN)

AL-SAKKĀKĪ, ABŪ BAKR YŪSUF B. ABĪ BAKR B. MUḤAMMAD Sirādj al-Dīn al-Kh̲wārizmī was born in Transoxiana on the 2nd of Djumādā I 555 A. H. He was originally a metal-worker and excelled in engraving dies, from which art he received his *laqab* al-Sakkākī, and making intricate locks. One day he had made an inkstand furnished with a lock, the whole weighing no more than a kīrāt, which he presented to the ruler of his country, whose name is not mentioned by the biographer. He was suitably rewarded, but soon another man came to the audience and great honour was shown to him; this amazed Sakkākī, and upon enquiry, he was told that the man was a person of learning. Seeing that learning was in greater honour than handicraft he decided to become a scholar himself. His first studies were far from successful and his ill success made him lose heart and only when he saw how the perpetual dropping of water had made a hollow in a rock, did he take up his studies again. There is exceedingly little known of his life; the names of neither his teachers nor pupils are known, no doubt on account of the Mongol invasion of his native country towards the end of his life. He is reckoned among the Hanafī lawyers; two of his teachers in that branch, Sadīd al-Kh̲hayātī and Maḥmūd b. Sa'īd b. Maḥmūd al-Hārithī, are mentioned and also one of his pupils, Mukhtār b. Maḥmūd al-Zāhidī, the author of a Hanafī law-book entitled *al-Kinya*. He died in the village of al-Kindī near the town of Almālīgh (Almālīk of the geographers) in Ferghāna in the year 626 A. H. As a Turk he is credited with some Turkish poetry, but his reputation rests upon his work in Arabic, the "*Miftāḥ al-'Ulūm*", which is the most comprehensive book on rhetoric written up to his time. In spite of its great reputation, manuscripts of the book are scarce, as it was early superseded by the abridgement and commentary of the third part of the work written by al-Kāzwinī under the title of *Tulḫīṣ al-Miftāḥ*, which has become the standard work on the subject and has in turn become the subject of numerous commentators. Another reason why the *Miftāḥ al-'Ulūm* became superseded is, no doubt, its very difficult language which at times is quite obscure on account of long sentences such as are unusual in Arabic, and which might point to Greek influence if such could be assumed. It may be that Sakkākī had also studied the translations of Greek philosophical books, being a contemporary of the celebrated Naṣīr al-Dīn al-Ṭūsī, and it is perhaps not without signifi-

cance that, sparing as he is in mentioning any authorities, he frequently refers to statements of al-Rummānī who is reported to have indulged in philosophical theories on grammar. The book is fortunately accessible in two printed editions (Cairo 1317 in 4^o and Cairo 1318 in 8^o), which, though printed without points, so necessary for this work, enable us to study it. The original plan of the author was to divide the book into three principal sections: morphology, grammar and rhetoric, to which he has added other branches akin to the subject. The part dealing with morphology is preceded by a chapter on phonology, teaching theoretically the proper pronunciation of the Arabic sounds, while in the part dealing with exposition and rhetoric he embodies chapters on *Badīʿ*. Though he attempts to classify the subjects scientifically, his divisions vary both in their titles and in the numeration. The first book is divided into three *Faṣl*'s, while the second is divided into several *Faṣl*'s and *Bāb*'s, those towards the end not being numbered. The chief portion on Rhetoric is divided into *Kānūn*'s and these again into *Fann*'s. The part dealing with *Bayān* or eloquence has two *Aṣl*'s and five *Faṣl*'s and again several unnumbered chapters. The third *Faṣl* on Metaphorical expressions is divided into six *Ḳism*'s and at the end some additional chapters not numbered. Here the author says, he ought to finish his book, but as what follows really belongs to the art of Rhetoric, he adds long expositions on *Istidlāl* or Reasoning by deduction and a lengthy account of the art of poetry, with the usual details of the metres etc. The work was too extensive and too badly arranged to serve as an easy hand-book; in consequence the abbreviation and commentary of al-Ḳazwīnī under the title of *Talkhīṣ al-Miftāḥ* soon superseded this work and the latter with its many commentaries, especially those by al-Taḥṣīnī entitled *al-Muṭawwal* and *al-Mukhtaṣar*, have held sway in Arabic literature till the present day. The *Miftāḥ al-ʿUlūm* has been the subject of numerous commentaries; in addition to those named, among others one by Maḥmūd b. Maṣʿūd al-Shīrāzī (died 726 A. H.), which deals with the third part only; another commentary on the third part is by al-Djurdjānī, who completed it in 803 A. H.

Bibliography: al-Kurashī, *Djauwahir al-Muḍīʿa* (Haidarābād), ii. 225; Ibn Kutlubugha, p. 250; al-Suyūṭī, *Bughyat al-Wuʿat* (Cairo 1326), p. 425; Muḥammad Bakir, *Rawdat al-Djinān* (Teherān 1304), pages not numbered; Brockelmann, *Gesch. der arab. Lit.*, i. 294; Mehren, *Rhetorik der Araber* (Vienna 1853).

(F. KREMKOW)

AL-SAKKĀKĪ, an Eastern Turkī poet, born in the last quarter of the eighth century, was celebrated in the first half of the ninth century at the court of the Timūrids in Transoxania. The only information regarding this poet of whom we know neither the date of birth nor of death, is found in the *Madjālis al-Nafāʾis* of al-Nawāʾī. Al-Sakkākī was himself a native of Transoxania and achieved his fame in Samarḳand. He is believed to be buried in the vicinity of this town. Al-Nawāʾī in the *Madjālis* alleges that al-Sakkākī's poems do not justify his fame. In the introduction to his *Khutba-i Dawāwīn*, the same author says that al-Sakkākī composed a complete *Diwān* and is famous in Turkeṣtān. On the other hand, in

his *Muḥākamat al-Lughatain* he says that al-Sakkākī cannot be compared with the Persian poets, although he acknowledges his claims as one who spread Čaghatai literature, like Luṭfi, for example, author of a Turkī *Diwān* and a *Gurwe Naurūs*, also in Turkī. The uncertainty regarding his life and the period in which he lived has led several modern writers to confuse him with the famous scholar Abū Yaʿqūb Yūsuf al-Sakkākī (see e.g. Nadjib ʿĀsim and Meḥmed ʿArif, *ʿOṭhmānī Tārīkhī*, Constantinople 1335, p. 275). In the British Museum is an incomplete copy of the *Diwān* of al-Sakkākī; the *ḥaṣida*'s which it contains and which are dedicated to the Timūrid Khalil Sultān (d. in 812/1408), to the great Šūfi Khwādja Pārsā (d. in 822/1418), to Ulugh Beg (814/1410—850/1445) and to the great Amīr Arslān Khwādja Tarkhān, general of Ulugh Beg, apparently the principal patron of the poet and himself the author of several poems in Turkī which still survive (Nadjib ʿĀsim, *Hibat al-ḥaḳāʾiq*, Constantinople 1334, p. 92—94), give us a fairly clear picture of the period and surroundings of the poet. In the various dictionaries of Čaghatai we find passages quoted from al-Sakkākī; in the MS. N^o. 4757 of the Aya Sofia written in Uigur characters, which contains, among other things, the *Hibat al-Ḥaḳāʾiq*, there are three of his *ghazal*'s. The poet, who had not yet been forgotten when al-Nawāʾī visited Samarḳand (870—873 = 1465—1468), played an important part in the history of Čaghatai poetry in spite of the fact that he was not an artist of the power of Luṭfi or Haidar al-Khwārizmī (cf. the art. TURKEY [language and literature]).

Bibliography: al-Nawāʾī, *Madjālis al-Nafāʾis*, second madjlis (manuscripts); do., Introduction to the *Khutba-i dawāwīn* (MS. of Nūr-i ʿOṭhmānī, N^o. 3880); do., *Muḥākamat al-lughatain*, Der-i Saʿadet, Constantinople 1315, p. 64; Rieu, *Catalogue of the Turkish MSS. in the Brit. Mus.*, p. 284; Köprülü Zāde Fuʾād, *Ilk Mutaṣawwifler*, Constantinople 1918, p. 198. (KÖPRÜLÜ ZADE FUʾAD)

SAKKĀRA, an Egyptian village, 15 miles S. W. of Cairo, Lat. 29° 75', Long. 31° 13', situated near the left bank of the Nile half way between Djize and Dahshūr. It measured 790 feddān (according to Ibn al-Djīʿān, *al-Tuhfa al-saniya*, p. 144; see also de Sacy, *Relation de l'Égypte*, p. 675) and its valuation (according to Ibn Duḳmāk, *Kitāb al-Intiqār*, Būlāk 1309, iv. 133) was 10,000 dinārs. Pococke in his travels found it a rather poor village at the foot of the hills, with a mosque and a few clusters of date-palms. The name in Arabic means "falcon's nest"; but it is no doubt a corruption of the name of the old Egyptian god of death, Seker or Sokar (*Socharis*), "the confined one", who presided over the great cemetery on the Western Plateau. The extensive ruins (5 miles in length and 1 mile in width) of this famous necropolis exhibit every conceivable variety of sepulchral monument, notably tombs of the Ancient Empire (described by Mariette, *Revue Archéologique*, 2nd series, xix. 8 sqq.).

Of the twenty odd pyramids of the Sakkāra group an outstanding one is the so-called Step Pyramid (*al-haram al-mudarradja*), which is in reality a transitional maṣṭaba. This, which is regarded as the oldest extant monument of its kind, was designed, it is believed, by Imhotep ("Imouthes")

the prime minister of King Zoser of the third dynasty (H. R. Hall in *The Cambridge Ancient History* (1923), i. 276). It is 197 feet high, and is roughly constructed of small stones quarried in the neighbourhood, and having eleven successive layers of masonry with six steps with sloping sides. It is not oriented (Brugsch, *Egypt under the Pharaohs*, London 1891, p. 28 sq.). The interior is a congeries of chambers and branching passages, many of them the work of Arab tomb-robbers. One of such depredators named Aḥmad al-Nadīdjār ("The Carpenter"), c. 820 A. D., has left his name in red ink behind him on the walls of a neighbouring pyramid. The Pyramid of Pepi I is known locally as the Pyramid of *Shaiḥ* Abū Maṣṣūr, while the Pyramid of Teti is believed by the natives to be in the vicinity of the place of Joseph's incarceration, and for that reason is known as the "Prison Pyramid". Another tomb in the same pyramid field is named by the Arabs *Maṣṣabat Fir'awn*, "Pharaoh's Throne".

Regarding the "Prison of Joseph", there is a quotation in al-Makrizī to the effect that it is at Būṣīr (al-Sidr), whose pyramids 'Abd al-Laṭīf describes (see the art. Būṣīr). But De Sacy (*op. cit.*, p. 206) considers that these include the pyramids of Sakāra as known to us (De Sacy mistakenly writes the name as *Sakhara*; although he afterwards corrects this in a foot-note, *ibid.*, p. 675). This would agree with the textual addition (see de Sacy, p. 671, note 6) which states that Sakāra is one of the dependences of Būṣīr. The "Prison of Joseph" was a regular place of pilgrimage. The Faḳīh Abū Ishāq al-Marwazī said: "If a man comes from 'Irāk to visit it I shall not reproach him for undertaking the journey" (al-Makrizī, p. 610). And there is a record in al-Masīḥī's chronicle of the month of Rabī' al-Awwal, 415 A. H. (May 13—June 11, 1024) that the populace of Cairo thronged the streets with drums and trumpets demanding from the merchants money to take them to the "Prison of Joseph". On the merchants' refusing, the matter was laid before the *Khālifa* ('Alī ibn Ḥakīm bi-amrī 'llāh) who ordered the merchants to pay the customary annual sum for the purpose. Thereupon the processional march to the "Prison of Joseph" took place led by the grand *Qāḍī* 'Izz al-Dawla (al-Makrizī, *ibid.*, p. 610 sq.).

Near the Sakāra pyramids are to be seen the remains of the celebrated Serapeum or Apis Mausoleum, where, in the rock-cut tombs below, the mummified carcasses of the sacred Apis-Bulls worshipped at Memphis were enshrined in huge sarcophagi of Assuan granite. The chapels built above the vaults formed the Serapeum proper. Thither a wonderful *Dromos* or Avenue of Sphinxes led. Fresh excavations in 1911—12 revealed the remains of the early Coptic monastery of Apa Jeremias (see *Annales du Service des Antiquités de l'Égypte*, Cairo, register). The well-known wooden statue, in Būlāk, of the *Shaiḥ al-Balad* came from Sakāra (see F. B. Zincke, *Egypt of the Pharaohs and of the Khedives*, London 1871, chap. ix.).

(J. WALKER)

SAKĀZ, a town and district in Persian Kurdistan, administered sometimes from Senne, sometimes from Tabriz and situated on the upper *Djaghāū* east of Bāne. The inhabitants are Kurds (Mukri). In religion they are *Shāfi'* Sunnis; there are also adepts of the *Naqshbandī* *Shaiḥs*. The family of local *Khāns* is related to that of the *Wālīs* of *Ardilān*. The town has 1200 houses, 2 mosques, a bazaar, etc. The district (with its dependency *Mīrede*) comprises 360 villages. According to the census of 1296 A. H., there were 34,024 people in the district. The government taxes amounted to 6305 *tumāns* a year. Cf. 'Alī Akbar Wakā'i-nigār, *Ḥadīka-i Nāṣiriya* (manuscript history of Persian Kurdistan written in 1309 A. H.).

(V. MINORSKY)

SAKŠİN, a place on the Dnieper (according to Ibn Sa'īd, quoted in Abu 'l-Fidā', *Taḳwīm al-Buldān*, ed. Reinaud and de Slane, p. 205), also located on other rivers e. g. on the Jaik (cf. Dorn, *Caspia*, p. 116) and on the Volga (according to Westberg; cf. Marquart, *Ost-türkische Dialektstudien*, p. 56). It is situated in 67° E. Long. and 53° N. Lat.; a town *ساقسن*, without *yā'*, is said to exist in 162° 30' E. Long. and 40° 50' N. Lat., but this must be another place. East of Sakšīn lies the town of *سوسو* (v. l. *سوسو*)

which belongs to the territory of Sakšīn (Abu 'l-Fidā', *op. cit.*, p. 202). According to Yāqūt, *Mu'djam*, iv. 670, the fortress of *Manḳashlāgh* is between *Khwārizm* and Sakšīn and the lands of the *Rūs* near the sea of *Tabaristān* (Caspian Sea). Further information is given in *Ḥamdallāh Mustawfī* (cf. *The Geographical Part of the Nuṣḥat al-Qulūb*, ed. G. Le Strange, Gibb Mem. Series, xxiii.): Sakšīn and *Bulghār* (this combination is frequent in other authors also) are in 32° = 750 farsangs distant from *Mekka* (text, p. 10; transl., p. 10); the eastern frontier of *Irān*, which begins in *Sindh*, runs to the frontier of Sakšīn and *Bulghār* (p. 21 = 23 of the transl.); *Khwārizm*, Sakšīn and *Bulghār* are east of the *Caspian Sea* (p. 239 and 231); Sakšīn and *Bulghār* are two small towns in the sixth clime; much land belongs to them and they export furs (p. 259 and 252). *Al-Yazdādī* in *Ibn Isfandiyyār* (Gibb Mem. Series, ii. 33 sq.) says that in his time *Āmul* was the market for the wares of Sakšīn. Merchants from the *Irāk*, *Syria*, *Khōrāsān* and *India* came to *Āmul* to purchase there. The voyage by boat from *Āmul* to Sakšīn took three months but the return journey only one week because the former was up stream and the latter down. *Ibn Isfandiyyār* wrote probably at the beginning of the xiiith century. We see that there is no agreement regarding the situation of the place: on the one hand it is said to be on the Dnieper and on the other east of the *Caspian Sea*; while Yāqūt seems to place it among the *Rūs*, al-*Qazwīnī* in *Āthār al-Bilād*, ed. Wüstenfeld, ii. 402 sq., calls it a town of the *Khazars*; he says it is large (contrary to *Mustawfī*), inhabited by 40 tribes of the *Ghuzz*, with a large number of strangers and merchants in addition. The climate is cold, the inhabitants are Muslims, for the most

part Ḥanafīs, although there are also some Shāf'īs. The houses are covered with roofs of pine-wood. The river of Sakşin is larger than the Tigris and rich in fish of a kind only found there, which are sold at the rate of 100 *mann* for a half *dānaḳ*: these fishes yield train-oil and isinglass. The currency there is lead, of which three Baghdad *mann* = 1 *dīnār*. Sheep cost $\frac{1}{2}$ *dānaḳ* each, rams $\frac{1}{4}$ (*fassūḡī*); there is also much fruit. Al-Ḡharnāṭī relates that the river is frozen in winter and can be crossed on foot. So far al-Ḳazwīnī's account of the place, an excerpt of which is given by al-Bākuwī, a geographer of the fifteenth century (quoted by d'Ohsson, *Hist. des Mongols*, i. 346, note 1); but al-Bākuwī adds that in his time the town no longer existed (*op. cit.*: "Sacassin est à présent submergée; il n'en reste aucunes traces; mais près de là existe maintenant une autre ville, le Séraï de Barca, résidence du souverain de cette contrée").

In the history of the Mongol period Sakşin is several times mentioned: conquered by Čingiz Khān (*Ta'rikh-i Gusiḍa*, Gibb Mem. Series, vol. xiv., part i. 572; cf. Yāqūt, *Mu'djam*, i. 255), it belonged to the territory of Tūshī, his eldest son (*Ta'rikh-i Djahāngushā*, Gibb Mem. Series, vol. xvi., part i. 31; *Ta'rikh-i Gusiḍa*, i. 375). Ögotai shortly after his accession sent an army to Kıpčāk, Sakşin and Bulghār (*Ta'rikh-i Djahāngushā*, i. 150); the *Djānib-i Sakşin wa-Bulghār* is mentioned as Bātū's territory (*ibid.*, i. 205). The descendants of Khān Barkah (d. 1626 A.D.; Abu 'l-Fidā', *op. cit.*, p. 205) afterwards lived there. We have already seen that it no longer existed in the fifteenth century. The "Serai of Barca", mentioned in al-Bākuwī in connection with it, is probably called after the reigning family. The combination *Sakşin-i Rūm* is found in a Persian poem, which the rebel Atsız sent to king Sandjar (*Ta'rikh-i Gusiḍa*, i. 488).

The name Sakşin may — at least in European sources — also denote the inhabitants of the place. This is perhaps the case with the *Saxi* in Joannes de Plano Carpini, vii. 3, although the Mongols could not conquer them according to this writer, which is contradictory to the Persian sources. In the passage from a Russian Chronicle which is quoted by Dorn, *Caspia*, p. 21 in the note — here also there is a reference to the Mongol wars — we find *Saksini* alongside of *Polowci* as the name of a people.

(V. F. BÜCHNER)

SĀL (P.), a year, a word also used by the Turks. It is normally the time that elapses between two successive passages of the vernal equinox by the sun, the astronomical year; but the word is also used to designate anniversaries of births, of arrivals, etc. Solar, lunar, astronomical and civil years are distinguished; the civil year is 365

days, the astronomical year 365 days, 5 hours, 49' (Handjéry).

SĀL-NAME (P. and T.), literally: year-book, annual, almanac, calendar; the term *rūs-nāme* from *rūs* "day" is also used; the Arabic word for calendar is *taqwīm*. The Turks make great use of tables whether annual or perpetual; the latter cover a period of 80 to 85 years; they are in the form of little rolls or tiny volumes usually written with great care and in ink of several colours. They give the year in the eras of Alexander, of Christ, of Diocletian and in the Djalālī era, the era of the Saldjūḳ Sultān Malik Shāh, the name of the year in the Turco-Mongol animal cycle, a horoscopic table, the Muslim, Jewish, Christian and Persian feasts, the correspondence with the Syrian months, astronomical and meteorological predictions, the dates at which the principal agricultural operations should be performed, as well as other operations. The *Mu'adhdhins* use tables called *zīj* or *taqwīm* to know the canonical hours and the new moons. M. d'Ohsson quotes a highly esteemed calendar from the xviiith century A.D. made in Turkey by Dārendewī which covered the period 1192—1277 A.H. *Sāl-nāme* is also the name of the official annuals (gazetteers) of the Ottoman Empire.

SALĀ, in dialect Slā (ethnic *Salāwī*, dial. Slāwī), or, following the official French orthography commonly used, Salé, the English Salé, Saleh or Salee, is a town in Morocco on the Atlantic coast at the mouth of and on the north bank of the river Bū Ragrāg. On the other bank just opposite stands Rabāṭ. The estuary of the river serves as the harbour of the two towns. Salé, the less important, has about 20,000 inhabitants of whom 2,000 are Jews.

The name is ancient, but the Punic Sala and the Roman Sala Colonia did not stand on the same site; the remains of the Roman Sala can still be seen near the modern Shāla (Chella), a few miles up the river and on the other bank. It is not till the Idrisid period (ixth century) that the new Salā (Salé) first appears, distinct from old Sala (Chella) then in ruins. At the beginning of the xth century it was the capital of a little Ifrānīd kingdom, which fought with the Barghawāta [q.v.], heretics settled to the south of the Bū Ragrāg. There was already at this time a ribāṭ built against these heretics on the south bank, where Ribāṭ al-Faṭḥ was afterwards built (Ibn Hawkal). In the middle of the xith century, Salā, if we may believe al-Idrisī, was a fine and strong town with rich bazaars, a harbour frequented by Spanish ships, which brought oil in exchange for foodstuffs; entrance into the river was already very difficult.

The building of Rabāṭ by the Almoḥads opposite Salé does not seem to have done much harm to the latter. It is from this period that the great mosque dates and Salé remained prosperous while Rabāṭ declined after the death of Ya'qūb al-Manṣūr. It fell into the power of the Marinids in 649/1251 and after several vicissitudes Ya'qūb b. 'Abd Allāh, a member of the reigning family of the Marinids, declared himself independent there. The

Christians from Spain entered it by surprise in 658/1260. The Sulṭān Abū Yūsuf Ya'qūb the Marinid drove them out again after a few days, closed its ramparts and built the Sea-Gate still visible to-day. The Marinid sovereigns on several occasions mobilised on the left bank of the Bū Ragrāg the troops intended for the holy war, had an arsenal at Salé where ships were built, and beautified the town. We may specially note the beautiful madrasa built by Abū 'l-Ḥasan. A little later, Ibn al-Khaṭīb spent several years there and wrote of its charm.

In the course of the great wars waged by the Spaniards and Portuguese in the xvth and xvth centuries, Salé was one of the few points on the Moroccan coast where they could not gain a footing. In the beginning of the seventeenth century when expelled by the edicts of Philip III (1609) the Spanish Moors took Rabāt; Salé, slipping from the rule of the Sherifs, became independent under the Mudjahid al-'Aiyāshī in 1627. It became his base for attacking al-Mamora (al-Madhiya) which was held by the Spaniards. Salé played a part in the feuds which divided the town and ḡaṣba of Rabāt, then fought unsuccessfully against one and the other, until when al-'Aiyāshī was killed and the three towns fell into the hands of the Marabouts of Dila' (1641). Salé recognised the authority of Ḥailān (1660) and after the defeat of the latter by al-Rashid became finally incorporated in the lands of the Filali dynasty in 1666.

This disturbed century was also the age of piracy. The Corsairs of Salé were famous; but under the name of Salé at this period the Europeans comprised the three towns and the pirates in reality almost all came from the Ḡaṣba of Rabāt and from Rabāt. These three towns, strange as it may appear, formed at the same time the principal commercial port of Morocco. Down to the end of the xviiith century this was the usual route by which travellers and merchandise from Europe went to Fās and it was on several occasions the residence of diplomatic representatives of the Christian powers.

As compared with Rabāt, the administrative capital of Morocco, Salé is now a quiet little town where many scholars live. It is also a market for the tribes who live on the north bank of the Bū Ragrāg.

SALADIN, AL-MALIK AL-NĀSIR ṢALĀḤ AL-DĪN YŪSUF I, was the son of the Amīr Nadjm al-Dīn Aiyūb (see AIYŪBIDS), born in Takrit in 532 (1138). His father moved shortly — according to others a few years — after his birth to Syria and was

appointed governor of Ba'albek by Zangī [q. v.] and remained on there (with one third of the town and its appanages as a fief) after the Būrid Atābeg Abaḡ [see BŪRIDS] had seized the town. Saladin and his brothers were brought up there. When 17 years old he came with his father to the court of Nūr al-Dīn when the latter had captured Damascus in 549 (1154) (on the occupation of Ba'albek and Damascus see the introduction to *Baalbek in islamischer Zeit* in vol. iii. of *Baalbek, Ergebnisse der Ausgrabungen und Untersuchungen in den Jahren 1899—1905*, Berlin 1925). It is remarkable how little is known regarding Saladin's youth and education; he played no part at the court of Nūr al-Dīn; the Amīr Usāma, who lived there, did not even know him, as we see from his biography. He first came into the public eye when in 559 (1164) "in spite of his reluctance" (as Abū Ṣhāma reports without giving any reasons) Shīrkūh [q. v.] took him with him on his first campaign against Egypt. Shāwar, the vizier of the Caliph al-'Adīd [q. v.], had been displaced by a rival, Dīrghām [q. v.], and had applied for assistance to Nūr al-Dīn, Atābeg of Syria. He promised the latter a third of the revenues of Egypt, while Dīrghām had asked king Amaury I of Jerusalem for support and had promised him a vast tribute. Dīrghām was defeated and slain before Amaury could give him any assistance, and Shāwar restored to the vizierate. As the latter did not fulfil his promises, Shīrkūh, to gain his dues, ordered Saladin to occupy Bilbā'is [see BILBĪS] and the district and collect the taxes there. Fierce fighting was the result. Shāwar, finding himself in a tight corner, called in king Amaury to help him, so that Shīrkūh and Saladin were forced to entrench themselves in Bilbā'is. The town was so well defended by the two that Shāwar and Amaury could not take it. While this was going on, Nūr al-Dīn captured the important fortress of Ḥārim and advanced on Bāniyās so that Amaury was now forced to retire to Syria in order to prevent Nūr al-Dīn from making further captures. He had agreed with Shīrkūh that the latter should withdraw from Egypt and leave Shāwar in possession. Shīrkūh arrived in Syria with Saladin in the beginning of 560 (towards the end of 1164) with his forces intact. The main result of the campaign was that it gave Nūr al-Dīn and his men a clear idea of Egypt, its wealth and relative strength. Shīrkūh was attracted by the idea of conquering the land and settling there but Nūr al-Dīn did not wish to split up his forces in view of the war with the Crusaders. It was only three years later when Shāwar made a new alliance with Amaury that Shīrkūh received orders to begin a second campaign against Egypt and again he took Saladin with him (October 1168) "in spite of his reluctance at first". His first objective was the occupation of the bank of the Nile; after overcoming the difficulties of the march and eluding the Franks he reached the south of Cairo and built a fortified camp near Dītze; very soon afterwards, Amaury arrived with his troops and encamped opposite him at al-Fuṣṭāt. At the same time he concluded an agreement regarding subsidies with the Caliph himself. Amaury then attacked Shīrkūh and forced him to retreat to Upper Egypt. At Babān he forced Shīrkūh to make a stand and the latter, after some hesitation, gave battle on the advice of Saladin and some of the Amīrs; he succeeded in beating Amaury, while

Saladin put to flight the Caliph's troops. *Shīrkūh* was not in a position to follow up this victory; he retired with Saladin to Alexandria and left the latter there with half his army while he himself went to Upper Egypt to collect tribute. This was Saladin's first independent command. Amaury advanced on Alexandria with his own and the Egyptian forces, while the fleet of the Crusaders watched the coast. Saladin had difficulty in holding the town against the Franks, who put up huge siege artillery, and therefore called upon *Shīrkūh* for assistance. The latter returned by forced marches and never pitched his camp until he was before Cairo. He then entered into negotiations with Amaury for peace which was concluded in the middle of *Shawwāl*, 562 (beginning of August, 1167); he bound himself to return to Syria with Saladin, prisoners were exchanged, Saladin was received hospitably in Amaury's camp and the Christians visited Alexandria. Both sides claimed the victory; Amaury left a garrison in Cairo as well as an office for the collection of his tribute. The fear of *Nūr al-Dīn*'s successes may have been the main reason for the conclusion of the treaty. Amaury did not keep the peace. His advisers induced him to invade Egypt only 14 months later and his garrisons in Alexandria and Cairo advised him to take possession of Egypt definitely. He therefore advanced on *Bilbā'īs*, took the town on *Muharram* 29, 564 (Nov. 2, 1168) and had nearly all its inhabitants put to death. This act of barbarity estranged the Egyptians from him. He next marched against Cairo. To protect the town the vizier *Shāwar* had the suburb of *al-Fuṣṭāṭ* (cf. above i. 817 *sqq.*) set on fire. It is said to have burned for 54 days and the smoke which it raised prevented Amaury from besieging Cairo from an advantageous position. The Caliph had with all speed sent messengers for assistance to *Nūr al-Dīn*, while *Shāwar* negotiated with Amaury. *Nūr al-Dīn* sent *Shīrkūh* and with him Saladin, who was still impressed by the sufferings during the siege of Alexandria and only with reluctance decided to go. He was supplied with men, horses and arms. Amaury sought in vain to intercept *Shīrkūh* and on *Rabī' II* 1, 564 (Jan. 2, 1169) he began his retreat; a few days later *Shīrkūh* appeared before Cairo and was hailed as a rescuer; *Shāwar*, however, remained hostile to him and plotted to take him and his Amīrs prisoners on the occasion of a feast. When *Shīrkūh* and his men learned of this treachery, Saladin decided to get rid of him. He seized *Shāwar* when riding in the vicinity of Cairo and had him executed. The Caliph, delighted at being freed from his tyrannical vizier, appointed *Shīrkūh* his successor on *Rabī' II* 17, 564 (Jan. 18, 1169). But *Shīrkūh* died only two months later and the Caliph, who thought that Saladin, owing to his good nature, would be a complacent servant, appointed him vizier with the title "*al-Malik al-Nāṣir*" (March, 26 = *Djumādā II*, 25). In a letter of congratulation *Nūr al-Dīn* recognised him as commander of the Syrian troops. Henceforth the greatness of Saladin is revealed. The power, that had become his through favourable circumstances, found a highly gifted man who knew how to use it. If he had hitherto hesitated to devote his life to warfare, so that *Nūr al-Dīn* had almost to force him to take part in the campaigns against Egypt, if he had hitherto cared for nothing so much as theological discussions and appeared in public as little as

possible, as we saw, and had even indulged in forbidden wine, all this either ceased (like wine-drinking) or (like the theological discussions) was only exercised as a pastime in hours of recreation. His path lay clearly marked before him: to secure power for himself and his family, to put down the *Shīf'a* and to fight the Crusaders to the utmost. He was able to attain these aims to a great degree, because, quite apart from his own ability and valour, the ground was prepared for him. But for the previous work of *Nūr al-Dīn*, and the diplomatic ability of his father *Aiyūb*, but for the decline of the *Fāṭimid* Caliphs and the sluggishness of the Egyptian people, but for the internal feuds of the Crusaders, he could never have achieved the great successes of his life to the same extent, in view of the initial lack of unity among the Muslim rulers. He was a politician rather than a general, amenable to the advice of capable advisers, clever and fortunate in the choice of his colleagues, without ever allowing power to leave his own hands. Two men of learning, *al-Qāḍī al-Fāḍil* [q. v.] and later *Imād al-Dīn al-Kātib al-Isfahānī* [q. v.], both noted for the style and grace of their correspondence, conducted his cabinet as viziers and were in constant correspondence with the highest officials and with rulers who were Saladin's friends. The number of Saladin's letters and the fulness of the political reports contained in them is overwhelming. At a later date, from 584 (1188), the *Qāḍī Ibn Shaddād* [q. v.], his biographer, entered his service as private secretary.

In Egypt, Saladin took a firm grasp of the reins of government and aroused the enmity of the black guards (Nubians and Abyssinians) who had been brought to Cairo as mercenaries, had risen to power under the weak Caliphs and filled influential positions at court and in the government. They were joined by all, who, being ardent *Shīf'īs*, were predisposed to be dissatisfied with Saladin as a *Sunnī*. The Caliph's major-domo sent to king Amaury for help; but as the messenger was captured, the plan fell through. The eunuch was executed and the Caliph's palace placed under the protection of men who could be relied upon. The negro guards thereupon mutinied in Cairo and Saladin to overcome them had their quarters burned down. They escaped to *Djīze* and were there wiped out by Saladin's troops. The Franks, who could not reconcile themselves to his rule, as they with good reason regarded it as a threat to Jerusalem, had sent envoys urgently begging for assistance to France, Germany, England, the Byzantine Emperor and the Pope and had succeeded in getting a fleet with troops sent from Constantinople and an auxiliary force from South Italy. The Byzantines and the Franks decided by mutual agreement to capture *Damietta* [q. v.] first and then to march on Cairo. Saladin sought assistance from *Nūr al-Dīn*, as he had to defend himself on one side against the Franks and Byzantines, on the other possibly against the always turbulent Egyptians. He also asked that the reinforcements should be sent under the command of his father, just as he had already called other members of his family to his side in Cairo. The successes of the Franks and Byzantines would perhaps have been greater if the siege had not been too far prolonged by the energy of the defenders. The Byzantine army began to suffer from shortness of commissariat and Amaury, doubting if he could gain a complete victory, preferred to

negotiate with Saladin and to conclude peace for a considerable sum of money. Envy and fear may have worked together upon him. In the meanwhile Nūr al-Dīn had invaded the Ḥawrān [q. v.] and prepared himself against the counter-attacks of the Franks, but a terrible earthquake in the summer of 565 (1170) which wrought tremendous devastation in the Syrian cities forced Franks and Muslims alike to lay down their arms and take up the task of rebuilding the shattered cities. In the following year (566) Saladin made a raid into Palestine and advanced as far as Ramla and 'Askalān [q. v.], then retired to Egypt to prepare for the taking of the port of Aila [q. v.] on the Red Sea and gradually to secure communications between Egypt and Palestine; in the same year he succeeded in taking Aila. In the next year (567) he fulfilled Nūr al-Dīn's desire by omitting the mention of the Fātimid Caliph in the Friday *ṣalāt* and continuing to name the 'Abbāsīd Caliph. Soon afterwards the Caliph al-'Ādīd died, whether of a natural death is uncertain; Christian writers say that he either committed suicide or was put to death by Saladin's brother, Tūrān Shāh, by the former's orders. Nūr al-Dīn is said to have been very pleased at the end of Fātimid rule. When the news of the extension of his territory was conveyed to the 'Abbāsīd Caliph he sent robes of honour to Nūr al-Dīn but not those befitting the latter's position (as a suzerain), so that, although he did put them on, he immediately sent them on by the Caliph's envoy to Saladin.

The relations between Saladin and Nūr al-Dīn were soon to become clouded. Saladin in Cairo was too independent for him; his father and his brothers were with him so that Nūr al-Dīn had no hostages in his power. When Saladin wanted to take up his scheme for securing the communications between Egypt and Palestine, he proposed to Nūr al-Dīn to besiege Shawbak and Kerak [q. v.] and set out to do so; but when Nūr al-Dīn departed for Kerak Saladin was advised by his Amīrs not to go to him as they feared for his safety. Taking their advice, he turned back and excused himself by pleading the unsettled condition of Egypt. Nūr al-Dīn was furious at this and collected troops against Saladin. When this became known at Saladin's court, a section of his Amīrs advised him to fight, but his father, who feared the great prestige of Nūr al-Dīn, advised him to write a submissive letter so that tolerable conditions were once more restored. But their mutual mistrust was not overcome, so that the two cities mentioned (Kerak and Shawbak) were not captured, nor did Saladin at this time support his suzerain against the Crusaders to the best of his ability. In the next year Saladin went to Kerak, but withdrew again, pleading his father's illness, when Nūr al-Dīn approached. In this difficult situation Saladin resolved to create a position of security for himself and his family in a way which would satisfy Nūr al-Dīn. In 569 (1173/4) he sent his brother Tūrān Shāh against the sectarian 'Abd al-Nabī, who had taken possession of the Yemen. Tūrān Shāh succeeded in driving him out and conquering the Yemen. He had himself mentioned in the *khutba* as ruler next to the Caliph and sent messengers to Saladin, who in turn notified Nūr al-Dīn and the Caliph. Nevertheless Saladin's position was still threatened, especially as he had again to face a rising in the spring of this year. Nūr al-Dīn now decided to take the field against him, especially as it vexed

him that the strength of the Crusaders was increased because Saladin held back. He had already collected an army (see AL-MALIK AL-ṢĀLIḤ, the Zangid) when he was attacked by a severe illness in Damascus and died in a few days on the 11th of Shawwāl (May 15). Saladin was thus relieved of a great anxiety and was now free to develop his power. He then recognised Nūr al-Dīn's eleven-year-old son al-Malik al-Ṣāliḥ Ismā'il (see AL-MALIK AL-ṢĀLIḤ, the Zangid) and devoted himself to fighting the Normans of Sicily, who had appeared before Alexandria with a strong fleet at the end of the year 569 (1173/4). They landed their crews but within three days they were defeated and for the most part killed with the help of troops sent to reinforce the strong garrison. Saladin captured enormous booty. King Amaury also had died shortly before, so that Saladin was left secure in possession of vast power and could devote himself entirely to the object of his life, the struggle with the Crusaders. He began by turning his attention to Syria, to which he was summoned by the Amīrs in Damascus in 570 (1174). He found the position there unsatisfactory in as much as there was no single guiding will among the Muslims. He rightly considered it, as Nūr al-Dīn had done before him in a similar situation (see BŪRIDIS), absolutely necessary to gain the real power in Syria, even if for the time being it was as vassal of Ṣāliḥ Ismā'il, whose guardian he endeavoured to become. Things went against him at first when he took the field against Ismā'il's Amīrs from whom he claimed to be going to liberate Ismā'il. Aleppo itself resisted him as did Ḥamā, Ḥims and Ba'albek. Ismā'il's uncle al-Ghāzī came from Mesopotamia with a large army so that Saladin was ready to make a peace favourable to Ṣāliḥ Ismā'il. As his conditions were not accepted, Saladin found himself forced to fight. He declared himself independent and dropped Ṣāliḥ Ismā'il's name from the *khutba*. The decision was in his favour, for the enemy were completely defeated at Qurūn Ḥamā. Saladin behaved with great moderation: he left Ṣāliḥ Ismā'il, who seemed quite harmless to him, in possession of Aleppo and gave Ḥamā, Ḥims and Ba'albek, which surrendered to him without a blow, to relatives as fiefs. Then, in Dhū 'l-Kā'da, 570 = May, 1175) he was, at his own request, granted by the Caliph rule (*bi 'l-saltāna*) over Egypt, Nubia, the Yemen, the Maghrib from Egypt to Tripolis, Palestine and Central Syria and henceforth considered himself as *Sulṭān*, as Abu 'l-Fidā' expressly mentions, and was also regarded as such by his contemporaries. He did not, however, adopt the title as such; he calls himself *Sulṭān al-Islām wa 'l-Muslīmīn*. A last attempt by the Zangid party to overthrow Saladin ended after several battles and a third siege of Aleppo with a peace towards the end of 571 (end of June, 1176) by which Saladin was finally left in possession of the lands conquered by him. He next besieged in his citadel an ally of Ismā'il's, the so-called Old Man of the Mountain, the Shaikh Sinān of the Assassins [q. v.] in Masayad, who had sent his Assassins against him several times; but he could not take it as the fanatical Assassins defended it vigorously. He raised the siege and received from Sinān a promise that he would not attack him again. This danger also was thus disposed of and Saladin returned to Egypt.

He considered the building of the Citadel, which

he began in this year, a very important task in Cairo (see the art. CAIRO, i. 824 *sqq.*). In Djumādā I, 573 (November, 1177) he suddenly made a rapid march into Palestine and laid waste the country round Gaza and Ascalon. King Baldwin IV opposed him but had to withdraw in face of Saladin's apparent superiority. Saladin's troops thereupon dispersed to plunder the country while Baldwin collected the Templars and many Knights under the leadership of Raynald of Kerak and again appeared upon the scene. Saladin had first of all to collect his numerous forces. The armies met to the south of Ramla. The Knights distinguished themselves by great bravery so that Saladin suffered an annihilating defeat on the 1st of Djumādā II, 573 (1177) in spite of his superiority. The victory was so surprising that the Crusaders ascribed it to a miracle. Saladin himself is said narrowly to have escaped capture; his nephew, other leaders and learned men of his retinue were taken prisoners. A great thanksgiving was held in Jerusalem in honour of the victory. One consequence of this defeat was that in the next year (574 = 1178) King Baldwin built a fortress at the Banāt Ya'qūb bridge over the Jordan, which gave him control over the river Jordan and the plain as far as Bāniyās, without Saladin being able to prevent him. Saladin, who had in vain offered the king an indemnity of 100,000 dīnārs if he would leave off building, had to attack this fortress. He sent his ablest general, 'Izz al-Dīn Farukh-Shāh, his nephew, against Baldwin, who suffered a reverse at the end of 574 (May, 1179). A year later, Saladin succeeded in inflicting a severe defeat upon him at Mardj 'Ayūn on Muḥarram 2, 575 (June 10, 1179); a large number of distinguished Franks were captured. Two months later Saladin took the fortress at Jacob's Ford and levelled it to the ground. The next year brought no fighting on a large scale. In Muḥarram, 576 (June, 1180) Baldwin concluded a two years' truce with Saladin. Next year Nūr al-Dīn's son, Ismā'īl of Aleppo, died. His successor, in keeping with his dying wish, was his cousin 'Izz al-Dīn Mas'ūd, a capable soldier, who, however, exchanged Aleppo for Sindjār with his brother Zangī II to obtain a consolidated dominion. In the meanwhile war had broken out between Saladin and the Franks as a result of the continued raids made by Raynald de Châtillon, prince of Kerak, on caravans going to Egypt. Zangī II, on the other hand, made peace with the Franks. Saladin, however, endeavoured to obtain sole control of the Muslim lands and used the next few years to conquer the rest of Syria (Aleppo), in Šafar, 579 (June, 1183), and to gain the suzerainty of Mesopotamia by occupying the most important towns and restoring them as fiefs. While there was no lasting peace with the Crusaders, fighting on a large scale was avoided by both sides and in the same year a four years' peace was concluded between Baldwin V, guardian of Raymond III of Tripolis, and Saladin. Soon afterwards Baldwin V died and his successor, Guy de Lusignan, ascended the throne in the following year in spite of Raymond's objections. Peace was again disturbed by Raynald de Châtillon, who from Kerak fell upon a large caravan and refused to give any satisfaction or compensation. Saladin was exceedingly angry and at the end of 582 (Feb., 1187) invaded the region of Kerak and

summoned his Egyptian troops to protect the pilgrims returning from Mekka, while his Syrian troops concentrated at Hārim. The Crusaders recognised the terrible danger. Guy made peace with Raymond, troops arrived from all sides so that Guy was able to collect an army of 20,000 men and take up a position in Šaffūriya. On Rabi' II 17, 583 (June 26, 1187) Saladin arrived south of Lake Genezareth and captured the town of Tiberias after six days' siege; the citadel alone held out. Raymond in vain warned the Crusaders against leaving their well sheltered position with its ample water supply during the frightful heat. His enemies, who believed that he had come to an arrangement with Saladin, advised the king to attack the Sultān. He ordered an advance to be made towards Tiberias and encamped the night at Ḥaṭṭīn [q. v.] where the army did not even find sufficient water. In spite of very great bravery the Crusaders were completely defeated, the king and a considerable number of his Knights captured. While Saladin gave the king a friendly reception, he slew with his own hand Raynald, the disturber of the peace, and had all the Templars and Knights of St. John executed by his Amirs and Kādīs. Just as the battle of Qurūn Ḥamā had secured him rule over Syria, the decisive battle of Ḥaṭṭīn gave him Palestine with Jerusalem. The fortress of Tiberias, Nazareth, Samaria, Sidon, Beirut, Batrūn, 'Akkā [q. v.], Ramla, Gaza and Hebron fell. He then advanced on Jerusalem and took Bethlehem, Bethania and the Mount of Olives in Raddj, 583 (Sept., 1187). Saladin first of all encamped to the west of the town, the inhabitants of which defended themselves bravely; but when he attacked the city from a more favourable position in the north and used the catapults and ballistas it had to capitulate at the end of the month. People of means were able to ransom themselves; those who could not pay were sold into slavery but several thousands were released on the intercession of Muslim and Christian persons of standing as were a large number of the poor by Saladin himself. Only a few sick people were allowed to stay as well as those who pledged themselves to pay a poll-tax. Everything associated with the Christian religion was destroyed, the Kubbāt al-Šakhra (Dome of the Rock) and the Aḳṣā mosque were restored and hospitals and schools built in memory of the great event; numerous Aiyūbid princes increased the splendour of these days by their presence and their rich foundations. It may be said that the whole of Islām joined in celebrating the capture of Jerusalem, which had been so ardently desired. The consequence of this victory was that Saladin gained possession of the cities and fortresses still Christian by force or by capitulation; only Antioch, Tripolis, Tyre and a number of smaller towns and castles remained in possession of the Christians. The remainder of the year was unfortunate for Saladin; he made the mistake of giving his weak, overtired army no time to recuperate but went on to besiege Tyre. Here he suffered a severe reverse owing to the brave defence of the garrison and his mishaps at sea. 'Akkā was rebuilt and fortified for him after long consultations by his Amīr Qarakūsh [q. v.], who had already proved his worth by building the citadel of Cairo. Saladin, after a futile attempt to take Kawkab, then went to Damascus and in Rabi' II, 584 (June, 1188) he summoned the

Muslim princes of Syria and Mesopotamia with their troops for a new campaign. In the course of the fighting that followed Lādhiqiya, Djabala [q. v.], Şahyūn, Sarmīn and Burziya were captured and a seven months' truce was concluded with Bohemund III of Antioch. Saladin on the 1st of Ramadān of the same year returned to Damascus and dismissed his allies from Mesopotamia but kept his own forces under arms in order to conquer Şafad [q. v.], Kawkāb, Kerak and Shawbak. This campaign was long but successful and ended on the 1st of Dhu 'l-Ka'da, 585 (Dec. 11, 1189) with the capture of all these places.

On learning of the capture of Jerusalem Gregory VIII proclaimed a Crusade and after his death Clement III continued his efforts. All hostilities between European rulers ceased and steps were taken to secure a rapprochement between Philip II of France and Richard I of England. The first reinforcement sent by the new Crusaders was a fleet despatched by William of Sicily, which relieved Tripolis and henceforth formed a support for the Palestine seaports. Gradually larger and smaller bodies set out from Europe for the Holy Land and all landed in Tyre. The Emperor Frederick I undertook a Crusade with numerous, well equipped troops; he went via Constantinople after he had in vain challenged Saladin to hand over Jerusalem. The Emperor Isaac of Constantinople, who had made an alliance with Saladin which proved ineffective, could not prevent his passage. The Franks, reinforced by the continued new arrivals, began the siege of 'Akkā on Radjab 14, 585 (Aug. 28, 1189), which is considered one of the greatest military operations of the Middle Ages. King Guy de Lusignan and the Count of Montferrat, who had been taken prisoners at the taking of Jerusalem, had been released by Saladin at the request of Queen Sibyl as early as Djumādā I, 584 (July, 1188) on pledging themselves not to fight again against him; after having been released from their oath by the patriarch, they began the siege of 'Akkā relying on the help of Frederick I of Germany, Richard I of England and Philip II of France and supported at first by continual arrivals of Crusaders from many countries of Europe. Saladin's energy was now revealed in its fullest development and in this several years' struggle the Crusaders learned to know and appreciate the great Sultān.

King Guy led the Franks up to 'Akkā after two months' preparations and Saladin arrived next day. The struggle for the city was waged by land and sea. The Crusaders had the advantage that the garrison was almost always cut off from the sea and suffered from lack of food. Besides, although the Crusaders at 'Akkā were joined by only very few German Knights owing to the death of Frederick I, they were given a decided superiority over the Saracens by the arrival of the army of Philip and more particularly that of Richard I and by the regular arrivals of ships with food and soldiers. They also had very fine siege artillery while the Muslims on their side had very clever artificers to make their fire-bombs. Saladin had the advantage of the single command, although his army was weakened by the long years of war so that even the relief of the garrison in 'Akkā could not be of much avail to him and his own army finally mutinied. The Crusaders were hampered by their quarrels with one another and the rivalries

of King Guy and the Count of Montferrat as well as those of Richard and Philip. The succeeding years were full of fighting by land and sea. Saladin in vain endeavoured to get new forces from the East through the intervention of the Caliph. On the 7th of Djumādā II, 587 (July 12, 1191) the garrison capitulated of its own accord without waiting for Saladin's decision. The fortress and all the prisoners in it were to be handed over and the garrison released on payment of 200,000 pieces of gold. When the money had not been paid at the end of a month, Richard had 3,000 prisoners put to death. This cruel deed, which was condemned by Christian chroniclers also, resulted in all the Christian prisoners in the hands of the Muslims being slaughtered. Richard soon afterwards captured Kaisāriya [q. v.] and fortified Jaffa, while Saladin destroyed the fortress of Ramla. Negotiations for peace henceforth went on almost without interruption between the two combatant parties; the principal agent in them was Saladin's brother, al-Malik al-'Adil. The principal demands were the cession of Jerusalem and the surrender of the Holy Cross; Richard, who was full of romantic ideas, afterwards proposed that his sister should marry 'Adil, who was to rule over Jerusalem; he followed a policy of reconciliation which gradually led to peace. He knighted al-Malik al-Kāmil [q. v.], 'Adil's son. After several more battles peace was concluded on Sha'bān 23, 588 (Nov. 2, 1192). Lydda and Ramla were divided, Ascalon razed to the ground and the Crusaders allowed to make pilgrimage to the Holy Places unarmed. The main cause of the conclusion of peace on Richard's side was his illness and his desire to return to England, as well as the cessation of reinforcements from Europe. In spite of the exertions of the whole of Europe the greater part of Palestine had become Muslim under Saladin, except for the strip along the coast, and communication between Palestine and Egypt secured; Saladin was on friendly terms with Bohemund of Antioch. Saladin was able to enjoy peace during the few months that he still had to live; he strengthened Jerusalem, then went leisurely to Damascus, where he was welcomed with rejoicings by the people towards the end of Dhu 'l-Ka'da (end of November). He spent the winter there with his family; he fell ill in Şafar, 589 (February, 1193) and died 14 days later at the age of 55. His eldest son received Damascus, his second Aleppo, another Egypt and his brother 'Adil North Arabia and Mesopotamia. The unity of his dominion disappeared within a few years after his death. It is not likely that, even if he had lived longer, he could have induced his family to come to an intelligent arrangement. During his lifetime, however, he hardly ever had to fight against one of his own family. His authority, based on his ability, kindness and piety, could not be assailed. Covetousness was remote from his character; twice — at the death of the Fātimid Caliph al-'Āqid and at the death of the Atābeg Nūr al-Dīn — he had an opportunity to acquire great wealth. He distributed the Caliph's treasures to his troops and retainers and did not touch Nūr al-Dīn's wealth but gave it to his son. He was fanatical against the Crusaders as a body but not as individuals and not against the subjected Christians of his empire, although when he came to the throne he at first enforced more strictly the regulations regarding dress for Christians and Jews. He followed

the same course as Nūr al-Dīn and may (see the art. AİYŪBIDS) be claimed as a champion of the Sunnī reaction against Shī'ī (Persian) fashion in architecture, style and writing of official documents. In the last years of his reign the personal relations between Muslims and Christians were good; it appears that some Muslims were actually knighted by Richard, e.g. al-Malik al-Kāmil, son of al-Malik al-'Adil. Saladin was beloved and respected by his people and with Sultān Baibars [q. v.] and Hārūn al-Rashīd [q. v.] is to this day the most popular figure in the East. In Europe he is considered the pattern of chivalry and, as a matter of fact, he never was unnecessarily cruel but was often magnanimous in releasing prisoners and bestowing gifts (e.g. the citadel of 'Azāz to the young sister of al-Shāh Ismā'īl, several villages to Bohemund of Antioch after the peace with Richard I). The Arabs have with only one exception (a chapter in the romance of Baibars) not given Saladin a place in ballad or romance, whereas very soon after his death he touched the fancy of English minstrels in connection with Richard, although they depicted him in an unfavourable light; in the poetry of the French and Italians he is described more favourably. Modern novelists like Scott in his *Talisman* and Lessing in his *Nathan der Weise* have introduced him into their works; to the former he is a vigorous Oriental ruler while the latter depicts him with as fine feelings as a European. He was a friend of theological learning, a patron of scholars and a builder on a grand scale as he showed in the Citadel of Cairo and in the restoration of the buildings in Jerusalem.

The epigraphical materials concerning S. have been treated in a detailed study by G. Wiet, *Les Inscriptions de Saladin* (Syria, iii. 307—328).

Bibliography: The still unprinted manuscript sources are quoted by Blochet in the introduction (p. 1—55) to his translation of al-Makrizī's *Sulūk* (period of the Aiyūbids, Paris 1908) in most commendable fashion; numerous extracts from the *Mufarriḡ al-Karūb* of Ibn Wāsil and from the "History of the Patriarchs of Alexandria" are also given there in notes in French translation; the printed literature down to 1889 is given in Derenbourg, *Ousāma Ibn Mounqidh* in the *P.E.L.O.*, xii/i, Paris 1889. — Contemporary Arabic and European sources are to be found in the *Recueil des historiens des Croisades. Historiens orientaux*, i.—v., Paris 1872—1906, and *Historiens occidentaux*, i.—vi., Paris 1844—1886, and in Reinaud's *Extraits des historiens arabes relatifs aux guerres des Croisades* and in other parts of Michaud, *Bibliothèque des Croisades*, Paris 1829. — The best and most thorough utilisation of early sources is that of Röhrich in his *Geschichte des Königreichs Jerusalem*, Innsbruck 1898, where Röhrich's other works and many bibliographical references are also quoted. Cf. also van Berchem, *Notes sur les Croisades* in the *Journ. As.*, series 9, 1902, vol. xix. 385 sqq. Of bibliographical works in addition to Derenbourg's edition of the *Ousāma* there are the biographies by Ibn Khallikān and Bahā' al-Dīn Ibn Shaddād (both also in the *Recueil des hist. orient.*, vol. iii.); the last named in English as *The Life of Saladin* by Behā' ed-Dīn, ed. by C. W. Wilson, London

1897; by Von Hammer-Purgstall in the *Gemäldeaal der Lebensbeschreibungen grosser moslimischer Herrscher*, vol. v., Leipzig 1838, now obsolete, and by Stanley Lane-Poole's brilliant and lucid *Saladin and the Fall of the Kingdom of Jerusalem in the Heroes of the Nations Series*, London 1898. On the siege of 'Akkā etc. see Kate Norgate, *Richard Lion-Heart*, London 1924, Index, s.v. *Acre* and *Saladin*. On the European legends relating to Saladin see Lane-Poole, *op. cit.*, ch. xxiii. 377 sqq., where the pertinent passage in the romance of Baibars as well as Scott's and Lessing's characters of Saladin are fully discussed (Lane Poole was not aware that the passage quoted by him belongs to the Baibars romance). On European legends of Saladin see Gaston Paris, *La Légende de Saladin* in the *Journal des Savants*, 1893, and the reprint; cf. also Röhrich in his *Geschichte des Königreichs Jerusalem*, p. 351, note 1. (SOBERNHEIM)

SALAF (A.) or **SALAM** (A.) is regarded by law as a permissible purchase (*bai'*). The purchaser in this case has to pay the purchase money in advance while the seller, on the other hand, is only required to deliver the article purchased after the expiry of a definite period. That which is sold must be a thing which can be replaced, not simply mentioned by kind but accurately described in the contract. The place where delivery is to be made must also be exactly defined. According to the Shāfi' school it is not necessary to define the date of delivery expressly in the contract; if this has not been done, delivery can be demanded immediately. In the view of the other Fiqh-schools, however, it is absolutely essential to state a short period at least for delivery. The *faqīh*'s in the Ḥidjāz usually called this kind of purchase *salām* but in the 'Irāk the name *salaf* was usual.

(TH. W. JUVNBOLL)

SALĀM (A.), verbal noun from *salama*, "to be well, uninjured", used as substantive in the meaning of "peace, health, salutation, greeting"; on the statements of the older Arab lexicographers see the *Lisān al-'Arab*, xv. 181—183, *passim*.

The word is of frequent occurrence in the Kor'ān, especially in the Sūras, which are attributed to the second and third Mekkan periods. The oldest passage that contains *salām* is Sūra xcvi. 5, where it is said of the *Lailat al-Kadr*: "It is peace until the coming of the dawn". *Salām* is also to be taken in this meaning in Kor'ān l. 33, xv. 46, xxi. 69, xi. 50. *Salām* means peace in this world as well as in the next. In the latter meaning we find it used in the expression *Dār al-Salām*, "the abode of bliss" for Paradise (Sūra x. 26, vi. 127). In the Medīna verse v. 18 which is addressed to the *Ahl al-Kitāb* we find the expression *Subul al-Salām*, the paths of bliss (cf. Isaiah, lix. 8: *Dārūk Shālōm*).

But *salām* is most frequently used in the Kor'ān as a form of salutation. Thus in Sūra lvi. 90 (first Mekkan period) the people of the right hand are greeted by their companions in bliss with *Salām laka* "Peace be upon thee" (according to al-Baidāwī;

for other explanations see the *Lisān al-ʿArab*, xv. 184, 8 sqq.; and the art. ALLĀH). *Salām* (Sūra xxxvi. 58, xiv. 28, x. 10, xxxiii. 43) or *Salām ʿalaikum* (xvi. 34, xxxix. 73, xlii. 24) is the greeting which is given the blessed in Paradise or on entering Paradise (cf. also xxv. 75); *Salāman salāman* in Sūra lvi. 25 (other reading *Salāmū salāmū*; cf. xix. 63) is presumably also intended as an auspicious exclamation (other interpretations in al-Baiḍāwī). Those on the Aʿraf [q. v.] call to the dwellers in Paradise *salām ʿalaikum* (vii. 44). *Salām* is also the greeting of the guests of Ibrāhīm and his reply (li. 25, xi. 72; cf. xv. 52). Ibrāhīm takes leave with *Salām ʿalaika* (xix. 48) from his father, who threatens him. In Sūra xx. 49 Mūsā in his address to Firʿawn is made to use the expression *al-salām ʿala man ittabaʿa ʿl-Hudū* "peace be upon him who follows the right guidance". According to the first explanation in al-Baiḍāwī, *al-salām* here means the greeting of the angels and guardians of Paradise; but as these words are not at the beginning of the speech, an other interpretation prefers to consider it as an affirmative sentence and to take *salām* as "security from Allāh's wrath and punishment" (cf. al-Baiḍāwī on the passage and the *Lisān al-ʿArab*, xv. 183, 7 sq.). *Salām ʿalaikum* "peace be upon you" is found in Sūra vi. 54 at the beginning of the message which the Prophet has to deliver to the believers and in Sūra xxvii. 60 a *salām* is uttered over Allāh's chosen servants. As a benediction *salām* is also used repeatedly in Sūra xxxvii., where at the end of the mention of each prophet a *salām* is uttered over him (verses 77, 109, 120, 130, 181; cf. also xix. 15, 34). *Salām* may be used in an ironical sense in Sūra xliii. 89 at parting from the unbelievers and *salām ʿalaikum* in Sūra xxviii. 55 (other interpretations in al-Baiḍāwī). This might perhaps hold of *salāman*, Sūra xxv. 64, also, with which the servants of the Merciful reply to the ignorant (*djāhilān*), but the commentators take it in the sense of *tasalluman* or *barʿatan*. In Sūra lix. 23 (Medinese) *al-salām* occurs as one of the names of Allāh, which al-Baiḍāwī interprets as *maṣḍar* used as *ṣifa* in the meaning of "the Faultless" (for other explanations cf. *Lisān al-ʿArab*, xv. 182, 7 sqq., 20 sqq.). *Al-Salām* in the expressions *Dār al-Salām* and *Subul al-Salām* is therefore also interpreted as a name of Allāh (cf. al-Baiḍāwī on Sūra vi. 127, x. 26, v. 18; *Lisān al-ʿArab*, xv. 182, 2 sq.). The word has even been taken to mean Allāh in the formula *al-salām ʿalaikum* (Fakhr al-Dīn al-Rāzī, *Mafātiḥ al-Ghaib* on Sūra vi. 54, Cairo 1278, iii. 54, 21 sq.; *Lisān al-ʿArab*, xv. 182, 8 sq.). It is improbable that the greeting is intended in *al-kā ʿl-salāma* in Sūra iv. 96; another reading is *al-salama* as in the similar expression in iv. 92, 93, xvi. 30, 89.

The denominative verb *sallama* is first found in the Medina chapters, namely Sūra xxxiii. 56, where it is recommended to utter *ṣalāt* [q. v.] and *salām* over the Prophet, and in xxiv. 27, 61 (see below).

At quite an early period the view became established among the Muslims that the *salām* greeting was an Islamic institution. This is, however, only correct in so far as the Ḳorʾān recommends the use of this greeting in a late Mekkan passage and in two Medīna passages: in vi. 54 it is commanded to the Prophet: "If those come to you who believe in Our signs say: "Peace be upon you" (*Salāmū ʿalaikum*). Your Lord hath

laid down a law of mercy for himself"; and in xxiv. 27: "O ye believers, enter not into dwellings" which are not your own before ye have asked leave and said *salām* (*wa-tusallimū*) on its inhabitants etc.; similarly xxiv. 61: "If ye enter dwellings, say *salām* upon one another (*fasallimū*) etc. (cf. a similar prescription Matth., x. 12, Luk., x. 5); iv. 88, where the more general expression for greeting (*ḥayyā*) is used, is also referred to the *salām* salutation. But Goldziher has pointed out (*Z. D. M. G.*, xvi. 22 sq.) and quoted passages from poets in support of the view that *salām* was already in use as a greeting before Islām. The corresponding Hebrew and Aramaic expressions *Shālām lekā*, *Shelām lak* (*lekōn*), *Shelāmā ʿolāk*, which go back to Old Testament usage (cf. Judges, xix. 20, 2 Sam., xviii. 28, Dan., x. 19, 1 Chr., xii. 19), were also in use as greetings among the Jews and Christians (cf. Dalman, *Gramm. d. jüd.-paläst. Aramäisch*², Leipzig 1905, p. 244); according to *Talmūd Yerushalmī*, *Shebiʿit*, iv. 35^b, *Shālām ʿalē-kām* was Israel's greeting. Cf. also Peshitta Mt., x. 12, xxvi. 49, Luk., x. 5, xxiv. 36, Joh., ix. 19, 21, 26, and Payne Smith, *Thes. Syriacus*, col. 4189 sq.). A very great number of Nabataean inscriptions further show the use of *sh-l-m* to express good wishes in North-west Arabia and the Sinai Peninsula (*C. I. S.*, II, *Inscriptiones Aramaeae*, i. N^o. 288 sqq., twice repeated in N^o. 244, 339, thrice repeated in N^o. 302) and the Arabic *s-l-m* frequently occurs in the Sāfaite inscriptions as a benedictive term. Cf. E. Littmann, *Zur Entzifferung der Sāfa-Inschriften*, Leipzig 1901, p. 47, 52 sq., 55, 56, 57, 59, 61, 64, 66, 67, 70; do., *Semitic Inscriptions*, New York-London 1905, Sāfaite Inscriptions, N^o. 5, 8, 12, 15, 69, 128, 134.

If the line *salāmaka rabbanā fī kulli fadjrin* quoted in the *Lisān al-ʿArab*, xv. 183, 5 from below, were genuine and really by Umayyā b. Abi ʿl-Salt, one might perhaps conclude from it that there was a benedictory use of the *salām* formula in the morning service in certain monotheistic circles of North Arabia. Presumably the usage, influenced by Christian and Jewish views, had given the word a special significance in the region of Aramaic culture. Lidzbarski's suggestion (*Ztschr. für Semitistik*, i. 85 sqq.) that *salām* reproduces the idea expressed by *σωρυπία* need not be discussed here but his explanation of *Islām* as the infinitive of a denominative verb *aslama* formed from *salām-sowrypiā* ("to enter into the state . . . of *salām*"), cannot be reconciled with such expressions frequent in the Ḳorʾān as *aslama wadihahu li ʿl-lāh-aslama li-Rabb al-ʿālamīn* etc.

Muḥammad must have placed a high religious value on the *salām* formula as he considered it the greeting given by the angels to the blessed and used it as an auspicious salutation on the prophets who had preceded him. A *salām*, like that in the *tashahhud* (see below) or like the salutation of peace which closes the *ṣalāt* and has its parallel in the Jewish *shillā* (cf. E. Mittwoch, *Zur Entstehungsgeschichte des islam. Gebets u. Kultus* in the *Abh. Pr. Ak. W.*, ph.-h. Kl., 1913, N^o. 2, p. 18), may have been from the first an essential feature of the ritual of divine service. According to a tradition (al-Bukhārī, *al-Isṭiḍhān*, bāb 3, *al-Adhān*, bāb 148, 150), originally they uttered the *salām* at the close of the *ṣalāt* on Allāh, on Djibril, Mikāʾil and other angels. With the

remark that Allāh is himself the *salām* (cf. *Qurʾān*, lix. 23) the Prophet disapproved of this and laid down what should be said in the *taṣḥḥud* [q.v.]; the *salām* utterance belongs to it in the form given below. On varying traditions regarding the *taṣḥḥud* see al-Shāfiʿī, *Kit. al-Umm*, Cairo 1321, i. 103 sqq.; cf. also Goldziher, *Über die Eulogien* etc. in the *Z.D.M.G.*, i. 102).

In the ritual of the *ṣalāt* as legally prescribed the benediction on Allāh and the *salām* on the Prophet, on the worshipper and those present and on Allāh's pious servants precede the confession of faith in the *taṣḥḥud* (*al-salāmu ʿalaika, ayyuhā ʿl-nabiyyu, wa-raḥmatu ʿllāhi wa-barakātuhu; al-salāmu ʿalainā wa-ʿalā ʿibādī ʿllāhi ʿl-ṣāliḥīna*). Among the compulsory ceremonies of the *ṣalāt* there is also at the end of it the *taslīmat al-ūlā*, the fuller form of which consists in the worshipper in a sitting position turning his head to right and left and saying each time *al-salāmu ʿalaikum wa-raḥmatu ʿllāh*. Cf. al-Badʿūrī, *Ḥaṣṣiya ʿalā sharḥ Ibn Kāsim al-Qḥaṣṣī ʿalā matn Abī Shudjāʿ*, Cairo 1321, i. 168, 170;

The preference of the *Qurʾān* for the *salām* formula and its liturgical use may have contributed considerably to the fact that it soon became considered an exclusively Muslim greeting (*taḥiyat al-islām*). As already mentioned above, the *Qurʾān* prescribes the *salām* on the Prophet to follow the *taṣḥḥud*. Tradition reports that the latter endeavoured to introduce it. When ʿUmar b. al-Waḥb was brought before him and gave him the pagan greeting (*anʿimū ṣabāḥan*), the Prophet said: "Allāh has given us a better greeting than thine, namely *al-salām*, the greeting of the dwellers in Paradise (Ibn Hishām, ed. Wüstenfeld, p. 472 *infra* sq.; al-Ṭabarī, ed. de Goeje, i. 1353, 10 sqq.) Those around him are also said to have been eager to introduce this greeting. Al-Wāḳidī relates that ʿUrwa b. Masʿūd, who immediately after his conversion wanted to convert his own townsmen in Ṭāʾif to Islām, called the attention of the Ṭḥakīf, who saluted in the heathen fashion, to the greeting of the dwellers in Paradise, *al-Salām* (Ibn Saʿd, *al-Ṭabaqāt*, v. 369; Sprenger, *Das Leben . . . des Muḥammad*, iii. 482; Goldziher, *Muh. Stud.*, i. 264). According to Ibn Ishāq, al-Mughīra b. Shuʿba instructed the deputation to Muḥammad from the Ṭḥakīf how they were to salute the Prophet, but they would only use the greeting of the *Djāhiliya* (Ibn Hishām, p. 916, 5 sqq.; al-Ṭabarī, i. 1290, 9 sqq.; Sprenger, *op. cit.*, iii. 485; Goldziher, *loc. cit.*). The Jews are said to have distorted this greeting with respect to Muḥammad to *al-sām ʿalaika* "death to you", whereupon the Prophet answered *wa-ʿalaikum* "and to you" (al-Bukhārī, *al-Istīʿdhān*, bāb 22; *al-Adab*, b. 38; *Lisān al-ʿArab*, xv. 206). According to Ibn Saʿd (*op. cit.*, iv/i. 163, 15), Abū Dharr was the first to greet the Prophet with the Muslim greeting. In the same author (*op. cit.*, iv/i. 82, 2) we find *salām ʿalaikum* at the beginning of a letter from Muʿāwiya to Abū Mūsā al-Ashʿarī.

The expressions which could be used were *salām* or *salām ʿalaikum* (-ka) or *al-salām ʿalaikum*. Umm Aiman is said to have used simply (*al*-)*salām* to the Prophet (Ibn Saʿd, *op. cit.*, viii. 163, 7 sq., 9 sq.). In the *Qurʾān* the use of *salām ʿalaikum* preponderates. Fakhr al-Dīn al-Rāzī endeavours to explain that the indefinite form is preferable and expresses the conception of perfect greeting (*op. cit.*, ii. 500, 35 sqq., iii. 512, 11 sqq.). Following

him al-Shāfiʿī is said to have preferred *salāmun ʿalaika* in the *taṣḥḥud* (*op. cit.*, iii. 512, 35); but the Shāfiʿī school also allows the definite form here (al-Badʿūrī, *op. cit.*, i. 168; *Lisān al-ʿArab*, xv. 182, 12 sq.). The formula *al-salām ʿalaikum* was, however, much used as a greeting. This undetermined form is expressly prescribed in the *taslīma* (Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 501, 5; al-Badʿūrī, *op. cit.*, i. 170; *Lisān al-ʿArab*, xv. 182, 13 sqq.). As a return greeting *wa-ʿalaikum al-salām* became usual (for further details on this inversion see Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 500, 29 sqq., iii. 512, 21 sqq.). According to Ibn Saʿd (*op. cit.*, iv/i. 115, 19 sq.), ʿAbd Allāh b. ʿUmar replied with *salām ʿalaikum*.

According to some traditions, Muḥammad had described the expression *ʿalaika ʿl-salām* as the salutation to the dead and insisted on being greeted with *al-salām ʿalaika* (al-Ṭabarī, iii. 2395; Ibn al-Athīr, *al-Nihāya fī Ḡharīb al-Ḥadīth waʿl-Athar*, Cairo 1311, ii. 176 below). The first named form of the greeting is actually found in elegiac verses (*op. cit.*, ii. 177; *Lisān al-ʿArab*, xv. 182). But there are also traditions in which the Prophet greets the dead in the cemetery with an expression beginning with (*al*-)*salām* (al-Ṭabarī, iii. 2402, 10 sqq.; Ibn al-Athīr and *Lisān al-ʿArab*, *loc. cit.*). ʿAbd Allāh b. ʿUmar also on returning from a journey is said to have saluted the graves of the Prophet, of Abū Bakr and of his father with *al-salām ʿalaika* (Ibn Saʿd, *op. cit.*, iv/i. 115, 5 sqq.).

The *salām* formula was very early extended by the addition of the words *wa-raḥmatu ʿllāhi* or *wa-raḥmatu ʿllāhi wa-barakātuhu*. The first extension became used in the *taslīma* and the second in the *taṣḥḥud* (cf. above). Applying the *Qurʾānic* commandment (iv. 88: "when ye are saluted with a salutation, salute the person with a better than his or at least return it") it is recommended (*sunna*) in the return greeting to add the wish of blessing and benediction or occasionally, when replying to a simple *salām*, only the former (cf. al-Bukhārī, *al-Istīʿdhān*, bāb 16, 18, 19). If anyone is saluted with the threefold formula, he must reply with the same (Fakhr al-Dīn al-Rāzī on Sūra iv. 88, *op. cit.*, ii. 502, 14 sqq.). According to Lane (*Manners and Customs*, i. 229, note), the threefold formula was very common as a return greeting in Egypt; cf. also Nallino, *L'Arabo parlato in Egitto*², Milan 1913, p. 121. In Mekka it is comparatively rarely used; the reply usual there is *weʿaleikum es-salām war-rahma* (*we-raḥmatu ʿllāh* or *wal-ikrām*); cf. Snouck Hurgronje, *Mekkanische Sprichwörter u. Redensarten*, The Hague 1886, p. 118. Landberg (*Études sur les dialectes de l'Arabie méridionale*, ii. 788, note) thinks that the longer form recalls the priest's blessing in Num., vi. 24—26. The application of *ʿalaikum* to a single person is explained by saying that the plural suffix includes the two accompanying angels or the spirits attached to him (i. e. the person; Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 501, 19 sqq.; cf. iii. 513, 17 sqq.).

At the conclusion of a letter the expression *wal-salāma* (*ʿalaika, -kum*) is often used, e. g. Ibn Saʿd, *op. cit.*, i./ii. 27, 17, 27, 28, 2, 5, 23, 29, 13, 21. Al-Ḥarīrī (*Durrat al-Ḡhawwās*, ed. Thorbecke, p. 208, 9 sqq.) disapproves of the use here of the indefinite form (*salāmun*), which, according to the more correct use, should only be used at the beginning. — *Wal-salām* has occasionally the meaning of "and that is the end of it" (cf. Snouck Hurgronje, *op. cit.*, p. 92).

In keeping with *Korān* xx. 48, it became usual to use the form *al-salām* 'alā man ittaba'a 'l-hudā to non-Muslims when necessary (cf. Fakhr al-Dīn al-Rāzī, *op. cit.*, ii. 501, 26 sqq., iv. 706, 19 sq.). It is found, for example, in letters ascribed to Muḥammad (al-Bukhārī, *al-Istīdhān*, bāb 24; Ibn Sa'd, *op. cit.*, i/ii. 28, 10 sq.; cf. line 6 there at the beginning of the letter: *salāmun* 'alā man āmana). Papyri of the year 91 (710) bear early testimony to its use (*Papyri Schott-Reinhardt*, i., ed. by C. H. Becker, Heidelberg 1906, i. N^o. 29, ii. 40 sq., iii. 87 sq., x. 11, xi. 7, xviii. 9). A letter from Muḥammad to the Jews of Maḡnā concludes, however, with *wa 'l-salām* (Ibn Sa'd, *op. cit.*, i/ii. 28, 23); similarly a letter to the Christians in Aila (*ibid.*, p. 29, 12 sq.). In Ḥadīth also a tendency is noticeable not to deny the *salām* greeting, at least as a reply, to unbelievers and the *Ahl al-Kiṭāb* (cf. al-Ṭabarī, *al-Taḥṣīn*², v. 111 sq.; Fakhr al-Dīn al-Rāzī, *loc. cit.*).

On the rules and limitations regarding salutation cf. the article *TASLIM*.

Salām means also a *ṣalawāt* litany, which is pronounced from the minarets every Friday about half an hour before the beginning of the midday service before the *adhān*. This part of the liturgy is repeated inside the mosque before the beginning of the regular ceremonies by several people with good voices standing on a *dikka* (Goldziher, *Über die Eulogien*, etc. in the *Z.D.M.G.*, l. 103 sq.; cf. Lane, *op. cit.*, i. 117). The same name is given to the benedictions on the Prophet which are sung during the month of Ramaḡān about half an hour after midnight from the minarets (Lane, *op. cit.*, ii. 264).

The auspicious formula '*alaihi 'l-salām*', which, according to the strictly orthodox opinion, like the *taṣliya*, should only follow the names of Prophets, but was more freely used in the earlier literature (cf. also al-Bukhārī, *al-Istīdhān*, bāb 43: *Fāṭima 'alaiha 'l-salām*), was used by the *Shi'a* without limitation of 'Alī and his descendants also (Goldziher, *op. cit.*, *Z.D.M.G.*, l. 121 sqq.; Fakhr al-Dīn al-Rāzī, *op. cit.*, iii. 511 sqq.).

The Sunnī of British India make a magical use of the so-called seven *salām*'s which refer to Sūra xxxvi. 58, xxxvii. 77, 109, 120, 130; xxxix. 73, xcvi. 5. In the morning of the festival of *Ākhir-i Čāhār-shamba* (see *ĀKHIR*) they write the seven *salām*'s or have them written with saffron-water, ink, or rosewater on the leaf of a mango-tree or a sacred fig-tree, or of a plantain. They then wash off the writing in water and drink it in the hope that they may enjoy peace and happiness (*Djāfar Sharīf—Herklots. Islam in India or the Qānūn-i Islām*, new ed. by W. Crooke, London 1921, p. 186 sq.).

On coins *salām* (sometimes abbreviated to *s*) means "of full weight, complete" (cf. J. G. Stickel, *Das gross-hers. Orient. Münzkabinett zu Jena (Handb. d. Morgenl. Münzkunde)*, Leipzig 1845, i. 43 sq.; O. Codrington, *A Manual of Muslim Numismatics*, London 1904, p. 10).

Bibliography: In addition to that mentioned in the article: Ibn 'Abd Rabbihi, *al-Iqd al-farīd*, Būlak 1293, i. 276 sq.; Lane, *op. cit.*, i. 298 sqq.; Landberg, *Études sur les dialectes de l'Arabie méridionale*, Leiden 1905—1913, ii. 776—781, 786—789. (C. VAN ARENDONK)

SALAMA B. RADJĀ, governor of Egypt from Dhū 'l-Hiddja 161 (August 30 to September 27, 778) until Muḡarram 162 (October 778).

Bibliography: al-Ṭabarī, ed. de Goeje, iii. 492, 493; Ibn al-Aṭhīr, *Kāmil*, vi. 38, 39; *Corpus Papyrorum Raineri*, iii. Series Arabica, ed. A. Grohmann, i/ii. 119, 120. (A. GROHMANN)

SALĀMA B. DJANDAL, a poet of pre-Islamic times, was a member of the clan al-Ḥārith, which belonged to the large division Sa'd al-Fizr of the tribe Tamīm. He is numbered among the excellent poets of the *Djāhiliya* of whom only few poems are preserved. He must have flourished during the second half of the sixth century of our era, as the most prominent event in his life recorded is about his brother Aḡmar (sometimes misspelled Aḡmad). When 'Amr b. Kulthūm, the chief of the tribe of Taghlib, made his raid south, Aḡmar was made a prisoner by 'Amr, but released without ransom upon the petition of Salāma (*Diwān* of 'Amr, Introduction to poem N^o. 2; *Aḡḡānī*, ix. 183, 18). Whether there is an error on the part of Arab tradition is not certain, but in the *Diwān* of Salāma we are told in the notes on poem N^o. 8 (edition Cheikhō) the same thing happened to Aḡmar with a certain Ṣaṣ'a b. Maḡmūd b. 'Amr b. Marḡad. The latter probably belonged to the Kaṣī clan of 'Amr who resided as allies (*ḡulafā'*) among the tribe of Shaibān, or he may have belonged to the celebrated Yamanite family of Marḡad. In his longest poem Salāma refers to the death of al-Nu'mān, king of al-Ḥira, who was trampled to death by elephants at the order of the Persian king Parwēz (*Diwān*, N^o. 3, v. 39; *Asma'iyyāt*, N^o. 53, v. 39). Further the *Naḡā'id* of Djārīr and Farazdaq give two poems by Salāma, not in the *Diwān*, in which he celebrates the victory of Djadūd, in which the clan of Minkar, also a division of Sa'd al-Fizr, defeated the tribe of Bakr b. Wā'il. These two events place the life-time of Salāma towards the end of the sixth century. The time of his death cannot be fixed; he did not live to the time of Islām and none of his descendants appear to be named in the biographies of early Muslims.

Cheikhō is mistaken when he assumes that Salāma is identical with the renowned chief Salmā b. Djandal b. Naḡshal, the latter being of the clan Naḡshal b. Dārim and related to Muḡjāshī', the ancestor of the poet al-Farazdaq. Salāma is reputed to excel in the description of horses. His collected poems have come down to us in two old manuscripts, which were edited by Cheikhō in 1920. This *Diwān* contains only nine poems or fragments of such, 135 verses in all, to which the editor has added a further 36 verses collected from various sources and to which I can add only one verse quoted in the *Kitāb al-'Ain* (ed. Baghdād), p. 108. We have no reason to doubt the genuineness of most of the verses. The poet speaks in them of departed youth which unfortunately is no guide to his age, as such statements belong to the ordinary phraseology of such poems. That he mentions Allāh (N^o. 1, v. 12) I should not take as a sign of later interpolation, as I believe that before Muḡammad some form of monotheism through the influence of Christianity and Judaism was widespread in Arabia, though the form al-Ilāh is probably the correct form in earlier times. He mentions swords of Buṣrā and al-Mada'in, which are seldom or never mentioned in verses of later times, as swords were no longer obtained from there. That he mentions writing or even inkstands and parchment (N^o.

3, v. 2) is not at all strange as these things were more widely known than is generally admitted. His poetry has otherwise the stamp of what is called Bedouin poetry, a rather unfortunate designation as it gives a wrong impression (cf. the art. *SHĀ'IR*). The text of the *Diwān* is a combination of the Baṣrian (*Aṣma'i*) and the Kūfic (Abū 'Amr al-Shaibānī) school, of whom the latter will generally be found more reliable, but unfortunately the recensions are not kept apart in this case to discern any differences. It would be wrong to assume that they collected the poems; their work was the commenting of the text which they found handed down by earlier scholars. The edition by Cl. Huart (*J. A.*, 1910) is superseded by that of Cheikho (Beyrouth 1920), which contains all that is known about Salāma.

Bibliography: *Mufaḍḍaliyāt*, ed. Lyall, No. 22, text and translation; ed. Cairo, i. 54; ed. Thorbecke, No. 20; *Aṣma'iyyāt*, ed. Ahlwardt, No. 53; Muḥammad b. Sallām, ed. Hel- (Leiden 1916), p. 36; *Naḩā'id*, ed. Bevan, p. 147—148; Ibn Kūtaiba, *Kitāb al-Shi'r*, ed. de Goeje, p. 147; Poètes Chrétiens, ed. Cheikho, p. 486—491. Verses of Salāma are cited in most books dealing with ancient Arabic poetry e.g. in the *Lisān al-'Arab* 40 times.

(F. KRENKOW)

SALAMANCA, the capital of the Spanish province of Salamanca, on the right bank of the river Tormes, 172 miles by rail N.W. of Madrid, with a population of 25,690 (1900). In the Roman period the city was constituted a military station, being the ninth on the Via Lata, which was the great highway of Spain, running from Merida to Saragossa. Trajan built a magnificent bridge there, the original piers of which still exist. Like the rest of Spain the city suffered from the Gothic invasion.

It was a greater change for the city, when Mūsā, the governor of Africa, appeared with 18,000 picked men in Southern Spain (712), and began a methodical campaign in the Peninsula. Capturing Seville, Carmona and Merida, he covered the road that many a Roman legion had tramped before him, until he came before Salamanca. The city, which once had all the dignity and defiance of a Roman fort, offered but a poor resistance to the Muslim warriors. But although the district was now in the hands of foreigners, the inhabitants found their masters not impossible tyrants. If they paid their tax, and followed their faith, without unduly propagating it, their lives and their property were safe. Indeed, they soon found that a new intellectual life had come to the city, and they had to bow before the classical and oriental learning of the invaders. It is by no mere chance that Salamanca boasts of the oldest and largest university in Spain. Its foundations were laid by the unpromising pioneers of Islām.

Ibn al-Athīr states that in May 757 A.D. (24 A.H.) King Alphonso opened an attack on the Moors, and drove them out of Salamanca, but this does not seem to have been anything more than a predatory raid. The city, however, was never a Muslim possession in the sense that Cordova or Seville was. It certainly was considered an admirable piece of work of Ibn Abī 'Amr, when in Sept. 977 he succeeded in capturing the suburbs of the city from the Christians, for he was rewarded with the title of *Dhu 'l-Wizārain* and a

princely salary. So the fate of Salamanca wavered from decade to decade, until finally through internal disunion, and the more determined hostility of the Spanish Christians, Moorish pride and power were swept from the city in 1055, never more to be re-instated.

The University, founded officially in 1220 by Alphonso IX of Leon, was in itself sufficient to give distinction to Salamanca, through all the succeeding centuries, until the great battle of 1812, when Wellington settled the fate of the French in the Peninsula.

(T. CROUTHER GORDON)

SALAMĪYA, a small town in Syria in the district east of the Orontes, about twenty-five miles S.E. of Hamā and thirty-five (a day's journey) N.E. of Hims (for the exact situation cf. Kiepert's map in Oppenheim, *Vom Mittelmeer zum Persischen Golf*, i. and part ii. 401). It lies in a fertile plain 1500 feet above sea level, south of the Djabal al-A'lā and on the margin of the Syrian steppe. The older and more correct pronunciation was Salāmya (al-Iṣṭakhri, *B.G.A.*, i. 61; Ibn al-Fakīh, *B.G.A.*, v. 110) but the form Salamīya is also found very early (al-Muḩaddasi, *B.G.A.*, iii. 190; Ibn Khordādhbeh, *B.G.A.*, vi. 76, 98) and it is now the form almost universally in use (cf. also Yāqūt, *Mu'djam*, ed. Wüstenfeld, iii. 123, and Littmann, *Semitic Inscriptions*, p. 169 sq.). The *nisba* from the name is Salami. The town seems to be the ancient Salamias or Salaminias, which flourished in the Christian period, but the references of the classical authors to this place are uncertain. Yāqūt (iii. 123) gives a popular etymology. The town, he says, was originally called *Salam-mī'a*, after the hundred surviving inhabitants of the destroyed town of al-Mu'tafika.

The situation of the town was important as an outpost of Syria, where main routes from the steppe (Palmyra) and 'Irāk joined; but it was never of any great military importance. It was conquered by the Arabs in the year 15 A.H. and became one of the towns of the Djund of Hims; it was only after 1500 in the Mamlūk period that it was placed in the district of Hamā for administrative purposes. In the second century of the Hidjra, after the victory of the 'Abbāsids, the descendants of the 'Abbāsīd Ṣāliḩ b. 'Alī b. 'Abd Allāh b. 'Abbās settled in Salamīya. The town is said to be most indebted to Ṣāliḩ's son, 'Abd Allāh, who rebuilt it and made arrangements for the irrigation of the neighbourhood. This 'Abd Allāh was held in high esteem by his cousins, the Caliphs. He married the sister of al-Mahdi and became governor of the 'Irāk. This Caliph visited him in Salamīya and was astonished at 'Abd Allāh's dwelling there (al-Ṭabarī, iii. 500). There are also other references to the fact that many "Hāshimīs" lived in Salamīya.

Almost nothing has survived of this period. There is the foundation inscription of a mosque

on a stone (not *in situ*) at the entrance to the citadel. It is probable that this inscription is dated 150 (767) and that it belonged to a mosque founded by those Hashimis, which may have been destroyed about 290 (902/3) by the Qarmatians. Still another inscription dating from an 'Abbāsid has been found in the citadel; according to Littmann's probable suggestion, it belongs with two other inscriptions to the period from 280 (893) (or, for another view, see M. Hartmann in the *Z.D.P.V.*, xxiv. 55). The fact that Salamiya was the centre of an important branch of the Hāshimis and the isolated position of the town perhaps account for the fact that about 250 (864) it became the secret centre of Ismā'īlī propaganda. It is difficult to ascertain who was the first Grand Master of the Ismā'īliya to settle in Salamiya; in any case it does not seem to have been so early as 'Abd Allāh b. Maimūn himself (as de Sacy, *Exposé de la Religion des Druzes*, Paris 1838, *Introd.*, p. 71, 166 supposes), for the latter, as de Goeje (*Mémoire sur les Carmathes du Bahraïn*, Leiden 1886, p. 19) makes probable, was probably never in Salamiya. The first leader to be sent here was apparently Husain b. 'Abd Allāh b. Maimūn (de Goeje, *op. cit.*, p. 21), whose son, Sa'īd 'Ubaid Allāh, destined to become the first Fātimid Caliph, was born in Salamiya in 259 or 260 (873/74) (Ibn Khallikān, *Wafayāt al-A'yān*, ed. Wüstenfeld, N^o. 365); according to a biased statement in Ibn al-Athīr (viii. 22), 'Ubaid Allāh was the son of a smith in Salamiya whose widow afterwards married Husain. When Husain died about 270 (883/4) his brother Aḥmad b. 'Abd Allāh b. Maimūn, also known as Ibn Shalaghlagh, became Grand Master and guardian of his nephew 'Ubaid Allāh, till his death (about 280 = 893/4). 'Ubaid Allāh continued to reside in Salamiya till 289 (902) when he set out on his successful journey to North Africa (de Goeje, *op. cit.*, p. 64). In the next year the town was practically wiped out by the Qarmatians from 'Irāk under their leader Husain, who had assumed the title of Mahdi. Of all towns in Syria, Salamiya, as home of the former companions in faith and later bitter enemies of the Qarmatians, was treated the worst (de Goeje, *op. cit.*, p. 50). Soon afterwards, however, the Syrian towns were reconquered by the Caliph. It is not impossible that the quadrangular citadel in the centre of the town goes back to the Ismā'īlī period; according to van Berchem, it belongs to an early period architecturally.

In the fourth (xth) century, Salamiya must have been in an area inhabited by Beduins (Saif al-Dawla's campaign; cf. Hartmann in the *Z.D.P.V.*, xxii. 175, 176). At the end of the fifth (xith) century, it was included in the possessions of the brigand chief Khalaf b. Mulā'ab (M. Hartmann reads Malā'ib), who acknowledged Fātimid suzerainty. There is evidence of this in an inscription in Kūfic characters on the door beam of the mosque of 481 (1088). According to Ibn al-Athīr (x. 184), Khalaf took Salamiya in 476 (1083); he was then already master of Ḥims. But in 485 he lost Ḥims and the lands that went with it to the Saljūq Ṭuṭush, brother of Malik Shāh. In the inscription Khalaf says that he has erected a *maṣhad* on the tomb of Abu 'l-Ḥasan 'Alī b. Djarū, whose servant (*ṣānī*) he calls himself (Khalaf is very fully dealt with by M. Hartmann, *Z.D.P.V.*, xxiv. 58—65).

During the Crusades Salamiya is never mentioned

as a fortress but frequently as a meeting-place for the Muslim armies. Politically it has always shared the fate of Ḥims [q.v.]. Thus it passed to Ridwān, son of Ṭuṭush, in 496 (1102/3). In 532 (1137/8) the Atābeg Zangī, who was then besieging Ḥims, set out from Salamiya on his campaign against the Greeks at Shaizar (Ibn al-Athīr, xi. 36 sq.) and in 570 (1174/75) Saladin obtained the town together with Ḥims and Ḥamā from the Amir Fakhr al-Dīn al-Za'farānī (Ibn al-Athīr, xi. 276). In 626 (1229) we find al-Malik al-Kāmil in Salamiya as a starting point for 'Irāk; the lord of Ḥamā came there to submit to him. Two years later, al-Kāmil gave the town to Asad al-Dīn Shirkūh, who rebuilt the fortress of Shumaimish north of it on one of the peaks of the Djabal al-A'lā (Ibn al-Athīr, xii. 318, 329) which had been destroyed by the earthquake of 1157 (Kamāl al-Dīn, *Histoire d'Alep*, transl. Blochet, Paris 1900, p. 21).

In 1299, the Egyptian army was defeated at Salamiya by the Mongols under Ghāzān; the battle was followed by the brief Mongol occupation of the city of Damascus.

In the eighth (xivth) century, Salamiya was part of the important frontier lands (called al-Sharqiya) of the *mamlaka* of Damascus. Abu 'l-Fidā', in whose territory as lord of Ḥamā the town lay during the Mamlūk period, mentions an aqueduct between Salamiya and Ḥamā. In 726 (1326) he went with his troops to clear out this channel (autobiography of Abu 'l-Fidā' in the *Rec. des Hist. des Crois.*, *Hist. Orient.*, i. 168, 185). This aqueduct no longer exists. Perhaps it is the same as is mentioned by al-Dimashqī (p. 207) as in existence between Ḥims and Salamiya and built by the 'Abbāsid 'Abd Allāh b. Ṣāliḥ. At this time Yāqūt (iii. 123) speaks of seven prayer-niches near Salamiya below which some *ṭabī'un* were buried; he also mentions the tomb of al-Nu'mān b. Bashīr, the companion of the Prophet.

Under Turkish rule, the town ceased to be of importance. In the middle of the nineteenth century it was entirely deserted, probably on account of the lack of adequate protection against the Beduins. But an Ismā'īlī Shaikh from the Nuṣairi mountains settled there and succeeded in settling the place with his followers. The Shaikh, whom van Berchem met in 1895, was a young man who traced his descent from 'Abd Allāh b. Maimūn. These Ismā'īlīs in a short time made the town very prosperous, which induced the Turkish government (in 1892) to create a special *qaḍā* of Salamiya in the sandjak of Ḥamā in the wilāyet of Bairūt. The population of the *qaḍā* is given by Cuinet (1896) as 53,084, of whom the smaller half are Muslims and the larger Christians. The town itself is said by the same authority to have 6,000 inhabitants, in addition to the Druzes (by whom he probably means the Ismā'īliya). The irrigation is excellent; the crops of the district consist mainly of corn and legumes.

On the fortress of Shumaimish see van Berchem and Fatio, *Voyage en Syrie*, i. 171, 173.

(J. H. KRAMERS)

SALĀMLIK (A.-T.) (Turkish pronunciation: Selamlık),

1) Reception-room in Turkish houses of the upper classes, derived from *salām*, greeting, welcome. In the general plan of this type of house (*konağ*) there is an ante-room or court behind the main door, at one side of which a stair-case leads up to the *selamlık*, *mā-bain* [q. v.] and to the corridor (*sofa*), which together form the part of the house allotted to the males. On the other side of the court is the entrance to the harem [q. v.]; there also is the swivel-box (*dolab*) through which the women communicate with the harem kitchen. Although *Selamlık* originally meant only the room in which the guests are welcomed, the word has come to receive the wider general meaning of the whole of the men's apartments as opposed to the harem or haremlik. It thus coincides more or less with the *ἀνδρῶν* or *ἀνδρονόριον* of the Greeks. Barbier de Meynard, *Dict. Turc.-Français*, Paris 1886, mentions a room called *Harem-selamlık* which is situated between the two parts of the house and cannot be entered by strangers; it is therefore probably another name for the *mā-bain*.

In Turkish houses of the lower classes it seems that strangers were not admitted at all (Hans Dernschwam's *Tagebuch*, ed. Babinger, 1923, p. 134); there was therefore no *selamlık* there.

In northern Mesopotamia where wood is scarce the rooms of the houses are hollowed out of sandstone and a kind of dome of stone and clay put over them. Moltke, *Briefe aus der Türkei*, Berlin 1893, p. 242, describes this type of house where one of these domed rooms is *selamlık*, another *harem*, another a stable, etc.

2) A ceremony in Constantinople on the occasion of the ceremonial visit of the Sultān to a mosque for the Friday service.

That the Ottoman Sultāns were accustomed to pay a ceremonial visit to a mosque on Friday is often mentioned by travellers. Every Friday they

visited one or other of the so-called Sultān's mosques (*djāwāmi-i Salāṭin*) where they had their boxes or stalls. While at an earlier period the high officers of state used to accompany the Sultān, etiquette since the time of Ibrāhīm I has only expected the court officials to go. The streets through which the procession went were usually guarded by Janissaries and the reception in the mosque by the Aga of the Janissaries and the administrator of the mosque was very ceremonious. In winter it was usually the Aya Şofya, as the mosque nearest the palace, that was visited.

D'Ohsson assumes a connection between the Sultān's visit to the mosque and his dignity of *Imām* in his capacity as caliph at the *ṣalātu 'l-djum'a* but adds that the Sultān never himself appears as *Imām*. This view is quite in agreement with d'Ohsson's ideas on the caliphate, but perhaps this ceremonial visit to the mosque should rather be regarded as an imitation of similar ceremonies at the Imperial Byzantine court.

Down to the beginning of the nineteenth century the Sultān always appeared on horseback on this occasion (picture of the year 1788 in Jouannin and van Gaver, *Turquie*, Paris 1840). Only a very few Sultāns omitted the ceremony, as their non-appearance would have aroused resentment among the populace. From the time of Maḥmūd II it was the custom for the Sultān to drive in a carriage (cf. von Moltke, *Briefe aus der Türkei*, Berlin 1893, p. lxx).

The name *selamlık* for this ceremony seems only to date from the second half of the sixteenth century. The word has presumably nothing to do with the meaning "reception room" but is rather to be connected with the expression *selam durmağ* "to present arms"; it belongs therefore to military terminology. Aḥmad Wāfiḳ Pashā in his *Leḥze-i 'Othmāni* (1306 = 1889) paraphrases it as *binish djum'a ālayi*.

The ceremony became particularly important in the reign of 'Abd al-Ḥamīd II. The Sultān was surrounded by a brilliant body-guard, of which his faithful Albanians in their costly uniforms formed the centre, along with the Ertoghul regiment mounted on white horses. From the time he lived in the Yıldız palace the *Selamlık* was usually held in the Ḥamidiye mosque. Formal audiences were held after it, to which great political importance was attached, while the display of pomp and splendour was intended to impress the foreigners invited. The holding of the ceremony was announced on each occasion in the official gazette *Taḳwīm-i Weḳā'i*.

It became less important after the reign of 'Abd al-Ḥamīd and after the abolition of the sultānate by the General National Assembly in November, 1922, in Angora, 'Abd al-Madjīd, who now retained only the dignity of Caliph, retained the *selamlık* ceremony, which fact is of significance for the character given to it since d'Ohsson's day. The last *selamlık* took place on Febr. 29, 1924 (1342) in the mosque of Dolma Baghçe and was little more than a parody of its former splendour. There was not even music and the carriage was drawn by only two horses (the *Waṭan* newspaper of March 1, 1924).

(J. H. KRAMERS)

SĀLĀR (P.), commander. From the older Pahlavi *sardār* there arose as early as the Sāsānid period the form *sālār* with the well-known change of *rd* to *l* and compensatory lengthening of the *a* (cf. *Grundr. d. Iran. Phil.*, i. 267, 274). The synonymous word in modern Persian (*serdār*) is not a survival of the ancient *sardār*, but is a modern formation; indeed, the elements from which the ancient word was composed still exist in the modern language. The old Armenian took over the Pahlavi *sālār* in the form *salār*; the form *sardār* which would give **sardar* in Armenian is not found in the latter language. A latter, probably modern Persian loan-word in Armenian is (*spa*) *salār* with *l* instead of *l*. On this and on other late Armenian forms cf. Hübschmann, *Arm. Gramm.*, i. 235 and 239. In the first of these two references the Pahlavi combinations of the word are also given. On the etymology cf. also Horn, *Grundriss der neu-p. Etymologie*, p. 153; Hübschmann, *Persische Studien*, p. 72; Junker, *Die Frahang i Pahlavik* (1912), p. 37 and 79.

The term which is primarily military (cf. *sipāh-sālār*, commander of an army; *sālār-i dīang*) is transferred to several court offices, e. g. *sālār-i khwān* (and *khwān-sālār*), Steward; *sālār-i bār*, Marshal; *ākhūrsālār*, Master of Horse. We need not trouble here with what else the native Persian lexicographers say about the word (cf. Vullers, *Lex.*, s. v.); it may be noted, however, that expressions like *dīahān sālār* for "king" belong to the language of poetry and the meaning "old" (*kahun u sāl-khwarda*) (which, as far as I know, has not yet been found anywhere) is perhaps based on an incorrect etymology which connects the word with *sāl* (year). (V. F. BÜCHNER)

SĀLĀR DJANG is the title by which Mīr Turāb 'Alī, a Sayyid of Persian descent and one of the greatest of modern Indian statesmen, was best known. He was born at Haidarābād in the Dakan on January 2, 1829, and, his father having died not long after his birth, was educated by his uncle, Nawwāb Sirājī ul-Mulk, Minister of the Haidarābād State. He received an administrative appointment in 1848, at the age of 19, and on his uncle's death in 1853 succeeded him as Minister of the State. He was engaged in reforming the administration until 1857, the year of the Sepoy mutiny, when the Nizām, Nāṣir al-Dawla, died and was succeeded by his son Afḍal al-Dawla. The news of the seizure of Dihli by the mutineers greatly excited the populace, and the British Residency was attacked by a turbulent mob, aided by some irregular troops, but throughout the darkest days of the rebellion Sālār Dīang not only remained true to the British, but strengthened the hands of his master and suppressed disorder. The services of the State were recognized by the rendition of three of the districts assigned in 1853 on account of debts due to the Company, and by the cession of the territory of the rebellious Rājā of Shorāpūr. In 1860 and again in 1867 plots to estrange the great Minister from his master and to ensure his dismissal were frustrated by two successive British Residents, and Sālār Dīang remained in office. In 1868 an attempt was made to assassinate him but the assassin was arrested and executed, despite Sālār Dīang's efforts to obtain a commutation of the sentence. On the death of Afḍal al-Dawla in 1869 Sālār Dīang became one of the two co-regents of

the State during the minority of his son and successor, Mīr Maḥbūb 'Alī Khān, and on January 5, 1871, he was invested at Calcutta with the insignia of the G. C. S. I. In November, 1875, he and other nobles represented the young Nizām at Bombay on the occasion of the visit of H. R. H. the Prince of Wales to India, and in April, 1876, he visited England and was presented to Queen Victoria. He received the honorary degree of D. C. L. from the University of Oxford and the Freedom of the City of London. In January, 1883, he was engaged in making preparations for the contemplated visit of the Nizām to Europe, but on February 7, after entertaining Duke John of Mecklenburg-Schwerin, who was visiting Haidarābād, on the Mīr 'Ālam Lake, he was attacked by cholera, and died on the following morning, regretted by all. Though always known by his first title, Sālār Dīang, he bore the higher titles *Shudjā' al-Dawla* and *Mukhtār al-Mulk*.

(T. W. HAIG)

ŠALĀT, the usual name in Arabic for the ritual prayer or divine service. The translation "prayer" simply is not accurate; the Arabic word *du'ā'* corresponds to the conception prayer (Snouck Hurgronje has several times drawn attention to this distinction; *Verspreide Geschriften*, i. 213 sq., ii. 90, iv/i. 56, 63 sq., etc.). The word does not seem to occur in the pre-Ḳorānic literature. Muḥammad took it, like the ceremony, from the Jews and Christians in Arabia. In many Kūfic copies of the Ḳorān and often in later literature also in connection with the sacred book it is written *صلوة*. It is very often assumed that this orthography represents a dialectic pronunciation (Nöldeke, *Geschichte des Qorans*, p. 255; Wright-de Goeje, *Arabic Grammar*, i. 12 A; Brockelmann, *Arabishe Grammatik*⁶, p. 7). The writing of a *wāw* in place of the *alif* which one would expect is found, it is true, in several other words belonging to the language of the Ḳorān; but with the exception of *ribā* (ربوا) only in the termination *āt* (or *ōl*), so frequent in Aramaic. The view that in forms like *صلوة*, *ركوة*, etc. Aramaic influence has been at work should therefore always be borne in mind (Fränkel, *De vocabulis in antiquis Arabum carminibus et in Corano peregrinis*, p. 21).

The etymology of the Aramaic word *šlōfā* is quite transparent. The root *š-l-* in Aramaic means to bow, to bend, to stretch. The substantive *šlōfā* is the *nomen actionis* from this and means the act of bowing, etc. It is used in several Aramaic dialects for ritual prayer, although it can also mean spontaneous individual prayer, which in Syriac at least is usually called *bā'ūfā*. Muḥammad took over the word *šalāt* in this sense from his neighbours and the Muslim *šalāt* shows in its composition a great similarity to the Jewish and Christian services, as will be shown in greater detail below. — The verb *šallā* is a denominative derived from the substantive *šalāt* with the meaning "to perform the šalāt".

It is clear that at first Muḥammad had not the material available in ample measure for the ritual. The texts which were recited and sung in the solemn litanies of the Christians and Jews in their services were lacking to him. This fact may still be deduced from the celebrated tradition regarding the revelation of Sūra xcvi., according to the common view, the first that was revealed to him. To the command of the angel urging him to recite he replied: "I have nothing to recite". The divine part of this dialogue, which so troubled Muḥammad, is then said to have at once become the first text for recitation, and it was followed by others with longer or shorter pauses.

Although the ṣalāt is nowhere described or exactly regulated in the Qorʾān, it can be assumed that its characteristic features have not changed in the course of development of the worship. The indications in the Qorʾān of its various component parts lead us to believe this. The standing position is everywhere presupposed in the ṣalāt, alternating with inclinations (*rukūʿ*) and prostrations (*sudjūd*). How closely the ṣalāt was bound up even in the Mekkan period with the recitation of the Qorʾān is seen from the fact that in Sūra xvii. 80 the morning ṣalāt is called *Qorʾān al-Faḍīr*. On the other hand we find the recitation of the Qorʾān by itself also associated with prostration (Sūra lxxiv. 21).

That at this period praises already constituted a very considerable part of the ṣalāt is clear from Qorʾānic passages like Sūra xx. 130 and xxiv. 41, where *taḥmīd* and *tasbiḥ* are mentioned in the closest connection with the ṣalāt.

From the mention of the *ṣalāt* and the verb *ṣallā* in the oldest Sūra's (e.g. lxxv. 31, lxx. 23, cvii. 5, lxxiv. 44, cviii. 2) it may be further seen that we can assert that this rite was an accompaniment of Islām from the earliest times and that Caetani's sceptical reflexions and hypotheses do not give sufficient weight to the Qorʾānic evidence (cf. *Annali, Introduzione*, 219 note — in part in connection with similar views of Grimme). How much Muḥammad disturbed the Mekkan with his new religion may be seen from Sūra xvii. 110, where he is recommended by Allāh not to perform the ṣalāt too loudly, which is interpreted by tradition — and, no doubt, rightly — to mean that his unbelieving fellow-citizens molested him for holding his services too noisily. This is in agreement with the fact that in the period during which Muḥammad is continually advised to imitate the example of the earlier prophets and model himself on their patience, attention is regularly called to their also having summoned those around them to hold the ṣalāt (e.g. Sūra xxi. 73, xix. 32, xiv. 40, xix. 56, xx. 132).

In the Qorʾān the ṣalāt is very frequently mentioned along with the *ṣakāt*; the two are obviously considered the manifestations of piety most loved by Allāh (e.g. Sūra ii. 77, 104, 172, 277, iv. 79, 160, v. 15, 60 etc.). In Sūra ii. 42, 148 the believers are exhorted to seek help in *ṣalāt* and *ṣabr*. *Ṣabr* [q.v.] is interpreted in this connection as fasting. There is further in the Qorʾān no trace so far of the five "pillars" which later attained such an important position. The *ṣalāt* is an expression of humility (Sūra xxiii. 2) which latter was considered throughout the Hellenistic world as the attitude to the deity most befitting man. Punctual observance (*muḥāfaẓa*) of the ṣalāt is

repeatedly enjoined (vi. 92, xxiii. 9, lxx. 34; cf. lxx. 22) and neglect (*sahw*) is censured (cvii. 5). In Sūra iv. 104 a similar injunction is given the following justification: "for the ṣalāt is a *kitāb mawḥūl*" i.e. "a regulated ordinance of religion". It is blamed in the Munāfiḳūn [q.v.] that they perform the ṣalāt without zeal and with eye-service only (Sūra iv. 141). The limitation and later interdiction of the use of wine owed its origin to the fact that over-indulgence disturbed order at divine service (Sūra iv. 46).

As has already been observed, we may assume that the essential features of the later ṣalāt were in existence from the very beginning. We know only very little about peculiarities of the ṣalāt and its accompanying phenomena in the oldest period of Islām. A ritual ablution (cf. the articles *GHUṢL*, *TAHĀRA*, *WUḌŪʿ*) before the ṣalāt is prescribed in Sūra v. 8; the *nidaʾ* for the ṣalāt is mentioned in v. 63 and in lxii. 9 for the Friday ṣalāt. A special ṣalāt in case of imminent danger is described in Sūra iv. 103 (see below under *Ṣalāt al-Khawf*). Praises of Muḥammad and the *Tastīm* form the conclusion of the later ṣalāt. This practice can be justified by Sūra xxxiii. 56, where it is written: "Allāh and his angels bless the Prophet; ye who believe, bless him and bring him salutations of peace". The Friday ṣalāt is mentioned in lxii. 9 in the words: "O believers, when the call to the ṣalāt occurs on Fridays, haste ye to the invocation (*dhikr*) of Allāh and quit trafficking. This is better for ye when ye know."

In these circumstances it is intelligible that Muḥammad laid great stress on those who showed themselves ready to adopt Islām being at once initiated into the practice of the ṣalāt. Tradition thus reports that he sent Asʿad b. Zurāra or Muṣʿab b. ʿUmar to the Medinese for this express purpose and that the latter was the first to hold the Friday service with them (see A. J. Wensinck, *Muḥammad en de Joden te Medina*, p. 111 sqq., and C. H. Becker in *Der Islam*, iii. 378 sq.). In Muḥammad's messages to the tribes of Arabia the ṣalāt is frequently inculcated as a Muslim duty (see J. Sperber, *Die Schreiben Muhammads an die Stämme Arabiens in the M.S.O.S. As.*, xix., reprint, p. 16, 19, 38, 58, 77 etc.). According to Muslim tradition, the establishment of the number five in the daily ṣalāt dates back to the beginnings of Islām. It is connected with Muḥammad's ascension to heaven (see the article *ISRĀʾ*). When Muḥammad is taken up to the highest heaven fifty ṣalāts daily are imposed on his community by Allāh. Muḥammad leaves the presence of Allāh with this commission; on his way back he meets Mūsā who asks him what Allāh has imposed on his community. When Mūsā hears the orders he says: "Return to thy Lord for the community is not able to bear this." Allāh then alters the fifty to twenty-five. On his way back Muḥammad tells Mūsā of the alteration and receives the same reply. The same processes are repeated until finally the number remains at five (al-Bukhārī, *Ṣalāt*, bāb 1; Muslim, *Imān*, trad. 259, 263; al-Tirmidhī, *Mawāḳīt al-Ṣalāt*, bāb 45; al-Nasāʾī, *Ṣalāt*, bāb 1; Ibn Mādjā, *Iḳāma*, bāb 194; Aḥmad b. Ḥanbal, i. 315 (ter), iii. 148 sq., 161; cf. Ibn Saʿd, I/i. 143 etc.). The scene bears some similarity to Genesis, xviii. 23 sqq., where Abraham's intercession for Sodom and Gomorra is described. — On the other hand, in a widely disseminated tradition we are told that

Gabriel came down five times in one day and performed the ṣalāt in Muḥammad's presence and the latter on each occasion imitated the angel (al-Bukhārī, *Mawāḥiṭ*, bāb 1; Muslim, *Masāḍid*, trad. 166, 167; Abū Dā'ūd, *Ṣalāt*, bāb 2; al-Tirmidhī, *Mawāḥiṭ*, bāb 1; al-Nasā'ī, *Mawāḥiṭ*, bāb 1, 10, 17; Ibn Mādjā, *Ṣalāt*, bāb 1; al-Dārimī, *Ṣalāt*, bāb 2; Malik, *Wuḥūṭ*, trad. 1; etc.). This idea cannot, however, survive literary and historical criticism. In a short but searching study Houtsma has come to the following conclusions (*Iets over den dagelijkschen ṣalat der Mohammedanen in the Theologisch Tijdschrift*, 1890, xxiv. 127 sqq.). How the Mekkan practice was regulated is seen from Sūra xi. 116: "And hold the ṣalāt at the two ends of the day as well as at the ends (?) of the night". With this Sūra xvii. 80 agrees, where a morning ṣalāt, a ṣalāt when the sun declines and the night ṣalāt (*tahajjud*) are prescribed; cf. Sūra xxiv. 57, where the ṣalāt al-*faḍr* and the ṣalāt al-*ishā'* are mentioned. Then we find appearing suddenly in the Medina Sūra iii. 239 the "middle ṣalāt" (al-*wuṣṭā*). This must therefore have been added in Medina to the two usual ṣalāts and probably after the example of the Jews, who also performed their *sevilla* three times a day.

We thus arrive at three daily ṣalāts in Muḥammad's life-time. The question how the number five came to be fixed upon is answered by Houtsma, who says that the two midday ṣalāts (*zuhr* and *ʿaṣr*) and the two evening ṣalāts (*maghrib* and *ishā'*) are duplications of the *wuṣṭā* and *ishā'* respectively, duplications which are easily explained from the lack of accurate means of defining the times for the ṣalāt as in Muḥammad's life-time (cf. E. Mittwoch, *Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, Abh. Pr. Ak. W., 1913, No. 2, p. 10 sqq.). Goldziher, on the contrary (*Islamisme et Parsisme in the R.H.R.*, 1901, xliii. 15), assumes Persian influence in settling the number at five. Caetani called attention to the fact that the number five was not yet firmly established in 'Umar II's time (*Annali, Introduzione*, § 219 note, with reference to Goldziher, *Muh. Studien*, ii. 20, 29). Thereon it should be noted that 'Umar's admonition to 'Urwa to be careful was not concerned with the number five but with the exact fixing of times. The latter, as a matter of fact, is also a subject of discussion in canonical Tradition, which deserves a separate investigation. When the theory of the five obligatory daily ṣalāts became firmly established cannot be exactly settled as yet. According to Ibn 'Abbās, Muḥammad "combined" in Medina several ṣalāts, e.g. the *zuhr* and *ʿaṣr* ṣalāt on the one hand and the *maghrib* and *ishā'* ṣalāt on the other, without his being on a journey or threatened by danger (Muslim, *Musāfirin*, trad. 49). Asked for Muḥammad's presumed reason, Ibn 'Abbās replied that he did not wish to expose any members of his community to (the danger of) sinning (by overburdening them) (*ibid.*, trad. 50; cf. 54, 55). In another version of the same ḥadīth we read: "We were wont in Muḥammad's life-time to combine ṣalāts in twos (*ibid.*, trad. 58). Al-Nawawī's commentary on the passages quoted (ed. Cairo 1282 A. H., ii. 196 sq.) is instructive for the difficulties which these traditions prepared for the 'Ulamā' and how they were able to overcome them. To us, such traditions are an indication that the

number of daily ṣalāts had not yet been fixed at five in Muḥammad's lifetime.

In the canonical Ḥadīth the number five is found in numerous traditions. In the schools of law there is no difference of opinion on this point. We shall therefore have to place the origin of this theory before the end of the seventh century.

The five compulsory ṣalāts are named as follows, according to the time of day at which they are observed (see the article *MIKĀT*): *Ṣalāt al-Ṣubḥ*, often also called *Ṣalāt al-Faḍr*; *Ṣalāt al-Zuḥr*; *Ṣalāt al-ʿAṣr*; *Ṣalāt al-Maghrib*; *Ṣalāt al-ʿIshā'*, often also called *Ṣalāt al-ʿAtama*, but the latter name is often condemned as unfit (Muslim, *Masāḍid*, trad. 228, 229; Abū Dā'ūd, *Ḥudūd*, bāb 78; al-Nasā'ī, *Mawāḥiṭ*, bāb 23; etc.).

II

Every Muslim who has attained his majority and is *compos mentis* is bound to observe the five daily ṣalāts (al-*maktūba*, in contrast to the voluntary ṣalāts, which are called *nāfila* or *ṣalāt al-taṭawwu'*). The obligation is suspended for the sick. Ṣalāts omitted must be made up (*kaḍā'*). The theories of the Shāfi' school on this point are given in al-Nawawī's commentary on Muslim, *Musāfirin*, trad. 309—316 (ii. 178 sqq.). According to the strict theory (which in Islām has in very many cases little or nothing to do with practice), any one who deliberately omits the ṣalāt because he does not recognise it as a legal duty is to be regarded as *kāfir*. Even deliberate neglect without any such theoretical basis makes him liable to the death penalty [cf. KATL] (see al-Nawawī, *Minḥāḍi al-Talibin*, ed. v. d. Berg, i. 202; cf. Abū Ishāq al-Shirāzī, *K. al-Tanbīh fi 'l-Fiqh*, ed. Juynboll, p. 15).

Several preliminary conditions must be fulfilled for the performance of a valid ṣalāt.

The requisite ritual purity must be restored, if necessary, by *wuḍū'* [q. v.], *ghusl* [q. v.] or *ta-yammum* [q. v.]. The dress worn should fulfil the legal regulations which aim at the "covering of the privy parts" (*satr al-ʿawra*). This means that in men the body must be covered from the navel to the knees, in free women the whole body except the face and hands. The latter regulation is remarkable, because it is in striking contrast to the popular European opinion regarding the compulsory veiling of Muslim women (cf. Snouck Hurgronje, *Twee populaire dwalingen in the Verspreide Geschriften*, i. 295 sqq.). In the Ḥadīth the question of dress, like so many others, has not yet reached a uniform formulation. Sometimes only the covering of the privy parts is mentioned (e.g. al-Bukhārī, *Ṣalāt*, bāb 10), and sometimes the saying is ascribed to Muḥammad that the shoulders also should be covered (e.g. Muslim, *Ṣalāt*, trad. 175); sometimes the use of the scanty *ṣammā'* is expressly mentioned in this connection (e.g. Aḥmad b. Ḥanbal, *Musnad*, iii. 322 etc.) and at the same time we are told that the ṣalāt in one *ṭhawb* is permitted or even quite common (e.g. Abū Dā'ūd, *Ṣalāt*, bāb 77, 80—82); on the other hand it is said that one who owns two *ṭhawb* should put them on at the ṣalāt (e.g. Abū Dā'ūd, *Ṣalāt*, bāb 82; Aḥmad b. Ḥanbal, ii. 148).

The ṣalāt need not be held in a mosque but may be celebrated in a dwelling-house and any other place; the authority given for this is the saying of Muḥammad that he was granted

the privilege that for him the earth was *masdjid wa-ḥakūr* (e.g. al-Bukhārī, *Şalāt*, bāb 56). Tombs are excepted (e.g. Muslim, *Şalāt al-Musāfirin*, trad. 208, 209) and unclean places, like slaughter-places etc. (e.g. al-Tirmidhī, *Mawāḥiṣ al-Şalāt*, bāb 141).

The place where the şalāt is performed is marked off in some way from the surrounding area by a *sutra*; on this cf. the article SUTRA. A *saḍjdjāda* [q. v.] is used as a rule. Attention has also to be paid to the direction of Mekka; cf. the article KIBLA.

The şalāt proper consists of the following elements, our description of which is based on the Şāfi'ī practice.

The *niya* (= intention, q. v.) is pronounced aloud or in a low voice, with an announcement of the şalāt which one intends to perform: it corresponds to the Jewish *kawwānā* (cf. Mittwoch, *op. cit.*, p. 16; A. J. Wensinck, *De intentie in recht, ethiek en mystiek der semietische volken in de V. M. A. W.*, series 5, vol. iv.). Then are pronounced the words *Allāhu akbar*, the *takbīrat al-ihṛām*, which begins the consecrated state (cf. the article İHRĀM). Mittwoch has compared this formula with the benedictions of the Jewish *tefilla* (*op. cit.*, p. 16 sq.). The şalāt is performed standing. Mittwoch points out that the Jewish *tefilla* is called *'amidā* (*op. cit.*, p. 16). It is sunna to utter a *du'ā'* or a *ta'awwudh* after the *takbīra* (see *Minkhādī*, i. 78). Then follows the recitation which usually consists of the *fātiha*. In the Ḥadīth the importance of this *ḥirā'a* is expressed in the maxim: *lā şalāt liman lam yaḥṣa' bi-fātiḥati 'l-kitāb* (e.g. al-Bukhārī, *Adhān*, bāb 95; Muslim, *Şalāt*, trad. 34—36, 42). In a congregational şalāt it is the custom for only the *fātiha* to be recited along with the Imām; if the latter begins with the second *ḥirā'a*, those present have to listen (cf. *Minkhādī*, i. 80). In the Ḥadīth are numerous statements as to whether recitation should be loud or low; e.g. al-Bukhārī, *Kusūf*, bāb 19; Abū Dā'ūd, *Ṭahāra*, bāb 89; al-Nasā'ī, *Iftitāḥ*, bāb 27—29, 80, 81 etc.; cf. al-Bukhārī, *Adhān*, bāb 96, 97, 108; Muslim, *Şalāt*, trad. 47—49; al-Nasā'ī, *Iftitāḥ*, bāb 27, 28, 80 etc.

Next comes the *rukū'* which consists in bending the back till the palms of the hands are on a level with the knees (the Jewish *kerī'a*; see Mittwoch, *op. cit.*, p. 17 sq.; cf. also the pictures of the various attitudes in the şalāt in Lane's *Manners and Customs* in the chapter on *Religion and Laws* and in Juynboll, *Handbuch*, p. 76). The upright position is then resumed (*ʾiʿtidāl*); as soon as the head is raised after the *rukū'*, the hands are uplifted and the worshipper pronounces the words: "Allāh heeds him who praises him." This is found quite early, even in Ḥadīth (e.g. al-Bukhārī, *Adhān*, bāb 52, 74, 82; Muslim, *Şalāt*, trad. 25, 28, 55, 62—64 etc.).

There have been differences of opinion regarding the raising of the hands in *şalāt* and *du'ā'*. Some say that Muḥammad used to lift up his hands at the şalāt (e.g. al-Bukhārī, *Adhān*, bāb 83—86; Muslim, *Şalāt*, trad. 21—26; Abū Dā'ūd, *Şalāt*, bāb 114—126; al-Nasā'ī, *Iftitāḥ*, bāb 1—6, 85—87; Aḥmad b. Ḥanbal, i. 93, 255, 289 etc.). Importance is attached (as may be seen in the passages just quoted) to giving the height to which it is permitted to raise the hands. Besides raising the hands the spreading out of them also occurs (al-Bukhārī, *Adhān*, bāb 130). It is also evident from

the passages of Ḥadīth quoted that the raising of the hands took place not only after the *rukū'* but also in other parts of the şalāt. This ritual gesture was made with special preference at the şalāt for rain (e.g. al-Bukhārī, *Ḍiym'a*, bāb 34, 35; Muslim, *Istisḥā'*, trad. 5—7; Aḥmad b. Ḥanbal, iii. 104, 153, 181 etc.). Occasionally the *raj' al-yadain* is declared permitted for no *du'ā'* except the *istisḥā'* (e.g. al-Nasā'ī, *Kiyām al-Lail*, bāb 52; Aḥmad b. Ḥanbal, ii. 243). What value was given this rite may be seen, for example, from the fact that Muḥammad is made to perform the *wuḍū'* before raising the hands in the *du'ā'* (al-Bukhārī, *Maghāzī*, bāb 55). This all becomes quite clear when we reflect that the raising of the hands is as it were a measure of coercion used by man towards the Deity, as Goldziher has shown in his *Zauberelemente im islamischen Gebet* (Nöldeke-Festschrift, i. 320). The Sunna further associates with the *rukū'* the *ḥunūt* [q. v.], which in parts falls into the same category as the raising of the hands, as Goldziher has also shown in the essay just mentioned.

The next "pillar" of the şalāt in order is the prostration (*sudjūd*), which was also one of the rites of the Jewish (Mittwoch, *op. cit.*, p. 17 sq., *hishtakawāyā*) and of the Christian service (Wensinck, *Mohammed en de Joden te Medina*, p. 104 sq.); for further details see the article SUDJŪD. Next the worshipper assumes the half-kneeling, half-sitting position, which in Arabic terminology is usually called *djulus* (cf. Juynboll, *op. cit.*, p. 76, fig. 7). Then comes another *sudjūd*.

The ceremonies from the recitation of the *fātiha* to the second *sudjūd* inclusive constitute a *rak'a*. It is to be noted that in the Ḥadīth literature at least this terminology still varies a good deal. Sometimes *rak'a* seems to be used in the same sense as *saḍjida*, sometimes (and this is the regular usage later) *rak'a* is the more comprehensive term, applied to the middle part just described of the whole *şalāt*. Only the history of the Muslim ritual, which has still to be written, will make clear the exact state of affairs. The most usual (in Ḥadīth also) terminology gives the number of *rak'a*'s for each şalāt, viz. for the *şalāt al-faḍīr*, 2; for the *şalāt al-ḡuhr*, 4; for the *şalāt al-aṣr*, 4; for the *şalāt al-maghrib*, 3; for the *şalāt al-ʾiṣḥā'*, 4. Muslim tradition even says that the şalāt originally consisted of two *rak'a*'s, that this number was retained for the şalāt on journeys, but four was fixed for the normal şalāt (e.g. al-Bukhārī, *Şalāt*, bāb 1; Muslim, *Şalāt al-Musāfirin*, trad. 1—3, etc.). Mittwoch (*op. cit.*, p. 18 sq.) assumes Jewish influence on the original choice of two *rak'a*'s.

The statement that this or that şalāt consists of so many *rak'a*'s means that the introductory rites which precede the first *ḥirā'a* and those which follow the second *sudjūd* (see below) need only occur once in the şalāt in question while, on the other hand, the ceremonies in between are repeated so many times.

The rites which follow the second *sudjūd* are the *tashahhud*, the profession of faith, which is pronounced sitting. That the rule just mentioned for the repetition of certain parts of the şalāt only developed gradually is evident from a tradition which ascribes to Muḥammad the pronouncement that the *tashahhud* should be repeated at every two *rak'a*'s (Aḥmad b. Ḥanbal, i. 211).

Then comes the şalāt on the prophet which

consists of eulogies in which occurs the much discussed formula *Ṣallā 'llāhu 'alaihi wa-sallama*. These formulae are pronounced sitting. The worshipper remains seated for the concluding ceremony, the *salām* or *taslīmāt al-taḥlīl*, which ends the consecrated state. The fullest version of it is, according to al-Nawawī (*op. cit.*, p. 91 sq.): *al-salām 'alaikum wa-rahmatu 'llāhi*; but it may also be abbreviated. It is pronounced twice, once looking to the right and a second time to the left. It is considered a salutation to the believers; but it is also referred to the guardian angels present (cf. Sūra xvii. 80). On analogies in the Jewish service see Mittwoch, *op. cit.*, p. 18.

The different ceremonies of the ṣalāt are classified according to their importance or their obligatory or sunna character. Al-Nawawī (*op. cit.*, p. 74 sqq.) numbers the following among the *arkān al-ṣalāt*: *niya*, *takbīrāt al-ihrām*, *ḳiyām*, *ḳirā'a*, *rukū'*, *'itidāl*, *sudjūd*, *djulus*, *tashahhud*, *ḳu'ūd*, *al-ṣalāt 'ala 'l-Nabi*, *salām* and (13) the correct order of succession (*tartīb*). The other ceremonies — some of which are mentioned above — are considered sunna by him. Cf. Abū Ishāḳ al-Shīrāzī, *Tanbih*, p. 25.

It is the many sunna ceremonies which, according as they are abbreviated or carried through in great detail, give each ṣalāt its peculiar character and in particular affect its length. This is true especially of the eulogies interspersed (see Maulvi Muḥammad 'Alī, *The Holy Qur'ān*, 2nd ed., Lahore 1920, p. II) and of the *ḳirā'a*; for the recitation of the *fātiḥa* may be followed by the recitation of further chapters from the *Qur'ān*. The *Ḥadīth* has much to say on this subject. It appears that the great zeal of many imāms in this respect has often been a burden to the faithful. Complaints on the subject are said to have been made to Muḥammad and he is said to have readily admitted their justice. "Reflect", he is said to have warned the Imāms, "that there are weak and old men among you" (e. g. al-Bukhārī, *Im*, bāb 28; Muslim, *Ṣalāt*, trad. 179—190; Abū Dā'ūd, *Ṣalāt*, bāb 122, 123 etc.). We even find him quoted as describing the Imām concerned as a *fattān* (tempter) (e. g. al-Bukhārī, *Adhān*, bāb 60; Aḥmad b. Ḥanbal, iii. 308). Praise is also given to Muḥammad because no one went through the ṣalāt more completely and in a shorter time than he did (Aḥmad b. Ḥanbal, iii. 279, 282 and many other passages).

It is natural that the correct order of the ceremonies in the ṣalāt is considered one of its pillars by the faḳīhs. But we are justified in supposing that there was still considerable variation in this long after Muḥammad's death. Such unintentional deviations from the usual number and order of the ceremonies are discussed in the *Fīḥ* and *Ḥadīth* — the *enfant terrible* of the *Fīḥ* — supplies the historical background for them. Both say that these unintentional deviations in minor points are made good by the performance of additional *rak'a's* or *saḳida's*. With what painful accuracy the *Fīḥ* deals with this subject may be seen, for example, from al-Nawawī (*op. cit.*, p. 90 sqq.). *Ḥadīth*, on the other hand, is content, as a rule, to say that Muḥammad, who was later also credited with such deviations, in these cases used to perform two additional *saḳida's*, which are called *saḳidatū 'l-saḥw* (e. g. Muslim, *Masāḳid*, trad. 85; Aḥmad b. Ḥanbal, iii. 12, 37, 42;

al-Bukhārī, *Ṣalāt*, bāb 88; *Saḥw*, bāb 4 etc.). Al-Bukhārī in the heading to bāb 32 of the chapter *Ṣalāt* preserves the memory of less minutely regulated conditions.

The *Fīḥ* also defines quite minutely what actions and contingent states of body destroy the validity of the ṣalāt (al-Nawawī, *op. cit.*, p. 103 sqq.; Abū Ishāḳ al-Shīrāzī, p. 28 sq.). The *Ḥadīth* records that at first the believers used to talk freely with each other during the ṣalāt and greeted Muḥammad and one another, but that the Prophet put an end to this licence (al-Bukhārī, *al-Amāl fī 'l-Ṣalāt*, bāb 2—4). The old state of affairs is strikingly illuminated in the oft told story of how Muḥammad performed the ṣalāt with Zainab's little daughter hanging round his neck; when he came to the *sudjūd* he, it is said, put down the child and took her up again when he arose (e. g. al-Bukhārī, *Ṣalāt*, bāb 106; Muslim, *Masāḳid*, trad. 41—44; al-Nasā'ī, *Masāḳid*, bāb 19). In another tradition it is related how Ḥasan and Ḥusain jumped on Muḥammad's back during his *sudjūd* (e. g. Aḥmad b. Ḥanbal, ii. 513). These were the good old days which the faḳīhs clearly did not wish back again.

III

Besides the five daily ṣalāts there are some that are not compulsory; al-Ghazālī divides them into three categories: *sunna*, *mustaḥabb* and *taṭawwū'* (*Iḥyā'*, Cairo 1302, i. 174); some of them may have come into use after Muḥammad's death and were therefore never given legal force, others had already fallen somewhat into desuetude in Muḥammad's lifetime.

The latter is true of the night-ṣalāt (*ṣalāt al-lail*). This name is the most usual in the *Ḥadīth*, while in the *Qur'ān* *tahajjud* (Sūra xvii. 80) is used. The etymology (the "waking") of this word suggests a close connection with the Christian vigils and especially with the custom of keeping awake (Syriac *shahrā*), which was much cultivated among ascetics and mystics of Western Asia. We have quite a minute knowledge of this rite from Syriac ascetic literature; in it the keeping awake is in itself a very meritorious work; it is usually combined with the reading of scripture, meditation and ritual prayer. We must imagine the *tahajjud* to have been something similar. In the description of the nightly exercises in the *Lailat al-Ḳadr*, and in the nights of Ramaḍān in general, the name *ḳiyām* is preferably used, which shows that great value was put upon standing and waking in themselves.

That such nightly exercises were zealously carried through in the oldest Muslim community is clear from the *Ḥadīth*. For further details see the article *TAHAJJUD*. Here we shall only say that even in Muḥammad's lifetime these exercises has been deprived of their obligatory character (Abū Dā'ūd, *Taṭawwū'*, bāb 17, 26; al-Nasā'ī, *ḳiyām al-Lail*, bāb 2; al-Dārimī, *Ṣalāt*, bāb 165).

The night-ṣalāt is closely connected with the *witr*. This word means "uneven" and the rite really consists in the addition of one *rak'a* to the even number of *rak'a's* in the night-ṣalāt. For further information see the article *WITR*. How varying the practice was in the oldest community with regard to the daily ṣalāts may be seen from the statements regarding the *ṣalāt al-duḥā*, the only one in the forenoon. In Aḥmad b. Ḥanbal,

i. 147, the time is fixed in the following way: Muḥammad used to perform the *ḡuḡā* when the sun had risen the same distance from its starting point as it is distant from its place of setting at the *ṣalāt al-ʿaṣr*. Some make Muḥammad recommend the *ṣalāt al-ḡuḡā* (al-Nasāʿī, *Ḳiyām al-Lail*, bāb 28; *Ṣiyām*, bāb 81; al-Dārimī, *Ṣalāt*, bāb 151; Aḥmad b. Ḥanbal, ii. 175, 265 bis, 271, etc.) and perform it regularly (Aḥmad b. Ḥanbal, i. 89, ii. 38); it is even said that it was *farīḡa* for him and *sunna* for the Muslims (do., i. 231, 232, 317 bis). Others again say that Muḥammad only performed this *ṣalāt* once or that the authority in question only saw him do it once (al-Bukhārī, *Adḡān*, bāb 41; Muslim, *Ṣalāt al-Musāfirīn*, trad. 80, 81; Abū Dāʿūd, *Taʿāwunūʿ*, bāb 12; Aḥmad b. Ḥanbal, iii. 156); or that Muḥammad only performed it on returning from a journey (Muslim, *Ṣalāt al-Musāfirīn*, trad. 75, 76). Such statements are supported by the traditions which say that the great authorities like Abū Bakr, ʿUmar and Ibn ʿUmar did not perform the *ṣalāt al-ḡuḡā* (al-Bukhārī, *Tahādīdjūd*, bāb 31; al-Dārimī, *Ṣalāt*, bāb 152). The last named goes so far as to call it a *bidʿa* (= innovation; a strong word) (Muslim, *Ḥaḡḡīdī*, trad. 220; Aḥmad b. Ḥanbal, ii. 128 sq., 155).

The *ṣalāts* before and after the obligatory ones, usually consisting of two *rakʿa*'s, are very numerous. Before and after the *Ṣalāt al-Faḡr*: al-Bukhārī, *Adḡān*, bāb 15; Abū Dāʿūd, *Taʿāwunūʿ*, bāb 6. Before and after the *Ṣalāt al-Zuḡr*: al-Bukhārī, *Tahādīdjūd*, bāb 25; Muslim, *Ṣalāt al-Musāfirīn*, trad. 105, 106. Before and after the *Ṣalāt al-ʿAṣr*, but care should be taken to avoid coinciding with the sunset (see the article *MĪḲĀT*): Abū Dāʿūd, *Taʿāwunūʿ*, bāb 8; al-Bukhārī, *Mawāḡit*, bāb 53; cf. *Maḡḡāzī*, bāb 69. Before and after the *Ṣalāt al-Maḡrib*: al-Bukhārī, *Tahādīdjūd*, bāb 35, 25 (six *Rakʿa*'s after the *Ṣalāt al-Maḡrib*: al-Tirmidhī, *Mawāḡit*, bāb 203). After the *Ṣalāt al-Iṣḡāʿ*: al-Bukhārī, *Tahādīdjūd*, bāb 25. But it is reported even of Muḥammad that he did not observe all these voluntary *ṣalāts* every day; the number is usually fixed at 16 or 12 (Aḥmad b. Ḥanbal, i. 111, 142, 143, 146, 147 sq.). In addition there are such *ṣalāts* on different days of the week and month (see al-Ḡhazālī, *Iḡyāʿ*, i. 174 sqq. in bāb 7 of the chapter *Ṣalāt*) and on different occasions, such as on entering a mosque, returning from a journey (al-Bukhārī, *Ṣalāt*, bāb 60; Muslim, *Musāfirīn*, trad. 74).

IV

One may perform the daily *ṣalāt* by oneself; but it is recommended to perform it with the community (on differences of opinion on this question see al-Nawawī, *op. cit.*, i. 126 sq.). In any case, according to al-Nawawī, there is no obligation on women; it is even not recommended for them. In the Ḥadīth the advantages of the congregational *ṣalāt* are strongly emphasised (e. g. al-Bukhārī, *Adḡān*, bāb 29—31, 34; Muslim, *Masāḡīd*, trad. 245—259, 271—282; al-Nasāʿī, *Aʿimma*, bāb 42, 45, 48—50, 52). The mosque is at the same time recommended as the place of assembly, although not obligatory, nor does the validity depend on a certain number of participants being present. In Abū Ishāḡ al-Šīrāzī (*Tanbīḡ*, p. 31; cf. Ibn Māḡja, *Iḡāma*, bāb 5) it is said that two persons can hold a *ḡamaʿa*. Very often *ṣalāts* performed by three individuals are described (e. g. Muslim, *Masāḡīd*, trad. 269).

One is recommended to go quietly to the *ṣalāt* (al-Bukhārī, *Adḡān*, bāb 20, 21, 23; Muslim, *Masāḡīd*, trad. 151—155). It is also considered particularly meritorious to take one's place some time before the commencement of the *ṣalāt* and to wait some time after its conclusion (Aḥmad b. Ḥanbal, ii. 266, 277, 289 sq., 301). If anyone comes so late that he can only take part in one *rakʿa* he has nevertheless "achieved the *ṣalāt*" (al-Bukhārī, *Mawāḡit*, bāb 29; Muslim, *Masāḡīd*, trad. 161—165 etc.; the opposite view is held by Mālik, *Wuḡūl*, trad. 16). Even if one enters the mosque after already performing the *ṣalāt* concerned by oneself, one should take part in the *ṣalāt* with the congregation (Abū Dāʿūd, *Ṣalāt*, bāb 56; al-Tirmidhī, *Mawāḡit*, bāb 49). The opposite view, however, has also its supporters (Abū Dāʿūd, *Ṣalāt*, bāb 57). The frequently mentioned rule is that one should make up in private for what one has missed in the *ḡamaʿa* (Aḥmad b. Ḥanbal, ii. 237, 238, 239, 270, etc.).

The worshippers arrange themselves in rows (*ṣaff*) on the closed and good order of which much stress is laid (al-Bukhārī, *Adḡān*, bāb 71, 72, 74—76, 114; Muslim, *Ṣalāt*, trad. 122—128; Abū Dāʿūd, bāb 93—100; Aḥmad b. Ḥanbal, iii. 3, 112 sq., 114, 122, etc.). The places in the front row have special advantages (al-Bukhārī, *Adḡān*, bāb 9, 73; Muslim, *Ṣalāt*, trad. 129—132); within this row again the places on the right of the *Imām* are especially recommended (Ibn Māḡja, *Iḡāma*, bāb 34). This, however, is true only of men; women are advised to take their places in the last row (Aḥmad b. Ḥanbal, ii. 247, 336, 354, 370). The *ṣalāt al-ḡamaʿa* is conducted by an *imām* who takes up a position before the front row, or, if there are only two individuals present besides him, between the two or so that one is on his right and the other behind him (Abū Dāʿūd, *Ṣalāt*, bāb 98; al-Nasāʿī, *Taḡbīḡ*, bāb 1; Aḥmad b. Ḥanbal, i. 451).

It is laid down that one should copy the *Imām* exactly (al-Bukhārī, *Adḡān*, bāb 51—53, 74, 82 etc.). Anyone who neglects this rule exposes himself to punishment from God (Aḥmad b. Ḥanbal, ii. 425; Mālik, *Nidāʿ*, bāb 57).

Mittwoch (*op. cit.*, p. 22; cf. thereon Becker in *Der Islam*, iii. 386 sqq.) has pointed out that the *Imām* corresponds to the *sheliḡḡ haṣ-ṣibbūr* at the Jewish service. At the latter as in *Islām* the duties can be carried through by any member of the community qualified to do so. In Muḥammad's lifetime the position in Medina was that it only happened exceptionally that the Prophet did not conduct the *ṣalāt*. During his last illness and also on other occasions when he was absent Abū Bakr is said to have usually represented him. The Ḥadīth loves to expand itself on this point; in this we have probably to consider many things as reflections of the events after Muḥammad's death. The conducting of the *ṣalāt* was then of tremendous importance as is clear from the manifold meanings of the word *Imām*. The leader of the *ḡamaʿa* in the mosque of the Prophet was naturally also the leader of the community in political matters. Gradually there came about a separation of the functions but the Caliph and the leader of the smallest village *ḡamaʿa* alike retain the title of *imām*.

While the *Imām* — at least in the days of the early Caliphs — was appointed to the mosque

of the Prophet, in the provinces an alternation in the exercise of the duties was more to be expected. In the canonical Ḥadīth we look in vain for a regular usage in the provinces. Perhaps it may be concluded from this that in the first century of the Hidjra no regular usage had yet developed. If a number of persons assemble for the *djamā'a*, sometimes it is said that the oldest (al-Bukhārī, *Adhān*, bāb 17, 18, 35, 49, 140; *Djihād*, bāb 42; al-Nasā'ī, *Adhān*, bāb 7 etc.), sometimes the one with the best knowledge of the Qur'an should conduct the ṣalāt (Muslim, *Masādjīd*, trad. 289—291; al-Nasā'ī, *Adhān*, bāb 8; Aḥmad b. Ḥanbal, iii. 24, 34, 36 etc.). Slaves and freedmen could perform the duties (al-Bukhārī, *Adhān*, bāb 54). In a Zaidī tradition there is even a mention of women as Imām ("Corpus Juris" di Zaid ibn 'Alī, ed. Griffini, N^o 189). The question behind whom one may perform the ṣalāt is also discussed in the Fikḥ books and in the collections of traditions (al-Nawawī, *op. cit.*, p. 131 sqq.; al-Bukhārī, *Adhān*, bāb 56; Abū Dā'ūd, *Ṣalāt*, bāb 63).

The responsibility of the Imām (Aḥmad b. Ḥanbal, ii. 232, 284, 377 sq., etc.) as well as his heavenly reward are laid stress upon (Abū Dā'ūd, *Ṣalāt*, bāb 58; Ibn Mādjā, *Iḥāmā*, bāb 47). One should retire if some one is there who has greater authority in religious matters (al-Nasā'ī, *A'imma*, bāb 3, 6). No one should thrust himself on the people (Abū Dā'ūd, *Ṣalāt*, bāb 62; al-Tirmidhī, *Mawāḥiṣ*, bāb 149). The Imām is not to be a stranger but a local man (Abū Dā'ūd, *Ṣalāt*, bāb 65; al-Tirmidhī, *Mawāḥiṣ*, bāb 147; Mālik, *Ṣalāt al-Djamā'a*, bāb 15).

The direction of the *djamā'a* gradually developed into a more or less definite office. In Egypt the Imām is often a small tradesman or a school-master (Lane, *Manners and Customs*, p. 96 sq.). In the larger mosques there are two imāms appointed who are paid out of the funds of the mosque. In Mekka we find the most distinguished scholars and quite insignificant individuals alike acting as Imām (Snouck Hurgronje, *Mekka*, ii. 234, note). In the Dutch East Indies the duties are often performed by the *panghulu*, who also holds juridical offices (cf. Snouck Hurgronje, *Verspreide Geschriften*, ii. 116 sq., 177; *De Atjehers*, i. 89). See further the article MASJID.

Besides the five daily ṣalāts there are special services to be held by the community on certain occasions. The first place among these is occupied by the Friday ṣalāt; for a description of which see the article DJUM'Ā. For the ṣalāt on the two feasts see the article 'ID, for the ṣalāt for rain see ISTISKĀ' and for the *Ṣalāt al-Kusūf* see KUSUF. Here we shall only say that much ancient and popular matter has survived in these divine services.

Of quite another kind, i.e. special or short forms of the true Muslim ṣalāt, is the ṣalāt on journeys, which consists of two rak'a's. The jurists naturally devote much attention to the question of what is meant by a journey. Another alleviation on journeys consists in the combination of two or more ṣalāts into one (*djam'*). The Ḥadīth has much information on the subject (e.g. al-Bukhārī, *Takbir al-Ṣalāt*, bāb 6, 13—19; Muslim, *Ṣalāt al-Musāfirin*, trad. 42—58 etc.). As mentioned in section I, it is said that Muḥammad combined several ṣalāts in Medina; on the significance of such statements cf. what is

said there and also al-Nawawī, *op. cit.*, p. 159 sq.

A special ṣalāt, already described in the Qur'an, is that which is held when danger threatens from the enemy (Sūra iv. 102—104). The deviation from the usual ritual consists mainly in the fact that the believers are arranged in two rows of which one keeps watch with weapon in hand during the *sudjūd* of the other; they repeat this in turn until all have performed the *sudjūd*. The *tashahhud* is then recited by them all together. If the enemy is to be expected from another direction than that of the *qibla*, the ritual is modified as conditions demand (for further information see e.g. al-Nawawī, *op. cit.*, p. 181 sqq.). In this case also the ṣalāt may be abbreviated (Muslim, *Ṣalāt al-Musāfirin*, trad. 4, 5; al-Nasā'ī, *Ṣalāt al-Khawf*, bāb 4, 7, 23, 24, 26, 27). There is even mention of a *Ṣalāt al-Khawf* of only one rak'a (Aḥmad b. Ḥanbal, i. 237, 243).

In conclusion we must here deal briefly with the ṣalāt for the dead (*al-ṣalāt 'ala 'l-mayyit*, *ṣalāt al-djinnāsa*). It is a common duty (*fard al-kifāya*) which can only be omitted in exceptional cases (cf. Snouck Hurgronje, *Verspr. Geschr.*, i. 138, note 3). In some traditions the ṣalāt is ordered for every dead Muslim (Ibn Mādjā, *Djannā'is*, bāb 31; al-Nasā'ī, *Djannā'is*, bāb 57). In the Ḥadīth (al-Bukhārī, *Djannā'is*, bāb 23, 85; *Tafsir*, Sūra 9, bāb 12, 13; Muslim, *Faḍl al-Ṣahāba*, Trad. 25 etc.) it is related how Muḥammad held the ṣalāt for the dead 'Abd Allāh b. Ubaiy, the arch-munāfiq, and was reproved by 'Umar for doing so. Therefore Sūra ix. 85 was revealed: "and never perform the ṣalāt for one of them who dies and stand not at his grave, for they are unbelievers against Allāh and His Messenger and they die as *fāsiq*" (on the legal definition of the conception of *fāsiq* see Snouck Hurgronje, *Verspr. Geschr.*, ii. 97).

In the Ḥadīth it is further related that Muḥammad omitted the ṣalāt in cases where the deceased had committed suicide (Muslim, *Djannā'is*, trad. 107; Abū Dā'ūd, *Kharāḍī*, bāb 46). Al-Nawawī, *op. cit.*, p. 225, says, however, that no exception was made in this case. The Ḥadīth also tells us that Muḥammad refused to hold this ṣalāt unless the debts of the deceased had already been paid (al-Bukhārī, *Ḥawālāt*, bāb 3; Abū Dā'ūd, *Buyū'*, bāb 9; Aḥmad b. Ḥanbal, ii. 290, 399). In law therefore the mourners are recommended to settle this matter quickly (al-Nawawī, i. 221). In the Ḥadīth we find contradictory statements regarding the question whether Muḥammad held the *ṣalāt al-djinnāsa* on behalf of those who had been legally executed (Abū Dā'ūd, *Djannā'is*, bāb 47; al-Nasā'ī, *Djannā'is*, bāb 63, 64). We shall hardly be wrong if we suppose that this ṣalāt also retained certain pre-Muḥammadan customs (cf. A. J. Wensinck, *Some Semitic Rites of Mourning and Religion in the Verh. A.W.*, New Series, vol. xviii, N^o 1, Chap. 2 and 3). According to Abū Ishāq al-Shirāzī (ed. Juynboll, p. 47 sq.), the following is the order of the ṣalāt for the dead: the Imām stands at the top of the bier in the case of a man, at the bottom in the case of a woman (this is the old tradition; cf. al-Bukhārī, *Djannā'is*, bāb 63; Muslim, *Djannā'is*, trad. 87, 88 etc.); he pronounces the *niya* and utters four *takbir*'s with hands raised; at the first he recites the *fātiha*, at the second he utters the eulogy on Muḥammad, at the third he pronounces the *du'a*

for the dead man, at the fourth a *du'ā* for those who take part in the service; the two *taslimā's* conclude the ceremony.

Difference of opinion prevails regarding the place where the *ṣalāt al-djānā'iz* should be held. There are indications that in the ancient Medina the *muṣallā* [q. v.] was used, for example in the case of the service for Nadjāshī [q. v.], who died in Abyssinia (al-Bukhārī, *Djānā'iz*, bāb 4; Muslim, *Djānā'iz*, trad. 63, 64). In Ibn Sa'd, I/ii. 14, it is said that the *ṣalāt* was held by Muḥammad in the home of the deceased. People therefore thought it an innovation when the body of Sa'd b. Abī Waḳḳās was brought into the mosque at the request, it is said, of 'Ā'isha or of the widows of the Prophet. 'Ā'isha is said to have replied to the complaints that were made: "How short is the memory of the people. Muḥammad was indeed wont to hold this *ṣalāt* in the mosque" (Muslim, *Djānā'iz*, trad. 99—101). Muslim's commentator, al-Nawawī, gives on this passage (as al-Zurkānī does on Mālik, *Djānā'iz*, trad. 22) the points of view of the different schools with reference to the legal category in which they place the holding of this *ṣalāt* in the mosque (on the question cf. also *Semitic Rites of Mourning and Religion*, p. 2—4). In any case it is the custom in various parts of the Muslim world to-day to perform this *ṣalāt* in a mosque (Lane, *Manners and Customs*, p. 526; Snouck Hurgronje, *Mekka*, ii. 189). In Atjeh, on the other hand, as is usually also the case on Java, it takes place in the front part of the enclosure before the house of the deceased (Snouck Hurgronje, *The Achehnese*, i. 423; do., *Verspr. Geschr.*, iv. 1 242). This is at least permitted by the law although not recommended (it depends on the *madhhab*).

The body is not necessarily present at the *ṣalāt*. In Mekka it is the custom to hold the *ṣalāt al-djānā'iz* for residents who have died away from home (*Mekka*, ii. 189). Justification may be claimed for this practice in the widespread tradition according to which Muḥammad held a service in Medina for the dead Nadjāshī (cf. above).

V

The question of the significance of the *ṣalāt* is usually approached in a one-sided fashion by European critics. They like, it must be admitted, to follow Ranke in placing a high value on the *ṣalāt* as a disciplinary measure and certainly it is difficult to appreciate this too highly. A considerable part of the life of the community must have centred in and around the *ṣalāt* in Medina in Muḥammad's life-time and through it the transformation of the old Arab mind into the Muslim must have taken place. The same phenomenon was afterwards repeated in the provinces of the Caliphate. The *ṣalāt* must have been one of the most effective formative elements in the communities.

The European, on the other hand, usually forms his judgment of the *ṣalāt* from his own point of view; the Protestant misses the intensification, the Roman Catholic the imposing ceremonial.

Both attitudes are wrong from scientific standpoint. Whoever wishes to gain a clear idea of the significance of the *ṣalāt* must ask the question: "what does it mean to the Muslim?"

This question may be partly answered by observing the enthusiasm for the *ṣalāt* displayed by Muslims in different countries. The results of such

observations almost everywhere go to suggest that there are few Muslims who regularly observe the five daily *ṣalāts* (Lane, *op. cit.*, p. 84; Snouck Hurgronje, *Verspr. Geschr.*, iv/i. 8, 16). In the Dutch East Indies the Achehnese so prominent in the *Djihād* [q. v.] only take part in small numbers in the congregational *ṣalāt*; in Banten (Java), in Palembang (Sumatra) and in isolated parts of the Archipelago on the other hand we find it much more religiously observed (Snouck Hurgronje, *Verspr. Geschr.*, iv/ii. 343 sq.; *De Atjehers*, i. 89 sq.).

Lane's remarks regarding the *ṣalāt* in Egypt (*Manners and Customs*, p. 98) are important: "The utmost solemnity and decorum are observed in the public worship of the Muslims. Their looks and behaviour in the mosque are not those of enthusiastic devotion, but of calm and modest piety. Never are they guilty of a designedly irregular word or action during their prayers. The pride and fanaticism which they exhibit in common life, in intercourse with persons of their own or of a different faith, seem to be dropped on their entering the mosque, and they appear wholly absorbed in the adoration of their Creator — humble and downcast, yet without affected humility or a forced expression of countenance".

A rich source for the study of the significance of the *ṣalāt* in the religious life is to be found in the literature. For the first two centuries it is mainly the Ḥadīth that we have to use. In the enumeration of the five pillars of Islām the *ṣalāt* always appears in the second place (al-Bukhārī, *Imān*, bāb 2; Muslim, *Imān*, trad. 19—22; in passing it may be noted that the first pillar is variously given). In the so frequently recurring story of the untutored Beduin who suddenly asks Muḥammad the question: "How shall I be saved?" the latter answers with a list of the duties imposed by Islām upon the believers, viz.: five *ṣalāts* daily, fasting in Ramaḍān and zakāt (al-Bukhārī, *Imān*, bāb 34; Muslim, *Imān*, trad. 8). In other traditions also, which enumerate the obligations of a Muslim, as, for example, in the commission given to Mu'adh b. Djabal when he was sent by Muḥammad to Yemen, we find mentioned besides the *tawḥīd* or the service of Allāh the five *ṣalāts* and the zakāt (e.g. al-Bukhārī, *Zakāt*, bāb 1; Muslim, *Imān*, trad. 29—31). Here the ḥajj and the fasting in Ramaḍān are omitted. In the scale of the most meritorious works the *ṣalāt* often appears in the first place (al-Bukhārī, *Mawākīt*, bāb 5; cf. Ibn Mādjā, *Ṭahāra*, bāb 4; al-Dārimī, *Wuḍū'*, bāb 2). The strict observation of the five daily *ṣalāts* secures admission into Paradise (al-Nasā'ī, *Iḳāma*, bāb 6; Mālik, *Ṣalāt al-Lail*, trad. 14 etc.). The omission of the *ṣalāt* is a bridge to unbelief and heathenism: "between man and polytheism and unbelief lies the neglect of the *ṣalāt*" (Muslim, *Imān*, trad. 134; cf. al-Nasā'ī, *Ṣalāt*, bāb 8).

The cleansing power of the *ṣalāt* is allegorically described in Tradition: "The *ṣalāt* is like a stream of sweet water which flows past the door of each one of ye; into it he plunges five times a day; do ye think that anything remains of his uncleanness after that?" (Mālik, *Ḳaṣr al-Ṣalāt fī 'l-Safar*, bāb 91; cf. Aḥmad b. Ḥanbal, i. 71 sq., 177, ii. 375, 426, 441, iii. 305, 317 etc.). It is described without allegory in the equally well-known tradition: "an obligatory *ṣalāt* is a cleansing for the sins which are committed between it and the

following one" (*op. cit.*, ii. 229; as is well known grievous sins are usually excluded from the cleansing effect of pious exercises (*op. cit.*, ii. 359).

We have just quoted the tradition according to which the observation of the daily ṣalāts secures entrance into Paradise. The following utterance goes still further: "He who knows that the ṣalāt is a compulsory duty will enter Paradise" (*op. cit.*, i. 60). At the final reckoning on the Day of Kesurrection the more or less faithful observance of the ṣalāt will be a consideration of the first importance: "The first thing to be dealt with is the ṣalāt; if this point is in order, the man has attained bliss; if not then he is lost (cf. al-Nasā'ī, *Ṣalāt*, bāb 9; al-Tirmidhī, *Mawāḍiʿ*, bāb 188; Aḥmad b. Ḥanbal, i. 161 sq., 171, ii. 290 etc.).

The ṣalāt should be performed devoutly with concentrated attention. It is often related how Muḥammad put away one of his garments because figures woven on it distracted his attention at the ṣalāt (al-Bukhārī, *Ṣalāt*, bāb 14; al-Nasā'ī, *Ḳibla*, bāb 20; cf. bāb 12).

That the ṣalāt does not, as is sometimes said, imply only the performance of a duty but that the heart is in it too is seen from the following tradition: Muḥammad said: "Of wordly things women and perfume are dearest to me and the ṣalāt is the comfort of my eyes" (Aḥmad b. Ḥanbal, iii. 128 bis, 285). Weeping at the ṣalāt is also sometimes mentioned (Abū Dā'ūd, *Ṣalāt*, bāb 156; al-Nasā'ī, *Sahw*, bāb 18; Aḥmad b. Ḥanbal, iii. 188, iv. 25 bis, cf. 26).

By far the most significant characteristic of the ṣalāt is the one which we find in two different settings, namely that the ṣalāt is intimate conversation with Allāh. On the one hand it is found in the *Ḥadiṭh*, in which spitting in the direction of the *Ḳibla* during the ṣalāt is forbidden, the reason given being that the ṣalāt is intimate conversation with Allāh (al-Bukhārī, *Ṣalāt*, bāb 39; *Mawāḍiʿ*, bāb 8; Muslim, *Masāʿid*, trad. 54; Aḥmad b. Ḥanbal, ii. 34 sq., 144, iii. 176, 188, 199 sq., 234, 273, 278, 291 etc.). On the other hand we find it expressed in the following form: "If one of ye performs the ṣalāt he is in confidential converse with his Lord; at that time he ought to know exactly what he says in this way with his Lord; therefore no one should drown the voice of another at the recitation" (Aḥmad b. Ḥanbal, ii. 36, 67, 129). An illustration to this utterance is given in the following *Ḥadiṭh qudsī*: Allāh says: "I have divided the ṣalāt into two halves between Myself and My servant, one of which belongs to Me while the other is for My servant and My servant obtains what he asks". The Messenger of God said: "recite! when the servant says: 'Praise be to Allāh, the Lord of the Worlds!', Allāh says: 'My servant hath praised Me'; when the servant says: 'to the Merciful and Compassionate', Allāh says: 'My servant hath glorified Me'; when the servant says: 'to the Lord of the Day of Judgment', Allāh says: 'My servant hath praised Me'; when my servant says: 'Thee do we serve and Thee do we beseech for help', Allāh says: 'this verse is between Me and My servant and he receives what he has prayed for'; when the servant says: 'lead us the right way, the way of those whom Thou favourest, with whom Thou art not angry and who do not err', Allāh says: 'This belongs to My servant

and he receives what he has prayed for" (Aḥmad b. Ḥanbal, ii. 460).

That the ṣalāt was also used as a means of healing is not remarkable in view of similar phenomena in other religions (Ibn Mādjā, *Ṭibb*, bāb 10; Aḥmad b. Ḥanbal, ii. 390, 403). At the same time we may mention the *Ṣalāt al-Ḥādja*, which is observed to secure the attainment of some ardently desired object (al-Tirmidhī, *Witr*, bāb 17), and the *Ṣalāt al-Istikhāra* [see *ISTIKHĀRA*] before a more or less important decision (al-Bukhārī, *Tahadjud*, bāb 25; Abū Dā'ūd, *Witr*, bāb 31; al-Tirmidhī, *Witr*, bāb 18; Aḥmad b. Ḥanbal, iii. 344 etc.).

The description of the ṣalāt as *munāḍjāt* is characteristic of the meditative tendency found even in the oldest Islām (on this see especially L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922); it has certainly been one of the main avenues by which mysticism entered Islām from without.

One of the oldest Muslim mystics, al-Muḥāsibī (d. 243 = 857), wrote a tractate on the significance of the ṣalāt (cf. Massignon, *op. cit.*, p. 259, note 1) and the philosopher al-Tirmidhī (d. 285 = 898) expounded the mystical side of the ṣalāt in 42 aphorisms (quoted in Massignon, *op. cit.*, p. 259). Among the more modern mystics the ṣalāt gives place in importance to *Dhikr* and *Wird*. Al-Ḳushairī does not devote a separate chapter to it in his *Risāla*. In al-Hudjwiri it appears as especially suitable for novices, who are to recognise in it to some extent a reflection of the whole mystic way. To them the *ṭahāra* represents the conversion, the *ḳibla* the dependence on spiritual leadership, the recitation the *dhikr*, the *rukūʿ* humility, the prostration self-knowledge, the *tashahhud* the *uns*, the *taslīm* renunciation of the world. Of the real mystics everyone sees something different in the ṣalāt: to one it is a means to *ḥuḍūr* with God, to another to *ghaiba* (al-Hudjwiri, *Kashf al-Mahdūb*, transl. Nicholson, *Gibb Mem. Ser.*, xvii. 301 sqq.). Al-Hudjwiri, however, also emphasises the affection of various Ṣūfis for the ṣalāt.

Of the philosophers, Ibn Sīnā (Avicenna) is only to be mentioned here, who wrote a short treatise on the ṣalāt (*Fi 'l-Kashf 'an māhiyat al-Ṣalāt wa-ḥikma Taḥrīrīhā* in *Djāmiʿ al-Badā'īʿ*, Cairo 1335 (1917), p. 2—14). According to him, the essence of the ṣalāt is the recognition of God in His existence and necessity of it. It is exoteric or esoteric according to the character of the believer who performs it. The law-giver knew that not all men can ascend the steps of the spirit. Such men therefore require corporal discipline and compulsory mortification, to keep their natural impulses in check. This is the exoteric side of the ṣalāt. Its true esoteric significance is the *mushāhadat al-Ḥaḳḳ* with pure heart and a soul which is liberated and purified from desires (*amānī*). Ibn Sīnā then proceeds to deal with the saying that a man at prayer is in intimate converse with his Lord (see above). This can, he says, only happen outside of the material world. Those who are in this state of mind are spiritually in the presence of God and they gaze upon the deity (*al-Ilāh*) in a real vision. The ṣalāt is therefore a real *mushāhada* and a pure worship, i.e. the real divine love and spiritual vision.

Al-Ḡhazālī's chapter *Ṣalāt* has in the *Iḥyāʾ* in the *Rubʿ al-ʿIbādāt* a position between *Ṭahāra*

and *Zakāt* (as in the *Fikḥ*). As with the other *ʿibādāt* it should be observed in this case also with what painful accuracy he describes the legal regulations (ed. Cairo 1302, i. 140 *sqq.*) and how on the other hand he raises the ṣalāt to an ethico-mystical level which sufficiently meets all the demands of intensification. After what has been said above in II and III, we need only briefly survey here the latter side of his exposition. The inward *maʿānī* which bring the life of the ṣalāt to perfection are the six following: the presence of the heart (*ḥuḍūr al-qalb*), understanding, respect (*taʿṣīm*), reverence (*ḥaiḇa*), hope and humility (*ḥayāʾ*).

Particularly significant are his remarks on the presence of the heart (p. 145). The *fakīḥs* demand the presence of the heart only at the *takbīr*; according to the *Fukahāʾ al-mutawarrriʿūn* and the *ʿUlamāʾ al-Aḥkira*, on the other hand, the heart should be present at the whole ṣalāt. But only very few succeed in achieving this. The ideal ṣalāt is that of Ḥatīm al-Aṣamm, who said: "When the time for the ṣalāt arrives, I perform a copious *wuḍʿūʾ* and go to the place where I want to perform the ṣalāt. There I sit till my limbs are rested, then I stand up, the *Kaʿba* straight in front of me, the *ṣirāṭ* under my feet, Paradise on my right, Hell on my left and the Angel of Death behind me; and I think that this ṣalāt is my last. I then stand wavering between hope and fear, join in the *Takbīr* and *Taḥkīk*, recite with *Tartīl*, perform the *Rukʿ* in submission and the *Suḍūd* in humility, sit on my left thigh, spread out the upper part of the left foot and fix the right one on the great toe and accompany this with *Iḥklās*. Then I do not know whether my ṣalāt has been graciously accepted by Allāh or not (p. 139, 7 *sqq.*).

Al-Ḥazālī lays down his ethical point of view in the sentence: If his ṣalāt does not restrain a man from evil and wrong-doing, he only obtains estrangement from God by it (cf. *Sūra* xvi. 9).

In the chapter on "the useful remedies for securing the *ḥuḍūr al-qalb*" distracting thoughts are given as the principal obstacles which divert attention at the ṣalāt. These enemies are to be overcome by fighting their causes. These are of two kinds, external and internal. The external causes of distraction (*ghafla*, in the Syriac mystics *fehṣā*) come from the organs of sense. One therefore ought to prevent these from being distracted. The *mutaʿabbidūn* therefore perform the ṣalāt in a dark cell with only sufficient room for the *suḍūd*. Ibn ʿUmar is said not to have allowed a single object in this cell. The internal causes of distraction exercise a much stronger effect. They have their root in earthly cares, thoughts and occupations. But desires have the most powerful influence. They are to be fought by meditation on the future world. All preparations for the ṣalāt and all its parts should be connected with the *Aḥkira*. At the *adhān* one should think of the *nidaʾ* on the Day of the Resurrection. At the covering of the *ʿawra* one should enquire whether there is no internal *ʿawra* etc.

The highest goal of the ṣalāt is complete absorption in the Deity by humiliating oneself. Sufyān al-Thawrī is reputed to have said: "If a man does not know humility, his ṣalāt is invalid". This is laid down in two special sections (*Bayān Ishtirāʾ al-Khushūʿ wa-Ḥuḍūr al-Qalb*, p. 145 *sq.*, and *Hikāyāt wa-Aḥbār fī Ṣalāt al-*

Khāshīʿin, p. 157 *sq.*). In the latter he shows by several examples how much the great leaders used to be absorbed in their ṣalāt.

(A. J. WENSINCK)

SALGHURIDS, one of the dynasties known as Atābaks, or Regents, which arose on the ruins of the empire of the Saldjūks. Salghur was the chief of a band of Turkmāns who migrated into Khurāsān and attached themselves to Tughril Beg [q. v.], the first of the Great Saldjūks. Būzāba [q. v.], one of Salghur's descendants, was killed in battle by Sultān Ghiyāth al-Dīn Masʿūd, the fourth of the Saldjūk kings of ʿIrāk and Kurdistan, and his nephew, Sunkur b. Mawdūd, rose against the Saldjūk and in 1148 established his independence in Fārs, where he founded a dynasty which ruled for more than 120 years but seldom enjoyed complete sovereignty, being tributary first to the Saldjūks of ʿIrāk, then to the Shāhs of Khwārizm, and lastly to the Mongols. Sunkur died in 1161 and was succeeded by his brother, Zangī b. Mawdūd, who was molested at the beginning of his reign by his cousins, the Atābaks of Syria, who claimed the throne of Fārs. After overcoming them he did homage to Arslān b. Tughril I, Saldjūk of ʿIrāk, who confirmed him as ruler of Fārs. On his death in 1175 he was succeeded by his elder son, Takla, who remained tributary to the Saldjūks of ʿIrāk and reigned for twenty years. On his death in 1194 the throne was claimed both by his cousin Tughril, the son of Sunkur, founder of the dynasty, and by his younger brother, Saʿd b. Zangī [q. v.]. Tughril first gained possession of the capital and assumed the royal title, but Saʿd maintained the contest for eight years, during which period the kingdom was devastated and depopulated. In 1203 Saʿd captured Tughril and ascended the throne. During the early part of his reign he was occupied in restoring prosperity to his country, which had been wasted by famine and pestilence. Meanwhile the Saldjūks of ʿIrāk had been overcome by the Shāhs of Khwārizm, who in 1194 had annexed their country. Saʿd attacked ʿAlā al-Dīn Muḥammad Khwārizm Shāh, but was defeated and taken prisoner by him, and as a condition of his release was obliged to cede Iṣṭakhr and Ushkunwān, and to agree to pay the tribute which had formerly been paid to the Saldjūks. He is famous as the ruler from whom the great poet Saʿdī took his *takhalluṣ* or pen-name. He reigned for twenty-eight years, and on his death in 1231 [but cf. SAʿD B. ZANGI] he was succeeded by his son Abū Bakr, who had attempted to usurp the throne during his father's captivity and had been for this offence condemned to imprisonment, from which he was released at the instance of Djalāl al-Dīn Mangobartī, Shāh of Khwārizm. He extended the boundaries of his kingdom, but was obliged to pay homage and tribute first to Ogotāi Khān, supreme Khān of the Mongols as son and successor of Cingiz Khān, and afterwards, in 1256, to Hulāgū, the Mongol Il-Khān of Persia. Ogotāi Khān conferred on him the title of Kutluḡ Khān. Abū Bakr died in 1260, and was succeeded by his son, Saʿd II, who reigned for no more than twelve days, when he died and was succeeded by his infant son, Muḥammad, whose nominal reign was ended by his death in October, 1262. The child was succeeded by his cousin, Muḥammad Shāh, son of Salghur, the younger son of Saʿd I. Muḥammad Shāh was overthrown and put to death on July 18, 1263, and

was succeeded by his younger brother, Saldjūk Shāh b. Salghur, who was defeated and slain by the Mongols in December, 1264. Fārs had been tributary to the Mongol Il-Khān of Persia since 1256, but Saldjūk's cousin Ābish Khātūn, daughter of Sa'd II, was raised to the throne and permitted to reign alone for a year, at the end of which time Mangū Timūr, the fourth son of Hulāgū, married her, and ruled her kingdom in her name, and it was not until her death, in 1284, that the dynasty came to an end.

SALḤĪN, SILḤĪN, the residence of the Sabaeen kings in Mārib in South Arabia, the capital of the kingdom of Saba'. The name of this castle is already mentioned in the ancient South Arabian inscriptions. In the foundation inscription Glaser 482/3, which is placed on the temple of Almaḳah (called Haram Bilḳis by later generations and lying due S.S.E. 50 minutes from the modern village of Mārib), King Kariba'il Wātir Yuhan'im of Saba' and Hālik'amar, son of Kariba'il, speaks of renovations in this temple which were undertaken for the good of the castle of Salḥīn (*Slhn*) and of the city of Mārib (*Maryab*). The inscription Osiander 31, 3 speaks of a dedication in favour of the donors of the inscription, who are obviously to be regarded as lords of the castle, and of the castle of Salḥīn. In the inscription of king Ilīsharāḥ Yaḥḍīb (*Bibl. Nat.*, N^o. 2) Salḥīn is mentioned along with the ancient castles of Ḥumḍān and Širwāḥ. The Sabaeen inscriptions Glaser 828—30, 12, 870—872, 5, 1076, 13 sq., 1082, 13 are very interesting. They record a treaty of friendship concluded between the Sabaeen king 'Alhān Nahfān and his sons on the one side and king Gadarat of Ḥabashāt on the other. The passage in question runs: "and that Salḥīn and Zurarān and 'Alhān and Gadarat shall be like brothers in truth and fidelity". D. H. Müller (*Epigraphische Denkmäler aus Abessinien*, p. 76; *Südarab. Altertümer*, p. 9) has rightly pointed out — against J. H. Mordtmann and M. Hartmann — that this juxtaposition is to be interpreted to mean that Salḥīn and Zurarān represent the ancient residence of the kings of Saba' and Ḥabashāt. The suggestion put forward by M. Hartmann (*Die Arabische Frage*, p. 158) that Salḥīn is the modern Ḥaram Bilḳis is further disposed of by the fact that the latter has been proved to be the ancient temple of Almaḳah and is called 'Awm in the inscriptions (N. Rhodokanakis, *Studien*, ii. 7) and has therefore nothing to do with Salḥīn.

The importance of this ancient royal palace of the Sabaeen kings is also shown by the fact that the Ethiopian king 'Ezānā (*Alḥanawā*, about 350 A.D.) in the great inscriptions of Aksūm (N^o. 4, 3, 6, 2, 7, 2, 8, 3, 9, 2, 10, 3/4, 11, 3) bears the name of the castle of Salḥīn among his official titles, just as the Emperors of Austria used to call themselves Counts of Habsburg. The name Salḥīn appears there in the Greek text as Σιλην (Σιλην), in the Ethiopian as *Salḥēn*, in Sabaeen *Slhn* and *Slh*. There was therefore a twofold pronunciation, Silḥīn

and Salḥīn, even in ancient times. E. Osiander, *Z. D. M. G.*, 1856, x. 26, shrewdly connected the former name with that of the town שִׁלְחָן

in the tribe of Judah (Joshua, xv. 32). The form *Slh* is of interest because the same name is also found in the great inscription of Širwāḥ (Glaser 1000 B, 5g) which is perfectly preserved and contains over 1,000 words (*baithu slhm*) and presumably indicates likewise the royal castle of Mārib.

Poetry and folklore have woven their legends round the ancient castle as round many others. To the successors of the ancient Sabaeen it seemed the work of demons or devils, who built it in 70 years by Solomon's command for the Ḥamdanid king Dhū Bata', when Solomon married Bilḳis. This is, however, only one story. According to others, Salḥīn was built in 80 years by order of one of the Himyar rulers (*Tubba's*). Others again say that a castle was built in the royal residence of Salḥīn in Mārib, which belonged to the kings of the Himyars; it was built by order of Bilḳis, queen of Saba', daughter of Ḥadḥād, and in it her wonderful throne stood which is mentioned in the Ḳor'ān, Sūra xxvii. 23. It was also said that Solomon built the palace for Bilḳis. It should be mentioned that al-Ḥamdānī as well as Naṣḥwān al-Himyarī expressly describe Salḥīn as a royal residence or capital of Mārib.

There was no longer anything left of this castle in the Muslim period. The waves of the Ethiopian conquest (525 A.D.) no doubt swept over this ancient royal residence, which had already lost most of its former importance with the transference of the capital of the kingdom from Mārib to Zaḥār. Salḥīn, as well as Bainūn, Ibn Hishām tells us, was destroyed by the Ethiopian general Aryāt.

(ADOLF GROHMANN)

AL-ŠALĪB (A., plural *Šalūb*, *Šalbān*), the cross. This general meaning occurs in several special applications, e. g. to the *wasṣm* branded in the skin of camels in the form of a cross etc. In the sense of the chief Christian symbol the word may have been taken over from Aramaic where it has the same form. It does not occur in the *Qurʾān*. In *Ḥadīth* it is used in eschatological descriptions. *ʿĪsā* (Jesus) will reappear in the last days, combat the Antichrist (al-Dajjāl), kill the swine and break the cross into pieces (al-Bukhārī, *Anbiyāʾ*, bāb 49; Muslim, *Imām*, Trad. 242, 243; Ibn Mādjā, *Fitan*, bāb 33; Aḥmad Ibn Ḥanbal, *Musnad*, ii. 240, 272 etc.). On Doomsday all religious communities will appear before Allāh with their symbols or idols. The Christians will follow the cross and, on their confession that they did worship the *Masīḥ* ibn Maryam, be thrown into Hell (al-Bukhārī, *Tawḥīd*, bāb 24).

Further al-Bukhārī speaks of a *ṭhawb muṣallab*, a garment or cloth into which the form of the cross was woven, and which *ʿĀʾisha* removed on Muḥammad's order, because it distracted his attention from the *ṣalāt* (*Ṣalāt*, bāb 15).

Lexicographers call the cross the *ḫilba* of the Christians; apparently they were acquainted with the Christian custom of praying before the crucifix.

In *ʿUmar*'s treaties with the inhabitants of several towns of Palestine a special *amān* for their churches and crosses was granted them (al-Ṭabarī, i. 2405 sqq.). A document belonging to a late period of tradition and of doubtful authenticity prohibits the public use of the cross as a Christian symbol (Hamaker, *Incerti auctoris liber*, p. 165 sq.; Muir, *The Caliphate*, p. 137; cf. Caetani, *Annali dell' Islam*, Anno 17, § 174 sq.).

In the debate between Christian and Muslim doctors at the court of al-Ma'mūn the Christian worship of the cross is one of the controversial points between the combatants (cf. A. Guillaume, *A Debate between Christian and Moslem Doctors in the Centenary Supplement to the J.R.A.S.*, October 1924, p. 242).

In the battle of Ḥaṭṭīn in 583 (1187) the Muslims captured the *Ṣalīb al-ḡalabūt* "the cross of the crucifixion", a cross in which a piece of the true cross was incorporated (*Historiens des Croisades, Historiens orientaux*, i. 685). See further the articles *ʿĪSĀ* and *NAṢĀRĀ*. In Christian Arabic literature the Christian legends concerning the cross, its recovery etc. have found their place. The verb *ṣalaba* denotes the Oriental form of crucifixion as a capital punishment.

On the diminutive form *Šulaib* cf. this article.

(A. J. WENSINCK)

ŠĀLIḤ, a prophet who was sent to the Arab people *Thamūd*. He is, as usual, depicted as a sign and a warning in the style of Muḥammad; he demanded that his countrymen should turn to him and pray to Allāh alone (*Sūra* 7, 71, 11, 64, 26, 141); he called their attention to the benefits received from God (7, 72, 51, 43) and prided himself on seeking for no reward from them (26, 145). But they rejected him abruptly, called him bewitched (26, 153), a man like themselves, who could make no claim to revelations (54, 24); they could not surrender the religion of their fathers (11, 65) and scorned the idea of a day of judgment (69, 4). His appearance produced a schism in the people (27, 46) for only the weak believed in him, while the strong scoffed at him (7, 73). The only new feature was that they had placed their hope in him before he irritated them by his preaching (11, 64), which, if based on some corresponding incident, would be an interesting contribution to the history of Muḥammad. Then follows the special story of this prophet. Allāh sent them as a sign a she-camel (17, 61) and Šālīḥ begged them to allow it to feed unharmed and to share water with it (7, 71, 26, 155, 54, 28). But they lamed it and killed it (7, 75, 11, 68, 26, 157) through the hand of a particularly godless individual among them (91, 12, 54, 29) and scornfully asked Šālīḥ to inflict the threatened punishment (7, 75). He told them to hide three days in their houses (11, 68); then a tremendous storm broke out (11, 70, 51, 44; according to 7, 76 an earthquake; cf. also 54, 31, 69, 5) and on the following morning they lay dead in their houses. In the later Muslim stories of prophets these brief features are elaborated in various ways.

This story has a certain amount of foundation in fact in as much as the *Thamūd*, according to 7, 72 the successors of the *ʿĀdīs*, were an ancient Arab tribe known also from other sources (see the art. *THAMŪD*). The dwellings which the *Thamūd* had hewn out of the rocks (89, 8, 7, 72, 26, 149), often mentioned in the texts, the remains of which were still visible (29, 37), are undoubtedly the tombs, containing remains of human bones, hewn in the rocks of al-ʿŪla (see *AL-ḤIDJR*), which has led Philippe Berger to the further supposition that the word *kafrā* (tomb) found in the inscriptions there may have been explained as *kufr* (unbelief). But whence Muḥammad got the name Šālīḥ and the story of the camel cannot be ascertained. It is further remarkable that the stories of Šālīḥ and Hūd [q. v.] are in contradiction to the usual teaching of Muḥammad in the Mekkan period to the effect that no prophet had been sent to the Arabs before him (28, 46, 32, 2, 34, 43, 36, 5). The stories of these two prophets are found in the earliest Mekkan *Sūras* e. g. 53, 51 sq., 85, 17 sq., 89, 8, 91, 11 sqq., and frequently recur in the following sections; on the other hand they disappear in the *Medina* revelations except for the brief enumeration in 9, 71.

AL-MALIK AL-ŠĀLIḤ 'IMĀD AL-DĪN ISMĀ'IL, son of Sulṭān al-Malik al-ʿĀdil Abū Bakr, son of Aiyūb, was born in the year 598 (1202). He is not mentioned in connection with the division of the lands which his father made among his brothers. He is mentioned for the first time in 623 (1226) as a partisan of his brother al-Malik al-Muʿazzam ʿIsā; he is described as lord of Boṣrā. After Muʿazzam's death he attached himself to his son al-Malik al-Nāṣir Dāʿūd, by whose side we often find him fighting. He was with him in the battle at Damascus in 626 (1229) and when Dāʿūd was forced to capitulate, he was left in possession of his fief Boṣrā. In the next year, we find him in the service of his brother al-Malik al-Aṣḥraf Mūsā, who sent him to the siege of Baʿalbek, which he was to take from al-Malik al-Amǧjad Bahrām Shāh; Ismāʿil forced the latter to surrender after a long siege. On the death of his brother Mūsā in 635 (1237), he inherited Damascus and he began to play a more important if afterwards despicable part. As he had good reason to fear his brother al-Malik al-Kāmil, Sulṭān of Egypt, he concluded an alliance with the Aiyūbid princes of Syria (except with the prince of Ḥamā). He then prepared to stand a siege as he had already news of the advance of al-Kāmil and his nephew Dāʿūd. His resistance availed him little; he had soon to surrender Damascus and received in compensation Baʿalbek and al-Bikāʿ, while Boṣrā also remained to him.

The remaining part of his life is so closely associated with the careers of his nephews al-Malik al-Šāliḥ Nāǧm al-Dīn Aiyūb and Sulṭān al-Malik al-Nāṣir Yūsuf II, that the reader may be referred to their biographies. Ismāʿil was killed in Cairo in the year 648 (1250) when fighting with Sulṭān Yūsuf in the battle of ʿAbbāsa against the Egyptians. He repeatedly allied himself with the Khwārizmīs and the Franks out of selfish ambition and love of power to the detriment of his subjects and fellow-Muslims.

Bibliography: See the article AL-MALIK AL-ŠĀLIḤ NĀǦM AL-DĪN AIYŪB. (SOBERNHEIM)

AL-MALIK AL-ŠĀLIḤ 'IMĀD AL-DĪN ISMĀ'IL, son of Sulṭān Muḥammad al-Nāṣir [q.v.] of the line of Kalāʿūn, was chosen Sulṭān at the age of 17 after the deposition of his brother Aḥmad (743 = 1342) whose cruelty had aroused the fury of the Amīrs. He was considered a virtuous and pious young man, but later fell under the destructive influence of his harem. After making new appointments to the principal administrative posts in the provinces, his next task was to put an end to the intrigues of his brother Ramaḍān, who was soon captured and executed. He then proceeded to fight his brother Aḥmad in Kerak, which cost great efforts and expenditure in troops. He tried to gain the Beduins of the neighbourhood to his side to make it difficult for Aḥmad to get supplies, but the latter's watchfulness foiled the attempt. On the other hand Ismāʿil feared he would lose support as even his vizier was in secret negotiation with Aḥmad. In the beginning of 744 (1344) he appointed another Amīr vizier and sent an expedition to Kerak, by

which he finally captured the town and took the citadel also, when reinforcements arrived in the beginning of 745. Aḥmad was taken prisoner. A few days later he was strangled in prison. The struggle with Aḥmad had occupied all Ismāʿil's time and means, so that he had neglected everything else. He is a typical example of the decline of Oriental dynasties. His time and strength were entirely absorbed in wars against his brothers and in excesses. As a result of the great expenditure at court, the revenues of the state declined and often the requisite money was not available for necessary military expeditions. His weakness was taken advantage of by the regular enemies of the Mamlūk kingdom, the Amīr of Mekka and of the Yemen, the dynasts of Asia Minor and the Beduin chiefs of Northern Syria, who rebelled against the governors in their lands under the Sulṭān's suzerainty. On the other hand the authority of the Caliph and of the Sulṭān remained unbroken in the remoter East and in India. Muḥammad b. Tuḡlak of Dehli sent the Caliph an embassy to ask for investiture and declared himself vassal of the Sulṭān; he also asked for some people learned in the law to be sent to him to enable his subjects to become better acquainted with the principles of Islām. His requests were readily acceded to. Sulṭān Ismāʿil was so deeply affected by the struggle with Aḥmad and his execution that he could not recover; he died in 746 (1345) after two months' illness when still only 20.

Bibliography: Weil, *Geschichte d. Chalifen*, iv. 452—461; *al-Manhal al-Šāfi*, Paris MS. Ar. 2068—2073 under AL-MALIK AL-ŠĀLIḤ ISMĀ'IL. (SOBERNHEIM)

AL-MALIK AL-ŠĀLIḤ NĀǦM AL-DĪN AIYŪB, the eldest son of al-Malik al-Kāmil Muḥammad, son of al-Malik al-ʿĀdil Abū Bakr, son of Aiyūb, was born in 603 (1207). His father designated him successor in 625 (1228) and made him his representative in Egypt, while he was away on his campaigns in Syria. At this time (Rabīʿ I, 626 = February, 1229) al-Kāmil ceded Jerusalem to the Emperor Frederick for ten years. The relations between Aiyūb and his father were disturbed in 628 (1231) by the slanders of one of al-Kāmil's wives who wanted to get the succession in Egypt for her son al-ʿĀdil Abū Bakr. She accused Aiyūb in a letter of trying for the throne while his father was still alive, as he had enlisted over 1,000 Mamluks of his own. Al-Kāmil, secured by the peace with the Emperor, returned to Cairo to take the reins of power into his own hands again. In 629 (1232) political conditions (the advance of the Tatars and of the Khwārizmīs up to the frontiers of the Empire) caused him to go to Syria and he gave the command of the army to Aiyūb in order to get him out of Egypt in this way.

Al-Kāmil achieved his object on this campaign of getting Mesopotamia into his own hands, as a strong bulwark against the Tatars and Khwārizmīs, and granted his son Aiyūb Ḥiṣn Kaifā as a fief and later, in 633 (1236), the towns of al-Ruhā (Edessa) and Ḥarrān conquered by him in addition.

Aiyūb's position with regard to the Tatars and Khwārizmīs cannot have been an easy one. He allied himself with the latter and took them into his service with the permission of al-Kāmil. In 635 (1238) he received Sindǧār and Naṣībīn in addition to his other territory. So long as al-Kāmil was alive, Aiyūb was master of the east and no one dared attack him. This state of

affairs was altered, however, when al-Kāmil died in the same year (635) in Damascus, which his brother al-Malik al-Šāliḥ Ismā'īl had ceded to him two months before in return for Ba'albek and Boṣrā. Al-Malik al-ʿĀdil II was recognised in Cairo as al-Kāmil's successor and al-Malik al-Djawād Yūnus appointed governor of Damascus in his name. Aiyūb received the news of his father's death while he was besieging Raḥba; he at once raised the siege, but met with opposition from the Khwārizmis who were in his service. Enraged at the thought of their booty escaping them, they were going to seize him and he had to take to flight. The Sulṭān of Rūm, Ghiyāth al-Dīn, also tried to capture him, besieged ʿĀmid and divided the towns which Aiyūb possessed between Syrian and Mesopotamian princes even before he had captured them. Lu'lu', the ruler of Moṣul, was also hostile to Aiyūb. He besieged him in Sindjār, where he had taken refuge. In this perilous position, Aiyūb was saved by the intervention of his highly esteemed Qādī, who regained for him the help of the Khwārizmis. This made it possible for him to relieve Sindjār and inflict a terrible defeat on Badr al-Dīn Lu'lu'. Next he raised the siege of ʿĀmid and routed the Sulṭān of Rūm. Mesopotamia was now secured to him. In the next year (636) he was invited by al-Malik al-Djawād, governor of Damascus, to exchange Damascus for Sindjār, Raḥka and ʿĀna, as the latter did not feel his position safe from Sulṭān al-ʿĀdil of Egypt. Aiyūb handed over his eastern possessions to his son al-Muʿazzam Tūrān Shāh, while he granted the Khwārizmis Ḥarrān, al-Ruhā and the province of Djazira. He then accepted the invitation, went with his army to Palestine and occupied Damascus.

Sulṭān al-ʿĀdil and Prince Dāʿūd of Kerak decided to take the field against him. But a number of the Amirs abandoned the Sulṭān, whose love of pleasure had made him unpopular, and decided to join Aiyūb. Dāʿūd himself offered his support on condition that he was given Damascus. When Aiyūb refused, he returned to al-ʿĀdil. The Caliph, continually threatened by the Tatars and Khwārizmis, had a lively interest in the maintenance of peace and the strengthening of Aiyūbid power generally, but he sent an envoy to Aiyūb in vain to negotiate a peace. In 637 (1240) Aiyūb left Damascus with 5,000 men and went to Nāblūs to prepare for his advance on Egypt there. He had also endeavoured to secure the support of his uncle, Ismā'īl, who pretended to agree but deceived him by false messages (see Sobernheim, *Baalbek zu islamischer Zeit*, p. 9 of the reprint, and the account in al-Makrizi, transl. Blochet, p. 445, and Abu 'l-Fida' under the year 637). But Ismā'īl made a secret agreement with the prince of Ḥimṣ and by promises tempted Aiyūb's troops to desert him and come to him in Damascus. Finally Aiyūb was left almost alone. In the meanwhile Dāʿūd of Kerak had again quarrelled with Sulṭān al-ʿĀdil and had begun negotiations with Aiyūb. But when he learned that Aiyūb was almost alone in Nāblūs, he went thither with his army, took him prisoner and sent him to Kerak. He treated him well and refused to hand him over to his brother al-ʿĀdil. In the meanwhile the treaty between al-Kāmil and Frederick II regarding the occupation of Jerusalem had expired. Dāʿūd felt himself strong enough to take the city by force from the Franks, who would not

hand Jerusalem over voluntarily. After a twenty-one days' siege, he succeeded in taking it in Djumādā I, 620 (Feb. 2, 1222); he destroyed its fortifications, which the Franks had rebuilt during the last months of their occupation.

Aiyūb's fortunes now began to turn. When, in spite of long negotiations between Dāʿūd, Ismā'īl and al-ʿĀdil, no alliance was achieved, an agreement was made between Aiyūb and Dāʿūd through the intermediary of the prince of Ḥamā. Aiyūb was released in Ramaḍān of the same year and went with Dāʿūd to Jerusalem, where they concluded a treaty. Aiyūb was to receive Egypt, Dāʿūd Syria and the eastern provinces. The combination of the two princes naturally caused al-ʿĀdil great anxiety. He persuaded Ismā'īl of Damascus to take the field against the two allies, while he himself went with an army to Bilbā'is. A section of the Mamluks, the Ashrafiya (called after al-ʿĀdil's uncle, al-Ashraf Mūsā), were dissatisfied, deposed him and sent him as a prisoner to the citadel of Cairo; after some hesitation they offered the crown to Aiyūb, with the request that he should come at once to Bilbā'is. Aiyūb and Dāʿūd went at once to Egypt and everywhere received a hearty welcome from the Amirs. After Aiyūb had occupied Cairo, he was recognised as ruler in the Friday *khutba* and later confirmed by the Caliph in a diploma. Al-ʿĀdil was kept prisoner in the citadel and not put to death till 645 (1247) when he declined to move to the fortress of Shawbak, as the Sulṭān ordered. Aiyūb was now secure in the possession of Egypt. In the East (Mesopotamia) his son Tūrān Shāh guarded his interests. The third member, Damascus, was still lacking to give him practically the empire of Saladin once more.

He therefore did not hand over to the unreliable Dāʿūd the lands between Egypt and Syria which he had occupied, nor Shawbak and Jerusalem, but declared the treaty of Jerusalem had been extorted from him. He avoided an open breach, however, by promising him Damascus as an independent possession when they would have conquered it together. In the next year (638=1240) Aiyūb busied himself securing the foundations of his rule in Egypt. He put down the rebellious Beduins in Upper Egypt, had the Amirs whom he could not trust arrested one after the other and gave their fiefs to his own Mamluks; it was then that he began the buildings on the present Nile (Baḥr) island of Rōḍa (which was then still a peninsula): his palace and the barracks for his Mamluks called Baḥris, who gave their name to the first Mamlūk dynasty (see the art. BAḤRI).

In the same year fighting broke out between Aiyūb and his enemies. Dāʿūd realised that he would never get any increase of territory from him and Ismā'īl rightly felt himself threatened when Aiyūb sought to gain possession of Damascus. In the East Lu'lu', prince of Moṣul, was reinforced and had taken ʿĀmid from Aiyūb's son, Tūrān Shāh, so that the latter now had only Ḥiṣn Kaifa and Kal'at al-Haiṭham. Ismā'īl and Dāʿūd concluded an alliance with the Franks, in which they ceded them Tiberias, Shakīf Arnūn and Šafed, and allowed them to purchase arms in Damascus. Relations between the Muslim and Christian leaders became so close that they did many things for each other. Thus the Franks handed over the prince al-Djawād, who had taken refuge with them, for a sum of

money to Ismā'il, who at once put him to death. Dā'ud and Ismā'il in their turn warned the Franks of a mutiny of Muslim prisoners in Şakīf Arnūn, so that they moved the prisoners to 'Akkā and put them to death there. The Franks and Ismā'il's troops now marched together against Aiyūb. The armies met between Ghazza and Ascalon. But when the Muslim troops went over to Aiyūb, the Franks were defeated and lost many prisoners, who were employed in the building operations on the island of Rōḍa in Cairo. The prisoners, however, were liberated by the peace concluded in the same year, which was a very favourable one for the Franks. They were allowed to retain their possessions in Palestine and Syria.

While in the next few years, Aiyūb kept out of Syria, fighting on a small scale went on with great cruelty between Dā'ud and the Franks. In 641 (1243) negotiations were going on between Aiyūb and Ismā'il; Aiyūb's son, al-Malik al-Mughīth, was to be liberated from his imprisonment by Ismā'il and Aiyūb was to be recognised as sovereign in the Friday prayer. But when Ismā'il learned that Aiyūb was secretly stirring up the Khwārizmīs against him, the negotiations fell through and before the end of the year Ismā'il and Dā'ud had made a close alliance with the Franks and ceded to them large tracts of Palestine with Jerusalem and the holy Muslim places there. Dā'ud, that most ardent enemy of the Christians, had to see the mass read in the Şakhra and hear bells rung in the Akṣā mosque. Aiyūb summoned the Khwārizmīs to help him against these allies and they came next year (642), temporarily occupying Jerusalem and wreaking frightful devastation. Aiyūb sent an army from Cairo to support the Khwārizmīs. Ismā'il in turn sent troops to the Franks who joined forces with them. The hostile armies met at Ghazza in a terrible battle, in which the Khwārizmīs and Egyptians won a decisive victory. The Khwārizmī booty was countless. As a result of this victory, the Egyptian troops were able to conquer Jerusalem and Palestine again, and they remained in Muslim hands down to 1918. Dā'ud could only retain Kerak, al-Salt and Adjlūn. The Egyptian troops besieged Damascus, which held out for a long time. Ismā'il did not capitulate till next year (643 = 1245), surrendered Damascus and limited himself to Ba'albek, Bosrā and their dependencies. In view of these successes the Khwārizmīs expected high pay and as this was not to their satisfaction they entered the service of Ismā'il and Dā'ud and laid siege to Damascus on their behalf, which was defended by one of Aiyūb's generals and still held out at the beginning of 644 (1246). To put an end to the Khwārizmī terror, the princes of Aleppo and Hims, who had so far shown little sympathy for Aiyūb, sent their troops against the Khwārizmīs. They were thereby forced to raise the siege and to go to meet the Aleppo troops. In the battle of Kaṣab the Khwārizmīs were severely beaten; one of their leaders was killed and another put to flight. Ismā'il sought refuge in Aleppo and enjoyed the protection of the ruler there, Yūsuf II, but lost Ba'albek to Aiyūb; his sons and wives were taken prisoner to Cairo.

Dā'ud also was deprived of all his possessions except Kerak and likewise sought refuge in Aleppo. He appointed his youngest son his deputy. The ruler of Aleppo cherished a continual distrust of Aiyūb. He tried to secure himself against any further

advance of the latter by getting prince al-Aṣḥraf to hand over Hims to him in 646 (1248) after a two months' siege.

Aiyūb, full of wrath, went to Damascus to fight Yūsuf II and sent one of his generals to Hims to recapture the town from al-Aṣḥraf. On his arrival in Damascus he heard of the arrival of the Crusaders, whom Louis IX had led against Damietta. This induced him to conclude a peace at once with Yūsuf through the intermediary of the Caliph. Although he was very ill, he set off in a litter and soon arrived in Aṣḥmunain. He could not prevent the landing of the Crusaders and the capture of Damietta, as the discipline of his army had become slack through his illness. The Beduin tribe of Kināna, to whom was entrusted the guarding of the district, fled like cowards, because they thought they had been abandoned by the Sultān's troops.

Shortly before his death Aiyūb heard with joy that the older sons of Dā'ud, who, dissatisfied with the transference of authority in Kerak to their younger brother, had attacked and taken prisoner the latter, were handing over the government of Kerak to him in exchange. He at once sent one of his Amīrs thither with troops to take over the fortress. Aiyūb died on Sha'bān 15, 647 (Nov. 23, 1249); on his successor and the result of the Crusade see the art. *SHADJAR AL-DURR*. He was a skilful politician but no general; at least he hardly ever led his troops in person. His great ambition was to found an empire like Saladin and al-Kāmil, which should consist of Egypt, Palestine, Syria and Mesopotamia. By the end of his life he had achieved a considerable part of this, but the independent principality of Aleppo and the principality of Moṣul were not under his influence. He strengthened his position by the formation of a corps of Mamlūks, a measure of expediency for the moment, but which, as often in similar cases, brought about the ultimate fall of his dynasty (see the art. *SHADJAR AL-DURR*). He himself kept his Amīrs and officials firmly in control; they never dared speak unasked in his presence. He took a great interest, indeed an extravagant pleasure, in building. His palaces on the Nile peninsula Rōḍa, in Kabsh and his madrasa were famous in their day. He founded the town of Şālihiya as a frontier-fortress in Egypt.

Bibliography: Weil, *Geschichte der Chalifen*, vol. iii.; also the literature of the Crusades quoted under SALADIN. (M. SOBERNHEIM)

AL-MALIK AL-ŞALIH NŪR AL-DIN ISMĀ'IL of the line of Zangī, son of the Atābeg of Aleppo and Damascus, Nūr al-Dīn [q.v.], son of Zangī, succeeded his father on the throne in 569 (1173) at the age of eleven. A few weeks previously his circumcision had been celebrated with great ceremony and alms for the poor on a particularly large scale. His name was mentioned in the Friday prayer and put on the coins without opposition from the Amīrs in Damascus and Aleppo or from Saladin [q.v.]. Only his cousin Saif al-Dīn al-Ghāzī of Moṣul, who was about to come to Nūr al-Dīn with troops which the latter intended to use against Saladin, seized the opportunity to occupy with his army the towns in the Dījazīra belonging to Nūr al-Dīn. The Franks likewise thought it a suitable occasion and advanced on the fortress of Bāniyās. In this difficult situation the Amīrs had either to appeal to Saladin for help or come to terms with the enemy. They did the latter, left

Saif al-Dīn al-Ghāzī in possession of his conquests and made it clear to the Franks that they would only be unnecessarily irritating Saladin, who had suppressed the rising in Egypt and had no longer cause to fear Nūr al-Dīn. The Franks received an indemnity in addition and then retired. By the alliance with al-Ghāzī the centre of the administration was transferred to Aleppo and Ismā'il brought there in security; the regency and the government were taken over by capable men. The Amīrs of Damascus, whose influence was thus lessened, called in Saladin; the latter, enraged at the weakness shown in face of the Franks and at the surrender to al-Ghāzī, wrote Ismā'il a letter full of reproaches for not having asked his assistance. Just as earlier it had to be Nūr al-Dīn's endeavour to gain possession of Damascus in place of the weak Būrid Abak (see the art. BŪRID), so now it became absolutely necessary for Saladin to have the real power in his own hands. Formally he continued to profess himself Ismā'il's faithful liegeman. When he reached Damascus the citadel was not handed over to him; Raiḥān, one of Ismā'il's eunuchs, only surrendered it after several months' negotiations when Saladin again declared himself Ismā'il's faithful servant. No arrangement was come to between Saladin and Ismā'il; on the contrary the Aleppo government was secretly negotiating with the Franks. Saladin resolved to take the offensive. He captured Ḥamā and Ḥimṣ and in Djumādā II, 570 (end of 1174) proceeded to besiege Aleppo. But al-Ghāzī had asked Gümīṣhtikin as Ismā'il's ally for assistance. The latter sent troops which, united with the Aleppo force, advanced on Ḥamā and threatened Saladin from the rear. Ismā'il, who cannot be denied the possession of a certain natural ability, conjured the people to defend him, the orphan, to the utmost as an act of gratitude for the benefactions of his father. Moved by his appeal the citizens of Aleppo defended the town by sorties and held out on this occasion and later ones also; indeed, the people of Aleppo were unique in Syria in frequently showing a feeling of independence and a certain pride in their citizenship. The commander of Aleppo, Gemīṣhtikin, was as unscrupulous in the struggle with Saladin as he was brave; he had even asked Sinān, the chief of the Assassins [q.v.], to send his notorious murderers against Saladin. But they did not succeed in murdering Saladin and they suffered death for their attempt. Gemīṣhtikin had also gone so far as to release Count Raymund of Tripoli, who was a prisoner in Aleppo, and induced him to attack Ḥimṣ. In this dangerous situation Saladin declared himself ready to hand over Ḥimṣ and Ḥamā on condition that he was allowed to retain Damascus, as governor for Ismā'il. This offer was foolishly not accepted as al-Ghāzī was relying on getting the help of his brother 'Imād al-Dīn Zangī II. But the latter did not join in as he was on friendly terms with Saladin. Saladin's army met their opponents at Ḥamā and he gained a decisive victory which settled the fate of Syria. For a second time he besieged Aleppo, which he invested more tightly on this occasion, and forced Ismā'il to make peace in Shawwāl, 570 (1175). He retained Ḥamā, Ḥimṣ, Damascus and several of the larger towns. Ismā'il was left only with Aleppo. This victory was of great importance because Saladin declared himself independent of Ismā'il and omitted Ismā'il's name from the Friday prayer and from the coins.

Soon afterwards an envoy from the 'Abbāsīd Caliph al-Mustaḍī arrived in Ḥamā and presented Saladin with the diploma of Sultanate (al-Saltāna) over Egypt and Syria in addition to the usual robes of honour. In the next year (571) there was fighting between Saladin and the Zangid princes after the conclusion of which Saladin again laid siege to Aleppo in Dhu 'l-Hijjā of the same year. But the garrison and the civilian population defended themselves so bravely that he had to withdraw and definitely conclude peace at the beginning of the year 572 (July, 1175). The conditions of the earlier treaty were confirmed. Soon afterwards, at the request of his young sister, Ismā'il was ceded the castle of 'Azāz by Saladin.

Henceforth there was peace between Saladin and Ismā'il. The latter is even said by one authority to have intended to help Ismā'il to attain greater power again but was dissuaded by his Mamlūks from this. Ismā'il seems to have been really satisfied with the secure possession of Aleppo. Of military enterprises there is further to be recorded an expedition against the territory of Djabal Summak (west of Aleppo; see Yāqūt, *Mu'djam*, ed. Wüstenfeld, ii. 21) in 572 (1175), the inhabitants of which wanted to join Sinān, the "Old Man of the Mountain", and the siege of Ḥārim, which he had to take from Gemīṣhtikin, whom he had for long been unable to trust. Gemīṣhtikin was convicted of having brought his treasure out of Aleppo and of having carried on negotiations with the Franks regarding the surrender of Ḥārim. Ismā'il thereupon had him seized and soon afterwards put to death in 573 (1176). But the Franks held by their treaty with Gemīṣhtikin, advanced on Ḥārim in 574 and reduced the town to great straits. Ismā'il sent it reinforcements on the appeal of its citizens and finally induced the Franks to withdraw on payment of an indemnity and by threatening to surrender the town to Saladin. He then had the town transferred to himself and appointed a governor. In 576 Ismā'il became very ill and designated 'Izz al-Dīn Mas'ūd, prince of Moṣul, as his successor, as he was unmarried and without direct descendants (and al-Ghāzī had died shortly before), because he thought him capable of withstanding Saladin. In the following year (577 = 1180) Ismā'il died. At his accession he was so young that he could not have been blamed for having lost his lands. How far he was responsible for the particularist policy by alliances with the Franks, cannot be decided. He kept possession of Aleppo with a strong hand. He seems from childhood to have been popular with his subjects and he was always bravely defended by them and his death was honestly lamented.

AL-MALIK AL-ṢĀLIḤ ṢĀLĪḤ AL-DĪN ḤĀDĪDĪ, son of Malik al-Ashraf Shā'ban (see the art. SHĀ'BĀN) of the line of Sulṭān Kalā'ūn, succeeded to the sulṭānate on the death of his brother 'Alī as a boy of 6 in 783 (1381). Some months later he

was deposed on Ramaḍān 19, 784 (Nov. 26. 1382) by the Atābeg Barḳūḳ, as the kingdom required a man and not a boy on the throne. Ḥādjīdī was sent back to the harem and Barḳūḳ, as had been arranged before, was appointed Sultān (on the events down to the restoration and second deposition of Sultān Ḥādjīdī see the art. BARḲŪḲ). In 791 (1389) Ḥādjīdī, who was now 13, was once more installed as Sultān but badly treated and not allowed to interfere in the government by his Atābeg Yelboghā. It is related how he appointed his tailor court-tailor and gave him a robe of honour. The latter was robbed of his robe of honour, then beaten and imprisoned and only with difficulty liberated by one of the great Amīrs. The Sultān was very angry at Yelboghā's shameful treatment of him; even his father's old Mamlūks and the eunuchs and chamberlains were removed from him. He was relieved when Mīntāsh (see the art. BARḲŪḲ) came into power again and allowed him more liberty. When Mīntāsh afterwards began the campaign against Barḳūḳ in Syria, he took the Caliph and the Sultān with him to show the righteousness of his war against the rebel. This step was to prove to his disadvantage. While Barḳūḳ was beaten in the decisive encounter, he captured the insufficiently defended tent with the Caliph, the Sultān and the Kādīs. Success was therefore on his side and in addition he was victorious in a second battle. He hastened with his important prisoners to Cairo where in the meanwhile one of his supporters, the Amīr Buṭā, had seized the citadel and had him named as Sultān in the Friday prayer. Ḥādjīdī was deposed by the Caliph by Barḳūḳ's orders. He was allotted an abode in the citadel but was honourably treated by Barḳūḳ who frequently visited him. In later years Barḳūḳ gave up these visits as Ḥādjīdī, who was of a cruel disposition, ill-treated his slave-girls and had music performed and songs sung to drown their cries. He also took to drink and heaped insults on Barḳūḳ when he visited him. The family of the great Kalā'ūn ended with this unworthy scion.

(M. SOBERNHEIM)

AL-MALIK AL-ŞĀLIḤ ŞALĀḤ AL-DIN ŞĀLIḤ, son of Sultān Muḥammad al-Nāṣir of the line of Ḳalā'ūn, was chosen Sultān when 14 years old in place of his brother Ḥasan as a result of quarrels among the Mamlūks in 752 (1357). The feuds between the Amīrs did not cease in his reign; the eternal quarrel between the governors of the Syrian provinces and the dignitaries of the court in Cairo was also an important factor. When on his campaign in Syria he had succeeded by his prestige in withdrawing their supporters from the rebels and defeating them, the quarrelling among the cliques in Cairo broke out again. His addiction to pleasure prevented him from conducting the government himself to prevent the predominance of anyone Amīr with his followers. He thus fell a victim to the intrigues of the Amīrs; he was deposed in 755 (1354) and his brother Ḥasan recalled to the throne.

(SOBERNHEIM)

ŞĀLIḤ B. 'ALĪ b. 'ABD ALLĪH b. 'ABBĀS AL-'ABBĀSĪ was born in Sawād or in the highlands of al-Balkā in the year 92 (710/11); he, along with Abū 'Awn 'Abd al-Malik b. Vazīd al-Djurdjānī, commanded the expeditionary force sent to Egypt in pursuit of the last Umayyad Caliph Marwān b. al-Ḥakam and on Muḥarram 1, 133 (Aug. 9, 750) was appointed governor of this province. On Sha'bān 1, 133 (March 4, 751) he was recalled from Egypt and given the governorship of Palestine after installing his companion-in-arms Abū 'Awn as his successor in Egypt. But by Rabi' I, 136 (Sept., 753) he was again given the governorship of Egypt along with the control of the finances of the country and was further appointed governor of Ifrikiya so that the whole of the Maghrib was united under his rule. On Rabi' II 5, 136 (Oct. 8, 753) he entered Egypt but had to return to Palestine within a year and half on Ramaḍān 4 of the following year (Feb. 21, 755) as a result of a rebellion in Egypt and again handed over the governorship of Egypt and the financial control of the country to Abū 'Awn. He had next to exchange Palestine for Syria (141 = 758/9). He undertook two campaigns against the Byzantines and died at Ḳinnesrīn or at 'Ain Ubāgh at the age of 58 after appointing his son al-Faql governor of Hims.

The name Şāliḥ is found on two glass measure-stamps in the Fouquet collection in P. Casanova, *Catalogue des pièces de verre des époques byzantine et arabe de la collection Fouquet, M.M.A.F.*, 1893, vi. 370, N^o. 140, 141, and on copper coins of Ḥalab of the year 146 (763/4), and 148 (765/6) in H. Nützel, *Katalog der orientalischen Münzen in den Kgl. Museen zu Berlin*, i. 328, N^o. 2083/84, and p. 329, N^o. 2086; cf. also Ismā'īl Ḡhalīb, *Meskūkāt-i qadime-i islāmīye Katalogy*, p. 284, N^o. 769, 770; S. Lane-Poole, *Brit. Mus., Cat. Orient. coins*, i. 200, ix. 94.

(ADOLF GROHMANN)

ŞĀLIḤ B. MIRDĀS ABU 'ALĪ ASAD AL-DAWLA — see his genealogy in his biography in Ibn Khallikān, transl. by de Slane, Paris 1842, i. 631 — was one of the most important Beduin chiefs of the Nearer East in the fifth century A.H. His tribe was the Kilābī, who migrated under his leadership northwards from the Irāk to Aleppo in the beginning of the fourth century and gained him this principality (see the art. ḤALAB). We know little of his character and private life but he seems to have been a brave and resolute man. He is mentioned for the first time in 399 (1008) as the ally of the otherwise unknown Ibn Muḥkam, when the latter appealed to him for help in defending Raḥba which he had captured. The alliance was not a close nor a loyal one. After a certain amount of friction, a reconciliation took place between the two leaders in which Şāliḥ married Ibn

Muḥkam's daughter. He continued to have his residence in Hilla, as Ibn al-Athīr expressly mentions. In spite of the family links which united them, the friendship with Ibn Muḥkam did not last. In the same year Ṣāliḥ had his father-in-law murdered, seized Raḥba and administered it in the name of the Fāṭimid Caliph in Cairo whom he recognised as his suzerain in the Friday prayer. In the next year (400 = 1009) he was involved in the affairs of Aleppo for the first time (see the art. ḤAMDĀNIDS). Maṣṣūr Murtaḍā al-Dawla, son of the Ḥamdānid Mamlūk Lu'lu', was ruling there but his position was challenged by the pretender Abu 'l-Ḥidjīdā, grandson of Saif al-Dawla. The latter had taken the Kilābis into his service but they had gone over to Maṣṣūr who had promised them large tracts of land. In consequence it was easy for Maṣṣūr to beat the Ḥamdānid. But when the Kilābis became pressing in their demands for their reward and invaded and plundered his lands, he had recourse to an old stratagem. He invited the Kilābi chiefs to a feast to discuss the matter, fell upon them and killed some and took the others prisoners. The story that 1,000 Kilābis were killed on this occasion in addition to the chiefs may be an exaggeration. Ṣāliḥ had so far to humiliate himself as to declare his wife to be divorced in favour of Maṣṣūr. For three years he languished in chains. It was not till 405 (1014) that he succeeded in escaping, in chains, as some say, or, as others report, after sawing them through with a file that had been smuggled unto him. After lying in concealment for some time he gradually collected the Kilābis around him again and attacked Maṣṣūr. The latter was defeated, captured and put into the same chains, the story goes, as he had bound Ṣāliḥ with. He was then released on certain conditions and handed over 5,000 dinārs, 70 pounds of silver and 500 robes, but did not fulfil the condition that he should pay the Kilābis half the revenues of Aleppo for the year 405 and marry Ṣāliḥ to his daughter. The Kilābis then laid siege to Aleppo and Maṣṣūr, who could not trust Faṭḥ, the commander of the citadel, fled to the Byzantines in 406 (1015). Faṭḥ came to terms with Ṣāliḥ and delivered Aleppo over to 'Alī b. Aḥmad al-'Adjamī, the Fāṭimid governor of Apamea. The Caliph, angry at the flight of Maṣṣūr, recognised 'Alī as governor, lauded Faṭḥ and Ṣāliḥ to whom he gave the honorary title of Asad al-Dawla and granted him the promised half of a year's revenue of Aleppo. (On the governors of Aleppo to the year 406—411 see above, p. 229 sq.). The rule of the Fāṭimids with their continually changing governors aroused the discontent of the Beduin tribes, who combined against Fāṭimid authority in 414 (1024) (see above ii. 229 sqq.). Ṣāliḥ conquered Aleppo, Hims, Ba'albek and Sidon in the next two years and his authority stretched to beyond Anah on the Euphrates. When the power of the Fāṭimids increased again, the Caliph Zāhir sent a new army in 420 (1029) under Anushtikin al-Dizberī against whom Ṣāliḥ took the field. He fell in the battle of Uḫwāna on the Jordan; his son Naṣr (see the art. SHIBL AL-DAWLA) escaped with a portion of the army and retained rule over Aleppo. Ṣāliḥ's importance lies in the fact that he led his tribe from Mesopotamia to Aleppo and gave them permanent settlements there.

Bibliography: Kamāl al-Dīn 'Umar b. al-'Adnū, *Zubdat al-Ḥalab fī Ta'rikh al-Ḥalab*, St.

Petersburg, Arabic MS. of the Asiatic Museum 522, Paris 1666, of which the part dealing with the Mirdāsids has been edited by J. J. Müller, *Historia Merdasidarum*, Bonn 1830; Ibn al-Athīr, *Kāmil*, ed. Tornberg, ix. 148, 159 sq.; Ibn Khallikān, transl. by de Slane, Paris 1842, i. 631; cf. also the articles ḤAMDĀNIDS, above, p. 247 sqq. and ḤALAB, p. 227 sqq. (M. SOBERNHEIM)

ŞALİH b. ṬARİF. We know very little definitely about this individual, the prophet of the Barghawāta of Tāmasnā (the western coast of Morocco) and the founder of their heresy, or at least it was he to whom it was attributed. According to the information transmitted by al-Bakrī and which later writers simply reproduce, Ṭarīf b. Shama'un b. Ya'qūb b. Ishāq was one of the companions of Maisara, promoter of the Khāridjī insurrection in the Maghrib in the eighth century A.D. and the leader of a section of the Zenāta and of the Zwāgha; then he was recognised as their chief by the people of the Tāmasnā among whom he settled. His son Ṣāliḥ succeeded him, declaring himself to be the prophet — the *Ṣāliḥ al-mu'nin* of the Qor'ān — sent to complete the mission of Muḥammad. He elaborated his doctrine, which he kept secret, then set out for the East leaving his power in the hands of his son al-Yās and saying that he would return under his seventh successor. Al-Yās in his turn kept this teaching secret and was succeeded by his son Yūnos who preached it and spread it by force of arms in the course of the third century A.H. in the lands now comprised in western Morocco, but the chronology is extremely vague. The descendants of Ṣāliḥ b. Ṭarīf continued to reign over the Barghawāta down to the period of their defeat by the Ifrānids of Salé (beginning of the xth century), then by the Almoravids (end of the xth century) and lastly by the Almohads (middle of the xiith century). — According to other traditions, hostile to the Barghawāta, Ṣāliḥ was of Jewish origin and born at Barbāt in Spain, whence the name Barghawāta given to his followers. But these traditions are of no value. It may be asked if this enigmatic figure Ṣāliḥ is really the author of the heresy of the Barghawāta or rather if Yūnos, who spread it, did not, in order to give it more prestige, place it to the credit of his grandfather who had mysteriously disappeared and whose return was predicted. This would be quite in keeping with the psychology of the Berbers. An account of the teaching of Ṣāliḥ b. Ṭarīf will be found in the article BARGHAWĀTA.

Bibliography: The only really important Muslim source is al-Bakrī, *Description de l'Afrique Septentrionale*, ed. de Slane, Algiers 1857, p. 134—141; cf. also René Basset, *Recherches sur la religion des Berbères*, Paris 1910, p. 48—51. The remainder of the Bibliography will be found in the article BARGHAWĀTA.

(HENRI BASSET).

SALİH. Arab historians and genealogists are unanimous in stating that the tribe or clan Salīh were the first Arabs who founded a kingdom in Syria, though the three princes mentioned by them appear not to be named on inscriptions or by Greek and Syrian authors. There is also doubt as regards their affiliation with other tribes; some reckon them to Ghassān, while others say they were a branch of Kudā'a. Their first ruler is named al-Nu'mān b. 'Amr b. Mālik who was succeeded by his son Mālik after whom followed the latter's

son 'Amr, the last of his line. This much seems certain that they were considered as being of South Arabian descent and that they were Christians as might be expected from their receiving their appointment from the Greek emperors. Arab historians tell us that they used to levy a poll-tax of two dinārs upon all their subjects. One of their officials, named Sabta, came to levy this tribute upon a man belonging to the tribe of Ghassān named Djiz', who instead of paying killed him. This led to prolonged wars between Salḥ and Ghassān with the result that the latter became established as rulers of the Syrian Arabs, the first ruler of whom was al-Hārith b. 'Amr, surnamed Muḥarrik [cf. GHASSĀN]. Though deprived of the royal authority the tribe appears to have remained in Syria for a long time, for we find the tribe of Salḥ mentioned as late as the year 13 of the Hidjra among the Arab tribes who fought on the side of the Greeks against the invading Muḥammadan army. They are also stated to have formed part of the army of the legendary queen al-Zabbā' and we must probably consider as being of the same tribe the last king of Hāthra (al-Haḍr) who is named Daizan or Saṭirūn, who was killed by Sabur after a prolonged defence of his capital, which was only taken through the treachery of his own daughter. Ḥamza al-Isfahānī knows another king of Mesopotamia named Ziyād b. al-Hayūla (or Habūla) who was a contemporary of the Kindite king Ḥudjir b. Ākil al-Murār. The kings of Mesopotamia of this tribe are also mentioned under the collective name al-Dajā'im which, according to Nöldeke, may be identical with descendants of *Touon* who is referred to by Greek authors. From all it seems possible that we have to date the time of their kings approximately round the year 400 A.D. Exact and reliable information about them cannot be expected from Arab sources; there was certainly a historical foundation but legend has obscured considerably all real facts.

SĀLIM (A.), well preserved, intact. In the Kur'ān the word *sālim* is found only in Sūra lxviii. 43 in the quite general meaning: "shame comes upon them (the unbelievers) for they were asked to worship, while they were still in safety (*wahum sālimūna*)". *Sālim* is for the rest used by the interpreters of the Kur'ān to explain the divine name *Salām* of frequent occurrence there; this is said to be equivalent to *Sālim* = free from *āfāt* (calamities). Similarly *ḥalḥ salīm* (Sūra xxvi. 89) is explained as free from *kufr* (cf. Sūra xxxvii. 82). — In general *sālim* means free from defects and faults in cases where these might be found. For example in medicine, *sālim* is equivalent to *ṣāḥih*, sound, free from illness, and *djurḥ sālim*

is also used of a light wound. — Applied to money *sālim* means unclipped coins of full weight, or a sum of money free from charges or deductions.

Sālim is especially used as a grammatical term, again synonymous with *ṣāḥih*: in accidentence (*ṣarf*) a word is *sālim* when none of its radicals is one of the weak letters (*hurūf al-'ilal*) or a hamza and there is further no gemination (*taḍ'īf*). The same condition holds for syntax (*naḥw*) but in this case only of the last letter of the word; weak letters may occur in other positions and the word still remains *sālim*. For example, the root *nṣr* is *sālim*, *rmy* is not, for the *ṣarfīyūn* as well as for the *naḥwīyūn*, but *by'* only for the *naḥwīyūn* and *islanḳā* (to lie on the back, root *slk*) only for the *ṣarfīyūn*.

These examples are given by al-Djurdjānī, *Ta'rifāt*, and, following him, by Muḥ. 'Alā, *Dict. of Techn. Terms*, s. v. The so-called sound (*ṣāḥih*) plural is occasionally called *djam' sālim*. — The prosodists give the name *sālim* to a metre, whose feet (*adjiā'*) have no *'ilal* and *ziḥāfāt*, e.g. *ḳabḍ*, *kaff*, *ḳabn*, etc.; cf. the article 'ARŪD and the dictionaries, s. v., e.g. *Lisān al-'Arab*, xv. 183 middle, and *Tādī al-'Arūs*, viii. p. 339 top, 343. (WALTHER BJÖRKMAN)

SĀLIM, MEHMET EMİN, called Mirzā-zāde, an Ottoman jurist and biographer of poets. He was the posthumous son of the *Shaikh* al-Islām Mirzā Muṣṭafā Efendi (cf. Şubhī, *Ta'rikh*, fol. 65, and *İlmiye Sābānmesi*, Stambul 1334, p. 403 sq.), born in Stambul, became *muderris* and ascended the ladder of legal office, became judge of Mekka in *Dhu 'l-Ḳa'da*, 1134 (began Aug. 13, 1722), *Ḳāḍī* of Stambul in *Djumādā I*, 1143 (began November 12, 1730), military judge of Anatolia, received in *Rabī' II*, 1146 (began August 12, 1733) the office of military judge of Rumelia (cf. J. v. Hammer, *Gesch. d. Osm. Reiches*, vii. 434) and in 1148 (began May 24, 1735) was banished to Chios. In 1149 (began May 12, 1736) he was sent as judge to Mekka for the second time and later transferred to Tripolis in Syria with "barley money" (*arḩalīk*, q. v.); in 1151 (began April 21, 1738) he received orders to go to Damascus, but died on the way in Muḥarram, 1152 (began April 10, 1739) at Mufriḥ near Damascus. A memorial stone was erected to him on his father's grave in *Shahzāde-baḥī* at Stambul. *Sālim* was the author of numerous translations of and commentaries on theological works, of a Turkish-Persian dictionary and of a book on the Holy War, *Nail al-Raḥād fī Amr al-Djihād* (printed Constantinople 1294 = 1878), finished in *Dhu 'l-Hidjja*, 1145 (began June 13, 1732), written by order of Sultān Maḥmūd I [q. v.]. He also translated into Turkish the universal history of al-'Ainī [q. v.] (d. 855 = 1451), *İkḍ al-Djumān fī Ta'rikh Ahl al-Zamān*. Eight volumes of the original MSS. of this work, planned to fill ten volumes, are in Stambul in the Nūr-i 'Oṭhmāniye library. *Sālim*'s main work is his *Tedḥkire-i Shu'arā'* dealing with 410 poets and metrists, written in 1133 (began November 2, 1720) and continued by Faṭn [q. v.] (cf. Ḥādjdī Khalīfa, *Kaṣf al-Ẓunūn*, vi. 560, No. 14633; original MS. in the library of Khālīs Efendi at Stambul; MS. in Vienna; cf. G. Flügel, *Katalog*, ii. 401, and J. v. Hammer, *G. O. R.*, ix. 243, No. 140), which was printed (726 pp.) at Stambul in 1315 (1897).

Bibliography: *Sidḥill-i 'Oṭhmānī*, iii. 3;

(ADOLF GROHMANN)

SĀLIMĪYA, a school of dogmatic theologians with mystic tendencies which was formed among the Mālikī Sunnis in Baṣra in the iīrd—ivth century A.H.

Founded by Sahl al-Tustarī [q. v.] who died in 283=896, it takes its name from his principal disciple, Abū ‘Abd Allāh Muḥammad Ibn Sālim (d. 297=909), and his son Abū ‘l-Ḥasan Aḥmad Ibn Sālim (d. 350=960) who succeeded one another at its head. The second Ibn Sālim, a friend of the Kor’ān exegesis Ibn Muǧāhid, is well known from the eulogies of his pupil and successor Abū Ṭālib al-Makki (d. 380=990) in his *Ḳūt al-Ḳulūb* and from the criticisms of his adversary Abū Naṣr Sarraǧī (d. 377=987) in his *Luma’* (ed. Nicholson).

The main theses of the Sālīmīya have been preserved for us by their Ḥanbalī adversaries, particularly Abū Ya‘lā Ibn al-Farrā (d. 458=1066) who enumerates sixteen of them (ten were given in the *Ghunya* attributed to Kilānī):

(a) God never ceases for a moment to be creating; his uncreated efficiency (*taf‘īl*) makes him thus equivalently present everywhere, especially in the elocution of every reader reading the Kor’ān.

(b) God has an uncreated will (*maṣḥā’a*) and created decisions (*irāda*) by which the faults of created beings are causalized without his wishing their culpability; Satan in the end obeyed God; at the Day of Judgment God will appear in a human form, transfigured, immediately perceptible by all creatures (*taǧallī*; see the article ḤULMĀNIYA).

(c) The practice of the law is realised by an

effort of voluntary adaptation (*iktisāb*, opposed to the quietism of the Karrāmīya); endurance is superior to enjoyment; the prophets are superior to the saints; wisdom is identical with faith.

(d) Mystical union consists for the believer in gaining consciousness of his personality, of the divine “ego” in the proportion in which he has been pre-eternally invested with it (*sirr al-rubūbiya*).

The Ḥanbalī polemicists, from Ibn al-Farrā to Ibn al-Djawzī and Ibn Taimīya, with perspicacity denounced the semi-Mu‘tazilī affinities and the monistic tendencies of these theses, which al-Ḥallāǧī, al-Aṣḥārī and Ibn Khafīf had criticised from the first in different degrees.

Nevertheless the Sālīmīya, being with the Karrāmīya the only Sunni theologians to support belief in the personal survival of the soul (between death and the resurrection), it is to them that the majority of Sunni mystics, from Abū Bakr al-Wāsiṭī, have liked to turn. Al-Ḡhazālī in the second period of his life designed his *Iḥyā’* on the lines of the *Ḳūt* of a Sālīmī, al-Makki. The semi-Isma‘īlī school of Andalusian mystics of the sixth century — from Ibn Barradǧān (d. 536=1141) and Ibn Ḳasīyī to Ibn ‘Arabi [q. v.] — owes, as Ibn Taimīya has pointed out, several of its monist formulae to the Sālīmīya. Other Sālīmīya theses have been traditionally preserved in the order of the SHĀDHLIYA [q. v.].

Bibliography: Abū Ṭālib Muḥammad al-Makki, *Ḳūt al-Ḳulūb*, Cairo 1310, 2 volumes (the text seems to have been purified at an early period); Ibn al-Farrā, *Mu‘tamad fī Uṣūl al-Dīn*, MS. Damascus, Zahiriya Library, Part “Tawḥīd”, N° 45, ‘Abd Kādir al-Djilānī, *Ghunya li-Ṭālibī Ṭarīḥ al-Ḥaḳīq*, Cairo 1288, i. 83—84; al-Muḳaddasī, in the *B.G.A.*, iii. 126; Ibn al-Da‘ī, *Tabṣirat al-‘Awāmm*, lith. Teheran 1313, p. 391; Goldziher, *Z.D.M.G.*, 1907, lxi. 73—80; Amedroz, *J. R. A. S.*, 1912, p. 572—575; Massignon, *Essai sur les origines... de la mystique musulmane*, 1922, p. 264—270; do. *Passion d'al-Ḥallāǧī*, Index, s. v.

(LOUIS MASSIGNON)

SALMĀ. [See ADJĀ’].

SALMĀN, KHWĀDJA DJAMĀL AL-DĪN, son of Khwāǧja ‘Alā’ al-Dīn Muḥammad, was born at Sāwa (whence his *nisba* Sāwādī) at the beginning of the fourteenth century. His father, who was a scribe in the service of government, gave him a good education and he gained the favour of Shaikh Ḥasan Buzurg, the Djalā’ir of ‘Irāk, by an ode which he composed in his praise. Shaikh Ḥasan and his wife, Dilshād Khātūn, made him tutor to their son Shaikh Uwais, at whose court he held a high position as the most distinguished poet of the age, except Ḥāfiẓ. Of his poetry Shaikh Rukn al-Dīn ‘Alā’ al-Dawla of Samnān said: “The pomegranates of Samnān and the poetry of Salmān have no equals”, and it has also been said that “the works of Salmān are a book in which students of poetry and the genius of poets will find all that will profit them”. In some of his verses he satirized ‘Ubaid Zakānī, a poet who had written some very scurrilous odes, and afterwards encountering ‘Ubaid on a journey, fell into converse with him. ‘Ubaid, when he discovered who his companion was, told him that he had intended to visit Baghdād in order to repay him with interest, and the two poets became fast friends, but Salmān always went in fear of ‘Ubaid’s tongue and pen.

Salmān was not exempt from the rapacity of

his class. One night, after a drinking party at court, Uwais sent a slave with a candle in a golden basin to light him home. The next morning the king sent for the basin and received a verse in reply:

"Last night the candle was consumed, and in my lamentation

I too shall be consumed, if the king demands the basin".

The poet was allowed to keep the basin.

As a reward for an ode which he wrote in answer to the odes of Khwādja Zahir Fāryābi, Salmān received two villages in the Rai district and some land in the neighbourhood of Sāwa, his native town, in Suyūrghāl, and in his old age he retired from court and lived in peace on his estate.

Uwais, who ruled over 'Irāk and Ādharbaidjān, died in 1374 and Salmān emerged from his retirement and mourned for some time over his patron's grave, chanting an elegy which he had composed on him. Salmān himself died at an advanced age in 778 (1376).

[Salmān wrote both epical and lyrical poetry. There exist of him two *Mathnawī*, viz. *Firāk-nāma*, composed in 761 (1359) on demand of his patron Sultān Uwais, and *Djamsīd u Khwarshīd*, an imitation of *Khusraw u Shirin*, written in 763 (1362). His lyrical works contain *Ghazals*, *Rubā'is*, *Kiṭās*, and the *genre* in which he excelled, *Qasidas*. In this latter kind of poetry, notable in the artificial *Qasida* (*Qasida-i maṣnū*) he surpassed even his greatest predecessor Dhu 'l-Fiḳār of Shirwān. Of poetical figures, Salmān cultivates especially the *Tawshīh*, i. e. the incorporation of a smaller poem into a longer one (cf. Ibn Kaīs, *Muḍjam*, Gibb Mem. Ser. x., p. 362 sqq.). Many of the *Qasidas* are reflexes of historical events of the time. Salmān's *Ghazals* could not, in the eyes of Persian critics, win the renown of his *Qasidas*.

A lithographed Bombay edition of his *Kulliyāt* is mentioned by Browne, *Hist. of Persian Lit. under Tartar Dominion*, p. 261].

SALMĀN AL-FĀRISĪ, a companion of the Prophet and one of the most popular figures of Muslim legend. According to one tradition, the most complete version of which among the many that exist goes back to Muḥammad b. Ishāk, he was the son of a *dihkān* of the Persian village of Djaiy (or Djaiyān; cf. Yāqūt, ii. 170) near Isfahān. According to other stories, he belonged to the vicinity of Rāmhurmuz and his Irānian name was

Mahbēh (Māyēh) or Rūzbēh (cf. Justi, *Iran. Namenbuch*, p. 217, 277). Attracted by Christianity while still a boy he left his father's house to follow a Christian monk and having changed his teachers several times arrived in Syria; from there he went right down to the Wādī 'l-Ḳurā in Central Arabia seeking the Prophet who was to restore the religion of Ibrāhīm, the imminence of whose coming had been predicted to him by his last teacher on his deathbed. Betrayed by Kalbī Beduins, who were acting as his guides through the desert, and sold as a slave to a Jew, he had occasion to go to Yathrib where soon after his arrival the *hidjra* of Muḥammad took place. Recognising in the latter the marks of the prophet which the monk had described to him, Salmān became a Muslim and purchased his liberty from his Jewish master, after being miraculously aided by Muḥammad himself to raise the sum necessary to pay his ransom.

The name of Salmān is associated with the siege of Medina by the Mekkans for it was he who on this occasion advised the digging of the ditch (*khandaḳ*) by means of which the Muslims defended themselves from the enemy. But, as Horovitz (see the *Bibliography*) has shown, the earliest accounts of the *yawm al-khandaḳ* make no mention of Salmān's intervention, the story of which was probably invented in order to attribute to a Persian the introduction of a system of defence the name of which is of Persian origin. The other references to the career of Salmān (his part in the conquest of the 'Irāk and of Fārs, his governorship of al-Madā'in etc.) are equally devoid of authority and almost all date from the historian Saif b. 'Umar, the bias of whose work is well known. Indeed, the fame of Salmān is almost entirely due to his Persian nationality: he is the prototype of the converted Persians (just as the Abyssinians and the Greeks are represented by Bilāl [q. v., i. 718] and Ṣuḥaib respectively), who played such a part in the development of Islām; as such he has become the national hero of Muslim Persia and one of the favourite personages of the *Shu'abiya* (cf. Goldziher, *Muh. Studien*, i. 117, 136, 153, 212). What explains the majority of the traditions relative to Salmān is the fact that the Prophet foretells to him that the Persians will form the better part of the Muslim community; he declares him member of his own family (*ahl al-bait*); his annuity is equal to that assigned to Ḥasan and to Ḥusain, the grandsons of the Prophet etc. In reality, the historical personality of Salmān is of the vaguest and it is with difficulty that one can even admit that his legend is based on the actual fact of the conversion of a Medina slave of Persian origin.

The figure of Salmān has had an extraordinary development. Not only does he appear as one of the founders of Sūfism along with the *Aṣḥāb al-Ṣuffa* (*Kitāb al-Luma'*, ed. Nicholson, p. 134—135) but the alleged site of his tomb very early became a centre of worship (at latest in the 10th century A. H.; cf. Yā'qubi, *Kitāb al-Buldān* in the *Bibliotheca Geographorum Arabicorum*, vii. 321): it is still pointed out in the vicinity of the ancient al-Madā'in, at the place called after him Selmān Pāk ("Salmān the Pure") near the former Asbāndur suburb. His sepulchral mosque, which was seen in its older form by Pietro della Valle in 1617 (*Viaggi*, ed. Gancia, Brighton 1843, i. 394), was renovated by Sultān Murād IV (1623—1640) and

recently restored (in 1322 = 1904—1905) (Herzfeld-Sarre, *Archdol. Reise im Euphrates- und Tigrisgebiet*, ii. 262, note 1, based on information given by the learned Mesopotamian journalist Kāzīm al-Dudjaili; and cf. *ibid.*, p. 51 [topographical sketch] and p. 58). It is the object of numerous pilgrimages, especially on the part of Shī'īs who do not fail to visit it in returning from Kerbelā (cf. Aubin, *La Perse d'aujourd'hui*, Paris 1908, p. 426—428). Other traditions locate the tomb of Salmān in the vicinity of Iṣfahān, where there is evidence of his cult in the vith century (Yāqūt, ii. 170), and elsewhere (for Lydda in Palestine cf. Clermont-Ganneau, *Études d'archéologie orientale*, ii. 108).

Salmān plays a remarkable part in the development of the *futuwa* and the workmen's corporations. He is venerated as a patron of barbers, whence comes the tradition, unknown in ancient collections of tradition, which makes him the Prophet's barber (H. Thorning, *Studien zu Basī Madad et-Taūfīq*, Diss. Kiel 1913, p. 33—37 and 85—90 = *Beiträge zur Kenntnis des islamischen Vereinswesens, Türkische Bibliothek*, vol. 16; Goldziher, *Abhandl. z. arab. Philol.*, ii. lxxv, lxxxiii.). He is also one of the principal links in the mystic chain (*silsila*) in various religious orders (Depont and Coppolani, *Les Confréries Musulmanes*, p. 91). The veneration accorded to Salmān among the Sunnis is naturally exceeded among the Shī'īs: not only do they attribute to him a mass of *hadith's* in honour of 'Alī and his family but among the extremist sects he is placed immediately after 'Alī in the series of divine emanations. The Nuṣairiya make him the third member of the trinity formed by the three mystic letters A ('Alī), M (Muḥammad) and S (Salmān), of which he forms the gate (*bāb*) (cf. Dussaud, *La Religion des Nusairis*, p. 62; Goldziher, *A. R. W.*, xii. 88).

The death of Salmān is placed in 35 or 36 A.H., a statement which has no value except to indicate that the historian's tradition had no note of his activity after the accession of 'Alī (end of 35 A.H.). Like many other individuals, said to have embraced Islām after long experiences of other religions, he is credited with an extraordinary longevity: 200, 300, 350 and even 553 years (Goldziher, *Abhandl.*, ii., lxxvi.).

SALMĀS, a district in the province of Adharbāidjān in Persia, to the north-west of the Lake of Urmīyah and having an area of 25 miles (N. to S.) by 40 (E. to W.). To the south the chain

of the Awghān (Afghān)-dagh with its pass Wer'gewīz (6,150 feet high) separates Salmās from the district of Urmīyah (Urūmī); the eastern portion of the Awghān-dagh forms the lofty promontory of Kara-bāgh [q.v.] which runs out into the Lake; at the end of it is the fortress of Güwerčīn-Kal'a. In the west the Harāwīl range (in Turkish Ara'ul) separates Salmās from the Turkish district of Albak; the pass of Khānasūr is 7,900 feet high. To the north Salmās marches with Khoi; in the north-east with the district of Güneī ("exposed to the sun"; former administrative name Arwanağ-wa-Anzāb) which lies on the north bank of the lake and has Tasudj as its capital. Salmās consists of the fertile plain watered by the Zola-Çai and of the mountainous districts of Çahrīk, Shīnetāl and Shepirān.

The region of Salmās has been inhabited since very early times to judge by the remains of Khaldic (Vannic) buildings. Later it formed part of the province of Persarmenia belonging sometimes to Atropatene and sometimes to Armenia. Faustus Byzantinus includes the region of Salmās in the province of Kortēkh. Constantine Porphyrogenetos mentions Σαλαμάς alongside of Χερτ (now Khoi).

Al-Muḥaddasī describes Salmās as a fine town with good markets and a stone mosque; the population in the fourth (xth) century was of Kurd origin. In Yāqūt's time the town was in ruins; among natives of the place he mentions Mūsā b. 'Amrān, a learned man who died in 380. According to Ḥamd Allāh Mustawfī, the city wall, 8,000 paces in circumference, was rebuilt by the vizier Khādja Tādj al-Dīn 'Alī Shāh in the reign of Ghāzān. The taxes of Salmās in the viiith (xivth) century amounted to 39,000 dinārs. At the present day there is no town named Salmās. The passages in the Muslim writers must refer to the hamlet known as Kuhna Shahr ("the old town") in the north-west of the district on the road from Albak and Khoi. There are at Kuhna Shahr about 1,000 families of Shī'īs who speak the Azeri dialect of Turkish, 100 Armenian families and a Jewish colony, always the sign of an old established settlement in Persia. The fact that the tower of Mīrī-Khātūn is situated near Kuhna Shahr is equally significant.

The modern capital is Dilmān (written Dilmakān), the name of which seems to indicate some connection with the Dailamis of Gilān (cf. the art. DAILAM) some of whose little forts are at Shahri-zūr etc. (cf. Yāqūt, s.v. Dailamastān). There are at Dilmān 1,400 houses (in 1852 only 300) and 8,000 inhabitants (almost all Shī'īs). The town advantageously situated at the intersection of the routes in the centre of the plain is surrounded by walls of earth and has 5 gates. It has 11 mosques (those of Aghā, of the Shaikh al-Islām, of Ḥādjdī 'Alī Ridā, Ḥādjdī Sādiq Aghā, Kanli, Shīrlī, etc.) and a *tekkīya* of dervishes founded by Rawshan Efendi (whose seal bore the date 1251 A.H.; cf. Véliaminof Zernof, *Scheref-Nāmeḥ*, 1860, i. 18).

The plain of Salmās about 1850 (Çirikow) had 51 villages with 3,310 houses. Their number towards 1900 had risen to 108 with a population of over 50,000 of whom 63.2% were Shī'īs, 13% Sunnis, 22.5% Christians and 1.3% Jews. Alongside of purely Muslim villages or those with a mixed population, there were Christian villages of fair size: Armenians (Kal'a-sar, Haftuwān, Peryādjik) c. Syrians (Khosrowa, Patāwur, etc.). The Catholic (Chaldaean) Syrians were found mainly at Khosrowa, a prosperous hamlet of 500 houses with

2 churches (one built in 1844), the see of a bishop and of a Lazarist mission. As early as 1281 a bishop of Salmās was present at the *ḡesporovia* of the Nestorian patriarch Mar Yalabaha (Assemani, ii. 456) at Baghdād. The inhabitants of Khosrowa were converted to Catholicism in the course of the eighteenth century. Among the Muslims of Salmās there are a few Lek, who came originally from southern Kurdistan but claim to have come to Salmās from Isfāhān. The representatives of the different races and religions agreed very well together and were only disturbed by the inroads of Kurds who came down from the mountains to plunder in the plains. The exports and imports of Salmās before the war amounted to a million gold roubles. The exports consisted of wax, almonds, skins and cattle. The Russo-Turkish fighting and the period of trouble that followed the war from 1918 onwards have seriously affected the prosperity of Salmās.

Čahriḡ, the administrative centre of the mountainous region inhabited by the Kurds, is a little fortress built on a rock rising up in the centre of the gorge of the Zala-Čai (see the photograph in E. G. Browne, *Nuqtatu 'l-Kāf*, 1910). In 1828 Čahriḡ was occupied by the Russians. In 1848 the Bāb [q. v.] was imprisoned there before his execution at Tabriz. At this date the governor of Čahriḡ was Yahyā Khān, brother-in-law of Muḥammad Shāh. After the assassination of his son Timūr Khān, Čahriḡ was occupied by the 'Awdōi Kurds. This clan belongs to the great tribe of Shekkāk, which occupies both sides of the Persian-Turkish frontier here. According to the Awdōi, their ancestors came from Diyārbakr to Urmiya towards the middle of the xviiith century. The tomb of their chief Ismā'īl Aghā (on the Nāzlu Čai) is dated 1231 (1816). His son, 'Alī Khān, seized Čahriḡ in 1864. The son of 'Alī Khān, Dja'far Aghā, a bold bandit, was put to death at Tabriz in 1905 by order of the governor-general. His younger brother Ismā'īl (known as Simko) played a considerable part in the troubled politics of these marches. In 1918 the Nestorian patriarch was assassinated at Kuhna Shahr in an encounter provoked by Simko's men. In 1922 a Persian military force drove Simko back into Turkey.

Among the antiquities of Salmās there should be noted: 1) the Khaldic (Uratæan) buildings discovered by Ker Porter (*Travels*, ii. 60) on the hill of Zindjir Kal'a near the village of Tamar; 2) a bas-relief (Sassanian) on the rock of Pīr Čā'ūsh, representing Galerius, Narses and Tiridates (Ker Porter, *ibid.*; Flandin and Coste, iv., Pl. 204—205) or, according to another explanation, Ardashir-i Pāpāhān and his son Shāpūr (Jackson, *Persia Past and Present*, p. 81; Sarre, *Iran. Felsreliefs*, p. 246); 3) The fortress of Güwerčīn Kal'a ("fortress of the pigeons") on the rocks, sometimes forming a peninsula and sometimes an island in the lake of Urmiyah. Some parts of G.-K. may date from the Khaldic period. N. Khanykoff in 1852 discovered there a fragment of a Muslim inscription of a certain Abū Nāṣir Ḥusain Bahādur Khān (the newspaper *Kavkaz*, Tiflis 1852, No. 22, 23); 4) The brick tower near Kuhna Shahr. Its inscription dated about 700 (7xx) and deciphered by Max van Berchem attributes its erection to Miri Khātūn, daughter of Arghūn Ākā. The last named is known as governor of Khorāsān in the time of Hülāgū and Abākā (cf. Lehmann-Haupt, *Mate-*

riallen zur ältesten Gesch. Armeniens, Abh. G. W. Gött., New Series, ix. 158—159; photograph in Lehmann-Haupt, *Armenien einst und jetzt*, p. 320).

SALSABİL is the name of a fountain in Paradise, mentioned only once in the *Qur'ān*, in *Sūra lxxvi.* 18. The passage runs: "And there shall they (the just) be given to drink of the cup tempered with ginger, from the fount therein whose name is Salsabil".

Grammarians differ as to the derivation of the word. Some refer it to the triliteral root *s-b-l* while others derive it from a quinqueliteral root of which it is, except in its own feminine form, the sole derivative. Some explain it as meaning "that which slips or steals (*yansallu*) into the throat", as though the only radical letters were *s* and *l*. The derivation from *sal sabīlan* as in the comment *sal rabbaka sabīlan ilā hādhihi 'l-'ain* is condemned as erroneous. The word is explained as meaning "easy" or "smooth" (as a beverage), "in which is no roughness", "easy of entrance into the throat", and is applied as an epithet to milk, water and wine, but in the *Qur'ān* it is understood to refer to wine, which will be lawful to Muslims in Paradise.

Some grammarians take it to be the proper name of the fountain, and therefore imperfectly declined, without *tanwin*, but it is given *tanwin* in the verse quoted in order that it may conform with

سَلْسَبِيلًا, but others understand it as an epithet

applied to the fountain, and therefore perfectly declined, with *tanwin*. That the conception of the word as of a proper name was popular in the Muslim community, appears from a tradition in Muslim, *Haid*, No. 37, where it is said that the fountain in Paradise from which the faithful will drink is called Salsabil.

SALŪK (in al-Hamdāni: *Khariḇat Salūk*), an ancient city in South Arabia in the district of *Khadr* in the Yemen on the site of which the village of Ḥabil al-Kiyyaba stood in al-Hamdāni's time. In the ruins of the great city of Salūk there were found slag-heaps, lumps of gold and silver as well as ornaments and coins. It was celebrated for the splendid double meshed mail-shirts which were manufactured in it. There was also a fine breed of dog specially suited for hunting gazelles (*salūḡi*), which was said to be the result of a cross between dogs and jackals, which came from this place. To this day, as I am informed by Alois Musil, there is a saying among the *Shammar* Beduins:

Hu drūki, lā ʿalab wa-lā Slūki "He is a bastard, not a dog and not a Salūki (hound)".

SALŪL. There are two tribes of this name, one South Arabian and a branch of *Khuzāʿa*, the other North Arabian and reckoned to the federation of tribes known by the collective name of *Hawāzin*. Both tribes appear to have been in little estimation and I am in doubt whether the two are not really identical as some members are at times reckoned either to *Khuzāʿa* or *Hawāzik*.

1) The branch of *Khuzāʿa* had immigrated into the *Hidjāz* at an early date, Arab genealogists giving the time as after the break of the dam at Maʿrib, and became custodians of the Kaʿba. A member of the tribe, Abū Ghabsḥān al-Muḥtarish b. Hulail b. Salūl, sold the key of the temple to Kuṣaiy b. Kināna, through whom the custodianship came down to the tribe of *Kuraish*, for a skin of wine. This tribe was divided into three principal branches: *Huḥshiya*, *ʿAdī* and *Hirmiz*, the last of which was probably very small as no notable persons belonging to this clan are mentioned. *Huḥshiya* was divided into several families, namely: *Hulail*, *Kumair*, *Dāṭir*, *Kulaib* and *Ghādira*. To the first belonged al-Muḥtarish mentioned above and Kurz b. ʿAlkāma who followed the Prophet on his flight from Mekka to al-Medina as far as the cave where he lost trace of him, when he found a spider-web over the entrance of the cave. He lived to the time of Muʿāwiya and it was through his knowledge of the topography of the country that the limits of the Holy Territory were fixed, which have been retained to this day. Of the family of *Kumair* was Kaḥḥisa b. *Dhuʿaib*, who was born in the life-time of the Prophet and died in Syria in 86 A. H., and Mālik b. al-Haitham b. ʿAwf, one of the principal emissaries of the ʿAbbāsids and friend of Abū Muslim, who left him in charge of the army when he went to see the Caliph al-Manṣūr and was murdered.

2) The tribe descended from *Hawāzin* was named after their maternal ancestor Salūl, daughter of *Dhuḥl* b. *Shaiḥān*, the ancestor in the male line being *Murra* b. *Ṣaṣaʿa* b. *Muʿāwiya* b. *Bakr* b. *Hawāzin*. They were settled to the East of Mekka. They were divided into ten clans: ʿAmr, *Dubaiʿa*, *Nahār*, *Suḥaim*, *Ghādira*, *Udaiya*, *Djābir*, *Muʿāwiya*, *Djinnī* and *Duḥaiy*. Of the clan *Ghādira* were ʿImrān b. *Husain*, a companion of the Prophet who was sent by ʿUmar I as judge to al-Baṣra, and the poet *Kuthayyir ʿazza* [q.v.]. To the clan ʿAmr belonged the poets ʿAbd Allāh b. *Hammām* and al-ʿUdʿair. In comparing the genealogies of the various members

of the tribe Salūl not inconsiderable divergencies are encountered, *Ghādira* e.g. occurring in both, from which it seems safe to infer that, though the general membership was known the affiliation was more than uncertain in most cases, which the ingenuity of the genealogists has not been able to bring into one common scheme. The chief difficulty was, no doubt, that Salūl was the name of a woman, not of a man, in spite of the "Ibn" of the genealogists and we have a case of a matriarchy, not uncommon in the genealogies of Arab tribes.

SALUR is the name of one of the tribes of the Oghuz which traces its name and origin to the eldest son of *Dagh Khān*, one of the six sons of Oghuz *Khān*; in the texts the orthography

سالور (it occurs in a Persian *Oghuz-nāma* in manuscript in my private library) or سلغر (*Diwān luḡhāt al-Turk*; *Taʾriḫ-i Guzida*) is rarely found; the commonest is سالور or صالور. As in the case

of many other Turkish tribes the historical data regarding their ethnology are very scanty and confused. This much is, however, certain for their early history that from the earliest times they shared the fortunes of the other Oghuz tribes, since they came from the lands of *Ili* and of *Isfgh Göl* on the banks of the *Saiḥūn* [q.v.] and then migrated into Transoxania, *Khwārizm* and *Khorāsān*, and finally, at the conquest of Asia Minor, a part of the tribe settled in Eastern Anatolia (for the details see *Köprülü Zāde Fuʿād, Türkiye taʾriḫi*, Constantinople 1923, i. chap. 5). It was from them that the *Salgharid* dynasty [q.v.] arose after the fall of the *Saldjūk* empire (*Taʾriḫ-i Guzida*, Gibb Memorial Series, xiv/i. p. 503); the royal poet *Qāḍī Burhān al-Dīn* [q.v.] was also a descendant of the Salur ("ʿAziz b. *Ardashīr Astarābādī, Bazm-u Rasm*, MS. of the Aya Sofia, N^o. 3465). Seeing that, according to the translation of the *Saldjūk-nāma*, the Salur, who had come into Asia Minor, were in the army of *Bahrām Shāh*, prince of *Erzindjān*, of the family of *Mengüček* (*Houtsma, Recueil* etc., iii. 57), we may conclude that the Salur played an important part in the history of the *Saldjūks* of Asia Minor along with the *Kāyi* *Bāyandūr* and *Bayāt* tribes (see the Index to vol. iv. of the *Recueil* and J. Marquart, *Über das Volkstum der Komanen*, p. 189 in the *Abh. G. W.*, new series, vol. xiii. N^o. 1, Berlin 1914). According to a Persian manuscript of the *Oghuz-nāma* in my private library, the *Qaramān-Oghlu* [q.v.] belonged to the *Qaramān* branch of the Salur. It is very probable that the villages bearing the name *Qaramanlu* in *Adharbaidjān* in the Caucasus were originally founded by the Salur. Among the solid bodies of Turkomans that we find in these regions in the viith century A. H. (al-Nasāʾī *Histoire du Sultan Djelal ed-Din Manḳobirtī*, transl. Houdas, Paris 1895, p. 264, 374, 383) there were certainly these

Ḳaramāns. After a large part of the Salur had migrated westwards, as a result of Saldjūk policy, which aimed at dispersing the Oghuz tribes in different directions, those who had remained at Marw and Sarakhs played a part in later history under the general name of Turkomans. In the opinion of several scholars a certain number of these Salur went between 1380 and 1424, via Samarkand, Turfān and Sou Tcheou, to Si Ning where they settled and became the present Salar of Kan-Su (it still remains to be ascertained whence and when these latter emigrated). The Salur, reduced in number and in strength by these two emigrations, became gradually weakened by their fighting with the other nomad Turkomans and particularly by their continual incursions into Persian territory; they finally ceased to be of any importance as a result of the great losses sustained against 'Abbās Mirzā, son of Faḥr 'Alī Shāh, during the latter's expedition to Sarakhs in 1831.

Present state of the Salur. The Salur regard themselves as the oldest and noblest of the Turkomans who live clustered round Sarakhs and scattered along the Russo-Persian frontier near Hari-Rūd. They are divided into three groups: Alavač, Ḳaramān and Anabeleghi; these groups again have their subdivisions. Evnewič gives the following divisions:

Yalowač: 1) Ordouhodka, 2) Daz, 3) Bek-Sakar.
Karaman: 1) Ougroudjihli, 2) Bek-Chezen, 3) Alain.

Kirahe Agha: 1) Kirahe Aga, 2) Bech Ourouk (all these names after the orthography of the *R.M.M.*, lvi. 66, 67).

These subdivisions are again divided into clans. Their numbers are variously estimated. Dubeux puts the number of the Salur around Sarakhs at 2,000 tents, Petrouchewitch at 3,000, Vámbéry at 5,700 (which is an exaggeration). Recently J. Castagné has put it at 3,000 tents.

The number of Muslim Salur in the originally Tibetan district of Kan-Su is put at 70,000 (according to Grenard, 50,000). They dwell on the right bank of the Yellow River in an area stretching from Ourounvou to T'ao-Hô with the little town of Sin-Hoa-T'ing or Salar as its centre; on the left bank they occupy some villages on a rather dangerous and mountainous road between Si-Ning and Hô-Tcheou. These Turks are readily distinguished by their physical type from the other Muslims of Kan-Su; they have retained their Turkish language. Grenard has published materials concerning their dialect and has drawn certain conclusions from it regarding the origin and time of emigration of the Salur but these materials are neither sufficient nor reliable. The Salur are Ḥanafī Sunnis; they have always been Nakshbandis and the *dhikr dījāhri* is common among them. They despise the Chinese and as a rule are brigands.

SĀM (Shem) is regularly given first among the sons of Nūḥ and in the *Ḳiṣaṣ al-Anbiyā'* of al-Tha'labi is expressly mentioned as Nūḥ's first-born. Only one isolated tradition in al-Ṭabarī (ed. de Goeje, i. 196) gives the order Yafīṭh, Ḥam, Sām, in agreement with a Jewish tradition in the Babylonian Talmud, *Sanhedrin*, fol. 69b (cf., however, on this the statements in the *Ahl al-Tawrāt* of al-Ṭabarī, *op. cit.*, p. 223). Sām is the favourite son of Nūḥ. He not only shares the paternal blessing with Yafīṭh (cf. *Genesis*, ix. 27) but his dying father also appoints him his successor and gives him special tasks. His preference is transmitted to his descendants; they enjoy special beauty and prophecy is innate in them. Sām's wife, Ṣalīb (Sulaib), was descended, like the wives of Nūḥ's other sons, from Ḳain b. Ādam and bore him four sons, whose names can readily be identified with those in *Genesis*, x. 22; whether Sām's fifth son, Aram, had the same mother is uncertain. The Arabs are regularly said to be Sām's descendants, frequently the Persians and Romans in addition, sometimes also the Jews. When Nūḥ divided the earth among his sons, he allotted "the centre" to Sām, i. e. the region between the Nile, Euphrates-Tigris and Oxus-Jaxartes. Sām himself lived in Mekka.

SĀM MIRZĀ, a Persian poet, son of Shāh Ismā'il I, born in 923 (1517), was installed by his father as governor of Ḳhorāsān under the guardianship of Dürmish Khān in the town of Herāt after it had been relieved from the siege by the Uzbeks in 938 (1531). He rebelled in 969 (1561) against his brother Shāh Tahmāsp I and was thrown into prison and then put to death on the accession of Ismā'il II in 984 (1576—77). Besides a few verses that have been preserved, he was the compiler of the *Tadhkira-i Sāmī*, an anthology of contemporary poetry, a continuation of Dawlat-Shāh, written in 957 (1550).

SAMĀ' (de Sacy's *simā'*, *Grammaire Arabe*, i. 347, is quite false; cf. Fleischer, *Klein Schr.*, i., p. 260) is an infinitive, like *sam'* and *sim'*, of

the root *s-m-* and means "hearing", often passing into the thing heard, like music and hearing music; also, like *istimā'*, "listening" (Lane, *Lexicon*, pp. 1427^b, 1429^b; *Lisan*, p. 26 sq.); it does not occur in the Qur'ān but it belongs to old Arabic even in the meaning, "a singing or musical performance" (Lane, p. 1617^b under *mushār* and references there). In lexicology and grammar it means, with *samā'i*, what is received on authority, as opposed to *kiyāsī* "analogical" (de Sacy, *loc. cit.*, and Lane, p. 1429^b). In theology it, and *sam'*, are opposed, in the same sense, to *ʿaql*, "reason" (Goldziher, *Die Richtungen der isl. Koranauslegung*, p. 136 sq., 166). But its principal technical use is undoubtedly in Sūfism, in which it means the listening to music, singing, chanting and measured recitation in order to produce religious emotion and ecstasy (*wajd*) and also such performances by voice or instrument. To this on all its sides al-Ḡhazālī has devoted a Book of the *Ihyā'*, the viiith in the Sections of Customs, vol. vi., p. 454—end in ed. with commentary, *Iḥyā' as-sāda*; cf. ḠHAZĀLĪ above. It has been translated with commentary and analysis by D. B. Macdonald in *J.R.A.S.*, for 1901, 2, and is the *locus classicus* in Islām for the whole subject of the attaining and controlling of religious emotion by such means, on its legal, psychological, theological and esthetic sides. Al-Ḡhazālī considers it both as an advanced mystic and experienced ecstatic and as an orthodox Ash'arite and Shāfi'ite, and this Book by its subject forms the kernel of his *Ihyā'*. Al-Hudjwiri, an earlier Persian writer and a theologically more advanced mystic — although still holding to his professed orthodoxy — has given to the same subject a chapter of his *Kashf al-mahjūb*; see the translation (Gibb Memorial Series, vol. xvii.) by R. A. Nicholson, p. 393—420; see also, *Mystics of Islam* and *Studies in Islamic Mysticism* by the same author, both by index; Massignon, *La Passion d'al-Hallaj*, by index and especially p. 780, 795 sq. Al-Kushairī has also given a section to this in his *Risāla*, ed. with commentaries of al-'Arūsī and Zakariyā (Bulāḡ 1920), iv., p. 122—146; cf. on this passage R. Hartmann, *Al-Kushairī's Darstellung des Sūfitums*, p. 134—148. There are two vivid descriptions of seances by Rifā'ite darwīshes for *samā'* in Ibn Baṭṭūṭa's *Travels*, Paris ed., ii., p. 5—7.

Bibliography: has been given above.

ṢAMAD. [See ALLĀH, i. 303^a].

AL-SAMAK, fishes. There are numerous kinds, some so long that one cannot see both ends at the same time — a ship had once to wait four months till one of these monsters had passed — but others are so small that one can hardly see them. They breathe water through the covers of their gills and do not require air in order to live: air is injurious to them all except flying-fish. They are very voracious on account of the coldness of their temperament and because in them the stomach is very near the mouth. Like snakes they have great strength in their movements, because they have not to distribute their nourishment over many limbs. Many fishes pair; others are produced from sand and slime or decaying matter. According to al-Djāhiz, there are migratory fish, which one only finds at certain periods of the year, like migratory birds. Al-Kazwini gives 79 names of fishes and 130 names of birds for Lake

Menzaleh in his *ʿAdjā'ib al-Makhḥūḡāt* (ii. 119). The eating of fish is permitted by law, in whatever way they may have perished or been killed but they must not be roasted or eaten alive. Fishes are considered to be cold and moist and therefore good for people of a hot temperament and they fatten the thin. Freshwater fish have many bones but have a fine flavour; fishes which live on mud are forbidden. If a drunk man smells fish, he becomes sober. Eating fish makes one thirsty. Al-Rāzi deals very fully with the cooking of fish and their wholesomeness. Wonderful tales are given in the 1001 Nights and are also told by al-Damiri.

(J. RUSKA)

AL-SAMAKATĀN, Pisces; the more accurate name for the last sign of the Zodiac which is usually called *al-Ḥūt*, the fish. It consists of 38 stars of which 34 belong to the constellation and four lie outside of it (*khāridjuhā*). The two fishes are, according to the usual view, connected by a band twisted between their tails, *σύνδεσμος ὀπορπαῖος*. This is called *al-Rashā'* or is described as a thread, *khait*, which connects the two fishes in its windings (*ʿalā ta'ridh*).

Bibliography: al-Kazwini, *ʿAdjā'ib al-Makhḥūḡāt*, ed. Wüstenfeld, i. 38; transl. H. Ethé, p. 79; L. Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, p. 202 sqq.

(J. RUSKA)

SĀMĀNIDS, a Persian dynasty, descended from a certain Sāmānkhudāt. The genealogy down to Ismā'il, the first really independent prince, is as follows:

Sāmānkhudāt, who traced his family back to the celebrated Bahrām Ġubin, that is to a noble

family of Ray (Ibn al-Athīr, ed. Tornberg, vii. 192), was, as his name shows, lord of the village of Sāmān (in the district of Balkh; cf. Ḥamza al-Isfahānī, ed. Gottwaldt, p. 237; Barbier de Meynard, *Dict. géog. . . . de la Perse*, p. 297). When Sāmānkhudāt had to flee from Balkh, he sought refuge with Asad b. 'Abd Allāh al-Kasrī, governor of Khurāsān (cf. the art. ASAD, i. 475). The latter helped him against his enemies; Sāmānkhudāt then adopted Islām. He called his son after his protector, Asad (Narshakhī in Schefer, *Descr. . . . de Boukhara*, p. 57 sq.). The further stories of Sāmānkhudāt given in the *Ta'rikh-i Guzida* (apud Schefer, *o. c.*, p. 99 sq.) are obviously legendary. The story that his ambition was aroused at the recital of a certain verse was only later transferred to him from another connection (Gibb Mem. Ser., xi. 26, 123 sq.). The *Ta'rikh-i Guzida* also says that Sāmānkhudāt gained possession of Ashnās.

Asad b. Sāmānkhudāt had four sons, who seem to have played a part in the political history of the eastern Caliphate even in the time of al-Rashīd. The future Caliph al-Ma'mūn is said to have ordered the sons of Asad to assist the commander-in-chief Harthama against the rebel Rāfi' b. Laith and the Sāmānids were able to arrange an agreement between Harthama and Rāfi' (Narshakhī, p. 74). In any case, when al-Ma'mūn succeeded his father, he commanded Ḥassān b. 'Abbād, whom he appointed governor of Khurāsān, to give the sons of Asad posts in the administration (Narshakhī, p. 75; cf. Ibn al-Athīr, vii. 192; Ḥamza al-Isfahānī, p. 237). In 204 (819) Ḥassān appointed Nūḥ b. Asad to Samarkand, Aḥmad to Farḡāna, Yahyā to al-Shāsh and Ushrūsana and Ilyās to Herāt. When later, Ṭāhir b. al-Ḥusain became governor of Khurāsān, he confirmed these appointments. The Sāmānids were thus a kind of sub-governors of the Ṭāhirids. An older source, Ḥamza al-Isfahānī, only briefly states that Nūḥ spent some years at the court of al-Ma'mūn and that the latter then appointed him over Māwarā' al-Nahr *min kibal al-Ṭāhirīya* (237). The first of the brothers to die was Ilyās; his death took place in the reign of 'Abd Allāh b. Ṭāhir. The latter allowed Ilyās's son Muḥammad to succeed his father in Herāt (Ibn al-Athīr, vii. 193).

But this branch of the family is of less importance than the line of Aḥmad from which the Sāmānid dynasty was descended. When Nūḥ, who seems to have been a loyal servant of the Ṭāhirids — he had aided 'Abd Allāh b. Ṭāhir at the instigation of the Caliph al-Mu'tasim to entrap in infamous fashion al-Ḥasan b. al-Afshīn, son of the famous general of the Turks who had fallen from favour (al-Ṭabarī, iii. 1307 sq.) — had died without heirs, Ṭāhir b. 'Abd Allāh gave his governorship in Transoxania to the brothers Yahyā and Aḥmad. Aḥmad is praised in later sources for his unselfishness and other fine qualities (Ibn al-Athīr, vii. 192) in the fashion usual among eastern historians, when dealing with the founder of a dynasty. Aḥmad was succeeded in the governorship of Transoxania by the eldest of his seven sons, Naṣr (we hear no more of Yahyā; perhaps he died before Aḥmad; Ḥamza al-Isfahānī only knows of Aḥmad as successor to Nūḥ). From 261 (874/75) onwards Naṣr can be regarded as an independent prince; in that year he was granted Transoxania as a fief direct from the Caliph (al-Ṭabarī, iii. 1889; cf. Ibn al-Athīr, vii. 193); the star of the Ṭāhirids was on

the wane and danger threatened from the Ṣaffārids. But just as it appears from the words of Ibn al-Athīr that he regards Naṣr after the grant of 261 as a *de facto* autonomous ruler dependent only on the 'Abbāsid government, so Ḥamza (p. 237) seems to consider Ismā'il the first actual prince (*fakānat wilāyat man taḥaddama Ismā'il min kibal al-Ṭāhir*). In the same year, 261 Naṣr appointed his brother Ismā'il Wālī of Bukhārā. In this region anarchy reigned; an army sent by Naṣr against the Ṣaffārid Ya'qūb b. al-Laith had murdered its leader and gone to Bukhārā, where the soldiery, after Naṣr's *nā'ib* Aḥmad b. 'Umar had retired before them, appointed and deposed rulers as they pleased (so Ibn al-Athīr). Narshakhī (p. 76) speaks of an invasion of the Khwārizmis (Rāfi' II, 260 = 874) when great devastation was wrought in Bukhārā. The leader of the Khwārizmis, Ḥusain b. Ṭāhir al-Ṭā'i, was soon forced to take to flight, but the disturbances went on as before. Then the Faḳīh Abū 'Abd Allāh b. Abī Ḥafṣ appealed to Naṣr to send a governor to restore order. He sent Ismā'il; according to Narshakhī, by the first Friday of the month of Ramaḍān, 260 (June 26, 874), the name of Ya'qūb b. Laith was replaced in the *khutba* in Bukhārā by that of Naṣr. The Sāmānid soon rendered harmless, although by perfidious means, the Khāridjī Ḥusain b. Muḥammad, whom Ismā'il encountered in Bukhārā. Ismā'il cleared the robbers out of Bukhārā, defeated Ḥusain b. Ṭāhir of Khwārizm and forced the turbulent Bukhārā aristocracy to obedience. He further sought to strengthen his position by an alliance with Rāfi' b. Harthama, lord of Khurāsān. The latter also handed over to him the administration of Khurāsān (Ibn al-Athīr vii. 193). This must have been shortly before the outbreak of war between Ismā'il and Naṣr (272 = 885/886) for it was only in 271 that Muḥammad b. Ṭāhir was appointed governor of Khurāsān by the Caliph al-Mu'tamid in place of 'Amr b. al-Laith, whereupon Muḥammad installed Rāfi' b. Harthama as his deputy there (Ibn al-Athīr, vii. 290). The power of the Sāmānids was by then so well established that these events in Khurāsān did not affect their position in the least. Ismā'il's treaty with Rāfi' b. Harthama was an offensive alliance against Naṣr. In the first war, which broke out in 272 (Narshakhī gives as the cause that Ismā'il had not paid the annual tribute promptly; Ibn al-Athīr speaks in general terms of intrigues), Rāfi' did not distinguish himself as an ally. Ḥamwaih b. 'Alī, a general of Ismā'il's, seems to have induced him to work for a rapprochement between Naṣr and Ismā'il rather than for a vigorous campaign (Ibn al-Athīr, vii. 194). Peace was soon concluded between the two brothers. The war was renewed in 275 (888) and ended in favour of Ismā'il. The latter captured Naṣr, but was politic enough to send him back to Samarkand with the honours befitting his suzerain. There Naṣr reigned till his death in 279 (892) (al-Ṭabarī, iii. 2133) while Ismā'il remained as his brother's *nā'ib* in Bukhārā, until he succeeded him on the throne. Ismā'il is regarded the first proper ruler (*amīr*) of the dynasty. The list is as follows:

Ismā'il b. Aḥmad . . .	279—295 (892—907)
Aḥmad b. Ismā'il . . .	295—301 (907—913)
Naṣr b. Aḥmad . . .	301—331 (913—943)
Nūḥ I b. Naṣr . . .	331—343 (943—954)
'Abd al-Malik I b. Nūḥ .	343—350 (954—961)
Manṣūr I b. Nūḥ . . .	350—365 (961—976)

Nūh II b. Maṣṣūr . . . 365—387 (976—997)
 Maṣṣūr II b. Nūh . . . 387—389 (997—999)
 ‘Abd al-Malik II b. Nūh . 389 (999)

By the time Ismā‘īl (cf. above, ii. 545 *sq.*) died, he had considerably extended his kingdom, in addition to Transoxiana and *Khurāsān*, which had come to him after the overthrow of the Ṣaffārid ‘Amr (see the above article). He was, so far as we can judge, one of the ablest rulers of his dynasty, energetic but unscrupulous. His loyalty to the ‘Abbāsids is, however, commemorated (Narshakhī, p. 90) and, indeed, the Sāmānids always professed, outwardly at least, this sentiment, if ‘Utbī is right when he says that only the princes of this dynasty bore the title *walī amirī ‘l-mu‘minin* (in Schefer, *Description*, p. 160). Anecdotes of Ismā‘īl’s piety and philanthropy are given in Ibn al-Athīr, vii. 194 *sq.*, viii. 4 *sq.*

Under the second prince, Aḥmad, there already appears a factor, which contributed not a little to the decline of the dynasty, namely the mutinous and ambitious spirit of the notables. Even at his accession Aḥmad was forced to put his uncle Ishāk in prison; another noble, Bārs al-Kabīr, who had considerable sums in his keeping, fled to Baghdad. The new Amīr seems in other respects to have been of a resolute character. Ibn al-Athīr (viii. 89) attributes to him a sound judgment and the knowledge of men indispensable in a king. Narshakhī emphasises his justice; it is only in a later compilation that we find him unfavourably criticised (in Schefer, *Description*, p. 98). In 298 (910/911) Aḥmad’s general, al-Ḥusain b. ‘Alī, conquered Sīstān; among the leaders of this expedition was Simdjūr al-Dawātī, the ancestor of the powerful family that held the governorship of *Khurāsān* under the Sāmānids. Sīstān was at that time in the hands of a Ṣaffārid, al-Mu‘addal b. ‘Alī b. Laith. The latter was defeated and sent to Baghdad along with a former *ghulām* of ‘Amr b. al-Laith, who was taken prisoner in Fārs. But the conquest of the country was not final. In 300 (912/13) a rebellion broke out, stirred up by the Khārīdjī Muḥammad b. Hurmuz in favour of a Ṣaffārid pretender, ‘Amr b. Ya‘qūb b. Muḥammad b. ‘Amr b. al-Laith. Al-Ḥusain b. ‘Alī again conquered Sīstān for the Sāmānids, but further troubles broke out after Aḥmad’s death. In 301 (913/914) the governor of Ṭabaristān was driven out by an ‘Alid; shortly after the receipt of this news Aḥmad was murdered by some of his *ghulām*’s (Ibn al-Athīr, viii. 46, 52, 58).

In this we may see the hand of those notables who, for one reason or another, were tired of the strong hand of the Amīr. Significant also are the words which are put in the mouth of Aḥmad’s son Naṣr (Ibn al-Athīr, viii. 58). That Aḥmad, as later compilations report, showed so much favour to learned men that the *ghulām*’s became jealous is probably an invention (Schefer, *Description*, p. 92, cf. 101).

The detailed histories of the succeeding rulers will be found in the articles on them (‘ABD AL-MALIK, MAṢṢŪR, NAṢR, NŪḤ). The following is a general account of the dynasty, the capital of which was Bukhārā from the time of Ismā‘īl. The kingdom of the Sāmānids, which grew out of a subordinate governorship in Transoxania, comprised in the period of its greatest extent Sīstān, Kirmān, Djurdjān, Ray and Ṭabaristān, in addition to

Transoxania and *Khurāsān*. The reign of Naṣr b. Aḥmad, the patron of Rūdākī, marks the zenith of the dynasty (301—331), not so much on account of the imposing personality of the ruler (in this respect he was far inferior to Ismā‘īl) as on account of the fact that after his death the decline of the kingdom begins to make itself apparent. The same factors, as had proved fatal to older Irānian dynasties, the turbulence of the notables (in this case the military aristocracy) and the danger from the northern nomads, the Turkish tribes, increased in strength when powerful figures like Ismā‘īl and Aḥmad no longer sat on the throne and finally brought about the catastrophe. No sooner was Aḥmad dead than his uncle Ishāk contested the throne with his son Naṣr; Nūh I had to defend his throne against his relative Ibrāhīm b. Aḥmad. From the reign of the last-named prince dates the rise of Alptegin, who later seized Ghazna, when he had been removed by Maṣṣūr I from the governorship of *Khurāsān* and replaced by Abu ‘l-Ḥusain Simdjūr, and became the founder of the Ghaznawid dynasty (cf. the article ALPTEGIN). The war, waged with little success against the Būyids and ended in the reign of Maṣṣūr I, contributed as little to increase the prestige of the dynasty at home or abroad. Things did not improve under Nūh II. He tried in vain to put down the rebellious governor of Sīstān, Khalaf b. Aḥmad. Abu ‘l-Ḥusain Simdjūr, whom he had relieved from the governorship of *Khurāsān* and sent against Khalaf, made common cause with the latter. This was the beginning of a series of troubles which did not cease with the death of Abu ‘l-Ḥusain; his son, Abu ‘Alī Simdjūr, was an equally faithless subject, who finally incited the Turkish prince Bughrā Khān [q. v.] against the Sāmānid kingdom. The Turks, who had not only been defeated by Ismā‘īl but had had the war carried into their own territory (al-Ṭabarī, iii. 2138, 2249), now came to the front again. The days of Ismā‘īl were past, however. Nūh’s armies were defeated — one of his generals played the traitor — and he himself had to flee. Only the premature death of the Turkish leader enabled the Sāmānid to return to his capital in a short time again. Fā‘ik, the general, who was said to have allowed himself deliberately to be beaten by the Turks, made an alliance with Abū ‘Alī Simdjūr, with the object of driving Nūh from the throne. The Amīr, who could not trust the nobles, appealed for assistance to the Ghaznawids, who agreed to help him. Nūh’s two opponents were forced to seek refuge with the Būyid Fakhr al-Dawla. The governorship of *Khurāsān* was given by Nūh to the Ghaznawid Subuktegin; the latter and his son Maḥmūd received in addition the titles Nāṣir al-Din and Saif al-Dawla (384 = 994). The war with the rebels continued till Abū ‘Alī met his death and Fā‘ik escaped to the Turkish ruler Naṣr b. ‘Alī Ilek Khān (cf. above, ii. 465 *sq.*). War with the Turks did not result on this occasion; it was agreed that Fā‘ik should receive the governorship of Samarqand. The brief reign of Maṣṣūr II was similar in its course. Ilek Khān, with whom some members of the military aristocracy had made an arrangement, conquered Bukhārā and drove out Maṣṣūr. With the help of Fā‘ik, Maṣṣūr was soon able to return. A quarrel broke out between Abū ‘l-Ḥasim Simdjūr and Bektūzūn over the governorship of *Khurāsān*; Maḥmūd of Ghazna also intervened, but the definite conquest of *Khurāsān* by

the Ghaznawids did not yet take place. Manšūr was deposed by Fā'ik and Bektūzūn and blinded. His brother, 'Abd al-Malik, was put upon the throne. Maḥmūd now intervened. He drove 'Abd al-Malik out of Khurāsān and conquered it. On these events and occupation of Transoxania in the same year 389 (999) by Illek Khān, when 'Abd al-Malik was taken prisoner, cf. above, i. 50^a. Here the dynasty ends; on the fate of one member of the family, who was carried off by the Turks, Ismā'il b. Nūḥ al-Muntaṣir, see above, ii. 546^a.

More important than the political history of the Sāmānids, which is very similar to that of other Oriental dynasties, is another aspect of their rule which can only be briefly touched on here. Not only did learning flourish under the aegis of this house (one thinks, for example, of Bal'ami, the translator of al-Ṭabari's chronicle; cf. above, i. 613 sq.) but it is from this epoch that modern Persian literature takes its rise. It is sufficient to recall a name like Rūdakī; Firdawsi also began writing in the Sāmānid period. It may be mentioned as a curiosity that one of these rulers himself, Manšūr II, has left poetical fragments (cf. 'Awfi, *Lubāb*, ed. Browne, i. 23).

(V. F. BÜCHNER)

SAMARITANS. The Samaritans were in all probability the very first nation to come under the sway of the Arabic conquest and under the domination of Islām, a domination which lasted uninterrupted for centuries. Slender as the contact had been between the dwellers in Nāblus and the Western World throughout the period of Roman and Byzantine rule, they were now entirely cut off from any further intercourse and became practically an isolated island in the sea of Arabic civilisation. It is of symptomatic interest to follow up the now all-embracing influence and to draw some conclusions pertinent to the problem of the character and depth of the influence which one culture is alleged to have exercised upon the other. We have on the one hand the rise of a new culture from the desert and on the other an apparently stagnant literary life which is now stirred, and we have therefore every reason, as it seems, to anticipate some traces of such an influence. This is a point of no mean importance as it has almost become a dogma to assume that whatever parallel is found in two literatures of which one is Arabic, the priority and originality belong to the Arabic whilst the other does nothing but borrow. It is forgotten, however, that the Arabs were the last of the eastern nations to appear on the horizon of civilisation and culture; they were the last and did not originate much at the beginning. On

the contrary, they were simply the heirs of hoary civilisations; true they were eager to enter upon that rich inheritance and quickly added to it. But the way in which they succeeded in adopting and assimilating the older civilisations is a proof of similar adaptability in any earlier period, however scanty the literary data may be. Still the desire of ascribing to the Arabs all initiative and originality has greatly obscured or impeded such investigations; the syncretistic character of the Korān alone should suffice to prove this adaptability. No one doubts the multiple origin of Muḥammad's sources of information and Jewish and Christian influences have been freely recognised. The greater familiarity with these literatures favoured such conclusions, whilst one might say that complete ignorance of matters Samaritan favoured the prejudice on behalf of the Arabs. Insufficient knowledge of Samaritan traditions and literature prevented the suggestion of any possible influence from that quarter. Added to this was the aforementioned assumption that if anything were found in the Samaritan similar or akin to Islāmic tradition and practice, the Samaritan must have borrowed from the former. Recent investigations of the remnants of Samaritan literature, however, have shown that this literature represents a tradition which is at least a thousand years older than Muḥammad and which contains writings going back to the first centuries before and after the Christian Era. The Samaritans are characterised by complete fossilisation and a fixed determination not to change or alter anything. No difference of importance can be discovered between the teaching and practice of the first centuries and those of relatively modern times; their whole strength rested in this immutability and in their imperiousness to outer influences. Continuity of life in one spot and continuity of worship warrant the assumption of reliability of tradition, and if, as will be seen, a strong similarity will be detected between Arabs and Samaritans in some important points, the presumption is justified that the Samaritan tradition is the older and the Muḥammadan the later, these having borrowed it from the Samaritans.

The numbers of the Samaritans in olden times and the position which they occupied have been greatly underrated. They were the representatives of the Northern Tribes and were scattered in large numbers throughout the Babylonian and Persian Empires and moreover were always found side by side with the Jews. By their doctrinal opposition to the Jews they formed as it were a bridge between the latter and other heterodox movements. Sufficiently Jewish by their strict adherence to the Law of Moses, they yet rejected the Prophets and withheld their allegiance from the house of David. They were the first to accuse the Jews of tampering with the Holy Scriptures, an accusation which was afterwards taken up by Christian, Muḥammadan and Gnostic sects. For the Samaritans to have changed a single jot or tittle of their dogma, to have modified their form of prayer, or to have introduced new angelological views and tenets was a sheer impossibility; only a new sect separating itself from the older stem could have ventured upon such changes thereby justifying the separation.

There were indeed sects among the Samaritans but as far as can be ascertained from the information which can be gleaned from Samaritan Chronicles they belong to a period centuries older

than the date of Islām and have nothing in common with it. One cannot, therefore, insist too strongly, that generally speaking and for the older period, the Samaritans owe nothing to Islām and that the indebtedness lies rather with the latter.

The conquest of Palestine by the Arabs must have been hailed with joy by the Samaritans; it freed them from the vindictive and tyrannical persecution of the Byzantine rulers and the Church. The darkest period for the Samaritans was from the time of Hadrian, who, as stated by them, destroyed their literature, down to the period when the Arabs put an end to the Christian domination. The relation between the new rulers and the Samaritans seems to have been one of friendly intercourse; freedom of faith and liberty of action were granted to them on the strength of documents purporting to have emanated from Muḥammad himself and corroborated by 'Alī b. Abī Ṭālib.

The very words of these documents are given by Abu 'l-Faḥ in his Arabic-Samaritan chronicle, the genuineness of which has never been disputed. In any case they seem to have been a source of protection to the Samaritans for many centuries. It was only the fanatical intervention of some of the local governors which caused some temporary loss and trouble. On the whole the relations remained friendly, for besides the documents the Samaritans also belonged to the "tolerated" religions. There is a story related by Abu 'l-Faḥ in connection with the granting of these documents. According to him, three wise men, astrologers, had seen that Muḥammad would arise and would succeed. One was a Jew, one was a Christian and one was a Samaritan. All three went to Muḥammad to foretell his future greatness. He was much impressed, accepted their prognostications gratefully and was able to induce the Jew and the Christian to embrace his faith. The Jew was the famous Ka'b al-Aḥbār and the Christian Ab Samlyā. The Samaritan, however, refused to embrace the new faith and was able to impress Muḥammad more than the others by telling him that he had a blemish between the shoulders, like that of a leprous man. Out of gratitude for the prophecy, Muḥammad granted liberty of life and freedom of conscience to the Samaritans. This document, written by Muḥammad, was corroborated by 'Alī b. Abī Ṭālib. The name of the Samaritan was Ṣassata (?), who afterwards assumed the name of Qabaṣa, being the ancestor of the family of Qabaṣī on whom more later on. These three persons typically represent the three faiths which contributed to the shaping of Islām.

How much did the Samaritans contribute? The claim now put forward on behalf of the Samaritans is a novel one and only a few points will be selected where a proof of Samaritan origin can be advanced. This proof consists of showing that the Samaritan dogmas or principles rest directly on a sentence found in the Pentateuch. Their contribution may sound exaggerated but it will not be found so when carefully investigated.

I start with the well-known Muḥammadan proclamation of faith: "*Lā ilāha illa 'llāh*": "There is no God but Allāh". This corresponds as closely as religious doctrines will allow to the Samaritan formula repeated over and over again by Markaḥ and his contemporaries, 'Amram Dara and Nana: "*Lā ilāh illā eḥād*" (or, according to their pronunciation, *aād*) "There is no God but one." To

the Samaritan as well as to the Jew, the Unity of God was the fundamental principle as was also the case with Muḥammad who proclaimed Allāh as the real God in contradistinction to the heathen gods. The name of Allāh was the chief element and decisive factor of the new faith and had therefore to be chosen instead of Eḥād. The above mentioned Samaritan writers belong to the third or fourth centuries, two or three centuries before Islām. There cannot be any question of interpolation, as the formula appears so frequently and is so interwoven with the contents that it forms an integral part of the poems. It is also found in the "Prayer of Joshua", which is unquestionably one of the oldest Samaritan hymns and which stands in close connection with that ancient Samaritan Book of Joshua of which so little is known and to which reference will be made later on. The Samaritans assume the origin to be known and the occasion when these prayers were uttered. But whatever the date may be which can be assigned to it, there cannot be any doubt that the Prayer of Joshua must be older than Markaḥ and probably only a little less old than the *Enṣira* or Opening Prayer.

We also have in the *Enṣira* the proclamation: "there is no God but one", and the reference to the Biblical passage upon which it principally rests (Deut., iv. 39), where the Samaritan adds at the end *milebado* meaning "none else beside him", i.e. there is no God but that one.

Further the very first word of the *Qor'an* is *Bismillāh*, "in the name of God". A special value has been attached to this formula and it has been used by Muḥammadans for all and every religious function. In fact every religious action begins with it. It is not an invocation of God direct but a call on His most powerful and efficacious Name. This is part of Jewish and Samaritan mysticism and lies at the root of most of the magical speculations and conjurations of the ancient world. Only through Jewish or Christian, but more especially Samaritan influences could Muḥammad have obtained that knowledge, and then used this formula as he did, placing it at the very beginning of the *Qor'an*. The Samaritans derive it from Deut., xxiii. 3, where they read: *Ki beshem Adonai ekrā*, "For I call on the name of the Lord". — The Samaritan reading *beshem* instead of *shem*, as the Jews read, approximates this form to the Arabic *bismillāh* — and this phrase occurs over and over again during prayer and in fact proceeds every other portion, even the *Enṣira*. Markaḥ has devoted a special portion of his Commentary to it and Qabaṣī has written a special treatise (see below).

Now as it stands in the Arabic, it is quite abrupt; it has no end and no connection with the form of invocation. What does it mean? "In the name of God the All-merciful." There is no verb to complete the sentence and it is not sufficient to appeal merely to the imagination.

It becomes intelligible, however, if compared with the parallel Samaritan invocation "In the name of God we begin and finish", or, according to the variant: "In the name of God we begin and prosper". This form is the one constantly in use among the Samaritans; it stands at the head of the *Kinosā* which contains the collection of the most ancient prayers and hymns, it stands at the head of the ancient phylactery and is at every beginning. In time this formula in its entirety

became abbreviated through its constant use and reached Muḥammad in this form, in which the second part was so well known and understood that it was omitted. But it is really the beginning of a formula without the completion of which it has no real meaning. And even so, it rests upon a theory new to the Muḥammadan world, i.e. the mystic nature of the Name of God.

I do not wish to discuss here the other words, the attribute "All-merciful", which corresponds to the Samaritan duplication of the same word in order to express the superlative: *Raḥum ha-reḥumim*, just like the Arabic. Let us rather turn to the *Fātiḥa* itself, also a kind of succinct Confession of Faith. We do not find any such confession standing at the head of prayers or of any religious liturgical books among Jews or Christians; a comparison with the Christian Paternoster misses the point. It has nothing in common with it, either in form or in contents. But if we turn to the Samaritan we find precisely the same practice. Reference has already been made to that Opening Prayer called by the Samaritans *Enṣira*. It is a more elaborate Confession of Faith, a prayer for Divine Protection which is said silently. It contains the principal doctrines of the Samaritans and begins with the words: *Amadiḥ ḥamekha al fataḥ raḥamekha*, "I stand before Thee at the gate of Thy mercy". *Fataḥ* = *Fātiḥa*, Opening or Gate, and thus the very word "*fataḥ*" stares us in the face. Standing by itself it might be looked upon as a mere coincidence, but taking it together with the other declarations in the *Enṣira* and the fact that it occupies the same prominent position as has been assigned to the *Fātiḥa*, this must be something more than mere coincidence.

In the *Enṣira* there is also the *Ḳibla* or turning in prayer to the Sacred Mountain. True the direction towards the Sanctuary was also known among the Jews. Daniël (iv. 10) turns three times towards Jerusalem when bending his knees in prayer. With the Samaritans, however, it is a fundamental dogma forming part of their religious practice, in as much as the worship on Mt. Garizim was the principal difference between them and the Jews. Muḥammad may have borrowed this practice from the Samaritans; like them he invested it with a special religious character more stringent than the Jews. He also changed the direction when he broke with the Jews showing thereby the importance he attached to the *ḳibla*.

If *saḡyada*, hence *masḡid*, are words borrowed by the Arabs to designate worship, i.e. divine worship, then, though this word is Aramaic, still none the less curiously, the Jews have refrained from making any technical use of it for any liturgical purpose, nor does it seem to have obtained the same general acceptance in Syriac. In the Samaritan, on the contrary, it is in the *Enṣira* and is the standing technical expression for "Divine worship", and occurs over and over again in almost every hymn and prayer.

Of a far greater importance is the parallelism between Muḥammad and Moses in the conception of the Samaritans. He is the Only Prophet and is venerated in a manner approaching apotheosis. The most important attribute assigned to Moses is that of the Only Prophet, Faithful Prophet, the Messenger chosen by God to perform the miracles and wonders; moreover, there is none like him nor will there be until the End of Days.

Such a designation is unknown in Jewish literature, where Moses is always known as Moshe Rabbenu, i.e. Moses our Teacher or Master. *Ha-nabi ha-ne'man* or *ha-shaliaḥ* is the standing phrase among the Samaritans and rests among others on the statements often found in the Bible where the words "prophet", "sent" and "sending" occur in connection with Moses. The close parallelism between this title given to Moses and the corresponding *Rasūl Allāh* attributed to Muḥammad can be followed down to minute details, but this is not the place for such an investigation.

Special attention must still be drawn to one point of extreme value. It is the declaration found in the *Fātiḥa* in the belief in a Day of Requital and Punishment. The Samaritans derived it from the words in the song of Moses (Deut. xxxii. 35) where they read "On the day of Vengeance and Reward" (*leyōm*) instead of the Massoretic reading "To me belongs vengeance and reward" (*li*). The Samaritans ascribe great eschatological importance to this song. This reading is moreover corroborated by the Septuagint and is thus of very high antiquity. The "Day of Judgment", no doubt, plays a very great role in Jewish and Christian Eschatology, but, as far as the Jews are concerned, it has never been introduced in any formal principle of faith nor is it found in the liturgy, whilst with the Samaritans it has assumed a capital importance, so much that it forms part of the *Enṣira*. Mention may also be made of the curious parallel that both Muḥammad and the Samaritan recognise practically four angels only who form the celestial hierarchy; the names are somewhat different (Gabriel occurring in both) but there is the coincidence that they are limited to four. Jewish and Christian angelology was ever so much richer at the time of Muḥammad.

In view of what has been said before I am giving here a slightly abbreviated translation of the *Enṣira*, particularly of the portion affected by this investigation:

"I stand before Thee at the gate of Thy mercy, O Lord my God and God of my fathers, to recite Thy praises and Thy numerous greatnesses according to this my strength. I, the poor and weak one, I know this day and I have taken it to my heart that Thou art the Lord God in the heavens above and in the earth beneath and there is none else beside Him. . . . Blessed be Thy holy name for ever. There is no God but One. O Lord, we will not worship any one but Thee for ever, and we will believe only in Thee for ever and in Moses, Thy Prophet, and in Thy Writing of Truth and in the place of Thy worship, Mount Garizim, Bethel, the mountain of rest and inheritance and of the *shekina* (sanctuary), and in the Day of Punishment and Reward. *Ehye asher Ehye*. The Lord is our God, the Lord is One alone. How great is His goodness and mercy. I stand in Thy hands. I pray for Thy mercy and loving kindness, and I speak: "O my Lord!" with my heart and with my soul."

If we now compare the first part of the *Fātiḥa* we shall find that it runs as follows: "Praise be to God, the Lord of all creatures, the most Merciful, the King of the day of judgment. Thee do we worship and of Thee do we beg assistance." The parallelism between these two forms of prayer is so striking that one must be dependent upon the other. In both the same fundamental dogmas

are proclaimed and in language they are similar to one another. There cannot be any question which of these two is the more ancient and therefore the original. The Samaritans did not wait one thousand years and more in order to formulate their prayer and Confession of Faith; moreover, it rests in every detail upon the words of Scripture to which distinct reference is made. Again almost every one of these principles is found repeated over and over again in Markah and in the most ancient prayers and hymns in the Samaritan liturgy. Not so with Muhammad, who had to have recourse to other older forms which he used as patterns and so worded that neither Jew, Christian nor Samaritan could take umbrage at them; at the same time these new principles enunciated by Muhammad marked a definite break with the pagan beliefs of his contemporaries.

No less important is the parallelism between the Arabic Mahdi and the Samaritan Taheb. According to Ibn Khaldūn, "the whole body of Muslims throughout the centuries have held that at the end of the age a man of the family of the Prophet must appear who will strengthen religion and make justice manifest. The Muslims will follow him and he will gain possession of the Muslim kingdoms and be called al-Mahdi" (Guillaume, *Traditions of Islam*, Oxford 1924, p. 89 sq.). So far Ibn Khaldūn; the rest, which is evidently borrowed from Jewish and Christian legends about the Messiah and the Antichrist, belongs to a later period of tradition. As it stands, the agreement between the Mahdi and the Taheb is absolute: in both cases he is either the Prophet Redivivus or the descendant of Muhammad or of Moses or the tribe of Levi. He is the Restorer who will bring the people back to the old faith and old glory and who will cause the faith to triumph. It is a different type from that of the Jewish Messiah or the Christian Jesus and he does not descend from heaven. He is human born and probably in both cases will live only for a short time.

Another point, the significance of which cannot be overestimated, is the fact that Muhammad seems to know the Pentateuch and the Psalms only; he does not know any of the prophetic or historical writings. If he had obtained his information from the Jews, this ignorance would be very surprising indeed, but if he had it from the Samaritans, it would be quite natural. A knowledge of the Psalms may have come to him from Jews or Christians, although it must not be forgotten that the Samaritans also have hymns and psalms of their own. Again among the Biblical personages Adam, Noah and Abraham are counted as prophets. No such position is assigned to them, at any rate, nor to the first two, by the Jews, whilst to the Samaritans Adam and Noah are High Priests and in more than one old treatise Adam is considered as a Prophet who foretells the future Deluge and to whom is entrusted the secret of the calendar.

Among the ceremonies the peculiar forms of washing and ablutions which are obligatory before prayer are common to Muhammadans and Samaritans and in the practice of prayer, in the prostrations and in peculiar attitudes etc., Samaritans and Muhammadans again show so much similarity that a close connection between them cannot be denied. We must realise that an Arab who wished to become a Muslim had to change entirely his

mode of life and faith; he had to give up all his heathen practices and adopt not only new principles but also new ceremonies and forms of prayer. To him everything was new. With the Samaritan, however, all his ceremonies were the heritage of a long past; to them the slightest change meant giving up his faith and forfeiting the claim to which his people have clung with so much tenacity as being the true keepers of the faith. Any deviation from tradition meant annihilation, nor was there any reason why they should have done so considering they have never been forced to abandon their ancient faith; on the contrary, they were treated with every possible tolerance and even the virulent persecution of the Church had not been able to affect their adherence to the old faith and practice. The Jews offer an example in point; they have lived for a far larger number of centuries in Christian environment; however, every attempt has been made to induce them to forsake the religion of their fathers and when blandishments had no effect they were subjected to cruel persecution. They mixed freely to with the world around them and yet not a single trace of Christian influence can be detected in Jewish religious practices and in their ceremonies and principles. How much less could this, therefore, be the case with the Samaritans who were left to themselves and who show, indeed, no perceptible change in their principles and ceremonies as far as can be ascertained in their literary tradition.

Reference may be made to one more point, I mean the mysterious words or complex of letters at the beginning of many a Sūra. I venture to believe that the parallel practice of the Samaritans will offer a satisfactory solution. The Samaritans denote the single sections of the Law (*Kiṣṣa*) by taking out from the contents a single word which is sufficiently characteristic to denote the whole section. Thus these words become catch-words and are used as headings in the Arabic translation and especially in the extremely ancient phylacteries and amulets. There are also special lists drawn up of these single words (so in my code). In the phylactery this process of abbreviation has been carried one step further; there the catch-words have been reduced to single letters, not necessarily the initial letter, but very often a medial or final letter which has been chosen for the purpose. This discovery of mine has enabled me to recognise the same practice in the Greek Magical Papyri and the Latin conjurations, thus solving a problem which has baffled scholars for many a century. But besides the magical application, its principal value was to serve as a mnemotechnic sign to assist the reader in remembering the section in question. This therefore is probably the meaning of those words and letters which are found at the heads of the Sūras; they are either catch-words picked out of the context or are a combination of letters taken from such catch-words and placed at the head, as in the case of the Samaritan *Kiṣṣa*.

More space has been devoted here to the consideration of these points than might perhaps be warranted for a brief survey of the Samaritan literature and the relation in which the Samaritans stood to the new religion rising as late as the seventh century. No one can gainsay the importance henceforth to be attached to the value of the comparative study of Samaritan traditions and Muslim

principles of faith. The subject has hitherto not yet been touched upon by anyone, and I venture to think that a new field of research has been opened up; I submit that the further study of the Samaritan material as soon as it is made more accessible will strengthen the results here tentatively offered for the first time. But I do not hesitate to say that a comparison of Samaritan and Muhammadan religious principles will show that the Samaritans have exercised a deep influence upon the moulding of Muhammad's religious system and upon the shaping of Islām. Far from being influenced by Muhammad, the Samaritans were those who exercised the influence upon Muhammad.

The situation, however, changed with the final victory of Islām. I do not wish it to be understood that even after that period the Arabic literature had any decisive influence upon Samaritan faith and practice. True the Arabic conquest was not only a political domination, but was a religious conquest as well. A new form of faith was forcibly imposed upon the conquered peoples with the grudging exception of the few so-called "tolerated" religions. A new Holy Book was substituted for the others cherished and venerated by the other nations. Arabic thus became the language of the Sacred Script, and, of course, not only were Sūras of the Korān, the Liturgical lessons, recited in Arabic, but prayers and hymns were now composed in that language exclusively and the people forced to learn it. It became the new language common to all the peoples under the Arab sway and the only means of intercourse, with the result that it gradually superseded all the other vernaculars among the nations being also the Jews and Samaritans.

In a way Islām proved a greater danger to the latter than Christianity or Mazdaism. There was much similarity in dogma and practice and above all there was the pure monotheism common to them. It was natural that they should feel attracted to it, and through being treated with great tolerance and forbearance would not hesitate to exchange their old vernacular, Aramaic, for Arabic. Thus the Samaritans gradually gave up the Aramaic dialect which they spoke and learned to speak Arabic and later on used it for their writing. It must be mentioned that the vernacular spoken by the Samaritans was invariably Aramaic and not Greek; there is no trace of Greek in old Samaritan traditions. Jews and Samaritans had long before discarded any use of that language. All the ancient literary monuments of the Samaritans were written in that peculiar Aramaic which is characteristically their own. The only exception was the Biblical Lessons which they read on Sabbath and Festivals and also recited on special occasions; to these were also added the Florilegia or anthologies called *Katef* which consisted of Biblical verses strung together according to a special system for liturgical purposes. On the contrary all the prayers, poems and hymns were written in that popular Aramaic dialect. They also translated the Pentateuch into this same popular language and the *Targum* therefore takes its place as one of the oldest writings.

The question arises: when was this language displaced by the Arabic? Here the parallelism with the Jews and especially Jewish sects who developed under almost similar conditions will prove helpful. As far as can be ascertained, it

must have taken at least two or more centuries before the people had so far forgotten the old Aramaic as to use Arabic freely and to introduce it into the literature of the Divine Service. Very little, if anything, can be traced back before the ninth century. It seems that dissenting sects, just like the Karaites among the Jews, were among the first to break with the old language and practice, although 'Anan still uses Aramaic for his writings. With the Samaritans it was a natural sequence of events which forced them to abandon Samaritan Aramaic for the Arabic language. The knowledge of the former was fast dying out. As its use was primarily for liturgical purposes, it seems most likely that the first things to be translated were the prayers and hymns. They were all in Samaritan, as mentioned before, and it is obvious that the first duty would be to make the people understand their own prayers; the translation of the Bible must have come much later as there was no pressing necessity for this; Hebrew was and is the sacred language and to this very day the Biblical Lessons are read in Hebrew: the *Targum* sufficed to interpret it to the worshippers. According to information obtained by me from the Samaritans, its use was continued in the *Kinska* down to the end of the seventeenth century. The man appointed to that post was called the *Haftawi* and the last one died about that time. Since then the recital of the *Targum* has ceased. It must be noted, however, that its place has not been taken by an Arabic translation. A careful examination of the *Targum* enables us to realise the growing influence of Arabic. As remarked before, the knowledge of the Samaritan language was fast disappearing; it was limited to the small circle of the learned and this has remained so down to this very day. There are still a number of priests who are conversant with the old Samaritan, but the rest know Arabic only. In time the *Targum* became merely a religious tradition to which they adhered with their usual tenacity, for it had lost its meaning for the people. Slowly some of the expressions became obsolete even to the better instructed, and so we see a gradual change until it is entirely discarded. Arabic glosses were introduced to explain archaic words, and later on these glosses became part of the text. Through being in constant use, they were so much changed and altered that after the publication of the *Targum* they were classed as ancient so-called Kuthean words, remnants of the pre-exilic period. It was the merit of S. Kohn to have exploded that fallacy and to have recognised in them corrupt Arabic words. Later on a complete translation into Arabic was made. There is a serious difficulty in determining the date of the translation and the name of the author, nay whether there were not two translations which have been ascribed to two men of the same name Abū Sa'īd, but too little is so far known about the different recensions to allow of a definite conclusion.

But before trying to answer this question it is necessary to ascertain the dates of the translation of the prayers in the *Kinosh* or *Delter*, as the "collection" of the oldest hymns and prayers is called. It contains unquestionably the old stock which has been handed down from ancient times and is used in the prayers all the year round. A comparison of the text found in the old manuscript Cod. Br. Mus. Or. 5034 of the middle of the xiiith century and the latest copies from the middle

and end of the last century written by the late High Priest Jacob son of Aaron shows no appreciable difference. Without exception, the Arabic is written in Samaritan script in all the books used for divine worship. They use the Arabic alphabet for profane writings alone and it is only in quite modern times that they have begun to write the translation of the Bible in Arabic characters to face the Hebrew text. In these translations we do not find classical Arabic but mostly the Palestinian dialect; moreover, they very seldom use diacritical points to differentiate between similar letters of the Arabic alphabet. For a detailed survey of the literature of the Samaritans the reader is referred to the separate article on this subject accompanying this fasciculus.

It must be emphatically stated that practically none of these books have hitherto been published with the exception of the Arabic translation of the Pentateuch (Gen.-Lev.) (Kuenen, *Specimen*, Leiden 1851—1854), the chronicle of Abu 'l-Faḥ by Wilmer (Gotha 1865), the Book of Joshua by Juynboll (Leiden 1848), and a few grammatical fragments by Nöldeke in the *G.G.N.*, Nos. 17, 20. Continuing to publish them in Arabic would reduce to a large extent the number of those who are specially interested in the traditions of the Samaritans, whilst publishing them, as anticipated by me, in their Hebrew-Samaritan version, would at once make them accessible to a far larger circle of scholars interested in these studies. Besides this I have also obtained through my correspondence lists of books extant and as far as possible such information as they could give of a biographical character. The latter, however, is extremely confused and contradictory. Under these circumstances my reference to bibliography can only be very brief inasmuch as copies of most of these writings still extant and accessible are in my possession (they are now being acquired by the British Museum). Mr. D. S. Sassoon also has acquired from the Samaritans a considerable number of valuable manuscripts, modern copies of the same books, and at the same time also the old copies of works of the afore mentioned Munadjā, Shams al-Dīn and al-Askari, which were up to quite recently in the possession of the Samaritans. Steinschneider has given full references to all the other Samaritan manuscripts in the European libraries. Further reference should be made now to the articles of A. Cowley in the *Jewish Encyclopaedia*, x. 676 sq., who gives most ample references and also to his *Samaritan Liturgy* (Oxford 1909), especially the introduction, in vol. ii. 17 sqq.; W. G. Moulton in *Hastings's Encyclopaedia of Religion and Ethics*, xi. 161 sq.; Montgomery in *The Samaritans* (Philadelphia 1907), gives a brief sketch. Articles on the Samaritans and their literature in other encyclopaedias which have since appeared are more or less out of date and add nothing more to our knowledge.

(M. GASTER)

SAMARĀND, with Bukhārā [q.v.] the principal town of Transoxiana (Sogdiana, Soghd [q.v.], Mā warā' al-Nahr), in modern times capital of the province of the same name in Russian Turkestan, on the south bank of the river Soghd (Wādi 'l-Soghd, Zarafshān) in a situation described by Oriental as well as Russian and European travellers as a veritable Paradise. The town — the second part of the name of which contains the Eastern Irānian word for "town", *kand*, frequent

in Eastern Irānian place-names (cf. Buddh.-Soghdian *knd-*, Christ.-Soghd. *kath*, *kanth*), while the first part has not yet been satisfactorily explained (cf. the attempts by Tomaschek, *Centralasiatische Studien*, i. 133 sqq.) — is first found in the accounts of Alexander's campaigns in the east as Maracanda, Μαράκανδα. Arrian (iii. 30) calls it βασιλεία τῆς Σογδιανῶν χώρας. Alexander occupied it several times during the fighting with Spitamenes and, according to Strabo (xi. 11, 4), razed it to the ground (while Arab legend makes him founder of the city). Under the Diadochi — after the partition of 323 —, as the capital of Sogdiana, it belonged to the satrapy of Bactria and was lost to the Seleucids with Bactria when Diodotos declared himself independent and the Graeco-Bactrian kingdom was founded during the reign of Antiochus II Theos; henceforth it was exposed to the attacks of the northern barbarians. From this time down to the Muslim conquest it remained historically and economically separated from Irān, although cultural intercourse with Western lands continued. (On the settlement of Manichaeans in Samarānd cf. J. Marquart, *W. Z. K. M.*, xii. 163 sq.; the attempts made by E. West to refer Ān and Ānistān in the *Bundahishn* and *Bahmanyasht* to Samarānd are very unsatisfactory.) The only positive information is given by Chinese imperial historians and travellers (of which the former are unfortunately for the most part only available in obsolete translations). From the Han period the kingdom of K'ang-Kü is mentioned, whose chief territory, K'ang, is definitely identified in the T'ang Annals with Sa-mo-kian = Samarānd (cf. the passages in C. Ritter, *Erkunde*, vii. 2 657 sqq.). According to the Annals of the Wei, compiled in 437 A.D. (cf. F. Hirth in J. Marquart, *Die Chronologie der alttürkischen Inschriften*, p. 65 sq.), the Čau-wu dynasty related to the Yü-ēi (Kūshān) had been reigning here since before the Christian era. Hüan-čuang visited Sa-mo-kian in 630 A.D. and briefly describes it (St. Julien, *Mémoires sur les contrées Occidentales*, i. [1857], p. 18 sq.; S. Beal, *Si-yu-ki, Buddhist Records*, i. [1884], p. 32 sq., with valuable bibliographical note on p. 101).

The Arabs, who did not begin to penetrate systematically into Transoxania till the appointment of Kūtaiba b. Muslim as governor of Khurāsān, found Samarānd ruled by the Tarkhūn (Chin. To-hoen). With regard to the statement in al-Birūnī, *Āthār*, ed. Sachau, p. 101, 20 (cf. Ibn Khordādhbih, *B. A. G.*, vi. 40, 5), that the native rulers of Samarānd bore the well-known (Turkish) title *ṭarkhān* (*tarqan* in the Orkhon inscriptions), we are forced to see in this appellation a title and not a name as might appear from the Arabic sources. The reference is to a representative of one of the local Turkish dynasties, which in the last centuries before Islām had disposed of Ephthalite rule in Transoxania.

In 91 (709) the Tarkhūn made peace with Kūtaiba on paying tribute and handing over hostages (al-Ṭabarī, ii. 1204), but was soon deposed by his subjects who were angered thereby. His place was taken by the Ikshēdh Ghurak, Chin. U-le-kia (al-Ṭabarī, ii. 1229), who was forced by Kūtaiba to capitulate in 93 (712) after a long siege of the town (*op. cit.*, p. 1247). He was left on the throne but an Arab governor was put in the town with a strong garrison; along with Bukhārā the town became a base for the further conquest and

Islamisation of the land, which was frequently shaken by the risings which, provoked by the chicaneries of the governors, disturbed Transoxiana in the last decades of the Umayyads. (On the Arab legend which connects SamarĀkand with the legendary Hīmyar kings and makes it destroyed by Shīmar on his campaign against China — Shīmar-kand = Shīmar destroyed [it] — and rebuilt by Iskandar cf. J. Marquart, *Erānīahr*, 1901, p. 26¹, where to the references in Yāqūt should be added al-Ṭabarī, i. 890 sqq., al-Kāẓwīnī, *Āthār*, ed. Wüstenfeld, p. 360 etc. The legend ought to be systematically investigated).

The 'Abbāsīd Ma'mūn in 204 (819) gave the governorship of Transoxiana, especially SamarĀkand, to the sons of Asad b. Sāmān and henceforth it remains — unaffected by the risings of the Ṭāhirids and Ṣaffārīds — in the hands of the house of Sāmān till Ismā'il b. Aḥmad destroyed the power of the Ṣaffārīds in 287 (900) and founded the Sāmānīd kingdom, which meant a century of greatest prosperity for Transoxiana, such as it was only to see once again 500 years later with Timūr and his immediate successors. The capital was, it is true, moved to Bukhārā but SamarĀkand retained first place as a centre of commerce and culture, especially in the popular estimation of the Muslim world.

It is to this period that the descriptions by al-Iṣṭakhrī, Ibn Ḥawḳal and al-Makḏisī refer. They show that SamarĀkand had the typical tripartite formation of Irānīan towns (cf. Barthold, i. 810b): citadel (*kuhandiz*, arabicized *kuhandiz* or translated *kal'a*), the town proper (*shahristān*, *shāristān*, *madīna*) and suburbs (*rabaq*). The three parts are here given in their order from south to north. The citadel lies south of the town on an elevated site; it contains the administrative offices (*Dār al-Imāra*) and the prison (*ḥabs*). The town itself, of which the houses are built of clay and wood (cf. E. Herzfeld, *Islam*, xi. 162, and E. Diez, *Persien*, i. [Kulturen der Erde, vol. xx., Hagen-Darmstadt 1923], p. 20), is also on a hill. A deep ditch (*khandak*) has been dug around it to obtain the material for the surrounding earthen wall. The whole town is supplied with running water which is brought from the south to the central square of the town called *Ra's al-Ṭāḳ* by an aqueduct, a lead-covered artificial channel (or system of lead pipes?), running underground. It seems to date from the pre-Muḥammadan period as its supervision, as is expressly stated, was in the hands of Zoroastrians, who were exempted from the poll-tax for this duty. This aqueduct makes possible the irrigation of the extensive and luxurious gardens in the town. The town has four main gates; to the east the *Bāb al-Ṣīn* — a memorial of the ancient connection with China due to the silk trade —, to the north the *Bāb Bukhārā*, to the west the *Bāb al-Nawbahār* — which name, as in Bukhārā and Balkh, points to a (Buddhist?) monastery — and to the south the *Bāb al-Kabīr* or *Bāb Kishk* (*Bāb* stands for the Persian *Darvāza*). The lower lying suburbs adjoin the town, stretching towards the river Soghd and surrounded by a wall with 8 gates. In them lay the majority of the bazaars, caravanserais and warehouses, which were rare in the city itself. The government offices of the Sāmānīds and the Friday mosque were in the city itself. The great period of building in SamarĀkand only begins with Timūr.

Among native products — as Bābur tells us — the paper of SamarĀkand, the manufacture of which had been introduced from China, was specially famous. The most celebrated sanctuary of the town, also specially mentioned by Bābur and still held in high honour, is the tomb-mosque of Qāsim b. 'Abbās who is said to have converted the city to Islām in the time of 'Uthmān (cf. I. Goldziher, *Vorlesungen über den Islam*², p. 218). Among the famous men of SamarĀkand of the period one at least must be mentioned, the theologian Abū Mansūr al-Māturīdī (d. in SamarĀkand in 333 = 944; Māturīd or Māturit is a quarter of SamarĀkand; cf. al-Sam'ānī, *Ansāb*, fol. 498a) who exerted a decisive influence on the dogmatic development of Eastern Sunnī Islām.

After the fall of the Sāmānīds, SamarĀkand was ruled by the Qarakhānīds (Ilek-Khāns; q. v., ii. 465 sq.). In 495 (1102) the Qarakhānīd Arslān Khān Muḥammad owned the suzerainty of the Saldjūk Sandjar [q. v.]. His descendants remained in power when forty years later, after the great victory of the Qarakhānītai over Sandjar at Kaṭwān in 536 (1141) the Gurkhāns became masters of Transoxiana. About 1170 Benjamin of Tudela visited the town and found 50,000 Jews in it (M. N. Adler, *The Itinerary of Benjamin of Tudela*, London 1907, p. 59). The Gurkhāns were overthrown in 606 (1209) by the Khwārizmshāh Muḥammad b. Takash. The latter's terrible opponent, Čingiz Khān [q. v.], laid siege to SamarĀkand only a few months after he had crossed the Jaxartes, on his way from Bukhārā which he had completely destroyed. Fortunately for the city it surrendered in Rabī' I, 617 (May, 1220). Although the city was plundered and many of its inhabitants were deported, a number of its citizens were allowed to remain under a Mongol governor. For the next 150 years it was but a shadow of its former self. Ibn Baṭṭūṭa (iii. 52 sqq.) about 1350 found a few inhabited houses among the ruins.

The revival of the town's prosperity began when Timūr after about 771 (1369) became supreme in Transoxiana and chose SamarĀkand as the capital of his continually increasing kingdom, and began to adorn it with all splendour. In 808 (1405) the Spanish envoy Ruy Gonzales de Clavijo visited it in its new glory (cf. the Spanish-Russian edition of his itinerary by I. Sreznevskiy in the *Sbornik otd. Russk. Jaz.*, 1881, xxviii. 325 sqq., etc., with a valuable French Index). He gives Cimesquiente as the native name of the town, which he explains as *aldea gruesa* "large (lit. thick) village"; in this we have an echo of a Turkish corruption of the name of the town based on a popular etymology which connects it with *sāmiz* "thick". Timūr's grandson Ulugh Beg (d. 853 = 1449) embellished the city with his palace Čihil Sutīn and built his famous astrological observatory there; on him cf. W. Barthold, *Ulugbek i ego vremya* (Ross. Akad. Nauk., 1918). A very full description of the city in Timūr's day, which may be justly described as classical, is given by the memoirs of Bābur (*Bāburnāma*, ed. Ilminski, p. 55 sqq.; ed. Beveridge, p. 54^b sqq.; transl. Pavet de Courteille, i. 96 sqq.; transl. Beveridge, p. 74—86), who captured SamarĀkand for the first time in 903 (1497) and held it for some months. In 906 (1500) it was occupied by his rival, the Özbeg Khān Shāibānī. After his death, Bābur in alliance with the Šafawīd Ismā'il Shāh succeeded

in 916 (1510) in once more victoriously invading Transoxiana and occupying SamarĀnd, but by the next year he found himself forced to withdraw completely to his Indian kingdom and leave the field to the Ōzbegs. Under the latter, SamarĀnd was only the nominal capital and fell completely behind Bukhārā.

A new era began with the Russian advance across the Sir-Darya. On Nov. 14, 1868, General Kauffmann entered the old Timūrid capital which was now finally lost to the Amir of Bukhārā, Muẓaffar al-Dīn (1860—1885). Since 1871 a new Russian town has arisen in the west of the city, which has been linked up to the Transcaspian railway. In 1882 the citadel was restored. In 1900 the population was about 58,000. We have no reliable information regarding changes since 1917. Unfortunately there is also a complete lack of historically accurate and complete descriptions of the architectural monuments (cf. W. Barthold, *Die geogr. u. hist. Erforschung d. Orients*, p. 173, 179) so that we cannot give any list of them here.

SĀMARRĀ. I. Historical Topography.

Sāmarrā, which is now a mere village, lies on the east bank of the Tigris half way between Takrit and Baghdād.

The original form of the name is probably Irānian. The following etymologies have been proposed: Sām-rāh, Sā'i-Amorra, and Sā-morra, the last two meaning the place of payment of

tribute. On the coins of the Caliphs Sāmarrā is written *Surra man ra'ā*, i. e. "delighted is he who sees (it)".

Sāmarrā was founded in 221 (836) in the reign of al-Mu'taṣim by one of his Turkish generals, Ash-nās, two parasangs south of the village of Karkh-Fairūz. The Caliph, perpetually threatened in Baghdād by the mutinies of his Turkish and Berber mercenaries, sought to settle in a less threatened capital.

Between 221 (836) and 276 (889) seven 'Ab-bāsīd Caliphs lived in Sāmarrā. The references in the historians of the Caliphate and in the Arab geographers, Yā'qūbī and Yāqūt, enable us to re-constitute with sufficient exactitude the development of this ephemeral capital during the fifty years of its existence. Built on the eastern bank of the Tigris at a corner where it turns to the south-east, Sāmarrā lay between the villages of Karkh-Fairūz (or Karkh Bādjaddā) to the north and Maṭīra to the south-east. Two canals — one, the Kaṭūl Kisrawī, leaving the Tigris above Karkh-Fairūz, near Dūr, ran to the south-east to rejoin a second canal, the Yahūdī, which, leaving the Tigris below Maṭīra, ran E. N. E. — thus isolated Sāmarrā and its eastern suburb into a kind of island. On the west bank of the Tigris opposite Sāmarrā lay several castles cut off by a canal parallel to the Tigris, the Ishāqī Canal, entering the Tigris below Maṭīra, a little above Balkuwārā.

The town of Sāmarrā proper lay on the east bank; its principal streets were the Sarīḍja Street which ran past the police office and the prison leading to the quarter which bore the name of the vizier Ḥasan b. Sahl; then came the street of Abū Aḥmad b. Rashīd leading towards the village of Itākhiya built on the Kisrawī Canal; this village, which at first bore the name of a Turkish chief, was later called Muḥammadiya. Five other principal streets (*shārī'*; this term applied to a main street is the same as has been revived in modern times for the streets of Cairo) are recorded: al-Hair, Barghamush Turkī (Turkish quarter), Šālīḥ (leading to the military camps or 'askar'), al-Hair al-Djādīd and al-Khalīdj. The historians give us numerous details regarding the important buildings in the vicinity of Sāmarrā, beginning with certain buildings in existence before the capital of the Caliphs was moved thither: the eight Christian monasteries, of which the principal were the Dair Ṭawāwīs or "monastery of the peacocks", the Dair Mār Mārī and the Dair Abi 'l-Sufra. But the most famous buildings were the palaces. Al-Mu'taṣim, who lived at first in Sāmarrā itself, had built there the palace called al-Ḥjawsak; the Caliph Wāṭḥik built there the castle called Ḥārūnī after him. The Caliph al-Mutawakkil, who lived at first in the Ḥārūnī, built or enlarged twenty-four other palaces of which the best known are the Balkuwārā, 'Arūs, Mukhtār and Waḥīd. Nine months before his death he was planning a new town to the north halfway between Karkh-Fairūz and Dūr; this town was called *Dja'farīya* after his praenomen. The historians, who record many details of the luxury of the palaces of al-Mutawakkil, say that he brought from Persia to use as timber the sacred cypress venerated by the Mazdaeans at Kishmar. Other historians, noting that nothing remains of the splendid buildings of al-Mutawakkil, see in this so swift destruction a punishment from heaven, as retribution for his having ordered the destruction

of the tomb of Ḥusain at Kerbelā' in 236 A. H. After the death of al-Mutawakkil, Muntasir brought the court to Sāmarrā itself again and took up his abode in the palace of Djawṣaḥ. Mu'tamid, the last Caliph to live at Sāmarrā, built the palace of Ma'shūḳ on the east bank (255 A. H.).

Since the tenth century A. D. the majority of these buildings have fallen into ruins. The great mosque of Sāmarrā alone survived, which stood near the military camps, whence the name 'Askar Sāmarrā frequently given to this part of the town. The piety of the Shī'a very early located beside the great mosque the site of two tombs of their Imāms — the tomb of their eleventh Imām, Abū Muḥammad Ḥasan called al-'Askarī because he died in Sāmarrā in 260, and the "cave" (*sirdāb*) in which his youthful successor, Abū 'l-Ḳasim Muḥammad al-Mahdī, disappeared in 264 (878). We know that for a thousand years past, the Shī'a pilgrims have been visiting this cave of Sāmarrā, believing that al-Mahdī will re-appear there at the end of time. Al-Sam'ānī gives a list of individuals who bore the *nisba* Sāmarrī or Surmurri. Another *nisba* also refers to Sāmarrā, namely Karkhī, applied to men born in Karkh-Fairūz.

SĀMARRĀ. II. Architecture

Sāmarrā is at the present day a vast area of ruins lying on the left bank of the Tigris about sixty miles north of Baghdād. These ruins cover the site of one of the richest and most prosperous cities of the 'Abbāsīd period, the building of which cost vast sums.

It was begun in 838 in the reign of the Caliph al-Mu'tasim, son of Ḥārūn al-Rashīd, reached its zenith under Dja'far al-Mutawakkil (847—861) and died with him.

Sāmarrā's brilliant but ephemeral existence gives these ruins a special interest for the student of the origins of Muslim art. Unfortunately, for centuries past, the Arabs have been using the ruins as a quarry for building material, and have hastened the work of time, and in the end nothing has been left standing. Nevertheless, excavations recently undertaken have recovered sufficient information regarding the main lines of construction and decoration to give a very clear idea of the beauty of the Muslim civilization which was then shedding its lustre over the world, and was given expression in this 'Abbāsīd city of the ixth century.

The most remarkable remains still standing are:

To the south of the old town on the bank of the Tigris, the great mosque built by al-Mutawakkil with the magnificent palace of the Caliph (*Balkuwārā*) near it on the north. Opposite on the right bank of the Tigris, and built a little later, is a strong castle (*Ḳaṣr al-'Ashīḳ*) the imposing ruins of which are still visible. About half a mile south of this castle is a sepulchral monument (*kubbat al-sulabīgiya*).

Near the ruins of the caliph's city survives a modern Sāmarrā with a golden dome, which commands the desert. It contains some venerated Shī'a sanctuaries.

The great mosque of al-Mutawakkil was built between 846 and 852. It is an immense rectangle with high walls of baked bricks, fortified with round towers. Within it on the south is the principal chamber (*haram*) with twenty-five naves orientated towards the Kibla and three other smaller chambers on the other sides. All these naves, which were over thirty feet high, were supported by marble columns. The *mihrāb* was also flanked by two pairs of marble columns and the prayer-niche was probably covered with valuable carved wood. The four chambers opened on to a large court, the centre of which was occupied by a fine fountain. Outside, against the north wall of the mosque, rose the minaret (*malwiya*), a kind of huge tower of Babel on a base 100 feet square. Around it outside wound a spiral stairway. This tower was visible more than a day's journey away.

The ruins of Balkuwārā, the Caliph's palace, cover a vast rectangle over a thousand yards each way. On the west front there still stand three arches built of brick (*al-djama'*), the only remains which are now to be found. This palace was built by al-Mutawakkil for the prince al-Muhtadī billāh.

These three arches, facing the river, audience chamber and guest chambers (*iwān*), open widely out on the valley. Terraces and fountains descend like cascades from them. Behind them are three inner courts which are succeeded by rooms in the form of a cross: throne rooms, numerous smaller rooms and private apartments with luxurious baths. On the east was a large rectangular garden with water-falls surrounded by walls with pilasters on to which open richly adorned little pavilions. To the north was a large creek with stairways of access, with caves and docks cut out in it. Finally behind all this was an agglomeration of houses sheltering the harem, others for the courtiers, a little mosque, and large barracks etc. for the caliph's guard and his cavalry.

The various and diverse elements which constituted the whole of this immense palace were harmoniously arranged. They formed a beautiful composition conceived on a vast scale in the form of \perp of which the long axis perpendicular on the river terminated in the three vaulted rooms of the façade, richly ornamented with sculpture and mosaic.

The general composition of this palace is, however, of a type well known in the tradition of Irānian architecture. Around the Caliph's palace were sumptuous and richly decorated residences. The richest as well as the most modest homes of the city are almost all built on the same plan. Built on the ground floor only they consist of a series of inner courts with fountains into which open the *iwān* and the living rooms. This type has been perpetuated in certain parts of the east down to our day. The decoration of the interior is an important feature. High carved panels and very probably a decorative frieze always ornamented the public rooms and sometimes all the rooms in the house. The courtyards also were sometimes ornamented but the outer walls were never decorated.

The ornamental carving of the palaces and houses of Sāmarrā is of the same technical skill and gives a high idea of the development of the art at this period. Elaborate panels run

all round the rooms at a height of three feet. Above them are ornamental alcoves (Pers. *takīn*). The frames of the doors and the embrasures of the windows are ornamented. The ceilings are adorned with cornices and friezes. The majority of these decorations are in plaster finely designed and executed, sometimes set off with paintings.

The designs are of very different types; some simple, with large veins somewhat coarse in workmanship. Others are more finely chiselled in the flat without relief, others again, accentuating the relief, treat the principal motif in round bosses.

Some of these decorations were carved out of the mass *in situ*, others were cast in a mould on a bed of matting (especially motives continually repeated), and then fixed to the wall. The forms of the designs are very varied. Some are very simple and severe, in straight lines without arabesques. These are the ones found most frequently at Sāmarrā and which are, so to speak, the prototype. Others, on the contrary, often inspired by the fauna or flora, are more elaborate and richer; conventionalised flowers occupy the centre of geometrical figures repeated again and again and connected by ribands, beadings which come to a stop or intertwine, taking the shape of a vase, a lyre or a cornucopiae. Others again more filled with movement unfold in arabesques around bunches of grapes and vine branches.

It has been proposed to make a rigorous classification of the ornamental designs at Sāmarrā into three distinct categories: Style I: Coptic character; Style II: Irānian character; Style III: Mesopotamian character. A classification as methodical as this with labels of origin seems to us dangerous, premature and a source of error. One impression that can be retained from a study of the ruins of Sāmarrā, the discovery of which is valuable for the history of Oriental arts, is that several artistic influences met together in this part of Asia without conflicting or seeking predominance. It was a centre that attracted numerous artists from all parts of the globe, drawn thither by the wealth of the court of the 'Abbāsīd Caliphs and the protection they afforded. Sāmarrā was to be the crucible into which Hellenic, Syro-Coptic and Indo-Persian art were fused together and a new art, Muslim art, was produced.

AL-SAMAW'AL B. 'ĀDIYĀ, more accurately AL-SAMAW'AL B. GHARĪP B. 'ĀDIYĀ, a Jewish-Arab poet, whose residence was in the strong castle of al-Ablak [q.v.] near Taimā'. Being a contemporary of Imru' al-Kais [q.v.] he must have flourished about the middle of the sixth century A.D. One of his grandsons is said to have adopted

Islām and to have lived into the Caliphate of Mu'āwiya when he was then very old. Except his name there is hardly a trace in tradition of his being a Jew; it is not even certain that he was of Jewish descent.

All the poems ascribed to al-Samaw'al have been collected by Cheikho in his edition of the *Diwān*. Of the few pieces said to have been composed by him a considerable part cannot be considered genuine, including those which most readily suggest that they were written by a Jew. The few remaining *qaṣīda*'s, the genuineness of which there is no reason to doubt, contain no indication of the fact, which is not, however, to be doubted, that al-Samaw'al professed the Jewish religion. They much rather breathe the spirit of the old Arab poetry and show in form and matter clearly that he, like his co-religionists, had become in external matters assimilated to the surrounding Arabs and in poetry followed Arabic forms. Poems have also been handed down that are attributed to a son and a grandson of al-Samaw'al.

Al-Samaw'al owes his fame less to his poetry than to his devotion in fulfilling his pledges to his guest Imru' al-Kais, which has become proverbial ("more faithful than al-Samaw'al"). After Imru' al-Kais b. Hudr — the story seems quite reliable in its main facts — had been leading an unsettled life of adventure in his fight to avenge his father and had lost most of his followers while fleeing before al-Mundhir, king of al-Hira, he sought refuge in al-Samaw'al's castle and was hospitably received with his few followers. When, some time later, he went to the court of Byzantium he left his daughter and his cousin with al-Samaw'al along with his valuable armour and the remains of his paternal inheritance, and asked him to guard them. During the absence of Imru' al-Kais, al-Samaw'al was besieged in his castle by an army, which had presumably been sent by al-Mundhir, because he would not obey the demand to hand over the property of his guest. By chance it happened that the leader of the hostile army captured a son of al-Samaw'al and threatened to kill him if Imru' al-Kais's property was not handed over. As al-Samaw'al steadily refused to betray his trust he had to see his son die before his eyes. The besiegers then withdrew without achieving their purpose.

SAMBAS, a Malay kingdom on the island of Borneo in the N. W. of the Dutch residency of "Westerafdeeling van Borneo". In the west and north-west from Cape Dato to the mouth of the river Duri it is washed by the China Sea, in the S. and S. E. it is bounded by the districts of Mampawa, Landak and Sanggau (the Duri river forms the boundary for part of the way), in the E. and N. E. by Sarawak (British North Borneo); some of the islands off the coast also belong to it. The country is mountainous, especially on the eastern frontier; the ground slopes gradually to the W. and N.; the coastlands are almost everywhere low, flat and swampy, but not unfertile. Of the rivers the largest is the Great Sambas; Sambas, the Sultān's capital, lies on the Little Sambas. At the end of 1915 the number of inhabitants had risen to 123,600 of whom 26,000 were Dyaks, 67,000 Malays and 30,000 Chinese; the two first classes are under the Sultān (at present Muḥammad 'Alī Ṣafī al-Dīn) who, very much dependent on the Dutch officials, rules the land with his four ministers (*wazir*). The Chinese are direct subjects of the Dutch government. It should be noted that the term Malays does not signify a single ethnic group; the deciding factor here is the Muslim religion: as soon as the heathen Dyaks become converts to Islām, they are counted as Malays and the fairly numerous Javanese and Buginese are also usually counted as Malays. The steady advance of Islām is no more to be ascribed here than elsewhere in the Malay Archipelago to definite missionary activity but primarily to the many marriages of Malays with Dyak women and further to the fact that the social position of the Muḥammadans is better than that of the still unconverted natives. The Dyaks are no longer nomads and live on good terms with the rest of the population; they are engaged in the collection of jungle products and carry on a primitive agriculture, mainly on dry fields. The agriculture of the Malays on the coast is also of little importance. The Chinese form the most industrious part of the population; their methods are on a much higher level in every way: they grow rice on well tilled, wet fields and grow other produce also for export. Their position in W. Borneo was for long a very peculiar one. The first immigrants into Sambas (about 1760) were gold-diggers and their number increased so rapidly that they soon formed an important element in the population. They organised themselves into numerous societies and even managed to attain a certain political autonomy; it was only in the latter half of the sixteenth century that the Dutch government succeeded in breaking up these societies. Gold-washing no longer pays and the majority of the Chinese now live by trade and agriculture.

We have no reliable data regarding the early history of the land and the beginnings of the spread of Islām; the kingdom was probably founded by Malays from Djohore; about the middle of the sixteenth century it was subject to the Javanese kingdom of Majapahit. In the early years of the sixteenth century, about the time when the Dutch East India Company concluded its first commercial treaty with Sambas (1609), the kingdom was under a Malay chief, Ratu Sapodak (Pangéran Ratu), who recognised the suzerainty of Djohore. Ratu Sapodak had only two daughters and after his death he was

succeeded by his son-in-law and nephew Ratu Anom Kusuma Yuda. The latter had only a brief reign; he was soon driven from the throne by his brother-in-law, Radin Sulaimān, a son of a chief of Brunei (Radja Tēngah) and of a sister of the Sultān of Sukadana. After his accession Radin Sulaimān took the name of Sultān Muḥammad Ṣafī al-Dīn. He was the founder of the present reigning house.

(W. H. RASSERS)

AL-SAMHŪDĪ, NŪR AL-DĪN ABU 'L-HASAN 'ALĪ B. 'ABD ALLĀH B. AḤMAD, a descendant of al-Ḥasan b. 'Alī, according to the genealogy traced by Ibn Fahd, was born in Samhūd in Upper Egypt (al-Ṣa'īd) in the month of Ṣafar, 844 A. H., where his father was a noted lawyer. The latter took him for the first time to Cairo in the year 853, but he visited the city later on several occasions both alone and in the company of his father to enable him to pursue his studies under the most renowned men of his time, and the Ṣūfī saint al-'Irāqī invested him with the Ṣūfī mantle. In the year 860 he made the pilgrimage for the first time and settled in al-Madīna. He had first a cell near the mosque of the Prophet, but through intrigues he was compelled to leave it and he then hired a house near the Bāb al-Raḥma, known as the house of Tamīm al-Dārī. He had noticed at the time of his arrival that the mosque of the Prophet had not been put into proper repair since it had been burnt in the year 654, and in the long interval of over 200 years it had been patched in a very unsatisfactory manner. He wrote a treatise in which he urged the proper reconstruction, based upon researches which he had made with reference to the original state of the building. In the year 886 he went to Mekka to perform the pilgrimage again and during his absence his valuable library, which appears to have been stored in the cell near the mosque, was involved in the fire which destroyed the mosque. Discouraged he now went back to Egypt and paid a visit to his aged mother who died ten days after his arrival in Samhūd.

After her funeral he went to Cairo and was admitted to the circle of the Sultān al-Ashraf Kā'it-bey [q. v.] from whom he received a salary and a nucleus of valuable books to replenish the libraries in al-Madīna, he being entrusted with the charge of them. After visiting Jerusalem he returned to al-Madīna towards the end of the year 890. He found that the house of Tamīm al-Dārī was for sale and bought it and put it into proper repair. Here he married several wives, but later gave them up and contented himself with concubines to have more time to devote to the welfare of the people

and their instruction. He died on Thursday the 18th of Dhu 'l-Ka'da, 911 A.H., and was buried in the Baḳī' (cf. the art. BAḲĪ' AL-GHARḲAD) cemetery between the grave of Suiyid Ibrāhīm and the Imām Mālik.

Among his numerous works composed during his residence in al-Madīna the principal one is his History of the City. He had originally composed it upon a large scale under the title *al-Iktifā' bi-Akhbār Dār al-Muṣṭafā*. At the request of a patron he had made an abbreviation of this book to which he gave the title: *Wafā' al-Wafā'*. This abbreviation he had completed on the 24th of Djumādā II, 886, and had it with him in Mekka when his library in al-Madīna was destroyed by the fire. This fortunately saved the chief contents of the work. Later he made a further edition condensed from the abbreviation, which he finished, according to some manuscripts and the printed editions (Bulāḳ 1285 and Mekka 1316), in the year 893 and called *Khulāṣat al-Wafā'*. This work has become our principal source of information for the history and the topography of the city and the rituals for the visit of the grave of the Prophet. In addition he composed a number of other works of which nine are enumerated by Brockelmann in his *G. A. L.*, to which Arab biographers add several more which may have been lost. They comprise books on grammar, tradition, theology, law and the rituals of pilgrimage. Special mention is made of his collection of *Fatwā's* in one volume collected by himself on all branches of legal knowledge. They appear to contain the arid discussions which form the favourite theme of Arabic authors of his time.

Bibliography: *Al-Sanā al-Bāhīr*, Brit. Mus.

Add. 16,648, fol. 193; editions of the *Khulāṣat al-Wafā'*, Bulāḳ 1285 and Mekka 1316; Wüstenfeld, *Geschichte der Stadt Medina nach Samhudi*, Göttingen 1860 (an abbreviated translation of the *Khulāṣa*); Wüstenfeld, *Die Geschichtsschreiber der Araber und ihre Werke*, p. 507; Brockelmann, *Geschichte der arabischen Literatur*, ii. 173.

(F. KRENKOW)

SĀMĪ, SHAMS AL-DĪN, SĀMĪ BEY FRĀSHERĪ, a Turkish author and lexicographer, born at Frāsher in Albania on June 1, 1850, of an old Muslim Albanian family whose ancestors are said to have been granted this place as a fief by Sulṭān Mehmed II. He was educated in the Greek lycée at Janina, at the same time receiving instruction from private tutors in Turkish, Persian and Arabic. He then came to Constantinople, where he devoted himself to journalism and founded the daily paper *Ṣabāḥ* about 1875. He began his literary career about the same time and attached himself to the new school founded by Kemāl and Shīnāsī. From this period dates his novel *Ta'ashshuḳ-i Ṭal'at wa-Fitnet*, which contains an indictment of the Turkish marriage system (1872), and the dramas *Besā* (the scene is laid in Albania, produced in 1874), *Sidī Yahyā* (1875) and *Kāwe*. The production of this last piece, which describes the Persian revolution against the tyrant Dāhḥāk, resulted in his being banished for two years to Tripoli in North Africa.

After his return he devoted himself almost entirely to his famous lexicographical works. These are the *Ḳāmūs-i Fransewī* (French-Turkish, 1882, and Turkish-French, 1885), the six-volume encyclopaedia *Ḳāmūs al-A'ām* (1889—1898) and the *Ḳāmūs-i Türki* in two parts (1899 and 1900).

Although in his latter years he suffered a good

deal in body and in spirit, his great industry never left him till his death. He died in Constantinople on June 18, 1904. He had spent the greater part of his life in his study. In the last years of his life he looked 75, although only 54.

In the literary field Sāmī could not claim a place beside his contemporaries 'Abd al-Ḥaḳḳ Ḥāmid, Ekrem Bey, etc. Besides the newspapers themselves, we have as evidence of his journalistic work a series of pamphlets which appeared in the *Djeb Kütübhānesi* and are in part taken from his newspaper articles (*Medeniyet-i Islāmiye*, *Kadınlar*, *Emḥāl*, etc.). He also made several translations from the French (*Sifiller*, *Shaitān-in Yādkārārı*, etc.). He also published select poems of Baḳī and an edition with commentary of the poems ascribed to 'Alī b. Abī Ṭalīb. But his greatest merit lies in his great work in lexicography and philology. This includes several school-books on Turkish and Arabic grammar, and an unfinished Arabic dictionary of which he speaks in the preface to his *Ḳāmūs-i Türki*.

This last work is important in several respects. In the first place the order is strictly alphabetical and the arrangement of the different meanings clear and lucid; it is a great advance on previous lexicographical work by Turks, even on Aḥmed Wefīḳ Pasha's *Lehze-i Oṭhmāni*. Secondly the choice of the words included is of importance in so far as it represents a compromise between the different views prevailing in his time on the development of Turkish. Sāmī himself urged a far-reaching Turkish purism (as is evident from his contribution in the introduction to Mehmed Emin's *Türkçe Şi'rler* of 1898) and he would have liked to replace most Arabic and Persian words by Turkish words that had fallen into disuse. He adopted of the latter those whose revival seemed indispensable, but by the adoption of a great mass of Arabic and Persian material he made great concessions to the literary language. His dictionary is therefore a true picture of the educated Turkish of his time. Sāmī, however, does not seem to have had any traceable influence on the development of Turkish.

Among his unpublished material, of which the unfinished Arabic dictionary has already been mentioned, there are also comprehensive studies on the *Ḳudatḳu Bilik* and on the Orkhon inscriptions, as well as works on Persian and Eastern Turki.

He also worked at Albanian. He produced an Albanian alphabet and a grammar. He left poems in this language and a book on the future of Albania. His drama *Besā*, already mentioned, also shows his love for the land of his birth.

On Sāmī Bey's brother Na'īm Frāsherī (1846—1900) who was a great Albanian poet cf. Babinger in *Isl.*, 1921, xi. 99.

Bibliography: Biography of Sāmī by Ismā'il Ḥaḳḳī in the '*Oṭhmanī' meshāhiri üdebāsī* series; Paul Horn, *Geschichte der türkischen Moderne*, Leipzig 1909, p. 38; *Revue d'Orient et de Hongrie*, Budapest Jan. 20, 1902. The unprinted and unfinished works of Sāmī are in the possession of his family to whose kind information the writer is indebted for some of the above-mentioned facts. (J. H. KRAMERS)

AL-SĀMĪRA. [See SAMARITANS].

AL-SĀMİRĪ, "the Samaritan", is the name in *Qur'ān*, xx. 87, 90, 96, of the man who tempted

the Israelites to the sin of the golden calf. This sin is twice mentioned in the Qurʾān. The first narrative, Sūra vii. 146—153, tells of the sin of Israel and Aaron as in Exodus, xxxii., but with the elaboration that the calf cast out of metal lowed. The second version, Sūra xx. 85—97, which is shown to be later by its additions and was considered by Muslim tradition also to belong to the Medina period (Nöldeke-Schwally, *Geschichte des Qurʾāns*, p. 124, 125), makes al-Sāmīri the tempter of Israel. At al-Sāmīri's bidding they cast their ornaments into the fire and he made out of them the lowing calf, which was worshipped by the people although Aaron advised them not to. When challenged by Moses, al-Sāmīri justified himself by saying that he saw what the others did not see, the footsteps of the messenger (according to Muslim tradition: the tracks of the hoof of Gabriel's horse). Moses then announced his punishment to him: "so long as thou livest, thou shalt call out to those that meet thee *tā misāsa* 'touch me not'".

Abraham Geiger thought that Muḥammad had perhaps confused al-Sāmīri with Sammael, the prince of the demons. Geiger quoted *Pirḳe Rabbi Eliezer*, xlv., where, according to one view, Sammael lowed concealed in the calf to lead the Israelites astray. In reality this feature in the *Pirḳe Rabbi Eliezer* is imitated from the Muslim legend and the otherwise unknown proper name al-Sāmīri replaced by the name Sammael of somewhat similar sound. S. Fraenkel (*Z. D. M. G.*, lvi. 72) derives the story of al-Sāmīri in the Qurʾān from a lost Jewish *midrash* which aimed at diverting the grave sin of making the golden calf from Aaron to a Samaritan.

The figure of al-Sāmīri was first put into its true light by Goldziher (see below). Goldziher explains him as the representative of Samaritanism through the story of the Samaritan secession. We have already evidence of this secession in Sirach, i. 25, and the Gospels Luke, ix. 52, John, iv. 9. Goldziher collects Jewish, Christian and Muslim references, which show that the Samaritans considered contact with those not of their stock as impurity. What Muḥammad or rather his presumed Jewish source knew as a ritual principle of the Samaritans is put back into earlier times and explained as a punishment of al-Sāmīri for having incited the Israelites to make and worship the calf.

Goldziher's convincing arguments can be reinforced by the early Muslim interpretation of the Qurʾān. Al-Ṭabarī himself following an earlier tradition sees in al-Sāmīri a prominent Israelite of the Samaritan tribe; as a punishment for his sin Moses forbade the Israelites to have social or commercial relations with him and "this has remained the case". Similarly al-Zamakhshārī: al-Sāmīri belonged to a Jewish tribe called Sāmira whose religion differed somewhat from the Jewish. Al-Sāmīri was forbidden to have social and commercial intercourse with men; it is said that his people still observe the prohibition. Al-Ṭaḥḥābi similarly concludes his very full story of the golden calf.

Al-Sāmīri thus is the representative of Samaritanism, which keeps apart from non-Samaritans. In a segregation of this kind — as in the Jewish laws regarding eating (Qurʾān, iv. 158) — Muḥammad sees a divine punishment. What has al-Sāmīri (= the Samaritans) to atone for? For the sin of the golden calf.

Bibliography: al-Ṭabarī: *Tafsīr*, and al-Zamakhshārī, *al-Kashshāf* on Qurʾān, xx. 87—97; al-Ṭaḥḥābi, *Ḳiṣṣ al-Anbiyāʾ*, Cairo 1282, p. 82; Geiger, *Was hat Mohammed aus dem Judenthume aufgenommen?*, Frankfurt 1902, p. 162—165; S. Fraenkel, *Der Sāmīri*, in the *Z. D. M. G.*, 1902, lvi. 73; I. Goldziher, *La Misāsa*, in the *Revue Africaine*, No. 268, Algiers 1908, p. 23, 28.

(BERNHARD HELLER)

SAMMĀ, the name of a Rāḍjpūt clan in Sind. As the hold of the Ghaznawid kings on Sind relaxed, the Sumrās, a Rāḍjpūt tribe converted to Islām, established their rule in that country in 1053, and made Tūr their capital. They persecuted the Sammās, a rival Rāḍjpūt tribe which adhered to Hinduism, and drove many of them to take refuge in Kačch, where, in 1320, they ousted the Čāvada prince who had protected them and seized his throne. This branch of the Sammās, known as *Djādedja* or the children of *Djāda*, is still represented by the Rāo of Kačch and the *Djām* of Navanagar. The Sammās who remained in Sind accepted Islām, and after the Sumrās had been overthrown by the troops of 'Alā' al-Dīn *Khaldjī* of Dihli founded, in 1333, a dynasty which ruled Sind for nearly two centuries, with its capital at Thatha. The ruler, like the head of the branch which acquired the state of Navanagar, assumed the title of *Djām*, a word of doubtful signification which Abu 'l-Faḍl, Firīṣṭa and other Muslim historians derive, on insufficient grounds, from the name of the semi-mythical Persian king *Djamshīd*.

Unar, the Hindu name of the first *Djām*, suggests recent conversion to Islām. His brother and successor, *Djūnā*, took Bakhar in Upper Sind, which had hitherto been included in the imperial dominions, and harboured a rebel who was fleeing from *Gudjarāt* before Muḥammad b. Taghlaḳ or Dihli. Muḥammad invaded Sind but died on the banks of the Indus in March, 1351, before he had had time to punish *Djūnā*. His cousin, Firūz Shāh, succeeded to the command of an army disorganised by its leader's death, and with difficulty extricated it from Sind, from which it retreated, menaced and harassed both by the Sindis and by their allies, the Mughuls. Firūz attempted, eight years later, to avenge his discomfiture but again failed and saved a portion of his army only by a disastrous retreat into *Gudjarāt*. Returning in the following year he defeated the Sammās and carried the *Djām*, *Djūnā*, and his nephew, *Bābaniya*, prisoners to Dihli, but permitted *Djūnā*'s son and another nephew, *Tamāčī*, to govern the province as his tributaries. Later in the reign *Tamāčī* rebelled and *Djūnā* was sent from Dihli to reduce him to obedience, and sent him to Dihli. After the accession of Taghlaḳ II in 1388 *Bābaniya* was permitted to return to Sind, but died on the way thither. He was succeeded by his brother, *Tamāčī*, and after his reign the succession appears to have been as follows: — (1) *Šalāḥ al-Dīn*, (2) *Nizām al-Dīn*, (3) 'Alī Shīr, (4) *Karan*, (5) *Faṭḥ Khān*, (6) *Taghlaḳ*, (7) *Rāidan*, (8) *Sandjar*, (9) *Nizām al-Dīn II*, known as *Djām Nanda*, (10) *Firūz*.

"The history of the Sammās after their accession to power is of interest by reason of the ability with which they held their own in several campaigns against the forces of the imperial government, and by reason also of the conversion

of large numbers of the people from Hinduism to Islām". The disintegration of the empire of Dihli after Timūr's invasion restored independence to Sind, and the Sammās reigned thenceforward untrammelled by allegiance to any higher power. The greatest of them was Nizām al-Dīn II, known as Djām Nanda, who died in 1509 after a reign of forty-seven years. The line ended with his son and successor, Firūz, who in 1520 was defeated by Shāh Beg Arghūn, ruler of Kandahār, who founded the Arghūn dynasty in Sind.

The Sammā tribe now numbers over 800,000 in Sind.

AL-SĀMIT. [See AL-NĀTIQ.]

AL-SAMN (A.), butter made from cows', goats' and ewes' milk, more especially cooked or melted butter, cleansed from impurities and preserved by the addition of salt, for example. Fresh butter and cream are called *subda*. These are used not only in the kitchen but also in medicine, externally and internally; — externally for wounds, abscesses and boils, internally as an antidote against snake-bite and poisons, against retention of the urine, etc.

Bibliography: Ibn al-Baiṭār, transl. Leclerc, ii. 290. (J. RUSKA)

SAMOS, an island in the Aegean Sea; the Turkish name is Sīsām-adasi, "the Island of Sesame", for which Sūsām-adasi was written at an earlier period (Bihishtī, *Inshā* [MS. No. 260 of the Berlin Library], f. 193^b; Kīātib Celebi, *Tuhfat al-Kibār*; Sussam in Tavernier, *Les six Voyages*, i. 359), while the Arab geographers give the Greek name in the forms Samū, Sām (al-Idrīsī, *Géographie*, ed. Jaubert, ii. 127, 303), Sāmis (Yā-kūt, *Mu'djam*, i. 21) or Shāmis (Abu 'l-Fidā', ed. Reinaud, p. 192, 193). In the middle ages Samos was repeatedly raided by the Arabs in their incursions into the Aegean Sea, notably in the years 889 and 911. It was only with the expulsion of the Arabs from Crete about the middle of the tenth century that Byzantine rule was restored over Samos and the other islands of the archipelago. Later the island was exposed to the raids of the Saldjūks and their vassals. Tzachas, lord of Smyrna, captured the island about the year 1090 and kept it for some time (Anna Comnena, *Alexias*, ix. Ch. 1); in the xvth century it was ravaged by the Aidīn-oghlu Umur Beg (Ducas, Ch. vii). From the end of the xvth century it belonged to the Genoese Maona of Chios (cf. the art. SAKIZ). Friendly relations were maintained with the people of the adjoining mainland. It is, for example, related that at Timūr's invasion numerous Turks fled thither (Buondelmonte, ed. Sinner, Ch. 54) and the fanatic Bürklüdjē Muṣṭafā, who provoked a communistic rising on the Erythraean peninsula about 1420, maintained communication with the monks of Chios and Samos. After the fall of the Byzantine empire, Mehemmed the Conqueror granted Samos to the Genoese of Chios, but they were not able to hold it and therefore induced the greater part of the population to migrate to Chios in 1476. Probably as a result of this, Mehemmed II in 884 (1479) had Samos

occupied by the Beg of Bighā; to repopulate the deserted island the new colonists were promised freedom from the state imposts (*ʿawāriḍ-i dīwāniye*) (Bihishtī, *Tārīkh*, f. 209^b of the Brit. Mus. MS.; cf. Sa'd al-Dīn, i. 567 sqq.). Later, probably after the peace with Venice in the reign of Bāyazīd II in 1502, the Genoese seem to have regained control of the island; at least, Belon, who travelled in the Archipelago soon after 1547, expressly states that it belonged to the "seigneurie de Chio" (*Les observations de plusieurs singularitez etc.*, Paris 1555, p. 84a); but a few years later they evacuated it for a second time and left it to its fate (Boschini, *L'Arcipelago*, Venice 1558, p. 72). The islanders used to retire into the impenetrable mountains of the interior before the corsair raids, where they led the lives of savages. The Kapudan Pasha Kılıdji 'Alī Pasha, on one of his voyages in the Archipelago, was then attracted by the abandoned island and had it given to him by the Sulṭān in 1562. He endowed the great mosque built by him in Top-Khāne on the Bosphorus with the revenues from the taxation of the island. — A Turkish voivod usually called Aghā governed the island; a kāḍī or nā'ib exercised judicial authority; they lived in Chora, the principal place on the island, where also the titular of the then newly founded (Greek orthodox) bishopric of Samos took up his residence. Except for these two officials and their subordinates there were no Turks on the island. But even under Turkish rule the Samiotes continued for long to suffer from the raids of pirates of all nations, Maltese, Frank, Algerian and Tripolitan, who, like their contemporaries, the filibusterers and buccanniers in the West Indies, and the Pamphylian pirates conquered by Pompey, made this part of the Mediterranean unsafe for a century. Samos, which had neither fortresses nor a permanent garrison, was invaded and repeatedly occupied for some time by the Venetians in the wars between the Sublime Porte and Venice in the xviith century. The occupation by the Russian fleet lasted for several years, 1771—1774. The Samiotes played a prominent part in the Greek war of liberation: at the end of the war they passed again under Turkish rule, but through the intervention of the Western powers they obtained complete autonomy under a Christian governor appointed by the Sulṭān (Bey, Greek ἡγεμὼν, which was usually translated Fürst, prince), and were placed under the protectorate of France, Great Britain and Russia. They were also allowed a flag of their own. Like the other vassal states of the Sublime Porte, Samos paid an annual tribute, which was at first 400,000 piastres but was later reduced to 300,000. 101,000 of this went to pay the dues to the waḳf endowment of Kılıdji 'Alī. The first Bey of Samos, Stefan Vogorides, was appointed in the beginning of Djumādā I, 1249 (middle of September, 1833), and filled this post till the beginning of September, 1851. After him down till 1913 no less than 18 "princes", who with few exceptions belonged to Fanariot families, ruled the island of Polykrates. In 1913 Samos was united with Greece by the Treaty of London, which ended the Balkan war.

In modern times Vathy has replaced Chora as the seat of the Government; the number of the settled population was in 1912 about 50,000.

(J. H. MORDTMANN)

ŞAMŞÂM AL-DAWLA, ABŪ KĀLĪDJĀR AL-MARZUBĀN, a Būyid. After the death of the Būyid ruler 'Aḍud al-Dawla in Shawwāl, 372 (March, 983), his son Abū Kālīdjār was recognised as Amir al-Umarā' under the name Şamşâm al-Dawla. The latter then gave his two brothers Abu 'l-Ḥusain Aḥmad and Abū Ṭāhir Firūz Shāh the province of Fārs as a fief and ordered them to go there at once. But when they arrived in Arradjān the fourth brother, Sharaf al-Dawla, had anticipated them and already taken possession of Fārs so that they had to retire to al-Ahwāz. As Sharaf al-Dawla would not recognise the suzerainty of Şamşâm al-Dawla, the latter sent an army against him under Abu 'l-Ḥasan b. Danḡas, who met the enemy at Qurkūb, between Wāsīt and al-Baṣra, led by Abu 'l-A'azz Dubais b. 'Afīf al-Asādī. Abu 'l-Ḥasan was taken prisoner and his army put to flight (Rabī' I, 373 = Aug./Sept., 983) whereupon Sharaf al-Dawla granted his brother Abu 'l-Ḥusain rule over al-Ahwāz. At the same time Şamşâm al-Dawla had to fight with the Kurdish chief Bādḡ, the ancestor of the Marwānids. The latter had invaded Diyār Bakr, where he had seized several towns like Maiyāfāriḡin and Naṣībīn after the death of 'Aḍud al-Dawla. Şamşâm al-Dawla's troops were defeated, and al-Mawṣil also passed into Bādḡ's hands; but when in Şafar, 374 (July, 984), he endeavoured to take Baghdād also he was defeated and had to give up al-Mawṣil. He was, however, allowed to retain Diyār Bakr and the half of Ṭūr 'Abdīn. In 375 (985/986) the Dailamī general Asfār b. Kurdawāh rebelled against Şamşâm al-Dawla in Baghdād and at first declared for Sharaf al-Dawla; but he next decided — by arrangement with the troops who were devoted to him — to make Abū Naṣr b. 'Aḍud al-Dawla, then only fifteen years old and later appointed Amir al-Umarā' with the name Bahā' al-Dawla [q. v.], governor of al-'Irāq in place of his brother Sharaf al-Dawla. But Asfār was defeated and Bahā' al-Dawla taken prisoner. Sharaf al-Dawla then left Fārs to go to al-Ahwāz and there told his brother Abu 'l-Ḥusain that he wanted to liberate Bahā' al-Dawla; but Abu 'l-Ḥusain did not trust him and began to collect troops. The latter, however, went over to Sharaf al-Dawla and there was no-

thing left for Abu 'l-Ḥusain to do but join his uncle Fakhr al-Dawla [q. v.]; but as the latter did not find him absolutely reliable, he was imprisoned and afterwards put to death. To preserve peace, Şamşâm al-Dawla wrote to Sharaf al-Dawla and, as he was satisfied with the governorship of Baghdād and ready to release Bahā' al-Dawla and to have Sharaf al-Dawla mentioned first in the *khutba* in the 'Irāq, the latter agreed to his proposal. When in 376 (986/7) Şamşâm al-Dawla came to Sharaf al-Dawla, he was at first very kindly welcomed, but then seized and imprisoned in a citadel near Shīrāz. According to the usual statement, Sharaf al-Dawla afterwards had him blinded. In the meanwhile disturbances broke out in Baghdād between the Dailamis who supported Şamşâm al-Dawla and the followers of Sharaf al-Dawla, the Turks, and only after quiet was restored did the Caliph al-Ṭā'ī recognise the latter as Amir al-Umarā'. On the latter's death at the beginning of Djumādā II, 379 (Sept., 989), Bahā' al-Dawla succeeded to this office. Şamşâm al-Dawla was then liberated but had first to fight with his nephew, Abū 'Alī b. Sharaf al-Dawla, and after his assassination with Bahā' al-Dawla [q. v.]. In 383 (993/994) — or, according to another statement, probably due to a corrupt text, as early as 380 (990/991) — Bakhtiyār's [q. v.] sons, who had been interned in a castle in Fārs after Sharaf al-Dawla's death, succeeded with the help of the Dailamī garrison in gaining their liberty and gathering a large following. When Şamşâm al-Dawla heard of this he sent an army under Abū 'Alī b. Ustādḡ Hormuz against them. The latter besieged them in the fortress in which they had taken refuge; they had to surrender and were brought to Şamşâm al-Dawla, who had two of them executed and the other four imprisoned. In the same year hostilities again broke out between Şamşâm al-Dawla and Bahā' al-Dawla and after several years' fighting victory was inclining more and more to the side of the former, when he was assassinated in Dhu 'l-Hiddja, 388 (end of 998), at the age of thirty-five years and seven months. Cf. also the article ABŪ KĀLĪDJĀR.

ŞAMŞÂM AL-DAWLA, SHĀHNAWĀR KHĀN SHAHĪD KHĀWĀFI AWRANGĀBĀDĪ, an Indian statesman and historian. His early name was 'Abd al-Razzāḡ Ḥusainī and he belonged to a Saiyid family which had migrated to India from Khwāf in Khurāsān in the time of Akbar and attained high honour there. He was born in Lahore on Ramaḍān 28, 1111 (March 20, 1700) and while still young moved to Awrangābād [q. v.] where he was appointed *Diwān* of Berār by the first independent Nizām of the Deccan, Aṣaf Djaḡ [q. v.; see also the article ḤĀIDĀRĀBĀD]. In 1155 (1742) he was involved in the rising attempted by Nāṣir Djaḡ, son of Aṣaf Djaḡ, against his father and dismissed from office after its failure. The next five years he devoted in retirement to his great historical work, the *Ma'āthir al-Umarā'*. Shortly before the end of his reign, Aṣaf Djaḡ

pardoned him in 1160 (1747) and restored him to his former office, which he continued to hold under the next two rulers, Nâsir Djang and Şalabat Djang. After the accession of Basâlat Djang in 1170 (1756) the French party which had been opposed by Şamsâm al-Dawla succeeded in bringing about his fall; he was killed on Ramađân 3, 1171 (May 12, 1758) by soldiers of the French General Bussy. According to another, unreliable, story, the General shot him with his own hand.

The *Mu'athir al-Umarâ*, a biographical dictionary arranged alphabetically, according to the initial letters of the names discussed, of all the more important statesmen under the Indian Moghuls from Akbar to the author's day — Elliot calls it "the Peerage of the Mughal Empire" — exists in two recensions of both of which many copies exist. The original, which was unfinished and even in the completed part not quite ready for publication, disappeared at the murder of the author and the destruction of his house, and was only found after twelve months' search by the friend and for several years secretary of the author, Ġhulâm 'Alî Āzâd Balğrâmi (famous as the author of two *tadhkirâ*'s of poets, *Khasâna-i 'amira* and *Sarwi-Āzâd*; cf. H. Ethé in the *Grundriss der iran. Philol.*, ii. 215), although not complete. He gave it a preface, wrote a biography of Şamsâm al-Dawla (see the *Bibl.*) and added several articles. This recension contains 261 biographies.

It was much extended and republished by the author's son, 'Abd al-Hayî Khân († 1196 = 1781; for his numerous titles see Morley, *op. cit.*, p. 104; cf. the *Bibl.*), who in twelve years' labour continued the work of his father to the year 1194 (1790) when he concluded his labours; he took the first recension as a foundation, added other parts of the original which had since been found and additions which he compiled from the 30 historical works mentioned in his preface. His own first draft is preserved in the India Office MS. N^o. 2424 (Ethé's *Catalogue*, N^o. 627). This second edition contains an editor's preface, the preface by Şamsâm al-Dawla and Ġhulâm 'Alî, the latter's biography of Şamsâm al-Dawla, an index of the articles and the latter themselves, as well as a short biography of the editor. It contains 731 biographies and is one of the most valuable sources for the history of the Moghul rule in India.

Şamsâm al-Dawla also composed a collection of biographies of poets entitled *Bahâristân-i Sukhûn*.

Elliot, *History of India*, viii., 1877, p. 187 sqq.

(H. H. SCHAEFER)

ŞAMSÂM AL-SALTANA, NAJAF KULI KHÂN, a Bakhtiyârî chief born about 1846. He belonged to the great division of Haft-Lang which he governed in 1903—1905 as İl-begî and later as İl-Khânî. He was the son of the Husain Kuli Khân, killed by order of prince Zill al-Sultân — the famous governor-general of Işfahân — and grandson of Dja'far Kuli Khân. Şamsâm owes his fame to the part he played in the nationalist revolutionary movement in Persia.

Rebelling against the incapable administration of the governor Ikbâl al-Dawla, Şamsâm al-Saltana at the head of 1,000 Bakhtiyâris occupied Işfahân on Jan. 5, 1909, and convoked the provincial committee (*andjuman*). Jointly with his brother Sardâr-i As'ad, who had come back from Europe, Şamsâm telegraphed to the government (May 3) that he intended to advance on the capital. He carried out his plan but allowed the protagonists of the revolution, Sardâr-i As'ad and Sipahdâr-i A'zam, leader of the forces collected at Rasht, to have all the credit.

When in the summer of 1911 the news of the return of Muḥammad 'Alî Shâh reached Tih-rân, Şamsâm entered the Sipahdâr's cabinet as minister of war and military governor of the capital (July 5). On July 26 he himself formed a new cabinet; three days later the Majlis put a price on the head of Muḥammad 'Alî Shâh. In August the Bakhtiyâris with the active help of the Armenian revolutionary Yefrem Khân inflicted a defeat on Sardâr-i Arshad, the principal supporter of the fallen Shâh. In September they disposed of the rebellion led by the turbulent prince Sâlar al-Dawla. Şamsâm at first gave wholehearted assistance to Mr. Morgan Shuster, the American adviser who, entrusted with the reform of the Persian finances, had warmly supported the nationalist movement but very soon a quarrel broke out between them as a result of energetic action taken by Mr. Shuster (the episode of 'Alâ' al-Dawla). On October 29 Russia demanded satisfaction for the intervention of Mr. Shuster's gendarmes in the affairs of Prince Shu'â al-Saltana who claimed to be a protégé of Russia. As a result on Nov. 11 Wuthûk al-Dawla, minister of foreign affairs, expressed to the Russian legation the government's apologies but on Nov. 16 Russia presented an ultimatum demanding the dismissal of Mr. Shuster. The cabinet, which after a quarrel with Yefrem Khân had again made its peace with him, showed conciliatory tendencies. On Dec. 9 Wuthûk al-Dawla formed a new cabinet which two days later accepted the ultimatum. Mr. Shuster was replaced by a Belgian (M. Mornard) and left Persia.

In the summer of 1918 Şamsâm was again called upon to take the reins of government. As a repercussion of events in Russia the new cabinet, which had a nationalist character, at its meeting of July 27 abrogated all the treaties with Russia and all concessions granted to Russians. This measure, which affected the interests of foreigners in general, accelerated the fall of the cabinet and its replacement by that of Wuthûk al-Dawla, which signed the Anglo-Persian convention of Aug. 9, 1919.

Şamsâm is noted for his impulsive character but Mr. Morgan Shuster in his book reproaches this chieftain with a lack of constancy.

AL-ŞAMŞÂMA, the sword of the Arab warrior-poet 'Amr b. Ma'dikarib al-Zubaidi (cf. above, i. 336a) celebrated for the temper and cutting power of its blade. Like a number of the best Arab swords, its origin was traced back to Southern Arabia and a fabulous antiquity was ascribed to it. 'Amr himself in a verse often quoted (Ibn Duraid, p. 311; *Ik̄d* [ed. 1293], i. 46, ii. 70; Ibn Badrūn, p. 84; *Tađj al-'Arūs*, vi. 229) says that it had once belonged to Ibn Dhī Kaifān "of the people of 'Ad" (this member of an actual Himyar clan [cf. Hartmann, *Die arabische Frage*, p. 331, 613] is identified with one of the last Himyar kings of the family of Dhū Djadan; but very probably the poet only means to allude to the great age of his weapon).

The history and fortunes of al-Şamşāma are rather involved; even in the poet's lifetime it came into the hands of a member of the Umayyad family, Khālid b. Sa'īd b. al-'Āsī, the companion of the Prophet. The way in which he got possession of it is recorded with several variants by Ibn al-Kalbī (in al-Balādhuri), Abū 'Ubaida (in the *Aghānī*), al-Zuhri (in Ibn Hūbaish; see *Bibl.*), Saif b. 'Umar (in al-Tabarī). According to the last-named, Khālid won it in battle after routing 'Amr b. Ma'dikarib who was taking part in the revolt against Islām raised by the false prophet al-Aswad al-'Ansī (cf. above, i. 502b); according to the three first, 'Amr himself gave it to Khālid as a ransom for his sister (or wife) Raihāna, who was a prisoner of the Muslims. 'Amr composed a poem on the occasion, of which several verses are frequently quoted in the Arab sources (Ibn Duraid, p. 49; *Lisān*, xv. 240, etc.). The tradition (al-Tibrizī in *Ĥamāsa*, ed. Freytag, p. 397, 12—15) which says that 'Amr gave it to the Caliph 'Umar is quite denied by authority.

After the death of Khālid b. Sa'īd at the battle of Marjī al-Suffar during the conquest of Syria (14 A. H.) al-Şamşāma passed to his nephew Sa'īd b. al-'Āsī b. Sa'īd b. al-'Āsī, who lost it while defending the Caliph 'Uthmān when the latter was besieged in his house at Medina (35 A. H.). It was found by a Bedouin of the tribe of Djubaina with whom it was discovered in the reign of Mu'āwiya. Restored to its former owner, it passed from one member to another of the family of the Banu 'l-'Āsī, until one of them, Aiyūb b. Abī Aiyūb, great-grandson of the son of Sa'īd, sold it to the Caliph al-Mahdī (158—169 A. H.) for about 80,000 dirhams. Henceforth al-Şamşāma was kept as a precious relic in the treasury of the 'Abbāsids and its fame continued to increase; poets like Abu 'l-Hawl al-Himyarī (*Djāhiz*, *Ĥayawān*, v. 30) and Salm al-Khāsir sang its praises.

From different sources we learn of its existence in the caliphates of al-Hādī (169—170 A. H.), Harūn al-Rashīd (170—193), al-Wāthik (227—232), and al-Mutawakkil (232—247), after which there is no longer any mention of it. The anecdotes recorded regarding the excellence of the famous sword during the period when it was in the hands of these Caliphs have little chance of being authentic; a description which has a certain appearance of reality is the one given in al-Tabarī,

iii. 1348, 4—8, in connection with the story of al-Wāthik's using it to execute with his own hand in 231 A. H. Aḥmad b. Naṣr al-Khuẓā'ī, who was accused of having conspired against the Caliph and of having maintained that the Qur'ān was not created, contrary to the view laid down by al-Ma'mūn: "It was a blade with a hilt at its end; three nails driven into it attached the blade to the hilt". It is apparent then that the famous al-Şamşāma had nothing of value about it except its great age.

As to the name al-Şamşāma, it is simply an epithet referring to the fine quality of the blade (the "cleaver") like *muṣammim*, which has the same significance. Al-Şamşāma is often used as a common noun, e.g. by al-Farazdaq (*Naḳẓ'id*, p. 385, 4) and by 'Amr b. Ma'dikarib himself (*Ĥamāsa* of al-Buḥturī, p. 83, ed. Cheikho, N^o. 237); *Amālī* of al-Kālī, iii. 154, 10), as well as by Muslim b. al-Walid (ed. de Goeje, vi. 18) in a verse which Schwarzlose (see the *Bibl.*) wrongly thought to refer to 'Amr's sword, while the weapon given by Harūn al-Rashīd to his general Yazīd b. Mazyad referred to in the verse is the sword of the Prophet, Dhū 'l-Faḳār (cf. above, i. 959), as is evident from verse 25 of the same poem and the note by Ibn Khallikān, iii. 299 (ed. 1299) = ii. 284 (ed. 1319) = N^o. 830 Wüstenfeld.

ŞAMSÜN, a harbour on the north coast of Asia Minor, the ancient Amisus, also called Amisos by the Byzantines and later, after the conquest by the Saldjūks, Sampson (Akropolites, Bonn ed., p. 14; also Schiltberger, ed. Langmantel, p. 14 [transl. Hakluyt Society, p. 12], who says it was founded by the Samson of the Bible), the Simisso of western seafarers and the Şamsün of the Arabs, was taken from the Byzantines by Kılıdġ Arslān II (1156—1192) (Niketas Choniates, Bonn edition, p. 689, 699); three centuries before (860) it had been laid waste by the Arabs on one of their raids into Byzantine territory (Theophanes contin., Bonn ed., p. 179). Under the Saldjūks and their successors, Şamsün with Sinope conducted the trade with the Crimea and from the time of Mas'ūd II (631—646 A. H.) was a mint of the Saldjūks and later of the Ilkhāns (Aḥmad Tawhīd, *Meskū-kāt-i qadime-i islāmiye Katalōghī*, iv., N^o. 704, 705; Mehemmed Mubārak, *ibid.*, vol. iii. under the coins of Ghāzān Maḥmūd, Khudābende Mehemmed and Abū Sa'īd Bahādur), which suggests a considerable commercial activity. About this time also we find Şamsün first mentioned by the eastern geographers as a "famous harbour" (Abu 'l-Fidā', *Taḳwīm al-Bulḍān*, ed. Reinaud, i. 32 sq., 215, 392; al-Dimashqī, ed. Mehren, p. 146; Ḥamd Allāh

Mustawfī, *Nuḥḥat al-Kutub*, ed. Le Strange, p. 96). Alongside of the Muslim Şamsūn there was at the beginning of the xiiith century an independent Greek enclave (Fallmerayer, *Geschichte des Kaiserthums von Trapezunt*, p. 56 sqq.), the so-called "Christian Şamsūn" (*Kiāfir Şamsūni*), and formed, as in Smyrna (see the art. IZMİR, ii. 267), with the Muslim settlement a double town. Both parts were enclosed by walls and only a stone's throw (Ibn 'Arabshāh, *Adḡā'ib al-maḡdūr fī Akhbār Timūr*, Cairo 1285, p. 141) or "half a bowshot" (Schiltberger, p. 16, Hakt. Soc. ed. p. 13) apart. In the early years of the xivth century the Genoese established themselves in Christian Şamsūn and held it for over a century (Heyd, *Histoire du Commerce du Levant*, i. 553 sqq., ii. 359 sq., 373); about the year 1425 the last Frankish inhabitants set the town on fire and sailed off in their ships, whereupon the Ottomans entered it (Neshri in Leunclavius, *Hist. Musulm.*, col. 475; wrongly in Heyd, *op. cit.*, ii. 359).

After the withdrawal of the İlkhāns Muslim Şamsūn was in possession of the Isfandiār-oghlu of Kaştamūnī [q. v.] and was taken from them in 795 or 797 A. H. by Bāyazid I (Schiltberger, p. 14 sqq.; Neshri, in the *Z. D. M. G.*, xv. 343 = Leunclavius, *op. cit.*, col. 336; Sa'd al-Din, i. 135 sq.; cf. *Tawārikh-i Āl-i 'Othmān*, ed. Giese, p. 34); in 1404 the town still belonged to Mīr Sulaimān Çelebi, the son of Bāyazid I (Clavijo, p. 82); it was then again occupied by the Isfandiār-oghlu (the date 822 A. H. is given) (Leunclavius, *Hist. Musulm.*, col. 474; Sa'd al-Din, i. 287 sqq.; cf. Ibn 'Arabshāh, *op. cit.*) but shortly afterwards ceded without a fight to Sultān Mehmed I (*Tawārikh-i Āl-i 'Othmān*, ed. Giese, p. 53 = Leunclavius, *op. cit.*, col. 464; 'Ashik Pasha Zāde, p. 89 sq.; Neshri, Sa'd al-Din, *op. cit.*). Şamsūn since then has been under the Turks and became the capital of the sanjak of Djanik, which formerly belonged to the eyālet of Siwās but in modern times has been incorporated in the wilāyet of Trebizond. The harbour still retained with Sinope and Trebizond some importance for trade with the Crimea, had a shipyard of its own, and in the xviith century was again fortified as a defence against the attacks of the Don Cossacks. Local trade was limited to the manufacture and export of hemp ropes etc. and of the popular *nārdenk* (pomegranate syrup). After the cession of the Crimea to Russia in the xviiith century the town began to decline and in 1806 it suffered considerable damage during the fighting between the rival Derebeys, the Çapan-oghlu and the family of Djanikli 'Alī Pasha. It was only with the opening of steam navigation in the Black Sea and the development of tobacco-growing in the adjoining district of Bafra that the town received an unexpected revival of prosperity. Many Greeks and Armenians came to it from the interior, especially from Kaşāriye and Karamān, and Europeans also including many Hellenes settled here; to engage in the export of local products (tobacco, corn and hides). The old parts of the town which were avoided on account of endemic malaria were burned in 1286 (1869) and replaced by modern buildings. New quarters and suburbs also arose on a more healthy site, for example the suburb of Kaḏi-Köy inhabited exclusively by Hellenes. The town which at the beginning of the xixth century had only 400 houses with a purely Turkish population of

2,000 had a century later over 20,000 inhabitants (10,000 Turks, 8,000 Greeks and Hellenes, 2,000 Armenians) and was the most important commercial town next to Trebizond on the north coast of Asia Minor. We have no more recent information.

AL-SAMT, direction, point of the compass, a term in frequent use in Arab astronomy applied to the length of the arc (angular distance) made by any straight line drawn in the horizon through the position of the observer with respect to the line from east to west. As a circle of altitude of the heavens cuts the horizon along a straight line, such sections in their deviation from the east-west line give the direction by which the altitude is characterised. On vertical walls on which the so-called inclined sundials (*munḥarīfāt*) are marked as well as in turning the face towards Mekka (*qibla*) the definition of *al-samt* is of importance. This is one of the problems of spherical astronomy, which the Arabs were able to solve in quite a number of ways.

The plural of *al-samt* is *al-sumūt*. For this we can quote references from the language of one of the greatest Muslim astronomers, namely Ibn Yūnus († 1009 in Cairo). The title of Chap. xxiv. of his famous Hākīmī Tables, for example, is: *Fī l-khrāḡi Khatt Nişf al-Nahār bi 'l-Irtifā' alladhī Samtuhu ḥalāṭhun wa-ghairuhu min al-Irtifā' allatī simūtuhā ma'fūma* (Oxford, MS. Hunt. 331, fol. 43^r). As will be noticed the adjective *ma'fūma* is in the feminine singular, in keeping with the rules of Arabic grammar. An inexperienced translator of Arabic astronomical texts might very well take a plural like this (*sumūt*) for a singular and translate *al-sumūt* by "direction" instead of "directions". According to Nallino in *R.S.O.*, viii., p. 390 sqq. *simūt* is a dialectical form of *simūt*. By contraction in Spanish and French *al-simūt* became *azimut* and in this form and with singular meaning the word has passed into western languages so that we now speak of the azimuth of an altitude of the sun or of a wall etc.

The expression *samt* (or *semt*) *al-ra's* means the direction of the head. Later in Europe the qualification *al-ra's* was dropped so that in the French and Spanish spelling only the word *semt* remained.

Through errors in copying this became *senit*, just as Latin translators of the *astronomy* of al-Farghānī (Alfraganus) made *Henis* and then *Henit* out of Hims, Hems = Emesa.

Since, as already mentioned, the Arabs measured the azimuth from the east-west line, the meridian (*khatt nisf al-mahār*) came with them to be an azimuth of 90°. Its definition is a necessity for finding one's position so that it is never omitted in any Arabic *sidi* and even has *rasā'il* specially devoted to it (the writings on this subject by Ibn al-Haiṭham, *Mémoire sur l'azimut* and *Mémoire sur la détermination de la méridienne avec la dernière exactitude*; cf. F. Woepcke, *L'algbre d'Omar Alkhayyāmī*, Paris 1851, p. 74 and 75, are probably no longer extant).

The arithmetical relation between altitude of the sun and azimuth (when the geographical latitude of the place and the declination of the sun are known) is given in the azimuth-tables (*Qiaḍwīl al-simūt*) which were calculated by various Arab astronomers for the latitude of their homes; cf. e.g. Ibn Yūnus, *Kitāb al-Samt wa'l-Zill li'bn Yūnus mahtūl daḳīqatan daḳīqatan*, MS. Escor., 924.

SAMUEL. [See UŠHMU'IL].

SAMŪM, the name of a hot wind in several Arabic speaking countries. The word occurs in three passages of the Qur'an, where it is, however, not especially applied to the wind. Sūra 15, 27 it is said that the *Djānn* were created from the fire of Samūm. Sūra 52, 27 the punishment of the Samūm is mentioned; and according to Sūra 50, 41 the "people of the left" were dwelling in *Samūm wa-Hamīm*. Apparently Muḥammad applies the term to infernal heat.

The Ḥadīth uses the word in the same sense; yet the meaning "hot wind" is here coming to the front. It is said that Hell takes breath two times a year: "its taking breath in summer is Samūm". (Tirmidjī, *Djahannam*, bāb 9; cf. Ibn Mādja, *Zuhd*, bāb 38). In Bukhārī we find reference to the opinion that the hot air during the day is called *ḥarūr*, whereas it is called *samūm* at night (*Bad' al-Khalq*, bāb 4).

In nearly every traveller's book the samūm (simum) is mentioned in the sense of the suffocating wind which is also often called sirocco. From the innumerable references a few may be picked out. C. M. Doughty mentions it in the neighbourhood of Maḍā'in Šālīḥ as "a droughty southern wind" against which the Beduins "covered their faces, to the eyes, with a lap of the kerchief". He again mentions it between Madīna and Mekka and tells us that according to the Beduins weak camels may be suffocated by it

(*Travels in Arabia Deserta*, Cambridge, 1888, i. 100, 188).

In Mekka the north, north-east and eastwind are called samūm. When it blows it makes the impression as if it came from a huge fire through the intermediary of gigantic bellows (Snouck Hurgronje, *Mekkanische Sprichwörter und Redensarten*, N^o. 76). The season in which the sun enters the constellation of the Virgin (August) has an extremely bad reputation in Mekka, because in this time *ḥōm*, *wamā*, *samūm* and *azyab* blow alternately (*loc. cit.*).

Concerning Egypt, Lane says (*Manners and Customs*, Introduction): "Egypt is also subject particularly during spring and summer, to the hot wind called the "Samoom", which is still more oppressive than the khamāseen winds, but of much shorter duration, seldom lasting longer than a quarter of an hour or twenty minutes. It generally proceeds from the south-east, and carries with it clouds of dust and sand".

Concerning Kaṣr-i Šīrīn [q. v.] Ḥamd Allāh Mustawfī (*Nuḥat al-Kulūb*, transl. Le Strange, Gibb Memorial Fund, vol xxx/ii., p. 50) says: "Its climate is unwholesome for in the hot season at most times the (hot) Simum blows".

Mas'ūdī, *Murūdj al-Dhahab*, ed. Paris, iii. 320 sq. has a legendary report concerning the *Djānn* which according to the verse from the Qur'an mentioned above, were created from the fire of the samūm (translated by R. Basset, *Mille et un contes, récits & légendes arabes*, Paris 1924, i. 57).

(A. J. WENSINCK)

ŞAN, now ŞAN AL-ḤADJAR, a little village in lower Egypt, in the province of Sharkīya in the district of al-ʿArīn to the south of Lake Manzala on the Baḥr al-Muʿīza (or Muwis), the ancient Tanitic arm. The Arabic name corresponds to the Hebrew Šo'an, the Greek *Távις* and the Coptic *Djani*.

This town, which was the capital of the dynasty of the Shepherd Kings, had been long in ruins by the time of the Arab conquest. The ancient town, notably the temples, had fallen to pieces and no Arab author mentions them; their remains nevertheless still form the most considerable group of ruins in the Delta. A single text recalls its fame in quoting Şan among the Towns of the Magicians.

A passage in the Chronicle of John of Nikiu (transl. Zotenberg, p. 540) shows that in the seventh century it was a little town, since the same governor administered Kharbetā (Farbaṭ = modern Hurbait), Şān, Bastā, Balḳā (= Ṭarābiya = Copt. *Ṭagabīa*) and Sanhūr. This district really comprised five contiguous pagarchies, *Φαρβαῖτος, Τάβις, Βούβατος, Ἀραβία* and *Ἡφαίστος*.

The Arab *kūra*, founded on the pagarchy of *Távις*, was called after two places, Şān and Iblil; the latter, which is found in Coptic in the form *reβλil*, cannot, however, be exactly located. The

kūra of Şān and Iblil contained 46 villages (40 in al-Dimashḳī) stretching to the north-east up to the Syrian frontier, and included besides Sanhūr (Hephaistos) the towns of al-Faramā (Peluse) and al-ʿArīsh (Rhincolura). The southern boundary ran north of a line Hurbait — Fāḳūs, although

the latter formed part of the *kūra* of Ṭarābiya. The *kūra* of Tumaïy (Tumaïy al-Amdid) bordered it on the west and on the north the *kūra* of Şan and Iblil ended on the banks of the Buḥairat Tinnis (Lake Manzala).

We have almost no historical information regarding the town, which had been the see of a Coptic bishop (there is no mention later than the fifth century A. D.). We only know that bodies of the tribes of *Khushain*, *Lakhm* and *Djudhām* settled in this region. The geographer Yākūt gives no details and one is surprised not to find it mentioned in the censuses of Ibn Mammāṭi, Ibn Duḡmāk and Ibn al-Djī'ān, although in quoting the old lists of *kūra's*, al-Ḳalkāshandī says it is unknown. The notice by 'Alī Pāshā Mubārak is simply a translation of an article by Quatremère. It is not known at what period Şan received the surname of *al-Ḥadjjar* (Şan "of the stones"), which is found in Egypt attached to several places near which there are important ruins, e.g. Bahḫit al-Ḥadjjar (Tseum), Şa' al-Ḥadjjar (Saio).

(G. WIET)

SAN STEFANO, in Turkish Aya Stefanos, a little town on the sea of Marmora, twelve miles west of Constantinople. It probably takes its name from an old church (according to von Hammer) but it is not certain whether San Stefano is the ancient Hagios Stephanos, which was one of the places which Meḥammed the Conqueror occupied before the investment of Constantinople (Ducas, ed. Bekker, Bonn 1834, p. 258, speaks of the *πύργια τοῦ ἁγίου Στεφάνου σὺν πολέμῳ*). The Crusaders landed in its neighbourhood on June 23, 1203, before the Latin conquest of Constantinople. San Stefano lay off the great road from Constantinople to Adrianople, which passed through Küçük Çekmedje (Ponte Piccolo) 2½ miles to the east of it and has never been of any strategic or economic importance. Ewliyā Çelebi does not mention it. Since the beginning of the nineteenth century wealthy inhabitants of the capital have been building country-houses here so that it has now become a pleasure resort for the citizens of Constantinople, easily reached by railway. The population itself is entirely Greek and numbers about 2000 souls.

The town acquired a place in history by the preliminary peace of San Stefano which was signed there on March 3, 1878, between Turkey (represented by Şafwet Pasha and Sa'd-ullāh Pasha) and Russia (represented by Count Ignatieff and Nelidoff), a truce having previously been agreed upon at Adrianople on the previous January 31.

The Russian headquarters were in San Stefano on this occasion; the house where the treaty was signed has been destroyed by an earthquake. The conditions of peace (text in *Nouveau Recueil Général de Traités*, 2nd Series, iii. 246—256) were

very harsh for Turkey on account of the great area of territory which was given to the newly formed principality of Bulgaria and the huge indemnity demanded by Russia. The Berlin Congress, summoned on the initiative of England, considerably ameliorated the conditions of the preliminary peace and annulled the latter. Peace with Russia was finally concluded in Constantinople on Feb. 8, 1879.

In 1909 San Stefano was again in the public eye after the Turkish counter-revolution of March, which ultimately led to the deposition of 'Abdul-Ḥamid. On April 19 of this year the first constitutionalist troops hurriedly appeared here from Salonica. Immediately the deputies of the committee "*İttihād-u Teraḳkî*" went to San Stefano and constituted the national assembly in the Yacht Club under the presidency of Abu 'l-Diyā Tewfik Bey, who was succeeded as president by Ahmed Ridā on April 21. Next day the whole senate joined the assembly which placed all power in the hands of the army. Maḥmud Şewket Pasha became commander-in-chief and on April 24 Constantinople was entirely in the hands of the constitutionalists. During these events the whole Turkish fleet appeared before San Stefano to submit to the army.

ŞAN'Ā', the capital of Yaman, lies on the eastern Sarāt in a mountain valley which is open to the west as far as the chain which belongs to the *Djabal 'Aibān*, while immediately to the east the town is overshadowed by the *Djabal Nuḡum* which rises 1600 feet above it. Its situation is 15° 23' N. Lat. and 44° 12' E. Long. As the town is 7200 feet above sea-level the climate is temperate, particularly as in summer regular winds blow through the day. In winter the temperature falls to zero at night which brings ice, which, however, disappears again with day. In spring and in mid-summer, especially July, it rains a great deal. Very dry summers are a rare but disastrous exception. Two streams run under cover through Şan'ā' to the Wādī 'l-*Khārid*. They are only full after rain. A regular supply of good water is provided by an aqueduct from the Nuḡum. The soil of the plateau is of volcanic origin but earthquakes are very rare (e.g. one in 657 = 1259) and those insignificant. Lava forms the building material of the better houses while the humbler, and even the city wall, are built of mud. The scanty wood supply of the plateau, little tamarisks (*ṭalḥa*), *dawm*-trees is only of importance as a supply of fuel for the market in Şan'ā'. Thin transparent sheets of marble are still used, as they once were on the citadel of *Ghumdān*, as windows in the upper-class houses. The industries for which the town was noted in the middle ages, like the smelting of silver and the manufacture of the once famous Yamanī cloths have declined considerably. The short curved Yaman swords generally worn, with bone hilts adorned with silver, are still made there. Large well kept gardens are also found within the formerly more thickly populated town. All the fruits of the temperate zone are cultivated: apricots, peaches, apples, quinces, wine-grapes and fragrant herbs. The

Turks have also acclimatised all kinds of vegetables including the potato. The date-palm is only ornamental at this high level. Coffee is grown, notably on the slopes of the Nuḳum.

The present town, the population of which is estimated at 18,000, has three quarters. The Arab quarter stretches from the citadel at the foot of the Nuḳum westwards until it joins up with the once separate suburb Bīr al-Aḏḥab with fine gardens and the official buildings and public offices. About 5,000 Jews live away to the west in the crowded Ḳā' al-Yahūd. Outside the south wall lie the barracks and close to the north wall the tiny town of Sha'ūb. Of the dozen gates only four are usually opened. The chief mosque with two minarets, the so-called "little Ka'ba", probably the old "Ḳalis" (see below), is almost in the centre of the Arab town, which still contains many palaces built by various ruling families that have succeeded one another here. The most important of these is the residence of the Imāms, Bustān al-Mutawakkil, in the north-west of the Arab town. Among public buildings Şan'ā' has a large hospital, a dispensary, about 12 baths, 3 schools, including a technical school and a printing-press.

The routes for traffic are very difficult through the mountainous country. The descent towards the Red Sea is made towards Hudaida. With a view to safety the roads generally lead round the tops of the valleys, for example the Wādī Şunfur with its gentle descent. The road, for example, at Ḳarn Wa'l (Deer-Horn) south of the Djabal Ḥaḏūr Nabī Şu'aib rises to about 9,000 feet and then descends to about 5,000, climbing through the passes of the coffee-growing range of Ḥarāz at Manāḳha to a height of 7,200 feet again and drops down to the Tihāma just outside of Bāḏjil. It takes the regular Turkish post, carried by riding camels in the Sarāt, 2½ to 3 days to cover the distance from Şan'ā' to Hudaida, which is about 100 miles as the crow flies. This route has also a telegraph line which links up with the Syrian-Arabian system. The road to the site of the ancient Ma'rib [q.v.], which is 75 miles E. N. E. in a straight line, and from the region of which salt is still brought to Şan'ā', begins by going round either north or south the outer spurs lying east of the town and then descends to the Djabwī through the Wādī Dhāna with its plentiful water-supply. For the road from north to south via Yarim, the ruins of Zafār, Djanad and al-Ḥūṭa to 'Adan and via Şa'da, Bisha and Turaba to Mekka see above, i. 368 sq. But the pilgrim and commercial traffic to Mekka instead of following this route through the mountain along, begins by striking straight across in the direction of the Wādī Surdud, and from al-Mahḏjam, about 25 miles N. of Hudaida, onwards and then uses the Tihāma road running northwards from 'Adan via Zabīd.

Although Şan'ā' is a very ancient town, no mention of it has as yet been found in the Minaean and Sabaeen inscriptions so far studied, and there is just a possibility that it is mentioned in the Ḥimyar period if the *Şnu* mentioned in the inscription Glaser 424, line 13, is our Şan'ā'; this inscription would date from the middle of the first century A.D. if the king of Saba' and Dhū Raidān in line 3, Ilīsharḥ Yaḥḏib, who wins a victory at or over *Şnu*, can be identified with the Elisar of the *Periplus maris Erythraei*, § 26 (see E. Glaser, *Die Abessinier in Arabien und Afrika*, 1895,

p. 117 sqq.; M. Hartmann, *Der islamische Orient*, 1909, ii. 150 sqq.). Legend and poetry have more to tell us, inspired by the vast ruins of the castle of Ḡhumdān [q.v.]. Shem was the builder of the town and castle and Azāl their ancient name. As this latter was possibly only taken at a later date by Jews and Muslims from Genesis, x. 27, the suggestion that in Şan'ā' we have the Ūzāl of the Bible is as uncertain as Sprenger's explanation (*Die alte Geographie Arabiens*, 1875, § 294) of Şan'ā' as the *Menambis basileion* of Ptolemy, *Geogr.*, book vi., chap. vii., § 38, or Glaser's assertion (*op. cit.*, p. 122, and *Skizze d. Gesch. u. Geogr. Arabiens*, ii. [1890], p. 310, 427) that the old name was Tafidh and that the present name has been brought from the region of Ma'rib.

It was only when with the Abyssinian invasion Yaman became involved in the struggle for world supremacy between Rome and Persia that Şan'ā' is definitely known to have assumed the prominent part which it henceforth played down to the present day in Upper Yaman and with occasional interruptions in the whole of Yaman. Only a few of the events of these fourteen centuries, in which the history of Yaman is reflected in the story of this single town, can be briefly given. About 530 A.D. after the overthrow of the Jewish king Dhū Nuwās, who is said to have persecuted the Christians in Şan'ā' also, Abraha arose and after disposing of his Abyssinian rival Aryāt made the town the seat of the Abyssinian viceroy. He enriched the town with the Christian cathedral, the Ḳalis or Ḳulais (*ekklesia*). The materials are said to have been brought from the ruins of Ma'rib and the workmen and the mosaics to have been sent by the Byzantine emperor. Summoned by the old Yamanī ruling family of Dhū Yazan, Wahraz, Khusrāw I Anūsharwan's general, about 570 drove the son and second successor of Abraha, Masrūk, from the town and established there at first a system of joint administration with the Dhū Yazan, then Persian rule alone, which was, it is recorded, in the hands of his son, grandson and great-grandson after him. In the year 10 (631), according to some stories two years earlier, the fifth governor, Bāḏjām, adopted Islām. In the same year 10, Muḥāḏjir b. Abī Umaiya b. al-Mughīra was sent to Şan'ā' to collect the taxes for the Yaman. In the following year the town was for three months in the hands of the anti-prophet 'Abhala b. Ka'b al-Aswad, who entrenched himself in Ḡhumdān. On the death of Muḥammad, his rising became merged in the general struggle for the independence of the Yaman, the principal champion of which was again one of the Dhū Yazan, 'Amr b. Ma'ḏi Karib. The Medina government found most support with the arabicised Persian nobles, the Abnā' [q.v.]. In 11 (632), Fairūz the Dailami, with the help of al-Muḥāḏjir, was able to restore Muslim supremacy in Şan'ā' and Upper Yaman. It was probably in this fierce fighting that the fortress of Ḡhumdān was destroyed, which, according to the legend, must have been rebuilt once before in the Ḥimyar period by 'Amr b. Abī Sharḥ b. Yaḥṣab, who is known from inscriptions. After the conquest comparative quiet prevailed, particularly as the leaders in Medina dealt gently and tactfully with the notables in and near Şan'ā'. Ya'īla b. Munya whom 'Umar I appointed successor to al-Muḥāḏjir was still in this office on the accession of 'Alī. The latter dismissed him and appointed

'Ubad Allāh b. 'Abbās as, at least so al-Ya'kūbī, ii. 208 *sq.*, tells us, Ṭalḥa refused to be moved to the provincial office to Şan'ā', but with al-Zubair seized all the taxes of the Yaman, which Ya'la had taken with him from Şan'ā' to Mekka. But 'Ubad Allāh or his successor was driven from Şan'ā' by Busr b. Aryāt by order of Mu'āwiya I, according to some versions as early as 40 (660), that is even before the assassination of 'Alī.

There are proverbial sayings such as "farther than Şan'ā'" or "everyone, even the shepherd on the hills of Şan'ā'" (al-Ṭabarī, i. 2752; iii. 2472). When the centre of Islām was removed to Syria and then to the 'Irāk, Upper Yaman appeared even more remote, and its history was in keeping with this. Three forces were resisting the Caliphate, fighting one another, or in certain cases supporting one another: native princes, ambitious governors and leaders of sects, who taught their views far from the capital and endeavoured to put them into practice by founding states; even the arch-heretic 'Abd Allāh b. Sabā [q.v.] is described as "one of the men of Şan'ā'". Although lack of notice is no proof of quiet in this remote town, the Umayyads seem to have had a firm grip of Şan'ā'. Even when the Umayyad Caliphate was breaking up, the general Ibn 'Aṭṭiya was able in 130 (747—748) to send to Marwān II from Şan'ā' the head of 'Abd Allāh b. Ḥamza, who had set himself up there as Khārījī caliph. The situation soon became more difficult under the 'Abbāsids. Homage was not paid to al-Hādī at all. Under Hārūn al-Raṣīd, his fifth governor, Ḥammād al-Barbarī, only succeeded after a nine years' struggle in bringing the rebel Hamdānīd al-Haiṣam b. 'Abd al-Maḍjīd a prisoner from al-Sarāt to Şan'ā'. At this time, about 188 (803), the town was almost in ruins. Things became no better at the beginning of the third century when the 'Alid Ibrāhīm b. Mūsā b. Dja'far al-Djazzār (the "butcher") ruled from Şan'ā' to Mekka, half as an adventurer for his own hand and half as an official governor. The attitude of his opponent, the Walī Ḥamdawaih b. Māhān, was no less ambiguous. In the end the government had to resort to Turkish praetorian generals. Not later than 256 (869) the Ya'furids of the tribe of the Ḥiwālī became masters of Şan'ā' by a compromise, it is true, by the terms of which Muḥammad b. Ya'fur gave the caliph al-Mu'tamid mention in the *khutba* and paid tribute to the Ziyādids at Zabīd. Even their rule was often interrupted in the town itself. On the accession of Muḥammad's son, Ibrāhīm, in 279 (892) his palace was set on fire by citizens of the rival tribe of Shihāb and the Abnā', who were usually at enmity with the latter. Two bodies of Shi'īs then attacked Şan'ā'; from the north, from Ṣa'da, the Zaidī Yahyā b. al-Ḥusain who occupied the town for the first time for four or five months in 288 (901); from the south, with the fortress of al-Mudḥaikhira (see above, i. 369a) as his base, the Ḳarmaṭian 'Alī b. al-Faḍl controlled the town at the beginning of 293 (905) at first for two or three months from its castle. In the never-ending struggle between Ya'furids, Zaidīs, Ḳarmaṭians, mutinous clients of the Ya'furids of the family of Ṭarīf, 'Abbāsīd governors and generals, Şan'ā' was taken no less than twenty times in the twelve years from the first entry of Yahyā to the end of the century (913 A.D.); it three times surrendered after negotiations, and was besieged unsuccessfully some

five more times. According to al-Mas'ūdi, ii. 55, Şan'ā' had a quieter and brilliant period after the death of the Ḳarmaṭian, under the Ya'furid As'ad b. Ibrāhīm, from 303—332 (915—943). On his death family dissensions brought back the old turmoil. The Zaidī Mukhtār, grandson of Yahyā, took the town in 345 (956) but was murdered in the same year. The streets and quarters of the town became a battlefield for the feuds of the two tribal groups of Khawlān and Hamdān. Behind the chief of the latter, al-Daḥḥāk, was the now restored power of the Ziyādids of Zabīd. But in 377 (987) or 379 (989) the last important Ya'furid of Şan'ā', 'Abd Allāh b. Ḳaḥṭān, was once more able to exact retribution and destroy Zabīd. 'Abd Allāh had been able to secure the support of the still numerous Ḳarmaṭians and officially recognised the caliphate of the Fāṭimids. The Ṣulaiḥids followed the same policy; the first of them, 'Alī b. Muḥammad, as Fāṭimid *dā'i* made Şan'ā' his headquarters about 453 (1061) and after half a century put an end to the unrest which had been increased by the fact that the Zaidī Imāms, who penetrated among the hostile tribes from Ṣa'da from time to time, quarrelled among themselves. When Queen Saiyida Ḥurra moved the seat of government to Djubla in Lower Yaman, her relations, the Yāmid, held the town for her for another decade or so, until in 492 (1098) Ḥatīm b. al-Ghashīm made himself independent there. His dynasty, the Hamdānīds, reigned till the invasion of the Yaman by Saladin's brother Turānshāh in 569 (1174), interrupted in the usual way by family quarrels, by another Yāmid interregnum, and especially by the Zaidī Imām of Ṣa'da and Naḍjrān, Aḥmad b. Sulaimān al-Mutawakkil.

But even the fifty-five years of Ayyubid rule showed that Şan'ā' could not be held firmly by a distant power. The Hamdānīd 'Alī al-Wahīd b. Ḥatīm, who had established himself in the mountain fortress of Birāsh about two hours to the east of Şan'ā', in 583 (1187) destroyed the city walls, the castle and the greater part of the town of Şan'ā'. In 595 (1199) and again in 611 (1214) we find the Imām 'Abd Allāh al-Manṣūr holding the town for a brief period. The suzerainty of the Rasūlids [q.v.] of Ta'izz over Şan'ā' began in 626 (1229) at first with vigour. The governors, usually princes or Kurd officers, visited the town and the sultāns themselves often came also. It was at first rarely and only for brief periods captured by the Imāms e.g. in 648 (1250) or 671 (1271). It was not till a century later that Zaidi power was again restored. The Imām Salāḥ b. 'Alī was not only able to make himself secure in Şan'ā' but repeatedly to attack Zabīd, 'Adan and Ta'izz from it in the years 777—793 (1375—1391). His successors were able to ward off successfully the new Ṭāhirid kings of lower Yaman; the first of these, 'Amīr b. Ṭāhir b. Mu'awwada was only able to enter the town temporarily in 861 (1456). In 913 (1507) the Kurd al-Ḥusain, admiral of the second-last Mamlūk Sulṭān Ḳānṣūh [q.v.] al-Ghūrī, took the town to which the latter sent the Mekkan Sharīf Barakāt II b. Muḥammad b. Barakāt I as Walī in 922 (1516); but in the very next year it was regained by the Imām Yahyā Sharaf al-Dīn. When the Ottomans put an end to the Mamlūk dynasty they had to fight to gain the Mamlūk possessions. In 953 (1546) Özdemiş Pāshā entered Şan'ā'; in 1038 (1628) Ḥaidar Pāshā capitulated to the Imām Muḥammad

of the Kāsimī line which held the town till 1087 (1676). Then followed a period of fighting among rival Imāms; the native notables, the Bedouin tribes and the never completely exterminated Ẕarmāṭians thereby gained considerable freedom of action and foreign powers also seized opportunities for intervention. Devastating Bedouin invasions in 1233 (1818) were repeated in 1251 (1835), which induced the Imām al-Nāṣir in 1253 (1836—1837) to negotiate for the sale of the town to the Egyptian Pāshā Mehmed 'Alī. The Turkish general Kībrisli Tawfīk Pāshā was admitted to the town by the Imām in 1265 (1849). His troops were massacred within two days and next year the Imām was deposed by the Mekkan Sharif Muḥammad b. 'Awn who intervened. He appointed a rival Imām who was, however, not able to protect the town; in 1267 (1851) and 1269 (1853) the town was again invaded. During the Ottoman reconquest by Mukhtār Pāshā, Şan'ā' was taken by storm in 1288 (1871) and made the capital of the wilāyet of Yaman and headquarters of the viith Ottoman Army Corps. But the Zaidis were not disposed of. In the spring of 1905 the Ottomans had to vacate the town and the country round before the Imām Maḥmūd Yaḥyā b. Hamid al-Dīn. Although they regained it in the autumn, it took fully five years to secure a rather parlous restoration of the Turkish position. After the Great War Maḥmūd Yaḥyā was recognised as Lord of Şan'ā' and Yaman by the Treaty of Sèvres on Aug. 10, 1920.

In spite of its remoteness and its turbulent history, Şan'ā' has been able to make its contributions to Muslim learning. It was here that 'Abid b. Shariya, by his historical tales, laid the foundation for the fame which induced Mu'āwiya I to summon him to his court. His younger colleague Wabb b. Munabbih, who died in Şan'ā', was also celebrated by his fellow-citizens as their first authority on the Qur'ān. In the second century Şan'ā' was visited by many collectors of traditions, including Aḥmad b. Ḥanbal and Yaḥyā b. Ma'īn, who studied with 'Abd al-Razzāk b. Hammām b. Nāfi', who died in Şan'ā' in 211 (827). Şan'ā' is also noted as the place of birth and death of the poet, grammarian and historian, but above all genealogist and geographer, al-Hamdānī [q.v.]. Of the Imāms of Şan'ā' very many of them have done something to increase the bulk at least of literature; this very fact provoked the other factions to a similar activity. Christians survived for a long time among the various groups of Muslims and the Jews, or they may have settled again there at the time of the greatest expansion of the Nestorian Church; thus, for example, about 225 (840) Thomas of Margā (*The Book of Governors*, ed. Budge, i. 238) mentions Mār Petrus as contemporary bishop of Yaman and Şan'ā'.

The first European to reach Şan'ā' was the Italian Barthema as a prisoner in 1508. The first explorer whose goal was either Şan'ā' or to reach the country of Ma'rib from it, was Carsten Niebuhr in 1763. While the yield of inscriptions from Şan'ā' and vicinity has been slight, valuable collections of manuscripts were obtained there by Glaser, Landberg, Caprotti and Burchardt.

Bibliography: Şan'ā' is often dealt with by Arab geographers and travellers. In addition to Yāqūt we may mention as valuable for economic details also al-Muḥaddasī (*B. G. A.*, iii.),

Ibn Khordādhbih (*ibid.*, iv.), Ibn Ḥawkal (*ibid.*, ii.), Nāṣir-i Khusrāw (ed. Schefer, 1881); Ibn Baṭṭūta, ed. Deffrémery and Sanguinetti, 1853—1858; especially al-Hamdānī's *Ṣifat Dīarīrat al-'Arab*, ed. D. H. Müller, 1884; D. H. Müller, *Die Burgen und Schlösser Südarabiens* (*S. B. Ak. Wien*, vol. xciv. and xcvi.). — In addition to the Arabic universal histories cf. Nöldeke, *Geschichte der Perser und Araber z. SANAD. [See ISNĀD].

SANĀ'Ī, ABU 'L-MADJID MADJĪD B. ĀDAM, of Ḡhazni, was one of the most famous poets at the court of the later Ḡhaznavid kings, where his contemporaries were Saiyid Ḥasan, 'Uḥmān Mukhtārī, 'Alī Fathī and Maḥmūd Warrāk. He gained his livelihood as a court poet by writing verses in praise of the king and of the leading men in the state, but one day, overhearing a well-known eccentric of Ḡhazni drink confusion to "the wretched Sanā'ī, who spent his time in composing mendacious verses in praise of the great and would be obliged to remain silent when asked, at the Day of Judgement, what he had done for God", he was overcome with remorse and left Ḡhazni for Marw, where he led the religious life as a disciple of the Shaikh Abū Ya'qūb Yūsuf. This occurred in the reign of Ibrāhīm (1059—1099), the eleventh king of the Ḡhaznavid dynasty.

Besides a *Dīwān*, containing 30,000 verses, Sanā'ī wrote the *Ḥadiqat al-Ḥaḥika*, a didactic poem on morals and religion, of which the doctors of the law at Ḡhazni disapproved so strongly that they sent it to Baghdād, with a view to its condemnation by the leading jurists and theologians of Islām, but were disappointed by a decision which pronounced the book to be orthodox. After this Sanā'ī returned to Ḡhazni, but continued to lead the religious life. [Besides the *Ḥadiqat* Sanā'ī has left six more *Mathnawī's*, viz. *Tārik al-Taḥīk*, *Ḡharīb-nāma*, *Sair al-'Ibād ilā 'L-Ma'ād*, *Kār-nāma*, *Isḥāq-nāma* and *'Aḥl-nāma*. The *Ḥadiqat*

was commented upon by 'Abd al-Laṭīf b. 'Abd Allāh al-'Abbāsī, who wrote in the time of the Mughal Emperor Shāh Dījhān].

It is said that Bahram (1118—1152), the fifteenth king of the Ghaznawid dynasty, offered his sister in marriage to Sanā'ī, who begged that he might be excused, as he sought neither wealth nor worldly rank. As the year of his death 526 (1131) as well as 576 (1181) is given; the latter is, however, very improbable.

(T. W. HAIG)

ṢANAM (A., plur. *aṣṇām*) is explained in the dictionaries and the commentaries of the Qur'ān as meaning "an object which is worshipped besides God", and it is as a rule distinguished from the word *wathan* (plur. *awṭhān*) as being a thing having shape and made of stone, wood or metal, while the latter is almost synonymous with "picture or painting". This is also the explanation given by Ibn al-Kalbī in his *Kitāb al-Aṣṇām*. The Arabic dictionaries state further that it is a word of foreign origin, derived from the word *shanam*, but do not know the language from which it is borrowed. According to the European philologists, it is etymologically identical with Hebrew *šēlem* "image". A deity named Š-l-m occurs in the Aramaic inscription of Taimā'. Cf. further J. Hehn in *Festschrift-Sachau*, Berlin 1915, p. 36 sqq. The word occurs five times in the Qur'ān (vi. 74; vii. 134; xiv. 38; xxi. 58 and xxvi. 71) and is frequently mentioned in traditions, though not as often as the word *Wathan*. From the description of the idols worshipped by the pre-Islamic Arabs, enumerated by Ibn al-Kalbī, the word Ṣanam appears to apply to objects of very varying character. Some were actual sculptures like Hubal, Isāf and Nā'ila; so were the other idols set up round the Ka'ba. Muḥammad when he entered Mekka as victor is stated to have struck them in the eyes with the end of his bow before he had them dragged down and destroyed by fire. Others were trees like al-'Uzzā and many were mere stones like al-Lāt. Stones are well-known as objects of worship by the Semites in general and the traditionist al-Dārimī states early in the first chapter of his *Musnad* that in the time of paganism

the Arabs, whenever they found a stone remarkable for its shape, colour or size, set it up as an object of worship. These stones called *Nuṣub* (plur. *Anṣāb*) had libations poured over them and were circumambulated as a special act of worship. There can be no doubt that the Black Stone in the Ka'ba is but a survival of this stone-worship. Ibn al-Kalbī states that the Arabs were not content with setting up stones for idols, but even took such stones with them on their journeys. The word Ṣanam, however, does not mean a "god"; it always appears to have a derogatory meaning. For this reason it is found only very rarely in verses ascribed to poets of the time of paganism. The passages are so few which I have found that I can enumerate them; the verses are by Zaid b. 'Amr b. Nufail (Ibn al-Kalbī, *Kitāb al-Aṣṇām*, p. 22, 2 = Ibn Hishām, *Sīra*, p. 145, 10), Kāshid b. 'Abd Allāh al-Sulamī (*Aṣṇām*, p. 31, 10 = *Khizāna*, iii. 245, 12), and most instructive of all is the verse of 'Abid b. al-'Abras (*Diwān*, ed. Lyall, ii., verse 6 = *Aṣṇām*, p. 63, 4): "And they took in exchange for their god Ya'būb an idol". In the poetry after Islām the word is used by al-Kuṭāmī (*Diwān*, ed. Barth, 23, verse 25) and Ibn Kaīs al-Ruḳaiyāt (ed. Rhodokanakis, 61, verse 27) in the ordinary meaning of "idol, Götze". The numerous names of Arabic idols with all that can be traced about them in ancient Arabic literature are found in the works named in the bibliography. In the Qur'ān are named as idols of the past Wadd, Suwā', Yaghūth, Ya'ūq and Nasr. The chief idols still worshipped in the Ḥidjāz at the time of the Prophet were al-'Uzzā, al-Lāt, Manāt, which were female godheads, and Hubal, who seems to have been the chief male idol; his statue was of red granite.

The enumeration of the names of the idols does not really belong to this article as the proper name for them is probably covered by the word *Nuṣub*. As deities the various idols had special attendants (*Sādin*, plur. *Sadana*), whose office was in most cases hereditary and who accepted sacrifices brought by the worshippers, performed the sacrifice and smeared the idol with the blood of the victim. The worship was not continuous, but appears to have been once or twice a year at the beginning of autumn and spring. Then the worshippers in their circumambulation would touch or kiss the idol, the object being to derive from the godhead some of its latent powers. These festivals of worship were the cause of the peculiar Semitic custom of pilgrimages to venerated deities. Though the gods had their special places and were particular to certain tribes, other tribes would come to them from great distances during the so-called Holy Months when warfare was suspended. In this way long before Islām the various Arab tribes maintained continual communications. Growing Islām was from the very beginning intent upon the destruction of all traces of pagan idolatry and was so successful that the antiquarians of the second and third century of the Ḥidjra could glean only very scanty details. Some of the idols were made use of for other purposes, as for example, the idol *Dhu 'l-Khalasa*, a white piece of marble on which a kind of crown was carved and which was worshipped at Tabāla, a place on the road from Mekka to Yaman, was in the time of Ibn al-Kalbī (about 200 A. H.) used as a stepping-stone under the door of the mosque at Tabāla. Other stones which had been worshipped as idols were actually used as

corner-stones of the Ka'ba and as such we must consider also the Maḳām Ibrāhīm.

(F. KRENKOW)

SANĀR (P., a corruption of *sad ainār*), the name given in the reign of Fāṭh 'Alī Shāh of Persia (1212—1250 = 1797—1834) to a silver coin, the half 'abbāsī or maḥmūdī; it weighed 36 grains (2.34 grammes). With its multiples it was abolished at Fāṭh 'Alī's reform of the currency in the thirtieth year of his reign.

(J. ALLAN)

SANDĀBIL, said to be the capital of China. The name and description of the town in Yāqūt (*Mu'djam*, iii. 451, 5) and Zakariyā al-Kāzwinī (*Adjā'ib al-Maḥlūkāt*, ii. 30 sq.) are taken from the undoubtedly fraudulent story of his travels by Abū Dulaf Miṣ'ar b. Muḥalhil (see the art. *Miṣ'ar*), who claims to have accompanied an embassy of the Chinese king Kālin b. al-Shakhī to the Sāmānid Naṣr b. Aḥmad († 331 = 943) from Khurāsān back to China. J. Marquart (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, p. 84 sqq., esp. p. 89) endeavours to show that Sandābil and Kan-čou (cf. the art. *KANSU*) are identical and that we have to see in the sender of the embassy "not a prince of one of the short-lived dynasties after the fall of the T'ang dynasty but the Khagan of the Uigurs of Kan-čou". This Khagan is said "to have felt threatened by the steadily increasing power of the Kitan", and "to have sought support and an alliance from the powerful Sāmānid". On the question of the origin of the name Sandābil for Kan-čou, Marquart only gives the suggestion made to him by de Goeje that Abū Dulaf confused Kan-čou with Čing-tufu (in Marco Polo Sindafu), well known as the capital of the province of Sz'čwan, where a separate dynasty actually did rule at that time. According to Marquart, "the latter town must be considered to have been the starting point of the return journey", which is obviously impossible as the return journey is described as being made by sea. So long as Abū Dulaf's story is not confirmed from any other source, the question will remain unsettled what relation his story of his journey and the alleged reason for it bears to historical facts. Nowhere is there the slightest mention of embassies from China to Khurāsān or vice versa nor of the matrimonial alliance said to have been arranged (Yāqūt, iii. 45, 22).

(W. BARTHOLD)

SANDAL, Sandalwood. According to al-Nuwairī, numerous varieties are distinguished. The majority, especially the white, yellow and red kinds, are used for the manufacture of fragrant powders on account of their pleasant smell; they are also used in medicine, while other varieties again are used by turners and furniture-makers or for the manufacture of chessmen, etc. At the present day the *pterocarpus* imported from Southern Asia, the

islands of the Malay Archipelago and Africa is used for fine furniture and the waste as dye-woods.

SANDJAK (T.), 1) flag, standard, banner (Arabic *liwā*), especially of a large size (more important than the *bayrak*, Ar. *rāya* or 'alam) and suitable for fixing in the ground or hoisted permanently on a monument or a ship; 2) (nautical term) ensign; pennant (*ikindji sandjak*), starboard; 3) formerly a military fief or *khas* of a certain extent in the Ottoman empire; 4) a Turkish administrative and territorial division; 5) (in the expression *sandjak tiken-i* or *diken-i*, from the Turkish translation of *burhān-i kāfi*, p. 88, 25) a synonym of *sindjan tiken-i* (on this plant see Barbier de Meynard [ii. 101], who gives it as a Persian word).

As al-Kālkashandī pointed out in the xvth century (*Subḥ al-a'shā*, v. 458), *sandjak* comes from the verb *sandj-mak* (not *sandjī-mak*, as in the author already quoted) which means "to sting, prick, plant, stick a weapon or pointed object in the body of an enemy or in the ground (cf. Sāmī-Bey, *Kāmūs-i Türki*). The form *sandjak* found in Čaghatai (Boudagov) and even in an old Serbian loanword (Miklosich, *Die türkischen Elemente in den südost-europäischen Sprachen*, Vienna 1884, ii. 50) corresponds to the verb *sanč* of the Orkhon inscriptions (v. Thomsen, p. 42; Radloff, p. 132). Cf. also F. W. K. Müller, *Uigurica*, ii. 78, 30 and 86, 48. In Kirghiz the form used is *shansh* (Radloff, *Wörterbuch*, iv. 949) and in Uriankhay *shanish* and *zanish* (Katanov, *Opit izledovania*, p. 429 and 779, with the meaning "to prick, stab, erect, fix"). Maḥmūd al-Kāshgharī (xth cent.), *Diwān Lughāt al-Türk*, ii. 171, 180, 182 and iii. 310, also gives (iii. 108) *sandjghan* equivalent to *sandjan* (*sindjan*) already quoted, which is a Turkish participle used as the name of a prickly plant.

The word *sandjak* belongs to a family of derivatives which all contain the idea of "point" and mean (the word itself sometimes): harpoon, fork, piercing pain, colic. Such are *sandjgh*, *sandjikkh*, *sandjikkh*, *zanikkh* (Tobolsk), *shanishkik* (Kirghiz), *sandjighi*, *sandji* (whence *sandjī-mak* in Othmanli). We may add on the authority of Abū 'l-Fidā' and the Turk.-Arab glossary published by Houtsma, Leiden 1894, p. 80 and p. 29 of the Arabic text, the proper name *Sandjar*, glossed *vaṣ'an*, in preference to the usually accepted etymology from *Sindjar*, the name of his place of birth (cf. *Recueil des Historiens des Croisades*, i. 1872; cf. Index under *Sindjar*).

Sandjak has passed into a certain number of other languages; more recently into the Balkan languages (cf. the work by Miklosich quoted above and Saineanu, *Insumenta Orientalia*) and earlier into Arabic (cf. Dozy, *Suppl.*; cf. also W. Marçais, *Le dialecte arabe de Tlemcen*, Paris 1902, p. 270, 90, 92) and into Persian where, according to the *Burhān-i kāfi*, it means or meant a "flag, a large metal pin intended to keep on the head a kind of hood worn by women"; "a kind of girdle". In Modern Persian *sandjak* (sic) simply means "pin" (in opposition to "needle") (cf. Nicolas,

Dictionnaire français-persan, under the word "pin"). Freytag took *sandjak* for a Persian word and the Turks still keep the orthography which it has in Persian (*s-n-dj-ā-k*) while they write the verb *şandj* with a *şad*. We may note that in Persian *direfsh* "flag" also means "point" (cf. Vullers), whence the Othmanli word *direwush* (cf. Hind-oglu s.v. "pointe" and "poinçon"). The *Burhān-i kāfī* gives us a variant of *sandjak* in the form *sandjūk*. If it is not a corruption due to the Persian, we have here another example of a Turkish word preserved through its use in Persian. The word *sandj-ūk* is very well explained with the help of the Turkish suffix *-ūk (-ik)* which makes a passive participle from transitive verbs. *Sandjūk* then would mean "sharpened, fixed". The suffix *ak*, with its tendency to designate place-names (which very well fits a flag "fixed" or able to be fixed) seems to have been more in use very early.

The etymological details which are given above without excluding the explanation of *sandjak* by "lance with a pennon" (it is that of al-Ḳalḳashandī who uses the word *rumk*) make very probable the explanation as "flag with a staff sharpened at the foot". Independently of this peculiarity it is difficult to say what was the exact form of the primitive Turkish *sandjak*; did they have a horse's tail (or the tail of a yak of which von Hammer speaks in his definition, *Hist. de l'Empire Ottoman*, xvii. 257) or were they always flags? Were they like the *čalış* (or *shalış* mentioned by Ibn Khaldūn (for the references see Dozy, *Supplément*, under the word *djālīsh*; it has become *hālīsh* by an error in Djewdet Pasha and Ahmed Rāsim, quoted below in the *Bibliography*)? The meaning of these terms may be more indefinite than we think and varied a great deal with time and place. The word *tugh* [q.v.] which it was allowed to take in the meaning "horse's tail", meant, according to al-Kāshghārī, not only a "flag of silk or orange brocade" but also "drum", another symbol of sovereignty (i. 169; iii. 92). Ibn Khaldūn confuses the flag with the "parasol" of the prince or *djīr*, better *čatr* (Persian) pronounced *čatr* (al-Kāshghārī, i. 340), then *čadr* "tent", by the Turks who have preferred these words to their old *čovač* "silk parasol of the Turkish Khaghans" (al-Kāshghārī, ii. 149, 17 and iii. 45, 15; cf. the Othmanli *čoghach* "a place in the sun" and a passage in Rabghuzi in Radloff, *Wörterbuch*, iv. 59 under *djawač*!).

Whatever its primitive form was, the *sandjak* appears among the Saldjūks as an insignium of royalty. In the Turkish text of Ibn Bibi (ed. Houtsma, *Recueil*, vol. iii.) the word *sandjak* is always found in connection with the title Sultān (*Sultān-ih sandjaghī*). This standard is mentioned (p. 135—136, 144, 169, 170, 289 and 357) à propos of different sieges of strong places on the walls of which it was placed after capitulation. Sometimes (p. 135—136) it is the besieged themselves who, ready to surrender and no doubt seeing in this banner a guarantee of protection against pillaging, asked for a *sandjak* to be sent. It is not, however, necessary that the Sultān himself should be present and the historian (p. 357) shows us the *beylerbeyi* setting out on an expedition with the standard of the sovereign.

For a long time the neighbouring princes and vassals of the Saldjūks respected their privilege but the Atābeg of Moṣul, Saif al-Dīn al-Ghāzi, son

of 'Imād al-Dīn al-Zangī (d. Nov., 1149), was the first of the *aṣḥāb al-atraf* to have a *sandjak* carried unfurled over his head (Ibn al-Athīr, *Hist. des Atabeks de Mossoul, Recueil des hist. or. des Croisades*, vol. ii., part 2, p. 167).

The Aiyūbids followed the example of their predecessors.

In 1198 the Sultān of Egypt, al-Malik al-'Azīz, conferred on his nephew al-Malik al-Mu'azzam 'Isā when he became prince of Damascus "the *sandjak* and the *liwā*" to display throughout the world" (*Kitāb al-Rawḍatayn, Rec. des Hist. des Croisades*, v. 117). In 1250 Aibak the Turkoman, married to an Aiyūbid princess and proclaimed Sultān of Egypt, took part in a procession in which the royal banners were unfurled for him (*al-sanādīk al-sultāniya*; cf. Abu 'l-Fidā', *Annales*, ed. Reiske, iv. 516 of the Arabic text and 515 of the Latin translation). Among the Mamlūks, a distinction was made between the *sandjakdār* "royal standard-bearer" and the ordinary *'alamdār* (Gaudefroy-Demombynes, *La Syrie à l'époque des Mameloucs*, Paris 1923, p. xcvi); afterwards, in Turkish Algeria this distinction disappeared; cf. *Mélanges René Basset*, ii. 35 (under the press).

At the end of the Saldjūk empire in Asia Minor the *sandjak* became one of the insignia of investiture of new sovereigns, notably of the first Othmanli Sultān. In 1280 after the capture of Karadja Hīṣār by 'Othmān, Sultān 'Alā' al-Dīn II to celebrate this conquest sent him by the hands of Aḳ Timur, 'Othmān's nephew, a *sandjak* "with its accessories" (*sandjak yaraghī*), as 'Ashīk Pasha Zāde tells us (ed. Constantinople 1332, p. 8 sq.); Neshri prefers another version (cf. Nöldeke, *Z. D. M. G.*, 1859, xiii. 207—209). 'Ashīk Pasha Zāde mentions in this connection that 'Othmān thus became *sandjak-bey* and we know that it was from this time that the *khutba* was read in his name (for the first time at Karadja Hīṣār by Dursun Faḳīh). According to the same authority, the *sandjak*'s were made of cloth of Philadelphia or Ala Shehir (p. 56).

When they became independent in their turn, the Ottoman princes appointed *sandjak-bey*'s in larger and larger numbers and the *sandjak*, somewhat diminished in splendour, became identified with the territory over which it floated; it appears henceforth as the name of a political division partaking both of the nature of the military fief and of the administrative representative of the central authority. The *sandjak* generally carried with it a *dirlik* (for *dirilik*, "life, livelihood, fief") or, more accurately, a *khāṣṣ* (a name given to a *dirlik* of an annual revenue of over 100,000 aspers). Above were the larger *khāṣṣ*'s of the *beylerbeyi* or governors-general of the provinces; below the smaller fiefs, the *siyāmet*, *timār* and *klīlāḳ*, to give them in their order of importance. Sometimes the Sultāns granted a *sandjak* to their children (d'Herbelot, *Bibl. Orient.*, p. 755; this is what was called a *sandjagh-a ḳk-mak*, Selānikī, p. 286) or to a *beylerbeyi* or retired vizier (for examples see Na'ima, ii. 23, iii. 336 and passim). The *sandjak-bey* or *mīr-liwā* who had a right to a horse's tail were not in principal the owners of their districts; they had the "possession" or *teşarrüf* of them, and were their *müteşarrif*. This term used from the xviith century (Na'ima, ii. 23, 8, 179, 13 and passim) was destined to become a rank in the administrative service (cf. below).

Sometimes the *sandjak-beyi* was only an official

appointed and given an annual salary (*‘ulūfa*), which meant that his *sandjak* was awarded by *sāliyāne*. This was the case with all the *sandjak*'s of the remoter *eyālet*'s of Asia, like Baghdād, Baṣra, Yemen, Ḥabesh, Laḥsā and Egypt, and for three *sandjak*'s (maritime) in each of the *eyālet*'s of the archipelago and of Cyprus (Ḥādjdī Khalifa, *Toḥfet el-Kibār*, f. 67). At the beginning of the sixteenth century there were 290 *sandjak*'s divided among 25 *eyālet*'s.

In case of mobilisation, the *sandjak-beyi* became military officer (*mīr liwā*²) and presented themselves at the appointed place of assembly (e.g. the plain of Isakci in Rumelia) with the troops collected by their vassals or subjects. The maritime *sandjak*'s were bound to equip a ship and make war by sea (*deryā-ya eṣmek*), sometimes at the same time as by land (*kara-ya eṣmek*). The word *sandjak* passed into the sea-faring language of the Turks and Arabs with considerable variations of meaning which can be found in the various dictionaries, notably that of ‘Alī Seiyidi, *Resimli kāmūs-i ‘Oṯmānī*, Constantinople 1325, p. 55 I (cf. for Arabic Ben Cheneb, *Mots turcs*, p. 48; Brunot, *Notes sur le vocab. mar. de Rabat*, Paris 1920, p. 80; see also *J.A.*, Jan.—March, 1922, p. 109). By an archaism which has survived in administrative language the word *sandjak* has continued to be used in the sense of “symbol of investiture” for a *beylerbeyi* for example (Wāṣif, *Tārīkh*, ed. of 1219, i. 81, copy of a firmān of 1175 A.H.) without taking account of the general meaning of “flag”.

According to Mouradja d’Ohsson, who does not give his authority, it was Murād III (1574–1595) who ordered the division of the empire into *eyālet*'s and *liwā*'s (*Tableau général de l’Empire Othoman*, vii. (1824) p. 276–277; cf. von Hammer, *Hist. de l’Emp. Ott.*, vii. 288–289, 40). Neither Pečewi nor Selānikī mention these reforms.

Sultān Maḥmūd II, having just after the destruction of the Janissaries (1826) suppressed the feudal military organisation, which died a natural death in 1837, the *sandjak* or *liwā* or *müteṣarriflik* definitely acquired the meaning of an administrative subdivision pure and simple. The *müteṣarrif*, governor of the *sandjak*, was henceforth a civil official, distinct from the *mīr liwā* who now became the modern “general of brigade”.

The division into *sandjak*'s or *liwā*'s was maintained by the law of the *wilāyet*'s (the former *eyālet*'s) of Nov. 8, 1864 (the administration of the *sandjak*'s is dealt with in Chapters iv. and v., articles 23–37) and by that of Jan. 21, 1871 (Administration of the *sandjak*'s, articles 35–42 and 90).

The government of the Grand National Assembly abolished the *sandjak* or *liwā* by the fundamental law of Jan. 20, 1921, called *teshkilāt-i esāsiye*, of which article 10 runs: “Turkey is divided, in accordance with geographical necessities or economic relations, into *wilāyet*'s and the *wilāyet*'s into *kaḍā*'s. The latter are divided into *nāhiya*'s”. In practice this arrangement was carried out by turning the old *sandjak*'s into *wilāyet*'s.

SANDJAK SHARIF (r. “illustrious banner”), the standard of the Prophet³ preserved in Constantinople. It is 12 feet long, surmounted by a silver cube containing a copy of the Kur’ān said to have been written by the Caliph ‘Uṯmān himself. It is covered with another flag attributed to the Caliph ‘Umar and with 40 covers of taffeta, the whole being in a case of green cloth; in the centre of all these covers is a little copy of the Kur’ān attributed to ‘Umar and a silver key of the Ka’ba presented by the Sharif of Mekka to Selīm I.

This standard brought from Egypt by this Sultān in 923 (1517) was at first deposited in Damascus to accompany the caravan to Mekka; then, in the reign of Sultān Murād III, in 1003 (1594) the Grand Vizier Koḍja Sinān Pasha to settle the continual mutinies in the army had it brought via Gallipoli escorted by 1,000 Janissaries of the Syrian garrisons to the camp in Hungary where it made a great sensation among the troops. Taken to the capital it left again next year. Finally in 1005 (1597) Sultān Muḥammad III going to war had this banner carried in front of him, under the care of 300 amīrs at the head of whom marched the Naḳīb al-Ashraf and the Molla of Galata.

Since then the banner has never left the Serāi except when the Sultān or Grand Vizier commanded an army in person. A tent was reserved for it; it was mounted on a staff of ebony wood ornamented with circles and with silver rings to which the standard was attached. At the end of the campaign it was taken from its fastenings and enclosed in a richly decorated box with many ceremonies, prayers and the burning of incense of aloes and ambergris. It was kept in the palace in a kind of chapel containing other relics of the Prophet such as the *Khirḳa-i Sharif* [q. v.]. Since the xviiith century 40 officers from the corps of the *Haram-kaḥudḍi* have been on guard over it with the title of *Sandjak-dār*.

On Dhu ‘l-Ka’da 18, 1182 (March 29, 1769), the Sultān Muṣṭafā III having sent the standard to the Grand Vizier Muḥammad Pasha with great pomp, the ceremony provoked massacres in which there were Christian victims and even Europeans of high rank. The Austrian internuncio, M. de Brognard, only escaped with difficulty from the fury of the fanatics. On Dhu ‘l-Ka’da 9, 1241 (June 15, 1826), the Janissaries having mutinied, Sultān Maḥmūd II took the *sandjak sharif* in person and gave it to his defenders who planted it on the pulpit of the mosque of Sultān Aḥmad III. This move contributed remarkably to the success of the reformer Sultān’s enterprise.

SANDJĀN RĀY (or **SUDJĀN RĀY**; cf. Rieu, i. 230; iii. 908), author of a general history of India up to the early part of the reign of Awrangzēb [q. v.], entitled *Khulāṣat al-Tawārīkh*. Nothing is known of his life except the few facts that he mentions himself and the remarks added by transcribers of his book. In his preface (lith. ed., p. 6, 11) he tells us that from his youth upwards he had followed "the profession of drafting letters i. e. of a Munshi" under administrative and revenue officials; he was born at Batāla in the Panjāb (p. 71, 20); he had visited Kābul (p. 86), possibly Thatta (p. 60, 6), and the Pindjāw Gardens at the foot of the Himalayas (p. 35, 16). He based his *Khulāṣa* on a number of Persian historical works, which he enumerates, and having revised it two or three times completed it, after two years' labour, in the 40th year of Awrangzēb's reign, 1107 (1695). But the narrative ends with the events of 1068 (1658). His copyists tell us that he was a *Khatri* (Bhandari or Dhiri), and one states that he was proficient in Hindī, Persian and Sanskrit (Rieu, i. 230, where the passage cited is obviously corrupt); there is, however, no other evidence of the author's knowledge of Sanskrit. The work claims to be only an "abridgement of histories", but is of special interest as being written by a Hindu; it contains a valuable section on geography, the author being particularly well-informed about the Panjāb.

Much of the *Khulāṣa* was incorporated in their own works by the authors of the *Siyar al-Muta'akhkhirin* (Elliot, viii. 194) and the *Akhbār-i Mahabbat* (id., viii. 376). The '*Arā'ish-i Mahfil* by Afṣōs [q. v.] is an adaptation of it in Urdu.

S., 1894, p. 733—768; 1895, p. 211; Elliot-Dowson, *History of India*, viii. 5—12; Rieu, *Catalogue of the Persian MSS. in the British Museum*, i. 230; G. Sarkar, *India of Awrangzib*, p. xi. sqq., 1—122, Calcutta 1901.

(MUHAMMAD SHAFI')

SANDJAR B. MALIK SHĀH NAṢIR AL-DIN (afterwards MU'IZZ AL-DIN) ABU 'L-ḤARITH, a Saldjūk Sultān. According to the usual statement, he was born on Raddjab 25, 479 (Nov. 5, 1086), according to some, however, two years earlier, on Raddjab 25, 477 (Nov. 27, 1084). His muhammadan name was Ahmad; on the name Sandjar, see p. 148b. After the assassination of his uncle Arslān Arghūn [q. v.] in 490 (Dec., 1096), the young Sandjar was appointed governor of Khurāsān by his brother Barkiyārūk [q. v.]. Some time afterwards, however, the third brother, Muhammad, rebelled against Barkiyārūk; in Raddjab, 493 (May—June, 1100), the latter was defeated and had to retire to Khurāsān. In the meanwhile Sandjar had taken the side of Muhammad, who was his brother on his mother's side also and when Barkiyārūk made an alliance with the Amīr Dādāh, who ruled Tabaristān, Djurdjān and a part of Khurāsān, Sandjar took the field against the combination and inflicted a severe defeat on them. In the events that followed, Sandjar stood loyally by his brother Muhammad. During the war between Barkiyārūk and Muhammad, Badr Khān, lord of Samarkand, tried to take advantage of the absence of Sandjar to extend his rule over Khu-

rāsān, having come to an understanding with one of Sandjar's amirs named Kundoghdi, but was captured and put to death in 495 (1101/1102), whereupon Sandjar appointed his sister's son Muhammad Arslān Khān b. Sulaimān b. Boghrā Khān as prince of Samarkand and the provinces on the Djaiḥūn. Sandjar also came into conflict with the Ghaznawid Arslān Shāh b. Mas'ūd [q. v.]. The latter captured Ghazna (510 = 1117) and installed Bahrām-shāh (see the art. GHAZNAWIDS) as Sultān under Saldjūk suzerainty. After the death of Sultān Muhammad on Dhū 'l-Hijjdja 24, 511 (April 18, 1118), the sultānate was to go to his son Maḥmūd, in accordance with his testamentary instructions; but neither Maḥmūd's brother Mas'ūd, lord of al-Mawṣil and Ādhar-baidjān, nor Sandjar were satisfied with this arrangement. Maḥmūd was able without much difficulty to come to an arrangement with Mas'ūd but it was more difficult to satisfy Sandjar. The latter left Khurāsān with a large army and on Djumādā I 2, 513 (Aug. 11, 1119), a battle was fought near Sāwa. Victory at first inclined to the side of Maḥmūd, but as his troops were thrown into confusion by Sandjar's elephants, the battle ended in the complete rout of the former. After long negotiations an agreement was reached by which Maḥmūd was recognised as governor of the 'Irāk with the exception of al-Raiy, but Sandjar's name was to be mentioned first in the *khutba*. When Muhammad Arslān Khān of Samarkand became crippled he handed over the government to his son Naṣr Khān. The latter was soon afterwards murdered, whereupon his father appealed for assistance to Sandjar. Before the Sultān arrived in Samarkand a brother of Naṣr Khān's had succeeded in putting down the rebellion, whereupon Arslān Khān sent to Sandjar and endeavoured to persuade him to go back. But this aroused the anger of Sandjar, who at the same time suspected Arslān Khān of having designs on his life so that he laid siege to Arslān Khān in the fortress in which he had taken refuge. When Arslān Khān was forced to surrender in Rabi' I, 524 (Febr./March, 1130), Sandjar gave him his life but appointed the Amīr Ḥusain (or Hasan) Tegin and on his death soon after Maḥmūd b. Muhammad Khān b. Sulaimān prince of Samarkand. In Shawwāl, 525 (Sept., 1131), Sultān Maḥmūd died. According to his last will, his son Dā'ūd was to succeed him, but his two uncles, Saldjūk and Mas'ūd, also set up as claimants.

In Djumādā I, 526 (March/April, 1132), the contesting parties agreed that Mas'ūd should be recognised as Sultān and Saldjūk as heir apparent, while the administration of the 'Irāk was to be left to the Caliph al-Mustashid. But Sandjar was not at all satisfied with this arrangement. On the contrary he proclaimed Tughril b. Muhammad, who was with him in Khurāsān, as Maḥmūd's successor and made an alliance with 'Imād al-Din Zankī, whom he appointed governor of Baghdād, and Dubais b. Ṣadaqa [q. v.], who received the principality of al-Hilla. War was now inevitable. On Raddjab 8, 526 (May 25, 1132), Mas'ūd was defeated by Sandjar at Dinawar, whereupon the latter retreated to Khurāsān. In Dhū 'l-Kā'da, 529 (Aug./Sept., 1135), he set out against Ghazna because Bahrām-shāh was endeavouring to make himself independent. But this affair was settled without bloodshed. Bahrām-shāh submitted and

was pardoned. Sandjar also became involved in a long struggle with Atsiz b. Muḥammad [q. v.], lord of Khwārizm. The Qara-Khitāi also endeavoured to take the town of Samarḳand whereupon Sandjar crossed the Djaïḥūn at the head of a large army. On Šafar 5, 536 (Sept. 9, 1141), however, he was defeated and had to take to flight, thus losing the whole of Transoxania. On Sandjar's struggle with the Ghōrid Ḥusain see the art. DJASHĀNSŌZ and GHŌRIDS. In 548 (1153) the Ghuzz [q. v.] also rose. Sandjar took the field against them but was defeated and taken prisoner and only obtained his release in Ramaḍān, 551 (Oct./Nov., 1156). He died on Rabi' I 26, 552 (May 8, 1157). After the death of this clear-sighted and vigorous ruler the Salḍjūk empire began rapidly to approach its dissolution.

ŠANHĀDJĀ (Ibn Khaldūn tells us that the pronunciation of the word approaches *Zanāga*; both forms are still known. On the other hand we know that the Šanhādja have given their name to the Senegal which bordered on their territory). The Šanhādja are one of the branches or one of the great confederations of the Berber people. According to the theories of the western Muḥammadan genealogists, they are descended by Šanhādī from Bernes b. Berr like the Ketāma of Little Kabylia and the Mašmūda of the extreme Maghrib. No criterion, linguistic or other, has so far been able to justify this grouping. We do not know what was the kind of life led by the Šanhādja in ancient times and where they lived. In the course of the middle ages their name frequently appears; they were very numerous; their territory extended all over both Maghribs and the Sahara. Among them were great nomads (some still are to this day, notably the Tuāreg of Hoggar) and settled tribes, of whom it is not possible to assert that they previously led a nomadic life; such are the Telkāta. The Šanhādja are contrasted with the other great group, that of Zenāta [q. v.] who in the latter part of the middle ages succeeded in supplanting them. The Šanhādja reached their zenith in the first half of the middle ages or more exactly in the xth—xiith centuries (1vth—vith A.H.). This is the period when those whom Ibn Khaldūn considers Šanhādja of the first and second race appear in the light of history. We must, of course, use the term race with very great reservations. In any case it should be observed that several times the Šanhādja of one of the groups, wishing to secure the help of the Šanhādja of another group, appealed to the sense of solidarity due to common origin.

The first race, that of the Telkāta, in the tenth century occupied that part of the Central Maghrib which now corresponds to the department of Constantine without the Kabylia. The settled tribes and especially the descendants of the Banū Zīri

founded or ruled over centres of which the chief was Ašhīr [q. v.] in the south of Algeria. Supporting the policy of the Fātimids of Kairawān they fought during the whole of the tenth century against their neighbours in the west, the Zenāta, clients of the Umayyads of Cordova. They moved their action to the east as a result of the departure of the Fātimids to Egypt. The family of Zīrids ruled in the name of the Fātimids at Kairawān. A split led to the foundation of the kingdom of the Ḥammādids of al-Qal'a [q. v.]. Much weakened from the second half of the eleventh century onwards these two kingdoms disappeared in the middle of the twelfth, when the Almohad thrust into eastern Barbary was made. A little group of Šanhādja bearing the name survived into our times in the south-east of Algeria.

The second race of Šanhādja is represented by the great nomads who occupied in the xth—xith centuries the desert between the meridian of Tripoli and the ocean. The more important tribes were the "carriers of *liḥām*", Lamtūna and Masūfa, who played a considerable part in the religious and political history of Barbary and Spain under the name of Almoravids [q. v.]. Al-Bakrī gives us curious details regarding their style of life in the desert, their food and their tactics. The Tuāreg form part of this group.

Certain less powerful groups located in the Sūs and the adjoining valleys of the Moroccan Atlas belonged to the same Šanhādī stock. These are the Lamṭa and Gazzūla nomads and the settled Haskūra. The latter joined the Almohad movement.

Finally a third stock of Šanhādja is said to have lived scattered in the extreme Maghrib around El-Qsar, in the plains of the Šāwīya in the region of Tāzā and in the Rif. The Šanhādja Boṭṭuiya and Uryāghol have remained in the last named place to the present day. The name Šanhādja is still borne by one of the two *leff* into which the tribes of Northern Morocco are divided.

Bibliography: Ibn Khaldūn, *Histoire des Berbères*, text i. 194, transl. ii. 1 sqq.; al-Bakrī, ed. SANTA MARIA DE ALGARVE, or St. Mary of the West, in Arabic *Šhantamariyat al-Gharb* (to distinguish it from Santa Maria of the East, in Arabic *Šhantamariyat al-Sharq* or *Šhantamariyat Ibn Razin*, the modern Albarracín, a town in the province of Teruel in Spain; cf. above, i. 250 sq.), formerly a Muslim town in the south-western part of al-Andalus of which the Portuguese have preserved the Arabic name Algarve = *al-Gharb* (cf. above, i. 256b). *Šhantamariyat al-Gharb* is usually identified with Faro, a little Portuguese sea-port to the north-west of Cape St. Marie, on the railway from Lisbon to the frontier station of Villareal de São Antonio, 35 miles from the latter. The Arabic ethnic from the name of the town is *Šhantamari* (cf. under this name the article on al-A'lam al-Šhantamari).

In the Muslim period, Santa Maria de Algarve belonged to the province of which Silves (Ar. *Šilb*) was the capital. It was a little town of slight importance till the Umayyad Sulaimān al-Musta'in Billāh entrusted the government to a

man of obscure birth, Abū 'Uthmān Sa'īd b. Hārūn, a native of Merida, about 407 (1016). The latter in his new residence set up as an independent prince and reigned till his death in 434 or 435 (1042—1043). His son Muḥammad succeeded him and took the honorific title of al-Mu'taṣim, but in 444 (1052) he was deposed by the 'Abbāsid Abū 'Amr al-Mu'taḍid who annexed the little principality of Santa Maria to the kingdom of Seville. But during the brief period of its independence the two princes who reigned there embellished the town and gave it numerous fine buildings, if we may believe the descriptions by al-Idrisi, Yāqūt and al-Ḳazwīnī; it had a cathedral-mosque and other places of worship and a church containing very beautiful columns.

Santa Maria de Algarve from the xiith century shared the lot of Seville and with the conquest of Algarve by Sancho II in 1249—1253 it passed finally to the Portuguese.

(E. LÉVI-PROVENÇAL)

SANTAREM, in Arabic *Shantarīn* (ethnic: *Shantarīnī*), a town in Portugal in the region of the Estremadura, 41 miles N. N. E. of Lisbon, 350 feet above sea-level on the slope of a hill on the right bank of the Tagus. This town, the ancient Scalabis or Praesidium Iulium of the Romans, takes its name from St. Irene (Santa Irene) who was martyred in 653 and thrown into the river at Thomar 30 miles farther up the river; her body stopped before Santarem and the name of the saint became that of the place. All the geographers of Muslim Spain give Santarem as the chief place in the district. According to al-Idrisi, its citadel on the heights was impregnable; the rest of the town stretched along the Tagus.

Conquered at the same time as the south-west of the Peninsula, it occasionally rebelled against the authority of the Umayyad Caliphs and it was for this reason that it was taken by the Ḳā'id Aḥmad b. Alyās by order of al-Nāṣir in 316 (928). A few years later, in 327 (938), the town was the scene of the rising by Umayya b. Ishāk against the Caliph 'Abd al-Raḥmān III who had just dismissed Umayya's brother Aḥmad from the office of vizier which he held. The rebel made an alliance with the king of Leon, Ramiro II, but Santarem was taken from him by the Caliph's men. At the end of the following century the town and its territory became part of the independent kingdom founded by the Aḥṣāsids (cf. above, i. 178 sq.) of Badajoz at the same time as Evora and Lisbon. On the fall of this dynasty in 485 (1092/93), Santarem was taken by Alfonso V of Castile, but

recaptured by the Almoravid general Sīr b. Abī Bakr b. Tāshfīn in 504 (1111), along with Badajoz and the district of Algarve. Its capture was announced to the Almoravid sovereign 'Alī b. Yūsuf in a letter from the celebrated secretary to the court, Ibn 'Abdūn (cf. above, ii. 354 sq.) the text of which has been preserved for us by the historian al-Marrākushī. Santarem remained in the hands of the Muslims till the fall of the Almoravids and was definitely taken by the first king of Portugal, Afonso Henriquez in 542 (1147) with other Portuguese cities: Lisbon, Cintra, Alcacer do Sal and Evora.

In 580 (1184) after a raid made by the Christian garrison of Santarem into Ajarafe and the defeat of a Muslim army sent from Seville to retake the lost territory, the Almoḥad Sulṭān Abū Yaḳūb Yūsuf b. 'Abd al-Mu'min decided to lead a force in person against Portugal and made great preparations with this end in view. Leaving Marrākush at the beginning of the year, he went over to Gibraltar, Algeciras and Seville; thence he marched on Santarem, then very strongly fortified and defended by a numerous garrison. The siege of the town dragged on and as the Almoḥad Sulṭān was wounded, probably from a bolt from a crossbow, and died from his wound on Rabi' II 18, 580 (July 28, 1184), the siege was raised. After that date no further Muslim attempts to retake the town are noted by the historians. Among celebrated Muslims born in Santarem may be mentioned the famous historian Abu 'l-Ḥasan 'Alī Ibn Bassām born in 542 (1147/48), author of a work entitled *al-Dhakhīra* (on him see F. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898, p. 208 sqq., N^o 171) and the poet Abū Muḥammad 'Abd Allāh b. Muḥammad b. Šāra al-Bakrī al-Shantarīnī, d. at Almeria in 517 (1123—24) (cf. Ibn Ḳhallikān, *Wafayāt al-A'yān*, Cairo, p. 331—332).

AL-SANŪSĪ, ABU 'ABD ALLĀH MAḤMADD (for Muḥammad) B. YŪSUF B. 'UMAR B. SHU'AIB, a learned Ash'arī theologian of Tlemcen, where he was born and died at the age of about 63 on Sunday, Djumādā II 18, 895 (May 9, 1490); his epitaph, however, gives neither day of the week nor day of the month.

He studied Muslim lore as well as mathematics and astronomy in his native town with such teachers as his father Abū Vaḳūb Yūsuf, his full brother 'Alī al-Tallūti, Abū 'Abd Allāh al-Habbāk, Abū 'l-Ḥasan al-Kalasādi, the famous Ibn Marzūq, Kāsim al-'Uḳbānī, etc. He is said to have gone to Algiers where he studied under 'Abd al-Rahmān al-Tha'libī. The scholars of the Maghrib, in whose eyes he was the reviver of Islām at the beginning of the ixth century A. H., all agree in praising his merit, his learning, especially theological, his fear of God and his zeal.

Among his disciples may be mentioned Ibn al-Hādjdī al-Yabdarī, Ibn al-'Abbās al-Ṣaghīr, Ibn Ṣa'd, Abū 'l-Kāsim al-Zawāwī. His works, some of which have acquired great authority in North Africa, are:

1^o. *Aḳīdat ahl al-tawḥīd al-mukḥridja min zulumat al-djahl wa-riḳat al-taḳlīd* or *al-'Aḳīdat al-kubrā*; 2^o. *Umdat ahl al-tawfiḳ wa 'l-tasdid*, commentary on the preceding, publ. with it at Cairo in 1317; 3^o. *Aḳīdat ahl al-tawḥīd al-ṣuḡhrā* or *Umm al-barāḥin* and, more briefly, *al-Sanūsiya*, published several times in Cairo and Fās, transl. into German by Ph. Wolff, *El Sensus's Begriffsentwicklung d. mohammedanischen Glaubensbekenntnisses*, ar. u. deutsch mit Anm., Leipzig 1848; into French by Luciani, *Petit traité de théologie musulmane*, Algiers 1896; Delphin, *La philosophie du Cheikh Senousi d'après son aqida es-sor'ra*, J. A., Ser. 9, x. 356; Luciani, *A propos de la trad. de la Senoussia*, in the *Revue Afr.*, 1898, xlii., No. 231; 4^o. Commentary on the *Umm al-barāḥin*, Algiers, Bibl. Nat., Nos. 653-662, etc.; 5^o. *al-'Aḳīdat al-wuṣṭā* or *al-Sanūsiya al-wuṣṭā*, and 6^o. his commentary, Algiers, Bibl. Nat., No. 632 (70), Tunis 1387-1393; 7^o. *al-Minhādī al-saḍīd fī sharḥ kifāyat al-murīd*, commentary on the didactic poem *al-Ḳaṣīd fī 'ilm al-tawḥīd* (the text of which was published in Tunis in 1311) of Abū 'l-'Abbās Aḥmad b. 'Abd Allāh al-Djazzārī, Brit. Mus., No. 628, 901, 1617 (3), Paris, No. 1268, Bibl. Khéd., ii. 35, Bodl., i. 66, 67, Fās, No. 1571, 1575, 1579, my MS.; 8^o. *Ṣuḡhrā 'l-ṣuḡhrā* and 9^o. his commentary publ. in Cairo in 1304, 1322; 10^o. *al-Muḥaddimāt*, publ. on the margin of the preceding with the commentary of al-Bannānī; Luciani, *Les Prolegomènes théologiques de Senousi*, Algiers 1908; 11^o. Commentary of the *Muḥaddimāt*, Algiers, No. 632 (80), 638 etc.; 12^o. *al-Muḥarrir al-mustawfī fī sharḥ farā'id al-ḥawāfi* Algiers, No. 1450 (20), J. A., 1854, i. 175; 13^o. *Muḥḥaṣar fī 'ilm al-manṭiq*, and 14^o. his commentary, published with glosses by Ibrāhīm al-Baḍjūrī, Cairo 1321; 15^o. *Sharḥ mukmil kamāl al-ikmāl*, commentary on the *Ṣaḥīḥ* of Muslim, Cairo, on the margin of the commentary of al-Ubbi; 16^o. *Nusrat al-fakīr*, Bibl. Khéd., ii. 172, Tlemcen (madrasa), No. 81, Algiers (Great Mosque), No. 88 (270); 17^o. *Sharḥ asmā' Allāh al-ḥusnā*, Tunis, No. 1434(5); 18^o. *Kitāb al-ḥaḳā'iq*, Bibl. Khéd., vii. 620; 19^o. *al-Muḍjarrabāt*, publ. on the margin of *Muḍjarrabāt al-Dirībī*, Būlāḳ 1279, Cairo 1316; 20^o. *al-Ṭibb al-Nabawī*, Brit. Mus., 460, 461, Leiden, 1375, Bibl. Khéd., vii. 145; 21^o. *Hafīza*, Brit. Mus., 119 (2); 22^o. *Umdat ḥawāi*

'l-albāb sharḥ buḡyat al-tullāb fī 'ilm al-istarlāb by al-Habbāk, Algiers, 1458 (2); 23^o. *Sharḥ wāsiṭāt al-sulūk* by al-Hawḍī, Fās, No. 1583, 1585; 24^o. *Ṣalawāt*, Bibl. Khéd., vii. 168; 25^o. *Sharḥ Isāghūdī* (recension of al-Bikāfī), Algiers, 1307(3), 1382(1); 26^o. *Sharḥ Ṣaḥīḥ al-Bukḥārī*, unfinished (my MS.).

AL-SANŪSĪ, SIDI MUḤAMMAD B. 'ALĪ AL-SANŪSĪ AL-MUḌJĀRHĪ AL-ḤASANĪ AL-IDRISĪ, born in 1206 (1791) at Turḥ near Mostaganem (Algeria) in a duar of the *Ḳhaṭā'iba* (Ulād Sidi Yūsuf) of Zaiyānī Berber stock, and died in 1276 (1859) at Djaghbūb (Cyrenaica), the founder of the celebrated modern military brotherhood of the Sanūsiya (the "Senusis").

Taught at first by Abū Rās (d. 1823) and Belganduz (d. 1829) in his native country he went to live at Fes from 1821 to 1828 where he studied Ḳur'anic exegesis, tradition, the principles of law and jurisprudence. He then performed the pilgrimage, going via Southern Tunisia and Cairo to Mekka where he lived from 1830 to 1843 (except for a sojourn in Sabia); there in 1837 he founded the first zāwiya of his order on the Abū Kubais.

Returning to the west he could not stay in Cairo but settled in Cyrenaica, where he founded first the zāwiya of Rafā'a, then of al-Baiḍā near Derna (Dj. Akḥḍar), then Temessa, lastly Djaghbūb (1855), which he peopled with liberated slaves. There he died and was buried.

He had two sons: S. Muḥammad al-Mahdī (born 1844, d. 1901 at Guro), his successor, and S. Muḥammad al-Sharīf (b. 1846, d. 1896). The elder left two sons: S. Muḥammad Idris (b. 1883, given an estate in the west in 1909; Amīr under Italian protection from 1916 to 1923) and S. al-Riḍā. The younger had six sons, S. Aḥmad Sharīf (b. 1880; head of the brotherhood from 1901 to 1925; he took the side of Germany, went to Turkey and since 1921 has been conducting a pan-Islāmic campaign from Angora), S. Muḥammad al-'Ābid (given an estate in the south, in Fezzan, since 1909, he directed the Saharan rising against France in 1916-1918), S. 'Alī al-Ḳhaṭṭābī, S. Ṣafī al-Dīn (president of the Italian Parliament of Cyrenaica in 1921), S. al-Hallāl and S. al-Riḍā.

The headquarters of the order after having been at Djaghbūb (1855-1895) were transferred to Kufra (1895), Guro (1899), then back to Kufra

(1902), while the number of *zāwiya*'s rose from 22 in 1859 to 100 (1884).

Sidī Muḥammad b. 'Alī al-Sanūsī left, in addition to instructions regarding initiation into his order (types of *wird*; *sirr*: *yā Laṭīf*, repeated a thousand times), four works; one on the *uṣūl*, one on a harmony between the Qur'ān and the Ḥadīth (established without taking account of the *taḥlīd* of any of the four rites; although the author calls himself a *Mālikī*, he postulates *idj-tihād*) and two on mysticism, *Fahrāsa*, the enumeration of his "chains of support" (canonical; 150, of whom 64 were mystics) guaranteeing the orthodoxy of his order, and *Salsabil mu'in fi 'l-tarā'iq al-arba'in* containing the *dḥikr* formulae of the "forty" previous orders [see *TARĪQA*] of which his order was to give the quintessence. This last work is the most curious. Although the statements in it are represented as received by oral initiatory transmission, they are, he confesses, taken from the *Risāla* of Ḥasan 'Udjaimī, 1113 (1702), imitated by S. Murtaḍā Zabidī, in his *Ikḍ al-djumūn*; the chapter on the *dḥikr* of the Ḥallādjiya is found word for word in the *Adāb al-dḥikr* of Abū Sa'īd Kādīrī, written in India in 1097 (1686) (MS. Calcutta 1280, cf. the Catalogue by Ivanov) which betrays a common source, probably the *Iḍrākāt* of the Aḥmadi Shinnāwī (d. 1028 = 1619).

His claims to the juridical *idj-tihād* were dismissed at Cairo in 1843 by the learned *Mālikī* Muḥammad 'Alā'ish (*takfir*); the followers of al-Sanūsī do not observe the *Mālikī isbāl*.

Initiated into mysticism at Mostaganem (Kādiriya) and at Fes (Tidjāniya, Taibiya), al-Sanūsī's ideas took definite shape at Mekka, where the influence of his teacher Aḥmad b. Idrīs al-Fāsi (d. 1837 at Sabia), founder of the Khāḍiriya-Idrisiya, the ancestor of the present ruling dynasty of 'Asir and teacher of two other founders of modern brotherhoods (Rashidiya and Anūrghaniya).

Bibliography: For the order see the standard works of H. Duveyrier (1884), Rinn, *Marabouts et Khouans*, 1884, p. 481—515. On the founder and his family: Muḥammad ben-Otsmane el Hachaichi, *Voyages au pays des Senoussia*, Paris 1912; A. Le Chatelier, *Les confréries musulmanes du Hedjaz*, Paris 1887, p. 257—258; E. Insabato, *Rassegna contemporanea*, vi/ii, Rome 1913; E. Graefe in *Der Isl.*, Berlin, iii. 141—150, 312—313; D. B. Macdonald in the *Encyclopaedia of Religion and Ethics*, s. v. SANŪSĪ, p. 194—196.

SAR (P.) "head, extremity of anything", figuratively "idea". From the meaning "head" comes that of "chief" (Lat. *caput*), especially in derivatives. *Sar-i 'asker* (vulg. *ser-asker*) is among the Ottomans "commander-in-chief", "minister of war", transformed by the Arabs of Tunis into *Sārī-asker*. *Sar-dār* (q.v.; English transcr. *Sirdar*), "general"; *sardārī* is the plaited frock coat worn by Persians of the upper classes and by most of the officials (*R. M. M.*, 1914, xxviii. 225, note 2; Brieteux, *Au pays du Lion et du Soleil*, p. 360). *Sar-bāz*, "he who risks his head", a name given to the Persian soldiers since the reforms of Fath 'Alī Shāh (Polak, *Persien*, Leipzig 1865, i. 40). *Sarkār*, "superintendent, surveyor", more frequently used simply as a polite form of address = "Sir", "Monsieur", a title given to the official tax collector in the Euphrates region (*R. M. M.*,

1911, xiv. 256). *Sar-kātīb*, "chief secretary". *Serden ge'di* (Turkish), "he who has renounced his head", a franc-tireur, forlorn hope, marching in the vanguard (Barbier de Meynard, *Dictionnaire turc*, ii. 77). *Sar-lawḥa*, illuminated frontispiece of a Persian manuscript. *Sar-andāz*, a little rug of felt which is placed on the woollen carpet at one end of the room (Chodzko, *Popular Poetry of Persia*, London 1862, p. 99 note).

(CL. HUART)

SĀRA. [See *IBRĀHĪM*].

SARĀ. [See *SERĀY*].

SARACENS. The earliest certain mention of this name is found in the work composed by Dioscurides of Anazarbos about the middle of the first century A. D. entitled *περί ὕλης ἱατρικῆς*, i. ch. 67 (i. 60 of Wellmann's edition, Leipzig 1909—1914) who describes the resin of bdellium (*muḥl*) as a product of a "Saracenic tree" (*δάκρυον ἀπὸ δένδρου Σαρακηνικοῦ*) and adds that it is imported through Petra and is of a quality inferior to Indian bdellium (on this cf. Bretzl, *Botanische Forschungen des Alexanderzuges*, p. 282 sqq.). The most recent editor has, against the evidence of all the manuscripts, not only altered the native name *madlakon* given by Dioscurides, which is vouched for by the Hebrew *be'adlach*, into *mal dakon* but also *Σαρακηνικοῦ* into *Ἀραβικοῦ*. In the contemporary *Hist. Nat.* of Pliny the Elder, vi. § 157, ed. Dellefsen, the Araceni are mentioned among the Arab tribes of the interior whose lands bordered on the Nabataeans, along with better known names like Taveni (Taïy) and Tamudaei (Thamūd); it is natural to find the Saracens in these. Ptolemy (middle of the second century A. D.), v., ch. 17, § 3, mentions the district of Sarakene in Arabia Petraea and locates it west of the "Black Mountains" (*ὄρη τὰ καλοῦμενα μέλανα*) which, according to him, stretched from the Gulf of Faran to Judaea "besides Egypt" (*παρὰ τὴν Αἴγυπτον*). On the other hand in vi. ch. 7, § 21 he mentions the Saracens as a people in the interior of Arabia Felix; according to him, the Skenites and the *᾽Οαδίται* (= 'Ād; var. *Θαδίται*) inhabit the heights towards the north and south of them the Saracens and the Thamydens (Thamūd). According to Stephanus Byzantinus, s. v., Saraka is "a district (*χωρά*) beyond the Nabataeans; its inhabitants are called *Σαρακηνοί*"; under *Ταῖνοι* i. e. Taïy the same author says that they live south of the Saracens, giving as authority the Arabian histories of Ulpianus and Uranios. If Uranios, Stephen's authority, to whom the statement regarding Saraka must also go back, belongs to the period of the last Diadochi, as von Domaszewski (*A. R.*, xi. 239 sqq.) endeavours to prove, this would be the oldest reference to the Saracens. In any case, relying on the passages quoted we must seek the original home of the Saracens on the Sinai Peninsula towards the Egyptian frontier and in the vicinity of the Nabataeans, and B. Moritz has recognised their descendants in the little Beduin tribe of Sawārke, who live at the present day along the coast between Pelusium and Ghazza. These Saracens in the narrower sense may still be referred to in the letter preserved in Eusebius, *Hist. Eccl.*, vi. 42, of the contemporary Dionysios, Bishop of Alexandria, regarding the Christian persecutions in Egypt in the first year of Trajan Decius (249/250): many Christians took refuge in the "Arabian Mountains", where they were sold

by the Saracen barbarians as slaves. In the different versions of the Christian *Διαγεωγραφία* τῆς γῆς, which is based on the Mosaic genealogies and dates from the third century, in the *Liber Generationis Mundi* and in the *Barbarus Scaligeri* (*Mon. Germ. Hist.*, vol. ix. of the *Auctores antiquissimi*, p. 107), in the *Chronicon Paschale* (p. 45, ed. Dindorf), in the *Ancoratus* of Epiphanius (p. 113, ed. Holl), the Saraceni and Taieni are mentioned as people of some importance. In the tractate of Bardasanes *K'ēlābā d' Nāmōsē d'Atrawāṭā* (ed. Cureton, p. 16 of the Syriac text = p. 24 of the translation), which is placed in the beginning of the third century, the Tayōye and Sarakōye, for which the translation of Eusebius gives *Taianoi* and *Sarakanoi*, are the representatives of the independent nomadic Arab tribes; it seems that about the middle of the third century A. D. the tribe of the Saracens, hitherto little known, came to the front among the smaller tribes, incorporated them and disturbed the Roman frontier. In the ecclesiastical historians of the fourth century, Eusebius and Hieronymus, the Saracens are identified with the Ishmaelites of the Bible: they live outside of the province of Arabia in the desert, at Qadesh, in the district of Faran or Midian where Mount Horeb lies, to the east of the Red Sea; they were first of all called Ishmaelites and later Hagarenes and finally Saracens (Eusebius in the *Onomasticon* composed before 336 under Γεράρα, Κυδάρ, Μαδιάμ and Φαράν; Hieronymus in *Eus., Chron.*, ed. Schoene, ii. 13: Ismahel, a quo Ismahelitarum gentes, qui postea Hagareni et ad postremum Saraceni dicti = *Chron. Pasch.*, 94, 18; do., on *Jes.*, xlii. 11, lx. 7, Ez., xxvii.; Epiphanius, *Panarion Haer.*, iv. 1, § 7: Ishmael founds Faran in the desert; from him are descended the tribes of the Hagarenes, also called Ishmaelites, who are now called Saracens). Henceforth the name Saracens is extended to the other Arab tribes also; the profane historians of the fourth, fifth and sixth centuries (Zosimos, Rufius Festus, the Panegyrici, Julianus, Ammianus Marcellinus, the *Scriptores Historiae Augustae*, who, according to modern research, wrote at the beginning of the fifth century, the *Notitia Dignitatum*, Priscus, Malchus, Nonnosus, Eunapius, Menander Protiktor, Procopius) and Socrates and Sozomenos among ecclesiastical historians avoid the Biblical names and prefer to use the term Saraceni and only occasionally "Arabes", Evagrius exclusively *Συνήταί* (cf. Ammianus Marcellinus, xxii. 15, 2: Scenitae Arabes quos Saracenos nunc appellamus, and xxiii. 6, 13: Scenitas Arabes quos Saracenos posteritas appellavit, word for word also in Malchus, *Fragm. Hist. Graec.*, iv. 112). The names Saraceni Assanitae (i. e. Ghassānids) should be noted in Ammianus and Saraceni Thamudeni in the *Not. Dign. Or.*, Ch. 28. Finally, the Arabs in the north, in Mesopotamia and on the Persian frontier became known as Saracens (Marcianus Heracl., *Periplus*, Ch. i. § 17; *Expositio totius mundi et gentium*, ch. 20; frequent in Julianus, Ammianus, Procopius, Menander Protiktor etc.).

After the foundation of the Arabian Empire by the successors of the Prophet, the Byzantines call Saracens all the Muslim peoples subject to the Caliphs, and this name survived into the late Middle Ages even after the decline of the Caliphate of Baghdad, as is shown by the anecdote given by Ibn Battūta (ed. Defrémery and Sanguinetti,

ii. 441), who was greeted in Constantinople by the Emperor as "*Sarākinō*, that is Muslim". The Saldjūks and Turks, on the other hand, are called Persians or Hagarenes. The name Saracens was transmitted by the Byzantines to Western lands through the Crusades and has survived to the present day as the name of the Arab peoples and the products of Eastern lands, as the dictionaries of the Romance amply show.

In striking contrast to the wide distribution of the name Saracen in the west is the fact that the Arabs themselves do not know the name, either for a small tribe or as a collective name for the North-Arabian tribes. The derivation from *saraka* "to rob" (as early as Joseph Scaliger) or *shark* "east" (Relandus) or even from *sharik*, as Sprenger suggested, are all to be rejected; besides, the spelling *sarkī* in the Palestinian Talmud and in the Targum Yerushalmi as well as among the Syrians points to *sarak* as the root, provided that this form is not based on *Σαρακηνός*, Saracenus. H. Winckler (*Altorient. Forschungen*, ii., Ser. i. 74—76) thought he had discovered the word *sharraku* in the meaning "desert-dwellers" in two passages in Sargon's Annals and derived the name Saracens from this. Hieronymus says in his commentary on Ezekiel: Agareni qui nunc Saraceni appellantur falso sibi assumpserunt nomen Sarae ut de ingenua et domina videantur generati; Sozomenos (*Hist. Eccl.*, vi. Ch. 38), Synkellos (ed. Bonn, i. 187) and others have repeated this interpretation of the name; it is once more dishd up to the credulous reader as late as the xviith century in a modern version in the *Travels* of Macarius of Antioch (ed. Balfour, ii. 169).

The descriptions given in various late classical authors of the manners and customs of the pre-Islamic Saracens, e. g. in Ammianus, Sozomenos, Hieronymus (*Vita Malchi*), Procopius Gazaeus, Priscianus and Procopius of Caesarea ought to be collected and annotated.

Bibliography: A. Sprenger, *Die alte Geogr. Arabiens*, Bern 1875, § 328; B. Moritz, Art. SARAKA in Pauly-Wissowa, *Realenzyklopaedie*, and *Der Sinaikult in heidnischer Zeit in the Abh. G. W. Gött.*, New Series, xvi/ii. 9 sq.; O. L. Z., 1912, p. 206 (Eb. Nestle) and 310 (F. Perles); *Philologus*, li. 737 (Th. Nöldeke).

(J. H. MORDTMANN)

SARAGOSSA, a town in Spain, capital of the modern province of this name and formerly capital of the kingdom of Aragon, on the right bank of the Ebro 600 feet above sea-level in the centre of a well watered and flourishing region (la Huerta). The modern Spanish name Zaragoza corresponds to the Latin Caesarea Augusta, a name given in 728 A. U. C. to the military colony founded by Augustus on the site of the ancient Salduba of the Iberians. The name of the town passed into Arabic in the form *Sarakūṣṭa* (*nisha*: *Sarakūṣṭi*) probably through the Gothic form *Cesaragosta*. From the time it was taken by the Muslims until it was regained by the Christians, Saragossa was one of the great cities of the Muslim empire of al-Andalus; its geographical situation gained it the title of "Upper March" (*al-thaḡhr al-a'lā*) of Arab Spain. In the time of al-Idrisī (middle of the twelfth century) it was densely populated; it was known as the "white city" (*al-madinat al-baiḍā*) from the colour of its ramparts built of blocks of tufa. The fruits of its gardens were

reckoned among the best in al-Andalus. The capes of beaverskin made there were famous throughout the Muhammadan world.

Saragossa fell into the hands of the conquering Arabs in 94=712/3 soon after Toledo. Mūsā b. Nušair, having been rejoined by Ṭāriḳ, left this last town and advanced on Saragossa which he took at the same time as the villages and *castillos* which surrounded it. According to Isidore of Beja, it was sacked and its inhabitants treated with the utmost cruelty. It was already a Muslim metropolis when, under the emirate of Yūsuf b. 'Abd al-Rahmān al-Fihri, al-Šumail b. Hātim [q. v.] was appointed governor in 132 (749). He was soon besieged there by Arab rebels and had to abandon the place to one of them. Throughout the second half of the second century A.H., Saragossa saw successive revolts within its walls, which the historians have recorded for us. This is how it came to be in the hands of the local chief al-Ḥusain b. Yahyā al-Khazradjī when the army of Charlemagne besieged it in 778. The Emperor was suddenly summoned away to the banks of the Rhine; he raised the siege and soon afterwards in the pass of Roncevaux, where the Basques had prepared an ambush for him, suffered the fearful disaster the memory of which is immortalised in the *Chanson de Roland*. Two years later, in 164 (780), the Umayyad 'Abd al-Rahmān I marched on Saragossa and captured it. But it was not long before it slipped from the power of the Caliphs and in 175 (791) Hishām had again to besiege it and take it again through his general 'Ubaid Allāh b. 'Uthmān. Again in 181 (797) a rebel declared himself independent there and successive Caliphs had regularly to send expeditions to the Upper March of their empire to suppress rebellions — with more or less success.

At the same time (end of the eighth century) a Saragossa family, the Banū Kasi, attained great power in Aragon. They had adopted Islām; one of its members, Mūsā son of Fortunio, son-in-law of the first king of Pampeluna, Iñigo Arista, declared for the Caliph Hishām and surrendered Saragossa to him. Later, in the middle of the ninth century, the head of the family, Mūsā II, was governor of Tudela and commanded the armies of 'Abd al-Rahmān II which raided the frontiers of France. He helped this ruler to drive off the Normans who had landed in Portugal and in 852, the year of accession of the Caliph Muḥammad, he had in his power all the Upper March, with Saragossa, Tudela and Huesca. He lived like a monarch, exchanged presents with Christian kings, for example Charles the Bald of France. But he was defeated in 860 by the King of Leon, Ordoño I, and killed two years later by his son-in-law, the governor of Guadalajara. On his death the Banū Kasi cast off the authority of the Caliph of Cordova and the latter, Muḥammad, to counteract them allied himself with the Tudjibids.

This Arab family, settled in Aragon since the conquest, had its tribal rights recognised and its chief, 'Abd al-Rahmān al-Tudjibī, was officially appointed its head. In 888 on the accession of Sulṭān 'Abd Allāh, the latter learning that a plot was being hatched against him in Saragossa commissioned the son of the Tudjibid chief, Muḥammad b. 'Abd al-Rahmān, surnamed al-Ankar (the "one-eyed") to put the governor of the town to death. The latter did so in 890 and became a by no means too dutiful vassal of the Caliph. He

finally destroyed the last Banū Kasi, whose chief, Muḥammad b. Lope, was killed in 898 below Saragossa. Al-Ankar died in 924. His son Hāshim who succeeded him gave his name to all the family and died in 930. His sons, the Banū Hāshim, were well treated by the Caliph 'Abd al-Rahmān III but one of them, Muḥammad, rebelled against him in 934, joined the king of Leon, Ramiro II, and after a pretended submission to the Caliph leagued against him the whole of the north of Spain, including the kingdom of Navarre. 'Abd al-Rahmān set out to overthrow him; he seized Calatayud and then besieged him in Saragossa; Muḥammad b. Hāshim capitulated, the Caliph pardoned him and kept him in his governorship. His son Yahyā was general of 'Abd al-Rahmān III and of al-Hakam II in Spain and in Africa and governor of Saragossa from 975.

Later, in the reign of the ḥadjib al-Manšūr b. Abī 'Amir, a Tudjibid governor of Saragossa, 'Abd al-Rahmān b. Muṭarrif b. Muḥammad b. Hāshim, hatched a plot against him which was discovered and the conspirator executed in 989.

On the fall of the Umayyads a grandson of the preceding, Yahyā, became governor of the Upper March and had a son al-Mundhir, who after fighting with the Slavs against the Berbers of Spain proclaimed himself king and made an alliance with the Counts of Barcelona and Castile. Under his reign peace reigned in Saragossa. The town became flourishing and populous. The glories of his court were celebrated by poets like Ibn Darrādj al-Kastali. Al-Mundhir reigned till 1023.

His son Yahyā who succeeded with the title of al-Muzaḥḥar died soon after his accession and was succeeded by his son al-Mundhir II, Mu'izz al-Dawla (420/1029). The latter was killed ten years later by one of his relatives, the general 'Abd Allāh b. al-Hakam, because he refused to recognise the Caliph Hishām II. This 'Abd Allāh tried to seize the authority but rebellion broke out among the people of Saragossa; and the independent governor of Larida, Abū Aiyūb Sulaimān b. Muḥammad b. Hūd arrived quickly to restore order in the city and seized the throne of the principality.

He took the title of al-Musta'in and was the founder of the kingdom of the Banū Hūd (cf. the article Hūd) with Saragossa as capital and ruling the districts of Larida, Tudela and Calatayud. He died in 438 (1046—1047). Son succeeded father as follows: Aḥmad al-Muḥtadir Saif al-Dawla till 474 (1081); Yūsuf al-Mu'tamin till 478 (1085); Aḥmad al-Musta'in II killed in 503 (1110) at the battle of Valtierra won by the Christians. His son 'Abd al-Malik 'Imād al-Dawla reigned in his turn till the final capture of Saragossa by the Christians of Sobrarbe on Ramaḍān 4, 512 (Dec. 19, 1118); he took refuge in Rueda. Unfortunately we have very little detailed information regarding the reigns of these princes and the dates given for them by the historians are not always in agreement. Nine years before it fell into the hands of the Christians, Saragossa had been taken by the Almoravids for Sulṭān 'Alī b. Yūsuf on Dhu 'l-Ḳa'da 1, 503 (May 31, 1110).

At the present day very little survives of the Muslim period in Saragossa, which must undoubtedly have been several times rebuilt in the course of these centuries as a result of the strenuous and heroic sieges it had to endure. The "Seo" or

cathedral is built on the site of the former Great Mosque and there can still be seen on the north-eastern façade an ornamentation of bricks and squares of enamelled faience (*azulejos*) which probably dates from the Arab epoch. According to a tradition recorded by certain chroniclers and geographers, this mosque-cathedral was founded by the *ṭābi* [q. v.] Ḥanash b. 'Abd Allāh al-Ṣan'ānī who died in 100 (718/719); he was buried with one of his companions opposite the *mihrāb*. The mosque was enlarged in 242 (856), in the reign of the Umayyad Caliph Muḥammad b. 'Abd al-Raḥmān b. al-Ḥakam.

At the present day the most important Arab monument in Saragossa is the palace which bears the name of Aljaferia (no doubt the Arabic al-Djāfariya, from a Djāfar or Ibn Djāfar, whose memory does not seem to have been preserved outside of popular tradition). This palace which has undergone many and far-reaching alterations and was partly destroyed in 1809 is now used as a barracks; it lies as the western end of the town. Of the part dating from the Muslim period there only remains a little oratory 25 yards square with a very pretty dome 45 feet high. It was supported by marble pillars with remarkable capitals, to judge from those that still exist. The *mihrāb* is adorned with a decoration in carved stucco, on a blue ground. Close to the oratory a little tower 80 feet high (called the "troubador's cell") is most probably of the same date. It is probable that the Muḥammadan ruins of Aljaferia date from the dynasty of the Banū Hūd whose palaces were numerous in Saragossa (we only know the name of one of them, *Dār al-Surūr* ["house of joy"], built by al-Mukṭadir b. Hūd). The Aljaferia deserves to be subject of a monograph, for it is a memorial of a period of transition from the beautiful age of the Caliphate of Cordova to the century of the Alhambra.

Among famous Muslims born in Saragossa may be mentioned the great traditionist Abū 'Alī Ḥusain b. Muḥammad b. Fierro b. Haiyūn al-Ṣadafī, known as Ibn Sukkara, born in 452 (1060) and died "a martyr" at the battle of Cutanda in 514 (1120). It was to his pupils that Ibn al-Abbār in the following century devoted an encyclopaedia (*mu'djam*) published by F. Codera in vol. iv. of his *Bibliotheca Arabico-Hispana* (cf. the references in the *J. A.*, 1923, ccii. 223 and note 1).

SARĀI, capital of the Golden Horde; cf. the articles *KIPČAK* and *MONGOLS*. The name is in Persian *sarāi* = palace; nevertheless it is frequently written *ṣarāi* in Arabic works. On its foundation by Bātu and the name Sarāi Berke see above, i. 683^a and 709^a. The geographers and historians speak only of one town of this name but on the coins we find a New-Sarāi (*Sarāi al-Djādid*) mentioned: the earliest coin struck in New-Sarāi is dated 710 A. H. The only historical reference to New-Sarāi so far known is the mention of the death of the Khān Özbeg (the date given is 742 A. H.) in New-Sarāi in Shams al-Dīn al-Shudjā'i al-Miṣrī and quoting him in Ibn Kāḍī Shuhba (text in Tiesenhausen, *Sbornik materialov, otnosyashchysya k istorii zolotoi Ordā*, p. 254 and 445). Two ruined sites on the Akhtuba, which branches off from the Volga, are regarded as the ruins of Sarāi, now called Tzarew and Selitrennoye or Selitrennfy Gorodok. Which of the two was the capital of the Golden Horde and when, whether there were one or two Sarāi's (that is whether New-Sarāi was a new part of the town or a town built on another site) are questions often disputed since the xviiith century by scholars and not yet decided even now. The sources are obscure and contradictory on many points; thus the distance given by Abu 'l-Fidā² (and many others) between the mouth of the Volga and Sarāi (2 days' journey) suits Selitrennoye; on the other hand Abu 'l-Fidā² says in the same passage (ed. Reinaud, p. 217) that the town is built in a plain (*fi mustawīn min al-arḍ*) which is only true of Tzarew (Selitrennoye is built on hills). The same information is found in Ibn Baṭṭūta (ed. Defrémery and Sanguinetti, iv. 477: *fi basīṭin min al-arḍ*); the description by Shihāb al-Dīn al-'Umārī, according to which there was a pond in the middle of the town, also fits Tzarew (text by Tiesenhausen, p. 220). The excavations conducted for a series of years (1843-1851) by A. Tereshchenko in and around Tzarew show there are certainly the remains of a large town there. It is on the results of these excavations that the view first expressed by Grigoryew as long ago as 1845 is based that the ruins of Sarāi can only be

at Tzarew; and at most at Selitrennoye we have the town built by Bātū and later supplanted by the Sarāi of Berke. Under the influence of Grigoryew's pamphlet Solowjew in his *History of Russia* (edition of the Society "Oūšē. Pol'za", i. 841) located Sarāi at Tzarew and not at Selitrennoye, as Karamzin (vol. iv., note 74; German edition, Riga 1823, iv., note 53, p. 263) had done. The ruins at Selitrennoye have so far been only superficially examined; they occupy almost as large an area as the ruins of Tzarew (both sites are 8 miles long, the ruins of Tzarew 2½ miles broad and at Selitrennoye 2 miles broad) but the finds made there are much less important. The view expressed by G. Sablukov in 1844 (*Očerki vnutrennyego sostoyaniya Kipčakskago tzarstva*, repr. by N. Katanow, Kazan 1895, p. 28) that Selitrennoye is Old-Sarāi and Tzarew New-Sarāi was revived by D. Kobeko (*Zap.*, iv. 267-277) and more recently by T. Ballođ (*Starzy i Novyy Sarai, stolitsi Zolotoi Ordzi*, Kazan 1923); on the other hand A. Spitzfn (*Zap.*, xi. 287-290) locates Old-Sarāi at Tzarew and New-Sarāi at Selitrennoye. According to the narrative of a merchant given in Abu 'l-Fida³, p. 36, there was a village called Eski-Yūrt ("Old Settlement") on the Akhtuba below Sarāi; this may very well refer to Selitrennoye. The finds of coins show that Selitrennoye was perhaps inhabited before Tzarew and certainly continued to be inhabited much later.

Sarāi was destroyed in 1395 by Tīmūr; the skeletons found by Tereshchenko without heads, hands or feet etc. must be regarded as dating from this destruction. Perhaps the settlement at Selitrennoye again became of more importance as a result. In 1472, Sarāi was ravaged by Russian freebooters from Niátka and is said to have been destroyed in 1480 by a Russian force in combination with a Tatar force from the Crimea. About 1554 at the time of the conquest of Astrakhan by the Russians (cf. above, i. 494^b) the towns at Tzarew and Selitrennoye were both already in ruins.

Smith, *Über Rubruk's Reise*, Berlin 1885, from the *Z.G. Erdk. Berl.*, xx. 74-81. (W. BARTHOLD)

SARAJEVO. [See SERAJEVO].

SARAKHS, an old town between Mashhad and Marw, where the frontier between modern Persia and Russia turns from E. to S., on the lower course of the Harirūd, which is at this part filled with water for part of the year only and then disappears in the oasis of Tadjān north of Sarakhs. Between the town and Marw lies a part of the desert of Karakūm [q. v.] which belongs to the area of the Teke-Turkomans. The Arab-Persian geographers ascribe the foundation of the town to Kai-Kāwūs, Afrāsiyāh or Dhu 'l-Karnain. The soil is considered good but, as a result of the drought, is devoted to pasture only and there are few settlements in the neighbourhood. Camel-rearing was the principal industry of the inhabitants and the weaving of veils, ribbons etc. was for

a long time prosperous. The town consists of houses of mud or brick without any important public buildings. It was the birth-place of al-Faql b. Sahl, the famous vizier of the Caliph al-Ma'mūn, who is said not to have adopted Islām until 805/806 A.D. and was one of the most influential representatives of the Persian genius. He was murdered in his bath in Sarakhs in 818/819 A.D.; his brother al-Hasan died there in 850/851. The physician and mathematician Aḥmad b. al-Ṭaiyib, a pupil of al-Kindi, later the confidant of the Caliph al-Mu'taḍid, was also born in Sarakhs.

Wüstenfeld, iii. 71; B. de Meynard, *Dictionnaire de la Perse*, p. 307; C. Ritter, *Asien*, viii.² 277; Le Strange, *The Lands of Eastern Caliphate*, p. 396; A. Burnes, *Travels into Bokhara*, ii. 50-53; Ibn Khallikān, transl. de Slane, i. 408, ii. 472. (J. RUSKA)

AL-SARAKHSI, SHAMS AL-A'IMMA ABU BAKR MUHAMMAD B. AḤMAD B. ABĪ SAHL, the most important Hanafi lawyer of the fifth century in Mā warā' al-Nahr. Little is known of his life. Probably born in Sarakhs, he studied under 'Abd al-'Azīz al-Hālwanī († 448 = 1056) in Bukhārā. He then came to the court of the Qarakhanids in Uzdjand. There he was thrown into prison by the Khaḡān Ḥasan, probably because he alone of all the 'Ulamā' stigmatised as illegal the conduct of the ruler when he married his manumitted *umm walad*'s without observing the 'idda. Here he languished for over ten years and dictated to his pupils, who sat before his prison, his most important works, the *Mabsūṭ* (14 vols.), the *Uṣūl al-Fiḡh* (2 vols.) and the *Sharḡ al-Siyar al-Kabīr* (in 4 vols., printed at Haidarābād in 1335-1336), entirely from memory without using a book. Parts of the *Mabsūṭ* are dated from the prison in the years 466 (1073) and 477 (1084). When he had reached the fourth part of the *Siyar* he was released. He completed this work at the court of the Amīr Ḥasan in Marghinān in Djumādā I of the year 480 (Aug., 1087) and died in 483 (1090). His pupils were: Burhān al-A'imma 'Abd al-'Azīz b. 'Umar b. Māza, the father of al-Ṣadr al-Shahid († 536 = 1141), Maḥmūd b. 'Abd al-'Azīz al-Uzdjandi, the grandfather of Qāḍikhān († 592 = 1196), 'Uṭmān b. 'Alī al-Baikandī († 552 = 1157) etc. His *Kitāb al-Mabsūṭ* (vols. 1-30, Cairo 1324-1331) is one of the most comprehensive of the earlier Fiḡh-books. It is remarkable for the way in which the author works out general legal principles. Besides the works already mentioned he wrote commentaries on the *Mukhtaṣar* of al-Ṭahāwī († 321 = 933), the *Kitāb al-Hiyal* of al-Khaṣṣāf († 261 = 875; printed in the *Mabsūṭ*, vol. 30), the *Kitāb al-Kasb* of al-Shaibānī (printed in the *Mabsūṭ*, vol. 30) and on numerous other works of al-Shaibānī. His books are still very common in the east; his *Siyar*, for example, is in almost every library.

SARANDIB. [See CEYLON].

SARĀT, the mountains which run along the western side of the Arabian plateau. Al-Hamdānī, the greatest authority on the Arabian peninsula among the Arab geographers, says that the termini of the range, which divides the highlands (Naǧd) from the plain (Ǧhawr, Tihāma) and was therefore also called Ḥiǧǧāz by the Arabs, are the extreme south of the Yaman and Syria; al-Aṣmaʿī makes it stretch to the Armenian mountains. This mountain chain, which al-Hamdānī already knew not to be a single range, but a succession of hills immediately adjoining one another, is, according to the old records, four days' journey in breadth on an average, varying by a day or part of a day here and there. In his description, al-Hamdānī distinguishes the main ridge (*ǧāḥir*), then the lofty part, not belonging to the main ridge itself (*aʿlā 'l-Sarāt*) and the western spurs (*awsaṭ, ǧhawr, asfal al-Sarāt*). The average height of this great range, which the Arabs regarded as created by God to be a backbone for the earth, according to a story recorded by Saʿīd b. al-Musaiyab, is 8,500 feet. In the north-west the greatest elevation is the *Djabal Dibāgh* (7,200 feet), in the south-west there is a series of peaks which reach 10,000 feet, and, as in the case of the *Djabal Nabī Shuʿaib*, occasionally snow-covered in winter (10,800 feet), the highest peak in the Sarāt forming part of the huge Maṣānaʿa massif, even surpass it. The whole range consists of sedimentary rocks with a substratum of granite and gneiss and numerous volcanic cones between which often stretch wide plains strewn with black lava, which are called *ḥarra* in the northern part of the Arabian peninsula and *faish* in South Arabia. To the west the range falls sharply down to the Tihāma, which is a plain sloping from a height of 2,300 feet to sea-level, out of which rise recent volcanic upheavals in the form of peaks. On the east the hills slope gently down to the Persian Gulf. The Sarāt as a whole does not show any marked uniformity of direction but is cut up into large and smaller ranges which intersect in all directions. It is in general treeless and uninviting in appearance with black rocky ravines, ridges, peaks and pinnacles, round and sharp or jagged, showing all possible forms but always bare. There are mountain villages away high up on almost inaccessible heights which consist of stone houses of two to five stories, sometimes square and sometimes round, and form self-contained often quaint citadels, surrounded by yawning gulfs on all sides. Breakneck paths and bridle paths often hardly traceable on the rock lead up to the narrow gates which open into the villages; there are well cultivated fields on the slopes and in the valleys, laboriously erected terraces along the slope sink like steps down the valley. The valuable soil is kept in place by a wall built of large stones, rarely bound with mud and always without lime, and protected from being swept away. The rain-water is fully utilised for these plots and runs from the upper terraces to the lower ones. On these fields, which are protected from the great heat of the sun by shade-giving trees, the best coffee in the world is grown, and grapes and sugar-cane also flourish here. The long chain of the Sarāt is interrupted occasionally by broad plains. For example, the plain of Ṣanʿāʾ runs 15 miles to the south and about 7 miles to the north; the southern tongue of this plain runs after a short interruption through the Naḳīl al-Yaslaḥ into the broad plain

of *Dhamār*, the most fertile part of the Yaman and the richest in water.

The Sarāt owes its origin to those great volcanic convulsions which caused the young tertiary Erythraean subsidences, and created the great fault on which the Arabian desert sank with its hitherto undisturbed horizontal deposits. Weathering, wind-erosion, and erosion by running water then tried their strength on the steep western slope of the tableland which was transformed into a mountain system of erosion or highlands, which can be divided into an inner and an outer system of valleys and is furrowed with numerous valleys which on the western slopes run from east and north-east to west, on the south side run consistently from north to south and south-east and cut the highlands into separate tongue-like peninsulas which are again cut up by smaller valleys, the origin of which probably is also as old as the pluvial period. These side valleys have transformed the Sarāt peninsulas into hills of erosion or chains of hills, which has contributed to the very varied forms of the hills, which in part owe their existence to volcanic forces also, like the necks which often occur.

In summer the western slope of the Sarāt shows very slight variations of temperature; the heat is tropical and rises from 88° F. in June to 99° F. in August; in the winter it reaches a more endurable maximum of 77° F. At night, however, the temperature sinks to 36°–27° F., and in the high mountains in the winter to 23° F. so that the mountain tops are frequently covered with snow. From the middle of June to the end of September is the rainy period. The spring rains fall in April; thunderstorms are not uncommon in the main rainy season and in the winter months water freezes on the higher slopes, especially with a strong east wind, even when the thermometer is several degrees above freezing-point. A further peculiarity of the climate of the Sarāt are the Tihāma fogs which come in summer down to the bottom of the valleys, which the Arabs call *umma* or *sukḥaimānī*, and only disappear after the temperature has reached its maximum so that they bring their own mitigation with them, which is exceedingly beneficial to vegetation. The climate of the eastern slopes of the Sarāt is extremely dry in contrast to the very moist climate of the western Sarāt. In Ṣanʿāʾ the relative humidity sinks to 20%. Here also the rainy season falls into two parts (March, and July–September). Throughout the whole year it is possible to sow and reap, which is true not only of cereals but also of vegetables and fruit, which are ready at every season in some one of the numerous sorts. The vine, for example, flourishes all over the mountains of Arabia, although only in the river-valleys. The eastern slope of the Sarāt has an almost European character with respect to agriculture although the good soil is limited to the artificial terraces, which are also artificially irrigated. The valleys which have a perennial water-supply show that incredible wealth in fruit and cereals which was described so enthusiastically by al-Hamdānī. The occurrence of tamarisks, acacias and mimosas is characteristic of the desert-like eastern slopes of the Sarāt, but in addition to the *yāb-tree* we also find date-palms, numerous varieties of fruit-trees and the cotton plant as well as a great variety of medicinal and garden plants, among which the aromatic are especially important on the classic soil of Arabia Felix. The celebrated frankincense

tree now only yields resin in a few parts of the Yaman; on the other hand cactus-like euphorbias, balsam trees, 'Aden shrub, Dōm palms, tamarinds, rāk and a variety of resin- and gum-yielding trees, acanthaceae and sweet scented plants and shrubs are widely disseminated. Besides the most valuable cultivated shrub in Arabia, the coffee-plant already mentioned, the vine, the date-palm and countless varieties of fruit, there also grow in the Sarāt region rye, wheat, oats, barley, maize, sugar-cane, tobacco, *ḡāt* [q. v.], potatoes, cabbage, beans and figs. But these fruits of the earth do not drop into the countryman's lap; on the contrary, they are often won from the soil only after a hard fight. Only thousands of years of labour have made this remarkable district, which has landscapes rivalling the Alps in splendour, what it is to-day economically.

(ADOLF GROHMANN)

AL-SARĀṬĀN (the crab), Cancer, in astronomy the name for the northernmost constellation in the ecliptic which the sun enters at the beginning of summer. The *ṣūrat al-sarāṭān* (Greek: *Καρκίνος*, Latin: Cancer) with the Arabs (exactly according to the *Almagest* of Ptolemy) consists of nine stars with an additional four outside the actual figure of the crab. Even the brightest stars in the constellation are only of the fourth magnitude; four of them form a smooth upright curve, the two outer being on the pincers (*al-sabānī al-djānūbī* and *al-sabānī al-šimālī*) while the two central ones, forming the eyes of the crab, are called the little asses (*al-ḥimārān, asini, aselli*); between them is a group of stars, the Beehive (*al-maʿlaf, braesepé*), looking like a little cloud to the naked eye but showing about 40 stars when seen through a telescope. In the centre of an opposite curve on the hind-legs of the crab is the celebrated and much studied multiple star ζ Cancri.

With the entry of the sun into the head of Cancer it reaches its greatest (northern) declination which is equal to the obliquity of the ecliptic E (Arabic: *al-maʿl al-aṣṣam*). But this figure (now = 23° 27') is not a constant magnitude; it alters with time within moderate limits. Astronomical

calculation has shown that it can be found from the formula

$$E = 23^{\circ} 27' 8''.26 - 46''.845 T - 0''.0059 T^2 + 0''.00181 T^3$$

where T is reckoned in units of 100 tropic years and from the initial year 1900.0. Thus, for example, for the year 1000 A.D. $E = 23^{\circ} 34' 8''.07$ (cf. S. Newcomb, *Elements of the four Inner Planets and the fundamental Constants of Astronomy*, Washington 1895, p. 196). This variation in E, which from a present diminution will again pass into an increase, was well known to the Arab astronomers. The Fātimid astronomer Ibn Yūnus († Cairo 1009) has given us in his *al-Ziḡ al-kabir al-Ḥākīmī* (MS. Leiden 1057, Chap. xi., f. 222) a historical account of the measurements of the obliquity of the ecliptic by the Arabs, from which the following is taken. According to Ptolemy, Eratosthenes and Hipparchus had estimated the obliquity of the ecliptic at $\frac{1}{4}$ of the circumference = 23° 51' 20", "and I do not know of any observation for the greatest declination between Ptolemy and the authors of the tested tables (*aṣḥāb al-mumtaḥan*) except this one which was made in the year 16. of the Hidjra (i.e. after 776 A.D.) and its observer mentions that the greatest declination is 23° 31'." Al-Ma'mūn's astronomers from their observations at al-Shammāsīya (a quarter and gate in Baghdad) found that $E = 23^{\circ} 33'$ and the same figure is given by Muḥ. b. Mūsā al-Kh̄wārizmī in his *Ziḡ* and Muḥ. b. Kathīr al-Farḡānī in his book "On the Use of the Astrolabe". The astronomers Kh̄alīd b. 'Abd al-Malik al-Marwarrūdhī, Abu 'l-Sanad b. Ṭaiyib 'Alī and 'Alī b. 'Isā al-Aṣṭorlābī etc. of Damascus who took observations after the death of Yaḥyā b. Abī Manṣūr with the instrument that al-Ma'mūn ordered them to use when he took the field against the Byzantines, mention that they had found $E = 23^{\circ} 33' 52''$. Their measurement was made in the year 201 of the era of Yazdadjird (832/33 A.D.). The sons of Mūsā b. Shākir say that they had ascertained E to be 23° 35' in the year 237 of the same era (868/69) at the gate of the round wall of Baghdad. In the tables of *al-Taḥwīm* (restoration) Aḥmad b. 'Abd Allāh Habash gives the following two values for the obliquity of the ecliptic: 23° 35' and 23° 33', "but there must only be one". In 243 A.H. (226 Yazdadjird = 857/58 A.D.) al-Māḥanī fixed E at 23° 35' 30": "And Abu 'l-Ḥasan Thābit b. Qurra said: I have found old methods of observation before Ptolemy, which show that the greatest declination is 23° 35', and Muḥ. b. Djābir b. Sinān al-Battānī says that from his own measurements he has found it to be 23° 35'". The Sharif al-Fāḍil Abu 'l-Kāsim 'Alī b. al-Ḥusain Muḥ. b. Abī 'Isā, who is known as Ibn al-'Alam and Abu 'l-Ḥasan al-Šūfī 'Abd al-Raḥmān b. 'Umar, found the value of E to be 23° 34' 2" and 23° 34' 45". Ibn Yūnus then gives his own calculation of the obliquity of the ecliptic to which he had devoted great care and found $E = 23^{\circ} 35'$. It may be further noted that al-Bīrūnī also took $E = 23^{\circ} 35'$ (*al-Kānūn al-Mas'ūdī*, Berl. MS. Or. 8° 275, fol. 85r), Ibn al-Shāṭir about 765 (1363/64) $E = 23^{\circ} 31'$ and Ulugh Beg in 1437 A.D. at Samarkand $E = 23^{\circ} 30' 17''$.

As the extreme daily orbit that the sun can describe in the heavens (in northern latitudes the longest day), the day of entry into Cancer (*al-*

Saraṭān al-arwaḥ) as well as into the Aries and Capricorn is an auspicious one. Therefore the representation of these three regions and their division into hours (*sā'a*) on the face of a sundial is of special importance. The symbol of Cancer (and of Aries) is a conic section, the exact shape of which depends on the latitude of the place and the position of the dial.

The name Cancer (*Kapvinox*) no doubt dates from Greek times. According to L. Ideler (see below), the name Lernaean is also found because he (the crab), according to the fable, crawled out of the swamp of Lerna to injure Hercules in the foot when he was fighting with the Lernaean Hydra. The name "Crab" is found on the famous circle of the Zodiac at Dendera (Egypt) which, however, dates from the late Egyptian period and must certainly have been made under Greek influence. In Babylonian the constellation (without β Cancri) was called (Mul) AL-LUL = Kakkab šittu, which probably is the name of an animal, but hardly crab. In the later texts of the Seleucid period instead of AL = LUL we always find the ideogram for carpenter (cf. F. Kugler, *Sternkunde und Sterndienst in Babel*, Münster 1913, p. 6, 54, 209, 210).

Bibliography: L. Ideler, *Über den Ursprung und die Bedeutung der Sternnamen*, Berlin 1809, p. 158 sqq.; F. W. V. Lach, *Anleitung zur Kenntniss der Sternnamen*, Leipzig 1796, p. 75, where Persian, Turkish and Syrian names for "Cancer" are also given. The passage in Yünus on the definition of the obliquity of the ecliptic is translated in C. Schoy, *Die Bestimmung der geographischen Breite eines Ortes durch Beobachtung der Meridianhöhe der Sonne oder mittels der Kenntnis zweier anderen Sonnenhöhen und den zugehörigen Azimuten nach dem arabischen Text der Hukimilischen Tafeln des Ibn Yünus (Annalen der Hydrographie und maritim. Meteorologie, Hamburg 1922, p. 10 sqq.)*. A table of the observations on E made in earlier centuries is given in C. A. Nallino, *Al-Battānī sive Albatēnī Opus Astronomicum*, Milan 1903, i. 160; for the gnomonic representation of Cancer, Aries and Sagittarius, cf. C. Schoy, *Gnomonik der Araber*, Berlin 1923, p. 26 and do., *Sonnenuhren der spätarabischen Astronomie*, in *Isis*, No. 18 (1924), p. 354.

(C. SCHOY)

AL-SARAṬĀN (A.), the crab; the name is applied to the fresh water crab as well as to the sea-crabs, *saraṭān nahri* and *bahri*. Al-Damiri describes the crab as follows: "it can run very quickly, has two jaws, claws and several teeth and a back as hard as stone; one might think that it had neither head nor tail. Its two eyes are placed on its shoulders, its mouth is in its chest and its jaws are sideways. It has eight legs and walks on one side. It breathes both air and water. It casts off its skin six times a year. It builds itself a hole with two doors, one opening into water and the other on to dry land. When it casts off its skin, it closes the door which is on the water side from fear of fishes of prey and opens the land door so that the wind may reach it and dry the new skin". Al-Kāzwīnī gives a similar account of the animal among beasts of the sea. The uses in magic and medicine are innumerable.

Cancer is also called *al-saraṭān* (after the

Greek). According to the *Ḥāmūs*, it is a tumour of black gall, at first no bigger than an almond; as it grows, red and green veins appear on it like crabs' feet. The disease is incurable and at best its course can only be prolonged; it attacks both men and animals.

SARĀY. [See SERĀY.]

SARDĀR is a Persian word (see SAR), the etymological meaning of which is "holding", or "possessing the head", i.e. the first place, its current meaning being a chief or leader and hence a military commander. It has been borrowed in this sense by the Turks, who, however, sometimes derive it in error from *sirr-dār* ("the keeper of a secret"). Through Turkish it has reached Arabic, and in a letter written in 1581 by "one of the princes of the Arabs (of Yaman)" occurs the phrase "*wa-‘ayyana sardārān ‘ala l-‘asākir*" ("and he appointed a commander over the troops") on which Rutgers comments "Vocabulum *sardār*, quod Persicae originis est, ducem exercitūs significat". The abstract substantive *sardāriyyat* in the sense of the post or office of commander of an army also occurs; and it was doubtless owing to the familiarity of the Arabic-speaking people of Egypt with the borrowed word that it was selected as the official title of the British commander-in-chief of the Egyptian and Sudanese armies. In Persia the word was until recently much used as a component part of honorific titles, such as *Sardār-i Zāfar* and *Sardār-i Dīang*. In India it is used generally of the (Indian) commissioned officers of the army as a class. *Sardār log* means "the (Indian) officers of a corps or regiment". It was formerly applied to the head of a set of palanquin-bearers, and it is still applied to the valet or body-servant of a European in northern India, as the chief of his household servants. *Sardār Bahādur* is a title of honour attached to the first class of the Order of British India, an order confined to Indian commissioned officers of the army.

SARDINIA (in Arabic sources SARDĀNIYA, SAR-DĀNIYA), an island in the Mediterranean Sea, lies $7\frac{1}{2}$ miles South of Corsica and 138 miles South West of the Italian Civita Vecchia, and has an area of 9,187 square miles. It is mountainous, and has a peak as high as 6,016 feet. Throughout the 160 miles of its length and the 68 of its breadth it consists chiefly of ranges of granitic rock or high plateaux. These ranges of dark hills convey an appearance of wildness to the island and make it anything but attractive, which probably accounts for its comparatively uneventful history.

The Nuraghi or circular towers, of which 6,000 have been traced on the island, bear unmistakable evidence that the island was well inhabited in the Bronze Age, but it is only when we come to the Phoenician period that we have definite information regarding the island. These invaders certainly did

conquer the island at about 500—480 B.C., and they were the first of a succession of overlords, who made the island contribute to their granaries. The Roman occupation bore more heavily on the Sardinians; as they had no free city on the island, they were compelled to supply much of the corn for Rome, and they were obliged to contribute a money tax. Little wonder that there was an insurrection of 80,000 slaves in 181 B.C. The island was useful to the Romans, moreover, as a place of exile. We read that in 355 A.D. Constantius banished 3 bishops to Sardinia, one of whom was Lucifer of Calaris. In 440 the Vandals prepared to attack the place, seeing, as they did, that it gave food supplies to the Empire, and in 476 the island had to be ceded to them. A governor of German nationality was installed to discharge all relevant duties both military and civil. Justinian finally recovered the prize for Byzantium, until the 10th century.

Ibn 'Abd al-Hakam in his *Futūḥ Miṣr wa 'l-Maḡrib wa 'l-Andalus* seems to put it beyond question that Sardinia was invaded at the same time as Spain, c. 92 A.H. He says that the Sardinians used their harbour to trick the Arabs out of plundering their valuables, and this seems not at all unlikely. That the Arabs made one of their usual raids on the island is certain, but they did not prolong their stay there. They paid another visit in A.H. 98 and 118 and carried through the same programme, but they never even attempted to maintain themselves in the place, nor is it hard to understand that such a place would little appeal to those who were born to the desert and the heat. In 130 A.H., however, they went a step further, and imposed a tribute on the island, which they succeeded in extracting from the enfeebled people. Meantime in 725 A.D. Luidprand, fearing these repeated raids, obtained the body of Saint Augustine, and succeeded in removing it out of danger to Pavia. This great treasure of the Church had lain at Cagliari since the 6th century. Once again before the 8th century was ended Sardinia suffered another plunder at the hands of the Arabs (143 A.H.). The Saracens never used the island for purposes of grain-producing, as had the previous conquerors, but in 227 A.H., when they made their daring attack on Rome, they used Sardinia as their rendezvous, before making the final onslaught on the capital. Not even in the 10th century A.D. did Sardinia cease to be the quarry of the Arabs, for we read that, when 'Ubaid Allāh the Mahdī was plundering Genoa, in 332/3 A.H., he did not forget to take what plunder he could from Sardinia. The last mention of Arab influence in the island is when Mudjāhid of Denia, in Spain, subjugated it in 393 A.H. Never again were the formidable raiders of the Mediterranean Sea to strike terror into the inhabitants of Sardinia, and it seems strange that in exchange for all their plunder the Arabs gave neither culture nor trade, religion nor art, as a recompense and a memorial of their presence.

Pisan supremacy followed that of the Arabs, and this again was succeeded by that of Aragon. In modern times the island has changed hands several times, having been Spanish and French and Austrian. Its ties, however, are all with the present possessors, and Italy seems to be inaugurating a new regime.

(T. CROUTHER GORDON)

SARĖKAT ISLAM (*sarĕkat*, Javanese pronunciation of the Arabic *sharika*, a brotherhood or guild), a political combination of Muhammadan Indonesians formed in Surakarta (Java), which has played an important part in the history of the development of the native population of the Dutch East Indies and in Dutch colonial policy in the last fifteen years. Its object was to secure for the native element a more prominent position socially, politically and economically, at the same time retaining Islām, which is the natural bond that links together the very diverse elements of a great part of the native population of the Dutch Indies. The leaders of the Sarĕkat Islam would not, however, themselves subscribe to this, but would give other definitions and estimates of its objects according to local conditions, if indeed they give any reply at all when asked about the objects of their organisation.

Early History. While the position of the masses of the Javanese natives as regards their own rulers had from the earliest times been characterised by extreme subservience, during the nineteenth century the independence of both the people and their lords became more and more limited by the gradually increasing influence of the Dutch. The national pride with which they looked back on a past in which the whole Indian Archipelago was under a Javanese hegemony was more and more supplanted by a feeling of dependence and inferiority to foreigners (Dutch, Arab or Chinese), of whom the Dutch in particular and later on the Chinese only rarely concealed the slight estimation in which they held the natives. When about the end of last century a few progressives among the *priyayi*'s (aristocracy) of Java for the first time wished to give their sons a European education, they did, it is true, receive support from a few Dutchmen, but a considerable majority of the officials offered marked resistance to this innovation, and the few who made the experiment found it made very difficult for them to find a place in society in keeping with their newly acquired qualifications. Nevertheless, a small body of educated Javanese was gradually formed, and naturally it was they who least appreciated foreign tutelage. Then came the events in the Far East and their reaction on the situation in the Dutch Indies. Even before the Russo-Japanese war (1904—1905) the Japanese had been granted equality with the Europeans in the Dutch East Indies. After the foundation of the Chinese Republic in 1911, Chinese warships visited Java and Chinese officials came to enquire into the position of their compatriots; the Chinese in the Dutch Indies were granted (from 1908) the Dutch-Chinese schools which they had desired for some years, the restrictions on their freedom of movement were abolished (1910) and more satisfactory arrangements were made for the administration of justice (1912). The Arabs also

shared the advantage of the new legal position of the Oriental foreigners, but the position of the Javanese remained the same.

In 1908 the League of Young Javanese *Budi Utama* ("noble endeavour") was founded by students of the Dokter-djawa (native medical) school in Batavia, the first modest attempt to obtain from the authorities the fulfilment of some of their desires by organisation, particularly more and better education. The father of the movement, which was regarded with suspicion not only by the Dutch but also by many conservative Javanese, was the "Dokter-djawa" Wahidin = Sudira-Usada. Such adherents as this first Javanese organisation found belonged to the higher classes of Javanese society; the masses did not join it, but they also began gradually to desire a reorganisation of social conditions and for a number of reasons.

a. Their social position was thoroughly unsatisfactory. In contrast to the foreign Orientals the Indonesians had to pay marks of homage to their European or native masters (*hormat*, Ar. *hurma*). It is true that the central government repeatedly ameliorated these *hormat* but the practice for the most part continued. The administration of the law very much favoured Europeans; detention for examination, applied not only to accused persons but for convenience often to witnesses also, was an evil which had not yet been entirely abolished; trial and punishment by the police were not always just and were imposed only on natives; the security of private property was often very slight; cases occurred in which a man preferred to say nothing about a robbery of his possessions rather than bring down upon his head the unpleasant efforts of the authorities. The few rights were not equal to the hardships of forced labour and the frequent ill-treatment of the native workers in European businesses. Education was very insufficient. In addition, as a result of the progressive development in China, the attitude of many Chinese, especially newcomers, to the Javanese became so presumptuous that the latter felt deeply hurt; excesses against the Chinese showed how deeply.

b. Their economic position had gone from bad to worse. The free development of native industry was much restricted when about 1830 the plantation system (Dutch "Cultuursysteem") especially for coffee, was introduced, which became a misfortune for the native population; when in 1877 the system was abolished, it had brought the Dutch government 832 million gulden — 21% of the State expenses (the so-called Indian Surplus). In the period that followed, the middle classes and the peasants were more and more deprived of their economic independence by the keen competition of European industries and plantations, while the retail trade had long been mainly in the hands of Chinese and Arabs. With however much tenacity they endeavoured to resist foreign competition, the decline was considerable, especially after the mainly native batik industry (turnover about 10 million gulden yearly; a short account of the native industry in *Koloniaal Verslag van 1920*, col. 7) was forced to use imported aniline dyes and textiles in place of the indigenous raw material (full details of this economic decay in *Onderzoek naar de mindere welvaart der inlandsche*

bevolking op Java en Madoera, Report of the Commission, Batavia 1905—1914, 32 vols. folio).

c. In the third place may be mentioned the fear of conversion to Christianity, although this factor had only been in operation a very short time and the movement among the Muslim population aroused by the activity of the Christian missionaries was quite different both in time and place. But the fact that Christian propaganda was more active, and found open approval with some members of the Dutch parliament, and that a warning had been issued from Mekka against it, was used by the leaders of the Sarékat Islam to arouse the masses in a way which would result in their joining the Sarékat Islam.

A comparatively unimportant incident is said to have brought about the foundation of the Sarékat Islam in 1910 (there are no reliable accounts of the first years). A case of dishonest practice on the part of a Chinese *kongsi* (company) in Lawéyan (Nglawéyan), a village near Surakarta, where very well-to-do Javanese merchants lived and where competition between them and the Chinese was unusually keen, is said to have aroused such bitterness among the cheated Javanese that the latter combined to bring about a boycott of Chinese goods. Out of this grew the Sarékat Islam, the organisation of which was perhaps modelled on the Sarékat Dagang Islam of Buitenzorg, which had been founded some years earlier by a Javanese and some Arab merchants. The name Sarékat Dagang Islam was at any rate also used in Surakarta. The Surakarta S. I., however, developed quite independently.

The S. I. did not long adhere strictly to its original aims. The movement spread with astonishing rapidity after the boycott of Chinese goods had been successful. The huge increase in membership cannot be explained simply from the hatred of the Chinese, natural at the time, but is rather due to the fact that the Javanese who longed for greater freedom and less tutelage thought that, after the successes won over the Chinese, the new union might assist them to a higher position as regards other foreigners also, i.e. this combination under a Muslim banner — in orthodox Lawéyan the union of the Muslims as such was natural — after it had once given proof that a victory for the Javanese was not an absolute impossibility, filled a gap generally felt in the circumstances described above in a, b, c, and could also bring within its ranks many people who had nothing to do with the boycott of the Chinese. Much more important than the details of its earliest history is the fact that this combination was able to rise and spread so rapidly, just as in the years following it was not single incidents and activities but the development of its aims that attracted attention to it. There is now a great difference between the origin and development of the S. I., which is due to the fact that it was born from the higher needs of the Javanese people, but developed under the deciding influence of external circumstance; — viz. the outbreak of the Great War in 1914, the Russian Revolution of 1917, the world economic crisis after the war, and collapse that necessarily followed in Europe. Ideas were brought into the Sarékat Islam from outside which were foreign to the Javanese people, who only demanded the fulfilment of modest requests and the satisfaction of local requirements.

The result was a great internal weakness which ended in the SarĀkat Islam losing the great influence it had as quickly as it had gained it.

The history of the SarĀkat Islam may be divided into three periods:

a. Up to the first national congress.

b. The zenith of the national congresses.

c. The decline of the SarĀkat Islam before the rise of the radical SarĀkat Ra'fat.

a. In the first period one can hardly talk of one homogenous SarĀkat Islam. Under the leadership of the vigorous and able Radĕn Usman Saiyid Tjakra Aminata, an inspiring orator, who soon, however, became dazzled by his own unbounded ambition, the movement spread beyond its home, especially in Eastern Java; in Surabaya the SarĀkat Islam newspaper *Utusan Hindia* (Indian Messenger) was founded in December, 1912, which was edited by Tjakra and long continued to be the most important organ of the S. I. Branches were later founded in Sĕmarang, Tjirĕbon, Bandung and Batavia. Admission was made very easy; the curiosity of the masses, the suggestive effect of the ceremonial secret oath, and the rapidly increasing popularity of the SarĀkat Islam brought it more and more new members. In the period of first enthusiasm the statutes adopted at the official foundation on Nov. 9, 1911 (the members were to promote a brotherly feeling for one another, to give assistance to Muslims, to work for the social elevation and economic advancement of the people by all legitimate means), were fairly generally observed. Soon, however, each local S. I. began to work only for its own local ends, and according to the views of local leaders. There were some which served the material interests of the people, e. g. by forming co-operative associations to strengthen the Javanese power of competition, others endeavoured by their intervention to dispose of the abuses to which the Javanese were exposed from officials and European employers, others again (e. g. the S. I. Batavia, which soon had 12,000 members) preached more accurate fulfilment of the duties of Islām. Expression was given to the desire for an improvement in the position of native women; an S. I. for children (*Sutarsa Mulya*) was even founded.

The successes of the S. I. in the economic field were but short-lived. The co-operative societies disappeared as soon as the first ardour of the members had cooled off; all economic activities suffered for the lack of financial training among the Javanese; S. I. funds were not seldom selfishly spent by the leaders of the movement. In the field of social progress the S. I. could certainly be credited with a general improvement of the relations between foreigners and Javanese to the benefit of the latter, although many gains were lost afterwards in the general decline of the movement. Interest in their religion was kept active by the leaders probably because they feared apathy. The bond of religion was to avert this evil. Before the National Congresses the S. I. took very little part in politics.

The first contact of the S. I. with the Dutch government seems to have been the temporary suppression of the Surakarta S. I. as a result of excesses against the Chinese (Aug., 1912). On Sept. 14, 1912, Tjakra presented a petition which asked the central government to recognise the

SarĀkat Islam. He received its decision on June 30, 1913. The government had long hesitated over its reply. Recognition of the, in themselves quite innocent, statutes involved to some extent a possible change in administration and in the colonial policy hitherto followed, which was based on the principle of the dependence of the native subjects. The leaders of the S. I. had shown themselves too weak to prevent the outrages against the Chinese; practice might very soon be in great contrast to their fine promises. An official recognition of the statutes which would give the S. I. a legal standing would be regarded by the simple populace as complete approval of all the activities of the S. I. or at least would be interpreted to mean that by its leaders. In a discussion between the Governor-General and a deputation of the S. I. on March 29, 1912, the former emphasised his personal sympathy with the S. I. but pointed out dangerous weaknesses which stood in the way of approval of the petition presented, such as, for example, the bad management of financial business (which has always been a weak point). Finally the edict of June 30 refused the S. I. the desired recognition on practical grounds, but called the attention of the petitioner to the fact that requests for recognition and legitimisation by local S. I.'s would perhaps not be refused; these local associations would also be able to combine to form a legitimate central committee of representatives of the local sections. The local S. I.'s were to be responsible, to standardise their formulae of oaths and to draw these up in such a way that they would be regarded as harmless by the government. The S. I. was therefore organised in accordance with these instructions.

The attitude of the officials in the provinces proved in general much more hostile to the SarĀkat Islam than that of the Government in Buitenzorg. This difference between the Government and some of its officials may have sown the seeds or been one of the most important causes of the native population's distrust of the Government, which was soon to appear. The frequent complaints of counter-measures by local officials, some of whom at first, in spite of the official recognition, even went so far as to suppress local S. I.'s, found sharper and sharper expression at the later congresses. The European population at this time was almost wholly against the SarĀkat Islam. A certain nervousness overcame them at times, especially when hostilities with the Chinese had taken place. The tone of the European press was at first in general contemptuous, later hostile; this brought about an increasingly vigorous reaction in the native press, which was growing very rapidly. The Chinese, of course, were hostile to the S. I.; the Arabs at first were on good terms with it and even had a considerable share in its early development; but when in the beginning of 1913 it was decided that only exceptionally could non-Indonesians be admitted to membership of the S. I., and particularly after the development of the S. I. on progressive lines began to hurt their conservatism, they withdrew. The relations between S. I. and *Budi Utama* were good although infrequent; representatives were sent from both to their congresses, etc.

b. In the period that followed, the political element became very prominent in the SarĀkat Islam and relations with the other political parties and movements became closer. The influence

of the growing European radicalism made itself more and more felt; European parties like the I. S. D. V. (Dutch Indies Social Democratic party) endeavoured to gain the S. I. to their side. The official trend of the S. I. became more radical year by year, but within the movement arose strong counter-currents. Tjakra was the representative of the legal, national-democratic movement; Sĕma'un became the leader of the growing left minority. This young man, an ardent follower of the I. S. D. V., made his first public appearance at the first national congress where he advocated "pĕrsèt" (Dutch *verzet*, "resistance") to the government but was hardly able to attract the attention of his audience; yet his speech was notable enough, for he was the only one who had the courage to point to the weak points in the national movement, e.g. the lack of energy. In contrast to the aristocratic Tjakra, he was a simple man of the people, whose work was distinguished by an unselfishness and an honesty unusual among Javanese. By the second congress we find him acting as president of the S. I.-Sĕmarang, where European radicalism had the greatest following, while at the third congress he had become a member of the C. S. I. (Central Sarekat Islam). Tjakra had only very reluctantly admitted him to it but he was afraid that this man, who promised more to the people than he did and had more understanding of their needs, would try to gain control of the business and he thought that he would more easily be able to keep him in check as a member of the C. S. I. In order not to lose his popularity, however, he moved more and more from his original attitude with the result that the opposition of the conservative wing increased. The struggle between Tjakra and Sĕma'un governed the development of the S. I. for the next few years. With great skill Tjakra was repeatedly able to avert a split within the Sarekat Islam but finally circumstances became too strong for him, and when, at the sixth congress, the S. I. was forced to a choice and in Tjakra's absence drove Sĕma'un out of the party, it was too late for the S. I.

A few details regarding the national congresses, where the different opinions and tendencies were able to find clear expression, may now be given.

The first national congress was held in Bandung on June 17—24, 1916. Shortly before (March, 18), the C. S. I. had received official recognition and an attempt to make the west Javanese and Sumatran S. I. branches independent of the C. S. I. had failed. An idea of the extent of the S. I. may be gleaned from the following figures: There were representatives of 52 Javanese branches (representing 273,377 members), 15 Sumatran (c. 76,000), 7 Borneo (5,574), while Celebes and Bali each had one branch. In an enthralling speech in which he dealt with the most important questions of the day, Tjakra emphasised the value of the name "national congress"; the S. I. was to set itself a new goal: the land was to raise itself to be a nation, the S. I. was to cooperate in obtaining self-government for the Dutch Indies soon, or the native elements would be granted greater influence in questions of administration; but he gave praise to the central government which had now really abandoned the old policy and was going to take the first step on the path of "policy and association" (cf. Snouck-Hurgronje, *Verspr. Geschr.*, iv/ii. 291—306) with the promise that a council composed of European,

native and foreign Oriental members would be given to the Governor-General. — There was a great deal talked of here and in subsequent congresses which the great majority of the delegates did not understand. Statements such as that the "Kur'an is a work of the greatest importance for socialism", that the Prophet (according to a contributor to the *Hindustan Review*!) is "the father of socialism, the 'precursor of democracy'", show on what lines propagandists of European parties endeavoured to gain adherents for their teaching. Perhaps the most important work of the congress was the discussion of the 86 proposals made by the local S. I.'s, which usually referred to local complaints and were published with Tjakra's opinion in the *Utusan Hindia* of June 15—16, 1916. From these motions we see what expectations the simple country people hoped to realise through the S. I.; the desire for greater personal freedom and independence was continually expressed at this and following conferences; it was not the confused political ideas of a few leaders that attracted the masses to the S. I. but the hope of achieving their desires through this powerful organization; this explains why they later left the S. I.'s so readily, when Sĕma'un's party promised to further native interests more than the S. I. had done.

The second national congress (Batavia, Oct. 20—27, 1917; 281 motions from local branches) dealt with the question what attitude the S. I. should adopt to the coming "Volksraad" (on the organization etc. of the Volksraad see *Koloniale Studien*, Vol. i., Oct., 1917, *Extra Politiek Nummer*, p. 169 *sqq.*); the share that was to be given in it to Indonesians did not satisfy them, still less did the continued postponement of its opening. The congress laid down a declaration of principles which explains the political goal of the C. S. I.: testimony is given to the superiority of Islām but absolute neutrality is demanded from the authorities; in view of the consideration that the majority of the native population lives under a state of wretchedness, the C. S. I. will always combat any supremacy of "sinful capitalism" (cf. *Kol. Studien*, *op. cit.*, p. 35 *sqq.*; in this volume is also given the programme of work of the S. I. with notes and an elucidation of the political situation at this time, details of the programmes of the political parties of the day given by their own leaders).

The results of the unrest in Europe were clearly seen at the third national congress (Surabaya, Sept. 20—Oct. 6, 1918). The new situation created by the opening of the Volksraad on May 18, 1918 (Tjakra and one other leader were the representatives of the S. I.), and the ameliorations still desired were vigorously discussed. But the unrest which had taken possession of the native society was particularly discussed. Economic difficulties and the results of very successful preaching of the coming war against "sinful capitalism" increased the bitterness; disastrous results were soon to be seen. The great strike at the end of 1917 and the outbreaks of the mob in Kudus and Dĕmak at the end of 1918 formed the beginning of a social struggle, which went on with intervals to the end of 1924, whose result for the present could hardly be in doubt in view of the weak economic position or the native population and the lack of that energy which alone could remove this fundamental evil. The organisation of the Javanese into *Pĕrsĕrikatan Ka'um Tani* (agricultural unions) and *P. K. Buruh* (industrial unions) had been in existence for some

years and expanded very much in the next few years. Their activities, which in recent years seem to have been supported by the Bolsheviks, cannot be further discussed here, nor all their relations with the S. I. and the later S. Ra'fat (see below). At Christmas 1919 they were centralised by Sasrakardana in the R. S. V. (revolutionary socialist committee of the trade unions), which split at the end of 1920 into a moderate committee in Djokyakarta and a communistic under Sēma'un in Sēmarang; these combined again after Sēma'un's adventurous journey to Russia to the Trades Union Congress at Madiun in Sept., 1922. Their activity has been by no means confined to questions relating to the working classes but has extended to the whole field of politics.

The period between the third and the fourth congress was a time of great unrest. Soon after the third congress the revolution in Europe caused the formation of the so-called "radical concentration" (Nov. 16, 1918) of different parties in the Volksraad including the S. I. Here their leaders explained the new development of the S. I. and defended the necessity of going farther than was laid down in the statutes (Nov. 14, Dec. 5; cf. *Handelingen van den Volksraad*, 1918—1919, p. 175—185, 518—525); the government, which continued to regard the course of affairs as a healthy development of native society (*Koloniaal Verslag van 1919*, p. 4—13), nevertheless sharply criticised the attitude of the C. S. I. to extremist movements (Dec. 2; cf. *Handelingen* etc., p. 432—434) especially the assertion of the C. S. I. that they could not assume responsibility for disturbances by local S. I.'s if the government did not meet their repeatedly expressed wishes more quickly; the C. S. I. was to settle the conduct of the movement, not the branches; the government, however, again declared once more their readiness to co-operate with the C. S. I. on the lines of their statutes. — An incident which proved fatal for the S. I. was the discovery of a secret revolutionary organisation (the so-called section B of the S. I.) in the Preanger (S. W. Java), as a result of investigations into a case of armed resistance to the authorities in the *désa* of Tjimaremè near Garut (July 4—7, 1919; cf. the synopsis of the report of the government commissioner G. A. J. Hazeu in the *Handelingen van den Volksraad*, Tweede gewone Zitting, 1919, Bijlagen, Onderwerp 10, p. 2—21). The relation of this section B to the C. S. I. and S. I. is by no means clear (cf. *Handelingen der Staten-Generaal*, 1919—1920, Tweede Kamer, Dec. 22, p. 1158^b; Blumberger in the *Encyclopaedie van Ned.-Indië*, Suppl., p. 15^b; *Kolon. Verslag van 1921*, p. 6). Tjakra denied that either the C. S. I. or the local S. I.'s had anything to do with the section B (cf. also *Handelingen der St.-G.* etc., p. 1153^b; *Hand. v. d. Volksraad*, 1919—1920, p. 90—92, 94, 96, 106—110, 114, 211). In any case the government decided to grant no further legal recognitions unless the oaths were taken out of the statutes, etc.; as they thought (probably rightly) that within the S. I. an anti-Dutch movement had become predominant (*Kol. Versl. van 1920*, chap. B, p. 5), they withdrew from the S. I. the moral support which they had afforded it in recent years against the local authorities. — In other respects also the Sarēkat Islam soon met with many great difficulties which crippled its external

activities and forced it to work to strengthen itself internally.

The fourth national congress (Surabaya, Oct. 26—Nov. 2, 1919) was mainly devoted to the discussion of the coming R. S. V. (see above) and the relation of the S. I. to it and can be passed over here.

The difficulties increased. The fifth national congress was postponed on account of a sharp criticism of the financial and political management of the C. S. I. (by the communist Darsana in the *Sinar Hindia* of Oct. 6—9, 1920; cf. *Kol. Verslag van 1921*, col. 6; *Kol. Verslag van 1922*, col. 9). The branches demanded an account of the money entrusted by them to the C. S. I. The first secretary of the C. S. I. was arrested in Nov., 1920, and sentenced on account of the branch B affair. The situation became more and more confused owing to the increasing activity of the other unions.

The fifth congress which was finally held at Djokyakarta from March 2—6, 1921, was Tjakra's last attempt to keep the control of the whole Javanese popular movement in the hands of the C. S. I. by a compromise between the very diverse movements and the postponement of the most difficult questions for which no solution could be found. The compromise was embodied in a new programme of principles in which (a) the fatal influence of European capital, which had, it was said, made slaves of the native population, was exposed, (b) Islām — which, by the way, demands a popular government, workmen's councils, a division of the soil and the means of production, makes work compulsory and prohibits anyone becoming rich through the work of another — was adopted as a basis and (c) the readiness of the S. I. to international co-operation within the limits placed by Islām and with maintenance of its independence was emphasised. The difficult questions of "party discipline" was postponed (whether a member of the S. I. could be also a member of another political party), which question the C. S. I. wished to answer in the negative and the left wing closely allied with the communist party in the affirmative. Since a and c were wanted by the communists, and they were no doubt willing to take b along with the rest, their claim that communism was now victorious in the S. I. was intelligible. It is also easy to understand that the struggle within the S. I. was soon renewed, because the C. S. I. would not allow this interpretation of the compromise (cf. *Utusan Hindia* of March 26, 1921). The breach followed at the sixth national congress (Surabaya, Oct. 6—10, 1921). Tjakra was not present; he had been arrested in August, 1921 (because he was thought to have committed perjury in the section B affair; but he was released in April, 1922, and pronounced not guilty in Aug., 1922). The deputy-chairman was not able to avert the decision; the principle of party discipline was approved by a majority of the congress and Sēma'un and his followers left the S. I. (Oct. 8, 1921); soon afterwards (Christmas, 1921) they formed themselves into a Pērsatuan S. I. or S. I. Mérah (Red S. I.) with headquarters at Sēmarang.

c. After this decision the S. I. lost ground rapidly. The fidelity of its members disappeared before the attractions of the radical party. After

the release of Tjakra he resumed his propaganda for the S. I. but with scant success. He had lost much of his earlier influence and he no longer represented the S. I. in the new Volksraad. He now followed a moderately progressive policy. The seventh national congress was held in the conservative centre of Madiun (Febr. 17-20, 1923). Tjakra again took up cultural and religious questions; in recent years Muslim affairs had been left to special unions, e.g. to the Muḥammadiya. Tjakra now became president of the first pan-Islamic congress (Tjirëbon, Nov. 1, 1922) which had been organised on the model of the "All India Muslim League". A lively interest in questions of international Islām was displayed; a telegram of homage was sent to Muṣṭafā Kemāl Pasha; the Javanese attitude to the caliphate question was discussed. In the Volksraad the S. I. attached itself to the second radical bloc, which was formed on account of the legislative proposals for the revision of the Dutch Indies Constitution. But its activity remained very limited.

In contrast to the decline of the S. I. was the rise of the radical S. I. Its leader, Sëma'un, entered into relations with the Russian Soviet government in Moscow. His activity in the trade unions has already been mentioned above. His arrest was the cause of the great railway strike of May 8, 1923. Deported from the Dutch Indies he went to Holland, where he was made a member of the committee of the communist party as "representative of the Indonesian popular movement". At the end of 1924 he was in China, with which country his party maintained active communication, especially after Sun Yat Sen's adoption of Bolshevism. On May 4, 1923, the radical S. I. and the P. K. I. (Indian communist party) held a joint congress in Bandung. The red S. I. was on this occasion given the name of Sarëkat Ra'yat (Union of the People). Propaganda was conducted in close co-operation with the P. K. I. The S. R. was to be a preparatory school for the P. K. I. and only trained pupils were to be admitted to the P. K. I. Courses for S. R. leaders seem to produce brilliant propagandists in spite of the astounding ignorance which the newspapers talk of (? with truth). The S. R. takes no account of religion; it is "neutraal këpada Allah" (neutral to Allah). The leaders in the towns are often hostile to religion, but in the country they are Muslims; there seems to be group of religious communists. The S. R. was continually fought by the authorities. Meetings were forbidden, breaches of the law relating to the free and public speaking were punished, communistic books etc. confiscated, inconvepient members of the party rendered harmless by detention for examination. Since Aug. 31, 1924, the campaign against them has been intensified. One result has been a milder attitude towards the moderate unions (S. I. etc.). Nothing definite can yet be stated about the results of this campaign.

The branches of the S. I. outside Java are far from being as important as the Javanese. The conditions were different, the soil much less suitable for the seed sown by the S. I. Since 1914 branches of the S. I. have been formed in the most important centres which in general have produced a more active interest in the religious life. Locally there were occasional excesses. But the enthusiasm soon cooled down. Representatives were sent to the national congresses in Java, who made

known to the congress the local complaints of the district they represented. Later there was sometimes the same conflict between S. I. and S. R. but to a far less degree than in Java. — The first S. I. outside Java seems to have been the S. I. Palëmbang, founded Nov. 14, 1913, by Javanese. The influence of the S. I. varied greatly according to local conditions. In Atjeh the situation was difficult about 1921 because the S. I. (often secretly organised) seems to have pursued anti-Dutch propaganda. In Djambi the S. I. played a part in the disturbances of the years 1916 and later; in Minangkabau the pan-Sumatran tendency was stronger than the Javanese influence of the S. I. The action of the S. I. in the islands of Ternate and Ambon was important; radical tendencies were strongly represented on the latter island. Finally we must not omit to mention that the development of the youthful S. I. was watched with the greatest interest from Mekka. In the years 1910 and onwards there was a certain amount of anxiety here because the Dutch government was credited with the intention of making the ḥadjidj impossible for their Indonesian subjects, and, of course, on the pilgrimage of the "Djāwa" the Mekkans depend a great deal for their livelihood (Snouck Hurgronje, *Mekka*, ii., ch. 4). There seems to have been a correspondence between the Mekkan 'Ulamā and the Muslim authorities in Indonesia regarding the activity of Christian Missions; special prayers are even said to have been offered in the Holy Mosque for the Muslims of Indonesia. There was therefore much interest in the S. I. At the end of 1913 a pamphlet on the S. I. appeared in Mekka in Arabic and was afterwards translated into Malay. A Mekka branch of the S. I. was founded (probably for the Indonesians living there) of the activities of which nothing further is known to the writer. This is probably the only branch of the S. I. outside of the Dutch East Indies.

To sum up we may say that the S. I. has played an important part in the development of the relations between Holland and the Dutch Indies, and that its history is important for the history of the revival of Islām and of the awakening of Eastern Asia. The S. I. is the first great independent expression of a want that had been felt among the Indonesians for several decades, their desire for greater freedom and more independence. Their leaders guided it into a radical, perhaps also national, direction, but the masses never understood their theories and gave most support to the movement which best met local requirements. In the fifteen years of the existence of the S. I. there has been externally a tremendous change in Javanese society, the causes of which are also to be sought in events during and after the World War; development internally began especially through the influence of the S. I. but naturally will progress much more slowly. The further development of the popular movement among the Javanese, which is in itself important as a sign of the times, will also depend on many external factors; the degree of capability among the European authorities to adapt their policy to the slowly-changing situation may be particularly decisive for the future character of the popular movement.

I.* in the *Encyklopaedie van Nederlandsch-Indië*², iii., the Hague-Leiden 1919, p. 694^a—703^a, and *Aanvullingen*, p. 15^a—21^b (1922), 196^a—203^b (1924); C. Snouck Hurgronje, *Verspreide Geschriften*, Bonn-Leipzig 1924, iv/ii. 395—402, 405—406, 409—410; the following work by the same author is very valuable for judging the situation at the time of the rise of the S.I., although written rather earlier: *Politique Musulmane de la Hollande*, Paris 1911, and *Verspr. Geschr.*, iv/ii. 227—316. (C. C. BERG)

SARF is defined by the jurists as a contract of sale (*bai'*) in which the goods to be exchanged are of precious metal (*thaman*). *Sarf* is primarily money-changing, but also includes any exchange of gold and silver. As the name shows — *sarf* is *maṣdar* of a verbum denominativum from *ṣairaf* or *ṣarrāf* — the business of money-changing is of Aramaic origin (cf. Fraenkel, *Die aram. Fremdwörter im Arab.*, p. 182 sqq.; Lambert in the *R. E. J.*, 1906, ii. 29). The expression *sarf* seems to have been first naturalised in Islām about the end of the first century A. H. With this is connected the fact that Mālik b. Anas in the *Muwatta'* and with him the Mālikīs make a sharp

distinction between money-changing (*ṣarf*) and the exchange of gold for gold or silver for silver (*murāḩala* by weight, *mubāḩala* by measure or number), which the other law-schools do not do; only in al-Shāfi' (*Kitāb al-Umm*, iii. 30) is a similar term, *muwāḩana*, once found. The legal principles relating to *ṣarf*, which are closely connected with the laws relating to usury, are based on the Hādīth, while the Qur'ān has nothing on the subject. They are the following:

1) With the same kind of material (*djins*), the exchange can only be made with an equal quantity (*taḡāthul*) even if the articles are different in quality and workmanship. With unlike materials (gold for silver) this rule does not hold. Coins debased more than half are treated as merchandise (as in the Talmudic law; cf. Lambert, *op. cit.*, p. 32 sq.) and can be exchanged with a surplus (*mutafāḩilam*). A recompense for the making up of bullion into ornaments etc. is therefore prohibited as usury, while modern authorities recognise the value of the labour and do not consider the sale as *ṣarf* (Benali Fekar, p. 80).

2) Ownership in the goods must pass on either side before the contracting parties separate (*al-taḡābud ḩabl al-tafarruḩ*). A cash payment is therefore necessary (*naḩd*), to the exclusion of all credit (which has passed into Turkish legislation; see below). Among the ḩanafīs, for example, a silver vessel, only part of the purchase price of which is paid, is common property, while among the Mālikīs and Shāfi'īs such a sale is quite invalid (*bāḩil*). There are also differences of opinion regarding the settlement of a debt. In general the rule is that the combination of a *ṣarf* with another legal matter in one agreement is not permitted.

3) The object to be exchanged cannot be disposed of before the ownership is acquired.

4) No option can be reserved (*ḩhiyār al-ṣarf*); on the other hand *ḩhiyār al-aiḩ* is allowed in case of defects and *ḩhiyār al-ru'ya* in purchase of bullion (e.g. ornaments).

The jurists have also evolved subterfuges which make a profit possible in money-changing (al-ḩudūri and al-ḩalabī at the end of the *Bāb*; *Mudawwana*, viii. 126 sq.; Sachau, *Muḩ. Recht*, p. 281). The money-changers condemned by the 'Ulamā — usually Jews — have been organised into guilds since the middle ages (Mez, *Renaissance des Islāms*, p. 449; Young, *Corps de droit ottoman*, title 67, art. 6 sqq.). In modern Muslim states there are special laws relating to money-changing (for Turkey cf. Young, *op. cit.*; of the year 1281 = 1861). Cf. the art. RIBĀ.

(HEFFENING)

SĀRĪ (formerly SĀRŪI; J. Marquart, *Erānsahr*, p. 135; Arab. SĀRIYA), a town in Persia, the

former capital of Ṭabaristān (Māzandarān), 8 miles from the Caspian Sea, 20 from Āmul. Its foundation is attributed to Ṭūs, son of Nūḏhar, general of the mythical king Kai-Khusraw, because there is a place there called Ṭūsān. Fariburz is said to have taken refuge there; the castle which he built could be seen at a place called Luman Dūn. The town itself was built in the time of Farrukhān the Great, *isṭabādī* of Ṭabaristān (end of the seventh century) by Bāv, one of his nobles, on the site of the village of Awhar. Sārī has several times been the capital of Ṭabaristān, — under the Ṭāhirids (820—872) and the 'Alids Iḥasan b. Zaid (854/868) and Muḥammad b. Zaid (270/884). The great mosque begun by the Amir Yahyā b. Yahyā in the reign of the 'Abbāsīd Caliph Hārūn al-Rashīd was finished by Māzyār b. Kārīn (d. 224 = 839). A building is pointed out called Sogunbadhān "the three cupolas", said to be the tomb of the three sons of Farīdūn, Irādī, Salm and Tūr.

The district is not fertile and the climate unhealthy. Silk is the principal product. Under the Ṭāhirids, the canton of Sārī (which extended as far as Tammīsha) had a revenue of 1,300,000 dirhams.

(CL. HUART)

SĀRĪ, the "swift metre", so named because of its swiftness of scansion and swiftness of appeal to taste (Freitag, *Darstellung der arabischen Verskunst*, p. 137), is the ninth in the prosody of the Arabs. It is the first of the six metres of the fourth circle, which is called "the intricate" (*dā'irat al-mushtabih*) on account of its metrical intricacy (Palmer, *Arabic Grammar*, London 1874, p. 346 sqq.). The paradigm is: *mustaf'ilun, mustaf'ilun, maf'ūlūtu* (bis), which is rarely, if ever, found. According to the native system, the *sarī* is of four kinds and has seven varieties (De Sacy, *Traité de la Prosodie des Arabes*, Paris 1831, p. 25).

But the normal form is: *mustaf'ilun, mustaf'ilun, fa'ilun*.

| ٠ ٠ ٠ | ٠ ٠ ٠ | ٠ ٠ ٠ || ٠ ٠ ٠ | ٠ ٠ ٠ | ٠ ٠ ٠ |

Maf'ū or *fa'ilun* (--) is often used in the *qarb*; and, more rarely, *maf'ūlū* or *fa'ilun* (٠٠٠) in both '*arūd* and *qarb*, although not so commonly in the latter. A further variety employed by later poets is the introduction of an extra syllable to the *qarb*, thus *fa'ilātun* (—٠٠٠).

(J. WALKER)

AL-SARĪ B. AL-ḤAKAM B. YUSUF AL-BALKHĪ, held the office of governor and financial controller of Egypt from Ramaḏān 1, 200 (April 3, 816). On Rabī' I 1, 201 (Sept. 27, 816) the troops openly mutinied against him and al-Ma'mūn was forced to remove al-Sarī from his post and replace

him by Sulaimān b. Ghālīb; al-Sarī was put in prison and Sulaimān entered upon his office on Tuesday, Rabī' I 4, 201 (Sept. 30, 816), but was removed from office as early as Sha'bān 1 (Feb. 22, 817) as the result of a repeated revolt of the troops, and al-Sarī again appointed by al-Ma'mūn. The news of his appointment reached Egypt on Sha'bān 12 (March 4, 817); al-Sarī was released from prison and entered al-Fuṣṭāṭ on the same day. He held office till his death on Djumādā I 30, 205 (Nov. 11, 820). That al-Sarī played a prominent part in Egypt even before his appointment as governor is evident also from his mention in the *ḥizā* of a *ḥizwa* intended for the Ka'ba of the year 197 (812/13). His name is also found on gold and copper coins of Egypt; see W. Tiesenhhausen, *Monnaies des Khalifes Orientaux*, p. 188, No. 1700 (Miṣr 200 A.H.), p. 193, No. 1737 (200 and 202 A.H.), H. (ADOLF GROHMANN)

AL-SARĪ B. MANṢŪR, better known as ABU 'L-SARĀYĀ, a hirer of asses who became a brigand as a result of a murder, and then entered the service of Yazīd b. Mazyad al-Shaibānī in Armenia who used him and his thirty horsemen to fight the Khurramīs (cf. the art. KHURRAMIYA). He commanded the advance-guard of Harthama's army in the civil war between al-Amin and al-Ma'mūn; remaining in the service of this general he was given the title of amir. Permitted to go on pilgrimage to Mekka he distributed to his soldiers the 20,000 dirhams that Harthama had given him and got money for himself by holding to ransom the governors he met on his way, defeated the troops sent against him and entered the desert. Reaching Raḡḡa, he there met the 'Alid Muḥammad b. Ibrāhīm Ibn Ṭabāṭabā whose side he took, went down the Euphrates by boat while his chier went by land; they reached Kūfa on Djumādā II 10, 199 (Jan. 26, 815). To get rid of Ibn Ṭabāṭabā whose authority was greater than his and who had prevented him from taking the treasure of Zuhair b. al-Musaiyib, he poisoned him (Raḡḡab 1 (= Febr. 15) and replaced him by another 'Alid, Muḥammad b. Muḥammad b. Zaid, while retaining effective control in his own hands. He struck dirhams at Kūfa (*Z.D.M.G.*, xxii. 707) and sent troops to seize Baṣra and Wāsiṭ. He appointed governors at Mekka and Medina.

Harthama, who was on his way to Khurāsān, sent troops to al-Maḏā'in who defeated Abu 'l-Sarāyā's army (Shawwāl = May/June). Besieged in Kūfa and feeling that his men were losing heart, he fled at the head of 800 horsemen (Muḥarram 16, 200 = Aug. 26, 815), made for Susa, fought

al-Ḥasan b. 'Alī al-Ma'mūn's troops, was defeated and wounded, whereupon his force melted away. He tried to reach his home at Ra's al-'Ain but was overtaken at Djalūlā by Ḥammād al-Kundaghūsh who made him prisoner and brought him to al-Ḥasan b. Sahl, al-Ma'mūn's vizier, then to Nahrāwān, who had him beheaded (Rabī' I, 10 = Oct. 18, 815); his body was hung on a gibbet on the bridge of Baghdād. His rebellion had lasted ten months.

Bibliography: al-Tabarī, ed. de Goeje, iii. 976 sqq.; Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, vi. 212 sqq., 217 sqq.; Ibn Tiktaka, *Fakhrī*, ed. Derenbourg, Paris 1895, 303 = transl. Amar, Paris 1910, p. 381; Ibn Khaldūn, *Ibar*, Būlāk 1284, iii. 242 sqq. (CL. HUART)

SARĪ AL-SAKĀTĪ, ABU 'L-ḤASAN SARĪ B. MUḤALLIS, a Sunnī mystic, died at Baghdād on Ramaḍān 28, 257 (870) or 253 (867) aged 78 (or 98). He was the uncle of Djunaid [q.v.], teacher of Nūrī, Kharrāz and Khair Nassājī, and figures at a later period in the classic *isnād* of the *khirka* of the Sūfis between Ma'rūf Karkhī [q.v.] and Djunaid. The latter was actually his pupil and had himself buried in Sarī's tomb which still exists at Shūniz (cf. L. Massignon, *Mission en Mésopotamie*, Cairo 1912, ii. 105). But Ma'rūf can hardly have been the direct teacher of Sarī.

Sarī is said to be equivalent to *Tsā* either as synonymous with *Rafī* or by an accommodating interpretation of Qur'ān xix. 24; *Sakāṭī* means a dealer in old iron and old clothes.

As regards doctrine, Sarī was the pupil of al-Muḥāsibī [q.v.]; he insists on the reality of a reciprocal love uniting God to man (*shawḳ*); he maintains that a true lover ought no longer to suffer any physical pain and says that at the Last Judgement the *muḥibbūn* will have a place of honour above the three communities (of Moses, Jesus and Muḥammad). Sarī was attacked by Ibn Ḥanbal for having admitted that the letters of the text of the Qur'ān were created and for having neglected asceticism in the matter of food.

Bibliography: Ibn al-Djawzī, *Talbis Iblis*, Cairo 1340, p. 180, 197; Farīd al-Dīn 'Aṭṭār, *Tadhkira*, ed. Nicholson, i. 274—284; al-Djāmī, *Nafahāt al-Uns*, ed. Lees, p. 59—60; Ma'sūm 'Alī Shāh, *Tarā'īk al-Ḥakā'īk*, lith. ed. Tihrān, ii. 166—173. (L. MASSIGNON)

ŠARĪ 'ABD ALLĀH EFENDI, Ottoman poet and man of letters, was the son of Saiyid Muḥammad, a prince of the Maghrib who had fled to Constantinople in the reign of Sulṭān Aḥmad I, and had married the daughter of Muḥammad Pasha, brother of the Grand Vizier Khalīl Pasha. He was brought up by the latter, who had entrusted his education to Shaikh Maḥmūd of Scutari, accompanied him as *tadhkiradāji* ("editor") when during his second vizierate he was given the command of the troops in the Persian campaign, was appointed *ra'īs al-kuttāb* in 1037 (1627/28) in place of Muḥammad Efendi who had just died and was dismissed at the same time as his patron. On the latter's death he was appointed *ra'īs* of the imperial *rikāb* in 1047 (1637/38), accompanied Murād IV to Baghdād and then became *ra'īs al-kuttāb* for the second time. He filled other offices till 1065 (1655) when he retired from public life; he died in 1071 (1660/61). He wrote a commentary in Turkish on the first volume of the *Mathnawī* of Djalāl al-Dīn al-Rūmī, and composed

several original works, some moral like the *Na-ṣīḥat al-Mulūk* and the *Thamarāt al-Qulūb* and others mystical like the *Durra*, the *Djāwḥara* and the *Maslik al-Ushshāḳ*, and a collection of 141 official documents entitled *Dustur al-Inshā'*, as well as verses and songs under the *takhalluṣ* of 'Abdī. His tomb is in the cemetery of Māl-tepe outside the Top-Kapu (Gate of St. Romanus) at Constantinople (Gib.), *Ottoman Poetry*, iv. 79).

(CL. HUART)

ŠARĪ KÜRZ, also ŠARĪ KEREZ, an Ottoman jurist and military judge. His proper name was Nūr al-Dīn and he was born in the district of Karasi, his father's name being Yūsuf. After studying under famous teachers, including Ḳodja Sinān Pasha, he entered upon a legal career, becoming professor (*müderriṣ*), later "guardian" (*şahn*) and finally in 917 (1511/1512) *kādi* of Stambul. Sulṭān Bāyazid II employed him on various affairs of state, for example on a mission to Prince Selim (cf. J. von Hammer, *Gesch. des osmanischen Reiches*, ii. 353, and *Die osm. Chronik des Rustem Pascha*, ed. by L. Forrer, Leipzig 1923, p. 28 sq.; also *G.O.R.*, ii. 371). In 919 (1513/1514) in the reign of Selim I he was appointed military judge (*kādi-asker*) of Anatolia and in 921 (1515/1516) of Rumelia. Next year he was dismissed and became again "guardian"; about 926 (1619/1620) he became *kādi* of Stambul for a second time (cf. Leunclavius, *Hist. Musulm.*, p. 613, 30, and F. Giese, *An. Chr.*, p. 130, 23). In 928 (1521/1522; according to other sources 929 = 1522/1523) he died in Stambul where he was buried in a mosque which he had built. He lived not far from the mesjid which bears his name (cf. *Ḥadīkat al-Djāwāmi'*, i. 133 sq.; *G.O.R.*, ix. 72, No. 280); one quarter of Stambul is still called Šary güzel after him (a *ghalaṭ-i meshhūr*, which has arisen from Šarī Kürz which came in time to be misunderstood; on the name see Sirri Pasha, *Ghalaṭat-i meshhūre*, Stambul, second ed., s.v. *Šarī güzel*, and J. H. Mordtmann in *Der Islam*, xiv. 155). On his son Mehmed cf. 'Aṭā'i, suppl. to the *Šaḳā'īk*, p. 265; on his son-in-law Sinān al-Dīn Yūsuf of Sonsa, famous as a commentator, cf. Ḥādjdji Khalifa, *Fedhlike*, i. 309; *Ḥadīkat al-Djāwāmi'*, i. 134; *Sidjill-i 'Othmāni*, iii. 108.

Šarī Kürz wrote on Fikh and left a number of works, a list of which is given in Ḥādjdji Khalifa, *Kashf al-Zunūn*, ed. Flügel, under No. 7119.

Bibliography: Taşköprüzāde, *Šaḳā'īk al-Nu'māniya*, Turk. transl. by al-Medjidi, p. 314 sq., Stambul 1269; *Sidjill-i 'Othmāni*, iv. 581; Sāmi, *Kāmūs al-A'lām*, p. 2816 sq. (on the forms of the name). (FRANZ BABINGER)

ŠARĪ ŠALTĪK DEDE, a Turkish dervish and Bektāshī saint. He was a contemporary of Ḥādjdji Bektāsh [q.v.] in whose legendary biography (cf. his widely spread *Wilāyet-nāma*) he plays, an important rôle and of whom he is said to have been a disciple, and came, like many dervishes of Anatolia at that time, from Bukhārā. His real name is said to have been Mehmed (Mehmed Bukhārī in Ewliyā 'Celebi, *Siyāḥetnāme*, ii. 134, 5—6). Practically nothing is known of his life and career. According to the *Oghuznāme* in the extract in Seiyid Lokmān, in 662 (1263/64) he led a

large body of people (10,000—12,000), said to have been Anatolian Turkomans, who settled on the western coast of the Black Sea in Dobruđian Tartary, especially around Baba Dađhi. The reason for this migration is unknown; it is perhaps connected with the advance of Hülāgū (cf. *Der Islam*, xi. 24). Apart from the *Ođhusnāme* (cf. J. J. W. Lagus, *Seid Locmani ex libro Turcico qui Ođhusnāme inscribitur excerpta*, Helsingfors 1854, and G. Flügel, *Die arab., pers. und türk. Handschr. der Wiener Hofbibl.*, ii. 225) there are no contemporary reports and the possible Byzantine sources are also silent (e.g. Pachymeres, Nicephoros Greg., Georg. Akropolita; cf., however, J. J. W. Lagus, *op. cit.*, p. 30 sqq.). It seems, however, that older accounts once existed but have now been lost. For example, according to Ewliyā Ćelebi [q. v.], Yazıdjı-oghlu Mehmed Ćelebi (d. 854 = 1450) wrote a *risāla* on Şarī Şaltık and Ken'an Paşa, some time governor of Oczakow, composed a *Şaltıknāme* of 40 *kırrāsa* (cf. Ewliyā, *op. cit.*, iii. 366, and thereon Vas. Dmitr. Smirnov, *Očerki istorii tureckoj literatury* in Korsh, *Vseobščaja istorija literatur*, St. Petersburg 1891, where extracts are given from a *Şaltıknāme*). Ewliyā, who seems to have had access to one of these sources now lost, says that Şarī Şaltık lived in Arpa Ćukuru, Siwās and Tođat before he migrated to Bessarabia. There he is described as 'adđam, which would be in accordance with Ewliyā's statement elsewhere (i. 659): "purifier (*tāhir*) from the Irāk". The earliest notice of Şarī Şaltık is given by Ibn Bađđūta (ii. 416) who visited about a generation after his death his sanctuary at "Baba Şaltuk" (the site of which, however, cannot even approximately be defined) and very briefly tells of the saint's miracles (*manāqib*). The fact that Ibn Bađđūta is obviously not able to give anything reliable about Şarī Şaltık who died barely 50 years before raises legitimate doubts regarding either the Arab traveller's statements or the historicalness of the saint. The fact is that traits and miracles are ascribed to him which are reported of Byzantine saints, and that Şarī Şaltık is confused with Byzantine saints. The legend given by Ewliyā of Şarī Şaltık is remarkable and probably isolated. According to it, the wonder-worker gave his disciples the order to bury his body after his death in 6 or 7 coffins in remote towns of infidel lands, "so that ignorance where the body really is will produce everywhere a pilgrimage of Muslims and from the pilgrimage will result the incorporation of these lands into the kingdom of Islām" (cf. J. von Hammer, *G. O. R.*, viii. 354 sq., following Ewliyā Ćelebi, *op. cit.*, iii. 133 sq.). According to Ewliyā, coffins were therefore taken to Baba Eskisi, Baba Dađhi, Kaliakra, Buzeu (Rumania) and even to Danzig. The conversion of the Lipka Tatars to Islām is ascribed to Şarī Şaltık. Christian saints are repeatedly identified with the Turkish saint and still more numerous are the places in the Balkans associated with the latter. In Kaliakra (Kilghra) Şarī Şaltık appears as a dragon-slayer, who liberates an imprisoned Christian princess (cf. Ewliyā, ii. 137 sq.; C. J. Jireček, *Das Fürstenthum Bulgarien*, Vienna 1890, p. 536; J. v. Hammer, *Rumeli und Bosna*, Vienna 1812, p. 27; *Archäol.-epigraphische Mittheilungen*, 1886, x. 188 sq.; *Z. D. M. G.*, 1922, lxxvi. 155), and Ewliyā himself brings Şarī Şaltık into connection with St. Nicolas (Sveti Nikola; cf. *op. cit.*, ii. 137). There are other

sanctuaries or tombs of Şarī Şaltık in Kroja (cf. *Wissenschaftl. Mittheilungen aus Bosnien*, vii. 60; Ippen, *Skutari*, p. 71 sqq.; A. Degrand, *Souvenirs de la Haute-Albanie*, Paris 1901, p. 223 sqq., 236 sqq.), in Adrianople (Ewliyā, iii. 481 sq.), Corfu, where he is associated with St. Spyridon (Spiridion) (cf. Sāmi Bey Frasheri [an Albanian!], *Kāmus al-A'tām*, p. 2916), in Blagay at Mostar (cf. Saćir Sikirić, *Dervisklostorok és szent sírok Boszniában* in the *Türán*, Budapest 1918, p. 605 sqq.; lacking in Ewliyā (vi. 474, so probably a legend of later invention!), in Chass, a place between Kroja and Djakova, where his alleged tomb is shown (cf. F. W. Hasluck, in the *Annual of the British School at Athens*, xxi. 122, note 3), in the Greek monastery of St. Naum (Sveti Naum) on the south shore of Lake Ohrida (cf. Sāmi Bey Frasheri, *op. cit.*). Şarī Şaltık once becomes St. George, also Elias, then St. Simeon and finally "Ćara Konjolos" (!; cf. Ewliyā, *Travels*, ed. J. von Hammer, i. 161, not in the Stambul printed text) and he thus becomes one of the most remarkable features in the mingling of Muslim and Christian beliefs. The principal sanctuary of Şarī Şaltık is, however, at Baba Dađhi (cf. Ibn Bađđūta, *op. cit.*; Ewliyā, iii. 368 sq.). It was built by Sulţān Bāyazid II, the *Wālī*, as a place of pilgrimage to which Sulţān Sulaimān afterwards made a pilgrimage (cf. *Histoire de la campagne de Mohacz par Kemal Pacha Zadéh*, ed. M. Pavet de Courteille, Paris 1859, p. 80 sqq., 177; J. v. Hammer, *G. O. R.*, iii. 202). Şarī Şaltık finally appears as *Pir* of the gild of *Bonađjiler*, the makers of *bosa* (millet-spirit) (cf. Ewliyā, i. 659, where Şarī Şaltık is described as disciple [*Ćhalifa*] of Ahmed Yesewi). Whether Sāri Salté in Al. Jaba, *Recueil de notices et récits hourdes*, St. Petersburg 1860, p. 94 sqq., is identical with our Şarī Şaltık need not be discussed here. In later Ottoman literature, Şarī Şaltık occasionally plays a part, for example in the *Ćhamsa* "fiver" of New'izāde 'Atā'ī (d. 1044 = 1634; cf. J. von Hammer, *Gesch. der osmanischen Dichtkunst*, iii. 281). The half historical, half legendary figure of Şarī Şaltık Dede demands a thorough investigation. One thing is certain, that it is closely connected with the Bektāşī movement, in the region of expansion of which in the Balkans Şarī Şaltık enjoys the greatest esteem. So long as the history of the 'Alid sectarians ('*Alewī*) in south-eastern Europe is as obscure as at present, only vague statements can be made regarding Şarī Şaltık Dede.

SAR-I PUL, "the head of the bridge", called by Arab geographers Ra's al-Ćanţara, is a town of Afđĳān Turkistān situated in 36° 20' N. Lat. and 65°

40' E. Long. on the Āb-i Safid from the bridge over which it takes its name. It is not to be confused with a village near Samarqand or a quarter of Nishāpūr, both of the same name, each of which is historically as important as the Afghān town. Between the northern spurs of the Paropamisus and the sands to the south of the Oxus, in a fertile tract well watered by streams from the mountains, but proverbially unhealthy, lay four Uzbek Khānates or petty principalities, Akča, Shibarghān, Maimana and Sar-i pul with Andkhūl (Andkhud), the independence of which has been destroyed by the Durrānī and Bārakzāi Amirs of Afghānistān. Of these principalities Sar-i pul was the last to succumb to the ruler of Kābul. In 1865 the troops stationed there revolted against the Amir Shīr 'Alī, but the mutiny was suppressed by 'Abd al-Rahmān Khān, who eventually succeeded as Amir; not long afterwards Sar-i pul lost the last vestiges of its independence, but the former geographical and political divisions of the principalities are preserved and their Uzbek inhabitants are exempt from liability to military service.

SĀRIK (A.) 'thief'. Muslim legal theory distinguishes between *al-sirka al-ṣuḡrā* (theft) and *al-sirka al-kubrā* (highway robbery or brigandage).

1) Theft (*sirka*) is punished by cutting off the hand, according to Sūra v. 42. This was an innovation of the Prophet's; but, according to the *Awā'il* literature, this had already been introduced in the days of paganism by Walīd b. Muḡhira (Nöldeke-Schwally, *Gesch. d. Qurāns*, i. 230). This method of punishment may be of Persian origin (cf. *Lettre de Tansar*, ed. Darmesteter in the *J. A.*, 1894, Series 9, iii. 220 sq., 525 sq.; *Sad Dar* 64,5 = *Sacred books of the East*, xxiv. 327). In pre-Muḡammadan Arabia theft from a fellow-tribesman or from a guest was alone considered despicable, but no punishment was prescribed for it; the person had himself to see how he could regain his property (Jacob, *Beduinenleben* 2, p. 217 sq.; cf. Burckhardt, *Bemerkungen über die Beduinen*, Weimar 1831, p. 127 sqq., 261 sqq.). In the beginning of the first century A.H. the right or left hand was cut off; there was no fixed rule. The Qur'ān leaves the point obscure and one tradition says that Abū Bakr ordered the left hand to be cut off (*Muwatta'*, *Sirka*, bāb 4; al-Shāfi'i, *Kitāb al-Umm*, vi. 117). Cf. the variant of Sūra v. 42: *aimānahumā*, transmitted by Ibn Mas'ūd.

According to the teaching of the Fuḡahā, the thief's right hand is cut off (for a second crime the left foot, then the left hand, then the right foot) and at the wrist; the stump is held in hot oil or fire to stop the bleeding. The Ḥanafis and Zaidīs, however, put the culprit into prison at his third crime, which the Shāfi'is and Mālikīs only do after his fifth. The Shī'is inflict imprisonment for the third offence and death for the fourth. The punishment was inflicted in public; the thief was frequently led round the town seated backwards on an ass with the limb cut off hung round his neck (cf. Ibn Mādja, *Ḥudūd*, bāb 22; Rescher, *Studien über den Inhalt von 1001 Nacht*, in *Ist.*, 1919, ix. 68 sqq.). Punishment could not be inflicted in cases of pregnancy, severe illness or

when the weather was very cold or very hot. It is a ḥadd punishment, as a right of God (*ḥaqq Allāh*) is violated by theft. But at the beginning of the second century A.H. mutilation is still contrasted with the ḥadd punishment (al-Mas'ūdī, *Murūdj*, vi. 28). But as the rights of the owner are also injured (*ḥaqq ādamī*) the thief is bound to make reparation. If the article stolen has disappeared, he is kept under arrest (not so according to Abū Ḥanifa). The Caliph 'Umar is said always to have condemned the thief to return double the value (cf. Roman law: Justinian, *Instit.*, 4, i, 5).

The jurists define theft for which the ḥadd punishment is prescribed as the clandestine removal of legally recognised property (*māl*) in the safe keeping (*ḥirz*) of another of a definite minimum value (*niṣāb*); among the Ḥanafis and Zaidīs ten dirhams, among the Mālikīs, Shāfi'is and Shī'is 1/4 dinār or 3 dirhams) to which the thief has no right of ownership; it is so distinguished from usurpation (*ghaṣb*) and confiscation (*khiyāna*). By *ḥirz* is meant guarding by a watchman or by the nature of the place (e.g. a private house). Thus theft from a building accessible to the public (e.g. shops by day, baths) is not liable to the ḥadd punishment. This is further only applied to one who 1) has attained his majority (*bāligh*, q.v.), 2) is *compos mentis* (*āqil*) and 3) has the intention (*niya*) of stealing (*animus furandi*), i.e. is not acting under compulsion (*mukhtār*). No distinction is made between freeman or slave, male or female. The punishment is not applied in case of thefts between husband and wife and near relatives nor in the case of a slave robbing his master or a guest his host. Views are divided on the question of the punishment of the *dhimmī* and the alien (*musta'min*) with the ḥadd; and on the punishment of accomplices and accessories; in any case the total divided among them must reach the *niṣāb* for each of the thieves. It is not theft to take articles of trifling value (wood, water, wild game) and things which quickly go to waste (fresh fruit, meat and milk), or articles in which the *shar'ia* does not recognise private ownership or things which are not legitimate articles of commerce (*māl*), like freeborn children, wine, pigs, dogs, chess-sets, musical instruments, golden crosses — the theft of a full grown slave is considered *ghaṣb* — or articles in which the thief already has a share (booty, state treasure, *wakf*, common good to the value of the share), also copies of the Qur'ān and books (except account books) as it is assumed the thief only desires to obtain the contents. The conception of literary theft is unknown to the Fikh.

The charge can be made by the owner and legitimate possessor (or depository) but not by a second thief. The legal inquiry has to be conducted in the presence of the person robbed. For proof two male witnesses are necessary or a confession (*ikrār*; q.v.) which can, however, be withdrawn. It is recommended to plead not guilty if at all possible (cf. the art. *ADHĀB*). If the thief, however, has given back the article stolen before the charge is made, he is immune from punishment. (cf. Sūra v. 43).

2) Highway robbery or robbery with violence (*muḡāraba*, *ḥaḡ' al-ṣarīk*) occurs when anyone who can be dangerous to travellers falls upon them and robs them when distant from any possible help

or when someone enters a house, armed, with the intention of robbing (cf. Roman Law: Justinian, *Novellae*, 134, Ch. 13). The *Shi'is* consider any armed attack even in inhabited places as highway robbery. The same regulations hold regarding the person and the object as above, especially the *niṣāb*. On the authority of *Sūra* v. 37 *sq.*, the culprit is liable to the following *ḥadd* punishments. If a man has committed a robbery which is practically a theft to be punished with *ḥadd* his right hand and left foot are cut off (the next time, the left hand and the right foot). If, however, he has robbed and killed, he is put to death in keeping with right of reprisal (*kiṣās*) and his body publicly exposed for three days on a cross or in some other way. The punishment of death is here considered a *ḥaqq Allāh*; the payment of blood-money (*diya*) is therefore out of the question. If the criminal repents, however, before he is taken, the *ḥadd* punishment is omitted; but the claim of the person robbed of the article for compensation and the talio remain. All accomplices are punished in the same way; if one of them cannot be held responsible for his actions, the *ḥadd* punishment cannot be inflicted on any.

All these laws hold only for the *ḥadd* punishment which the judge can only inflict when all conditions are fulfilled. In all other cases the thief is punished with *tā'zir* [q.v.] and condemned to restore the article or to make reparation. It is the same with the thief who comes secretly but goes away openly (*mukhtalīs*) or the robber who falls upon someone and robs him at a place where help is available (*muntahib*). Special laws were therefore frequently passed in Muslim states to supplement the *shari'a*, in Turkey, for example, by Mehmed II (*Mitteilungen zur Osm. Gesch.*, i. [1921], p. 21, 35), Sulaimān II (v. Hammer, *Staatsverfassung*, i. 147 *sq.*), Mehmed IV and 'Abd al-Madjid. These laws endeavour more and more to replace the *ḥadd* punishment by fines and corporal punishment. The Turkish criminal code of 1858 still only recognises fines and imprisonment for theft although the *shari'a* was not officially abolished thereby (cf. the art. MEDJELLE). The code of punishment laid down in the *shari'a* still at the present day holds only in Persia and Afghānistān and the Yemen.

SARIRA. [See ZĀBAG.]

ŠĀRLĪYA, the name of a sect in Northern Mesopotamia to the south of Moṣul. This sect is also a kind of tribe called Sarlis and lives in six villages, four of which lie on the right bank and two on the left of the Great Zāb, not far from its junction with the Tigris. The principal village, where the chief lives, is called Warsak, and lies on the right bank; the largest village on the left bank is Sefiye.

The Sarlis, like the other sects found in Mesopotamia (Yazidis, *Shabaks*, *Bādjūrān*), are very uncommunicative with regard to their belief and religious practices, so that the other inhabitants of the country attribute abominable rites to them and allege that they have a kind of secret language of their own. In *al-Mashriq*, 1902, v. 577 *sqq.*, Père Anastase gives some notes on the Sarlis (and also on the sects of *Bādjūrān* and the *Shabaks*) which he obtained from an individual in Moṣul. According to him, their language is a mixture of Kurdish, Persian and Turkish. As to religion, they are monotheists, believing in certain prophets, in paradise and hell. They neither fast nor pray. They believe that their chief has the power to sell territory in paradise. For this purpose he visits all the villages at harvest time, and every Sarli is allowed to purchase as much *dhirā'* as he can pay for; the price of a *dhirā'* is never less than a quarter of a medjidiye. Credit is not granted. The chief gives a receipt which shows how much *dhirā'* an individual has acquired. This receipt is put in the pocket of the dead man so that he can present it to Riḍwān, the guardian of Paradise. The Sarlis have also a feast-day once in every lunar year which consists in the consumption of a repast at which the chief presides, and to which every one contributes a cock boiled with rice or wheat. After this meal, called *aklat al-maḥabba*, the lights are said to be extinguished and orgies of promiscuity to take place. The head of the community is succeeded at his death by his unmarried son; he is forbidden to shave his beard or his moustache. The Sarlis are polygamous. They are said to have a sacred book written in Persian.

These statements should be taken with considerable reserve. The Sarlis themselves say that they are simply Kurds and belonged originally to the Kāke Kurds who have some villages near Kirkuk. But the Kāke Kurds also have a mysterious reputation. A characteristic feature noticed in one of the Sarli villages (Sefiye) is an ornament with triangular holes in the walls of the principal buildings of the village.

The Sarlis have the reputation of being good farmers. Their anthropological type is the same as that of the Kurds, as Père Anastase points out. It is only their religious beliefs that have been influenced by ultra-*Shi'a* and ancient Persian ideas. Like the Yazidis they have Muslim names; their present chief is called Tāha Koča or Mulla Tāhā.

SARPUL-I ZOHĀB ("bridgehead of Zohāb"), a place on the way to Zagros on the great Baghdad-Kirmānshāh road, taking its name from the stone bridge of two arches over the river Alwand, a tributary on the left bank of the

Diyāla. Sarpul now consists simply of a little fort (*kūr-khāna* = "arsenal") in which the governor of Zohāb lives (the post is regularly filled by the chief of the tribe of Gūrān), a caravanserai, a garden of cypress and about 40 houses. The old town of Zohāb about 4 hours to the north is now in ruins. To the east behind the cliffs of Hazār-Djarib lies the little canton of Beshiwe (Kurdish = "below") in a corridor running round the foot of Zagros giving access to the famous col of Pā-Tāk on the slope of which is the Sāsānian edifice called Tāk-i Girrā. In the west the heights of Mēl-i Ya'qūb separate the verdant plain of Sarpul from that of Kaş-i Shirin [q. v.]. Sarpul is the natural halting place for thousands of Persian pilgrims going to the *'atabāt* (Karbalā' and other Shi'a sanctuaries). When the pilgrimage season is at its height (in autumn and winter), a hundred tents may be seen near the bridge. They belong to the Kurdish gipsy tribe of Suzmānī (Fiūdj) the women of which are professional dancers and singers noted for their light morals.

Sarpul corresponds to the site of the ancient Khalmanu of the Assyrians, Hulwān [q. v.] of the Arabs. The earlier name survived as the Kurdish name of the Alwand i. e. Halawān. Traces of the old town are found mainly on the left bank (Pā-pul) where the land is level and beautiful.

Sarpul is noted for its antiquities; 1) the bas-relief and Pahlavi inscription on the cliff on the right bank of the Alwand; 2) three steles on the cliffs of Hazār-Djarib (on the left bank) of which two are Sāsānian (Parthian?) and the third represents Anu-Banini, king of the Lulubi; 3) two miles away to the south of Hazār-Djarib is the Achaemenid tomb cut out of the rock and venerated at the present day under the name of Dukān-i Dā'ūd (Dā'ūd's workshop) by the Ahl-i Haqq (see the art. 'ALĪ ILĀHĪ, q. v.) who have a cemetery at the foot of the rock.

SART, originally an old Turkish word for "merchant": it is used with this meaning in the Kuḍatku-Bilik (quotations in Radloff, *Versuch eines Wörterbuches der Türk. Dialecte*, iv. 335) and by Maḥmūd Kaşghārī (e. g. i. 286). In the Uighur translation (from the Chinese, of the *Saddharma puṇḍarīka* the Sanskrit word *sārthavāha* or *sārthalaḥa* "caravan-leader" is translated *sartpau*; this word is explained as the "senior merchant" *sarikh ulugh*). Radloff therefore concludes that Turk. *sart* is an Indian loan-word (*Kuan-si-in Pūsar*, *Bibl. Buddh.*, St. Petersburg 1911, xiv. p. 37). When the Iranians of Central Asia had secured control of the trade with the nomad peoples, the word *sart* became used by the Turks and Mongols as the name of a people with the

same meaning as *Tādjik* (*Tādjik*). Rashīd al-Dīn (ed. Berezin, *Trudi vost. Arkh. Obshch.* vii. 141) says that the prince of the (Muslim) Kaḗluḗ, Arslān Khān, when he submitted to the Mongols was called "sartāktāi", i. e. "tādjik", by them. The form of the name of the people here is Sartāk: the *tāi* was added by the Mongols to the name to signify a male member of a people (*op. cit.*, p. 65). As this example shows, the Sartāktāi to the Mongols were not so much people of a definite nationality and language (the Kaḗluḗ were of course a Turkish people) as adherents of a definite type of culture, the Perso-Muḥammadan. The Sartāktāi seems to have come to the Mongols not only as a merchant but also as a bearer of civilisation and especially as an expert in irrigation: this seems to be the only explanation of the Mongol legends of the hero Sartāktāi, and the wonderful canals, bridges and dams which he built (J. N. Potanin, *Očerki severo-za padnoi Hongolii*, St. Petersburg 1881/83, iv. 285/6). Alongside of "Sartāktāi" we find *Sartāul* used in the same meaning a word obviously derived from the same root (e. g. Rashīd al-Dīn, ed. Blochet, p. 541, s). In the Arabic-Mongol glossary published by Melioransky, *sartāul* is explained as *al-muslimūn* (Zap. xv. 75 infra). On the other hand in Turkistān in the Mongol period, we find "Sart" opposed to "Turk", apparently only because of the difference of language; cf. especially the description of Farghāna, in Babūr, ed. Beveridge, f. 26 on Andijān, *ili tusk dūr*, f. 36 on Marghinān *ili Sart tūr*. A. Samoilovič, *Afganistan*, Moscow 1924, p. 103 sq., calls attention to another passage in Babūr (f. 131 a—b), where a distinction seems to be made between Sart and Tādjik; it is said that the population of the town of Kabul and several villages consists of "Sart", while in other villages and wilāyets live other people including the Tādjik. The language of the Sart is often opposed to the language of the Turk by Nur 'Alī Shīr Nawā'i, cf. e. g. the quotation from his *Madjālis al-Nafā'is* in the dictionary of Shaikh Sulaimān in L. Budagow, *Sravoritel'nyi slovar turecks-tatarskikh naričii*, i. 612 and especially the whole of the *Muḥākamat al-lughatain*, where Persian as Fārs tili or Sār-tili is contrasted with Turkish (Khoḗand edition, n. d. e. g. p. 19: *Sart türk tili bile nazm aitkandeh faṣṣih türkler*).

After the conquest of Turkistan by the Özbek the contrast between the Özbek and the subject native population must have at times been felt more strongly than the contrast between Turk and Tādjik (or Sart). The Özbek in Kḗiwa are very frequently distinguished from the Sart by Abu 'l-Ghāzi, cf. ed. Desmaisons, p. 231: *Ürgenčning Özbeki wa Sartii*; p. 256: *hazārāspning Özbekin wa Sartin*. The same linguistic usage has survived in Kḗwārizm to the present day. The contrast is less apparent in Bukhārā and Khoḗand: it is more usual especially among the nomads themselves, for the Kazāk [q. v.] and not the Özbek are contrasted as nomads with the Sart as town dwellers and agriculturists. In Khoḗand, government edicts are said to have begun with the words *sartiya wa Kazakiy alargha ma'tūm bolsun* but (as far as I know) no such documents have yet been published. To the Kazāk every member of a settled community was a Sart whether his language was Turkish or Irāniān: in official language the word "Sart" seems to have been applied to the turkicised settled population in contrast to the Tādjik

who had retained their Irānian language, cf. in the *Tārīkh-i Shāhrukhi*, ed. Pantusow (Kazan 1885), p. 193; *Sartiya wa tādjihiya*, p. 209; *Karyahā-i Sartiya wa tādjihiya*, p. 279; *ilātiya wa özbekiya wa Sartiya wa tādjihiya*. The same usage has been adopted by European scholars, although it was difficult to define the difference between Sart and Özbek. According to Radloff (*Kuan-si-im Puser, loc. cit.*) Sart now means, "the Turkish-speaking town dwellers of Central Asia in contrast to the villagers the Özbek". In some regions especially around Samarkand, the villagers still pride themselves on being Özbek and have retained the division into families, but this distinction between town and country does not apply to the whole of Turkistan. No attempt has yet been made to establish a dialectic difference between Sart and Özbek. The settled peoples of Central Asia are in the first place Muslims and think of themselves only secondarily as living in a particular town or district, to them the idea of belonging to a particular stock is of no significance. It is only in modern times under the influence of European culture (through the intermediary of Russia) that a striving for national unity has arisen. The word "Sart", applied by the nomads with unconcealed contempt to the settled population and popularly explained as *sarī it* ("yellow dog"), has now been banished from use: now only an Özbek nationality is recognised in contrast to the nationalities of the Qazāq, Turkomans and Tādjiq.

(W. BARTHOLD)

SART, small village in Lydia in Asia Minor, the ancient Sardes (*αἰ Σάρδεῖς* of the classical authors, which makes Sāmi write Sārd), capital of the Lydian Kingdom, situated on the eastern bank of the Şart Çai (Pactolus) a little southward to the spot where this river joins the Gediz Çai (Hermus). Although in the later Byzantine period Sardes had lost much of its former importance (as a metropolitan see) and been outflanked by Magnesia (Turkish Maghniṣā) and Philadelphia (Ālā Shehr, q. v.), it still was one of the larger towns, when the Seldjuq Turks, in the 11th century, made incursions into the Hermus valley. At the time they were expelled by the Byzantine general Philocalos (1118). At the end of the 13th century Sardes had been for some time under a combined Greek and Turkish domination, until the Greeks were able to drive away the Turks a second time (Pachymeres, ed. Niebuhr, Bonn 1835, ii. 403). In the beginning of the 15th century the citadel was surrendered to one of the Seldjuq amirs, and the town probably belonged during the remainder of that century to the territory of the Şarukhān [q. v.] dynasty, whose capital was Maghniṣa. So when in 792/1390 the Ottoman Sultan Bāyazid I, after the conquest of the then Greek town Philadelphia, took possession of the Şarukhān country, Sardes was equally incorporated in his empire (Anonymus, Giese, Breslau 1922, p. 28; 'Ashīk Paṣhā Zāde, Constantinople 1333, p. 65). After the battle of Angora, when Timūr marched against Smyrna (805/1402), Sardes and

its citadel were probably destroyed and never recovered again.

At present Şart consists only of a few miserable huts inhabited by Yürüks, between the Şart Çai and the citadel hill. This hill is a long narrow counterfort, 200 metres in height, belonging to Mount Tmolus (now Maḥmūd Dağ) in the South (a topographical sketch of the site in Curtius, *Beiträge zur Geschichte und Topographie Kleinasiens*, in *Abh. Pr. Ak. W.* 1872, Plate V²). East of the ridge is a small millbrook called Taḇaḵ Çai; north of the town it joins the Pactolus, which is united with the Hermus about six km. to the North of the acropolis hill. At the other side of the Hermus is situated the big necropolis of Sardes, a large plain of mounds called *Bin Bir Tepe*. North of this plain is the Mermere Lake, the ancient Lake of Gyges. The railway from Smyrna to Ālā-Shehr runs along the southern Hermus bank and has a station at Şart. In the Turkish administration Şart belongs to the *kaḏā* Şāliḥli of the *Sandjak* Şārūkḥān of the *wilāyet* Aidin. The necropolis belongs to the *Qaḏā* Kaṣaba.

The site of Sardes has gained much importance from an archaeological point of view. The most complete information is to be found in the *Publications of the American Society for the excavation of Sardis* (Leiden 1916). See also Pauly-Wissowa's *Encyclopädie der classischen Altertumswissenschaft*, 2nd Series (Stuttgart 1922), col. 2475 sq.

(J. H. KRAMERS)

SARÜDJ, a town in Diyār Muḏār [q. v.] on the most southerly of the three roads from Biredjik [q. v.] to Urfa [q. v.] in 36° 58' N. Lat. and 38° 27' E. Long. As the name of the town is also that of the district, its relation to the ancient names Anthemusia and Batnae is disputed; cf. *Bibliography*. On account of the fertility of the district in which the town is situated and its central position between the Euphrates on the one side and Urfa and Harrān [q. v.], from each of which it is about a day's journey distant, on the other, the traffic through it brought it a certain degree of prosperity, especially as it was also important as a post-station between al-Rakka and Sumaisāt. According to Ibn Khordādhbeh [q. v.], it was 20 farsakh from the former town and 13 from the latter. The principal occupation was settled by the natural suitability of the soil or growing fruit and the vine, as all the geographers tell us. Within the town itself Ibn Djubair [q. v.] found orchards and running water.

The town was captured with the rest of al-Djazira in 18 (639) by 'Iyād b. Ghanm. There are a number of references to its later history scattered through the geographers and historians; but the history of the town can only be intelligently handled in connection with the history of the Djazira. — By the time of Abu 'l-Fidā' [q. v.], Sarüdj was already in ruins. Modern travellers describe it much as do the mediaeval geographers, except that it appears smaller to them. Sachau (see *Bibl.*) actually speaks of the village of Sarüdj; it is now the residence of a *ka'im-makām*.

Sarūj has attained great fame in literature because the hero of the *Maḳāmāt* of al-Ḥarīrī, Abū Zaid, belonged to it. In this work there are also details regarding the town itself.

PLESSNER)

ŞARUKHÂN, the name of a Turkoman dynasty, which made itself independent in Anatolia on the collapse of the kingdom of the Saldjūks of Rūm and had its capital in Maghnisa, the ancient Magnesia on the Sipylus; whether the name was originally that of a tribe (cf. Şarūkhān in Houtsma, *Recueil*, iv. 188) and later survived as that of the dynasty is uncertain. At the beginning of the sixth century Şarūkhān (written Σαρρυανς by the Greeks) is mentioned as lord of Maghnisa which he had occupied in 1313 and had made his capital. He seems to have been engaged in heavy fighting with the Catalan mercenaries of the Byzantine Emperor (about 1304 cf. *Chronik des edlen En Ramon Muntaner*, transl. by K. F. W. Lang, ii. 116 [Leipzig 1842]: Macunxia = Maghnisa), but in the end to have succeeded in asserting his independence. Indeed the Genoese settlement of Foča (Phocaea) owed him allegiance and had to pay a yearly tribute to him (Ducas, p. 162; Ibn Baṭṭūṭa, ii. 314). While Şarūkhān resided in Maghnisa (Ducas, p. 13; Pachymeres, ii. 451—452; Nicephor. Gregor., ii. 214; Shihāb al-Dīn al-'Umari in E. Quatremère in *N. E.*, xiii. 339, 368; Ibn Baṭṭūṭa, ii. 313), his brother 'Alī was established as an independent prince in Nif (the ancient Nymphaeum, south of Smyrna) cf. Shihāb al-Dīn al-'Umari, p. 367 and Defrémery in the *Nouvelles Annales des Voyages*, ii. 19 [Paris 1851]. Şarūkhān gradually gained a territory which roughly coincided with the ancient Lydia and included the following towns and villages: Güzel Hisār, Menemen, Ak Hisār, Mermere, Gurdük, Gördös, Kaşadık, Adala, Demirdi, Nif, İlidje, Torgudlu, Foča, Kara Hisār, Kaşaba. His rule even seems to have extended, partially at least, to the Aegean Sea the islands of which he repeatedly ravaged with this fleet (from Pachymeres J. von Hammer, *G. O. R.*, i. 70). In the course of his apparently stirring reign). Şarūkhān made an alliance with

Andronicus III, the younger, Emperor of Byzantium about 1329 against the Genoese (cf. *G. O. R.*, i. 126 sq. and against Urkhān and about 1345 allowed Umur Beg lord of Aidin-eli a free passage through this land in return for a disputed strip of land when the latter was marching along the Asiatic coast to the Hellespont to assist John VI Kantakuzenos. Şarūkhān's son Sulaimān accompanied the army but died suddenly at Apantea of a malignant fever (cf. Kantakuzenos, ii. 29—30, 450—484; iv. 86, 591—596, where details of these events are given). Şarūkhān must have had another son who died earlier, in addition to Sulaimān (cf. Ibn Baṭṭūṭa, ii. 313). Soon afterwards, the Empress Anna, mother of John Palaeologos, sought the assistance of Şarūkhān, which, although granted at once, was of no avail (cf. Kantakuzenos, *op. cit.* and *G. O. R.*, i. 136), Şarūkhān must have died very soon afterwards. The throne passed to his son Fakhr al-Dīn Ilyās about whose activities almost nothing is known. He died in 776 (1374/1375) and left the kingdom to his son MUZAFFAR AL-DIN ISHAK of whom also little is known. He was an ardent member of the Mewliye and founded a Mewlewī monastery in Maghnisa as well as the chief mosque (*Ulu Dīārī*) the splendid *minbar* of which of carved wood contains an Arabic inscription of 778 (1376/1377) with his name and titles. He was — probably the first — Mewlewī-Çelebi of Maghnisa and was buried with his wife and sons in the sarcophagi adorned with the Mewlewī head-dress in the mosque built by him in Maghnisa. On his death in 788 (1386/1387) he was succeeded by his son KHAIDR SHAH BEG who lost his kingdom in 792 (1390) or 793 (1391) when Sultān Bāyazid I conquered it and gave it with Aidin-eli and Monteshe-eli to his son Sulaimān (so Idris Bitlist, but Sa'd al-Dīn to Artoghrlu cf. *G. O. R.*, i. 606). Khidr Shāh Beg himself fled to Kötürüm Bāyazid lord of Sinob and Kaşamūnī to seek protection from his oppressor. After the battle of Angora (1402) he was restored to power by Timūr like the other petty dynasts of Anatolia (*ṭawā'if al-Müluk*). A few years later he made an alliance with Isā Çelebi brother of Sultān Mehmed I and supported him in his war against his Sultān brother. Mehmed I was victorious, took Khidr Shāh prisoner and had him put to death after promising him burial in the mosque of his ancestors and guaranteeing the maintenance of his foundations (mosques, schools and hospitals): cf. Sa'd al-Dīn, *Tāḍī al-Tawārikh*, i. 287 sqq., also *G. O. R.*, i. 343. With him the family of the family of the Şarūkhān-oghlu became extinct, and their lands henceforth formed an Ottoman province. As the province of Şarūkhān was that nearest the capital Constantinople and its governorship formed a regular steppingstone to influence and power, the position was usually given to eldest sons of the house of 'Othmān (cf. also *G. O. R.* iii. 267). The sandjak of Şarūkhān existed down to quite recent times and retained its ancient boundaries (on it cf. V. Cuinet, *La Turquie d'Asie*, iii. 523—575). The following is the dynastic list based on the available data (see particularly Münadjdīm bāshī, iv. 33). Şarūkhān (c. 700—746 = 1300—1345) Fakhr al-Dīn Ilyās (746—776 = 1345—1374) Muzaffar al-Dīn Ishāk (776—790 = 1473—1388) Khidr Shāh Beg (790—792/93 = 1388—1390/91 and 805—813 = 1402—1410).

Like the lords of Aidin and Monteshe, the

Şarūkhānoghlu struck *gigliati* modelled on the coins struck in Naples and Sicily by the house of Anjou to have a medium of exchange suitable for trading with Italian merchants (cf. J. Friedländer, *Beiträge zur älteren Münzkunde*, p. 52; A. de Longpérier, *Revue numismatique franç.*, 1860, p. 59; Sp. Lampros, *ibid.*, 1869, xiv. 355 sqq. (erroneous attribution); J. Karabacek, in the *Wiener Numism. Zs.*, 1870, ii. 525 sqq., 1877, ix. 200 sq.; briefly dealt with in G. Schlumberger, *Numismatique de l'Orient Latin*, Paris 1878, p. 479—481). The coins of the Şarūkhānoghlu are comparatively rare: only a few pieces in silver and copper are known of the last two rulers, Işhāk Celebi and Khidr Şah Beg; details in St. Lane-Poole, *Catalogues of the Oriental Coins in the Brit. Mus.*, vii. 12, London 1894; do., *Catal. of the Bodleian Library, Muhamm. Coins*, Oxford 1888, p. 31 sq., but especially Ahmed Tewhîd in vol. iv. of the *Catalogue des Monnaies des Khakans Turcs*, Stambul 1321, 21903 Turkish, p. 382—386.

Bibliography (in addition to works quoted in the text): Ahmed Tewhîd, in the *Revue Historique publiée par l'Institut d'Histoire Ottomane*, i. (1910/11), 615—619; W. Heyd, *Le colonie commerciali degli Italiani in Oriente*, i. 437, ii. 91; do., *Histoire du Commerce du Levant*, Leipzig 1885, i. 488, 636, 546, ii. 353. SASAK. [See LOMBOK.]

SĀSĀN, the patron saint of all wanderers and vagrants such as jugglers, beggars, conjurers, and those who go up and down the country accompanied by animals (goats, asses or apes), who show real or feigned diseases and mutilations, gipsies etc. These people are often classed together as the Banū Sāsān and have a bad reputation, as is evident from the literary references, as almost all classes of swindlers are included under this name. Their arts and tricks are called *ilm Sāsān*.

Various traditions seem to exist regarding the father of this trade of begging. According to one story, he was no less a person than the ancestor of the Sāsānian dynasty, Sāsān b. Isfandiyār or b. Bahman, who was excluded from the throne by his father at his death in favour of his sister Humāi and then became a shepherd and beggar. This tradition apparently owes its origin to anti-Sāsānian circles in Persia (Nöldeke, *Gesch. d. Perser u. Araber*, Leiden 1879, p. 432) and is said to be alluded to as early as Imru' al-Kais (*Muḥit al-Muḥit*, ii. 1026). In modern Persian *Sāsān* has actually come to mean "beggar".

The gild literature also deals with Sāsān. Although the mention of a *Ṭarīka Sāsān* has perhaps never been taken seriously, in certain manuscripts discussed by Thorning (*Beiträge zur Kenntnis des islamischen Vereinswesens*, Berlin 1913) the Shaikh Sāsān is considered as not belonging to the *ṭarīka*, although there are also traditions according to which Shaikh Sāsān with his brothers Khamdān and Raḡbān, all sons of Kaḡān, are in a way the fathers of all handicrafts (Thorning, *op. cit.*, p. 39 sqq.). The author of a manuscript on the gilds in Egypt (Gotha, Pertsch N^o. 903) makes a vigorous onslaught on Sāsān whom he describes as *djāhil* and the cause of the decline of the gild system in Egypt, as he parodied all the old respected customs of the gilds.

Bibliography: The Banū Sāsān and their tricks are discussed by al-Djawhārī, in his *Kitāb al-Mukhtār fī Kashf al-Asrār wa-Haḡḡ al-Astār*, discussed by de Goeje in the *Z.D.M.G.*, xx. 485, 493, 500; cf. also Justi, *Iranisches Namenbuch*, Marburg 1885, p. 291; Dozy, *Supplément*, s. v. SĀSĀN. (J. H. KRAMERS)

SĀSĀNIANS, a Persian dynasty. The names of the kings in modern Persian forms are as follows:

Ardashīr I, 226—241	Bahrām V, 420—438.
A. D.	Yazdigird II, 438—457.
Shāpūr I, 241—272.	Hurmizd III, 457—459.
Hurmizd I, 272—273.	Firūz, 459—484.
Bahrām I, 273—276.	Balāsh, 484—488.
Bahrām II, 276—293.	Kawādh I, 488—531.
Bahrām III, 293.	Khusrāw I, 531—579.
Narsai, 293—303.	Hurmizd IV, 579—590.
Hurmizd II, 303—310.	Khusrāw II, 590—628.
Adharnarsai, 310.	Kawādh II, 628.
Shāpūr II, 310—379.	Ardashīr III, 628—630.
Ardashīr II, 379—383.	Several ephemeral rulers; cf. Justi in the <i>Gr. d. iran. Philol.</i> , ii. 545.
Shāpūr III, 383—388 (or 387? cf. Pauly-Wissowa, <i>Realenz.</i> , 2 ^d Series, i. col. 2355).	Yazdigird III, 632—641.
Bahrām IV, 388—399.	
Yazdigird I, 399—420.	

The dates are not absolutely certain; this is especially true of the reigns between Hurmizd I and Shāpūr II (see Nöldeke, *Gesch. d. Perser und Araber*, p. 400 sqq.). The dynasty is said to be descended from a certain Sāsān, of whom little that is really historical is known; the genealogy is then traced farther back through Dārā to the mythical royal family of Īrān. In the beginning of the third century A. D., several petty kings were reigning in Persis under the suzerainty of the Arsakids. The epoch of these dynasts is called the period of the *Mulūk al-Ṭawwāʾif* by the Arabic and Persian historians, and the term includes the Arsakids (and Seleucids) as well as the minor rulers. Ibn Kṭaiba (*Kitāb al-Maʾārif*, p. 321), for example, includes Ardashīr I himself among the *Mulūk al-Ṭawwāʾif*, as ruler of Iṣṭakhr.

Bābak, Ardashīr's father, who, according to al-Ṭabarī, was originally king of Khir (east of Shīrāz) and whose father Sāsān is said to have held some priestly office in Iṣṭakhr, began to extend his territory at the expense of the other petty kings of Persis. After the brief reign of his son Shāpūr came Ardashīr, who continued what his father had begun until he defeated the Arsakid Artabanus V (Ardawān) in battle and killed him (224). It was probably in 226 that the Sāsānian king conquered the capital Ctesiphon; 226 is usually given as the initial year of the dynasty. But Iṣṭakhr was held in honour throughout the whole period of the dynasty as the ancestral home of the family. The Sāsānians succeeded to the inheritance of the Parthian kings, which included the struggle with Rome and later with the Byzantines. As our most reliable sources for their history are Greek and Roman authors, the relations of the Sāsānians with the empires of the west are best and most fully known to us. Ardashīr I conducted an offensive against Rome. Apart from relatively short periods of peace, this

war went on almost to the end of the dynasty. The earlier Sāsānians endeavoured to expand their empire and Rome in this first period was called upon to defend her eastern possessions.

An important bone of contention was Armenia, where a branch of the Arsakid house ruled which had very early adopted Christianity and directed its policy on Roman lines. A treaty of partition regarding Armenia was made about 387. When Christianity became the official religion in the eastern Roman empire also, a new element entered the political relations with Persia. The persecutions of the church by some kings (like Shāpūr II, Bahrām V, Yazdigird II) contributed to intensify the differences. The history of these wars, the details of which do not belong to this article, has often been written in modern works on Roman and Byzantine history, from Gibbon down to Seck and Bury (cf. also the biographical articles that have so far appeared in Pauly-Wissowa's *Real-encyklopädie der klass. Altertumswissenschaft*² on the kings Artaxerxes [Ardashir] I—III, Sapor I—III, Yazdegerd I and II). The best known of these wars were fought between Ardashir I and Severus Alexander, between Shāpūr II and Julian, in which the Roman offensive was at first successful, by Kawādh I against Anastasius I and by Khusrāw I against Justinian. This last war ended in 562 with a treaty which established a fifty years' truce.

The Christians in the Persian empire then attained religious freedom, but the Persian government soon resumed its repressive measures against the Armenian Christians. When the Emperor Justin II soon afterwards began to be dissatisfied with the boundaries of the respective kingdoms and made demands on Khusrāw, hostilities began again. This begins the last stage of this period of wars. Khusrāw I was unsuccessful in the fighting that followed and under Hurmizd IV also the Roman armies were victorious. The Persian general Bahrām Čūbin, who had been insulted by the king, seized the occasion to rebel against Hurmizd; he even aimed at the throne itself. During these turmoils Hurmizd was murdered by two of his relatives; but his son Khusrāw succeeded in escaping to Byzantine territory, where he appealed for help to the Emperor Maurice. With Byzantine assistance he disposed of the usurper, but in the reign of Khusrāw II there was no more prospect of lasting peace with Byzantium, as the Sāsānian, on the deposition and murder of Maurice by Phocas in 602, assumed the role of avenger of the murdered Emperor. In this, the last great war with Byzantium, the Persians at first won considerable successes. Khusrāw's armies conquered Jerusalem and even Egypt. The reaction followed in the reign of Heraclius. Kawādh II, who had deprived his father, Khusrāw, of life and throne, was forced to beg peace from the Emperor. With Khusrāw II died the last important ruler of the dynasty. Kawādh II begins a series of ephemeral rulers (including a usurper, Shahrwarāz, and two queens, Būrān and Azarmidukht) who were raised to the throne in succession by the nobles, only to disappear soon afterwards, until in 632 a grandson of Khusrāw II, Yazdigird III, came to the throne. Although it looked at first as if more settled conditions were to return, Yazdigird III was the last Sāsānian to rule over Irān.

It was not only wars with Rome and Byzantium that endangered the Persian empire. Less civilised peoples, like the Chionites and Gīlānīs (against

whom Shāpūr II had to take the field) and the Hephthalites (Haitāl, defeated by Bahrām V) continually threatened its existence. King Firūz lost his life in an unsuccessful struggle with the latter. It even seems that for some time after this event Persia was tributary to the Haitāl. About the middle of the sixth century A. D., the threat from the Haitāl was replaced by the danger from the Turks. It was not, however, the northern nomads that put an end to the Sāsānian empire, but the Arabs. Even before the beginning of the dynasty, Arab tribes had settled in the Euphrates and Tigris region; in the wars between Byzantium and Persia both parties used Arab assistance. The first king who came into conflict with the Arabs seems to have been Shāpūr I, of whom a war against Hatra is recorded. It must have been an Aramaic king who reigned there, but a story of an expedition by Shāpūr against the Kudā'a has been amalgamated with this story, which was itself already overgrown with legendary matter. How confused all this is shown by the fact that Ibn Ğutaiba (*Kitāb al-Ma'ārif*, p. 322; cf. Eutychius, ed. Cheikh, i. 106) puts this war with Hatra in the reign of Ardashir, contrary to the usual Persian-Arabic tradition. It is, however, a historical fact that Ardashir besieged Hatra (unsuccessfully) (Dio Cassius, 80, 3). Finally Firdawsī gives a different version of the whole episode and puts it in the reign of Shāpūr II (Macan, p. 1432 etc.). That Hurmizd II inflicted a defeat on the Arabs is very doubtful (Nöldeke, *op. cit.*, p. 51, note 2). According to the oriental sources, Shāpūr II was a bitter enemy of the Arabs; that he penetrated to Yamāma, however, and the vicinity of Medina and received the name Dhu 'l-Aktāf from the way in which he ill-treated his prisoners of war is an invention of legend. The Arab kings of al-Hira, the Lakhmids, were vassals of the Sāsānians; their antagonism to the Ghassānids, who were in Roman service, was an important factor, for example in the wars of Khusrāw I with Byzantium, and earlier they had played a part in the dynastic affairs of Persia. It is probable, indeed, that Bahrām V, whose rule was not at first recognised by several nobles, overcame a rival with the help of Nu'mān of al-Hira, amongst others. Khusrāw I even interfered in the domestic quarrels of Arabia, when about 570 he assisted the Yamani pretender Saif b. Dhī Yazan [q. v.] with a Persian army against the Abyssinians. According to Arab tradition, the last king of al-Hira assisted Khusrāw II when fleeing before Bahrām Čūbin, but when the king was firmly established on his throne, he had the Lakhmid seized and executed. Tradition gives no valid reason for this impolitic act. This king Nu'mān of al-Hira is said to have refused his horse to Khusrāw on his flight, or, according to another story, the intrigues of an enemy of his brought about his fall. Governors were appointed to al-Hira by the Persian king. The — not very serious — defeat which the Bakr tribes inflicted on an army of Khusrāw's consisting of Persians and Arabs at Dhū Kār soon showed how impolitic it had been to put an end to the dynasty of al-Hira, the bulwark against the Arabs of the desert. It is, of course, a question whether the Lakhmids would have been of much use against the great Arab tide of conquest which soon afterwards swamped the Sāsānian empire. As early as 633 Abū Bakr sent armies to the Irāk; this began a

series of attacks on the Persian monarchy (battle of the chains, battles of Waladja and Ullais, subjection of al-Hira, etc.) which culminated in the battle of Kādisiya (probably still in 636; cf. the art. KĀDISIYA) where the imperial Persian forces were completely routed. The complete subjection of Irān, however, only dates from the defeat of the Persians at Nihāwand (642). Yazdigird III escaped; but in spite of all his endeavours he did not succeed in obtaining effective assistance from the neighbouring peoples. One of the nobles had him assassinated near Marw in 651.

The Sāsānian empire was a feudal monarchy. The powerful families which already had very great influence in the Arsakid period, like the Surēn, Karēn etc., formed an influential nobility. The influence of the higher priesthood was also considerable. There was a revival of Mazdaeism with the rise of the dynasty; this creed became the state religion in the strictest sense, although the Jews and Nestorians, for example, were usually unmolested in Persia. The punishment for abandoning Mazdaeism for another religion was death. The political influence of the higher priesthood was seen at the accession of Bahrām V. His claims to the throne seem to have been supported by the clergy to an important extent. The works of Chr. Bartholomae (*Über ein sasanidisches Rechtsbuch*, in the *S. B. A. Heidelberg*, Phil.-Hist. Klasse, 1910; *Zum sasanidischen Recht*, i.—iv., ibid. 1918—1922) give us a survey of civil law in the Sāsānian period.

The Persian-Arabic tradition of Sāsānian history goes back to Pahlavi sources now lost, the most important of which must have been a work entitled *Xvatāy-nāmak* (mod. Pers. *Khudāy-nāma*). Taking up a rigidly legitimist attitude, it comprised the period of the mythical kings as well as the history of the reigning dynasty. Good historical material was preserved in this work, e. g. on the early deeds of Ardashīr; on the other side the "histoire anecdotique" plays a great part in it. The records of the doings of the kings are often interwoven with the stock motives of romance. Besides the *Xvatāy-nāmak* there were also smaller historical works, among them the *Kārnāmak i Artaxšatr i Pāpakān* still extant (transl. by Nöldeke, Göttingen 1878; text several times published, e. g. Bombay 1896, 1899, 1900); a fairly long historical romance about Bahrām Čubin can be partly reconstructed from the echoes of it in modern Persian and Arabic literature (Nöldeke, *op. cit.*, p. 474 etc.; A. Christensen, *Romanen om Bahrām Tschöbin*, 1907). Such Pahlavi works were early translated into Arabic; for example, the *Xvatāy-nāmak* by Ibn al-Mukaffāʿ; on the other hand, there were modern Persian versions to which traditions preserved in Firdawsī and al-Thaʿālibī go back, although they are not in complete agreement (Nöldeke, *op. cit.*, p. xiv. sqq.; do., *Das iranische Nationalepos*², p. 5 sqq.; al-Thaʿālibī, ed. Zotenberg, p. xxiii. sqq., xliii.; I have been unable to consult V. Rosen, *K woprosu ob arabskich perewodach Chudajname = Zur Frage betreffs der arabischen Übersetzungen des Ch.* [quoted in Zotenberg, *op. cit.*, p. xliii., note 3]. On the relation of the traditions preserved in al-Thaʿālibī to those in Firdawsī see al-Thaʿālibī, ed. Zotenberg, p. xxv. sqq.). The old Arabic translation of Ibn al-Mukaffāʿ has also been lost, but it is reflected in those sections of the Arabic historians, like al-Ṭabarī, al-Masʿūdī, al-Dīnawarī, etc., which deal with the Sāsānian period.

It is uncertain how far these authors have used Ibn al-Mukaffāʿ' s actual work. The tradition of the history of the dynasty in Ibn Kūtaiba (in his *Kitāb al-Maʿārif*) and Eutychius is more closely connected than in the other writers and shows a special character; indeed, these two historians often agree word for word. According to Nöldeke, it is probable that these two used the original Ibn al-Mukaffāʿ (*Gesch. d. Perser*, p. xxi.); the other historians must have used later versions of the original work (cf. al-Thaʿālibī, ed. Zotenberg, p. xliiii.). Several of the later historians of the Persians have also a section on the Sāsānians, e. g. Rashīd al-Dīn (*Djāmī al-Tawārikh*) and his copyist al-Kāzwinī (*Tārikh-i Guzida*). These as a rule have no independent value, although it seems to be not impossible that details might still be found in them which are not given elsewhere, as is the case with Ibn Balkhī's *Fārsnāma* (*Gibb Memorial Series*, New Ser., vol. i.; cf. p. xxiii sqq.).

It is from this semi-historical tradition that the anecdotes and witty sayings which are found in the *Adab*-literature relating to these kings and their court for the most part come. They are not uncommon, for example, in the excursus in al-Masʿūdī's *Murūdj*. The *Marzbānnāma*, which belongs to narrative literature proper, contains several stories of Khusrāw I Anūshīrwān and his vizier Buzurjdmihr. In poetic literature we may mention Niẓāmī, who, on several occasions, took the material for his romantic works from the Sāsānian period, although he occasionally deviates from the accepted tradition, for example, when he gives, in the *Haft Paikar*, the story of Bahrām Gūr (Bahrām V)'s master-shot in an essentially different form from Firdawsī and al-Thaʿālibī, who give a less polished and therefore probably older version. That tradition became much altered in course of time is undoubted. It must also have incorporated Arabic elements, which were foreign to the old Book of Kings, alongside of original Irānian matter. It is no longer possible to discriminate between these strata with any approximation to accuracy. The omission of one or other story in Firdawsī or al-Thaʿālibī is, of course, no criterion; besides, these two no longer used Pahlavi originals, but later versions. Among stories that are certainly old and original are the history of the founder of the dynasty, the story of the killing of Yazdigird I by a demoniacal horse, most of the stories of Bahrām Gūr relating to hunting or women, the death of Firūz in the Hephthalite war, most stories of Anūshīrwān, the cycle containing stories of the fall of Hurmizd IV, the rebellion of Bahrām Čubin and his fall and the further history of Khusrāw II Parwiz to his murder at the instigation of his son Kawādh (*Shirūya*); on the other hand, originally historical events of the Sāsānian period may also have given rise to similar stories, which were put back into the mythical period, as Nöldeke suggests, for example, in the case of the records of the events that followed the death of Firūz (*Iran. Nationalepos*², § 9). We also find episodes which are related of Sāsānian kings in some histories attributed to mythical kings by others; for example, the story of Bahrām Gūr's prohibition of wine in Firdawsī (Macan, p. 1497 sqq.) is placed by al-Thaʿālibī (p. 149; cf. p. xxix) in the reign of Kai Kūbād. The stories based on the very common motif of the king who goes unrecognised into the enemy's country (*Shāpūr II*, Bahrām Gūr) belong to the older

tradition. Other subjects are perhaps later — occasionally due to an Arab intermediary —, like the story of the siege of Hatra and the story connecting Saif b. Dhī Yazan with Khusrāw I; it is possible also that the part of the stories relating to Bahrām Gūr and Khusrāw II, in which the kings of al-Hīra play an important part (accession of Bahrām Gūr, flight of Khusrāw II before Bahrām Čubin), is not entirely free from Arabic elements, which are perhaps also found among the apophthegms of the kings. This is certainly the case with a saying of King Narsai reported by al-Thaʿālibī (p. 510: *wa-kāna lā yarkabu ilā buyūt al-nirān, fā'idhā hila lahu fī dhālika, kāla: kad shaghālani khidmatu 'llāhi 'an khidmat al-nār*).

The rulers the accounts of whom are fullest are as a rule the most important historically: Ardashīr I, Shāpūr I and II, Khusrāw I and II; Bahrām V, however, is really not one of the great kings. When there was nothing known to record of a monarch, the old Book of Kings seems to have confined itself to giving speeches which the king was said to have delivered at his accession, etc. The speeches and apophthegms of the kings were regarded as models of elegant style (Nöldeke, *Gesch. d. Perser*, p. xviii.; al-Thaʿālibī, ed. Zotenberg, p. xv. In the latter, p. 481, we find that even Ardashīr I possessed oratorical talents). Arabic rhetoric seems to have made its influence felt here; at least Hurmizd IV's speech from the throne in al-Dinawari (*Kitāb al-Akhbār al-Tiwāl*, p. 77 sqq.) gives the impression of coming from an Arabic rather than a Persian original. (Cf. also Nöldeke, *Gesch. d. Perser*, p. 326 sqq.).

SATALIA. [See ADALIA].

SATAN. [See SHAṬĀN].

SĀṬĪḤ B. RABĪʿA, a fabulous diviner (*kāhin*) of pre-Islamic Arabia, whom tradition connects with the beginnings of Islām; in reality we have here to deal with a quite mythical personage like the other *kāhin*'s in whose company he appears in most stories, Shīkh al-Ṣaʿbī, who is simply the humanisation of a demoniacal monster in appearance like a man cut in two (*shīkh al-insān*: cf. van Vloten, *W.Z.K.M.*, 1893, vii. 180—181). Sāṭḥ, whose name means "flattened on the ground and unable to rise on account of the weakness of his limbs" (*Lisān al-ʿArab*, iii. 312), is described as a monster without bones or muscles; he had no head but a human face in the centre of his chest; he lay on the ground, on a bed of leaves and palm-branches, and when he had to change his position "they rolled him up like a carpet"; only when he was irritated or inspired did he inflate himself and stand up. His close resemblance to Shīkh is accentuated by legend which makes them both be born without the intervention of a father in the night before the death of the *kāhina* Ṭuraifa (the wife of ʿAmr Muzaikīyā, ancestor of the tribe of this name, who is said to have foretold the catastrophe of the breaking of the dam of Maʿrib in the Yaman). She is said before dying to have made the two newborn monsters come to her and after spitting in their mouths (the classic method of transmitting magic power) declared them her successors in the art of *kihāna*.

In spite of these characteristically mythical features Arab genealogical tradition has not refused to give Sāṭḥ a place in its system, but gives him a name and a paternity (Rabīʿ b. Rabʿa b. Masʿūd b. Māzin b. Dhīʿb) which connect him with the Ghassānid branch of the tribe of Azd (just as it connects Shīkh with the Banū Ṣaʿb, a branch of the Banū Badjila) and more precisely with the Banū Dhīʿb (Ibn Duraid, *Ishṭīkāk*, p. 286, 10—13; Wüstenfeld, *Genealog. Tabellen*, II, 16; according to others, the Banū Dhīʿb belonged to the ʿAbd al-Kais, a tribe belonging to the Rabīʿa group); there even seems to have been in historic times an Azd clan claiming descent from Sāṭḥ (Abū Ḥātim al-Sidjīstānī, *Kitāb al-Muʿammarin*, p. 3, in Goldziher, *Abhandl. zur arab. Philologie*, ii.).

Among the legends associated with the name of Saṭīḥ some are connected with the pre-history of the Arabs and represent Saṭīḥ as acting as a diviner and judge (*ḥakam*) without any regard for history or chronology, even fictitious; sometimes we find him dividing among the sons of Nizār (Muḍar Rabi'a, Iyād and Anmār) their father's estate (*ʿIkd*, 1st and 2nd ed., ii. 46 = 3rd ed., ii. 46—47 = 4th ed., ii. 39); sometimes we find him consulted with *Shiḥk* by al-Zarib al-ʿAdwānī (Wüstenfeld, *Gen. Tabellen*, D, 13) regarding the real position of Kaṣī, the ancestor of the Thaḳīf, to whom al-Zarib had been forced to promise his daughter in marriage (*Aghāni*, 1st and 2nd ed., ii. 75). In al-Yaʿkūbī (ed. Houtsma, i. 288—290) it is he who decides the difference that has arisen between ʿAbd al-Muṭṭalib, the Prophet's grandfather, and the two Kaṣī tribes, al-Kilāb and al-Ribāb, regarding the ownership of the well of Dhū 'l-Harm discovered by the former in the vicinity of al-Ṭāʿif; but the parallel versions of the same story either do not mention the name of the arbitrator or give him that of another kahin, Salama b. Abī Haiya al-Ḳudāʿī (al-Maidānī, *Amṭhāl*, ed. 1284, i. 36 = ed. 1310, i. 30; Yāqūt, ed. Wüstenfeld, iv. 629; *Lisān*, xiii. 283).

Two other legends, on the other hand, have a completely Islāmic stamp; according to the first, given by Ibn Ishāq, who does not give his sources, Saṭīḥ consulted — as always with *Shiḥk* — by the Lakhmid chief Rabi'a b. Naṣr regarding a dream which had frightened him, reveals to him that South Arabia will be invaded by the Abyssinians and that after the expulsion of the latter and the brief dominion of the Persians it will be conquered by a Prophet (Muḥammad); as a result of the oracle Rabi'a b. Naṣr sends his son ʿAmr at the head of the tribe to the king of Persia who settles them at al-Ḥīra; this is the "South Arabian" version of the foundation of the Lakhmid dynasty (cf. G. Rothstein, *Die Dynastie der Lakhmiden in al-Ḥīra*, Berlin 1899, p. 39).

The second and most widely disseminated legend goes back to a certain Hānī al-Makhzūmī, who is said to have lived to 150 and about whom Muslim historiographical tradition knows nothing (cf. Ibn Ḥadīj, *Iṣāba*, Cairo, vi. 279, N^o. 8,929). It forms part of the cycle of the *ʿalām al-nubūwa*, that is of the miraculous signs which confirm the truth of the prophetic mission of Muḥammad. In the night when the latter was born remarkable phenomena occurred throughout the kingdom of Persia. The king (Kisrā Anūshīrwan) not being able to get an explanation from his magicians asked the king of al-Ḥīra, al-Nu'mān b. al-Mundhir (an anachronism!), to send him someone who could explain it. Al-Nu'mān sent ʿAbd al-Masīḥ b. Buḳaila al-Ḡhassānī (on him see the *Kitāb al-Muʿammārīn*, p. 38; Caetani, *Annali dell' Islām*, ii. 935, 12 A. H., § 165; iv. 657, 21 A. H., § 328), who not being able to explain these marvels himself went to Saṭīḥ, his maternal uncle, who lived in the desert. He found him at the point of death and his appeal was unanswered; only after his nephew had addressed him in verse, did the kahin predict to him the coming fall of the Persian Empire and its conquest by the Arabs, etc. Having delivered this oracle, his uncle Saṭīḥ died.

Saṭīḥ claimed to receive his knowledge of the future from a familiar spirit (*raʿī*, cf. above, ii. 625a) who had overheard the conversation of God with

Moses on Mount Sinai and had revealed part of it to him. Here we see the influence of the Qur'ānic passage (lxii. 1) about the djinn who overhear God's utterances.

The calculations of the Arab historians on the age reached by Saṭīḥ are naturally quite fanciful; those of them who place his birth at the time of the bursting of the dam at Ma'rib and his death at Muḥammad's birth, give him a life of 600 years. It should be observed that Abū Ḥātim al-Sidjistānī [q. v.], whose version is markedly different from the others (he does not speak of his monstrosity, puts his home in al-Bahrain, etc.), makes him die in the reign of the Ḥimyar king Dhū Nuwās and therefore does not know of his prophecy to Kisrā Anūshīrwan.

(G. LEVI DELLA VIDA)

SAUL. [See ṬĀLŪT.]

SĀWA (older SĀWAD), a town and district in Central Persia. It lies on the direct road from Kāzwin to Ḳum (Kāzwin-Sāwa: 22 farsakh; Sāwa-Ḳum: 9 farsakh). This road practically corresponds with the royal road (*Shāhrah*) described by Mustawfī (Sūmghān [?]—Sagzābād-Sāwa-Isfāhān) which was very important when, under the Mongols Arghūn and Uldjaitū, Sultāniya became the capital of Persia. The Kāzwin-Sāwa road may yet again resume its old importance for traffic between North Persia and the southern provinces. For the present it is eclipsed by a longer combination of paved roads leading through the capital: Kāzwin-Teherān (22 farsakh) and Teherān-Ḳum (22 farsakh). On the other hand Sāwa has definitely lost its position as a stage on the route from Hamadhān to Raiy (Teherān) (61 farsakh) on which the Arab geographers place it. Traffic between Hamadhān and the capital now goes via Nawbarān-Zarand or, with a detour, by the paved roads Teherān-Kāzwin-Hamadhān (about 54 farsakh). Geographical considerations explain the decline of the town. The desert is gradually invading the district of Sāwa as a result of a breakdown in the control of the irrigation system.

Sāwa is situated in the north-west corner of a plain (c. 30 × 25 miles) open towards the east the lower part of which is being gradually engulfed by salt marshes. The district is watered: 1. by the Ḳara-Sū (the Gāwmāhā or Gāwmāsā of Mustawfī) which is formed by three streams: the

southern and most important (Do-āb) comes from the north face of the Bakhtiyārī mountains (Djā-pelākh); the western descends from the Alwand (Orontes) of Hamadhān and the northern has its source in the mountains of Kharrākān. Having crossed the plain of Sāwa, the Kara-čai pours its brackish waters into the central desert and disappears; 2. by the Mazdakān (*vulgo*: Mazlaghān)-čai which rises near Dargazīn (east of Hamadhān) and runs parallel to the Kara-čai and before rejoining it on the left bank (north) disappears into several irrigation canals in the north-west part of the plain of Sāwa.

Sāwa is not known before the Muslim period. Tomaschek connects its name with the Avestan word *sava*, Pahlavi *savaka*, "advantage, utility" (?). The Persian dictionaries give "pieces of gold" for *sāwa*. According to Tomaschek, Sāwa corresponds to the Sevavicina or Sevakina of the Tabulae Peutingerianae.

Ibn Hawkal says that Sāwa was noted for its camels and camel-drivers. Al-Muḥaddasī mentions its fortifications, its baths and a Friday mosque near the great road at some distance from the market. The people of Sāwa (as of Ulūdžird) were Shāfiʿī Sunnis who were at permanent feud with their neighbours in Āwa who were fervent "twelver" Shīʿīs. The Mongols sacked the town in 617 (1220) and burned its fine library (Yākūt) which also contained astronomical instruments (al-Ḳazwīnī). Ḥamd Allāh Mustawfī (ed. Le Strange, p. 62) gives the four *nāhiya*'s of Sāwa: Sāwa, Āwa, Djahrūd and Būsin(?) with 46, 17, 25 and 42 villages respectively, 130 in all. Khwādja Zahir al-Dīn Sāwādī about the time of Mustawfī (viiith—xivth cent.) rebuilt its walls which were 6200 *dhār*^c (7,000 yards) in circumference and his son Khwādja Shams al-Dīn incorporated into the town the suburban village of Rūdābān.

Mustawfī extols the fruits of Sāwa but quotes the Persian proverb about its cereals: "the straw of Ḳum is better than the grain of Sāwa". The pomegranates of Sāwa are renowned throughout Persia to this day.

Among the European travellers Marco Polo mentions Sāwa ("Saba") as the town from which the three Magi kings set out for Bethlehem and where they are buried in a square sepulchre. This Persian-Christian legend must be based on a local popular interpretation of texts like "Reges Arabum et Saba dona adducent" (Psalm lxxii. 10). According to another story given by Marco Polo, the three kings are buried respectively at Sāwa, Āwa and Ḳalʿa-i Ātašparastān, which Vule locates between Sāwa and Abhar, while Tomaschek identifies it with Diz-i Gabrān (one stage beyond Ḳum on the road from Kāshān).

Sāwa is mentioned by Giosafa Barbaro (1474), Figueroa (1618) etc. Chardin laments its sterile soil and heat. In 1849 the English consul K. E. Abbot counted 300—400 houses in Sāwa with 1000 inhabitants; he says that the soil is excellent everywhere that it is not mixed with the *kavīr* but that the salt desert is met with at only 9 miles from the town.

At a distance of only 4 farsakh to the south of Sāwa is the old Shīʿa centre: the little town of Āwa watered by a stream coming from the heights of Tafrīsh which separate the plain of Sāwa from that of Farāhān (Persian ʿIrāk). According to Tomaschek, Āwa corresponds to the ᾿Αβαννα

of Ptolemy. Al-Muḥaddasī calls it Āwā, Yāqūt Āba. Kūh-i Namak lies between Āwa and Ḳum. It is composed of salt and its friable soil — Haussknecht calls it *Gidān-Gelma* — makes it impossible to climb it. In Mustawfī's time Āwa was 5000 paces in circumference. Houtum-Schindler says that the ruins of the old town are beside the modern village (100 houses) and that the tomb of Shamʿūn (Simeon?) is shown there. Mustawfī talks of the tomb "attributed" to the Prophet Samuel but puts it 4 farsakh north of Sāwa.

At the present day the population of the district of Sāwa is wholly Shīʿa. It consists of Persians and Turks. The latter belong to the local confederation of Shāh-Sewen which includes the remnants of the tribe of Khaladj. The district of Sāwa is frequently called Khaladjistān. There are Shāh-sewen to the north-east and to the south of Sāwa. The Khaladj live more especially to the north of the Ḳum-Sultānābād road (Rāhgird, Tadj-Khātūn, Djahrūd, Tafrīsh). In several of their villages (Kundurūd, Mawdjān, Sift, Fowdjird, Kardedjan) a very peculiar Turkish dialect is spoken: *warorom baghka*, "I am going to the garden"; *hissi-ri*, "it is warm"; *hāw-ēā*, "in the home"; *yol havul dagh-artti*, "the road was not good", etc. The dialect is worth the attention of students of Turkish (cf. the art. SHĀH-SEWEN).

In the tenth century A.H. (Ibn Faḳīh) Sāwa formed part of the province of Ḳum. In modern times it has formed part of various administrative combinations. Sometimes it was governed along with the districts to the south (Mahallāt, Kazzāz), sometimes with Zarand (N.-E. of Sāwa) and Kharrākān (*vulgo*: Ḳaraghān). This last mountainous district formed an enclave between the provinces of Ḳazwīn and Hamadhān. It consists of three *bulūk*: Afshār-i Bakishlu, Afshār-i Ḳutlu and Ḳaragöz; the chief town of Kharrākān is situated in the latter at the foot of the pass. It is called Āwa and must not be confused with the place or the same name in Sāwa. About 1890 Sāwa was governed by an Austrian officer in the Persian service, von Taufenstein. At the beginning of the twentieth century it formed a kind of fief of the brigade of Persian Cossacks at Teherān. One of the higher officers of this military force acted as governor of Sāwa and controlled the Turkish natives who supplied the principal contingent to the brigade.

The antiquities of Sāwa are: 1. the barrage on the Kara-čai (about 12 miles S.S.W. of the town) said to owe its origin to Shams al-Dīn al-Djuwainī [q. v.], vizier of several rulers of the viith (xiiith) century (cf. *Nushat al-Ḳutub*, ed. Le Strange, p. 221). The barrage is said to have been restored under the Ṣafawids; it is known as *band-i Shāh ʿAbbās*. It occupies the passage between two hills and is about 65 feet high, 100 long and 45 thick. Beside it on the left bank, the road rises in a kind of spiral: caravans were thus able to ascend the dam which was used as a bridge and descend on the west side by a gradual slope on the right bank. The attempts to repair this important work by closing the path which the river has made through it have so far failed with resultant ruin for the district. 2. The fortress of Kiz-ḳalʿa on a rock in the centre of an amphitheatre of hills not far from the dam. 3. Two mosques at Sāwa, one in the town, built, according to Houtum-Schindler, in 1518 A.D.; the other, very beautiful,

situated outside the town among the old ruins on the south side. This *masjīd-i djum'a* seems to occupy the site of the mosque mentioned by al-Muḥaddasi. According to Houtum-Schindler, the present building dates from 1516 A.D. but J. Dieulafoy attributes its "restoration" to Shāh Tahmasp (930—984 = 1524—1576). 4. Near this Friday mosque is a much older minaret 36 feet high, built of bricks arranged in rows with geometrical designs superimposed. Dieulafoy dates it to the Ghaznawid period but a comparison with a similar minaret at Khusrawgird (Khusrāsān) which is dated 505 (1111) suggests that it is of the same period (cf. Sarre, *Denkm. pers. Baukunst*, Berlin 1910, ii. 112—113, and E. Herzfeld, *Khorāsān*, in *Isl.*, xi. 170). 5. The reservoir (*āb-anbār*) with the great gateway which may date from the xiiith century of the Christian era (Herzfeld, *op. cit.*, p. 171).

Among famous men born in Sāwa, Yākūt mentions Abū Ṭāhir 'Abd al-Rahmān b. Aḥmad, one of the principal Shāfi'ī Imāms (d. 484). Mustawfi mentions the tomb of Shaikh 'Uthmān Sāwādī near the town. On the poet Salmān-i Sāwādī (700—778 = 1300—1376) see E. G. Browne, *A Hist. of Pers. Litt. under Tartar Dominion*, Cambridge 1920, p. 260—271 etc., and the article SALMĀN.

[Sāwa plays an important part in the legends of Muḥammad. According to a frequently quoted tradition (for details see A. Sprenger, *Das Leben und die Lehre des Muḥammad*, i. 134 sqq., and Th. Nöldeke, *Geschichte der Perser und Araber*, p. 253 sqq.), a lake (*buḥaira*) in the neighbourhood of Sāwa sank into the ground in the night in which the Prophet was born. The site was still pointed out to al-Kāzwīnī in the xiiith century. As the tradition quoted shows a rather accurate knowledge of Irānian matters, we may safely seek an allusion to a definite Irānian conception in this single feature of the story. Now in Zoroastrian eschatology the lake Kansava (*Kasaoya*) plays an important part; in the later Avesta it is located in Eastern Irān and is said to correspond to Lake Hāmūn in Sidjīstān. In it is preserved the seed of Zarathushtra from which in the end will arise the saviour Saoshyant. When we find the legend of the drying up of a lake in Irān connected with

the birth of Muḥammad, we may interpret it as an allusion to this mythical lake. The legend symbolises the destruction of the hope of a Zoroastrian saviour, just as the earthquake in the royal palace at Ktesiphon recorded in the same tradition symbolises the end of the Irānian empire and the extinction of the sacred fire the end of Zoroastrian culture. (H. H. SCHAEDEER)]

SAWĀD, a name of the 'Irāk [q.v.]. While the name 'Irāk has been proved to be a Pahlavi loanword (from *Erag*, "low land, south land", occurring in the Turfan fragments, with assimilation to the semantically connected stem 'rḱ; cf. A. Siddiqi, *Studien über die persischen Fremdwörter im klass. Arab.*, p. 69; H. H. Schaefer, *Isl.*, xiv. 8—9; J. J. Hess, *Zeitschr. f. Semitistik*, ii.) sawāa "black land" is the oldest Arabic name for the alluvial land on the Euphrates and Tigris given on account of the contrast to the eye between it and the Arabian desert (Yākūt, *Mu'djam*, iii. 174, 14 sqq.). The name has undergone a threefold development of application. 1) It is identified with the political division of 'Irāk and thus corresponds to the Sāsānian province of *Sūristān* (*Dil-i Erān-shahr*). With this meaning the historians of the Arab conquests use the name Sawād for the 'Irāk (cf., for example, al-Balādhuri, *Futūḥ*, p. 241, 2) and especially the compilers of monographs on taxation or political handbooks (cf. Abū Yūsuf, Yahyā b. Ādam, *Qudāma al-Māwardī*; also Ibn Khaldūn). The reason for this is that in the cadastral and revenue regulations of 'Umar I the name Sawād was used officially. 2) It is used as the name of the cultivated area within a district, e.g. *Sawād al-'Irāk*, *Sawād Khūzistān*, *Sawād al-Urdunn*. 3) Before the name of a town it means the systematically irrigated and intensively cultivated fields in its vicinity, e.g. *Sawād* of al-Baḡra, Kūfa, Wāsiṭ, Baghdād, Tustar, Bukhārā, etc.

On the philological point see Lane, *Ar.-Engl. Lexicon*, i. 4, 1462b; on the technical question of taxation A. von Kremer, *Über das Budget der Einnahmen unter der Regierung des Hārūn al-raṣīd*, in the *Verh. d. VII. Internat. Orient. Kongr.*, ii. 1888, and M. van Berchem, *La propriété territoriale et l'impôt foncier sous les premiers califes* (1886). (H. H. SCHAEDEER)

SAWĀKIN (SUAKIM or SUAKIN) a seaport on the west coast of the Red Sea in 19° 5' N. Lat. The town is built on a picturesque little oval-shaped island about a mile in circumference and 300 yards long, which lies off the mainland in the centre of a deep bay. The harbour is reached through a narrow channel 4 or 5 miles long hemmed in by coral reefs; Sawākin is connected with the African continent, by a causeway about 60 yards long, commanded by a fort. At the entrance to this road is a pretty gateway which can be closed by a door, through which one reaches the suburb of al-Kaif, which lies on the mainland. The Customs House and the Government buildings are the most important buildings on the island town. The best houses are fine white buildings of three stories, recalling in style those of Djidda. Among modern erections Kitchener's Gate, a handsome half Moorish edifice, is worthy of note. The pri-

mitive shapeless huts of the natives are in lurid contrast to these buildings. The bazaar consists of drinking-bars kept by Greeks and a little street with coffee-shops and booths. The half-dozen Europeans settled in Sawākin live among the primitive reed-huts of the natives in houses which are not always particularly habitable. The town possesses a single school which, however, is one of the best in the whole Sūdān. The suburb of al-Kaif on the mainland is surrounded by a wall which was at one time flanked by half a dozen forts and protected by an outer line of trenches. It has a much larger population than the island town, possesses a large bazaar in which the business life of the town is carried on and irregular streets in which live smiths and leather workers — the former make spearheads and knives and the latter do a busy trade in amulets — and barbers much visited by the male population. A few silversmiths provide the ornaments required by the women and make bracelets and anklets, ear- and nose-rings. Outside the suburb, which is a long narrow oasis surrounded by salt-lakes and prairie-like desert, are wells surrounded by gardens and date-palms, providing the town's drinking-water. The climate of Sawākin is not particularly healthy for Europeans. The heat never falls below 86° F even in winter; in June and August changeable winds predominate which often rise to dangerous sandstorms.

Sawākin is an old settlement, although the harbour is not important — it can only be entered by day owing to the narrow channel and the coral-banks. It has been suggested — probably rightly — that Pliny's Oppidum Succhae was here. In the middle ages the district belonged to the Bedjā (Blemmyers) to whom belong the modern Hadendoa, Ababde and Bisharin. The old connections of the Mekkans with the West African coast of the Red Sea brought about the settlement of Arab merchants here who intermarried with the Bedjā. The matriarchal institutions of the Bedjā enabled the half-breeds to attain important positions and Ibn Battūta in 1330 A. D. found in Sawākin a son of the Amīr of Mekka ruling the Bedjā. The upper strata of the populace professed Islām. al-Maḥrizī calls them Ḥadārib. In those days Sawākin had a serious rival in the harbour of 'Aidhāb farther north, which Th. Bent has identified in the modern Sawākin Qadīm, 12 miles north of Ḥalaib. The harbour, now in ruins, was very important between 450 and 760 A. H. as a landing-place for goods from India and Arabia and was a meeting-place for merchants from the Yaman and a rendez-vous for Egyptian and African pilgrims who sailed from here for Djidda. As Sawākin, which lay seven days' march to south, was also a landing-place for ships from Djidda, there must have been a good deal of competition between the two towns, from which Sawākin in the end emerged victorious. Al-Hamdānī († 945 A. D.) still reckons it in Central Abyssinia (*al-Ḥabash al-Wusṭā*). Under Sulṭān Selim I the Turks occupied the harbour. It was under the Pasha of Djidda who governed it through an Agha until in 1865 Egypt acquired it from Turkey by cession or purchase. The Mahdist period (1883—1898) was a heavy blow to Sawākin, as trade died away completely owing to the closing of the important Sawākin-Berber caravan road. By the treaty of July 16, 1899, between England and Egypt, Sawākin was placed under the Anglo-

Egyptian condominium along with the Sūdān and now belongs to the Red Sea Province, the largest cotton-growing area in the Sūdān.

Sawākin now has about 10,000 inhabitants. The town has a rather neglected look and almost half the buildings are in ruins, as the inhabitants in many cases are no longer able to afford the expense necessary to maintain them. The newly founded harbour of Port Sūdān is also a serious rival to Sawākin and has attracted a great deal of the trade and traffic in which Sawākin was once supreme. In spite of this competition Sawākin has been able to keep an important position as regards trade and the wholesale migration of business to Port Sūdān expected by many has not materialised. Although the numerous wholesale and retail firms are no longer as busy as they were before the foundation of Port Sūdān, they are still doing very well and very few native firms are suffering under trade depression. Sawākin will maintain its position if only because the trade of the natives stubbornly sticks to it and regards it as the main centre of the commerce of the Red Sea Province. Sawākin still is, as before, the starting place of pilgrims to Djidda. Fifty years ago the slave trade was still flourishing on the same route and some 3000 slaves annually were shipped from here to the market in Djidda, a trade which the English government was only able to suppress with great difficulty. Sawākin is now connected by a branch line from Athara Junction with Port Sūdān; the railway was made in 1905. If the stretch from Sawākin to Tokar (56 miles) is made, and it is planned for the near future —, the two towns are at present connected by a caravan road — the harbour of Sawākin will receive a new stimulus. At the present time the excellent cotton-wool from Tokar, 56 miles S. E. of Sawākin, is brought on camel-back to the harbour of Trinkat and then shipped the 1½ to 2 days voyage to Sawākin. With the building of the railway the Kassala-Sawākin (via Tokar, 297 miles) and Berber-Sawākin (241 miles) caravan routes, on which most of the trade with the interior is done at present, would lose their importance but the amount of the trade would considerably increase. Beside the railway line there is also an irregular steamer service connecting with Port Sūdān. There is also a steamer connection with Djidda with a fortnightly service. The main article of commerce and export are cotton, sesame oil, butter, hides, wax, resin, senna and ivory.

SAWDA BINT ZAM'Ā B. KAIS, Muḥammad's second wife, was one of the first women who embraced Islām. She accompanied her first husband al-Sakrān b. 'Amr and her brother Malik to Abyssinia, with the second party of Muslims who repaired thither. The pair returned to Mekka before the *Hidjra*, and al-Sakrān, who had become a Christian in Abyssinia, died there. By this union Sawda had a son, 'Abd al-Raḥmān, who was killed in the battle of Djalūlā.

Sawda's marriage to Muḥammad was arranged by Khawla bint Ḥakīm, who wished to console him for the loss of Khadija, and took place about a month after the latter's death, in the tenth year of Muḥammad's mission, in Ramaḍān, before his journey to al-Ṭā'if.

In the first year of the *Hidjra* Sawda, together with Muḥammad's daughters, joined him in Medina; her dwelling and 'Ā'isha's were the first to be built in the Mosque.

Sawda was no longer young at the time of her second marriage, and, as she grew older, became fat and ungainly to such a point that Muḥammad, during a pilgrimage, allowed her the privilege of reaching Minā for the morning prayer before the crowd's arrival, to avoid being jostled. As she grew older Muḥammad wearied of her and neglected her, while he spent a great deal of his time with the youthful 'Ā'isha; in 8 A. H. he divorced her, but Sawda stopped him in the street and begged him to take her back, offering to yield her day to 'Ā'isha, as "she was old, and cared not for men; her only desire was to rise on the Day of Judgement as his wife". The Prophet consented; on this occasion Sūra iv. 127 was revealed.

Sawda was charitable and good-natured; in one of his prophetic utterances Muḥammad seems to have alluded to her as the "longest-handed", i.e. the most charitable of his wives, who would be the first to join him in Heaven, and 'Ā'isha used to say: "There is no woman in whose skin I had rather be than Sawda's, except that she is somewhat envious".

Together with Zainab bint Djahsh, Sawda did not take part in the last pilgrimage. Of her life after Muḥammad's death there is no record, except that she received a gift of money from 'Umar; this, together with the fact that no mention is made of her dowry, may mean that she was in straitened circumstances, though she had received her share of the spoils of Khaibar. She died in Medina, in Shawwāl 54 A. H., during the caliphate of Mu'awiya, who bought her house in the Mosque, together with that of Ṣafīya, for 180,000 dirham.

AL-SAWDĀ' or **AL-KHARIBAT AL-SAWDĀ'**, a ruined city in al-Djāwī in South Arabia, in what was once the ancient Minaean kingdom. J. Halévy, who visited the ruins, calls it *es-Soud* and describes it as an extensive system of ruins one hour's journey N. E. of the also important al-Baiḍā'. Al-Sawdā' is built on an eminence. The ancient town was apparently destroyed by a conflagration and was presumably an important industrial centre, especially for metal work; even at the present day the vitrified soil is covered with slag-heaps. Insignificant remains of the sur-

rounding wall and a few steles are all that remain of its former splendour. D. H. Müller suggests that these ruins mark the site of the Minaean town of Karnā. F. Hommel identifies it with the Nashān of the Minaean inscriptions. Al-Ḥamdānī describes al-Sawdā' as one of the strongholds of the tribe of Nashk. The old Minaean town thus survived into the later period as the stronghold of a prominent family. The name "Black Fort" should probably be explained as referring to the building material, black lava or basalt.

SAWDĀ, MİRZĀ MUḤAMMAD RAFI', Urdū poet and satirist, was born in Dehlī in 1125 (1713). His father Mīrzā Shafī' (from Kābul) was a merchant and had established himself in India. Sawdā was educated in Dehlī and his teachers in the art of poetry were Sulaimān Kulī Khān Widad and Shāh Zuhūr al-Dīn Ḥātim. Like his contemporaries, Mīrzā Mazhar Djān-i Djānān, Mīr Taqī Mīr and Khwādja Mīr Dard, he had derived much literary benefit from the eminent Persian scholar and poet Sirādj al-Dīn 'Alī Khān Arzū; and it was he who persuaded Sawdā to write in his own mother tongue in preference to Persian. Sawdā's Urdū poetry very soon attained a high standard of excellence and he was recognised as one of the masters of Urdū poetry. At the age of about sixty he left Dehlī, and after a short sojourn at Farrukhabād went to Lakhnaū where he settled for the rest of his life. Aṣaf al-Dawla, the king of Lakhnaū, raised him to the high position of *Malik al-Shu'arā'*. Sawdā died at Lakhnaū in 1195 (1781). His works were collected by Ḥakīm Aṣḥā al-Dīn Khān and were first published at Calcutta early in the sixteenth century followed by numerous lithogr. editions.

Sawdā is rightly considered to be one of the greatest Urdū poets. He excelled in *qaṣida* and *ghazal* and his satires are witty and sharp. He was well versed in music also. Dr. Fallon's adverse remarks about his poetry are not justifiable.

(A. SIDDIQI)

SĀWDJ-BULĀK, a Persian corruption of the Turkish *so'uk-bulak* "cold spring"; the form *sawdj* (pronunciation *sā'udj*) is found as early as the

Nuzhat al-Kulūb (740 = 1340). There are two places of this name:

1. The fertile district beginning at Teherān and stretching to the west of the river Karađ along both sides of the great Teherān-Kāzwīn road. To the north a range of hills separates it from Talaḳān. On the southern slopes of these hills are the pits of Feshand which supply the capital with coal. The district is watered by the Kordān which rises in the same heights. Among its villages Ḥamd Allāh Mustawfī mentions Sunḳurābād and Nadjmābād which still exist at the present day. The centre of the district is marked by Yangī-Imām (an artificial mound with a tomb). At the south-western extremity of the district is the little town of Ishtihārd whose inhabitants speak the Īrānīan dialect called *tāti*; other villages of the same language (towards Kāzwīn) are Sagziābād, Shādmān, Ispīawarīn, Čāl and Siāhdahān. Many of the people of Ishtihārd profess Bahā'ism. See the map in A. F. Stahl, *Peterm. Mitt.*, suppl. fasc., No. 118, 1896, sheet I, and his map *Umgegend von Teheran*, Gotha 1892.

2. The southern section of the province of Ādharbāidjān, the capital of which is Sāwdj-Bulāk (in Kurdish Sā-blāgh). The governors of Sāwdj-Bulāk are appointed from Tabriz, but ethnographically Sāwdj-Bulāk forms part of Persian Kurdistān, which consists of three parts: a) Kurdistān of Mukrī in the north, corresponding to the *ḥukūmat* of Sāwdj-Bulāk; b) to the south Kurdistān of Sinna (cf. the art. SENNE) and c) to the south of it Kurdistān of Kirmānshāh.

The province of Sāwdj-Bulāk is bounded on the north by Lake Urmiya; in the north-west by the districts of Suldūz and Ushnū watered by the Gādir-čai; on the west by the heights of the Qandil forming the Turco-Persian frontier; in the south by the Sūr-kēw range separating Bāna from the district of Shilēr; on the east by the watershed between the Tatawū and the Djaghātū (only the district of Sakḳiz borders on the basin of the latter river); on the north-east by the course of the Tatawū on the right bank of which lies the isolated district of Miyan-du-āb ("between the two waters"). The Tatawū at the same time forms the boundary between the Turks of this latter district and the Mukri-Kurds of Sāwdj-Bulāk. Sāwdj-Bulāk measures 80 by 60 miles and has an area of about 4,800 to 5,000 square miles.

Hydrography. The Mukri country lies across two watersheds, that of the Lake of Urmiya and that of the Little Zāb (a tributary of the Tigris). To the first belong three separate rivers: 1. the Djaghātū, which rises in Mount Čihil-Čašma at the eastern extremity of the Turkish enclave of Shilēr which runs far into Persian territory between Bāna in the north and Mariwān in the south; 2. the Tatawū (Mustawfī: Taghatū) rising in the extreme south-east of Kurtak; 3. the Sāwdj-Bulāk rising in the eastern face of the Maidān pass (between Paswa and the town of Sāwdj-Bulāk). The river-system of the Little Zāb (*al-Zāb al-asfal*) belongs to the basin of the Persian Gulf. Its upper course is formed on the high plateaux of Lāhidjān Mukri; the north-western branch (Lāwēn) rises on the eastern face of the Qandil just south of the pass of Kel-i Shin; the north branch (Bārd-i Mēshe) comes from Djaldjān via Ushnū; the north-east branch (Āwa-zurū) from the west face of the Maidān pass.

Taking in on its right bank the swift waters of Badināwā, Āwa-Prdānān, Khidirāwā, Tālestān and Kāzān and on the left the large streams that rush down the gorges of the Kurtak, the Little Zāb under the name of Zei or Kialū rolls southwards, but below Sardasht it turns sharply westwards to force a passage through the ravine of Alān to the Tigris. Just at this bend, close to the pretty village of Alōt, the Kialū receives on the left bank the important tributary which drains the whole basin of Bāna (except the district of Namashīr, the waters of which enter the Kialū above Alōt). The river of Bāna (Āwa-Kiwerō) forms an almost straight line with the ravine of Alān. The left bank below Dunēs belonged to Turkey (Alān-i Girgasha). The frontier here follows the course of the Kiwerō and then of the Kialū, finally ascending the Qandil leaving Bētūsh to Persia and Qandōl to Turkey.

There is only one little stream that escapes the gigantic funnel of the Alān; the rivulet of Wazna rising on the verdant heights of this name to the south-east of the great cone of the Qandil describes a semi-circle to the west of the Kialū and enters the Mesopotamian plain (Piždar) by a deep defile where it finally rejoins the Little Zāb on its right bank.

Orography. The lofty chain of the Qandil rises like a wall between the territory of Sāwdj-Bulāk and the districts of the former Turkish Kurdistān: Rawāndūz and Kō-i Sandjāk. Among the Arabs the Qandil was called Sha'rān, in Persian Takht-i Shīrōye (Yāqūt, ed. Wüstenfeld, iii. 298), by the Armenians Zarasp (Hoffmann, *Auszüge*, p. 249, 266). The famous pass of Kel-i Shin (about 9,000 feet high) between Ushnū and Sidaḳān (belonging to Rawāndūz) lies to the north and outside the boundaries of Sāwdj-Bulāk. Communication between Sāwdj-Bulāk and Mesopotamia is maintained by the less elevated (6,000 feet) and more convenient pass of Garū-Shinka, between Lāhidjān and Bālak (Rāyāt), as well as by the defiles of Wazna and Alān. All traffic is, however, considerably hampered by the presence of turbulent tribes on both sides of the frontier.

The great perpendicular arête which is detached from the southern extremity of the Qandil and forms the northern wall of the ravine of Alān is noteworthy. It is called Dārū and its pass the Hawmīl.

The heights running between Lāhidjān and the valley of the Gādir are of little importance except a few peaks (Bīčāra and Čoghantū). They extend to the Tatawū, where they cut the town of Sāwdj-Bulāk off from the northern district of Shār-i Wērān; they allow a passage, however, to the Sāwdj-Bulāk river.

The central longitudinal massif of Kurtak (up to 7,000 feet) separates the waters of the Kialū from the basin of Lake Urmiya; to the north it joins the summit of Čoghantū.

The eastern part of Mukri Kurdistān is in the form of a square, the sides of which are in the north the latitudinal heights; in the west the Kurtak; in the south the watershed of the Tatawū on one hand and of Namashīr and Sakḳiz on the other; these heights coalesce in the extreme south of the Kurtak and their principal summit is Bārd-i Sūr ("red stone"); lastly on the east the heights of the watershed between the Tatawū and the Djaghātū. The interior of the square formed by the system of the Sāwdj-Bulāk-čai and of the Tatawū is extremely irregular: it contains mountain peaks (Tarāḳa), gentle slopes and fertile valleys.

To the south and outside the square are the districts of Sak̄kiz [q.v.] and Bāna. The first inclines from south-west to north-east. It is watered by the northern sources of the *Djaghātū* and fills the angle between the square of Sāwdj-Bulāk and the lands of Bāna. The latter district, on the other hand, forms a valley sloping from east to west towards the basin of the Kialū. To the south Sūr-kēw ("Red mountain") forms the boundary; to the east the heights of Shiwe-gwēzan separate it from the southern sources of the *Djaghātū* (River *Ṣāhib*); to the north-east the heights of the Kel-i Khān pass rise as a barrier between the wooded slopes of Bāna and the bare hills of Sak̄kiz. To the north the rocky group of Balū (the "oak") bounds the principal valley of Bāna. To the north of Balū runs the river of Namashīr which runs directly into the Kialū on its left bank. Balū thus forms an isolated group corresponding to Dārū on the right bank of the Kialū. The true northern boundary of Bāna is therefore formed by the mountain of Bārd-i Sūr to the north of the districts of Dasht-i Tāl and Namashīr.

From the administrative (and ethnographical) point of view the province of Sāwdj-Bulāk is divided into the following parts:

I. Mukrī Kurdistān properly so-called, inhabited by settled Kurds belonging to the Mukrī and Debokrī tribes. The capital is the town of Sāwdj-Bulāk founded, according to Rawlinson, at the beginning of the xviiith century. A century later it comprised 1200 houses of which 100 belonged to Jews and 30 to Syrians. The town retained this size till the outbreak of the Great War. According to H. Schindler, the town lies in 36° 45' 48" N. Lat. and 45° 47' E. Long. at a height of 4,272 feet above sea-level. The following districts (*maḥall*) form this part of Mukrī Kurdistān. 1. The environs of the capital, 36 villages; 2. Shār-i Wērān "the deserted town"; this very rich district is situated to the north of the capital and has 68 villages belonging to the Debokrī āghā's; 3. Akhtači "grooms", on the Sāwdj-Bulāk-Miyān-du-āb road, in the valley of the Tatawū, 90 villages, of which the principal is Burhān; 4. Bāhi on the Tatawū at the crossing of the Sāwdj-Bulāk-Sak̄kiz and Marāgha-Sak̄kiz roads, 65 villages of which the principal is Bōkān with a fine residence of the hereditary "sardār's" of the Mukrī; 5. Turdjān south of Bāhi, 38 villages; 6. Gowruk-i Mukrī near the sources of the Tatawū south-east of Kurtak, 24 villages.

II. The territory of the Kurd tribe Bilbās, related to the Mukrī and speaking the same dialect. Formerly nomads, the Bilbās now spend the winter in their villages and in summer go to the heights (*sarūn*) near their dwellings. The following are always on Persian territory:

a. The Mangur, a brave and courageous tribe, mostly settled, on the Sāwdj-bulāk-čai and in the districts of Ēl-Tamūr (below Gowruk) and Nač-lain-i Mangur (the "horse-shoe", i.e. an amphitheatre formed by the mountains on the western face of Kurtak). But the headquarters of the Mangur where their āghās live is at Mērgān (Tirkash) on the right bank of the Kialū between Lāhidjān and Sardasht. The total number of the villages of the Mangur amounts to 148.

b. The Pirān to the north of Mērgān in old Lāhidjān on the Lāwēn, 30 villages, including the little fort of Mutāwa-tapa just opposite the pass of Garū-shinka.

c. The Mamash live in New Lāhidjān, the centre of which is the ancient stronghold of Paswa, now in ruins, but mentioned as early as Yākūt. The Mamash occupy the valley of Bārd-i Mēshe (Djaldian) and all the upper part of Lāwēn above the part where it enters the plain of Old Lāhidjān. There are Mamash at Suldūz and at Ushnū, in all over a hundred villages.

d. The clan Odjākh-kā-Khidrī in summer occupies the rich pasturages of Wazna and in winter descends to the warm plains of Kō-i Sandjāk; but it also has an inclination to settle in Persia.

III. The territory of Sardasht consists of the following divisions:

a. The wretched little town of Sardasht, the residence of a vice-governor, and the district of the same name on the right bank of the Kialū.

b. The tribe of Gowruk (Gawrik) which besides the villages already mentioned occupies the wooded spurs of the Kurtak on the left bank of the Kialū and has over a hundred villages.

c. The Süsni live in the villages (68) between Wazna, Sardasht, the bend of the Kialū and the Kandil. Their clans (Baryadjī; Milkārī, Darmaī, Harz-Alān and Alān) live separately without common chiefs. Bētūsh, the chief place of the Alān, has 70 houses surrounded with beautiful gardens. It ought to become quite important, being situated on the Marāgha-Sāwdj-Bulāk-Sardasht road and the districts of Sulaimāniya and Kirkūk. At Teiyet below Bētūsh there are to be seen on the Kialū the ruins of an old bridge having seven piers of brick.

IV. The two other districts of Mukrī Kurdistān are Sak̄kiz and Bāna. They were both at one time under the wālī's of Sinna, but geographical, ethnical and political conditions (especially since the Turkish occupation in 1906) explain their being attached to Sāwdj-Bulāk.

Bāna is a very important district with 8 subdivisions (Dōla-Khuriāwa, Balwāw-Bnakhwē, Shwē, Namashīr, Dasht-i Tāl, Kiwerō, Tazān, Pāsh-Arbēbā) with 145 villages and about 3500 households. The town of Bāna at the foot of Mount Arbēbā has 800 houses, of which 80 belong to Jews, and a very busy market. In Pāsh-Arbēbā ("behind A."), on the road from Pendjwin, we may mention the village of Čampārōw, which although situated to the south of the Sūr-kēw range belongs to Bāna.

Rawlinson estimated the number of Mukrī families at 12,000 which would give about 100,000 souls. This figure does not seem to include Bilbās, Bāna, Sak̄kiz, etc. The actual number of inhabitants of the *hukūmat* of Sāwdj-Bulāk cannot be below 200,000. The foreigners are a few Persian officials, several hundred Jewish families at Sāwdj-Bulāk, Bāna and Sardasht, and even in the villages; a dozen Armenian families (with a church) at the town of Sāwdj-Bulāk, whence, on the other hand, Syrians have entirely disappeared.

Language. O. Mann concludes that the same Kurdish language (Kurmāndjī) is spoken on the territory bounded on the east by the valley of the Tatawū and the left bank of the *Djaghātū*; to the south, in Sak̄kiz and Bāna, Kurmāndjī is spoken, but at Marīwān (?) and among the Tilakū tribe (in the district of Hōbatū) the dialect of Sinna [q.v.] is said to be spoken. Kurmāndjī extends beyond the bounds of Persia as far as Sulaimāniya and even south of it. The favourite poets of the people of Sāwdj-Bulāk are natives of Kirkūk,

Darband and the villages of Sulaimāniya. To the north-west the dialect passes a little beyond the plain of Ushnū, but in the Urmiya region begins the area of the dialects which are connected with those of Hakkāri. Thanks to the labours of O. Mann we have a fine collection of heroic ballads and Mukrī folk-lore. There is a translation into the Mukrī dialect of the Gospel of St. Mark (Ave-taranian press at Philippopoli, 1909) and of Protestant hymns (L. O. Fossum) etc. Before the war American missionaries had begun to publish at Urmiya a little magazine for the Mukrī (*Kurdistan*, No. 1, April, 1914).

Religion. The Mukrī Kurds are Shāfiʿī Sunnis. They are very lukewarm in religious matters, but the *Shaikhs* belonging to the religious orders (*Naqshbandi* and *Qādiri*) exercise a very great personal influence among them. The disciples of *Shaiikh* Saʿid of Kāwsābād (killed in 1915 during the Turkish occupation) practised a very violent *dhikr* in his *takiya*.

Costume. The Mukrī costume consists of a shirt with very long sleeves coming down to the feet and tied behind the back when fighting. Above it is put a kind of robe which comes down to the knees and the tails of which cross; a huge girdle of cotton material, sometimes 20 feet long, is then rolled round the body. In summer the tails of the coat fall down over the huge white drawers tightened at the ankles. In winter or when on horseback the tails are thrust into cloth trousers of ample dimensions. Above all a very short sleeveless coat of hard felt is worn. On the head is worn a peaked headdress surmounted by a tassel. This is surrounded by a turban of Mosul silk, the fringes of which fall over the eyes. The old armour, coat-of-mail, helmet, buckler, lance and sword (cf. de Morgan, ii., Pl. ix. and x.), has completely disappeared. The Mukrī is content with a dagger and a rifle, and is specially fond of making a show of the number of his bandoliers and belts arranged to hold cartridges. There is not much variety in the equestrian sports; the favourite is the *taḡala* which consists in throwing a heavy stick to the ground and catching it while going at full speed.

The women wear dark cotton trousers, a long undergarment, and a piece of blue cotton with which they cover their shoulders; a blue or red turban skilfully arranged forms their headdress. The relations between the sexes have not the strictness usual among the Muslims. The women do not veil themselves. Among the Mukris there are a number of dances (*ḍōpī*, *rōinā*, *sūeskaī*, *ḍelapāi*, *ḥarshī*, *hal-parrin*) in which the men and women form circles holding one another's hands.

Occupations. To the north-east, especially in the rich valley of the Tatawū, we have agriculture with a view to export; everywhere else the tribes cultivate the soil for their own requirements only. The vine and tobacco are grown at Alān, Sardasht and Bāna. Sheep are reared throughout the mountainous region; cheese is made flavoured with sweet smelling herbs and felt is manufactured. In the wooded districts the people burn charcoal, gather acorns, gal-nuts and manna (*gaz*); these districts are: on the right bank of the Kialū the region between Prdānān and Sardasht; on the left bank the western slopes of the Kurtak; in Bāna the eastern parts of the district. In the river at Wazna (near Aghalān) auriferous sand is found in small quantities.

History. Down to about 1890 there was at Tashtapa on the lower course of the Tatawū a cuneiform inscription in the Khaldaic (Vannic) language, which has since been carried off by some vandal. According to Belck (*Das Reich der Mannäer*, in the *Verhandl. Berl. Ges. f. Anthropologie*, 1894, p. 479—487), it was put up by Menua, son of Ishpuini, a Vannic (Khaldic, Urartean) king who reigned between 812 and 778 B. C. (C. F. Lehmann-Haupt, *Armenien einst und jetzt*, 1910, i. 632). This monument, the most eastern known in the cuneiform character, must have marked the site of the town of Meshā in the land of the Mannaeans (Minni) conquered by Menua. Traces of Khaldic influence can also be seen in the waterworks, subterranean corridors and stairways hewn out of the rock, which Rawlinson (*J.R.G.S.*, vol. x.) discovered at Shaitān-ābād and at Sawkand on the left bank of the Sāwdj-Bulāk river. The Assyrian king Sargon, in the account of his famous campaign in 714 B. C., mentions to the south of Lake Urmiya — apart from Mannaeen territories — the districts of Allabria, Parsuash, Zikirtu, etc. (Thureau-Dangin, *Une relation de la huitième campagne de Sargon*, Paris 1912). But the identification of Parsuash with the land of the Persians (*Pārsa*) and its localisation on the lower course of the Gādir are still only hypotheses.

Another very remarkable monument is the rock tomb of Fakraka near the village of Indirkash north of Sāwdj-Bulāk; it resembles the Achaemenid type of tomb (de Morgan). E. Herzfeld connects it with the group of monuments which he regards as Median (Sarre-Herzfeld, *Iranische Felsreliefs*, 1910, p. 184; Herzfeld, *Chorasān*, in *Islām*, 1921, xi. 131). Among the towns of Media enumerated by Ptolemy (vi. 2) there are two in the same latitude (38° 30'): Δαρπίσσα (long. 87° 30') and Σινκάπ (long. 88°). Rawlinson identifies the latter with Singān in the district of Ushnū and he connected the former (Dārayavausa?) with the Daryās mentioned in the Kurdish chronicle (ed. Veli-minof-Zernof, i. 268). But he did not know the site of Daryās; it is the name of a village (2 miles N.W. of Indirkash) quite close to which are the ruins of the "deserted town" which has given its name to the whole district of Shār-i Wērān, which is still recognised as the ancient capital of the district.

De Morgan (iv. 283) has remarked on the great number of artificial *tell's* (mounds) on the upper Kialū; there are 24 in Lāhidjān. The ruins of the "old town" of this district are to the south-east of the pass of Garū-Shinka. Farther down the *tell's* disappear but in the centre of the Mukrī country at Gholgha-tapa there is a large mound 150 paces in circumference. Quite near, at Khalildalil, de Morgan found tombs of the iron age (*Miss. scient.*, vol. iv., *Recherches archéol.*, i. 9). In the Bāna district Harris mentions "mounds" (*tell's*) near Siāwma, the inhabitants of which sold him ancient seals, cylinders, etc. All this shows that the region of Mukrī Kurdistan has been inhabited from a remote period.

The Emperor Heraclius crossed this region in 624 in pursuit of Khusrav Parwēz; in the caves of Kereftu (Sāin-Kal'a, q. v.) Ker Porter found a Greek inscription (Kaibel, *Epigr. Graeca*, Berlin 1878, p. 512).

The history of Mār Yabalāhā, patriarch of the Nestorians (1281—1317 A. D.), shows the im-

portance of the traffic through the territory of Sāwdj-Bulāḳ in the Mongol period. The present toponymy of the region shows the clash of Turkish influences from the north-east and Kurd influences infiltrating from the west. In the eastern cantons (Akhtači, Bāhi, Turdjān, Sakḳiz) there are Kurdish villages with Turkish names. We also find a certain number of Mongol names: Taraḳa, Tatawū (in Mustawfī: Taghatū), Djaḡhatū, which, according to the *History* of Mār Yabalāhā (transl. Chabot, 1895, p. 151), was called in Persian Wakya(?)—rūd or, according to Raḡḡid al-Dīn (ed. Quatremère, *ad fol.* 297^b), Zarina Rūd. On the other hand, the Turkish districts between the Tatawū and Marāḡha formerly subject to the Mukrī have been lost to them. To the west of the Kurtak we only find Kurdish names with a few sporadic Semitic ones (Aramaic): Dribḳa, Kōka, Nalōsa and Shmōla.

We have to distinguish several historical layers among the Kurds of Sāwdj-Bulāḳ. In general the large tribes are divided into two classes: warrior (*‘ashīrat*) and peasant (*ra‘yat*) and it is very probable that before the formation of a tribe organised in this way the peasants had to be subjugated and sometimes even “Kurdicised” by the invaders who are their present masters. According to O. Mann, the peasants are usually proud of belonging to the (now called?) Debokrī tribe who would represent an older element than the Mukrī. The same hypothesis is probable for the Sūesnī (between the valley of Alān, Sardasht and Wazna) in view of their settled character and their ability as gardeners and vine-growers.

As regards the tribal aristocracy it always claims to have come from the west. For the principal tribe of the Mukrī we have the references in the *Sharaf-nāma*. The Mukrī chiefs claim to have belonged to the Mukriya tribe which lives in Shahrizūr and to have been of the family of governors of the Bābān tribe. During the period of Turkoman dynasties (ixth cent. A. H.) a certain Saif al-Dīn took Daryās from the Čabuklū (a Turkish tribe?) and enlarged the territory by the addition of the districts of Dōl-i Bārīk (Dōl is a little district to the S.-W. of Lake Urmiya and Bārīk a tribe at present scattered round the mouth of the Tatawū), Akhtači, Ēl-Tamūr and Suldūz. The tribes united under his sway received the name of Mukrī. His son and successor Šārim challenged Shāh Ismā‘īl Šafawī and in 912 inflicted a defeat on the Persian troops. Then (in 918?) he sought support and investiture from Sultān Selīm. On the death of Šārim his estates were divided among the three sons of his nephew Rustam, who recognised the suzerainty of Shāh Tahmasp. At the revolt of Alḳāš Mirzā (948) Sultān Sulaimān sent against them his vassals of the ‘Amādiya, Hakkārī and Brādōst tribes who fought and killed them. The young son of Šārim, Amīra-bēg I, succeeded them having received investiture from Sultān Sulaimān and ruled his tribe and the fief of Daryās for 30 years. Another Amīra, grandson of Rustam, succeeded him, with the help of the Šafawīs. During the troubles in the reign of Shāh Muḥammad Khudā-banda, Amīra-bēg II in 991 visited Sultān Murād III who added to his hereditary fief the wilāyet of Bābān (Shahr-i Zūr) and the sandjaḳ of Moṣul; Erbil and certain dependencies of Marāḡha were given to his sons. With the help of the Mīr-i Mirān of Wan, he defied the Persian governor of Marāḡha and plundered the

district, of which the Sultān appointed him beyler-beyi with the title of pāshā. The hereditary fief of Daryās was, however, awarded to his nephew Ḥasan who had given his adherence to the Porte before him. A war broke out between Amīra Pāshā and Ḥasan. The latter was killed and Sultān Muḥammad III (1003—1012 A. H.) granted his brother Ulugh-beg the district of Dih-i Khwārḳān (D. Harrakān to the north of Marāḡha) in fief. In the meanwhile the Turks had captured Tabriz and Dja‘far Pāshā, appointed Governor-General of the province, wished to have Amīra-Pāshā recognise his authority. The latter complied with a bad grace. Dja‘far Pāshā lodged complaints against him in Constantinople and the sandjaḳs of Bābān, Moṣul and Erbil were taken from Amīra. Marāḡha was subordinated to Tabriz with an obligation on Amīra to pay an annual contribution of 15 kharwār of gold. Finally his lands were reduced to Daryās alone. His son Shaikh Ḥaidār, however, was able to hold out in the old fortress of Sārū-Ḳurghān rebuilt by him. The people of Marāḡha complained of him as a troublesome neighbour and Khidīr Pāshā, governor-general of Tabriz, issued an edict allotting Sārū-Ḳurghān to the Maḥmūdī tribe. Fighting began around the fortress and Amīra-Pāshā had to intervene to put a stop to the hostilities. About 1005 the father and son still had the following districts: Daryās, (Miyān)-du-āb, Adjārī and Leilān (the two last named on the right bank of the Djaḡhatū), as well as the fortress of Taraḳa and Sārū-Ḳurghān with the districts attached to them.

Information on the later period is still little accessible. Iskandar Munshī, author of the *Tārīkh-i ‘Ālam Ārā*, was an eye-witness of Shāh ‘Abbās’s expedition against the Mukrī and Brādōst Kurds; the episode of the siege (in 1017 = 1609) of Dimdim-ḳal‘a (south of Urmiya on the river Kāsīmlū) is the favourite subject of Mukrī heroic ballads. Mirzā Mahdī-Khān’s history of Nādir Shāh also contains information about the Mukrī (O. Mann, *op. cit.*, i., Preface).

The more recent history of Mukrī territory is as follows: In 1810 the governor of Marāḡha, Aḥmad-Khān (of the Turkish tribe of Muḳaddam), invited the Mamash Āghā’s to a feast and had 300 of them massacred there, which put a stop to this tribe’s depredations for a long time. In 1850 the rebel Bāpīr Āghā (Bilbās) threatened Marāḡha. In October, 1880, the Mukrī territory was invaded by Shaikh ‘Ubaid Allāh of Shamdīnān, whose ambition was to found a Kurdish principality of the same character as that of Rumelia. On this occasion the religious chief of the Sunnis of Sāwdj-Bulāḳ proclaimed the holy war against the Shī‘īs which resulted in horrible massacres especially around Marāḡha. In 1905, the Turks contesting the Turko-Persian frontier occupied Lāhidjān. Muḥammad Fāḍil Pāshā’s headquarters were at first established at Paswa; in the end the occupation gradually opened all over Mukrī territory. In 1914 the delimitation took place with the assistance of British and Russian representatives; it re-established the old frontier along the Ḳandil. The World War began in these regions with a new Turkish-Kurd movement. Colonel Iyas, Russian consul at Sāwdj-Bulāḳ, was assassinated at Miyān-du-āb on Dec. 16, 1914. The region then became the scene of Russian-Turkish fighting which left a trail of devastation behind it.

Five great families constitute the Mukrī nobility: they are all called Bābā-Amīra (Bābā-mīrī) and trace their descent from Amīra Pāshā. Their more certain ancestor is Budākḥ-Sultān who is buried in Sāwdj-Bulāk; his connection with Amīra II is, however, not at all clear. According to Rich (i. 300), his brother Bābā Sulaimān flourished about 1700. There are curious legends about the life of Budākḥ-Sultān: he is said to have been the son of a certain Faḫīh Aḥmad who had married a young Frank girl called Kēghān (Rich, i. 291, 299, 389). One of the peaks of the Kandil is called Khān Budākḥ Kēghān (metronymic names are common among the Mukrī). The descendant of Budākḥ in the eighth generation was 'Azīz Khān Sardār, governor-general of Ādharbāidjān, who died in 1868. De Morgan (ii. 40—41) extols the ability of his son Saif al-Dīn, governor of Sāwdj-Bulāk and owner of the fine estate of Bōkān (he died in 1891). His son and successor, Ḥusain-Khān Sardār-i Mukrī, several times governor of Sāwdj-Bulāk, was killed in 1914 during the Turkish invasion. Other Bābā-mīrī families have estates at Akhtači, Turdjān and Yād-abād (Yālāwā).

Rawlinson (p. 35) describes the fiscal organisation of Sāwdj-Bulāk. The Bābā-mīrī families receive $\frac{1}{15}$ of the produce of the land; $\frac{1}{10}$ is received by the farmers (*āghā*) and $\frac{1}{5}$ goes to the 'zerāet-chīs' who superintend the cultivation. These quotas evidently represented the rent while the rest of the produce defrayed the expenses of tillage and labour. According to O. Mann, this system still flourishes; but feudal customs generally tend to disappear.

The tribe of Debokrī has only played a subordinate part. Their very centre, Daryās, has long been regarded by the Mukrī as their hereditary fief. It is only very recently that the Debokrī seem to have again organised themselves with some degree of independence under their present chiefs of whom the great-grandfather, Brahmīn Āghā, is said to have come from Diyār-bakr (?). Near Sāwdj-Bulāk there is a little village of Debokr from which *Debokrī* must be derived. The connection between Debokr (Dih-i Bokr?) and Diyār-bakr is uncertain. In any case the name *Debokrī*, which does not occur in the *Sharaf-nāma*, cannot be old but, as it is applied especially to a family of chiefs, this fact does not prejudice the antiquity of the people owning their rule. The district of Lāhidjān, like its homonym in Gilān, used to be called Lāridjān. Hoffmann, *op. cit.*, p. 244, 263, identifies it with the Salāk al-Awdī of the Arabs, while not denying that the name *salāk* may be a reminiscence of the ancient *Silices*. According to the *Sharaf-nāma* (i. 279), Sulaimān-bēg Sohrān (before 994?) pillaged the land of the Zarzā. A corrupt passage (i. 280) then seems to show that Lāridjān formed part of this territory and that it was taken from the Zarzā by Pīr Budāk Bābān. The Zarzā now occupy the district of Ushnū immediately to the north of Lāhidjān. The date of arrival of the present occupants, the Bilbās, in Lāhidjān is unknown. The Bilbās with the Qawālīs are occasionally referred to in the *Sharaf-nāma* to the west of the Kandil where some of their branches are still to be found (Mamash-i Bne, Khidir-mamasenī). In Rawlinson's time the Bilbās still paid to the Mukrī a tribute of 1000 toman a year.

As to Bāna, the *Sharaf-nāma* says that this district lies between the Ardilān, Bābān and Mukrī, and that it consists of two parts, one of which is

the *nāhiya* of Bāna properly so-called with the fort of Birūz; the other consists of the fort of Shīwa (in Kurdish "slope") which must correspond to the village of Shwē in the district of this name lying to the south-west of Bāna. The former capital, the official Persian name of which is Bihruza, is a short distance from the modern town but its name survives in the popular name given by the Kurds to the present town of Ba-rōza ("exposed to the sun"). The Amīrs of Bāna (*Sharaf-nāma*, i. 320) were called Ikhtiyār al-Dīn because "of their own accord (*ba-ikhtiyār-i khwud*) they had adopted Islām". The first chief mentioned by the author is Mirzā-bēg of Bāna, who married the daughter of Biga-bēg, governor of Ardilān, which brought him trouble with a rival and the resultant temporary loss of his fief. His son Budāk-bēg, driven out by his brothers, sought the support of Shāh Tahmasp but died at Kāzwin. The Shāh ordered the governor of Marāgha to instal in Bāna Budāk's brother Sulaimān-bēg who ruled the district for twenty years and finally handed over his position to his son-in-law and nephew Badr-bēg. The Ikhtiyār al-Dīn family, which also claimed descent from the 'Abbāsids, then became vassals of the wālīs of Ardilān. In the time of Rich (i. 217, 248) Nūr Allāh Khān was hereditary governor of Bāna. The last scion of the Ikhtiyār al-Dīn family, Karīm Khān, was killed (about 1890) by his old servant Wenis (= Yunūs) Khān, who seized the power in Bāna. His son Ḥama (Muḥammad) Khān was governor in the district before the Great War. Since 1912 by orders from Ṭeherān Bāna has been detached from Sinna and incorporated in the province of Sāwdj-Bulāk.

(V. MINORSKY)

SAWDJĪ, the name of three Ottoman princes. Its origin like that of most old Ottoman names (cf. Bali, Şaltık etc.) has not been satisfactorily explained: cf., however, W. Radloff, *Wörterb. der Türkida*, iv. 431, and Rieu, *Cat. of Turk. Mss.*, p. 272b, according to whom it means "Prophet".

1) SAWDJĪ BEG, in the old Ottoman chronicles also called ŞARĪ YATĪ or ŞARĪ BALĪ, was one of the younger brothers of ʿOsmān, the founder of the Ottoman dynasty, and a son of Ertogrul. He supported his brother on his campaigns and fell (684 = 1285/86 is the date given) in battle against the governor of Angelokome (Aine Göl) at Egridje south of ʿQoladja behind Olympus at the foot of a pine tree. The tree was still called *Ḳandīlī ʿam* "pine tree of the lamps" in later times presumably from the lights lit there, the glimmer of which was afterwards given a mystic significance. (According to Neshri, Idris Bidlisi and Saʿd al-Dīn, *Tādī al-Tawāriḫ*, i. 18, s. qq., a heavenly light, *nuzūl nūr*, illuminated the tree by night). Sawdjī Beg was buried beside his father in his tomb (*türbe*) at Söğüd destroyed by the Greeks in 1922.

Bibliography: J. von Hammer, *Gesch. des Osm. Reiches*, i. 54, and following him J. Zinkeisen, *G.O.R.*, i. 70, (from Saʿd al-Dīn who follows Idris Bidlisi, *Heşt Bihisht*, and Neshri, *Djihānumā*).

2) A son of ʿOsmān was also called Sawdjī. We

only know of him that he fell in battle (*Sidjill-ʿOthmānī*, i. 37).

3) The eldest son of Murād I who, when governor of Rumelia, made terms with a son of John V Palaeologos of Byzantium named Andronikos, and rebelled against his father. The Ottoman chroniclers give very scanty information about this conspiracy while the Byzantine historians Chalcocondyles, Phrantzes and Ducas give very full accounts, differing only in details; cf. Chalcoc., ed. Imm. Bekker, i. 40 sqq. (Σαουζής); Phrantzes, ed. Bekker, i. 50, where the rebel is wrongly called Μωση Τζελεπης i. e. Mūsā Čelebi through confusion with Bayazid I's son; Ducas, ed. Bekker, p. 22 (Σαβοῦρζιος) where Sawdjī is mentioned but the rebel is called Κουντούζης i. e. Gündüz. Murād I acted jointly with Joh. V and took the field against the two princes. After an unsuccessful battle at a place which the Byzantine writers call Ἀπικυρίδιον (Chalc., p. 43.) Sawdjī fled to Didymotichon, where he was surrounded and forced to surrender to his father. He was blinded and then beheaded. The execution took place in 787 (1385/86) and the body was brought to Brussa and buried there. Murād I had apparently made up his mind to get rid of Sawdjī as he had appointed his son Bāyazid to watch his movements, cf. Murād I's letter to Bāyazid in Feridūn, *Münshāt Selāfin*, i². 107 (of the beginning of Rabi' I, 787 = 1385—1386), with Bāyazid's answer, *op. cit.*, esp. p. 108 supra, according to which the Ḳādī of Brussa must have passed a death sentence on Sawdjī. The execution of Sawdjī was the first of a long series of similar cases, in which princes dangerous to the Ottoman heir-apparent were put out of the way.

SAWIḲ (A.) is in the first place barley flour, then also wheat flour and flour made of dried fruits, then a soup made from flour with water or a paste to which honey, oil or pomegranate syrup etc. is added. The effects of such flour dishes are discussed by al-Rāzī in his work on diet. — To revenge the battle of Badr, Abū Sufyān in *Ḍhu l-Ḥijidja*, 2 A. H., rode with a body of horsemen towards Medīna. Near the town there was some trifling skirmishing and Abū Sufyān fled as soon as Muḥammad and his followers approached. The Mekkans in their flight threw away their provisions, mainly *sawīḳ*, which were picked up by the Muslims. The incident has been perpetuated in the *Sira* under the name *Ghaṣwat al-Sawīḳ* (cf. Caetani, *Annali dell' Islām*, year 2, § 99).

Bibliography: Ibn al-Baitār, transl. Leclerc, ii. 308. (J. RUSKA)

ŞAWM (A.), with ŞİYĀM, *maşdar* from the root *ṣ-w-m*; the two *maşdar* are used indiscriminately. The original meaning of the word in Arabic is "to be at rest" (Th. Nöldeke, *Neue Beiträge zur sem. Sprachw.*, Strassburg 1910, p. 36, note 3; cf. previously S. Fränkel, *De vocab.*.... in *Corano peregrinis*, Leiden 1880, p. 20: "quiescere"). The meaning "fasting" may have been taken from Judaeo-Aramaic usage, when Muḥammad became better acquainted with the institution of fasting in Medīna. The word has this meaning in the Medīna sūras; in the Mekka sūras

it only occurs once, in Sūra xix. 27, where the commentators explain it by *ṣamt* "silence" (this is therefore given as one of the translations of the word in the dictionaries); but perhaps *ṣawm* has simply to be translated "fasting" here (see below). The verb is followed by the accusative of the time spent in fasting.

Origin of the rite of Fasting. That fasting was an unknown practice in Mekka before Muḥammad's time cannot be *a priori* assumed. Why should not the *Ḥunafā* in whose manner of life there were so many Judæo-Christian features apparent — at least according to tradition — have also used this spiritual discipline? In favour of the occurrence of fasting as a voluntary practice of mortification among the first Muslims in Mekka is the probability that Muḥammad on his many and varied journeys had observed the rite among Jews and Christians. But we can say nothing definite on this point; anything told us on this subject in the *Sira* and Muslim tradition may be biased. In the Mekka sūras, as above mentioned, there is a reference to *ṣawm* in xix. 27: a voice commands Mary to say "I have made a vow of *ṣawm* to the Merciful, wherefore I speak to no one this day". There is some possibility that *ṣawm* here simply means "fasting", because observing silence as a Christian fasting practice (cf. Afrāhāt, ed. Parisot, in *Patrol. Syriaca*, i., p. 97) may have been known to Muḥammad. Muḥammad was in any case not acquainted with the details, because it was only after the Hijra that he ordered the *ʿAshūrā*-day to be spent in fasting, when he saw the Jews doing it in Medina. In the year 2 A. H., according to unanimous reliable Muslim tradition (cf. A. J. Wensinck, *Mohammad en de Joden te Medina*, Diss. Leiden 1908, p. 136—137, in contradiction of e. g. A. Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 53—59), the revelation of Sūra ii. 179—181 again abolished the *ʿAshūrā*-fast as an obligation by the institution of the fast of Ramaḍān. On the question why Muḥammad chose this particular month and whence he took the arrangement of the Muslim fast, various opinions have been expressed. Islām teaches that it is the fast imposed by God on Jews and Christians, but corrupted by them and restored by Muḥammad to its true form; Sprenger, *op. cit.*, iii. 55 *sqq.*, thinks that it was an imitation of the Christian quadragesima; Nöldeke-Schwally, *Geschichte des Qorāns*, i., Leipzig 1909, p. 179—180, note 1, points to the similarity with the mode of fasting among the Manichæans. More recently, however, A. J. Wensinck has called attention to the particularly sacred character of the month of Ramaḍān even in pre-Muḥammadan times (on account of the — also old-Arabic — *Lailat al-Qadr* [q. v.], which happens in Ramaḍān) in his essay *Arabic New-Year and the Feast of Tabernacles in Verh. Ak. W. Amst.*, New Series, 1925, vol. xxv/ji. 1—13; cf. also M. Th. Houtsma, *Over de Israëlitische Vastendagen*, in *Versl. en Med. Ak. Wetensch.*, Afd. Letterk., Series 4, vol. ii. 3 *sqq.*, Amsterdam 1898) and with this has opened up the possibility that the solution of the problem of Ramaḍān is to be sought in this direction (for further information see the article RAMAḌĀN).

The first regulations concerning the manner of the Muslim fasting are given in Sūra ii. 179—181, which probably belong together (Nöldeke-Schwally, p. 178; in opposition to Th. W. Juynboll,

Handbuch des islāmischen Gesetzes, Leiden—Leipzig 1910, p. 114, who considers 181 a later revelation; al-Baidāwī also assumes that it was revealed in separate parts): one ought to fast during a definite number of days, to be precise, in the month of Ramaḍān, "in which the Qurʾān was sent down"; special dispensations were granted to invalids and travellers on condition that they made restitution for it. In obedience to these divine commands the Muslims fasted in Ramaḍān and the devout among them followed the Jewish custom of fasting from one sunset to the next until a new revelation (ii. 183) limited the period of fasting to the day (cf. al-Bukhārī, *Ṣawm*, bāb 15, etc.). The fast is also mentioned elsewhere in the Qurʾān: in Sūra ii. 192, where it is prescribed as a substitute for the *ḥāḍj* in certain circumstances; in iv. 94, where fasting during two successive months is ordered as an atonement when someone has killed a believer of an allied nation by accident (cf. the article KATL); v. 91: one should fast three days (as a substitute) if one has broken an oath; v. 96: one should fast (as a substitute) if one has killed game on the pilgrimage; lviii. 5: one should fast (as a substitute) for two successive months if one wants to make the *ṣiḥr* [q. v.] invalid (cf. the regulations of the *kaffāra*, below). *Ṣāʾim* is further used in xxxiii. 35 to describe the devout Muslim, along with other epithets, while in Sūra ii. 42 and 148 *ṣabr* [q. v.] is explained as *ṣawm*.

The ordinances in Sūra ii. 179—181, 183, form the basis of the detailed regulation by the *fuḳahā* of the law regarding fasting; many minuter details were taken from tradition. What follows here is a résumé of the law on fasting according to the Shāfiʿi school, as contained in the treatise by Abū Shudjāʿ al-Iṣfahānī (vth century A.H.) *Mukhtaṣar fi ʿl-Fiḳḳ*, annotated by Ibn Kāsim al-Ghazzī (d. 918 = 1522) and glossed by Ibrāhīm al-Bādjūrī (d. 1278 = 1861) (Cairo edition).

How the fast should be observed and who is bound to fast. Fasting in the legal sense is abstinence (*imsāk*) from things which break the fast (*muṣṭirāt*), with a special *niya* (intention) for each of the statutory fasts, and for the whole day; the *ṣāʾim* must be a Muslim in full possession of his senses (*ʿāqil*) and, if a woman, free from menstruation and the bleeding of childhood. The fast may be valid (*ṣāḥiḥ*) under these conditions; there is an obligation to fast on every one who is full-grown (*bāligh*) if he is physically fit (*kādir*). It is to be noted that the actual profession of Islām at the time is necessary for the *ṣiḥḥa*, while for the *wuḍʿūb* the Islām of a *murtadd* is also valid, who is thus after his conversion obliged to make up for the fast days he has omitted (*ḥaḍāʾ*); one who was born a *kāfir*, who is pledged to Islām, and ought, therefore, to obey its laws also, need not, however, make up for his omissions; the law calls his obligation *wuḍʿūb ʿikāb*, whereas that of the *murtadd* is called *wuḍʿūb muṭālabā bihi*. The fasting of a non-*bāligh*, who is *munayyiz* (has power of discrimination), is valid (one ought to compel a child to fast from the tenth year), as is that of a non-*kādir*. *ʿĀqil* is to be interpreted as meaning that for an unconscious, insane or intoxicated person *adāʾ* (fulfilment of the obligation at the right time) is not *wāḍʿib*. One may spend the day sleeping if the *niya* has been previously formulated; or in a state of drunkenness or unconsciousness, if one

can pull oneself together even for a moment only during the day.

The *arkān* (pillars) of the fast are, besides the *ṣā'im*, the *niya* and abstinence from the *muftirāt*. One ought to formulate the *niya* before dawn on each day of fasting (*ṭabyīl*); by *taḥlīd* [q. v.], however, the *Shāfi'* can follow the *Mālikī madhhab*, which allows one to formulate the *niya* for the whole of the month of *Ramaḍān* in the night before the first of *Ramaḍān*; if one fasts voluntarily, the *niya* may still be formed before noon, if one has actually fasted during the preceding part of the day. The *niya* should be deliberately formulated; it is desirable but not necessary to utter the words aloud (the law-books give formulae); indeed, preparations which are made directly in view of the coming fast day may be regarded as *niya*.

The *Muftirāt* are:

1. The entering into the body of any material substances in so far as it is done conscientiously and is preventable, i. e. the swallowing of food and beverages, the inhaling of tobacco smoke, the swallowing of spittle which can be ejected; if one sprays or drops liquids or inserts instruments into the various orifices of the body; if one retains what the body in the course of nature would reject. On account of the limitations in *a*, *b*, *c* (see below) it is not *muftir* if insects, dust of the road, fragments of food from the teeth, anything that the skin may absorb, water from rinsing the mouth or rinsing the nose, provided too much is not used, even in the not-compulsory *ghusl* [q. v.], and ritually pure scents find a way into the body. If thirst troubles one exceedingly one may hold water for a moment in his mouth, if it can be done without danger.

2. Deliberate vomiting, which is only permitted by doctor's orders and even then only with liability to *ḥaḍā'*.

3. Sexual intercourse.

4. Deliberate seminal emission, which is a consequence of sexual contact; in other cases a distinction is made as to whether it is caused by passion or not, whether the person causing it is a stranger or a *ḍhū mahram*, a boy, a woman or a *ḥā'il*. Nocturnal or similar emissions (*iḥtilām*) are not *muftir*.

5. Menstruation; this even makes the fast *ḥarām* (this rule is not clear to al-Bādjūrī, because the fast does not demand ritual purity otherwise).

6. The bleeding of a woman in child-bed.

7. Unsound mind and

8. Intoxication (7 and 8 make any *'ibāda* impossible), to which a ninth may be added, childbirth, but only in the view of some *fuḥahā'*.

The *ifṣār* occurs, *casu quo*, only in case of deliberateness (*ta'ammud*), knowledge (*'ilm*) and free will (*ikhtiyār*), i. e. not by neglect, in ignorance of the obligations if this is to be excused, or under compulsion. "If one eats by an oversight", says the tradition, "he may continue the fast because God himself has caused him to eat" (Bu., *Ṣawm*, bāb 26; *Aymān*, bāb 15; Muslim, *Ṣiyām*, tr. 171).

It is to be commended if the *ṣā'im* 1) takes the *faṭūr* [q. v.] as soon as possible after he is certain the sun has set; he ought preferably to use ripe dates for this, or (zamazam-)water or otherwise something tasty; the *ifṣār* is *wājib*, because the continuous fasting (*ṣawm al-wiṣāl*) is *ḥarām*;

2) eats the *saḥūr* (what is eaten after midnight) as late as possible and uses for it the same as is recommended for the *faṭūr*; 3) refrains from indecent talk, slander, calumnies, lies and insults, because, according to the tradition, "the result of fasting is only hunger and thirst, if one does not keep his hands and feet from evil deeds"; 4) avoids such actions as, although not actually forbidden, might arouse passion in oneself or in others; 5) refrains from being cupped or bled; 6) tastes no food; 7) chews nothing edible; 8) thanks God after the day of fasting; 9) recites the *Qur'ān* for oneself or others, and 10) observes the *i'tikāf* in the month of *Ramaḍān* [q. v.] (in accordance with *Sura ii. 183*). Al-Ghazālī adds to these charity in the month of *Ramaḍān*.

Arranged according to the five legal categories, the fast may be:

1. Obligatory (*wājib*, *farḍ*) (a) in the month of *Ramaḍān*; (b) if one has to make up for days omitted in *Ramaḍān* (*ḥaḍā'*); (c) on account of a vow; (d) in definite circumstances to atone for a transgression (*kaffāra*), and (e) when the *Imām* prescribes the *istishkā'*-ceremonies [q. v.] in season of drought. In the case of inexcusable *ifṣār* one is bound, according to al-Ghazālī, to fast during the remainder of the day, *tashbihan bil-ṣā'imīna*.

(a) Fasting in the month of *Ramaḍān* is the fourth pillar of *Islām*; whoever denies the obligation to fast is a *kāfir*, unless he has only recently come in contact with *Islām*, or has grown up remote from the 'Ulamā'. Whoever omits to fast without good cause, without, however, denying the compulsion to fast, is to be locked up and brought to formulate the *niya* by forced abstinence. The general obligation to fast (*'alā sabīl al-umūm*) begins on the first of *Ramaḍān*, after the 30th *Shā'bān*, or after the 29th if the *ḥākim* (*ḥāḍi*) has then accepted the evidence of one 'adl that he has seen the new moon; the personal obligation (*'alā sabīl al-khuṣūs*), in the case of an unaccepted *ru'yā* of one's own or that of another person whom one believes in this respect, even if he should not be 'adl, after the 29th *Shā'bān*; if only one 'adl has seen the new moon on the 29th *Shā'bān*, fasting etc. only becomes due on the 2nd *Ramaḍān*. The beginning of *Ramaḍān* has to be announced to the people in a way settled by the local custom (gun-shot, the hanging of lamps on the *manāra*, in Java by beating the *bēdug*). Special regulations hold regarding *niya* and *ḥaḍā'* if it is impossible for one to hear of the announcement or if he is wrongly informed. The observations of an astronomer, the calculations of a mathematician, or the dream of one who has received in his sleep information regarding the beginning of *Ramaḍān* from the Prophet, etc., can only allow *Ramaḍān* to begin for the astronomer, mathematician or dreamer themselves and those who firmly believe in them.

b.) Days omitted in *Ramaḍān* have to be made good (*ḥaḍā'*) as soon as possible, i. e. on the next day if this permits fasting, i. e. is not one of the forbidden days (see below) or is itself a compulsory fast day. If a man dies without having done his *ḥaḍā'*, the obligation is thereby removed if there was a valid excuse for his being in arrears; otherwise his *walī* (in this case any relative can be a *walī*) must pay from his estate, or, with the consent of the *walī*, any stranger can

pay, a small *kaffāra* or *fiḍya* (see below), or the *walī* (or stranger) — and this is the older Shāfiʿi view, which later authorities do not approve of except, however, al-Bādjūrī who even calls it *sunna* — can perform the *ḥaḍā* himself, in which case the merit acquired by the fast is credited to the deceased.

(c.) According to the opinion which has predominated in the Shāfiʿi school, a vow which would impose the obligation to the — reprehensible — *ṣawm al-dahr* (see below) is regarded as not done (cf. al-Bādjūrī, *Kitāb Ahkām al-ʿAimān wa 'l-Nudhūr*).

(d.) A distinction is made between the major and minor *kaffāra*. The first is imposed on anyone who (α) breaks the fast in Ramaḍān by sexual intercourse if this is sinful (*iḥm*), under the above mentioned conditions; he is further obliged to perform *ḥaḍā* and be liable to *taʿsir* [q. v.]; because every fast day is an independent *iḥāda*, a *kaffāra* ought to be performed for every fast day broken in this way. Al-Bādjūrī gives this subterfuge (*hila*) to escape the *kaffāra*, that one should previously break the fast with another of the *muḥṣirāt*; then the *kaffāra* drops out but the sin remains. The female participator in the transgression is only liable to *ḥaḍā* and *taʿsir*; (β) is guilty of illegal killing (cf. the article *QATL*); (γ) has pronounced the *ḡihār*-formula [q. v.] but not the *ṭalāk* immediately after it (because he does not observe the vow contained in the *ḡihār*); (δ) has broken a valid oath (*yamin*; see the article *QASAM*). This *kaffāra* consists of

	1	2	3	4
(α)				
and	<i>'itk</i> (resp.)	<i>ṣawm</i> (resp.)	<i>iḥām</i>	—
(γ)				
(β)	<i>'itk</i> (resp.)	<i>ṣawm</i>	—	—
(δ)	<i>'itk</i> or <i>iḥām</i> or <i>kaswa</i> (resp.)	<i>ṣawm</i>		

i. e. in the cases (α), (β) and (γ) fasting (*ṣawm*) will do as a *kaffāra* if one is not able to do the first mentioned; if one receives the means to do so after having begun to fast, *'itk* should be performed and the fasting that has been done is counted as a voluntary work of merit; similarly in case (δ) fasting takes fourth place with the idea that the first three are interchangeable, but fasting always comes fourth. In (α), (β) and (γ) two months' successive fasting is prescribed; the omission of one day makes it necessary to begin the fast from the first again, even if the omission was excusable; in case (δ) the fast is limited to three days and need not be successive. — If a man is not able to do any of the things mentioned, the obligation is put off until he has an opportunity to do one of them.

The minor *kaffāra* or *fiḍya* has to be paid when one takes advantage of one of the dispensations which are detailed below; the question of fasting does not arise. For a dead man (cf. above) it consists in his *walī* giving a *mudd* from the corn that grows on his land to the poor for each day omitted. The same alms have to be given by anyone who has not yet performed his *ḥaḍā* for days omitted in Ramaḍān by the beginning of the following Ramaḍān, and multiplied according to the number of years in arrears. — Anyone who has omitted, while performing the *ḥaḍj* or the *ʿumra*,

one of the obligatory rites which is not one of the four *arkān* or performs anything forbidden during the period of *iḥrām* or takes advantage of a dispensation allowed by the law (e. g. *ḥirān* or *ta-mattu'*), should atone it with a *fiḍya* consisting in the first place of a definite sacrifice which is prescribed for each case separately; if the person liable to it is not able to perform the sacrifice he should fast, in some cases for 10 days — 3 during the *ḥaḍj* and 7 after returning home — and in other cases as many days as the quantity of *mudd*'s which would otherwise have been given to the poor. These regulations originate in Sūra ii. 192 and v. 96; cf. al-Bādjūrī, *Kitāb al-Ḥaḍj*, faṣl ii. and iii.; Juynboll, *Handbuch* etc., p. 145 and esp. p. 157; the art. *ḤADJ*.

(e.) In the case of great drought, the *Imām* may, according to the *sharī'a*, prescribe extraordinary ceremonies which include fasting; the three days before the *ṣalāt al-istiskā'* [q. v.; cf. al-Bādjūrī, *Kitāb Ahkām al-Ṣalāt*, Faṣl fī Ahkām Ṣalāt al-Istiskā'] are spent in fasting. One notable feature here is that the formulation of the *niya* by night (*tabyit*) is *wāḍjib* for everyone, even when the fast is not obligatory for him, i. e. also for a boy or one who enjoys a dispensation. (This is the only case where *tabyit* is necessary for a fast which is not obligatory). — Cf. also C. Snouck Hurgronje, *Verspreide Geschriften*, i., Bonn-Leipzig 1923, p. 137, note 2.

The law permits relaxations in the following circumstances:

A. Such as have reached a certain age (men 40; not exactly defined for women) and sick people for whom there is no hope of recovery, if they are unable to fast, may omit the fast without being bound to the *ḥaḍā* should their strength or health be restored. In compensation they should give alms at the rate of one *mudd* for each day omitted; a slave does not need to perform *fiḍya* but his owner may do it for him, or a relative; the latter is also permitted to fast in compensation.

B. If pregnant or nursing women fear it would be dangerous for them if they should fast, *iḥṣār* is *wāḍjib* for them and *ḥaḍā* is obligatory. If their fear is for the unborn child or the one they are nursing (not necessarily their own), *iḥṣār* is *wāḍjib* in this case also but a *fiḍya* is imposed on them as well as *ḥaḍā*, which, however, like the *ṣakāt al-fiṭr* [q. v.], need only be paid out of the amount which is left over from the expenses of maintaining oneself and dependent family or from the expenses of housing and service; this *fiḍya* is to be given only to the poor and to *fukarā'*. — The same regulations hold generally for cases where one breaks the fast for fear of danger to oneself, respectively to another person.

C. Sick persons who are likely to recover and those who are overcome by hunger and thirst may break the fast on condition that the *ḥaḍā* is performed. If a man is in danger of death or danger of losing a limb, *iḥṣār* is *wāḍjib*. Chronic invalids need not formulate the *niya* in the night; nor persons sick of a fever if they are actually feverish at the time.

D. Travellers who set out before sunrise may, if necessary, break the fast, but not if they begin their journey during the day. In case of mortal danger, *iḥṣār* is *wāḍjib*. Two days' journey is the minimum. *Ḥaḍā* is obligatory on them, *casu quo*. The same relaxation is allowed to

divorced women. — If the persons mentioned under C and D break the fast by sexual intercourse, they are not liable to *kaffāra* because in this case it is not a sin but is permitted to them *bi-niyati 'l-tarakḥḥaṣ*.

E. Those who have to perform heavy manual labour should formulate the *niya* in the night but may break the fast if need be.

When the justification for relaxing the rules disappears during the day of fast, it is *sunna* to pass the rest of the day fasting.

II. Voluntary fasting is meritorious (*ṣawm al-taṭawwū*); for a married woman only with the consent of her husband; it may be broken without any penalty; the *niya*, which can be formulated any time up till noon, need not be definitely specified, although some *fuḡahā'* consider it desirable for the *sunan rawātib*. The *sunan rawātib* in the *ṣawm* are fasting (a) on the 'Ashūrā'-day [q. v.]; (b) on the 'Arafa-day, the 9th *Dhu 'l-Hijj*djā; (c) on six days of Shawwāl. Fasting on the day of 'Arafa applies specially to those who do not spend this day in 'Arafa. Whether Muḥammad fasted on this day is disputed in Tradition. Wensinck, *Mohammed en de Joden te Medina*, p. 126—130, points to the fact that the whole of the first ten days of *Dhu 'l-Hijj*djā had a special character and is recommended in the law for voluntary fasting; the 9th *Dhu 'l-Hijj*djā, however, is regarded as the most auspicious day, just as in the Jewish month of Ab the 9th is a great feast, for which preparations are made from the beginning of the month. Because Ab and *Dhu 'l-Hijj*djā probably coincided in the year 1 A.H., Wensinck thinks that the celebration of the 9th *Dhu 'l-Hijj*djā may have been taken from Judaism. Another view is put forward by Nöldeke-Schwally, *Gesch. d. Qurāns*, i. 159, who considers Sūra vii. 29 as probably Mekkan and see in it an attack on the ancient custom of "making the circuit of the Ka'ba naked and fasting at the time of pilgrimage" (cf. p. 179, note 1). According to this view, this fast should be traced back to old Arab customs (cf. al-Baiḏāwī's commentary on Sūra vii. 29: "It is said that the Banū 'Amir in the days of their ḥajj only ate what was necessary to nourish them but took no fat (= tasty) food and thus observed their ḥajj; then the Muslims were disturbed; then this (verse 29) was revealed"). It is considered meritorious if one who has to fast (as a substitute) three days during the ḥajj and seven days afterwards (cf. above) chooses as the 3 days the 7th, 8th and 9th *Dhu 'l-Hijj*djā, because the 10th and the *tashriḥ* days are not possible (cf. below). If the 9th *Dhu 'l-Hijj*djā is a doubtful day (i. e. whether 9th or 10th, on account of uncertainty as to the beginning of the month) fasting is only permitted for *ḡadā'*, on account of a vow or a regular custom. Al-Bādjūrī calls fasting from the 1st to the 9th *Dhu 'l-Hijj*djā *mandūb*.

Six separate days can be taken for the fast on the six days of Shawwāl; but it is best to take six successive days immediately after the festival, i. e. from the 2nd to the 7th Shawwāl. These days can also be taken for a *ḡadā'* or a *naḡhr* fast. Women who have had their menstruation in Ramaḡān often use these days for the *ḡadā'* (Juynboll, *Handbuch* etc., p. 132).

The following days are further recommended for voluntary fasting: the day before and

after the 'Ashūrā'-day; the Yawm al-Mi'rādj (27th Rādjāb); Monday and Thursday (*sunna mu'akkada*, according to al-Bādjūrī), because on these days, says Tradition, the works of men are offered to God. Muḥammad is reported to have said: "I should like my works to be offered while I fast". Wensinck, *Mohammed* etc., p. 125—126, points out that the Jews also fasted on these two days; Wednesday, "out of gratitude", says al-Bādjūrī, "that God on this day did not lead this *umma* to destruction, like the other *umam*"; the days of the white nights, i. e. the 13th, 14th, 15th and best of all also the 12th of each month. As Wensinck, p. 125, says, Muḥammad fasted, according to tradition, three days of every month and the later Muslims, who no longer knew which, chose those days. Perhaps these three days were an obligatory fast in the year 1 A.H. Nothing certain can be said regarding the origin of these fast days; Prof. Wensinck in conversation called my attention to the sacred character of the Jewish 14th and 15th Nisām, and to the sacredness of the middle of the month, e.g. in Sha'bān, in ancient Arabia; as a counterpart, presumably after the example of the white nights, the days of the black nights, i. e. the 28th, 29th, 30th (or 1st) and best of all also the 27th of each month; every day on which one has nothing to eat; all other days if they are proper for fasting. — On a three days' fasting as an atonement and a preparation to a better life see C. Snouck Hurgronje, *Verspreide Geschriften*, i., Bonn-Leipzig 1923, p. 137, note 2.

Al-Bādjūrī only briefly mentions the voluntary fast days and refers his readers for further information to more detailed treatises. To supplement what we have said we give the following from the third faṣl of the *Iḡyā'* of al-Ḡhazālī (see below).

He gives as additional days recommended for fasting the first, the middle and the last day of every month, speaks of the superiority of fasting in the sacred months (*al-aṣḡhur al-ḡurum*: Muḡarram, Rādjāb, *Dhu 'l-Hijj*djā and *Dhu 'l-Ḳa'da*), but more important is what he says regarding life-long fasting (*ṣawm al-daḡr*) which, as he tells us, was practised by the mystics (*al-sālikūn*) of his time in various ways (as had already been done by ascetics in the earliest days of Islām). In general he considers it blameworthy, as the *ifṭār* is not only *wādīb* some days of the year, but desired generally; only exceptionally may one here follow the example given, according to tradition, by the *Ṣaḡāba* and the *Tābi'ūn* (traditions regarding the *ṣawm al-daḡr*: al-Bukḡārī, *Ṣawm*, bāb 59; Muslim, *Ṣiyām*, trad. 18 sq.; cf., however, Aḡmad b. Ḥanbal, iv. 414; cf. also Aḡmad b. Ḥanbal, ii. 263, 435 etc.; ii. 164, 190 etc.). It is highly recommended, however, to fast on alternate days (*niṣf al-daḡr*), which achievement al-Ḡhazālī considers even more difficult; Muḡammad said: "The most excellent fasting is that of my brother Dā'ūd, who fasteth one day and not the next" (cf. al-Bukḡārī, *Ṣawm*, bāb 50, 56; cf. 58, 59; *Anbiyā'*, bāb 37, 38, etc.; Muslim, *Ṣiyām*, trad. 181, 182, 186, 187, 189—193, 196 etc.). To fast every third day is also very meritorious. To fast voluntarily for more than four days in succession is considered wrong by the 'Ulamā' and (as a general rule) also by al-Ḡhazālī. — If one has properly understood the correct significance of fasting, says al-Ḡhazālī for this see

below), one need observe no rules in voluntary fasting; it is, indeed, said of the Prophet (al-Tirmidhī, *Sawm*, bāb 56) that he sometimes fasted so long that the people thought he would never stop and sometimes went for so long without fasting that the people thought he would never fast again, just as the *nūr al-nubuwwa* inspired him.

III. Fasting is forbidden (*ḥarām*) on the days of the two great festivals, on the *tashrīk*-days and for a woman during menstruation; in definite cases when danger threatens, as already mentioned above.

IV. It is wrong to fast on Friday because it distracts the attention from the Friday service (but according to al-Ḡhazālī it is meritorious); on Sunday or Saturday, at least if one has no particular reason for fasting, because the Christians and Jews observe these as holy days. One also should not fast if one fears he will suffer in any way on account of the fast. It is very wrong to fast without special reason on the "doubtful day" (*yawm al-shakk*) and in the second half of the month of *Shābān*. The "doubtful day" is the day following the 29th *Shābān* if one does not know, with a clear sky, whether an 'adl has seen the new moon of Ramaḍān. If one has a particular reason for fasting, then one may use the doubtful day and the second half of *Shābān* for any kind of fasting: *ḥaḍā*, *nadhīr*, *kaffāra*, etc. Fasting in *Shābān* is otherwise commendable, for the Prophet fasted, as Tradition tells us, so long in this month that he began to think he was in Ramaḍān (many traditions; cf. also A. J. Wensinck, *Arabic New-Year*).

The three other *madhhab*s differ in details from the *Shāfi*' school; the differences are collected in the *Ikhtilāf*-books. The following is taken from the *Kitāb al-Miṣnā* of 'Abd al-Wahhāb al-Shar'ānī (ii. 20—30; Cairo 1279); the author appends to his list of divergencies a short explanation of the points of view (*waḍīḥ*); sometimes he associates himself with one of them. In the following the order of the subject matter is the same as in the earlier part of this article.

1. Abū Ḥanīfa teaches that the fasting of a young boy or girl is not valid, but valid is that of a *murāḥik*, and that a *murīadd* is not bound to a *ḥaḍā* after his conversion. The four Imāms teach the validity of fasting by a *djunub* [q. v.]; some other *fuḳahā*' are of a different opinion in points of detail.

2. Abū Ḥanīfa teaches that the fast need not be definitely specified in the *niya*, that even the intention of doing a good work is sufficient; that the *niya* can also be formulated in case of an obligatory fast up to noon (others only permit this for a *nadhīr* fast). But Mālik teaches that even with voluntary fasts the *niya* cannot be formulated after dawn; his opinion that one *niya* is sufficient for the whole of Ramaḍān has already been mentioned above. Abū Ḥanīfa and the majority of *Shāfi*' and Mālikī *fuḳahā*' teach that the mere intention of breaking the fast does no harm; but Aḥmad b. Ḥanbal holds the contrary view.

3. Abū Ḥanīfa does not consider deliberate swallowing of fragments of food one of the *muṣtirāt*, any more than one of the opinions said to have been held by Mālik regards the application of a poultice as one.

4. Vomiting does no harm, according to Abū Ḥanīfa and Aḥmad b. Ḥanbal, up to a certain point, which they calculate differently.

5. Mālik teaches that seminal emission spoils

the fast if it is a result of sensual images, even without preceding sexual contact.

6. In spite of the above-mentioned tradition, Mālik teaches that anyone who deliberately eats, drinks, or has sexual intercourse breaks the fast and is liable to *ḥaḍā*; Aḥmad b. Ḥanbal, only in the last case, *kaffāra* then being also necessary. Forced breaking of the fast holds good also in al-Nawawī; in Aḥmad b. Ḥanbal only in the particular case of a woman being forced to have intercourse.

7. Mālik says that kissing is always *ḥarām*; Aḥmad b. Ḥanbal that the cupper and his patient both break the fast; both Imāms say that the taking of *kuhl* is to be deprecated and, if the fragrance enters the throat, is actually *muṣfir*. The *Shāfi*' view that the cleaning of the teeth after noon is wrong is not shared by the other Imāms and not even by the later *Shāfi*'s (but is shared by al-Ḡhazālī; even now it is still condemned in the Dutch Indies). There is *iqṭimā* on the point that for a *djunub* a *ghusl* is recommended before dawn.

8. Mālik demands for the settlement of the beginning of Ramaḍān the evidence of two 'adl, Abū Ḥanīfa only the testimony of one, but of a large number when the sky is unclouded. Some other *fuḳahā*' recognise only the general obligation (see above) to fast in Ramaḍān, not the personal obligation of the one who has seen the new moon, but whose evidence has not been accepted.

9. Like al-*Shāfi*', Abū Ḥanīfa also teaches that the weak-minded is not bound to perform *ḥaḍā* in the event of his recovery; Mālik teaches the contrary; both views are credited to Aḥmad b. Ḥanbal.

10. The four Imāms impose the major *kaffāra* only on one who breaks the fast in Ramaḍān; some *fuḳahā*' also on those who break the *ḥaḍā* fast of Ramaḍān. Aḥmad b. Ḥanbal imposes a *kaffāra* for every breach of the regulations in question, even if several are committed on the same day; in the second transgression the obligation is imposed on the guilty woman also. Abū Ḥanīfa, however, is less severe and does not even multiply the *kaffāra*'s by the number of fast days broken if the *mukaffir* is in arrears with the payment of the first *kaffāra*; Abū Ḥanīfa and Mālik say that in case of sexual intercourse both man and woman are liable to the *kaffāra* and they impose it also on everyone who breaks the fast of Ramaḍān by eating or drinking, if he is not ill or on a journey, without affecting the liability to *ḥaḍā*. Mālik leaves the *mukaffir* free choice as to in which of the three ways he will fulfil his obligation, although he himself prefers *ifām*.

Abū Ḥanīfa does not impose the minor *kaffāra* (the donation of a *muddā*) if one has not yet fulfilled his obligation to *ḥaḍā* for the Ramaḍān fast by the beginning of next Ramaḍān.

11. Aḥmad b. Ḥanbal imposes, in addition, the (minor) *kaffāra* on pregnant and nursing women, if they have broken the fast out of fear of injuring themselves; Abū Ḥanīfa, however, only *ḥaḍā*, others only *kaffāra* and no *ḥaḍā*.

12. Sick people for whom there is no hope and old people are, according to Abū Ḥanīfa and a section of the *Shāfi*'s, liable to *fiḍya* only; Mālik denies this also.

13. Travellers may, as Aḥmad b. Ḥanbal teaches, break the fast, even if they have set out after the beginning of the fast, but this relaxation does not

include, according to him, permission for sexual intercourse; the *kaffāra* regulations hold, therefore, also with him. Some Ṣāhīrīs teach that fasting of a traveller is not valid at all. — Mālik and al-Shāfiʿī teach that one is bound to fast for the remainder of the day if the reason for the dispensation disappears; Abū Ḥanīfa and Aḥmad b. Ḥanbal hold the contrary. — The *ṣīḍya*, according to the two last-named, is a half *ṣāʿ* [q. v.] for every day omitted.

14. Mālik teaches that fasting on six Shawwāl-days is not recommendable; he and Abū Ḥanīfa say that one is bound to complete (*itmām*) a voluntary fast day also.

15. One ought to fast on the doubtful day, according to Aḥmad b. Ḥanbal, when the sky is clouded; otherwise it is wrong. — Abū Ḥanīfa and Mālik teach that occasional fasting (*ifrād*) on Friday is not wrong.

16. Lastly it is to be mentioned that, according to the Ḥanafī and Mālikī view, fasting during the *ʿitikāf* [q. v.] is obligatory; cf. e. g. Abū Dāʿūd, *Ṣawm*, bāb 80 (as A. J. Wensinck says, in his treatise *Arabic New-Year*).

The Shīʿa law regarding fasting differs in the following details from the *Sunna* (according to A. Querry's edition of the *Sharḥ al-Islām fi Masā'il al-Ḥalāl wa 'l-Ḥarām* of Naḍīm al-Dīn al-Muḥaqqik, entitled *Recueil de Lois concern. les Musulmans Schyites*, Paris 1871—72, i. 182—209, ii. 75—77, 197—199, 203—205):

1. The *niya* is not regarded as a pillar; it need not even be specified for Ramaḍān, although it does in other cases; it ought to be formulated before noon.

2. Smoking is not one of the *muftirāt* but unconsciousness is and if one deliberately remains in a condition of great *ḥadath* after dawn.

3. It is forbidden, nay *muftir*, to scorn God's word or that of the Prophet or that of the (Shīʿī) Imām; it is forbidden, although not *muftir*, to bathe completely in water. It is forbidden to keep deliberate silence during the fast.

4. If a man deliberately breaks the fast of Ramaḍān, he is to be chastised (25 lashes with a whip for a man or a woman in a case of sexual intercourse) and for the third offence the penalty is death. — The testimony of two *ʿadl* is necessary for the beginning of Ramaḍān.

5. One is bound to perform *ḥaḍāʿ*, for example, if one awakes after dawn in a state of great *ḥadath* even if the *niya* for purification has already been formulated. In the *ḥaḍāʿ* fast one may eat before noon; if one eats later he has to pay a *ṣīḍya* (10 *mudd* or three days' complete fast); in-deliberate neglect of purification in great *ḥadath* makes the *ḥaḍāʿ* fast not invalid. If an invalid remains ill till the following Ramaḍān, his obligation to *ḥaḍāʿ* expires but the *ṣīḍya* (1 *mudd*) remains.

6. *Kaffāra* is compulsory if one, during the fast day, eats, drinks etc., has sexual intercourse, practises onanism, voluntarily remains in a state of great *ḥadath* after dawn or falls asleep in this condition without having previously formed the *niya* for purification, and then does not awake till after dawn, viz.: on a day of Ramaḍān; during *ḥaḍāʿ* for an omitted fast in Ramaḍān if the *ifrār* takes place after noon; in fasting on account of a particular vow and for *ʿitikāf*. — If a man forces his wife or slave to marital intercourse in Ramaḍān, his *ḥaḍāʿ* and *kaffāra* are doubled but the

wife is exempt. Other causes of *kaffāra* are: man-slaughter, forbidden expressions of grief at a death, hair-cutting when in a state of *ihram*, intercourse with a slave woman who is in a state of *ihram* if one has given her permission for the *ḥaḍāʿ*.

In performing the *kaffāra*, fasting comes second, as with the Sunnis; deliberate murder, however, and, according to some *ṣūḥāḥā*, also the breaking of the fast of Ramaḍān with forbidden foods, entails threefold *kaffāra*: *ʿitḥ* + *ṣawm* + *ifrām*. The choice is free if one breaks the fast in Ramaḍān in another way than by sexual intercourse, breaks a vow or *ʿitikāf*, cuts one's hair when in a state of *ihram*, or has intercourse with a slave woman who is in a state of *ihram*.

In general the *kaffāra* fast should be uninterrupted. In the case of a two months' fast inexcusable interruption in the first month makes a repetition necessary; in the second it only entails obligation to the *ḥaḍāʿ*. Interruption by a pregnant or nursing woman is here excusable, but not an unnecessary journey (see below). If the duration of this fast is only one month, as e. g. the *kaffāra* fast of a slave, the hard period lasts 14 days. Interruption on the 10th *Dhu 'l-Hijja* does no harm in the three days' compensatory fast (see above), if one has already fasted two days. — The choice of the days is, however, open in the case of *kaffāra* for breach of an oath, for breaking the prohibition of hunting during the *ihram*, and in the seven days' compensatory fast (see above) (as also in case of *ḥaḍāʿ*). If one is not fit to fast for two successive months, he should fast 28 days and seek God's mercy with contrite heart. — Another kind of *kaffāra* (not fasting) may be voluntarily taken over on behalf of another person.

7. The relaxations. Only if a physician permits an invalid to fast, is it legitimate. Pregnant women are only given a dispensation in their last months and nursing women only when their milk supply is defective. The fasting of travellers is in general not valid; but if a man travels for the best part of a year in the course of his business he does not get the benefit of relaxation. A fast neglected on account of a journey must always be observed later; in case of death by the *wali* of the deceased.

8. Voluntary fasting may begin before noon. The Shīʿa *Fikḥ*-books recommend fasting on the following days also: on every first and last Thursday of the month; on the first Wednesday of the second ten days of the month (on should even pay compensation, 1 *mudd* or 1 *dirham*, if this is omitted); on the day of the *ʿId al-Ghadr*, 18 *Dhu 'l-Hijja*, on which day Muḥammad is said to have appointed ʿAlī his immediate successor at the side of a pond (*ghadr*) (Querry, *op. cit.*, p. 37, note 2); on Muḥammad's birthday (17 Rabiʿ 1) and on the first day of his mission (27 Rabiʿ 1); on the day when the Kaʿba was liberated from chaos, the first place to be created on earth (25 *Dhu 'l-Kaʿda*); on the *Mubā-hala*-day, because on this day Muḥammad and Abū Djahl are said to have hurled a curse against the one of them who preached a false doctrine. (Querry, *op. cit.*, p. 37, note 3) (24 *Dhu 'l-Hijja*); on the 10th of Muḥarram, the anniversary of the murder of Husain; on Friday; during the month of Radjab and Shaʿbān. Fasting on the doubtful day is also meritorious. — The law recommends moderation for the days on which an obstacle to fasting is removed: one should first eat a little and then fast.

9. It is wrong to fast: on the 9th *Dhu 'l-Hijj* in 'Arafa, if one fears harm from it; on a pious journey except 3 days in Medina during the *Ḥajj*; if a guest fasts without permission from his host, and a child without its father's permission, etc.

10. Fasting is forbidden: on the *tashrīḥ*-days for those who are in Minā; for travellers.

Al-*Ghazālī* gives at the beginning of his *Kitāb Asrār al-Ṣawm* in the *Iḥyā'* some considerations on the value of fasting. He points out, referring to some well-known traditions, the high esteem in which fasting stands with God; he gives as a reason for this that fasting is a passive act and no one sees men fast except God; secondly it is a means of defeating the enemy of God, because human passions, which are the *Shaitān*'s means of attaining his ends, are stimulated by eating and drinking. The passions "are the places where the *Shaitān* live in abundance and where they feed; so long as they are fruitful, they continue to visit them often, and so long as they visit them frequently, the majesty of God is concealed from the slave and he is shut off from meeting with Him. The Prophet of God even says: "If the *Shaitān* did not fly around the hearts of men they would readily think of heaven." Fasting is therefore "the gateway to divine service."

In the first *faṣl* al-*Ghazālī* details the legal obligations and recommended actions of the fast, according to *Shāfi'* doctrine, and in the third the recommended fast days, just as a *faḥīh* would do. But he says in the second *faṣl* that the most punctilious observation of the external law of the fast is not the essential of the fast. He distinguishes three steps in the fast. The first step is that of the *fiḥh*, the third that of the Prophets, the *ṣiddīqūn* and those who have been brought into the proximity (of God) (*al-muḥarrabūn*), whose fast consists in refraining from all mean desires and worldly thoughts. The second step suffices for the pious, however; it consists in keeping one's organs of sense and members free from sin and from all things that detract from God. Everything should be avoided which might affect the result of the fast; for example, at the *iftār* one should not eat more or fare better than usual (this is contrary to the *fiḥh* regulation) and one should not sleep during the day to avoid feeling hunger or thirst, for they are the *rūḥ* and *sirr* of fasting because they fight the power of the passions. Subjection of the passions, whereby the soul is brought nearer to God, is the real object of fasting, not mere abstinence; and he deduces the worthlessness of the fast of those whose conduct at the *iftār* destroys the results of the fast day, of whom the tradition says: "How many fasters there are for whom only hunger and thirst are the results of their fast".

The ethical conception of the fast which al-*Ghazālī* gives in this second *faṣl* supplements, he says, the barren law of the *fuḥahā'*, but to us it appears often to contradict it. In the *Ḥadīth* we find already various traditions with ethical tendencies and al-*Ghazālī* does not fail to quote them in support of his view. Besides we find in the works on *Ḥadīth* a mass of traditions relating to the fast, which will be found classified under the separate subjects in Prof. Wensinck's work (now about to appear) *A Handbook of Early Muhammadan Tradition*, under the word FASTING. Here we can only quote a few traditions which refer to the estimation in which fasting was held

in the early Muslim world. As it is to this day a widespread view that fasting, especially the fast of Ramaḍān, is the most fitting atonement for sins committed in the course of the year — which is why the fast is fairly generally observed, although not always so strictly as the *fuḥahā'* desire; cf. the article RAMAḌĀN —, so it was with the early Muslims (cf. al-Bukhārī, *Imān*, bāb 28; *Ṣawm*, bāb 6; al-Tirmidhī, *Ṣawm*, bāb 1, etc.). Various traditions compare the value of fasting at one time with its value at another, as, for example, "fasting on one day in the holy months (see above) is better than 30 days at another time, and fasting on one day in Ramaḍān is better than 30 days in the holy months". "If anyone fasts three days in a holy month, Thursday, Friday and Saturday, God considers one day equal to 900 years for him". Similar traditions refer to fasting on the 'Ashūrā'-day, the ten days in *Dhu 'l-Hijj* and especially in Ramaḍān [q. v.]. Other traditions tell how dear to God is the person of the faster or his characteristics; even is "the scent of the breath of a fasting man pleasanter to God than the scent of musk" (Aḥmad b. Ḥanbal, ii. 232, etc.). God compares one, who denies his passions for His sake, with His angels and says to him: "Thou art with Me like one of My angels", and He urges His angels to regard those who fast. The joys of the faster in Paradise are described and how he is honoured there; he will enter by a special gate (*al-Raiyān*) and meet God (al-Bukhārī, *Ṣawm*, bāb 4; Muslim, *Ṣiyyām*, tr. 166, etc.). This is his heavenly joy; his joy on earth is the *iftār* (al-Bukhārī, *Tawḥīd*, bāb 35; Aḥmad b. Ḥanbal, i. 446, etc.). One should, therefore, not deny this joy, because one has a right to it. To continue fasting after twilight is, moreover, not necessary, for "the sleep of the faster is (already) *ibāda*".

Bibliography: A comprehensive work on fasting among the Muslims has not yet appeared. An outline of the law on the subject according to the *Shāfi'* school is given by Th. W. Juynboll, *Handbuch des islamischen Gesetzes*, Leiden-Leipzig 1910, p. 113 sqq. (Dutch: Leiden 1903 and 1925; in the edition of 1925 the most recent bibliography is given). The main sources are the pertinent sections in the books of *Ḥadīth*, *Fiḥh* and *Iḥtiṭāf*. For Tradition cf. the work just about to be published, *Handbook of Early Muhammadan Tradition*, alphabetically arranged by A. J. Wensinck. Al-*Ghazālī*, *Iḥyā' 'Ulūm al-Dīn*, Cairo n. d., i. 207—214. For details of the observance and various customs of Ramaḍān in Muslim lands see the articles ORUḌJ, PUWASA, RAMAḌĀN, RŌZA.

(C. C. BERG)

SA'Y. When the pilgrim who is making the 'umra or the *ḥajj* has performed the circumambulation (*ṭawāf*) of the Ka'ba, kissed the Black Stone for the last time and drunk of the well of Zamzam, he goes out, taking care to put his left foot first, of the sacred mosque by the Bāb al-Ṣafā', pronouncing the formula of salutation to the mosque, then a second formula indicating his intention (*niyya*) to accomplish the ceremony of sa'y. He ascends the steps of al-Ṣafā' about 50 yards from the gate and standing there he makes an invocation, looking towards the Ka'ba, with his hands raised to the level of his shoulders and the palms turned towards the sky. Between al-Ṣafā' and another little hill, al-Marwa, lies a broad street with houses

and shops on either side; this is the *Mas'ā* where the pilgrims have to accomplish the ritual course. Walking at a normal rate he descends towards the former bottom of the valley (*Masīl*), marked by four pillars, two along the mosque on the left and two others opposite it; to cross it, he assumes a more rapid pace, called *harwal* or *khabab*, like the *ramal* of the *ṭawāf*, and runs. Then walking slowly he reaches al-Marwa which is marked by an arch of stone like al-Šafā' and he again prays there. He has now completed one of the seven elements of the ceremony for, except for one isolated opinion, the authorities agree that the *sa'y* consists of seven simple courses. It is usually followed by a desanctification by shaving or cutting the hair, which explains the large number of barbers' shops on the *Mas'ā*.

The *sa'y* has not the value of an independent rite like the circumambulation of the Ka'ba, the accomplishment of which, without the *'umra* and the *ḥajj*, is reckoned to the spiritual credit of the believer. The *sa'y* is an appendage to the circumambulation (*ṭawāf*) of the *'umra* or of the arrival (*kudūm*) or of the desanctification (*ifāda*), and the authorities are not agreed as to its importance, whether essential, obligatory or traditional. The law does not impose on the faithful who accomplish it the strict necessity of ritual purity that it demands for the *ṭawāf*.

The *sa'y* is an ambulatory rite with a brief period of running, analogous to the *ṭawāf*, to the *ifāda* of 'Arafa and Muzdalifa etc.; undoubtedly it was actually a separate ancient rite, which became combined with those of the Ka'ba, as the *ifāda* did to the ceremonies of 'Arafa and Muzdalifa. Tradition has retained the memory of the cult of two divinities, Isf and Nā'ila, but only in the story that they were a man and a woman who were turned into stone for fornicating in the sanctuary and later came to be worshipped. Later Muslim tradition turned them into Adam and Eve, who sat on either of the hills to take a rest. But tradition has made special efforts, not without hesitation, to connect the rite with the story of Abraham: Hādjār, cast off by Abraham and seeing Ismā'il perishing of thirst, ran in despair seven times from one hill to the other; or it is said that Abraham instituted the *sa'y* for the worship of Allāh and quickened his pace (the *harwal*) to escape Satan who was lying in wait for him at the bottom of the ravine.

(GAUDEFOY-DEMOMBYNES)

SAYĀBIGA, سِيَابِجَة, read SAYĀBIGA, name

of a people. The Arabic form سِيَابِجَة is to be read with ج used as a guttural sonant, as the etymology of the name indicates.

De Goeje has devoted a short article to the Sayābiga in his *Mémoires d'histoire et de géographie orientales* (No. 3, Leiden 1903, *Mémoire sur les migrations des Tsiganes à travers l'Asie*, p. 18 and p. 86—91) which has been used here; see also his *Contribution* (*Kon. Ak. v. Wet.*, Amst. 1875, ed. in English by D. MacRitchie, *Accounts of the Gipsies of India*, London 1886).

According to al-Balādhuri (ed. de Goeje, p. 373, 2 infra), they were already settled before Islām on the coasts of the Persian Gulf (*wa-kūnū ḡabl al-islām bi 'l-sawāḥil*). In the reign of the Caliph Abū Bakr (632—634), there was at al-Khaṭṭ in al-Bahrain a garrison of Sayābiga and Zoṭṭ — these two peoples are frequently mentioned together although they have nothing in common (cf. the art. ZOṬṬ) — (cf. al-Ṭabarī, ed. Zotenberg, p. 838—923; ed. de Goeje, i. 1961, 4; Abū 'l-Faradj al-Iṣbahānī, *Kitāb al-Aghānī*, xiv. 46). In 17 (638) the Oswārī, horsemen of foreign origin in the service of the king of Persia, concluded a treaty with the Muslim commander, which the Caliph 'Umar ratified, by the terms of which they pledged themselves to adopt Islām and to enter the service of the Arabs on condition that they received a scale of pay equal to that of the best paid soldiers, that they should be free to attach themselves to the Arab tribe which they preferred and that they should only have to fight against non-Arabs (al-Ṭabarī, i. 2562 sqq.). Their example was followed by the Sayābiga and the Zoṭṭ and they all attached themselves to the Arab tribe of Tamīm (al-Balādhuri, p. 373—375). In 36 (656), the Sayābiga were entrusted with the guarding of the Treasury of al-Baṣra; the army of the people of Kūfa which came to the help of 'Alī included a body of Zoṭṭ and Sayābiga (cf. al-Balādhuri, p. 376; al-Mas'ūdi, *Les prairies d'or*, ed. and transl. Barbier de Meynard, iv. 307, where السابكة is wrongly written for السيابجة; al-Ṭabarī, i. 3125, 3134 and 3181). In

a poem by Yazīd b. al-Mufarragh al-Himyari edited about 59 (677—678) there is a reference to "savage Sayābig barbarians who put irons on me in the morning" (Ibn Kūtaiba, *Kitāb al-Shu'ara'*, p. 212), which seems to imply that the Sayābiga acted as goalers. In 160 (775/776) they took part in a naval expedition against the town of al-Narbadā, that is the modern Broach on the west coast of India (cf. al-Ṭabarī, iii. 460 sqq.).

The Sayābiga came from Sind. "The Sayābiga, the Zoṭṭ and the Andaghār", says al-Balādhuri, "formed part of the army of the Persians; they were people of Sind whom the Persians had taken prisoners and made to perform this service" (p. 375, 6—7). Al-Djawālīkī (*al-Mu'arrab*, ed. E. Sachau, Leipzig 1867, p. 82) similarly says: "al-Laith says: These are people of Sind who accompanied the *iṣṭiyām* (إِسْتِيَام) plur. أَشَاتِمَة,

in al-Mukaddasī, ed. de Goeje², p. 10, 17); the origin of this word is unknown; it means the leader of the marines in the warships"; then, according to another source, "the Sayābiga are people of Sind who in al-Baṣra were police officers and prison warders". Ibn al-Sikkī (d. 857) quoted in the *Lisān al-'Arab* (iii. 118—119) gives identical information: "The Sayābiga are a people of Sind who were hired to fight as mercenaries and they formed the guard". Similar explanations are given in the *Taḍī al-'Arūs* (ii. 56).

From all these sources which are in perfect agreement it is evident that the Sayābiga were naturally soldiers, disciplined, used to the sea, faithful servants, which qualities rendered them most suitable to serve in the army by land or sea, to act as guards and to act as soldiers, police officers, goalers and warders of the treasury.

All the readings of the manuscripts of the Arab texts quoted above bring us to *Sayābiga* which is the correct form (cf. likewise Mubarrad, *Kāmil*, ed. W. Wright, Leipzig 1864, p. 41, 3, and 82, 17). It is the form which Sibawaih gives (ed. H. Derenbourg, ii. 209, 5-6), and he adds "they say *Sayābiga* because this word combines the two peculiarities of being a foreign word and plural of an

ethnic in *ي*, being practically equal to a plural *saibagiyūn*". According to al-Djāwālīkī (*loc. cit.*), the singular is *saibagi*. Now de Goeje points out (*loc. cit.*, p. 88) that the people of the 'Irāk pronounce the vowel *ā* as *e* and this phenomenon is not isolated in Arabic dialects; my friend William Marçais calls my attention to its occurrence in Tunisian. This enables us to state the following equation: سَيَابِجَة *Sayābiga* < singular سَيَابِجِي

Saibagi = سَابِجِي *Sābagi* < سَابِج *Sābag*. The *Lisān al-ʿArab* (*loc. cit.*), on the other hand, notes that "sometimes they say *Sābag*".

The original form of *Sābag* was pointed out to de Goeje by Hendrik Kern. It is now easy to reconstruct its phonetic history from documents which were not available to the latter. The change *Sābag* < *Djāvaka* = Sumatra, the زَابِج *Zābag* (inaccurately transcribed *Zābedj*) of the Arab geographers, is thus proved: the earliest mention of the island of Sumatra by this name is found in the third century A.D. in the *Nan t'ou yí wu t'ou* of Wan Čen and the *Fu-nan t'u su čuan* of K'ān Tai in the form 社薄 *Shō-po*, old pronunciation **Dja-bak* = *Djāvaka* > Arabic *Zābag*. Much later we find in the *Mahāvamśa* (lxxxiii. 36-48, and lxxviii. 62-75) the original form *Jāvaka* (pronounce *Djāvaka*; for these texts cf. my memoir *L'empire sumatranais de Śrīvijaya*, in the *J. A.*, Series 9, vol. xx. 170-173). In the xiiith century a Tamil inscription of 1264 has *Shāvaka* (*ibid.*, 1922, p. 48), which is the Dravidian form of the above readings. The initial is rendered in Tamil by a character which is transliterated indifferently *ḍj*, *ḍ*, *śh*, and even *s*, i. e. the sonant and mute palatals and the palatal and dental sibilants; it is the palatal that is generally used to transliterate it; whence *ḍjā* > *śhā*. The change of Indian *śh* to *s* — palatal to dental sibilant, in the present case of *Shāvaka* to the Arabic *Sābag* — is quite regular. We have a parallel example in the Sanskrit शक *śhaka* "teak" (*Tectona grandis*) which becomes in Arabic ساج *sāj*, more frequently inaccurately transcribed *sādj*.

The *Sayābiga* then are the descendants of ancient Sumatran emigrants to India, then to the 'Irāk and the Persian Gulf where there is evidence of their existence before Islām. This is not surprising for we know from other sources also that the Sumatrans colonised Madagascar at a very early date (see the art. ZĀBAG); the eastern route was familiar to them. (GABRIEL FERRAND)

SKUTARI. [See ŪSKŪDĀR].

SEBASTIYA. 1) The Arabic name for the ancient Samaria, which Herod had changed to Σεβαστή in honour of Augustus. The form Σεβάστεια — as in the case of other towns of this name — was presumably also used, as the

Arabic name (which is sometimes also written Sabastīya) suggests. By the end of the classical period, the town, overshadowed by the neighbouring Neapolis (Sichem; Arab: Nābulus), had sunk to be a small town (πολίχμιον) and played only an unimportant part in the Arab period. It was conquered by 'Amr b. al-ʿĀṣ while Abū Bakr was still Caliph; the inhabitants were guaranteed their lives and property on condition that they paid poll-tax and land-duties (al-Balāḍhūrī, ed. de Goeje, p. 138; Ibn al-Athīr, *al-Kāmil*, ii. 388). Al-Battānī is the first of the Arab geographers to mention it, but gives already much less accurate figures for its position than Ptolemy had done. In the later Arab geographers Sebastīya appears on a place in the Djund Filastīn. According to a tradition found as early as Jerome, for example, the tomb of John the Baptist was there (Ibn al-Athīr, *loc. cit.*: Yahyā b. Zakariyā; xi. 333 wrongly only Zakariyā); on its site there was in late antiquity a basilica built and in the crusading period (in the second half of the xiith century) a church of St. John; remains of the latter still survive. According to western sources, Sebastīya was again a bishopric at this time (Lequien, *Oriens Christ.*, iii. 650 sqq.). Usāma b. Munqidh, about 1140, visited the town and its sanctuary. Šalāḥ al-Dīn advanced on Sebastīya in 1184 but its bishop by handing over 80 Muslim prisoners saved the town from the terrible fate of Nābulus (Ibn al-Athīr, *op. cit.*, xi. 333; Abu 'l-Fidā, *Annales*, in the *Recueil des hist. orient. des croisades*, i. 53; Šhaddād, *ibid.*, iii. 82; *Epistola Balduini*, in Rönricht, *Regesta regni Hierosol.*, No. 638). In the year 1187 it was finally taken from the Crusaders by Ḥussām al-Dīn 'Umar b. Lādīn; the church of St. John was turned into a mosque and the bishop brought to 'Akkā (Ibn al-Athīr, *op. cit.*, xi. 357).

A. v. 103, vi. 79, vii. 329; Yāqūt, *Muḍjam*, ed. Wüstenfeld, iii. 33; Derenbourg, *Vie d'Ousāma*, p. 188 sq., 486; Arabic text, p. 528, 617; Cuinet, *La Syrie*, p. 192; Thomsen, *Loca Sancta*, i. 102; Schürer, *Gesch. d. jüd. Volkes im Zeitalter Christi*, ii. 4 195-198; R. Hartmann, *Palästina unter den Arabern (Das Land der Bibel, i./iv.)*, p. 14; Baedeker, *Palästina u. Syrien*, 1904, p. 195. On the results of the American excavations, which, however, only affect the pre-Arab period, see: G. A. Reisner, C. S. Fisher, D. G. Lyon, *Harvard Excavations at Samaria 1908-1910*, i. (text), ii. (plans and plates), Cambridge (Mass.), Harvard Semitic Series 1924. 2) A place in the Thughūr al-Šhāmīya, according to Ibn Khurdādhbih (*B. G. A.*, vi. 117), on the Cilician coast, 4 *mil* from an otherwise unknown Iskandariya, which again was 12 *mil* from Ḳurāsiya (Κοράσιον). It is the ancient Ἐλευθερα or Σεβαστή, the modern Ayash.

Bibliography: Pauly-Wissowa, *Realensykl.*, v. 2228, s. v. Elaiussa; ii A. 952, s. v. Sebaste No. 5; Tomaschek, *S. B. Ak. Wien*, 1891, Abh. viii. 65; E. Herzfeld, *Peterm. geogr. Mitteil.*, 1909, lv. 29, col. 2.

3) A town in Asia Minor, which was taken by al-ʿAbbās b. al-Walid in 93 (711/712) along with al-Marzubānain and Tūs (? should we not read Tarsūs!) whose situation is unknown. In some manuscripts

of al-Ṭabarī and Abu 'l-Mahāsīn the name is wrongly written Samastīya (or something like that) which can hardly, as Brooke suggests, stand for the Byzantine *Mirbeia* in Phrygia. The reference is rather to the Phrygian Σεβαστή (Pauly-Wissowa, *Realencykl.*, ii A. 951, No. 1).

Bibliography: Ibn al-Aḥir, *al-Kāmil*, iv. 457; al-Ṭabarī, ed. de Goeje, ii. 1236, with note b.; Abu 'l-Mahāsīn, i. 251; Brooks, *Journ. of Hellenic Studies*, 1898, xviii. 193.

4) A town of this name said to be not far from Sumaisāt on the Upper Frāt is mentioned by Yāqūt, *op. cit.*, iii. 33. It might be Juliopolis in Cappadocia (Ptol., v. 6. 25, p. 893, ed. Müller) which was presumably called after Augustus and perhaps may have also been called Sebasteia; but perhaps we should rather assume there has been some confusion with Siwās on the Upper Nahr Alis (Halyas).

(HONIGMANN)

SEBKHA, a salt lagoon. The sebkha is one of the characteristic features of the hydrography of North Africa and the Sahara, very common in the high plains, without communication with the sea. It is the terminus of a network of streams either above ground or subterranean, which have spread out and disappear in the ground; it is a shallow basin with well marked contours sometimes delineated by steep sides. After rain it is more or less completely filled with water impregnated with mineral substances which accumulate at the bottom of the basin. In periods of drought, the waters evaporate completely or partly and the floor is uncovered. The floor of the sebkha is covered with saline incrustations, sometimes traversed by crevasses in which the crystals gather. The salt deposit sometimes covers mud, quicksands and dangerous quagmires.

This definition and description of the features of the sebkha apply equally to the *shott*. An attempt has been made to establish a distinction between the two, the former term being applied to hollows which always remain more or less moist, the second to those whose evaporation is greater than the access of subterranean water or to those the floor of which looks like a plain losing itself in the horizon. There is no real foundation for this distinction. The two terms are employed indifferently in the same district. For example we have in Orania the sebkha of Oran and the *shott* Gharliu and Sharki, in the Sahara the sebkha of Timimūn (Gurara), the *shott* of Southern Tunisia, the sebkha of Wargla, of Siwa, etc.

(G. YVER)

SEBZEWĀR, near Herāt, is the present name of the town of Asfizār or Asfuzār (Aḥmad Rāzi, *Haft Iklim*: Sebzar) attached to Sijjistān. It lies to the south of Herāt, three days' journey north of Fara. In the itineraries it has the name of Khastān or Džāshān. In the ivth (xth) century there were in this region four towns of importance besides Asfizār, which was the chief place of this district; a town of medium size, surrounded by orchards and vineyards; its inhabitants were Sunnis of the school of al-Shāfi'ī [q. v.]. There used to be a stone fortress called Muẓaffar Kūh on the summit of a mountain; the soil inside and around the town was so soft that it was sufficient to dig down a few inches to get water. According to al-Iṣṭakhri, *B. G. A.*, i. 264, it was the name of the district and not of the town.

(CL. HUART)

SEBZEWĀR is a city of Khurāsān, situated sixty-four miles due west of Nishāpūr, and should not be confounded with the town of the same name in Western Afghānistān, south of Herāt; see the preceding article. Many legends of the heroic age of Persia are associated with Sebzewār, and the square in the centre of the town was long pointed out as the scene of the combat between Rustam and Suhrāb and was known as *Maidān-i Div-i Safīd*, "the plain of the White Demon". Sebzewār was a town of some importance in the district of Baihaq [q. v.] and eventually took the place of Baihaq as the principal town of the district. Sulṭān Shāh, after having been expelled from Khwārizm by his elder brother Takash, took Khurāsān as his share of his father's kingdom, and in 1186 besieged and captured Sebzewār, and was with difficulty restrained from ordering a massacre of its inhabitants, who had defied him with abusive language to take their town. The town was destroyed by the invading hordes of the Mongols, but recovered its prosperity, and in 1337 'Abd al-Razzāk, a native of the village of Bashtn who had been in the service of the Il Khān Abū Sa'īd (1316—1335) of Persia, headed a rebellion against the tyranny of the local governor, gained possession of Sebzewār and the neighbouring district and founded the dynasty of the Serbadārs, [q. v.] who reigned there for nearly half a century, until they were overthrown, in 1381, by Timūr. Maḥmūd, the heir male of the house, was enabled by the favour of Timūr's grandson, Bāysunkur, to retain some part of the heritage of his ancestors. The town, which fell into decay, was restored by the early Ṣafawid kings and became the capital of a district containing forty townships. It has ever since remained an important town of Khurāsān. The inhabitants have been noted for centuries for their attachment to the Shī'a, and Husain Wā'iz, author of the *Anwār-i Suhaili*, whose zeal for that sect was suspected, narrowly escaped death at the hands of the fanatics of the town.

(T. W. HAIG)

SEDJESTĀN. [See SĪSTĀN.]

SE'ERD, SĪ'IRD or SA'IRD, a little town in the frontier region between Armenia and Turkish Kurdistan, situated in a valley formed by the Bohtān Şu and the river of Bidlis about 30 miles S.W. of Bidlis and about 18 north of the Tigris. The little river Kezer runs near Se'erd; but it is the Bohtān Şu which is sometimes called Se'erd Şu (Sö'örd Su in von Moltke). This name is also found in al-Mas'ūdī, the earliest Arab geographer to mention Se'erd; he calls the Bohtān Şu نهر سريط

(ed. Paris 1840, i. 227); likewise al-Idrīsī (transl. Jaubert, ii. 172). The orthography varies much:

أسعد (al-Isṭakhri, Ibn al-Aṭhīr, Sharaf al-Dīn), ساعر (Abu 'l-Fidā', Yāqūt), ساعر (al-Mustawfī),

سعد (Hādjđī Khalifa). The last form is the official Turkish orthography (cf. *Ḳāmūs al-A'lām*). The Syriac form is Se'erd (Z. D. M. G., viii. 357, note) and the Kurd form is Sert (al-Khālidi, *al-Hadiya al-Hamidiya fi 'l-Lughat al-Kurdiya*, Constantinople 1310, p. 144). The origin of the town is unknown; the suggestion put forward by the travellers Shiel and Kinneir that it is the ancient Tigranocerta has already been disposed of by Ainsworth and Ritter, who rely particularly on the complete absence of traces of ancient buildings and on the description of Lucullus's campaign against Tigranes given by Plutarch. Moreover, C. F. Lehmann-Haupt in 1899 has identified the site of Tigranocerta with the modern Maiyāfāriqn.

Se'erd, a town with only slight fortifications (al-Isṭakhri; the *Sheref-nāme* alone calls it *ka'ra*), has generally shared the political history of Diyār Bakr and Ḥiṣn Kaifa. Thus in the xth century it was in the hands of the Marwānids (Ibn al-Aṭhīr, ix. 56); in the century following it passed to the Urtuqids of Ḥiṣn Kaifa and was taken by 'Imād al-Dīn al-Zangi in 538 (1143/44; cf. Ibn al-Aṭhīr, x. 62). The Mongols sacked it after the defeat of Djalāl al-Dīn Khwārizm-Shāh (Ibn al-Aṭhīr, xii. 326) but it seems to have quickly recovered, for al-Mustawfī calls it a large town with rich revenues. After experiencing the rule of the Il-Khāns [q.v.] and the Aq-Koyunlu [q.v.] Se'erd about 1500 passed to the Ṣafawids. During the xivth and xvth centuries the town had belonged to the little Kurd dynasty of the Malikān of Ḥiṣn Kaifa (descendants of the Aiyūbids). After the battle of Cāldfrān (1513) their prince, Malik Khālil, who had been thrown into prison by Shāh Ismā'il, escaped and again took possession of Se'erd and then of his old residence (*Sheref-nāme*, i. 157). This dynasty continued to exist for some time under the suzerainty of the Ottomans represented by the wālī of Diyār Bakr. In the new administrative territorial division established by Idris Bidlisī, Se'erd became the capital of a sandjak. The town continued to belong to the eyālet, then to the wilāyet of Diyār Bakr down to 1301 (1884). The sandjak of Se'erd was then attached to the wilāyet of Bidlis.

The number of inhabitants is given by Cuinet (1892) as 15,000 of whom the majority are Muslim Kurds (5 mosques). In the Christian element (c. 4,000) the Catholic, Syrians (Chaldaeans) are the most numerous (two churches), along with Gregorian Armenians (one church), Protestants and Jacobites (one church). The number of Christian inhabitants, however, must have considerably diminished by the deportations during and after the war of 1914—1918.

Se'erd has been built in the Arab style (Lehmann-Haupt); the houses are of clay and the town is noted for its lack of cleanliness. Water is scarce there and comes from several springs. On the hills around, the principal crop is grapes; the other products of Se'erd are cereals, rice and vegetables. Its trade is with Diyār Bakr. The town has been famous since the xivth century for its manufactures of weapons and copper utensils. Other

industries are cabinet-making and the manufacture of cotton stuffs, dyed red. On the only inscription known at Se'erd see van Berchem in the *Abh. G. W. Gott.*, Ph.-hist. Kl., N.S., ix³. 157.

The sandjak of Se'erd has 5 *kāzas* of which that of Eruh (Arwah) is in Bohtān [q.v.].

SEFID KOH (SAFID KŪH), "the White Mountain", is the name given to the most prominent mountain range of Northern Afghānistān, extending from a point situated in 34° N. Lat. and 69° 30' E. Long., near which rises its highest point, Sikārām, 15,620 feet above the sea, to the neighbourhood of Ātak on the Indus (33° 15' N. Lat. and 72° 10' E. Long. approximately), and separating the valley of the Kābul river from the Kurram Valley and Afridi Tirāh between these two points; but the range is continued in a mass of uplands running in a south-westerly direction and known as the Psein Dāg and Toba as far as a point situated, approximately, in 31° 15' N. Lat. and 67° E. Long. This latter range forms the watershed of Southern Afghānistān and a natural barrier between that country and India. In the northern and eastern spurs of the Sefid Koh proper are the Khaibar Pass [q.v.] between Peshawār and Djalālābād, and the formidable passes between Djalālābād and Kābul in which British and Indian troops suffered so severely in the campaign of 1841—1842. Through the passes of these ranges have streamed from the dawn of history the numerous hosts by which India has from time to time been invaded, and some of the invaders in historical times have left brief descriptions of those parts of the ranges which they traversed. The northern spurs are barren, but the upper slopes are wooded with pines, *deodars*, and other trees, and many of the southern spurs with pines and wild olives. Its valleys are a combination of orchard, field and garden, abounding in fruit-trees, and the banks of their streams are edged with turf and wild flowers and fringed with willows.

(T. W. HAIG)

SEFID RŪD. [See KIZIL UZEN].

SEGBÂN (P., "dog-keeper, whipper-in"), popularly SEYMEN, the third division of the corps of Janissaries forming 34 companies (*orta*); the 33rd was in garrison in Constantinople. It was created in the reign of Bāyazid I at the same time as the *saghardıji* (keepers of blood-hounds), the *samsūndji* (keepers of bulldogs) etc. who later formed the 64th and 71st *orta* of the *djemā'at*. Some of

these companies had special names of their own: the 18th was called *kātibi-segbānān*, the 20th *kekkhudāi-segbānān*, the 33rd *awdjī*, "huntsmen" (chasseurs), the captain of whom was called *ser-shikārī*, "chief huntsman". Their barracks, like those of the other Janissaries, were destroyed in the conflagration of Muḥarram 4, 1105 (Sept. 5, 1693), in the reign of Sulṭān Aḥmed II; rebuilt five years later, they were again destroyed in the reign of Maḥmūd I.

Segbān-bāshī? was at first the title of the general commanding this division; when it was placed under the authority of the *agha* of the Janissaries, his position became a sinecure. In case of mobilisation, however, he acted as *kā'im-makām* (lieutenant) to the *agha*, lived in the capital and commanded the Janissaries of the garrison there.

Segbānān-suwārī "Cavalry of the Seimen" was the name given to the 65th *orta* of the *ijemā'āt*.

SEGESTAN. [See SĪSTĀN.]

SEGOVIA, in Arabic *Shakūbiya*, an important and ancient town in Spain, now the capital of the province of the same name, situated in Old Castile, 60 miles N.W. of Madrid, 3,300 feet above sea-level, on an isolated rock near one of the last spurs of the Sierra de Guadarrama. This town is famous for its Rōman (aqueduct) and Christian (alcazar) remains and was only under Muslim rule for a short time. It was recaptured in 140 (757/758) by Alfonso I of Castile or his son Fruela I at the same time as Zamora, Salamanca and Avila. It was, like those towns, recaptured but only for a very brief period by al-Ḥādīb al-Manṣūr b. Abī 'Amir in the second half of the tenth century.

Bibliography: Ibn al-Aṭhīr, *Kāmil*, ed. Tornberg, v. 382; transl. Fagnan, *Annales du Maghreb et de l'Espagne*, p. 104; Ibn Khaldūn, *Kitāb al-'Ibar*, ed. Būlāḳ, iv. 122; al-Maḳkārī, *Analektes*, i. 213; E. Fagnan, *Extraits inédits relatifs au Maghreb*, Algiers 1924, p. 120.

(E. LÉVI-PROVENÇAL)

SEGU, now capital of a district in the French Sūdān. Segū is a little town with 6,500 inhabitants lying on the right bank of the Niger about 150 miles below Bamako and consisting of four groups of buildings, of which Sikoro is the principal.

This place was the capital of a Bambara state founded by a chief of the Kulubālī family, who was at first more or less a vassal of the Mandingo empire or empire of Mali. Towards 1670 king Biton Kulubālī liberated Segū from Mandingo suzerainty and made it very powerful with the help of a kind of standing army of regular soldiers which he had formed of slaves belonging to the state called in Bambara *tan-dyon*. In his reign the Bambara of Segū, although pagans, subjected the Fulba kingdom of Māsina, in which the majority of the inhabitants were Muslims, and the completely Muḥammadan town of Timbuctu, which was nominally governed by a pasha who claimed to be Moroccan. It is even said that Biton having offered an asylum to a holy man of Sūs, an enemy of the Ḥassanid Sulṭān al-Raḥīd, sent troops against the

ruler of Fās who had come to seek the fugitive and that al-Raḥīd having encountered the Bambara army south of Timbuctu took his way back to Morocco without daring to risk a battle.

On the death of Biton in 1710, however, the *tan-dyon* took advantage of their power to make and unmake kings and ended by overthrowing the Kulubālī dynasty and seizing the power. But the period of their domination was one of anarchy which was ended towards 1750 by a popular rising. A certain Ngolo or Molo belonging to the Bambara family of Dyāra had himself proclaimed king and founded a new dynasty, which reigned from 1754 to 1861 and was noted mainly for its wars with the other Bambara kingdom, that of Kaarta, located farther to the west.

In 1860 the conquering Tuculor al-Ḥādīdj 'Umar, a native of Fūta in Senegal who had been lord of Nyōro, capital of Kaarta, since 1854, marched against Ali Dyāra, king of Segū. The Bambara were supported in their resistance by their neighbours, the Fulba of Māsina, who had, however, been freed from Segū suzerainty in 1810 by the Emir Sēku (Shaiḳhu) Aḥmadu; this alliance of a wholly pagan state with a kingdom which had become Muslim against a conqueror himself a Muslim, who justified his expedition against Segū by calling it a holy war, is one of the most curious features in the religious history of the Sūdān; Aḥmadu-Aḥmadu, then Emir of Māsina, explained the motives of his conduct in a series of letters addressed to al-Ḥādīdj 'Umar which have been preserved. However, after a stubborn resistance by the defenders, al-Ḥādīdj 'Umar took Segū in 1861 and Hamdallāhi, capital of Māsina, in 1862, captured the two kings Ali Dyāra and Aḥmadu-Aḥmadu and put them to death. The Bambara and the defeated Fulba kept up the resistance for a long time in a guerilla war, in the course of which al-Ḥādīdj 'Umar died (1864). He left several sons, nephews, and favourites who divided the lands he had conquered amongst themselves, not without quarrelling. His eldest son, Aḥmadu Tal, whom he had installed in Segū as his lieutenant, lived there from 1862 to 1884 exercising a tyrannical sway over the people without successfully enforcing Islām on the Bambara or preventing the survivors of the Dyāra dynasty, aided by their Fulba allies, from harassing his troops continually, and even threatening him up to the walls of his capital. The naval Lieutenant Mage, sent with Dr. Quintin on a mission to Aḥmadu Tal by the French authorities in Senegal, was kept for two years at Segū by this despot (1864—1866) and was able to take exact stock of the situation. In 1884 no longer feeling his life safe in Segū where he was detested even by the Tuculors, Aḥmadu Tal handed the government over to his son Madani and established himself in Nyōro.

In 1888, the French government resolved to put an end to a state of affairs which was paralysing the development of the country and found expression in continual massacres and the reduction to slavery of a great part of the population. An expedition was organised under the command of Colonel Archinard who took Segū on April 6, 1890, and Nyōro on Jan. 1, 1891. Madani had fled to Mopti and Aḥmadu Tal to Bandyagara, in Māsina. General Archinard took Mopti and Bandyagara in April, 1893. Aḥmadu Tal once more escaped; accompanied by a few followers he fled

along the bend of the Niger and sought refuge with his compatriot, the Sultān of Sokoto and died in his country in 1898.

After an attempt to restore the ancient Bambara kingdom of Sēgu, at first under the government of Māri Dyāra, then of a certain Bodyan Kulubāli, an attempt which was not successful, the French in March, 1893, decided simply to annex the town of Sēgu and its lands to the new colony of French Sadān.

A few Tuculors who came with al-Ḥādjī 'Umar or in the time of his son Aḥmadu have remained in Sēgu; they all profess Islām and follow the Tidjāniya order, of which al-Ḥādjī 'Umar was *Muḥaddim*. The bulk of the population which consists of Bambara has remained attached to animism.

(M. DELAFOSSE)

SEHİ ÇELEBI, an Ottoman poet and biographer of poets. He belonged to Adrianople, in his youth received his education from and was on intimate terms with his fellow-townsmen and later father-in-law, the celebrated poet Nedjātī Nūḥ Bey (d. March 17, 1509; q. v.), became *Kiātib* (secretary) to Prince Mehmed, the youngest son of Sultān Bāyazīd II, and accompanied the latter to Kaffa where he was governor (*sandjaq-beyi*) (Leunclavius, *Hist. Musulman.*, col. 659, 44). When the prince died in 910 (1504/1505) Sehī went to Stambul and obtained an appointment as secretary in the *Dīwān* (*dīwān kiātibī*) there. Later he returned to his native town of Adrianople, was for a time administrator (*mütevali*) of a *wakf* of a school of tradition there (*Dār ül-Ḥadīth*) and died there in 955 (1548/1549).

Sehī was the author of a collection of poems (*dīwān*) and of a collection of biographies of poets with an anthology (*tedhkiye*) which contained notices of 261 metrists and poets and was entitled *Hesht Bihişt* ("Eight Paradises"). The work is expressly planned on Persian models (*Djāmī*, Dewlet-shāh and Mir 'Alī Shīr Newā'ī) and classified under eight heads (*tabaḳāt*).

Apart from the *Kenz ül-Küberā* of Sheikh-Oghlū (xvth century, very scarce, so far only known in one MS.), Sehī's biographical collection is the oldest work of this kind in Turkish. Of particular value are the notices of the Ottoman poets with whom Sehī was personally acquainted from his youth upwards or later, and of contemporary poets in general. The work was published in 1325 (1907) in Stambul (8^{vo}, 144 pp.) by Mehmed Shükr and has an appendix by Faṭīk Reshād. Sehī's *Dīwān*, of which specimens are given in the Turkish anthologies, is of little importance.

SELÂNİK, the town of Salonika in Macedonia, situated at the foot of the Gulf of Salonika, to the east of the mouth of the Wardar and at the foot of a hill which commands it on the north-east. It is the ancient Greek town of *Θεσσαλονίκη*, founded on the site of Therma by Cassander, who gave the new city the name of his wife, the sister of Alexander the Great (Strabo, VII, vii. 4). Towards the eleventh century, the popular form *Σαλονίκιον* appears (*Chronicle of the Morea*) on which is based the form Šalūnik or Šalūnik in al-Idrīsī, the Bulgarian form Solun, the western form Salonika and finally the Turkish name Selānik.

Salonika, situated on the Via Egnatia (from Durazzo to Byzantium) and having a large and safe harbour, was from ancient times an important commercial city. It was still so under the Byzantine empire and in those days included considerable European colonies, especially Venetians. From the tenth century onwards, it received its share of commerce with Muslim lands; once, in 904, it was sacked by a Saracen fleet from Tripolis in Syria led by a Byzantine renegade; twenty-two thousand inhabitants are said to have been carried off into slavery (description by John Comeniata, *De Excidio Thessalonices*, Bonn ed., in *Script. post Theoph.*, p. 487 sq.). The town is, however, hardly mentioned by the Arab geographers; only al-Idrīsī notes it. His patrons, the Norman princes of Sicily, had dealings with the Byzantine empire. In 1185 William II of Sicily undertook an expedition against the empire at the instigation of Latins and Greeks who had sought refuge with him after the troubles provoked by the usurper Andronicus. The Normans took Salonika on August 24, 1185. Under the Latin Empire the town was the capital of the kingdom of Salonika under the Marquises of Montferrat; during this period it had to undergo a siege by the Bulgarians, the allies of the pretender Kalo-Johannes (who was killed there, according to the legend, by the lance of St. Demetrius, the patron of the city). At the end of the thirteenth century, Salonika was finally restored to the empire of the Palaeologi, then reduced to Macedonia, Thrace and the western coast of Asia Minor. The Serbian conquests still further diminished this territory, so that in the time of Cantacuzenos (1347—1355) Salonika with the western part of the peninsula of Chalcidice was only connected with Constantinople by sea. Soon the Ottoman Turks, under Murād I, began to take the place of the Serbs by their conquests in Europe. It seems that the environs of Salonika were ravaged for the first time by Lala Shāhūr in 787 (1385) after the conquest of Serres and Ḳaraferiya. These lands were thereafter settled by nomads from the sandjaḳ of Şarukhān (Anonymus, ed. Giese). The town was soon after taken by Khair al-Dīn Pasha, but restored again to the Emperor Manuel (Ḥādjī Khālifa, *Taḳwīm*). Bāyazīd I retook it in 796 (1394) after having defeated the allied Christian fleets (Sa'd al-Dīn). The statements of the Turkish chroniclers and the Byzantine historians on these early conquests are by no means clear and often contradictory (cf. von Hammer, *Gesch. d. osm. Reiches*). Sulaimān, son of Bāyazīd, concluded an alliance with

the Emperor by the terms of which Salonika and a number of other towns on the coast were given back to the latter (1403). After the death of Sulaimân, his brother Mūsā (1410—1413) laid siege to Salonika, without being able to take it. Muḥammad I also, after setting out from Serres to attack the city, had to abandon his plan as a result of the rebellion of Shaikh Badr al-Dīn. Towards the end of his reign the pretender Dözme Muṣṭafā, coming from Wallachia, was defeated near Salonika and found refuge within its walls. It was from here that Muṣṭafā began his conquests after the death of Muḥammad I (1421). Muṣṭafā being beaten, Murād II turned his attention to the Greek empire and attacked Salonika in 1423, after a fruitless siege of Constantinople. But Andronikos Palaeologos, son of Manuel, governor of the town, thereupon invited the Venetians to take possession of it and sold it to them for fifty thousand ducats (Salonika at this time had forty thousand inhabitants). This act made the Turks withdraw for the time. Murād even recognised the sale in 1427, when a kind of capitulation was concluded between him and Venice by which the Turks were allowed to have a *kādi* in the town. Three years later Murād laid siege to Salonika for a second time; the Turkish sources say he did this because of acts of piracy committed by Venetian ships on Muslims. The town fell after a siege of forty or fifty days in March, 1430 (the 29th according to Anagnosta and the 13th according to Venetian sources; the Turks only give the year 833, or — wrongly — 832). The capture was accompanied by looting and a general massacre which Murād had promised his soldiers; it has been chronicled by Johannes Anagnosta: *De extremo Thessalonicensi excidio narratio* (Bonn 1838). A Turkish fleet from Gallipoli had shared in the attack on the town. Venice was quick to recognise Turkish rule over Salonika and obtained in return freedom of trade for Venetian merchants in the Sultān's lands.

A great part of the population had been in favour of the Turks in order to escape the terror of the Frank soldiery. The conqueror, moreover, after the looting showed himself conciliatory. For the moment only one church, that of the Virgin, was converted into a mosque (known as the Eski Djum'a). The Monastery of St. John Prodromos seems to have become a mosque during one of the earlier Turkish occupations. In the centuries that followed, the majority of the great churches were destined to be converted for Muslim usage. The conquerors also demolished a number of churches to get materials for other buildings. Murād, for example, in 1430 built a bath in the centre of the town. To give the town a Muslim population, colonists from Yenidje Wardar were transplanted thither. Although the number of Turks increased, Salonika has never had a majority of Turks in its population.

The town was not long in again becoming an important commercial centre. The immigration in the reign of Bāyazīd II of a large number of Sefardim Jews and Maranos, expelled from Spain, Portugal and Italy, contributed largely to its commercial revival. There had previously been Jews in Salonika (Benjamin of Tudela reckoned five hundred in 1170), but after the immigration of the fifteenth century the Jewish element became the feature of the town. The Jews also brought thither their Spanish language, Ladino, which they

have kept down to modern times (Lamouche, *Quelques mots sur le dialecte espagnol parlé par les israélites de Salonique*, in *Roman. Forschungen*, vol. xxiii.) and their religious and scholarly tradition (from 1515 they had their printing press). Under the benevolent rule of the Turks, Salonika became in the sixteenth century "the mother of Judaism". Their number was then put at twenty thousand; the cloth which they manufactured was sold throughout Turkey (Dernschwam, *Tagebuch*, ed. Babinger, 1923, p. 107). Towards the end of the seventeenth century, there was formed among them the sect of the followers of Shabbetai Zabi, the Crypto-Jews or Dönmes [q. v.], which had such a great cultural influence on the development of modern Turkey since the Young Turk revolution.

For the Ottoman empire, the possession of Salonika was a source of great revenue, especially from trade with the commercial nations of Europe, who by their capitulations obtained the right to have consulates there. The harbour has never been a naval port; it was only exceptionally visited by the Ottoman fleets (e. g. in 1715 in the war with Venice; cf. Rāshid, *Tārīkhī*, iv. 51). Administratively Salonika has been since the Turkish conquest capital of an eyālet which has at times included Serres and Drama. In the judicial hierarchy the Selānik Mollasā was one of the eight mollas of the sixth rank or *makkredj mollalar* (d'Ohsson, *Tabl. de l'emp. Oth.*, ii. 271). The Turks, however, never built great mosques there as the Greek churches were sufficient. The Mewlewī-Khāne to the north-west of the town is one of their best known religious buildings. A large part of the town consists of *wakf* properties founded by Qhāzī Ewrenos.

With the decline of the Turkish empire in the nineteenth century, Salonika became more exposed to enemy attacks and foreign influences. For example, in April, 1807, the English fleet attempted a landing there after the failure of the expedition against Constantinople (Zinkeisen, vii. 454). In the second half of the century the Macedonian troubles began and Salonika became the theatre of the nationalist intrigues of the Slav elements, while at the same time it was the centre of the Turkish opposition. The administrative reform of 1864 had created the wilāyet of Salonika, which, after extending as far as Elbasān and Üsküb, had been afterwards considerably reduced and in the end comprised only the sandjaks of Salonika, Drama and Serres with a population in which Bulgarians were in the majority. The assassination in 1876 of the French and German consuls brought about European intervention in favour of the Slavs in Turkey (Conference of Constantinople). In 1902 Salonika became the residence of Hilmī Paṣha, who had been appointed inspector of reforms in Macedonia, assisted from 1903 by a Russian civilian agent and an Austrian representative. The town, as the result of European control, became less subject to the direct influence of Constantinople and thus became a hotbed on Turkish soil of Young Turk propaganda, directed from Paris against 'Abd al-Ḥamid; from the beginning of the twentieth century the Committee of Union and Progress (*Ittihad u Terraḳkī*) held its meetings here in the Italian Masonic Lodge; the constitutional movement among the garrisons of Macedonia had its centre here; besides Turks, the Committee had Jewish members. In the night of 22—23 July,

1908, the constitution was proclaimed in Salonika, followed by the first revolution in Constantinople. The central section of the Committee had remained in Salonika and organised in 1909 the suppression of the counter-revolutionary movement, which broke out in Constantinople on April 13. Maḥmūd Shewket Pasha organised in Constantinople the constitutional troops, who entered the capital on April 24. 'Abd al-Ḥamīd, deposed on April 27, was sent to Salonika, where he remained till the Balkan War. The beginnings of the constitutional régime bear the stamp of its origin in a milieu where the Turkish element was in a minority, in as much as the Young Turks began by proclaiming the equality of all races being under the Sultān's rule.

Turkey lost Salonika in the Balkan War. The Greek army, commanded by the Crown Prince, crossed the Wardar after the battle of Yanitza and surrounded Salonika on November 8, 1912. On the same day General Ḥasan Taḥsin Pasha surrendered the town to the Greeks through the mediation of the neutral consuls. Besides the Greek troops, some Bulgarian battalions also entered it, but by the peace of Athens (November 14, 1913) Salonika, with the greater part of the wilāyet of the same name, was incorporated in Greece. As a result of the Greek occupation not only the Turks but also a great many Jews migrated, especially to Constantinople. The occupation by the allies in November, 1915, with the object of making it a base of operations against Bulgaria, is only of importance for Turkish history in as much as it contributed indirectly to the defeat of the Turks three years later.

On the eve of the Greek conquest, Salonika had about 130,000 inhabitants, of whom 76,000 were Jews and about 30,000 Muslims, the remainder being mainly Greeks and Bulgarians. The commercial development had been greatly furthered in the nineteenth century by the railways connecting it with Nish, Üsküb, Monastir and Constantinople. The new harbour was opened in 1901; ships cannot approach the quay there. The export of the products of almost all Macedonia (especially tobacco) took place through Salonika as well as the import of European goods, which made it compete more and more with Constantinople. As an industrial town, Salonika has very old established manufactures of cloth and carpets (*selânîk keleşî*), to which have been added silk-weaving, glass-bowing and the manufacture of soap and faience.

The town has many old monuments. Of classical buildings there remains practically nothing but the triumphal arch of Galerius. The Byzantine churches are numerous. Besides the Church of the Virgin, already mentioned, the principal are that of St. George, made a mosque in 999 (1590/1591), according to an inscription, and then called Ortadje Djāmi'i; that of St. Sophia, which became a mosque in 993 (1585) as Āyā Sofia, and notably that of St. Demetrius, the patron of the city, in the central part of the town on the Rue Mîdhat Pasha (governor of Salonika in 1873); the date of its erection is uncertain. Under Bayazîd II it was converted into a mosque and given the name of Kāsimiye Djāmi'i (St. Demetrius—Kāsim is a double saint; cf. the art. AL-KĀSIM). Of the Byzantine wall which formerly surrounded the town the southern part no longer exists and is replaced by the great

quay. The hill to the north-east of the town bears an acropolis called Yedi Kule by the Turks. A detailed description of the ancient monuments of Salonika is given in O. Trafali's book, *Topographie de Thessalonique*, Paris 1913.

SELÂNİKÎ, MUŞTAFÂ, Turkish historian. He was born at Salonika (Turkish Selânîk), and lost his father at Salonika in Dhu 'l-Kāda 972 (1565/1566), while he accompanied the Beylerbey of Rumîlî, Shamsî Aḥmad Pasha, as a reader of the Kur'ān (*Tārîkh*, p. 11, line 6 *ab infra*). He held a number of offices which are accurately enumerated in his work. When in 1584 he had been for some time secretary and *diwānîdâr* of the Nishāndjî Mehmed Pasha, he became secretary of the *sîlihîdâr* (*sîlihîdâr kâtîbî*; cf. *Tārîkh*, p. 235: Dhu 'l-Hidjdja 22, 995 = Nov. 23, 1586), then of the *sîpâhîs*; then he was appointed *rûznâmedjî* (diarist) president of the auditoffice of the two holy cities (*haramain muḥāsebedjîsî*) and quarter-master of the court (*muteferriḥa*). In October 1588 he was *mihmāndâr* of the Persian prince Haidar who then resided at Constantinople (*Tārîkh*, p. 261). In Sha'bān, 1003 (1595/96), he was inspector of the soldiers' pay (cf. J. v. Hammer; *G. O. R.*, iv. 244). Finally he possibly held the function of *Anadolu muḥāsebedjîsî* (president of the treasury of Anatolia). The year of his death is not certain. Probably he died soon after 1008 (1599/1600) at Stambul.

His work on history, part of which was printed at Stambul in 1281 (*Tārîkh-i Selânîkî Muştafâ Efendi*, 14 folios, 351 pages octavo), begins with Şafar 971 (1563/64), and ends in 1008 (1599/1600); it comprises the last years of Sulaimān the Great, the reign of Selîm II, Murād III and the first five

years of Mehmed III. Composed in the manner of a diary it is a mirror of the events at which the author was present as an eye-witness. His office in the treasury supplied him with statistic materials. Selânîkî's work is consequently a very valuable source for the years 1563—1599. It is to be regretted that the printed edition (cf. a note at the end, p. 351) is carried on to the year 1001 only (1592/93, because Na'ima [q. v.] begins his work with this year). Complete MSS. are preserved (apart from libraries in the East) at Upsala (cf. Tornberg, *Codices arab., pers. et turc. bibl. reg. univ. upsäl.*, Lund 1849, p. 196 sq., N^o. 284) and at Vienna (Flügel, *Die arab., pers. und türk. Hss. der K. K. Hofbibl.*, ii. 246 sq., N^o. 1030 H. O. 57).

Bibliography: J. v. Hammer, *G. O. R.*, ili. 750; iv. 168, 181, 185^d, 243, 435; Djemâl al-Din, *'Othmanî Târikk we-Mu'errikhleri*, Stambul 1314, p. 36, (not very valuable); Ahmed Keflik, *'Alimler we-San'atkiarlar* (900—1200), Stambul 1924, p. 34 sqq. (FRANZ BARINGER)

SELDJUKS, a Turkish princely family which ruled over wide territories in Central and Nearer Asia from the xith to the xiiith century. The following dynasties are distinguished: 1. The Great Seldjüks; 2. the Seldjüks of the 'Irāk; 3. the Seldjüks of Kirmān; 4. the Seldjüks of Syria and 5. the Seldjüks of Asia Minor (al-Rūm).

Early History of the family. The ancestor of these rulers was Seldjūk b. Duḳāk (Tuḳāk) called Timūryaligh, i.e. "with the iron bow". This Duḳāk was a member of the Ghuzz tribe of Kfñk, which is mentioned in the first place in the list of these tribes in al-Kashgharî, *Diwān Lughāt al-Turk*, i. 56. The following is told of him by Ibn al-Athîr, *al-Kāmil*, ed. Tornberg, ix. 322: "He was leader of the Ghuzz; they had implicit faith in him and they never contradicted him in a speech or neglected a command of his. Then it happened that one day the king of the Turks named Baighū collected his armies and wanted to march against the lands of Islām. Duḳāk spoke against it and after a long discussion the king of the Turks insulted him with coarse words. Duḳāk then gave him a box on the ear and wounded him in the head. When the king's servants surrounded and tried to seize him, he defended himself and fought with them; his people gathered round him and they separated from him (i.e. the king). The dispute between them was afterwards settled and Duḳāk remained with him. A similar story is then told of his son Seldjūk but the end is different: Seldjūk leaves the king with his people, enters the land of Islām and takes up his abode in the vicinity of Djand at the mouth of the Saihūn. According to Marquart, *Osttürkische Dialektstudien*, p. 46, the Turkish title *yabghu* is concealed in Baighū and the reference here is to the supreme chief of the Infidel Ghuzz, who in turn recognised the suzerainty of the Khākān of the Uighurs. It seems to me, however, that the whole story is an invention to explain the settlement of the Kfñk near Djand. Whether this tribe, or at least its chief Seldjūk, already professed Islām at this time is equally uncertain although the story presupposes it; the conversion perhaps only took place after relations had been formed with the Muslim population of Djand. Some Russian scholars have expressed the opinion that the Seldjüks came to

Islām through Christianity and in support of this point to the Biblical names of their sons Mīkā'il, Mūsā, Isrā'il, to a casual remark in al-Kazwīnī (ed. Wüstenfeld, ii. 394) and to the fact of the spread of Christianity among the Turks in Semir-jetye, but tradition makes no mention of it.

Political conditions in Transoxania, where the Sāmānids and the Turkish Kara-Khānids were fighting for the mastery, were favourable to the development of the power of Seldjūk and his Ghuzz. They became involved in this feud and usually they took the side of the Sāmānids, but at the same time took the opportunity to further their own interests. In the meanwhile Seldjūk died in Djand, aged, it is said, 107. His sons above mentioned (some records also mention a fourth, Yūnus) we now find not in Djand, but near Bukhārā in Nūr Bukhārā (now called Nūr Ata, N. E. of Bukhārā; cf. Barthold, *Türkistan* etc., p. 122), about the year 375 (985), as Ḥamd Allāh al-Kazwīnī, *Tārikk-i Guzida*, ed. Browne, p. 434, states. Isrā'il, whose proper name was Arslān, seems to have assumed the leadership among those sons. Sometimes the name is followed by Baighū, which is probably also to be interpreted here as the title *yabghu*; he is mentioned simply by this name in al-Gardīzi, ed. Barthold, p. 13, as the prince of the Ghuzz who in 1003 assisted the Sāmānid general Muntaṣir to victory over the Kara-khānids (cf. Barthold, *Türkistan* etc., p. 283). We next find him mentioned as ally of 'Alī Tegin who had captured the city of Bukhārā. In 416 (1025) Maḥmūd of Ghazna undertook a campaign into Transoxania to overthrow the latter and had a meeting with the Kara-khānid Kādir-Khān, with whom he came to an agreement regarding a common attitude towards the affairs of the district. On this campaign he sought information regarding the strength of the Seldjüks. There is a well known anecdote which tells how Arslān, when he was asked about the question, showed him two arrows and said that 100,000 men would turn out if these two arrows were sent round his people, and if the bow were added, as many as one could wish. This caused Maḥmūd some anxiety; he therefore consulted his Ḥādhib, Arslān Djādhib, as to what should be done regarding these people. The latter proposed that each man's thumb should be cut off so that he could not draw the bow any longer, or, as Ibn al-Athîr adds, that they should all be drowned in the Djaiḥūn. Maḥmūd thought this too inhuman and perhaps also impracticable; he thought it better to let them come across the Djaiḥūn and scatter over wide tracts in Khurāsān so that they would be easily kept in control. He took Arslān back with him to Ghazna and kept him a prisoner in the fortress of Kālandjār in Multan as a hostage for the good behaviour of his people. These measures did not succeed in their aims, however; the Ghuzz proved turbulent in spite of the severe punishment which Tāsh Farrash awarded to them (cf. al-Baiḥaqî, *Tārikk*, ed. Morley, p. 544). Under the leadership of their chiefs Yaghmur, Kīzlî, Buḳa, Koktaş etc. they withdrew from the jurisdiction of their Ghaznawid rulers and began raiding the lands of Islām. Damaghān, Samnān, al-Raiy, Isfahān, Marāgha, Hamadḥān and many other towns in the 'Irāk and Aḥarbaiddān suffered from their incursions. These Ghuzz are always called the 'Irākî Ghuzz by al-Baiḥaqî, who says nothing about Arslān in the part of his history that

has survived to us, and distinguished from the Ghuzz who had remained in Transoxania, to whom he refers as the people of Tughrl-Beg (this is the correct form, according to al-Kashghari, *Divān* etc., p. 400), Dā'ūd and the Niyāliyūn. Tughrl-Beg, Muḥammad and Čaghri-Beg Dā'ūd are the sons of Mikā'il b. Seldjuk, who, according to some records, was early killed in the war with the infidel Turks; as to the Niyāliyūn, these are the people of Ināl or Yināl, a maternal uncle of Tughrl-Beg, so that probably the reading should be Yināliyūn. It is true that this Ināl is mentioned nowhere else but his son Ibrāhīm b. Ināl is well known and at first faithfully supported his two nephews. We hear little of Mūsā, Seldjuk's third son, but his sons also supported Tughrl-Beg.

These Seldjucs lived in security in Nūr Bukhārā as long as 'Alī Tegin lived; as the pastures there were not sufficient for them, they received from Hārūn b. Altüntāsh, the governor of Khwārizm, through the intermediary of the vizier Aḥmad b. Muḥammad b. 'Abd al-Ṣamad Abū Naṣr, later vizier to the Ghaznawid Mas'ūd, permission to dwell in Khwārizm territory in winter. But when 'Alī Tegin had died in 425 (1034) they came into conflict with his sons and successors, and, as Hārūn b. Altüntāsh was murdered soon afterwards and the then ruler of Djand, Shāh Malik, attacked Khwārizm by command of Mas'ūd and put to flight the sons of Altüntāsh who were in open rebellion and with whom they sided, they found themselves forced to seek other lands to live in. They therefore sent a written petition (cf. al-Baihaḳī, *op. cit.*, p. 583) to the governor of Khurāsān, Abū 'l-Faḍl al-Sūrī (al-Suwāri), notorious for his extortions, requesting him to ask Mas'ūd to allot them the districts of Nasā and Farāwa. In this remarkable document Tughrl, Dā'ūd and a third brother Paighū, already call themselves protégés of the Commander of the Faithful. These negotiations, which did not lead to the desired result, and the events that followed can be followed almost from day to day in al-Baihaḳī's narrative, but here we must be brief and refer the reader to the full account by Kazimirski in the preface to his edition of the *Divān* of Minūčihri. In brief, the result was an open war between the Seldjucs and the Ghaznawids. Mas'ūd's generals were repeatedly defeated and finally Mas'ūd himself was routed in the battle of Dandānākān (Ramaḍān, 431 = May, 1040). By the end of 429 (Aug., 1038) the Seldjucs had taken Naisābur, the name of Tughrl-Beg was mentioned in the *khutba* there and an ambassador arrived from the Caliph to complain of the ravages of the 'Irāḳī Ghuzz. The rule of the Great Seldjucs was established.

I. The Great Seldjucs, 1038—1157. TUGHRL-BEG — 1063, ALP ARSLAN — 1072, MALIK-SHĀH — 1092, MAḤMŪD and BARKIYĀRŪK — 1104, MALIK-SHĀH II and MUḤAMMAD — 1117, SANDJAR — 1157.

The history of the individual rulers, with the exception of Maḥmūd and Malik-Shāh II, whose names were only mentioned for a brief period in the *khutba*, is dealt with in separate articles; here a few general observations will suffice. As regards the expansion of the Seldjuk empire, the majority of the Muslim rulers of the eastern and central provinces of the lands once ruled by the Caliphs submitted to Tughrl-Beg, either voluntarily or under compulsion. The rulers of Djurdjān and Ṭabaristān

had done this by 433 (1041/42); in 434 (1042/43) Khwārizm was conquered and was followed by the other lands which form modern Persia. In 440 (1048) Liparites, chief of the Abkhaz, was taken prisoner and raids were made into Asia Minor. In Ramaḍān, 447 (Dec., 1055), Tughrl's name was mentioned in the *khutba* in Baghdād and at a ceremonial audience in 449 he was addressed by the Caliph, who had in the meanwhile married a daughter of his brother Čaghri-Beg, as "King of the East and of the West". The suzerainty of the Seldjuk Sultān was recognised throughout the 'Irāḳ, in Mawṣil and in Diyār-bakr. Under Alp Arslān the Seldjuk conquests reached to the Jaxartes and after the defeat of the Armenians and Byzantines almost the whole of Asia Minor passed to the Turks. Finally Syria was added and in 485 (1092) even 'Adan and al-Yaman were conquered, although we can hardly talk of an effective rule of the Seldjucs in Arabia. Malik-Shāh's death in the same year, the quarrels for the throne among his sons which followed, and the Crusades put a limit to their conquests.

As regards the conquered territories, in many cases the conquered rulers continued to rule and paid tribute; in Kirmān, and later also in Syria and Asia Minor, the princes who had conquered these lands set themselves up as independent rulers and did not trouble about the Great Seldjucs with whom they even waged war (see below). The same thing happened in other outlying parts of the empire, which the Sultāns, e.g. Alp Arslān in 458 (1066), bestowed on their brothers and other relatives as fiefs, with this difference that the latter did not succeed in founding dynasties. According to the Turkish view, the right to rule belonged to the whole family and the oldest member had a certain right as *primus inter pares* to the obedience of his male relatives, but in a family with so many ramifications as that of the Seldjucs, harmony could not long be maintained. Even in the reign of Tughrl-Beg his nephew Ibrāhīm b. Ināl rebelled and if his brothers Čaghri-Beg and Paighū remained faithful to him this was probably because he had no sons. His successor had to fight with Kutulmīsh, son of Arslān and ancestor of the Seldjucs of Rūm. It was the same in the reign of Malik-Shāh, and after his death the rather brief reign of Barkiyārūk was marked by continual fighting with his uncle Tutuṣh and his brother Muḥammad. The empire of the Great Seldjucs therefore comprised strictly only the eastern provinces of the former territory of the Caliphs, with the exception of Kirmān. They had their residences in Isfahān, Baghdād, and under Sandjar, who handed over to his brother Muḥammad's sons the rule over 'Irāḳ, Fārs, Khuzistān and the western provinces, in Marw. The latter, the last of the Great Seldjucs, was more than once forced to use the sword to exert his authority as head of the family to settle disputes among his nephews; for the rest he was content with sovereignty over Khurāsān and the eastern frontier provinces. On his wars with the Ghaznawids, the rulers of Transoxania, the Ghūrids and the Ghuzz see the article SANDJAR, above. When he died childless in 552 (1157) the line of the Great Seldjucs came to an end.

For Islām the rise of the Seldjucs meant the victory of the Sunnī creed, as far as their power stretched, over the Shī'a tendencies which had been gaining more and more ground under the

Būyids and Fātimids. The Būyids had, it is true, allowed the 'Abbāsīd caliphate to continue a nominal existence in Baghdād, but in 450 (1058) al-Basīrī [q.v.] had the name of the Fātimīd caliph mentioned in the *khutba* in the 'Irāk also. The 'Abbāsīd al-Kā'im bi-Amr Allāh had to leave Baghdād, and his palace there was plundered for several days. Tughrl-Beg, who at that time already was on intimate relations with the Caliph, was at this time engaged in his struggle with Ibrāhīm b. Ināl; as soon as the latter was taken prisoner and put to death, Tughrl brought the Caliph back to Baghdād. In the following period, notably in the later years of Malik-Shāh, there was serious friction between the Caliph and the Sultān, but this did not have its roots in religious questions but was of a personal nature (cf. Houtsma, in the *Journal of Indian History*, iii. 147—160). The Seldjūks regarded the Caliph as such as the head of orthodox Islām whom they were called upon to defend with the sword. They took energetic steps against the dangerous activities of the Ismā'īlīs and furthered the interests of Sunnī theologians, although in this respect it was not they themselves but their viziers, notably the great Nizām al-Mulk [q.v.], that were entitled to most credit. Personally they were anything but fanatical Muslims, as is evident from the release of Liparites above mentioned and later of the Byzantine emperor Romanus Diogenes and from the treatment accorded their Christian subjects. It is practically the same with the credit given to some of the Sultāns, e.g. Malik-Shāh, for their patronage of learning; although untutored, they were able to esteem what they themselves did not possess. They therefore entrusted the administration of their empire to their viziers, who sometimes, like Nizām al-Mulk, governed with unlimited powers. In what spirit they did so, the latter himself has told us in his *Siyāsāt-nāma*. As regards art, very little of the architecture of the Seldjūks has survived for posterity. Only in Marw are there still considerable remains from Sanjār's reign. Taken all in all, we must admit that the Seldjūk Sultāns were able to guide the rude Ghuzz people, whose chiefs they were, with great skill and with true insight to turn to their use the advantages of Arabo-Persian civilisation.

II. The Seldjūks of the 'Irāk, 1118—1194. After the death of Muḥammad in 511 (1118) his eldest son MAḤMŪD, a thirteen year old boy, succeeded him as Sultān of the whole empire with the exception of Khurāsān and the north-eastern frontier provinces, where, as already mentioned, Muḥammad's brother Sanjār ruled. After him the title of Sultān was borne by his son DĀ'ŪD, 1131—1132, TUḠHRĪL I — 1134 (according to al-Bundārī, *Recueil de textes* etc., ii. 172, wrongly, beginning of 528 = 1133), MAS'ŪD — 1152, MALIK-SHĀH II — 1153, MUḤAMMAD II — 1159, SULAIMĀN-SHĀH — 1161, ARSLĀN-SHĀH — 1175 and TUḠHRĪL II — 1194. Almost all these Sultāns ascended the throne while still boys and met with a premature, often violent, death. Of the majority of them, therefore, it can hardly be said that they actually ruled; they were simply tools in the hands of their Atabegs and Emīrs. In keeping with the old Turkish custom, the four sons of Muḥammad, Maḥmūd, Tughrl, Mas'ūd and Sulaimān, were each brought up by a prominent Turkish Emīr, who acted as their second father and was therefore called Atabeg. The natural result was that each of these Atabegs endeavoured to

gain the title of Sultān for the prince allotted to him in order thereby to increase his own prestige. The result was continual wars between these brothers, which were decided for a short time by the intervention of Sanjār in favour of one or other of the claimants. For the details of these wars the reader is referred to the separate articles; here we will only point out that the 'Abbāsīd Caliphs also became involved and that two of them, al-Mustashīd [q.v.] and al-Rāshīd [q.v.], perished in them. This happened in the reign of the valiant Sultān Mas'ūd, but his successor Muḥammad II — Malik-Shāh II only bore the title of Sultān for three months — had to abandon the siege of Baghdād in 551 (1157). The power of the Caliphs began to rise again after this and the Seldjūk Sultān no longer lived in Baghdād but in Hamadhān. As a rule these Sultāns, from as early as Maḥmūd, were only nominal rulers. The great Turkish Emīrs held most of the provinces as military fiefs; the Sultāns lacked the money as well as the necessary troops to enforce their authority, if their Atabegs for the time did not assist them. To the latter also they entrusted war with foreign foes e.g. with the Crusaders in Syria; they themselves had continually to contend with enemies at home. Some of these Emīrs succeeded in founding a hereditary dynasty and making themselves independent with the title Atabeg, Shāh or Malik. Among the latter we may reckon the Urtukids in Mardīn and Hīsn Kaifa and the Armanshāhs in Khilāt, who had already succeeded in doing so in the preceding period, and among the former the Zangids in al-Mawṣil and other places, the Salgharids in Fārs and the Atabegs of Ādharbaidjān. The first of these Atabegs, Shams al-Dīn Ildegiz [q.v.], married the widow of Tughrl I and when Sulaimān Shāh died in 1161 had his stepson Arslān b. Tughrl proclaimed Sultān, but without affording him any authority. When he later threatened to become dangerous, Pahlawān, son of Ildegiz, had him disposed of by poisoning him and raised his minor son Tughrl II to the throne (571 = 1175). When the latter had grown up and Pahlawān was dead, he endeavoured to enforce his authority but was not a match for Kizl Arslān, the successor of Pahlawān, although he defeated the troops of the latter's ally, the Caliph, at Dāimarg in 584 (1188). He was taken prisoner by Kizl Arslān after whose death he was restored to liberty, but fell shortly afterwards in a fight with the troops of the Khwārizm Shāh Takash (590 = 1194).

III. The Seldjūks of Kirmān, 1041—1186. The ancestor and founder of their line was KĀWURD KARA ARSLĀN-BEG, a son of Čaghri-Beg who went to Kirmān with his Ghuzz about 433 (1041) and a few years later (440 = 1048/49) occupied the capital Bardasir. He then waged further wars on his own account with the Shabānkārs, with the Kufs in the Garmīr (the hot coast region) and even became lord of 'Omān without troubling much about Tughrl-Beg. When the latter's brother Alp Arslān succeeded to the throne Kāwurd made an attempt (459 = 1067) to pose as an independent chief, but submitted when Alp Arslān hurried in person to Kirmān to force him to obedience. On Alp Arslān's death he thought, presumably as the oldest member of the family, that he had himself a claim to the Seldjūk throne, and led his army against Malik-Shāh but suffered a terrible defeat in the vicinity of Hamadhān where he was taken prisoner and

afterwards strangled (466 = 1074). The victor then in his turn marched on Bardasir where first Kirmān-shāh and later Sultān-Shāh, the sons of Kāwurd, had assumed the reins of government *ad interim*, but withdrew when the latter showed himself submissive and left him in possession of his father's dominions. Sultān-Shāh reigned till 477 (1084) and was followed by TÜRĀN-SHĀH — 1097, IRĀN-SHĀH — 1100 (1101), ARSLĀN-SHĀH — 1142, MUHAMMAD — 1156, TUĞHRIL-SHĀH — 1169, BAHRĀM-SHĀH and ARSLĀN-SHĀH II — 1176, TÜRĀN-SHĀH II — 1183, MUHAMMAD-SHĀH — 1186. The end of the dynasty was brought about by the arrival of a body of Ghuzz; the Ghuzz after the defeat of Sandjar had fallen like a devastating deluge on the provinces of Persia and went wherever the weakness of authority seemed to offer them a chance of gaining rich booty. In Kirmān, where anarchy was practically complete under the last Seldjüks, they had an easy task, routed Tūrān-Shāh who marched against them and went plundering up and down the country. When the latter was murdered his successor Muḥammad-Shāh soon found himself forced to leave the country to seek help from neighbouring princes, which was, however, not granted him. A Ghuzz prince, known by the name of Malik Dīnār, then became lord of Kirmān.

IV. The Seldjüks of Syria, 1078—1117.

After the Marwānid Naṣr of Ḥalab in 463 (1070/71) had submitted to Alp Arslān, a body of Turks under Atsız b. Abaḳ (or Awaḳ) invaded Palestine, captured Ramla and Jerusalem and the rest of Judaea with the exception of ʿAskalān, where the Fātimids held out. He then turned his attention to Damascus which he was, however, not able to take till 468 (1076). An attempt made by him to conquer Egypt in the following year failed; he was routed by the Fātimid general Badr al-Djamālī [q.v.] and was next so hard pressed in Syria that he appealed for help to Tutuḡ b. Alp Arslān, who came to Syria in 470 and Damascus was handed over to him (471 = 1078). Tutuḡ then treacherously murdered Atsız and became lord of the town himself. An attempt to take Ḥalab failed; the then lord of this city, the ʿUḳailid Muslim b. Kuraish [q.v.], even attacked him in Damascus (475 = 1082), and when the latter had fallen in battle with the Seldjūk of Asia Minor, Sulaimān [q.v.] (478 = 1085), Malik-Shāh himself hastened to Ḥalab and installed Akṣonkor, the ancestor of the Zangids there, as governor, to the great vexation of Tutuḡ who had in the meanwhile disposed of his rival for the possession of the town, Sulaimān, in an encounter at ʿAin Salm (Sailam?), not far from Ḥalab (479 = 1086), where the latter met his death. It was only the death of Malik-Shāh (485 = 1092) that enabled him to gratify his ambition, to make great conquests and to set up as a claimant to the sultanate against his nephew Barkiyārūḳ [q.v.], till he finally was defeated in 488 (1095) and fell on the battlefield. For details see the article TUTUḢ. His son Ridwān [q.v.] then became lord of Ḥalab and another son, Duḳāḳ (the statement in Abu l-Maḥāsīn, ed. Popper, ii. 344, that he was Duḳmāḳ is wrong), of Damascus. The latter died soon after in 497 (1104) but the real power lay in the hands of his Atabeg, Tuḡtegin [q.v.], who next had the *khutba* read for a short time in the name of an infant, then for a brother of Duḳāḳ, named Artāsh (in Ibn al-Athīr called Begtāsh), then made himself independent and founded the Būrid [q.v.] dynasty

Ridwān of Ḥalab died in 507 (1114); he was followed by his son Alp Arslān who was soon afterwards murdered by his servant Luʿluʿ. The latter then had his brother Sultān-Shāh proclaimed Sultān but was himself murdered in 511 (1117). The inhabitants then handed over the town to Ilghāzī [q.v.] and Seldjūk rule came to an end.

V. The Seldjüks of Asia Minor (al-Rūm), 1077—1302.

The ancestor and founder of this dynasty was SULAIMĀN B. KUTULMISH B. ARSLĀN (Isrāʿīl) B. SELDJUK. His father Kutulmish was one of the Seldjūk paladins under Tuḡhril-Beg but later rebelled against Alp Arslān, and in the end fell on the battlefield near al-Raiy (456 = 1064). Sulaimān himself came to Asia Minor after the great battle of Malāzkind (1071) (in which the Byzantines suffered a terrible defeat and their emperor was taken prisoner), like so many other Turkish emirs, with the intention of making new conquests there and founding a kingdom. Being a prince of the ruling family he was successful in his aim and we therefore find him prince of Nicaea about 1077 when the fighting for the Byzantine throne seemed to give him a fine opportunity to play a prominent part. When this hope was thwarted by the accession of Alexius Comnenus, he turned eastwards, took the town of Antākiya from the Armenian Philaretus (477 = 1085), was thereby brought into conflict with Muslim b. Kuraish [q.v.], and, after the conquest and death of the latter, with Tutuḡ, which brought about his death in the following year (1086). These events caused Malik-Shāh to make the journey to Ḥalab to arrange matters there and elsewhere, e.g. in Antākiya and Edessa. Sulaimān's son, Kılıdġ Arslān, was taken back by him on his return, and only returned in the reign of Barkiyārūḳ after Malik-Shāh's death to Asia Minor. We have only scanty information in Arabic sources regarding events in the interval in Asia Minor, so that we have to rely on Byzantine, Syrian and Armenian originals. We cannot go into these here, nor is this the place to deal with the history of Kılıdġ Arslān and his successors; the reader is referred to the separate articles. Here we give only their names and lengths of reign: KILIDJ ARSLAN I — 1107, MALIK-SHĀH and MASʿUD — 1155, KILIDJ ARSLAN II — 1192 (Interregnum, see below), RUKN AL-DIN SULAIMĀN II — 1204; KILIDJ ARSLAN III and GHIVĀTH AL-DIN KAIKHUSRAW I — 1210, ʿIZZ AL-DIN KAIKĀʿUS I — 1219, ʿALĀʾ AL-DIN KAIKOBĀD — 1237, ʿIZZ AL-DIN KAIKHUSRAW II — 1245, ʿIZZ AL-DIN KAIKĀʿUS II (for several years [see the article] with his two brothers) — 1256, RUKN AL-DIN KILIDJ ARSLAN IV — 1266, GHIVĀTH AL-DIN KAIKHUSRAW III — 1284, GHIVĀTH AL-DIN MASʿUD II and ʿALĀʾ AL-DIN KAIKOBĀD III down to the year 702 (1302).

The kingdom of these Seldjüks underwent many vicissitudes of fortune. More than once its fall seemed imminent, but it revived again until finally it sank into insignificance with the Mongol invasion and collapsed altogether. Sulaimān's capital, Nicaea, was lost in the First Crusade in 1097 and never belonged to the Seldjüks again and with this ended Turkish rule in the whole of western Asia Minor, as the Byzantines under the Comnenoi again brought this region under their sway and were able to retain it throughout the period of the Seldjüks. In the south-east the Seldjüks were cut off from the rest of the Muslim world by the Christian

principalities of Antäkiya and Edessa, which had recently arisen, and by the rise of the kingdom of Little Armenia. Practically only the interior of Asia Minor was left to them and even there they were not the only rulers, as they had dangerous rivals in the Dānīshmandids [q. v.]. Kılıdġ Arslān's thrust towards al-Mawṣil came to an inglorious end with his premature death. It was his son Mas'ūd who first succeeded in founding a securely established dominion in Konya, after overcoming his brothers, and gradually extending his power. His successor Kılıdġ Arslān II continued his work and forced the Dānīshmandids to submit to his rule, although the powerful Nūr al-Dīn took up their cause. He was also not unsuccessful in his wars with the Byzantines and succeeded in inflicting a severe reverse on the Emperor Manuel in the vicinity of Murioképhalon (the pass of Çardak) (572 = 1176). But when he grew old, he became a pawn in the hands of his numerous sons, each of whom ruled a territory of his own; in addition, the Crusaders invaded his lands and even captured the capital Konya (1190). He died soon after this in 1192 while with his youngest son Ghiyāth al-Dīn Kaikhusraw and left his kingdom in a state of complete anarchy, as his sons were fighting among themselves. In the end one of them, Rukn al-Dīn Sulaimān, lord of Tokat, succeeded in overcoming his other brothers and taking Erzerüm from the Soltukids. He then granted this town to his brother Tuğhrıl-Shāh, who ruled there till his death in 1225 as an independent ruler and had coins struck in his own name there. His son Djahān-Shāh was, however, dethroned by Kaikobād I during the war with the Khwārizm-shāh Djālāl al-Dīn and his kingdom incorporated in the victor's. After an unsuccessful war with the Georgians Rukn al-Dīn died and his brother Ghiyāth al-Dīn, who after many wanderings had found a refuge with the Byzantines, ascended the throne. This happened about the time that the Latin kingdom was being founded in Byzantium and this gave him a fine opportunity to extend the power of the Seldjüks. In 1207 he seized the important harbour of Antalia and his successor 'Izz al-Dīn Kaikā'us also took Sinope. The Turkish empire was thus opened to world trade: relations were established with the Italian merchant republics; the export of the valuable products of the district and the through-commerce with Little Armenia assumed great proportions and "Turkey" at that time became considered the richest land in the world. The Greek princes of Nicaea and Trebizond and the kings of Little Armenia in Cilicia pledged themselves to pay tribute either voluntarily or under compulsion. The Ortukids and Aiyūbids in the border cities of the south-east frontier recognised the suzerainty of the Seldjüks on their coins and in the *khutba*. The Sultāns and their great emirs vied with one another in the erection of splendid buildings, mosques and madrasas, bridges and caravanserais. In brief, the Seldjūk kingdom passed through a period of glory such as had not been seen in Asia Minor for centuries; but the picture was not without its other side. The luxurious life of the rulers made them weak and effeminate and aroused the indignation of the lower classes and of the devout. Even Kaikā'us I and Kaikobād I, although they were able rulers, had to rely in their military enterprises on foreign, Greek, Armenian and Arab, mercenaries; this became still more the case when

the worthless Kaikhusraw II ascended the throne (1237). In the meanwhile the Mongol deluge had reached the frontiers of Asia Minor. Erzerüm, the frontier fortress, fell before their onslaught and soon afterwards the Turkish army suffered an ignominious defeat at Közadagh (1243). The future of the kingdom was thereby decided. It is true that a peace was concluded and the Sultān granted an appearance of independence on payment of a huge tribute, but the wealth of the land continually stimulated the covetousness of the Mongols and incited them to new raids, pretexts for which were given by the struggles for the throne among the sons of Kaikhusraw. In the end, in the reign of Hülagū, a partition of the kingdom was drawn up whereby 'Izz al-Dīn was to rule on the one and Rukn al-Dīn on the other side of the Kızıl Irmak, but when the former entered into secret negotiations with the arch-enemies of the Mongols, the Egyptian Mamlūks, an end was soon put to his rule and he had to seek a refuge in Byzantium. Rukn al-Dīn henceforth ruled alone but the real power was exerted by Mu'īn al-Dīn Sulaimān with the title of Parwāna, as agent for the Mongols, and when Rukn al-Dīn became inconvenient to him he had him put out of the way in 1266 so that he might rule all the more unchecked in the name of Rukn al-Dīn's infant son Ghiyāth al-Dīn. In the meanwhile the Turks began to rise against the Mongols in Laranda and elsewhere. A number of Turkish Begs therefore appealed to the Mamlūk Sultān Baibars [q. v.] and proposed that he should send an expedition into Asia Minor, where he would find the whole population on his side, if only the Mongol troops stationed in the country had once been defeated. Baibars agreed, defeated the Mongols in the bloody battle of Albistān and advanced as far as Kaṣariya (1277). But the Parwāna and the Sultān held aloof and the people did not move so that Baibars was forced by lack of supplies to retire again and leave things as they had been before. Soon afterwards Abaka appeared in Asia Minor and took fearful vengeance on the Turks, who, as he thought, had conspired with the Egyptians. The Parwāna also had to pay for his inactivity with his life. The Mongol regime now became stricter. Mongol financial officials settled the taxation which for the most part was used to maintain the troops stationed in the country. The Seldjūk Sultāns, whose names appeared on the coins down to 702 (1302), had no longer any authority worth mentioning. The turbulent Turkish emirs, among whom the Banū Qaramān and the Banū Ashraf played the most prominent part, were more than once brought to periods of obedience by ruthless punitive expeditions led by the Mongol princes Kungkaratai and Gaikhatū, only to come again from their retreats and found independent emirates when Mongol sovereignty finally diminished in power. In this way there arose on the ruins of the Seldjūk empire a dozen Turkoman dynasties, on which see the separate articles. The last descendants of the Seldjūk family of whom we have historical notice are found in Sinope and perhaps in Alaya. The Kılıdġ Arslān b. Luṭfibeğ, who had to yield in 876 (1471—1472) to the Ottoman general Gedik Ahmed Pasha, was deported with his whole family to Stambul and had Gülmüdjina allotted to him by the Sultān as *timār* [q. v.] but afterwards fled to Egypt, presumably belonged to the old family of rulers.

Bibliography: On the sources for Seldjuk history see K. Süssheim, *Prolegomena zu einer Ausgabe der im B. M. zu London verwahrten Chronik des seldschukischen Reiches*, Leipzig 1911. We may first mention the compendiums of general history by Ibn al-Athir; Sibṭ b. al-Djawzī, *Mir'āt al-Zamān*, facsimile edition by J. R. Jeweth, Chicago 1907, on the years 495—654; Bar-hebraeus (Syriac and Arabic Chronicle); Abu 'l-Fidā'; Ibn Khaldūn; Hamd Allāh Mustawfī; al-Ḳazwīnī, *Tārikh-i Ghusṭa* (facsimile by E. G. Browne, Leiden and London 1910); from whom was taken the *Histoire des Seldjoukides et des Ismaéliens* etc., by Defrémery in *J. A.*, 1848; Mirḳhwānd, *Rawḍat al-Ṣafā*, from whom are taken *Mirchond's Geschichte der Seldschuken*, ed. Vullers, Giessen 1838; Khwāndamīr, *Ḥabīb al-Siyar*, lithographed; ed. Tihrān 1271 and Bombay 1273. Munadjjim Bāshī, *Ṣaḥā'if al-Akhbār*, Stambul 1285. The same author's *Djāmi' al-Duwal*, in Arabic, is fuller but only available in MSS.

Special Histories: *Recueil de textes relatifs à l'histoire des Seldjoukides*, ed. Houtsma, Leiden 1886—1902, contains in vol. i. the history of the Seldjucs of Kirmān by Muḥammad b. Ibrāhīm; in vol. ii. al-Bondārī's synopses of 'Imād al-Dīn, *Nuṣrat al-Fatra wa-Uṣrat al-Fiṭra*; in vol. iii. and iv. the Turkish transl. and the Persian text of a synopsis of Ibn Bibī's History of the Seldjucs of Asia Minor; al-Rāwandī, *Rāhat al-Ṣudūr wa-Āyat al-Surūr*, ed. Muḥ. Iḳbāl, Leiden 1921; al-Husainī, *al-Uraḡa fi 'l-Hikāyat al-Saldjūkiya*, ed. K. Süssheim, Cairo 1326=1908.

Among the chronicles of contemporary dynasties the following are important: *The Tārikh-i Baihaḳī* etc., ed. W. H. Morley, Calcutta 1862; al-Uṭbī, *Tārikh Yamīnī*, ed. Maulawī Mamlūk al-'Alīyī and Sprenger, Delhi 1847, with comm. by al-Manīnī, Cairo 1286; Ibn al-Ḳalānīsī, *History of Damascus*, ed. H. F. Amedroz, Leiden 1908; Kamāl al-Dīn, *Zubdat al-Ḥalab min Ta'rikh Ḥalab*, French transl. of a part by E. Blochet, Paris 1909; other parts in vol. 3 of the *Historiens orientaux des Croisades*; Abū Ṣhāma, *Kitāb al-Rawḍatāin fi Akhbār al-Dawlatāin*, Cairo 1287, 1292; Rashīd al-Dīn, *Histoire des Mongols*, ii., ed. E. Blochet, Leiden and London 1911; al-Djuwainī, *Tārikh-i Djāhāngushā*, ed. Mirza Muḥ. al-Ḳazwīnī, Leiden and London 1912—16; al-Maḳrīzī, *al-Sulūk li-Ma'rīfat Duwal al-Mulūk*, French transl. by Quatremère, Paris 1837—44, and by E. Blochet, Paris 1908; Abu 'l-Maḥāsīn, *al-Nudjūm al-Zāhira fi Mulūk Miṣr wa 'l-Ḳāhira*, ed. W. Popper (*University of California publications in Semitic philology*, vol. ii., 1909, 1910). Biographies of separate Sultāns and viziers in Ibn Ḳhallikān, *Wafayāt*. Cf. also Niẓām al-Mulḳ, *Siyāset-nāme*, ed. Schefer, Paris 1891, and its Supplement, Paris 1897.

Of special importance for the history of the Seldjucs of Asia Minor and Syria are: *Chronique de Michel le Syrien*, ed. and transl. by J. B. Chabot, Paris 1899—1910; E. Dulaurier, *Chronique de Matthieu d'Edesse*, Paris 1858; M. Brosset, *Histoire de la Géorgie*; also the historians of the Crusaders and of the Byzantine Empire: Vincentius Bellocensis, *Speculum Historiale*, Books 30, 31.

Coins, Inscriptions, Art. On the Seldjuk

coins see the well known catalogues by Lane-Poole, Dorn, Ḡhalīb Beg, Aḥmed Tewḥid etc. Inscriptions in M. Sarre: *Reise in Kleinasien*, Berlin 1896; Cl. Huart, *Epigraphie arabe de l'Asie Mineure*, in the *Revue Semit.*, vol. ii. and iii.; J. H. Löyrtved, *Konia, Inschriften der seldsch. Bauten*, Berlin 1907; v. Berchem, *Matériaux pour un corpus inscr. arab.*, vol. iii., Cairo 1910, and many scattered articles by the same author; Khalil Edhem, *Kaisariya Shehri Mebānī-i Islāmīye wa-Kitābleri*, Stambul 1334, and other articles by him and by Aḥmed Tewḥid etc. in *Revue historique*; Zukovski, *Razvalini starogo Merwa*, St. Petersburg 1894; Sarre, *Denkmäler der persischen Baukunst*, Berlin 1910. Cf. also the works of H. Saladin and G. Migeon, Woerman, E. Diez, Strzygowski etc. Since Deguignes, *Histoire générale des Huns, des Turcs, des Mogols et des autres Tartares occidentaux* etc., 1756—1758 (Book X—XI), no European scholar has specially investigated the history of the Seldjucs, although in the works on history by Weil, Muir, A. Müller, d'Ohsson, Howorth, Barthold etc. there is much information on the subject. For the early history of the dynasty Kazimirski's already mentioned preface to his edition of the *Diwān* of Minuḥihri is of particular importance; for the history of the Seldjucs of Kirmān see Houtsma's synopsis (from *Recueil*, vol. i.) in the *Z. D. M. G.*, xxxix. 362—402; for that of the Seldjucs of Rūm, besides the above quoted works of Huart, von Berchem, Khalil Edhem etc., see: Neḡjib 'Āsim, *Türk Tārikhi*, p. 406—445; Huart, *Konia, la ville des derviches tourneurs*, Paris 1897; do., *Les Saints des derviches tourneurs*, Paris 1918—1922.

SELEBES. [See CELEBES].

SELEFKE, the ancient Σελεύκεια, Seleucia Trachaea or Ciliciae, a small town, capital of the sandjak of Iḱ-Il in the province of Adana. It was built by Seleucus Nicator towards 300 B.C. The river Gök-Sū (Calycadnus) runs past it, about 10 miles from its mouth. In it is a reservoir called *Tekfūr Anbārī*, "the Emperor's storehouse", hewn out of the rock and covered by a vaulted roof; it is a great cistern carved out of the rock, 30 cubits broad and deep and 60 long; the aqueduct which brought the water to it has been destroyed. There are numerous ancient ruins and a mosque dating from the Arab epoch; the town was actually conquered by al-Ma'mūn but soon afterwards evacuated. There is a Byzantine castle on the mountain (xith century). The town is mentioned by Yāḳūt, *Mu'djam*, iii. 119, *Marāṣid al-Iṭīlā'*, ii. 44, under the name Salaghūs.

The district, for the most part mountainous, contains 3 *nāhiya*: Bulādja, Yāghda and Āyāsh; in the *Sāl-nāme* of 1325, p. 816, Yāghda is given as the capital of Iḱ-Il and its district has now only two *nāhiya*; the number of its inhabitants is 24,860 of whom 1032 are Christians. The exports are the abundant agricultural produce; coarse carpets and sacks are manufactured there. The people in the hills rear cattle and those on the plains are farmers. The district at one time belonged to Cyprus and was administered like the islands of the archipelago by the Ḳapudan-Pasha (Grand Admiral) [q. v.].

SELİM I, ninth sultān of the Ottoman Empire, known in history as Yawuz Sultān Selim, reigned 918—926 (= 1512—1520). He was one of the sons of Bāyazid II, born in 872 (= 1467/68) or 875 (= 1470/71) (*Sijill-i ‘Othmānī*, i. 38). Towards the end of his father's reign, he was governor of the sandjak of Trebizond. Although his brother Ahmed, older than he but younger than prince Korkud, had been designated his successor by Bāyazid, Selim also cherished designs on the throne, knowing that he had the support of the greater part of the army. Civil war finally broke out between the two brothers as a result of the nomination of Selim's son Suleimān as governor of Boli. Ahmed protested and the sandjak of Kaffa in the Crimea was then given to Suleimān. Selim soon afterwards (1510) went to join his son in Kaffa and refusing to obey Bāyazid, who had ordered him to return to Trebizond, he went to Adrianople in March, 1511, with a body of Tatar troops. He then asked for a sandjak in Rūm-ili. Only after the Sultān had made up his mind to send troops against his son, did Selim consent to retire, after receiving the sandjak of Semendere as a result of negotiations conducted through the mediation of Mewlānā Nur al-Dīn Sarfkürz [q. v.]. But he soon took the field again, giving as a pretext the rebellion of Shāh Kuli or Shaitān Kuli [q. v.] in Asia Minor. This time he was defeated on August 3 near Çorlu by his father's troops and again sought refuge in the Crimea with his father-in-law, Khān Mengli Girāy. But the Janissaries in the capital were in favour of Selim; they forced prince Ahmed, who had advanced against Constantinople, to retreat (August 21). The attempts of Ahmed and Korkud to profit by the absence of their brother only increased the latter's popularity. Selim therefore left the Crimea in January, 1512, and reached Constantinople in April, where the Janissaries had openly declared for him. Bāyazid in vain attempted to open negotiations. He was dethroned on Šafar 8, 918 (April 25, 1512), by a great mob of Selim's partisans and died a month later on the way to Demotika (see the art. BĀYAZID II).

Selim employed the first year of his reign in exterminating his brothers and nephews. By July, 1512, he had set out against Ahmed and his son ‘Alā al-Dīn, who had taken Brussa; he put them to flight, but did not capture them. Ahmed entrenched himself in Amasia. An attempt by Selim to take him by surprise there failed, probably through the treachery of the Grand Vizier, Muṣṭafā Paṣha [q. v.]. The latter in any case was executed and replaced by Hersek Ahmed Paṣha. On November 27, five nephews of the sultān were executed at Brussa, sons of his deceased brothers Maḥmūd, ‘Alam-shāh and Shāhin-shāh. In the end Korkud, who had fled to the sandjak of Teke, was captured and put to death. The same fate overtook Ahmed, who, after several successes, was finally defeated and captured on the plain of Yeḥi Shehir (April 24, 1513).

Peaceful relations with Venice, Hungary and Russia were maintained as a result of negotiations conducted by the embassies which these powers had sent to Constantinople and Adrianople. The warlike spirit of Selim found an outlet in the east, where Shāh Ismā‘il [q. v.] had founded the powerful empire of the Shī‘ī Šafawids. Ismā‘il had supported the cause of prince Ahmed and had

given asylum to the latter's son Murād. Ismā‘il, moreover, had many partisans in the Shī‘a element in Asia Minor. His own dynasty owed its success to the Kızıl-bash of Anatolia, who had rebelled only recently under Shāh-Kuli against Sultān Bāyazid. Selim, urged either by hatred of Ismā‘il or by his zeal for orthodoxy, began a systematic persecution of the Shī‘is in his empire. The total number killed or imprisoned was forty thousand, according to all the Turkish sources. War was inevitable after this. On March 20, 1514, the Sultān left Adrianople and a month after the whole army met on the plain of Yeḥi Shehir. During this time Selim had begun with a declaration of war his celebrated correspondence with Shāh Ismā‘il in a series of letters written in an elegant style and insulting and provocative in their contents (see the *Munsha‘at* of Feridūn Bey, i. 374 sqq.), which often resulted in the immediate slaughter of their bearers. At the same time he had turned to ‘Ubaid Khān, prince of the Uzbeks, to incite him to war against the Shāh. The Turkish army marched by Konya, Kaṣariye (where ‘Alā al-Dawla of the Dhu ‘l-Kadr dynasty showed little enthusiasm to assist the expedition) and Siwās, while the fleet went to Trebizond with the commissariat. After Erzindjān the Janissaries began to murmur at the length of the campaign, but Selim restored his authority with a few executions. The Shāh's army was not met till the plain of Çaldıran [q. v.] between Lake Urmiya and Tabriz. Here on Raddjab 2, 920 (August 23, 1514), the Persian army was utterly routed by the Ottoman, mainly through the latter's superiority in artillery. Ismā‘il fled, leaving the whole of his harem in the hands of the victor. On September 5, Selim entered Tabriz. He left it by the 13th, carrying off vast treasures and several hundred artisans, to spend the winter at Kara-Bāgh, but the opposition of the Janissaries forced him to resume the road to Anatolia. He went via Kars and Baiburt, where Bīyıklı Muhammad Pēy had been left with a force. Selim himself went into winter quarters at Amasia; the Janissaries, who had begun to mutiny once more owing to the shortage of food, were sent to Constantinople. These disorders resulted in the dismissal of the Grand Vizier and the raising to the office of Khādīm Sinān Paṣha, Beylerbey of Anatolia (October, 1514). During the same year the Sandjak-Bey of Semendere had driven back a Hungarian invasion near Belgrade.

The year 1515 was marked by the conquest of eastern Anatolia and Kurdistan. Selim, who had assumed the title of Shāh after his victory (according to the coins), went in person to Kumakh or Kemākh [q. v.] which he took in May and then returned to Siwās. From here he sent the new Grand Vizier against the aged ‘Alā al-Dawla, lord of the Dhu ‘l-Kadr [q. v.]. Selim had previously, in the autumn of 1514, invested ‘Alī Beg, nephew of ‘Alā al-Dawla, with the sandjak of Kaṣariye and ‘Alī had defeated and killed Sulaimān, son of ‘Alā al-Dawla. On June 12, 1515, Sinān Paṣha defeated the Dhu ‘l-Kadr army in the plain of Gökün. ‘Alā al-Dawla was killed and his four sons captured and executed. The conquest of the land of the Dhu ‘l-Kadr, including the fortresses of Albistān and Marāsh, was one of the causes of the war with the Sultān of Egypt, who had been recognised as suzerain of this dynasty. Selim then returned to Constantinople, which he reached on

July 17; there he had executed several high officials accused of having incited the rebellion of the Janissaries, including the *Kādî* 'Asker and the poet *Dja'far Çelebi* [q.v.]. In August a great fire destroyed a part of the capital and was followed by more executions.

After the battle of *Çaldıran*, the Begs of *Kurdistan* [q.v.], the population of which was for the most part Sunni, declared for Selim; the inhabitants of *Diyār Bakr* and other towns had opened their gates to the Turks, but the citadels of several towns (e.g. *Mardin*) were still occupied by Persian garrisons. *Bıyıklı Muḥammad*, who had been appointed *Beylerbey* of *Diyār Bakr*, had been given military control of the country and the historian *İdris Bitlisî*, himself a Kurd, had been appointed to assist him as high commissioner for civil administration. In the beginning of 1515, however, the Persian general *Kara Khān*, brother of the former governor of *Diyār Bakr*, *Ustādîli Oghlū* killed at *Çaldıran*, was sent to reconquer the country. He besieged *Diyār Bakr*, but was forced by *Bıyıklı Muḥammad* to raise the siege in October, 1515. At the beginning of 1516, *Kara Khān* was defeated a second time near *Koç Hisār* between 'Urfa and *Nisibin* by *Muḥammad* and the Kurdish Begs, a battle in which *Kara Khān* himself was killed. In this way the towns of *Kharpūt*, *Maiyāfariqin*, *Bitlis*, *Hisn Kaifa*, *Diyār Bakr*, 'Urfa, *Mardin*, *Djazira* and the lands farther south as far as *Rakka* and *Mawşil* fell into Ottoman hands, the conquest being completed in the reign of *Suleimān I.*

In the capital, Selim had been busy with the construction of a new fleet and arsenal under the direction of *Piri Pasha*, while he had reorganised the corps of Janissaries so as to secure a more effective control over the higher ranks of this turbulent soldiery. These were the preparations for a new expedition against Persia. The Sultān left *Constantinople* on June 5, 1516, and went first to *Konya*; *Sinān Pasha*, who had been appointed commander-in-chief, was awaiting him in *Albistan*. In the meanwhile, the Sultān of Egypt, *Kānsūh al-Ghūrî* [q.v.], disturbed by Selim's annexation of the lands of the *Dhu 'l-Kadr*, had left his capital on May 18 with a large army with the object of supporting *Shāh Ismā'il* and retaking *Mar'ash*. Selim, having learned of the arrival of *Kānsūh* at *Aleppo* (August, 1516), was the first to send ambassadors. The latter were not at first well received, but returned with an offer of mediation in the war with *Ismā'il*. Selim did not accept the proposal; on the contrary, he sent back with contumely an envoy of the Sultān of Egypt after executing his companions. In the end Selim set off via 'Aintāb, capturing towns like *Malatya* on his line of march. He met the Egyptian army on the field of *Dābiq* [q.v.], north of *Aleppo*. On August 24 (on the date see *Islām*, vi. 389, note 4) the Egyptians were completely routed in a short battle; their defeat was due to dissensions among their troops and to the superiority of the Ottoman artillery. *Kānsūh* himself fell either in or after the battle. *Yūnus Pasha* had been sent by Selim against *Khā'ir Beg*, governor (*malik al-umarā'*) of *Aleppo*; the latter surrendered the town to the Ottomans without striking a blow. Selim encamped for eighteen days on the *Kök Maidān*, near *Aleppo*, and then resumed his march via *Hamā* and *Hims* to *Damascus*, which the Mamlūk Begs had abandoned on September 22. *Damascus* was surrendered by negotiation with

the traitor *Khā'ir Beg* and he occupied the town on the 26th. Selim stayed about two months here and ordered among other edifices a mosque to be built over the tomb of *Muḥyî al-Din b. al-'Arabî*. On October 22, the Mamlūks in *Cairo* had chosen their new Sultān, *Tūmān Bāi*. Selim sent him two envoys to offer him peace on condition that the Sultān of Egypt recognised Ottoman suzerainty. The two ambassadors were put to death, much against the wish of *Tūmān Bāi*, which rendered inevitable the continuation of the war. The Egyptian army left *Cairo* towards the end of October, under the command of *Djānberdi Ghazālî*. They met the Ottoman vanguard under *Sinān Pasha* near *Ghazzā* and were defeated. Selim had left *Damascus* in December; before rejoining the army at *Ghazzā*, he made a pilgrimage to *Jerusalem*. The decisive battle was fought on January 22, 1517, at *Ridāniya* near *Cairo*, after the Ottoman army had crossed the desert in thirteen days. The defeat which the Egyptians suffered there is attributed to the treachery of *Djānberdi Ghazālî*, acting in arrangement with *Khā'ir Beg*, who was in Selim's army; they are said by a ruse to have immobilised the Egyptian artillery, which was served by Europeans. The two Sultāns took part in the battle in person. *Tūmān Bāi* slew the Grand Vizier *Sinān*, believing he was Selim. *Sinān's* office was filled by the appointment of *Yūnus Pasha*. By the battle of *Ridāniya*, the fate of *Cairo* was decided; although *Tūmān Bāi* succeeded in regaining the city five days later he was driven from it on January 30, after desperate and bloody fighting in the streets followed by the execution of eight hundred Mamlūk Begs and a general massacre. After the definite occupation of *Cairo*, Selim, who had pitched his camp on the island of *Bulāk*, continued the war with *Tūmān Bāi*. The latter had retired to the *Delta* and endeavoured to resist with the help of the Beduins. But after another defeat at *Djiza*, his allies betrayed him and handed him over to the Turks. Selim at first treated him with consideration, but in the end yielded to the pressure of *Khā'ir Beg* and *Ghazālî* and ordered his execution on April 12 or 13 (cf. the article *TUMĀN BĀI*).

Selim, being recognised as undisputed master of Egypt, remained a month in *Cairo*. Among the numerous embassies which came to pay him homage, one of the most important was that of the *Sharif* of *Mekka*, *Barakāt*, who sent a deputation led by his own son, *Abū Numaiy Muḥammad*, then aged twelve, which was received by the Sultān towards the end of May. The *Sharif*, who had not much reason to speak highly of the Mamlūk Sultāns, readily submitted to the Ottoman Sultān, who had already, during his stay in *Damascus*, showed his solicitude for the holy places. *Barakāt* declared himself ready to insert the name of Selim in the *khutba*. *Abū Numaiy* returned with rich gifts and in December following (*Dhu 'l-Hidjja*, 923) the pilgrim caravan (*surre-i humāyūn*), sent by Selim from *Damascus*, carried for the first time a covering for the *Ka'ba* as a gift from the Ottoman Sultān. From this time onwards the Ottoman Sultāns bore the title of *Khādim al-Ḥaramain al-Sharīfain* which has given them such a great prestige in the Muslim and Christian world. Selim, however, in spite of his solicitude for the sacred places, took care to take with him to *Constantinople* as hostages several *Hidjāz* notables resident in *Cairo*.

Another important delegation consisted of the two ambassadors from Venice, who came to negotiate regarding the payment of the tribute for the island of Cyprus hitherto paid to the Sultān of Egypt. They had, besides, to defend their city from the charge of having assisted the Egyptians against the Ottomans. Their ancient privileges were confirmed by a document of September 8, 1517. There is, however, in existence an Arabic document by which Selīm confirmed as early as February 16, 1517, to the Venetian consul in Alexandria the privileges enjoyed by the Venetians (B. Moritz, *Ein Firman des Sultans Selīm I für die Venetianer*, in the *Festschrift Sachau*, p. 422 sqq.).

Among the monuments of Cairo, Selīm paid most attention to the Nilometer, the *mikyās* on the island of Rawḍa (cf. the article CAIRO, § 4). He had a pavilion built there which was his favourite abode during his stay in Cairo. Towards the end of May, he undertook a journey to Alexandria to visit his fleet which had arrived there under Piri Pasha, and returned to Cairo on June 12 to remain another three months there. He left the city on September 10, leaving Khā'ir Beg as governor of Egypt (but he had sent his harem and children as hostages to Filibe) and arrived in Damascus on October 8. The main reason for his return was the discontent in the army. He left Egypt without having been able to do much reorganisation there during his stay. Although, according to the Ottoman historians, "true justice" was introduced there (Rustem Pasha), the numerous abuses had not been diminished; Idris Bitlisi, who had dared to call the Sultān's attention to them, was sent back with the fleet. Yünus Pasha, the new Grand Vizier, was no more pleased with the expedition; the Sultān had already removed him from the governorship of Egypt; then Khā'ir Beg aroused the Sultān's suspicions of him, which led to his sudden execution on September 19 in the desert near Ghazzā. His successor was Piri Pasha. Selīm spent the winter in Damascus and resumed his journey in February, 1518, having appointed Djanberdi Ghazālī governor of Syria. He spent a further two months in Aleppo, from where Piri Pasha made an expedition against the Kızıl Bash, and returned to Constantinople on July 25 and went on to Adrianople on August 4. His son Suleimān, who had taken his place in his absence, was sent as governor to Sarukhān.

Among the notable personages whom Selīm had sent as Egyptian hostages to the capital was al-Mutawakkil, the last of the "Abbāsīd" Caliphs at the court of the Mamluks in Cairo. He had accompanied Kānşūh to Aleppo along with three of the chief Kādīs of Egypt and was made prisoner after the battle of Dābiḳ. Treated with great consideration by Selīm, he accompanied the latter to Egypt, where during his absence his place had been taken by his father and predecessor at the investiture of Tūmān Bāi. Selīm had endeavoured on several occasions to make use of the authority of the Caliph in his negotiations with Tūmān Bāi, but without success. In June, 1517, al-Mutawakkil had to leave Cairo and seems to have been sent by sea to Constantinople. Here his conduct is said to have decided the Sultān to imprison him in the castle of Yedi Kule, where he remained till the death of Selīm, after which he returned to Cairo at some time not now exactly known. These details regarding the Caliph al-Mutawakkil

are only given by the Egyptian historian Ibn Iyās, who probably much exaggerates the part played by him in the Egyptian campaign, while the Ottoman chroniclers do not say a single word about him. It may be concluded from this that the importance of the "Abbāsīd" caliphate and Caliph had become infinitesimal by the time of Selīm I and existed practically only for theologians. These early and almost contemporary sources in no case guarantee the authenticity of the tradition which appeared two and a half centuries later, according to which al-Mutawakkil formally renounced the caliphate in favour of Selīm. It seems that this story was first given in d'Ohsson's *Tableau général de l'Empire Ottoman*, Paris 1788, i. 232 and 270. It is afterwards found in several Ottoman historians and thus became an article of general belief in Turkey. It is obvious that this story is intended to justify the claim of the Ottoman sultāns to the caliphate, but it is unnecessary to assume that d'Ohsson invented it, as Barthold thinks, for the tradition seems in every way worthy of the great conqueror and may have been originated by the Turks themselves. Selīm in any case had been called caliph even before the conquest of Egypt; the historians say on several occasions that the *khutba* of the caliphate was pronounced in his name in different places. Cf. also the article KHALIFA.

Selīm's successes made a deep impression on the Christian world. The Pope Leo endeavoured to enlist the Emperor and the kings of France and England in common action against the Turks. But Selīm's relations with Europe remained peaceful during the next few years; the truce with Hungary was continued and a Spanish envoy obtained the confirmation of the privileges of the Church of the Holy Sepulchre in Jerusalem. The Sultān also recognised the new Khān of the Crimea, his brother-in-law Muḥammad Girāy, son of Mengli Girāy. The Grand Vizier was sent to the eastern frontier to defend the empire against the Persians. During this time two new Shī'a risings had to be put down, that of Ibn Hanush in Syria in 1517, which was suppressed by the governor Ghazālī and the Begs of Tripolis and Hamā, and that of a certain Shāh Weli (according to Luṭfi Pasha) at Terkhal near Toḳat. He and his followers are called Djelālī, a name found in several Shī'a risings, e. g. that of Kara Yazdī [q. v.]. Ferhād Pasha was sent against this Djelālī, but it was 'Alī Shehsuwār-Oghlu, who had been appointed in 1516 governor of the country of Dhu 'l-Kadr, who finally defeated and slew him in 1518.

In 1519 Selīm left Adrianople for Constantinople, where the equipment of a great fleet was begun, intended for the conquest of the island of Rhodes, but before the preparations were finished he died suddenly on Shawwāl 7, 926 (September 20, 1520). He was on the way from the capital to Adrianople when an illness, signs of which had shown themselves a few days before (an ulceration called *shir pendje*; according to others it was cancer) forced him to stop near Çorlu; the father of the historian Sa'd al-Dīn, Ḥasan Djān, was present at his death-bed. His death was kept secret by the viziers until the new Sultān Suleimān reached Constantinople. The body was buried on the hill on the north-west side of Stambul; Suleimān had the mosque of Selīm I built there, to which the *türbe* was joined; it was completed in Muharram, 929. The *türbe* also covers the tombs of the mother

of Selim, of several of his daughters and of several princes (Hafız Hüsnai al-Aiwanserâyî, *Hadîkat al-Djawâmî*, i. 14 sqq.).

The personality of Selim I dominates all the great events of his reign. His unrelenting severity and the numerous executions which he ordered earned him the name of Yawuz, expressing at once horror and admiration. It is the latter sentiment that has prevailed regarding him. A whole series of histories are devoted specially to him with the title of *Selim-nâme* (see *Gesch. d. osm. Reiches*, vol. ii., p. vii.). Selim I has been made a national hero (one of the two German warships which the Turks acquired in 1914 was baptised Yawuz Sultân Selim). Just as his vast conquests of Muslim lands have given rise to the tradition of the transfer of the caliphate, so there has been attributed to him the deliberate pan-Islamic idea of reuniting all the lands of Islâm under his sceptre and in this way an attempt has been made to excuse his apparent cruelty (cf., for example, the pamphlet *Yawuz Sultân Selim we-Ittihad-i Islâm Siyaseti* by Yûsuf Ken'ân, printed at Constantinople n. d., but since the revolution). In reality the conquered lands had at the beginning of the sixteenth century just entered on a period of decline and depopulation as a result of the change by the Portuguese of the trade route with the Indies. The conquests were nevertheless of enormous importance for the religious and political orientation of the Turkish empire, which henceforth became the great Sunni power in opposition to Shî'î Persia (cf. e. g. the *qaṣida* addressed to him by the poet Khwādja Isfahānî in Browne, *A Literary History of Persia in Modern Times*, Cambridge 1924, p. 78). It is also from this time that Persian Shî'a influence in Turkey definitely gives way to Arab Sunni influence (Babinger, *Z. D. M. G.*, lxxvi. 143). The Ottomans, besides, imposed several of their manners and customs on the conquered, such as the practice of shaving the beard (Selim is always represented beardless) and the style of dress and mode of dressing the hair, without, however, exerting a greater influence for the moment on the civilisation of Syria and Egypt.

Selim is equally celebrated as a poet. His *Divân* is entirely in Persian and was printed in Constantinople in 1306. It was again published in Berlin in 1904 by Paul Horn, by order of the Emperor Wilhelm II. Only a single one of the verses in Turkish attributed to him is regarded as authentic (*Tedhkir-i Latîfî*, Constantinople 1314, p. 57 sqq.). From his early days in Trebizond, Selim was fond of the society of poets; among the better known of these are Djâ'far Celebi, whom he made marry the wife of Shâh Ismâ'il, taken prisoner in the battle of Çaldîrân, and whom he had executed in 1515 (cf. above), Âhî and Rewânî, whose *Mathnawî Wasâ'il* was dedicated to Selim; other influential men of his time were Kemâl Pasha Zâde [q. v.], and the Muftî 'Alî Djemâlî Efendi [q. v.] who legalised by a *fatwâ* the war against the Sunni Sultân of Egypt and who was one of the few men powerful enough to oppose on several occasions the execution of the Sultân's sanguinary orders.

O. E. M.*, No. 22. (J. H. KRAMERS)

SELİM II, eleventh Sultân of Turkey, reigned from 974—982 (1566—1574). He was born probably in 930 (1524). He was the son of Suleimân I and the celebrated Khurrem Sultân (Roxelana) (*Sidjill-i 'Othmânî*, i. 39, gives three different dates) and was the eldest of the latter's four children: Selim, Bâyezîd, Djahângîr (d. 1553) and Mihrmah (became wife of the Grand Vizier Rustem Pasha). Khurrem Sultân favoured Bâyezîd and to secure his succession to the throne she brought about by her intrigues and influence over Suleimân the execution of the heir presumptive Muştafâ (October 6, 1553, at Ereğli). After the death of the Sultâna in 965 (1557/58) a rivalry began between Selim and Bâyezîd which reached its height in 1559 on the occasion of the changing of the sandjaks of the two princes. Bâyezîd was moved from Konya to Amasia and Selim from Maghnisa (where he had been since 1545) to Kutâhiya; the former refused to move and collected troops. According to the historian 'Âlî, this quarrel was the result of the intrigues of Lala Muştafâ Pasha, who had been appointed in 1556 to the post of Lala with Selim by the Grand Vizier Rustem Pasha, with the object of bringing about Muştafâ's downfall, as he was an old enemy of his. Muştafâ is said to have provoked insulting letters from Bâyezîd to Selim, which resulted in the orders for the change of sandjak; as 'Âlî was himself secretary to Muştafâ Pasha, his statements may be considered accurate. The modern historian Ahmed Refik, however, thinks that it was the Sultân himself who, with the help of Rustem, wished to get rid of Bâyezîd in favour of Selim. Bâyezîd was defeated on May 30, 1559, on the field of Konya, fled to Amasia and thence to Persia to the court of Shâh Tahmâsp. The latter, after a long correspondence with Suleimân and Selim, consented to

hand over the prince and his four sons to Selim (so as not to break the oath by which he had sworn to Bāyazīd not to deliver him up to his father). As a result, Bāyazīd was put to death on September 25 1561. Selim remained in his sandjak until the day when a messenger from the Grand Vizier, Muḥammad Şokolli Paşa, informed him of the death of Suleimān (September 6, 1566) and the taking of Szigeth (September 8). Reaching the capital on September 24, where no one had expected him, the death of the Sultān being still kept secret, the new Sultān set out two days later for Belgrade. Here he awaited the return of Şokolli with the army and his father's body. When on October 24 the death of Suleimān was finally made public, Selim refused to receive the solemn *bai'a* of the troops and had distributed among them accession presents which were thought insufficient. They then returned to the capital. Suleimān's body was sent in advance with a small escort and buried in Constantinople without any ceremony. By the time Selim reached the capital in the early days of December, the Janissaries began to mutiny near the Adrianople gate and would not allow the new Sultān to enter his serail until the increase in the accession presents they demanded had been promised them. The distribution took place on December 10. Besides the Janissaries, the 'ulemā' and notably the Mufti Abu 'l-Su'ūd had handsome gifts given them; there was not even enough left in the treasury to pay the other troops.

Re-entering his palace, Selim abandoned himself to his taste for wine and dissipation, leaving the government in the hands of Muḥammad Şokolli [q. v.]. It was the latter who throughout the reign of Selim continued the traditions of the glorious reign of Suleimān. Here it is sufficient to give a brief résumé of the political and military events of the reign of Selim II. In April the Kapudan Paşa Piyāle returned with the fleet from the taking of Chios (Şakız) and the ravaging of Apulia and was given the rank of a vizier. At the same time negotiations were begun with Austria as a result of which plenipotentiaries arrived to discuss peace, which was arranged at Adrianople on February 17, 1568, between Maximilian and the Sultān; in addition to agreeing to the rectifications of the frontier, the Emperor promised to pay an annual present of 30,000 ducats. In the same month a Persian embassy arrived with great pomp in Adrianople to renew the truce. The peaceful relations existing with Poland, France and Venice were likewise confirmed. The French and Venetian capitulations were renewed. In 1569 took place the unsuccessful expedition against Astrakhan [q. v.], undertaken to make possible the project of making a canal from the Don to the Volga; this plan had been conceived by the governor of Kaffa, Čerkes Kāzim, but the enterprise fell through, chiefly as a result of the secret opposition of the Khān of the Tatars; next year peace was concluded with the Russians. From 1568 to 1570 a Turkish army was engaged in the reconquest of the Yaman from the Zaidīs, who had driven out all the Turkish garrisons in 1567 except that of Zabīd. At first Lala Muştafā Paşa — who, after a period of disgrace, had returned to the Sultān's favour, but never enjoyed that of Şokolli — had been appointed commander of the Yaman expedition, but was recalled as a result of intrigues by the governor

of Egypt, Kōdja Sinān Paşa, who replaced him as Ser-asker. After the successful commencement of the campaign by Özdemir Oghlu 'Othmān Paşa in 1568, Sinān arrived in 1569 and saw his conquests crowned by the taking of Şan'a (July 26, 1569) and Kawkabān (May 18, 1570). Several Turkish poets celebrated this victorious campaign, e. g. Nihālī, *Futūḥāt al-Yaman*. The taking of the island of Cyprus in 1570—71 was more due to Selim's own initiative; it was his favourite, the Jew Joseph Nassy, appointed by him Duke of Naxos, who is said to have suggested the plan to him. The violation of the truce with Venice was justified in a famous *fatwā* of the Mufti Abu 'l-Su'ūd. Lala Muştafā commanded the expedition; he took Nicosia on September 9, 1570, and forced Famagusta to capitulate on August 1, 1571. After this capitulation took place the horrible execution of the commander Bragadino. (The conquest of Cyprus is described in a *Tārīkh Kībrīs*; see Flügel's Catalogue, i. 236, N°. 1015). In the same year an alliance was formed by Venice, Spain and the Pope. Their combined fleets almost completely destroyed the Turkish fleet in the Gulf of Lepanto (October 7, 1571), but this defeat was not enough to weaken Turkey; a new fleet was built during the winter and by the peace of March 7, 1573, Venice had to give up Cyprus and promise to pay a war indemnity. The war with Spain was continued. The Spaniards occupied Tunis in 1572, but were driven out again in September, 1574, by Kōdja Sinān Paşa. During the same period (1572—1574) there were troubles with Poland in Moldavia on account of the pretender Ivonia; the latter at first supported by the Turks was in the end defeated and killed by them in June, 1574. Peace was renewed with Austria in November, 1574, in spite of the troubles on the frontier and the intrigues of the claimants for the throne of Transylvania.

Selim died in the night of December 12/13, 1574 (Sha'bān 27/28, 982), as the result of an accident in the palace. He was the first Ottoman Sultān to spend his life in the Serail, where the Sultāna Nūr Bānū was all powerful. His fondness for wine gained him the name of *Mest Sultān Selim*. During his reign dissipated habits spread even among high 'ulemā'. The system of bribery and corruption, which had begun under Rustem Paşa, penetrated to all ranks of society. But the traditions of the reign of Suleimān were still able to maintain the empire at the height of its glory under the direction of capable men like Şokolli and Abu 'l-Su'ūd. The *Kānūn-nāme* of Suleimān I, legalised by *fatwā*'s of the Mufti, was put into force, especially in all that concerned the disposition of landed property and the fiefs (cf. *Millī Tettebb'at Medī-mū'asā*, 1331, vol. i., Nos. 1 and 2).

Selim II's most famous building is the Selimiya mosque in Adrianople, built from 1567 to 1574 by the architect Sinān (detailed description in vol. iii. of the *Siyāhat-nāme* of Ewliyā Čelebi). He also carried out various buildings and repairs in Adrianople, Navarino, Mekka (see C. Snouck Hurgronje, *Mekka*, i. 16) and Constantinople (Āyā Sofia). According to Gibb, he is the best poet among the Ottoman Sultāns. He wrote his poems under the *makhlaṣ* of Selimī and surrounded himself with poets, such as Fazlī [q. v.]; Bākī also enjoyed his favour.

(J. H. KRAMERS)

SELİM III, the twenty-eighth Sultān of the Ottoman Empire, reigned from 1203 (1789) to 1222 (1807). He was born on Djumādā I 26, 1175 (Dec. 24, 1761), a son of Sultān Mustafā III and the Wālide Sultān Mihr-Şāh (d. 1805; see *Sidjill-i 'Othmāni*, i. 83) and succeeded on Radjab 11, 1203 (Apr. 7, 1789), to his uncle 'Abd al-Ḥamid I [q. v.] who had died on that day. Selim's reign is characterised by disastrous wars against the European powers and revolts in the interior, showing the weakness of the Ottoman Empire, and at the same time by the continuous efforts of the Sultān and a party of enlightened men to reorganise the old decayed institutions of the state, which led finally to his deposition.

On his ascension to the throne he energetically continued the war against Russia and Austria, but the Turks were beaten in Moldavia at Focsani by the Austrians (Aug. 1, 1789) and especially at Martinesci on the river Būza in Wallachia by the Austrians and Russians (Sept. 22). Here the Grand Vizier Djenāze Hasan Paşa (who had previously replaced Kođja Yūsuf Paşa) died and was succeeded by the famous Kapudan Paşa Djezā'irli Hasan [q. v.]. On Nov. 10, the Austrians occupied Bucarest, while, on October 8, Belgrad had already fallen into their power. At the same time the Russians under Potemkin continued their conquests in Bessarabia (Khotin and Oczakow had fallen already) and took Bender (Nov. 15). The treaty with Sweden (July 11) to subsidise this country in the war with Russia was of little avail, and Selim, being prevented by tradition from joining the army himself, summoned in a *Khatt-i sherif* all the Muslims to the holy war. Next year the Austrian danger lessened, especially after a treaty of alliance with Prussia (Jan. 31, 1790) and the death of Joseph II. In June the Turks even gained some success against them. After Prussia had concluded with Austria the Convention of Reichenbach on July 27, in which Austria promised to make peace with Turkey and both nations undertook to guarantee the integrity of that empire, an armistice was concluded at Djurdjewe (Sept. 17), followed, after very long negotiations, by the peace of Zistowa (to the West of Rustuk on the Danube) of Aug. 4, 1791. This treaty, concluded by the mediation of Prussia, England and Holland, restored the Danube principalities to the Porte; only Old-Orsowa had to be ceded to Austria. The war with Russia had been disastrous in 1790. The new Grand Vizier

died in March and was succeeded by Hasan Paşa Sherif [q. v.], who was not able to stop the Russian advance in Bessarabia. The Russians took Kilia in Oct. and, after a desperate struggle, Ismā'il [q. v.] on Dec. 22. They were also successful in the Black Sea and beyond the Kubān river, though they did not succeed in taking Anapa. Moreover, Sweden had concluded peace with Russia (Aug. 14). In the Aegean, however, the small Greek fleet commanded by Lambro Canziani and equipped at Trieste with Russian aid, was destroyed by the Turks. In February, 1791, the Grand Vizier was executed, by order of the Sultān, in his camp at Shumla and replaced by Kođja Yūsuf Paşa who made energetic preparations to continue the war. But the Russians under Repnin crossed the Danube at Galatz and beat the Turks completely at Matchin (April 9). As spirits in Constantinople had sunk very low, and there had been a big fire, the Porte ordered the Grand Vizier to propose an armistice, which was concluded at Galatz on August 11 and followed by the peace treaty of Jassy of January 9, 1792. In its 13 articles the treaty of Küçük Kainardji was renewed; in the West the Dniestr became the frontier between the two powers, whereas in the east the Porte undertook to bridle the Tatar tribes on the left bank of the Kubān; the Crimea was definitely lost to the Turkish Empire.

Immediately after the war the Sultān took up the question of the reforms which he considered inevitable to restore the strength of his Empire. In the beginning of his reign he had already made an attempt in this direction by insisting on the application of the sumptuary laws (on them see e. g. Mehmed Ghālib, *Selīm ṭhālithiñ ba'd ewāmiri muhimmesi*, in *T.O.E.M.*, No. 8, p. 500—504). Soon afterwards he invited a number of prominent and enlightened personalities belonging to the army, the administration and the 'ulemā to submit to him schemes of reform. All the projects were sent to the palace, and, as it seems, treated in a way which gave the anti-reform party the opportunity of turning them into ridicule and beginning its never ceasing propaganda against them (Djewdet, *Tārīkh-i*, vi. 7; here all the people who presented *Lawā'ih* are mentioned). The Sultān, however, proceeded with energy. The *diwān* was enlarged to a body of about 40 members under the chairmanship of the Grand Vizier or the Mufti, according to the matters treated. The new regulations which were elaborated successively were called *Kānūn-nāme's* or *niṣāmāt* and the total of Sultān Selim's reforms is known as *niṣām-i djedid*, which word, however, is also especially employed for the new regular troops. One of the first measures was the foundation of a new treasury (*irād-i djedid*) for the cost of the new institutions. It was formed by all available revenues and especially by confiscating a large amount of fiefs, the titularies of which had not fulfilled their military obligations (*mahtūl olan zī'āmet we-timārlar*); a special regulation for the investigating of these fiefs was made. By these and other revenues the financial base of the innovations increased steadily. The first corps of new regular troops was formed from the Bostandji's in 1792. They were destined for the protection of the big waterworks of the capital near the Black Sea at the village of Belgrad Köy, where at that time a Russian invasion was feared. Large barracks were built for them at Lewend Çiftlik,

where they were drilled, though it proved difficult to get volunteers. This first attempt was followed by a still larger establishment at Skutari, where around the enormous Selimiye barracks almost a new town with mosques and baths was created for the new troops. Other regulations concerned the provisioning of the army, the restoring of discipline among the Janissaries, the reorganisation of the *Djebedji*-corps and the artillery; to the reorganisation of this arm the French contributed considerably. Bonaparte is said to have had in 1794 the intention to put himself at the head of the Turkish artillery, and in 1796 the French ambassador Dubayet even brought with him to Constantinople a mounted artillery brigade. The reforming activity extended also to the improvement of the Bosphorus fortifications, the building of new warships under the energetic direction of the *Kapudan Paşa Küçük Hüseini* [q. v.], Selim's foster-brother, the manufacture of gun-powder and the instruction of the officers. The engineering-school at *Süddedje* in the harbour of Constantinople, founded under 'Abd al-Hamîd I, was also completely reorganised under French and English direction and a new navigation school was opened. Although the unfortunate experiences of the last wars made the people comply with all those innovations, there was, of course, a strong party opposed to them, consisting chiefly of the Janissaries and the *'ulemâ*, the more enlightened of whom, however, supported the reforms. As a measure of precaution not too many new troops were stationed on the European side of the Bosphorus. It is a remarkable fact that, as the reforms proceeded, there was much less opposition to them in Asia than in Europe, where rebellious chiefs took them as a pretext for their taking arms against the government.

The peaceful period from 1792 to 1798 had made possible the taking of all these measures; even the two formidable rebels in Europe, *Pazvân-Oghlû* [q. v.], who in 1792 had entrenched himself in *Widdin*, and 'Alî Paşa *Tepedilenli* [q. v.], who had become Paşa of *Yanina* in 1788 and failed in 1792 in his first expedition against the *Sulîotes*, were comparatively quiet; *Servia* enjoyed the generous administration of the Paşa's *Ebû Bekir* and *Hâdjîdî Muşafâ*. During this time the Porte paid much attention to her relations with foreign powers; new ambassadors were sent to the European courts and in Constantinople a great diplomatic activity was displayed by the *Re'is Efendi Râşid* (d. 1798). The international situation became more and more influenced by the French Revolution. Although the execution of *Louis XVI* made a bad impression, especially on Selim, who had, even before his accession, been in correspondence with him, the emissaries of the revolutionary government (*Descorches*) succeeded in arousing sympathy, even in the *diwân*; they pointed, for instance, to the fact that, now that France had instituted the "culte de la raison", they were no more in religious opposition to the Muslims. They had influential helpers in Constantinople, e.g. the well-known *Mouradgê d'Ohsson*, then Swedish dragoman and from 1796 to 1799 Swedish minister, and had nearly induced Turkey to declare war to Russia.

The situation was completely changed by the French expedition against Egypt. In vain the French representative in Constantinople, *Ruffin*, tried to tranquillise the Porte about the peaceful intentions of his government; on September 4,

1798, war was declared on France and *Ruffin* was imprisoned, as were also the French consuls and merchants. For the operations of the French in Egypt (they landed on July 1, 1798, after having taken *Malta*) see the article *KHIDIW*; the action of Turkey was here much less important and much slower than that of England. On January 5, 1799, the Porte concluded an alliance with England and the first Turkish troops landed on July 25 in *Abûkir*, but they were compelled by Bonaparte to retreat to their fleet, after the French army had just returned from the siege of 'Akka, where *Djazzâr Paşa* in defending the town had shown himself for the time a faithful vassal of the *Sultân*. In the last part of that year a Turkish army of 80,000 men commanded by *Diya Yûsuf Paşa*, *Grand Vizier* since 1798 (*Kodja Yûsuf Paşa* had been replaced already in June, 1792, by *Melek Muḥammad Paşa*, to whom after 2½ years had succeeded *'Izzet Muḥammad Paşa*), and containing about 4000 men of new regular troops had reached *Syria* where it was joined by *Djazzâr's* troops. The Turks took the little fort of *al-'Arîsh* on December 20 and at the same place the *Grand Vizier* concluded an armistice with *General Kleber* on January 28, 1800, in which the French promised to evacuate Egypt. But after the treaty had been broken by the English, *Kleber* attacked the *Grand Vizier*, who was advancing to *Cairo*, and defeated the Turkish army near the ruins of *Heliopolis* (March 20) after which the Turks retreated into the desert. Only a year afterwards, in March, 1801, the Turks participated again in the Egyptian campaign under the *Kapudan Paşa Küçük Hüseini*; this expedition resulted in the definitive evacuation of the country by the French and the occupation by British troops of Egypt. Turkey's other ally in this war was Russia. After a Russian fleet had already appeared in the Bosphorus in September, 1798, an alliance treaty was concluded on December 23. The combined Turkish and Russian fleets then went to the west coast of Greece and expelled, in March 1799, the French from the *Ionian Isles*, which former possession of *Venice* had been left to France by *Austria* in the peace of *Campo Formio* (October 17, 1797). The *Ionian Isles* then were constituted a republic under protection of Turkey and Russia. In the meantime 'Alî Paşa of *Yanina* succeeded in occupying temporarily some sea-ports in *Albania*. Notwithstanding the Russian alliance, the relations with Russia remained strained. By the mediation of Prussia a preliminary peace was concluded with France in Paris on October 9, 1801, in which the complete sovereignty of the Porte over Egypt was recognised, as well as the new republic of the seven *Ionian Isles*; for the ratification of these preliminaries the famous *Sebastiani* was sent for the first time to Constantinople on an extraordinary mission. To the peace treaty of *Amiens*, where the same stipulations were confirmed (March 27, 1802), the Porte was no party; she concluded in June a separate peace with France. In the meantime the *Grand Vizier* and the *Kapudan Paşa* tried to restore order in Egypt by exterminating the great *Mamlûk Beys*. As the latter were protected by the British, they did not succeed and in December returned to Constantinople leaving *Khosrew Paşa* as governor in *Cairo*; the evacuation by the English troops only followed in 1803, after on January 9 of that year an agreement had

been reached at Constantinople between the ambassador Lord Elgin and the Re'is Efendi, in which the Porte pledged itself [to pardon the Mamlüks.

The situation in the interior had been equally unsettled in these eventful years. Since the peace of Jassy bandit chiefs ('Othmān Pasha) had been terrorising Rumelia; they were patronised by influential people in Constantinople, enemies of the reforms, especially by Yūsuf Agha chief equerry of the Wālide Sultān. In 1797 Pazwān-Oghlū had taken possession of a large part of Bulgaria and, when an expedition against him under the Kapudan Pasha Husein failed, the Porte had to comply with his claims and recognised him as Pasha with three *tugh's*. But soon afterwards Pazwān-Oghlū, who was protected by Austria, invaded Wallachia (1801). The Porte then tried to restore order by appointing 'Alī Pasha of Yanina Beylerbey of Rumelia (1803), but in vain. The latter was suspected of having an understanding with Pazwān-Oghlū and was deposed again. In December, 1803, he then exterminated the little people of the Suljotes. In combating the Rumelian rebels that year the Porte derived great advantage from the use of the new *niṣām*-troops. Pazwān-Oghlū's invasion of Wallachia gave Russia the opportunity of intervention in the Danube principalities. Under Russian pressure the Porte consented to a revision of the former settlements, which increased the autonomy of the principalities, and appointed Ypsilanti as *hospodar* of Wallachia and Muruzi as *hospodar* of Moldavia, both for seven years (1803).

In 1803 difficulties arose in Servia [q. v.] occasioned by invasions of Pazwān-Oghlū and by the return of the Janissary chiefs or *dāy's*, who had been expelled after the war with Austria. These troubles resulted in the rising of the Knezes under the famous Kara Georg in 1804. Neither Turkish troops nor the diplomacy of the Porte were able to subjugate the Servians in the next years; they had since 1805 their own constitution and were masters of the citadel of Belgrad since Dec. 12, 1806. In the same year 1803 Mekka fell into the power of the Wahhābites (April 30), after nearly the whole of the Arabian peninsula had already recognised the authority of their chief 'Abd al-'Azīz (cf. R. Hartmann in the *Z.D.M.G.*, 1924, p. 195). In the same year also Muḥammad 'Alī [q. v.] came to the front for the first time who, after having broken the resistance of the Mamlūk Bey Bardisi, was appointed in 1804 governor of Egypt.

After, in May 1803, war had broken out again between France and England, the Porte had decided to maintain a strictly neutral attitude, but she was put in a difficult position by France's demand that she should recognise Napoleon as Emperor, from which, however, Russia's menaces withheld her. A personal letter of Napoleon to Selim was of no avail. Only in 1806, after in 1805 the alliance with Russia had been renewed, recognition followed. In 1805 General Sebastiani had come as Napoleon's ambassador to Constantinople and finally French influence prevailed. The Porte went so far as to depose the two russophile *hospodars* of Wallachia and Moldavia; the Czar then ordered General Michelson to occupy the two principalities. Notwithstanding the resistance of Pazwān-Oghlū and Muṣṭafā Bairakdar, the Pasha of Rusçuk, this order was completely executed in Decem-

ber, 1806. Under the influence of anti-Russian manifestations in Constantinople and Sebastiani's pressure war was declared on Russia (Dec. 27). Next month England came with exaggerated claims, e.g. the departure of Sebastiani, enforced by the presence of the British fleet at Tenedos. When the Porte refused to accept, Admiral Duckworth entered the Dardanelles, scarcely meeting any resistance, and appeared on February 10, 1807, before the capital. After a moment of consternation, in which the Kapudan Pasha was executed, the defence of Constantinople was organised under the direction of Sebastiani and French officers (Juchereau de St. Denis). As the British shrank from the responsibility of bombarding the town, they retired again, after fruitless negotiations, on March 1, and reached Tenedos with considerable losses. Immediately afterwards Turkey declared war on England. The English were no more successful in Egypt. Though an English fleet occupied Alexandria on March 17, they were beaten everywhere by Muḥammad 'Alī and had to evacuate the country in September.

In the meantime the interior political situation had passed through a grave crisis. After 1802 the reforms had been taken up again and in March, 1805, a *Khaṭṭ-i Sherif* had ordered a general levy among the population for the *niṣām*-troops. This occasioned at last an open revolt of the Janissaries, who concentrated themselves in Adrianople and Kırk Kilise. They completely defeated the *niṣām*-troops which the government sent against them in August, 1806. The result was that the reforms had to be given up for the moment; it was due to the influence of the Mufti Şālih-Zāde Es'ad Efendi [q. v.] that no worse things happened. The Grand Vizier Hāfiz Ismā'il Pasha (succeeded in 1805 to Diyā Yusuf Pasha) was replaced by the Agha of the Janissaries, Ibrāhīm Hilmī Pasha. The Porte did not even dare to send *niṣām*-troops against the Russians in Rumania.

The successes against England had not restored the Sultān's authority. On the contrary, the opposition had been still more alarmed by the influence of the French during the fortification of Constantinople. Though the reform party continued its work unostentatiously, a plot was devised in order to depose Selim, the leaders of which were Mūsā Pasha (so the name is given by Djewdet; Zinkeisen and others have Musta Pasha), the *Kā'im-maḥām* of the Grand Vizier (who himself had marched against the Russians), and the new Mufti 'Atā-ullāh Efendi. They incited the rude auxiliary troops (called Yamak), that were encamped on the Bosphorus, to rebellion. The rebellion broke out on May 15, 1807, because they refused to put on *niṣām*-uniforms; the leader of the rebels, Kabakdjī-Oghlū, pitched his headquarters at Büyük Dere. In the following days, while Mūsā Pasha and the Mufti were calming the alarmed Sultān, the propaganda against him spread rapidly and a fortnight afterwards Kabakdjī went with his followers to Constantinople, provided with a list of all the notorious reform partisans. Nearly all these people were dragged to the At Meidān and killed. At this last moment the Sultān hoped to save his throne by a *Khaṭṭ-i Sherif* abolishing the *niṣām-i dīdīd*. But his dethronement had already been decided. Next day, Rabi' I 22, 1222 (May 29, 1807), the Mufti declared with feigned reluctance

to a deputation of the Yamağs that the deposition of Selim was lawful; after this comedy he himself went to inform Selim of the decision of the people. Selim, yielding immediately, retired and as he had no children, the elder of Sulṭān 'Abd al-Ḥamīd's two sons, Muṣṭafā, was placed on the throne as Muṣṭafā IV [q. v.].

Selim's tragic death happened a year afterwards, when Muṣṭafā Bairakdār [q. v.] marched against Constantinople with his own troops and those of the Grand Vizier Čelebi Muṣṭafā Paşa to re-establish the reforms and to restore Selim to the throne. On Djumādā II 4, 1223 (July 28, 1808), Bairakdār entered with his troops the first court of the Serāy, demanding Sulṭān Selim. Muṣṭafā IV then allowed the execution of Selim, which had been postponed until that time, and that of his own younger brother Maḥmūd. Bairakdār came just too late to save the unhappy Sulṭān, who had been already killed when the Serāy gates had been broken open. Then Muṣṭafā's brother Maḥmūd was brought forth from his hiding place and put on the throne.

Selim III is described as a ruler of great gifts (cf. especially his necrology by Djewdet, viii. 262 sqq.). He wrote poems under the *takhalluṣ* Ilhāmī and is said to have had musical talents. His zeal for reform proves his high intelligence, but was checked by his inclination to occupy himself with the minutest details. He also seems to have been unable to tolerate powerful characters in his immediate surroundings; during his 18 years' reign he had no less than ten 'Grand Viziers. Of the pious works he had carried out, are chiefly mentioned a silver gate for the *türbe* of Abū Aiyūb Anṣārī and the complete restoration of the mosque of Fātiḥ. The greater part of his constructions were the barracks and schools for the reform projects.

H. KRAMERS)

SEMĀ'-KHĀNE, a Persian formation from the Arabic *samā'* [q. v.] and Persian *khane*, the dancing hall or dancing room, i. e. the space in the monasteries devoted to those Ṣūfī dances always held in abhorrence by Muslim orthodoxy, to *mukābele* (*mugābele*) and to *dhikr*. Dancing and

music are, as a rule, particularly associated with the Mewlewī. But the Bektāshī monasteries have also their *semā'-khāne*; the great old Bektāshī monastery of Seiyid-i Ghāzī, for example, has three *semā'-khāne* in one suite, in front of the *türbe* of Seiyid Baṭṭāl. Cf. K. Wulzinger, *Drei Bektaschi-Klöster Phrygiens*, in the *Beiträge zur Bauwissenschaft*, part 21, Berlin 1913, p. 32 and plan. Cf. also the Arabic, Persian and Turkish dictionaries. (TH. MENZEL)

SEM. [See *SĀM*],

SEMENNÜD, a town in the Delta of Egypt, in the province of Gharbiya on the west bank of the Nile (Damietta arm), a railway station on the Tanṭa-Damietta line (11,550 inhabitants in 1884.) The Arabic name is based on the Greek Σεβέννυρος (which gave its name to the Sebennytic arm), in Coptic Djemnūtī, and *Zab nutir* in ancient Egyptian. The ancient town was perhaps built on both sides of the river; in any case there is a little town opposite Semennūd on the east bank of the Damietta arm called Mīt (Minya) Semennūd (4372 inhabitants in 1884), capital of a district (*markaz*) of the province of Daqahliya, known from at least the sixth century A. H.

Succeeding the pagarchy of Sebennytos, the *kūra* of Semennūd included an area not easy to define on account of the difficulty of identifying certain adjoining *kūra*'s. It was bounded on the east by the Nile; to the south by the *kūra* of Banā and Buṣīr (places which exist to this day); on the west by the *kūra* of al-Buḍjūm, which seems to correspond to the ancient Βουβύλια, even if we do not admit the phonetic relationship of the two words; on the north by the *kūra* of al-Awīsiya, which al-Ya'qūbī identifies with al-Damīra about 15 miles from Semennūd. The Fāṭimids and the Aiyūbids had an independent province called Semennūdīya, which was not much larger than the old *kūra* (129 villages against 108).

Semennūd, which, according to a tradition preserved by Ibn Duḡmāl, was founded by an eponymous magician, a descendant of Lud, the son of Shem, had a temple which was destroyed about 350 (961) after having been used for a short time under Arab rule as a storehouse for fodder. It seems from a passage in the Jacobite Synaxarion that this temple had suffered abuse before the days of Islām. Arab legends credit this temple with possessing a *djinn* of a dark complexion, with long hair and a short beard, and Maspero thinks that the Arabs were describing a statue of Osiris or Phtah, whose face was painted blue or green.

Coptic tradition records the passage of the Holy Family through Semennūd during the flight into Egypt, and locates a certain number of martyrs here. This town was the see of a bishop still mentioned as late as the ixth century A. D. The town had a Coptic population which gave Egypt several Jacobite patriarchs. Al-Makrizī, however, tells us that the principal church, dedicated to the Apostles, was in a private house.

Semennūd was not on the line of march of the Arab army of invasion, which went from al-Faramā via Bilbis, and the Arab writers do not mention it in connection with the conquest of Egypt. John of Nikiu mentions that the local soldiery refused to fight the Muslims. Semennūd is again mentioned in 132 (750) on the occasion of a local revolt directed by a certain John (Yuḥannis), who was captured and put to death.

Savary found it a medium-sized town, populous and busy. 'Alī Pasha gives a list of the mosques of Semennüd, all modern or recently restored.

SEMĀNĀN, a town in Persia, on the main road from Media to Khurāsān, situated in the old province of Kūmis (Comisene; cf. Marquart, *Érānsāhr*, p. 71), between Ṭīhrān (in the middle ages Raiy) and Dāmghān, at the foot of the Alburz mountain and on the border of the great Kawīr. The form Simnān is most frequently found (e.g. Yāqūt); the modern pronunciation is rather Semnūn. The foundation of the town is ascribed to Taḥmūrath (al-Ḳazwīnī), and it is probably of considerable antiquity, although it is not mentioned in the sources dealing with pre-Muḥammadan history. Semnān is often mentioned by Arab and Persian historians à propos of the frequent passing of armies on the road to Khurāsān. In the time of al-Ḥadjdjādī the *ispahbād* of Raiy defeated there the Khāridjī Ḳatārī (Ibn Isfendiyār, *History of Tabaristān*, transl. Browne, p. 104; cf. also the article ḲATĀRĪ B. AL-FUDJĀ'Ā).

In the beginning of the tenth century Semnān belonged to the lands of the Ziyārīds, who lost it in 331 (943) (Ibn al-Athīr, viii. 140). In the time of the Būyīds the towns of Kūmis were considered to belong to Dailām. In 427 (1036) Semnān suffered from the ravages of the Ghuzz tribes (Ibn al-Athīr, ix. 268). But when Nāṣir-i Khusrāw passed through it in June, 1046, it seems that the town had been rebuilt (*Sefer-nāme*, ed. Schefer, Paris 1881, p. 3—4). It was laid waste in 618 (1221) by the Mongols under Subutai (al-Djuwainī, *Djahāngushā*, Gibb Mem. Series, i. 115) and Yāqūt still found it for the most part in ruins (iii. 141). In the xvth century Semnān belonged to the little dynasty of the Čelāwīds of Ṭabaristān (Melgunof, *Das südliche Ufer des kaspischen Meeres*, Leipzig 1868, p. 52). In the present administrative division the province of Kūmis no longer exists and Semnān is now the most westerly town in the province of Khurāsān.

The distances from Semnān to Raiy and to Dāmghān are given by al-Makḍīsī as 3 days' journey each, but the town is nearer Raiy. The water supply of Semnān and its vicinity comes from the little streams that run down from the Alburz. The surrounding plain is quite extensive and well watered. Tobacco is the principal crop. This plain is separated by a range of hills from that of Dāmghān.

The town has been famous since the time of Yāqūt for its manufacture of cotton goods. It is surrounded by a wall of clay and contains the ruins of several castles. There is also a xiith century bath (*ḥammām*) there and a fine minaret, of which the mosque is now a ruin in the centre of the bazaar. It is probably this mosque which is mentioned by al-Makḍīsī (p. 356), although, according to Fraser, it cannot be older than the xvth century (Sarre in *Islam*, xi. 170). At the present day the town has a fine mosque built by Faṭḥ 'Alī Shāh. The population was estimated by Curzon in 1890 at under 16,000.

The dialect of Semnān, remarked upon even by Nāṣir-i Khusrāw, has the reputation in Persia of being particularly unintelligible. Geiger (*Grundriss d. iran. Phil.*, i. 421) connects it with the group of Caspian dialects. Christensen, who was the last to study the Semnānī, reckons it among the numerous dialects of central and north-western Irān, the place of which in the general scheme cannot yet be definitely fixed.

Several traditionists and lawyers have the *nisba* Semnānī (Yāqūt, *loc. cit.*, and Brockelmann, *G. A. L.*, i. 373).

(J. H. KRAMERS)

SENĀR. [See SANĀR].

SENEGAL. The origin of the word Senegal has not been definitely ascertained. The majority of modern writers have connected it with the name of the Berber tribe of the Ṣanhādja or Zenāga, representatives of which have occupied since a fairly remote period a district north of the lower course of the Senegal, and they have interpreted the "river of Senegal" to mean "river of the Ṣanhādja". This explanation seems to be based simply on a fortuitous resemblance of two names denoting distinct objects. From the information supplied by early geographers and travellers, Muslim as well as Christian, it seems evident that there was at one time in the lower valley of the river a black kingdom called Sanaghāna or Sanghāna (al-Bakrī, xith century) or Senegany („Pilot-book" of the Medicis of 1351) or Sanaga (Deniz Fernandez, 1446) or Senega (Ca da Mosto, Thevet, Marmol) or *S-n-g-l* [the vocalisation is uncertain] (Maḥmūd Kōlī, author of the *Ta'rikh al-Fattāsh*, xvth cent.). The same authors and documents give the Ṣanhādja, whom besides they place more to the north, names clearly different (Ṣanhādja, Assenages, Azanaghēs, Zanhagu,

Sénègues, etc.). To this day the Moors descended from the Ṣanhādja give the lower valley of the river the name of Isongān. It is probably from the name of the province that the word "Senegal" comes. Marmol further says that Lancelot du Lac, who visited the region in 1447, gave the river the name of a kingdom within which its mouth lay.

In any case in the form Senegal the name has been applied since the xviith century to the river which flows into the Atlantic about 120 miles north of Cape Verd and to the colony founded by the French in this part of Africa. This colony, the capital of which is St. Louis on the Senegal river and near its mouth, and which includes the town of Dakar, the capital of French West Africa, measures approximately 75,000 square miles and had (in 1921) 1,225,523 inhabitants of whom 5,287 were European and 1,220,236 were natives; of the latter, 1,021,791 belong to the negro race, 191,351 to the hybrid branch of the Fulbe or Pul and 7,094 to the white race (Moors). It is bounded on the north by the course of the river Senegal from the region of St. Louis up to the confluence of the river Faleme; in the east by the latter river from its mouth up to about 12° 40' N. Lat.; in the south by a line running from the upper Faleme to the ocean at Cape Roxo, a little south of the estuary of the Casamance. Inland there is a foreign enclave formed by the British colony of Gambia which consists of the two banks of the river Gambia from Yarbutenda to the sea. Geographically the two colonies are sometimes included under the composite name of "Senegambia".

Senegal was perhaps the first of all the negro countries of Africa to succumb to the attacks of Islām. It was in a hermitage built on an island of lower Senegal that the religious movement of the Almoravids began about 1040 A.D. and the Almoravids won over to the Muslim faith about 1050 the sovereign and principal notables of the negro kingdom of the Taktūr or Tokorōr, which lay in the present province of Senegalese Fūta and the name of which slightly altered to the form Tuculor is still employed by the French to designate the negro inhabitants of this province. It was presumably soon afterwards, towards the end of the xith century, that Islām was introduced among the Sarakolle or Soninke of the province of Galam, above Fūta. Much later, towards 1770, the Tuculor clan of Tōroḡbe preached the holy war against the pagan Fulbe, then in political control of Fūta, a war which ended in 1776 with the defeat of the latter, the forced conversion to Islām of a great number of them, and the establishment at Fūta in the hands of the Tuculors of a Muslim theocracy with an elected government which lasted till 1890, the time of the definite annexation of Fūta to the French colony of Senegal. It is from this religious centre founded by the Tōroḡbe of the Senegalese Fūta that several great campaigns of conquest and islamisation covering a very wide field, have started, notably about 1800, that led by 'Uthmān Fōdye which ended in his conquest of the Hausa country and the foundation of the Muslim empire of Ṣokoto, and about 1845 that of 'Umar Tal, called al-Ḥāḡḡi 'Umar, which ended from 1854—1862 in the conquest by the Tuculors of the Cambara kingdoms of Kaarta and Sēgu, and the Fulbe kingdom of Māsīna. Meanwhile Islām had spread among a considerable part of the Mandingo peoples of the upper Faleme, of

the upper Gambia and the upper Casamance. At a more recent period it won over almost all the Wolof of the lower Senegal river and of the lands to the south as far as Cape Verd. The other native populations of the colony (Serer, Non, Banyun, Balant, Dyola, Basari etc.) are still faithful to their ancestral animism and resist Islām.

The statistics divide the native population of Senegal into 719,000 Muslims, 469,500 animists and 4,700 Christians. (M. DELAFOSSE)

SENKERE, a village on the Lower Euphrates, situated 15 miles E. S. E. of Warkā [q. v.] on the mound of Tell Sifr; it is built on the ruins of an ancient Chaldaean city, Larsam, the town of the god Shamash; it is in the present qaḍā of Samāwa.

Bibliography: Razzūk 'Isā, *Kitāb Djoḡhrā-fiyat al-'Irāq*, Baghdād 1340, p. 216; Loftus, *Travels and Researches in Chaldaea and Susiana*, London 1857, p. 244—245; Trelawney Saunders, *Surveys of Ancient Babylon*, London 1885, plate vi. (L. MASSIGNON)

SENNA is written Sinna or Sinandij (dij = *diz* "castle, fort"). The form Sihna leading to confusion with Ṣahna [q. v.] is wrong.

1. Capital of the Persian province of Kurdistān, the ancient seat of the wālis of Ardilān [q. v.]. For the period before the building of the present town see the article SĪSAR.

Under the year 988 (1580) the *Sharaf-nāme* (i. 88) speaks of a fief of Timūr-Khān, Ardilān, including Ḥasanābād, Sīna, etc., but the historian of Senna attributes to Sulaimān-Khān the building of the modern town on the site of a ruin already there. According to Rich, i. 208, the ancient Senna(?) was built on a flat hill to the south of the present town. The Persian *tārīkh* for the building of the latter is *ghamhā* ("woes") which gives 1046 (1636).

The town lies between the right bank of the Kishlak and Mount Āwīdar which separates Senna from the old capital Ḥasanābād. The castle of the wālis crowns the hill about 70 feet high which rises in the centre of the town. The principal decorations date from the wālis Khusrāw Khān I and Amān Allāh I. Malcolm, Rich and Čirikov have given descriptions of the castle. The hall of honour of Amān Allāh Khān (*tālār*), covered with transparent marble with numerous figures and inscriptions (dated 1233 = 1818) formerly had a gallery of pictures representing the principal sovereigns of the world (Napoleon, Alexander I), celebrated battles, etc. Another was still in 1918 decorated with eleven portraits of wālis and their viziers. A beautiful panorama is revealed from the now ruined *tālār* on the mountain separating the valley of the Kishlak ("winter grazing") from the plateau of Lēlagh (*yaylak*, "summer grazing").

The population of Senna in 1820 (Rich) was 4,500 families of whom 2000 were Jews and 50 Chaldeans. In 1851 Čirikov counted 10,000 houses. The census of 1295 (1878) gave the figures of 5,484 houses and 24,744 inhabitants. In 1918 the number of inhabitants was about 30,000 with 500 households of Jews and 60 of Christians, Aramaic-Catholics (Chaldeans) and Armenians. There is a Turkish consulate-general at Senna. Senna is a busy centre of trade. The exports are gall-nuts (*māsū*), tragacanth (*katīra*), skins of the fox, marten and wolf, cattle and carpets of a special design.

2. The province of Senna (Persian Kurdistān in the strict sense) is bounded on the north by southern Ādharbāidjān (cf. the art. *SAWĀJ-BULĀK*), in the N.E. by Šā'in-Kāl'a [q. v.], in the E. by Bidjār (Garrūs), in the S.E. by Hamadān, in the S. by the province of Kirmānshāh and more especially by its divisions: Sunkūr, Dainawar, Balā-Darband, Māhidasht and Zohāb; in the E. Kurdistān of Senna is bounded by the former Turkish districts: Šahr-i Zūr (Halabča and Khūrmal = Gul'ambar), Pendjwin and Shilēr.

Within these boundaries the land of Senna with the exception of Sakḳiz [q. v.] and Bāna, now attached to Ādharbāidjān, has an area of about 75 square miles; except for the principal routes the province is insufficiently explored. In the N. E. and S. E. we have high plateaus devoid of trees; the centre cut up by numerous narrow valleys slopes down to the E. where we find forests (oaks, nut-trees, elms and beeches).

The main group of mountains is formed by the massif of Čihil-Čashma (about 12,000 feet); it begins in Persia at the eastern extremity of the enclave of Shilēr which runs deeply into Persian territory. Towards the south the Čihil-Čashma sends out a prominent spur which forms the barrier of Kārān on the Senna-Mariwān road (see below). The continuation of the Čihil-Čashma to the east forms the southern boundary of the basin of the *Djaghātū* which turns northward towards Lake Urmiya. To the N. E. of the Čihil-Čashma is the frontier district of Haft-dāsh with its capital Sakḳiz and watered by the main branch of the *Djaghātū*. In the S. E. of the Čihil-Čashma are the sources of the *Khorkhōra*, the first important tributary of the *Djaghātū* on the right bank. A little below their junction the river of Tilakū flows into the *Djaghātū*; its valley is separated by the mountain Tandūrtū(?) from the next tributary which is called Sārūkh.

In this valley there are three districts of Senna: 1. *Khorkhōra* with 8,000 inhabitants and 50 villages of which the chief are: Bast, with a mosque built in 929 (1523) and Mawlānābād; 2. *Tilakū* (with the canton of Kōciān), 4,240 inhabitants and 24 villages of which the best known is Bāshmak; 3. *Karastū* on the left bank of the Sārūkh: 4,600 inhabitants, 15 villages. The Afshārs of Šā'in-Kāl'a encroach upon Karastū.

To the south of *Khorkhōra* and *Tilakū* are the northern sources of the *Kizil-Uzān* (in Kurdish *Kizil-wāzān*) which run into the Caspian Sea. The plateau through which these waters flow is covered with snow for four months of the year but in the summer is covered with rich pastureage. Three cantons administered together and including 82 villages are situated here. 4. *Kara-tawara* in the N. (village Bārbarār); 5. *Hōbātū* in the S. (villages of Kelekowā and Diwāndara) and 6. *Sārāl* to the east of *Hōbātū*. The southern bank of the *Kizil-Uzān* also has its sources in the territory of Senna but the fork between the two branches, north and south, is occupied by the basin of *Kishlak*, the waters of which run eastward.

The basin of the southern sources of the *Kizil-Uzān* is situated to the S. E. of Senna on the Senna-Hamadān road. It is a large plain sloping north-east, watered by numerous streams and having an altitude of 6,200—6,600 feet. The pass of Kargābād-Šalawātābād (8,300 feet) separates it from Senna (5,788 feet); to the south the pass of Mē-i Muḥammad separates it from the plain of Hamadān;

to the east it is bounded by the low chain of Pandja-i 'Alī behind which lies the district of Sunkūr (Songhor). This chain ("Alī's five fingers") corresponds to the *Kūh-i Pandj Angusht* mentioned in the *Nuzhat al-Kulūb*, ed. Le Strange, p. 209. To the N. E. the mountain of Talvantū forms the frontier of Bidjār. The principal source of the south branch of the *Kizil-Uzān* is called Talwār (Tarwāl) or Arzand; its tributary from the south is called Hādjidjā (Adjī-čai "bitter water"). The Talwār waters the district of 7. Eilāk (Kurd. Lālāgh), noted for the coolness of its climate and having 80 villages with 12,000 inhabitants. The Hādjidjā waters the district of 8. Isfandābād (*ispand* "lycopodium"), 94 villages with 14,000 inhabitants; the old capital of Isfandābād is Qaslān; its present centre is Korwa. Khanykov visited in these regions the tomb of Bābā-Gürgūr, near which is a sulphurous spring and quarries of translucent marble (*balghamī*). This saint, Djāmāl al-Dīn, bears the same sobriquet (Turkish *gür-gür* "coming in torrents") as the well known Bābā Gürgūr of Kirkūk, on whom see W. Schweer, *Die türkisch-persischen Erdölorkommen*, Hamburg 1919, p. 10.

The central part of the province is much more undulating and less well known; it is bounded on the west by the mountains forming the Persian frontier (the Awrāmān chain). All the streams of this area are carried off by the river Sirwān (see the art. *DIYALA*) which makes its way westwards by the formidable defile separating the mountains of Awrāmān from those of Shāhō. Although Haussknecht mentions a village of Sirwān near the confluence of the *Kishlak* and Gāwarūd, the great river of Sirwān only has this name below the defile of Awrāmān.

Two main arms form the Sirwān: one coming from the east and the other from the north.

The eastern branch is called Gāwarūd (Gābarūd) and rises near the pass of Asadābād. It flows first through the lands of Suḳūr (Songhor) and then waters the districts of Senna south of the capital. From the right the Gāwarūd receives its important tributary the *Kishlak* which rises in the fork between the two arms of the *Kizil-Uzān*. On the left it receives waters rising in the Murwārī, the Palangān(?) etc. The lower course of the Gāwarūd is given on the maps as hypothetical.

In this valley are the following districts: 9. Ḥusainābād on the *Kishlak* above Senna, with 34 villages and 5,000 inhabitants; 10. Ḥasanābād with 32 villages and 5,500 inhabitants which form the immediate neighbourhood of Senna. The district takes its name from the ancient capital Ḥasanābād, a stronghold on a considerable height 6 miles S. E. of Senna. 11. Żāwarūd with 58 villages must lie near the confluence of the *Kishlak* and Gāwarūd. The canton of Sūrsūr with the village of Faḳīh-Sulaimān (on the Kirmānshāh road) seems to belong to the same district. The 12th district, Palangān, must be farther down along with 13. Amīrābād and Bilāwar which are said to have 35 villages with 3,000 inhabitants. Palangān has an ancient ruined stronghold in which had lived an independent clan of the tribe of Kalhur, the chiefs of whom are given in the *Sharaf-nāme* (i. 317—318). The new English map places Palangān on the Gāwarūd at the mouth of the river that comes from the villages of Shāhīnī and Luhon (Lōn) on the northern slopes of the Shāhū.

The northern branch of the Sirwān is formed by a fan-shaped series of streams; the topography of several of them is still uncertain.

After these rivers join one another, they flow into the Gāwarūd near the village of 'Abbāsābād in the Awrāmān-i Takht.

Four districts lie in the northern basin of the Sirwān. 14. Kalāt-Arzān with 64 villages and 10,000 inhabitants immediately west of Senna. 15. Korrawaz, with 20 villages and 2,500 inhabitants, may be located on the south of the Senna-Gārān road. Lycklama praises the beauty of the landscape in this wooded district. 16. Mariwān (formerly Mihribān), an important district with 200 villages and 26,000 inhabitants which stretches east of the pass of Gārān up to the western frontier of Persia. The great Senna-Gārān-Pendjwin-Sulaimāniya road crosses it. Its centre is occupied by Lake Zaribār; this depression in the frontier range has always been of great strategic importance. 17. Awrāmān-i Takht (the "A. plain") lies east of the chain of the same name and is immediately south of Mariwān. The northern arm of the Sirwān crosses it from north to south. It is an inaccessible district governed by its hereditary *sultān*'s ("captains"). Their capital is Razāw. The district includes 33 villages with 4,000 inhabitants. The people of A. have preserved their own particular costume from early times (Rich, *op. cit.*, i. 202) and still use their own dialect. They are very brave but not hospitable. 18. Awrāmān-i Luhūn lies S. W. of the preceding. According to the natives, *luhūn* means "rocky" (cf. Vullers, *op. cit.*, ii. 1108; *lahana* "rock"). The district has 22 little villages buried among the spurs of the mountain to the north of the defile of the Sirwān. It occupies the western face of the chain and its frontier with Turkey is much complicated. A. Luhūn is also governed by its *sultān*'s, who are related to those of A. Takht and live in Nāfsūd.

In 1049 (1639) the Turco-Persian treaty confirmed the rights of Persia to Awrāmān and Mariwān but Persian suzerainty was only nominal.

To the south of the Sirwān running N. W. to S. E., as usual with Persian mountains, lies the great massif of Shāhō (= Shāh-Kūh) from which descend the left bank tributaries of the Sirwān: Dāriyān, Sarāb-i Hawli watering Pāwa, Lēla and the oriental sources of the Zimkān. The important district to the north and south of the Shāhō (between the Sirwān and the district of Zohāb) is called 19. Djawānrūd and has about 100 villages with 15,000 inhabitants. It is governed by a collateral branch of the Ardilān family. Djawānrūd is the principal centre of the great Djāf tribe and its name may be explained as Djāfān-rūd ("the river of the Djāf"). The little canton of Pāwa dependent on Djawānrūd lies opposite Awrāmān-i Luhūn. The *Sharaf-nāme* (i. 319) mentions "Bāwa" among the possessions of the Kalhur-i Dartang. Local tradition attributes the foundation of Pāwa to Bāw, eponymous ancestor of the Bāwandids (cf. above, BĀWAND); the Arabs, led by 'Abd Allāh b. 'Umar, are said to have entered Kurdistan via Pāwa where there was a sacred fire.

To the south and outside of the basin of the Sirwān are two districts dependent on Senna: 20. Rawānsar and 21. Bilāwar, both lying on the northern sources of the Kara-su (cf. the art. KARKHĀ). Rawānsar stretches to the S. E. of the Djawānrūd on the south slope of the outer spurs of the Shāhō. It is ruled by relatives of the governors of Djawānrūd.

The canton of Shādiabād (in Kurd. Shālīawa) on the road from Kirmānshāh is governed from Rawānsar. Bilāwar is on the direct Senna-Kirmānshāh road, to the south of the Murwāri pass. Its waters flow into the Rāzāwar river which belongs to Kirmānshāh. Its principal village in Kām-i Yārān.

Such are the four principal river systems of the province of Senna; those of the Lake of Urmiya, of the Caspian, of the Tigris and of the Karkhā.

Population. The total settled population of the province, according to the census of 1298 (1881), was about 150,000 in about a thousand villages. With the exception of the district of Isfandābād, peopled by Persian and Turkish elements and the tribes of Awrāmān belonging to a particular Irānian stock, the population is Kurdish.

The nomads of Senna are following the general course of evolution towards a settled or semi-settled life: in the winter they remain in their villages and in summer after the harvest (April-May) they go up to the neighbouring heights; thus, for example, the Kōmāsī tribe seems to have become definitely settled at Korrawaz.

The tribe of Djāf is the most important among those of Kurdistan of Senna. There are about 4,000 families of Djāf on the Djawānrūd which represents a total of at least 20,000 men (Kūbādī, Ēnakhi, Kalāshi, Ulād-begī sections etc.). In the xviii century a part of the Djāf migrated to the west and gradually occupied the left bank of the Diyālā, Shahr-i Zūr and Pendjwin. Towards 1914 these Turkish Djāf numbered 10,000 families; of this number about 2,000 are settled and 8,000 are semi-nomadic and go every year to the pastures of Persia. They go by the enclave of Shīlēr by which they reach the Čihil-Čashma mountains where they pass the time from May to October. Another emigration from Djawānrūd took place about 1850 when some 150 families of the Djāf settled on the Zohāb under the protection of the Gūrān.

The other important tribes of Senna are the Mandumī at Husainābād and their neighbours, the Galbāghī at Hōbatū, Sārāl and Kara-tawara. The first-named numbered 2,000 families (in 1286 A.H.) and the latter about 3,000. The two tribes are very turbulent and the central government frequently sends expeditions to punish them. Less important are the Shaikh-Isma'ilis (1600 families) and the Prpishū (1000) at Isfandābād. At Lelāgh ("summer pasture") we have the Tamar-tōza (300), the Korākā (1500), the Lāla (600), the Mahmūd-Djibrā'ili (400), the Baliwand (1500) and the Durrādī (1200). A section of the two last-named tribes leads a nomadic life on the Kishlak and the Gāwarūd. At Žawarūd and Kalāt-Arzān we have the Kōik (1000) and at Bilāwar the Gashkī (1500), a very turbulent tribe. To the north-east along the Karastū the Bōrākā lead a nomadic life (450) and a number of tribes lead a scattered existence: the Sakūr (300), the Giwa-kash ("cobblers"), the Kharrāt ("turners") and the Lurr-i Kulāghar ("hatters"). These last tribes (1700), whose names give their professions, are rather associations of workmen, "travelling guilds", serving the needs of nomads and settled tribes.

In conclusion we may mention quite near Senna the village of Kishlak occupied by the Sūzmāni whose men are musicians and women dancers of rather light morals (Lycklama, iv. 53).

Religion. The great majority of the population of Kurdistan of Senna belong to the Sunnī Shāfi'i

school. The *Shaikhs* of the Nakshbandī religious order have many devoted followers among the Kurds; the real hereditary centre of these *Shaikhs* is in the villages of *Ṭawīla* and *Bēyāra* which form an enclave in *Awramān-i Luhūn*. Even in Senna, Lycklama (iv. 51) says he saw a *Shaikh* who, holding a seance, cured sores which his dervishes inflicted upon themselves in the course of their ecstatic meeting (*dhikr*). *Shī'is* are only found in the non-Kurdish district of *Isfandābād*. It may, however, be noted that the family of *wālis* of *Ardilān* professed the *Shī'a*, which perhaps is explained by the sojourn which their ancestors had made among the *Gūrān* who were fervent 'Alī-Ilāhīs. The great sanctuary of the latter sect, *Perdiwar*, is on the right bank of the *Sīrwān* at *Awramān-i Luhūn* (above the *Prdi-kurān* bridge). The people of *Ḥajjīdj* (in the same district) claim to be descended from the seven dervishes whom the "Kūsa" (*kōsa* "beardless"), who is buried in this village, had brought with him. This saint is said to be no other than 'Ubaid Allāh, brother of the eighth *Shī'ī* Imām. According to the people of *Awramān*, the people of *Ḥajjīdj* were rather late in being converted to Islām by a certain *Gushāish*; they still venerate the tomb of *Pir Shāhriyār*, their religious chief before they adopted Islām. A manuscript book (in the local dialect) of his moral precepts is said to be preserved at *Nafsūd*.

The very costume of these peaceable woodcutters seems to suggest ethnic peculiarities. Lycklama speaks of their "bonnet in the shape of a cornet bent back behind, quite like the headdress . . . of one of the personages on the bas-reliefs of *Bisutūn*."

The only Christians (60 families) are in the town of Senna. These are for the most part Aramaic Catholics (*Kalānī*) whose head is the patriarch of *Mawṣil*. They have a church built about 1840 on the site of an older church. The Jews are more numerous: 500 families in Senna and little groups in the villages.

Language. The *Mukrī* Kurd dialect (*Kurmāndjī*) stops at *Bāna* and *Sakiz*. To the south of the *Djaghātū* in the *Khorkhōra* and *Tilakū* districts the *Kurdīstānī* dialect begins and continues to the southern frontier of the province. Its linguistic peculiarities still await systematic study. The language of *Marīwān* like that of the *Djāf* closely resembles *Kurmāndjī*.

A non-Kurdish Irānīan dialect is spoken in the two *Awramāns*. It is called *Awramī*, or popularly *mačū* (= "I say" in *Awramī*). To the same group belong the language of certain villages of *Pāwa*, that of the great tribe of *Gūrān* (on the *Zohāb*), that of the village of *Kandūla* (between *Dainawar* and *Kirmānshāh*) etc. In the heart of Armenia in the district of *Darsjīm* the "Zaza" dialect is related to the *Awramī*. According to O. Mann (*Die Tadjik-Mundarten der Provinz Fars*, Berlin 1909, p. xxiii.), all these dialects can be classed with the "central" dialects of Persia (*Samnānī*, *Kohrūdī*, *Maḥallātī*, etc.). We have no original Kurdish texts from Senna, but the *Awramī-gūrānī* dialects have a whole literature of lyric and epic poetry. The *wālis* of *Ardilān* particularly encouraged at their court the production of this dialect poetry which has certainly passed beyond the limits of the people speaking these dialects. It is curious that "to sing" in Senna Kurdish is *gūrānī čarrin* "to recite *Gūrānī* poetry". The Chaldeans and the Jews of Senna speak their Aramaic dialects in addition to Kurdish.

History. There are no monuments like those of *Kirmānshāh* or even of *Kurdīstān-Mukrī* (see the art. *SĀWQJ-BULĀQ*) in Senna.

For the oldest period we may mention the chamber cut out of the rock near *Rawānsar* (*Čirikov*, p. 528); it seems to belong to the same category of monuments as the sepulchres (Median?) of *Šahna* [q.v.]. Its entrance has the typical rectangular form but its ceiling is vaulted. At the other end of the territory of Senna (N. E.) are the caves of *Karāftū*, which seem (Ker Porter, ii. 538—552) to have been used for the Mithraic worship. The Greek inscription there is an invocation of *Heracles*. The caves lie off the usual route, but at the period when *Gaznā* (*al-Shīz* of the Arabs, the modern *Takht-i Sulaimān*) flourished they must have led to its sanctuary (the fire-altar *Ādhargushasp*).

As to the ancient toponymy, *Streck*, *Billerbeck* and *Thureau-Dangin* have collected the Assyrian references to Persian *Kurdīstān*. Unfortunately no concordance of modern names has so far corroborated their hypotheses.

The leases in Greek and Pahlavī found about 1909 in a cave in *Mount Kōsālān* (*Awramān-i Takht*) and going back to the first century B. C., mention names which may refer to the locality where the find was made (the hyparchies: *Βασιρεα* and *Βασιρδωρα*, the stations-σταθμοί: *Βαϊθαβαρτα* and *Δυσανδρίς* and the village-κώμη: *Κωφάνις* or *Κοπάνις*).

The ingenious identification of Median places mentioned in *Ptolemy* (vi. 2) proposed by F. C. *Andreas* refer to territories outside of the modern Senna. For the Arab period see the word *SĪSAR*.

Kurdīstān of Senna and *Ardilān* [q. v.] were for at least four centuries governed by hereditary *wālis*. Their legendary history makes them originate in the *Sāsānīan* or early 'Abbāsīd period. The *Sharaf-nāma* only says that *Bābā Ardilān*, a descendant of the *Marwānīds* of *Diyār-bakr*, had settled among the *Gūrān* and towards the end of the Mongol period became governor of *Shahr-i Zūr*. According to *Rich* (i. 214), the *wālis* were of *Gūrān* origin (of the clan *Mamū'ī*). Their history became better known from the time of *Ma'mūn b. Mundhīr* to whom the historian 'Alī Akbar gives the date 862—900 A. H. The *wālis* took an active part in the struggle between the *Safawīs* and the Ottoman *Sultāns*, sometimes on the Persian side and sometimes on the Turkish. The *Sharaf-nāma* stops at the reign of *Halō-Khān* (*halō* "eagle" in Kurd.) oscillating between the two rival empires (994—1014). Local historians continue the tradition to our day.

With only slight interruption the *Ardilān* family retained authority throughout the *Safawīd* period when the four western frontier districts enjoyed a semi-independence: 'Arabīstān (the *Shī'ī* *wālis* of *Huwaiza*), *Lurīstān*, *Kurdīstān* and *Georgia*. During the *Afghān* invasion *Khāna Pasha Bābān* of *Sulaimānīya* seized Senna in 1132. The coming of *Nādir* brought back to Senna *Subhān Wardī Khān Ardilān* (1143—1169 with interruptions). In 1164 *Karīm Khān Zand* laid waste the district of Senna. After a period of troubles *Khusrav Khān Ardilān* (surnamed "the Great") settled at Senna (1168—1204). *Āghā Muḥammad Qādjār* as a reward for his exploits assigned *Sunkur* (*Kulyā'ī*) to him. His son *Amān Allāh* "the Great" (1214—1240) much improved the town. *Malcolm* and *Rich* were his guests. His son *Khusrav Khān Na-kām* ("not having enjoyed life" i. e. died young) succeeded him.

(1240—1250); he is celebrated for his literary abilities. Under his son Riqā-Kūli quarrels broke out in the family. The wālī (1250—1266) was imprisoned at Teherān whence he only escaped after the death of Muḥammad Shāh. His brother Amān Allāh (1265—1284) was the last hereditary wālī of Kurdistan. In 1851 Čirikov was a witness of the intervention by the central government in the affairs of the province under the pretext of discontent among the subjects of the wālī. In 1284 (1868) the energetic prince Tarḥād Mirzā was appointed governor-general from Teherān. He ruled Senna till 1291 and restored order to the ancient fief of the Ardilān. Their descendants still exist in Senna but are now of no importance. On the other hand the old families who held office at the court of the wālīs continue to play a prominent part in local life.

(V. MINORSKY)

SENNÄR. Modern Sennär is a village situated on the Blue Nile about 170 miles south of Khartūm. It is the seat of a District Commissioner, and the headquarters of an administrative district of the Blue Nile Province. The district has a population of about 50,000, which is composed of a mixture of Sūdān tribes and Fellata immigrants from West Africa. The Sennär dam, which irrigates a large cotton growing area, is situated at Makwar, about six miles to the south of Sennär village.

The older usage which extended the name of Sennär to the triangular territory between the Blue and the White Nile with undefined borders in the south is obsolete, and the country in question now forms the Blue Nile Province and the Fung Province of the Anglo-Egyptian Sūdān.

The discovery of pre-historic remains at Gebel Moya and of Meroitic finds near Sennär itself shows that the district has been inhabited since a remote period, but historically Sennär has only been of note as the seat of the Fung [q. v.] Sulṭānate, which formed the most important political organisation in the Eastern Sūdān from the sixteenth to the beginning of the nineteenth century. and the foundation of Sennär itself is connected by native chroniclers with the establishment of this kingdom in A. D. 1504. The semi-barbaric dynasty, known to natives of the Sūdān as the

Blue Sultānate (*al-salṭana al-sarḡā*), claimed sovereignty over the territory extending from the Red Sea to Ḳordofān and from the borders of Abyssinia to the third cataract, but its rule was never effective except in the immediate neighbourhood of Sennār itself; the rest of the country was split up amongst a number of petty kings and tribal chiefs, who were attached to the paramount power by means of a loosely-knit feudal organisation. The chronicle of the Sennār kings, a dreary record of internecine wars and barbaric diplomacy, may be read in MacMichael's *History of the Arabs in the Sudan*. The organisation and laws of the kingdom are of some interest as exhibiting a blend of pagan African and Arabo-Muslim elements. Even in the time of Bruce, the discoverer of the Blue Nile, there still survived the law that a king might be slain "if it were decreed that it is not for the advantage of the state that he be suffered to reign any longer", and a high functionary of state, styled *sid el-gōm* (*saiyid al-ḡawm*), was charged with the duty of carrying out the decree. Parallels to this law are afforded by the custom of Meroë in the 3rd century B.C. and an analogous custom still observed by the Nilotic Shilluk and Dinka. The intercourse between the kings and the vassal chiefs was regulated by an elaborate ceremonial; the more important of the latter bore the title of *mangil* (a word of unexplained origin) and were distinguished by the rights of *kakar* and *taḡiya*, i.e. the right to use a royal chair of state and a peculiar head-dress shaped like the horns of a bull.

Arab and Muslim influences, on the other hand, made themselves felt from an early period. The kings claimed descent from a remnant of the Banī Umaiya, who were said to have entered the country from Abyssinia, where they had taken refuge after the rise of the 'Abbāsīd dynasty, and this tradition may well refer to the immigration of small parties of Arabs, who married into an aboriginal tribe and introduced Islām without materially affecting the ethnic characteristics of the tribe (cf. the marriage of Djuhaina Arabs with the daughters of Nubian kings in the account of Ibn Ḳhaldūn, quoted by MacMichael, *op. cit.*, i. 138). In any case it is clear that the Fung were nominally Muslims at the time of the establishment of their kingdom and that the overthrow of the kingdom of Aloa and the disappearance of Christianity from Sennār were brought about by an alliance between the negroid Fung and a coalition of the Arab tribes, which had immigrated into the Sūdān during the period of decay which beset the Christian kingdoms of Nubia. The Islāmisation of the country is intimately connected with the missionary activities of a number of scholars and saints who flourished under the Fung sultānate, and whose lives are related in the still unpublished *Ṭabaḡāt* of Wad Ḍaif Allāh. Yet owing to the isolation of the country Sennār has played no serious part in the cultural life of Islām, and the *riwāḡ* (or hostel) of Sennār students at al-Azhar is a foundation of the Egyptian government subsequent to Muḥammad 'Alī's conquest of the Sūdān.

After a period of rapid decay Sennār became a dependency of Egypt in consequence of Muḥammad 'Alī's expedition in 1821. Under Egyptian rule the town was a centre of trade and the headquarters of a *mudiriya*, the buildings of

which were destroyed by the Mahdists in 1885. The palace and mosque erected by the Fung kings was already in ruins at the time of Cailaud's visit.

Modern Sennār is about a mile and a half distant from the ruins of the old town. It is now of comparatively small importance, and its place as a centre of trade and administration has been taken by Wad Medani.

(S. HILLELSON)

SEPOY is the English corruption of *sipāhī*, the adjective formed from the Persian word *sipāh*, "army". *Sipāhī* is used substantively for "member of an army, soldier", and occurs in literary Persian, though it is no longer current in the modern language. The Turks and the French have borrowed the word, the latter in the form *spahi*, and in these languages as well as in Persian it invariably means a horse-soldier, in which sense it is used by the English traveller Hedges (*Diary*, ed. Hakluyt Society, i. 55) in 1682. In India both the French and the British adopted the word, which seems to have reached them through the Portuguese, the former writing it *cipaye* or *cipai*, and the latter *sepoi*, *sepoi*, *sepoi*, *sepoi*, *sepoi*, etc., but there both nations have applied it since the beginning of the eighteenth century to natives of India trained, armed and clad after the European fashion as regular infantry soldiers. Regiments of sepoys were first raised and employed by the French. In 1748 Dupleix raised several battalions of Muslim infantry, armed in the European fashion, and in 1759 Lally wrote to the Governor of Pondicherry: "De quinze mille cipayes, dont l'armée est censée composée, j'en compte à peu près huit cents sur la route de Pondichéry". Stringer Lawrence soon imitated Dupleix in forming regular battalions of sepoys in Madras, and in 1757 a force of sepoys accompanied Lord Clive when he left Madras in order to recover Calcutta. The military establishment of Bengal had consisted of one company of artillery, four or five companies of European infantry, and a few hundred natives armed in their own fashion, but after the recovery of Calcutta from the Nawwāb Sirāj al-Dawla a force of Madras sepoys was used to form the nucleus of an army for Bengal, and 2,000 sepoys fought at the battle of Plassey in June, 1757. About the same time sepoys were raised and employed in Bombay, and European adventurers in native states raised and drilled battalions of sepoys for their masters.

In 1795 the infantry of the three Presidency armies was organised in regiments of two battalions each, each battalion consisting of eight battalions and two grenadier companies. Of such regiments Bengal possessed twelve, Madras eleven, and Bombay four, with an additional marine battalion. Henceforward the three armies grew on divergent principles and with different organisations. The

Sepoy Mutiny of 1857 shattered the old Bengal army and seriously affected that of Bombay, but both were reconstituted and remodelled. Early in the twentieth century Lord Kitchener, then commander-in-chief in India, formed the three Presidency armies into one Indian army.

SER. [See SAR].

SERAIL. [See SERĀY].

SERĀY (P.) This word which is derived from an old Persian form **srāda* (from the root *brā* "to protect") has in Persian the general meaning of dwelling, habitation. The Arabic word *surādīk* "tent" has been borrowed from a diminutive in *k* formed from **srāda* (Horn, *Grundriss der neu-persischen Etymologie*, Strassburg 1895, p. 199).

We frequently find in Persian the word *serāy* compounded with another substantive to indicate a particular kind of building, like *kār-wān-serāy* (cf. the art. KĀRWĀN). In Persian mystic poetry *serāy* is an expression for the terrestrial world, the temporary abode of man (cf. *Sipendī*).

It is in Turkish lands that *serāy* has come to mean particularly the seat of government (like the Turkish word *honağ*) and the residence of a prince, a palace. From this meaning come the names of towns in Tatar countries and in Turkey called simply *serāy* (cf. the articles SARĀY and SERAYÉVO) or compounded with *serāy* (Ağ-Serāy etc.). In Turkey the *serāy* par excellence was the *serāy-i Humāyūn* of Top Kapı in Constantinople [q. v.].

In Arabia the form *sarāya* is used for palace in the 1001 Nights. The Italian loanword *seraglio* and the French *sérial* are sometimes found with the meaning harem but this limitation of meaning is not Oriental.

SERAYÉVO, Turk. Bosna Serai or simply Serai (cf. the art. BOSNA SARAI), capital of Bosnia in the Southern Slav states, picturesquely situated on the Milyačka in a valley open to the west enclosed on other sides by high and rocky hills, 1730—2273 feet above sea-level, with 60,087 inhabitants (1921) (of whom one third are Muslims); they mainly live by local industries (copperware, silver-filigree, carpets and tobacco). In the xvth century we find in place of Serayévo the powerful fortress of Vrhbosna, part of which still survives in the modern citadel of Serayévo. Even in the xvth century Serayévo was still generally known as Varbosania. The place is first mentioned in the Christian period in 1379 as the residence of Ragusan merchants and again in 1415 as the burial-place of the voivod Paul Radenović. The Turks saw the admirable situation of the place and chose it as the military centre of the conquered district when they captured Bosnia under Mehmed II in the spring of 867 (1463); tradition records us the name of the alleged leader, Girāy Khān (= Hādjdī Girāy Khān, d. 871 = 1466?), who was also buried near Serayévo (cf. *Die früh-osmanischen Jahrbücher des Urudsch*, ed. by F. Babinger, Hanover 1925, p. 126, 4—5, and F.

Giese, *Die altosm. anonymen Chroniken*, i., Breslau 1922, p. 112, 23 sq.; ii. [German transl., Leipzig 1925, p. 150 (*Abh. f. d. K. d. Morgenl.*, xvii/1.)]. We already find here as early as 1438 and 1439 a Turkish governor who had been appointed to control the tributary native dynasts. After the final conquest of Bosnia by the Ottomans the Turkish governor of Bosnia ruled at Vrhbosna which name was retained, as the journals of Petantius and Benedict Kuripešić (1530; cf. B. Curipeschitz, *Itinerarium der Botschaftsreise*, ed. by El. Lamberg-Schwarzenberg, Innsbruck 1910, p. 33 sq.: Verchbossen) and the Ragusan correspondence (cf. J. Gelcich and L. v. Thallóczy, *Ragusa és Magyarországgal*, Budapest 1887, p. 674 [1513]: Verbosavia) show; forms like Werchbossen, Varbosania, Verchbössania etc. are also found. About the middle of the xvth century, however, the name Bosna Sarai ("Palace on the Bosna"), Slav. Sarayévo, Ital. Seraglio, Seraio (cf. Giac. di Pietro Luccari, *Copioso Ritratto degli Annali di Rausa*, Venice 1605, p. 17: *il castello di Varch-Bosna, da cui crebbe la città di Saraio*), appeared and gradually drove out the older name. Serayévo is found in 869 (1464) in a *waḡf-nāma* as *Medīne-i Serāy*. The name Bosna Serai or simply Serai comes from the palace which Mehmed II built after the capture of the town, on the site of the *Khunkār Djām'ī* (Imperial mosque, Careva Jamiya) (cf. Ewliya, v. 428; J. v. Hammer, *Rumeli und Bosna*, Vienna 1812, p. 160). Under Ottoman rule Serayévo increased in importance, particularly because it was the residence of the governors of Bosnia (cf. C. v. Peez, *Die ottoman. Statthalter in Bosnien*, in the *Wissenschaftl. Mitteilungen aus Bosnien* etc., ii. 344 sqq., Vienna 1894), who did much to beautify the town and transformed it into a Muḥammadan city between 900 and 1000 A.H. Numerous mosques, madrasas and baths arose, some very splendidly equipped, like the foundations of Ghāzī Khusrav Pasha (1506/1512 and 1520/1542) which are still kept in existence to-day. Ghāzī Khusrav (cf. and the document in *Cod. Turc.* 320 of the Saxon National Library in Dresden) is buried in Serayévo (cf. Ewliya, *Seyāhat-nāma*, v. 441, and *Wissenschaftl. Mitteilungen aus Bosnien*, i. 503 sqq.). Although after the definitive conquest of Bosnia the residence of the Turkish governor was moved from Serayévo to Banyaluka, the former retained its importance. Apart from a brief interruption by Prince Eugene's occupation of the town in October, 1697, which lasted a few hours only, Turkish rule lasted 415 years in Serayévo. On Aug. 18, 1878, the town was taken by the Austrian Artillery General, Josef Freiherr von Philippovich (1818—1889) after a sharp fight and incorporated in the Danube monarchy. On Oct. 6, 1908, the annexation with the consent of the Powers was proclaimed. On June 28, 1914, the Austrian heir, the Archduke Franz Ferdinand, was assassinated here. After the collapse of the Danube monarchy in 1918 Serayévo with Bosnia and Herzegovina passed to the newly formed Southern Slav State.

Serayévo which is the residence of a Muslim *Ra'is al-'Ulamā'* and has a Sher'at school, has a number of buildings from the Muslim period. Among the eight mosques, all of the xth century, of which Ewliya Čelebi (xviii century) mentions the mosque of Ferhād Pasha (built 969 = 1561), of Khusrav Pasha (built 937 = 1530),

of Ghāzī 'Alī Pasha (built 960 = 1553) and of 'Isā Pasha (built 926 = 1520), the finest is that of Ghāzī Khusrav (Begova Jamiya). Of the monasteries (cf. Ewliya, v. 431 sq.) that of the howling dervishes, Sinān Tekkesi (Sinan-tekiya), founded by Hādjīdī Sinān Agha (d. Ramaḍān, 1049 [began on Dec. 26, 1639]) in 1638 (cf. *Wissensch. Mitteil. aus Bosnien*, i. 506 sqq., with a picture), still exists. The description which Ewliya gives of Serayévo in the xviii century is surely much exaggerated (cf. Ewliya, v. 428—441); at least of the splendours of all kinds described there not very much has been saved for the present day. It is true that in course of time many edifices have been destroyed by numerous devastating fires (1480, 1644, 1656, 1687 and 1879). Serayévo was an Ottoman mint: copper coins (*manḡlir*) were struck here under Sultān Mehmed IV and Suleimān II in the years 1085, 1099 ("Bosna") and 1100 ("Serai") (illustrations in St. Lane-Poole, *Brit. Mus. Cat. Or. Coins*, vol. viii., *The Coins of the Turks*, London 1883, pl. vi., No. 401; cf. Ghālib Edhem, *Takwīm-i Meskūkāt-i 'Oṭhmāniye*, Stambul 1307, p. 228 sqq.); Č. Truhelka, in the *Wissensch. Mitteil. aus Bosnien*, ii. 350 sq., iv. 396 sq. (copper coins struck in 1085 [1674/75] in the reign of Mehmed IV; for general information E. v. Zambaur, *Prägungen der Osmanen in Bosnien*, in the *Nuism. Zs.*, New Series, vol. i., Vienna 1908). Serayévo is the birthplace of the important Ottoman poet Mehmed Nerkesi (cf. *Mitteil. zur osm. Geschichte*, i., Vienna 1922, p. 152 sqq., and *Yeñi Medjmu'a*, i., Stambul 1917, part 15—18), and intellectual life was always active in Serayévo and neighbourhood in the Turkish period (cf. Safvet Beg Bašagić, *Bosnjaci i Hercegovini u islamskoj književnosti*, Serayévo 1912, a Literary History of Muslim Bosnia Herzegovina).

(FRANZ BABINGER)

SERBEDÄRS, the name of a line of robber chiefs who made themselves masters of a considerable part of Khurāsān; their subjects are also known as Serbedārs. This state, a regular republic of brigands, in which military considerations and the influence of Shī'ī dervishes predominated, was formed during the troubles that succeeded the death of the Ilkhān Abū Sa'īd; it collapsed before the great Timūr. The name Serbedār, which one might translate "gallows-bird" (or perhaps better "desperado"), goes back, according to the historian Khwānd-amīr, to a saying of the first chief, 'Abd al-Razzāk: "*Ba mardī sar-i khwād bar dār dādan hazār bār bihtar kih ba nāmardī ba kāt rasidan*" ("courageously venturing to be hanged is a thousand times better than being killed as a coward"). Dawlat-shāh, *Tadhkirat*, ed. Browne, p. 278, gives, however, a different explanation of the origin of the name. According to Ibn Baṭṭūṭa, the Serbedārs were called in the 'Irāk: *Shuffār* (robbers) and in the Maghrib: *Ṣukūra* (birds of prey, falcons). Their capital was Sabzewār in the district of Baihaḡ. The first Amīr Serbedār, 'Abd al-Razzāk, was the son of an 'Alid, Shihāb (or Tādī) al-Dīn Faḍl Allāh Bāshṭīnī, a former official of the Shāh or Djuwain.

'Abd al-Razzāk was able to gain the favour of the Ilkhān Abū Sa'īd (d. 736/1335) who gave him a public appointment. Appointed to administer the taxes of Kirmān, 'Abd al-Razzāk spent all the tribute he received; but the death of the Mongol prince took place in time to get him out of his difficulty. He went to Bāshṭīn (a village in the district of Baihaḡ), his former abode, where he collected a band of adventurers and malcontents, with the object of becoming independent sovereign of a part of Khurāsān. He had first of all to fight with the vizier 'Alā' al-Dīn Muḥammad Faryumadī, then all-powerful in this country; the latter was defeated and killed in 737 (1336/1337). After the death of 'Alā' al-Dīn, 'Abd al-Razzāk seized the town of Sabzewār (738) which became the headquarters for the Serbedār chief's brigandages. According to Dawlat-shāh, he also conquered Djuwain, Asfarā'in, Džādjarm, Biyār and Khudjand. In 738 (1337/1338) in the month of Safer (according to others in Dhū 'l-Hiǧǧja) 'Abd al-Razzāk died, assassinated by his brother Wadīḥ al-Dīn Mas'ūd, who succeeded to the throne. The Oriental authors, even those who, like Ibn Baṭṭūṭa, are not prejudiced against the Shī'ī Serbedārs, represent 'Abd al-Razzāk as a tyrannical and unjust ruler, the opposite of his brother Mas'ūd. The latter, according to them, only killed him in legitimate self-defence. The romantic details that are given of the death of the first Serbedār prince have a very apocryphal look; probably the historians have blackened the character of 'Abd al-Razzāk to excuse Mas'ūd's fratricide. The latter, the second Serbedār chief, took the title of Sultān (Ibn Baṭṭūṭa, ed. Defrémery and Sanguinetti, iii. 65/66), and had warlike ambitions of further extending Serbedār rule. An ardent Shī'ī — Ibn Baṭṭūṭa tells us that the Serbedārs at that time intended to exterminate the Sunnis in Khurāsān — he attached the dervish Ḥasan Džūrī to his person, who for political reasons had been thrown into prison by the prince of Nišāpūr. The dervish was able to escape the wrath of the latter; the authorities are not agreed if Mas'ūd aided him to escape or not. Dawlat-shāh says that Mas'ūd himself became a *murīd* of Džūrī.

The first campaign of the new Serbedār chief was directed against the lord of Nishāpūr, Arghūn-Shāh Djānī Kurbānī. It is probable that this expedition took place as early as 738. Arghūn's army was routed: Nishāpūr and Djām fell into the hands of Mas'ūd. The defeated ruler sought refuge with Togha Timur Khān of Djurdjān. It seems that Mas'ūd and Djūri had considered the possibility of extending their power over the whole of Khurāsān. The Serbedār forces seem to have begun by attacking Togha Timur. It would seem then that the defeat of the Khān on the banks of the Atrak, an event mentioned by Dawlat-shāh as happening before Mas'ūd's campaign against Husain Kurt of Herāt, took place during this first war of the Serbedārs against Djurdjān. In any case, to realise their projects of conquest, Mas'ūd and Djūri turned their attention to the king of Herāt already mentioned (743 = 1342—1343). On Šafar 13 of this year the two princes' armies met near Zāwa. In the battle Hasan Djūri fell, either killed by the enemy or assassinated by order of the Serbedār chief. Indeed, it would not be surprising if Mas'ūd feared the ascendancy of the Shaikh at this time when, according to the historian Zahir al-Din (ed. Dorn, p. 338): "*zimān-i iktitār-i ān wilāyat dar akhtar-i umūr ba dast-i shuyūkh būd*"; in free translation: "In this country most things are performed in accordance with the wishes of the shaikhs". The battle of Zāwa was decided in favour of the ruler of Herāt, although it at first looked as if the Serbedār army had won. Mas'ūd had to withdraw and returned to Sabzewār. The historian Khwāndamīr recounts after these events a campaign against Djurdjān as well as the defeat and death of a brother of Togha Timur; he says that as a result Mas'ūd was able to become master of Astarābād, while the Khān fled from his capital (end of 743). Another authority, however, puts these events in 742 (cf. B. Dorn, *Die Geschichte Tabaristans und der Serbedare nach Chondemir*, p. 165, note 5). This would be before the war with Husain Kurt; if this is correct the victory won by Mas'ūd over the brother of Togha Timur would be identical with the battle on the Atrak. Once in possession of Djurdjān the Serbedār began to cast covetous eyes on Mazandarān. This was the end of his career. He was attacked by surprise in the land of Rustamdār; he and almost all his army perished (Rabī' II, 745 = Aug.—Sept., 1344).

Mas'ūd was the greatest Serbedār prince; his kingdom, according to Dawlat-shāh, stretched from Djām to Dāmghān and from Khabūshān to Tarshīz. He was the *qāhīb kīrān* of the dynasty. After him the power fell into the hands of those who had been subalterns of the family of 'Abd al-Razzāk: that is to say, the empire having reached its zenith, fell into the control of a coterie of soldiers (and in this case of dervishes also) until the glory of the Serbedārs had departed for ever. This is the normal course of the history of oriental dynasties. Mas'ūd left one son, a minor, named Luṭf Allāh; one of his notables, Mu ammād Aitmur, who during the war with Djurdjān had been *mā'ib* at Sabzewār on behalf of the late prince, seized the actual power. He reigned two years and a few months; in 747 or 748 (1346/1347 or 1347/1348) he perished, the victim of a plot hatched by the dervish clique, *murīd*'s of Djūri, the prime mover in which was the Khwādja 'Alī Shams al-Dīn. The latter becoming master of the

situation, proposed as ruler a certain Kalwā (or Kulū) Isfendiyār, who reigned for about a year; 'Alī Shams al-Dīn had him assassinated in 748 or 749. It was then proposed to make Mas'ūd's minor son successor to Isfendiyār; 'Alī Shams al-Dīn appointed a brother of Mas'ūd, who also was called Shams al-Dīn, to be regent. He on'y held the throne for some seven months; in Dhu 'l-Hijja, 749, according to Dawlat-shāh, he resigned. 'Alī Shams al-Dīn himself then assumed the external attributes of royalty also. In general the historians approve his rule, although they admit that he was as bigoted as he was cruel. He is said on one occasion to have had 500 prostitutes buried alive; his officials and officers when they had to enter his presence used to make their wills first. Shams al-Dīn built or renovated the *masājid-i djamī'* at Sabzewār. He also built a great storehouse (*anbār*) in the same town. With Togha Timur he concluded a treaty which secured the Serbedār chief possession of all the territory formerly ruled by Mas'ūd. In return it is probable that the Serbedārs pledged themselves to pay tribute. Dawlat-shāh (p. 236) says that they obeyed Togha Timur (*muti' wa munkād shudand*), which can only be true of the period after the death of Mas'ūd.

'Alī Shams al-Dīn, already much detested for his avarice and cruelty, insulted in frightful fashion one of his treasury officials, Haidar Kaṣṣāb, from whom he wanted, in addition, to extort a large sum of money. Kaṣṣāb conspired with Yahyā Karrābī, a former officer of Mas'ūd, and killed 'Alī Shams al-Dīn with his own hand (towards the end of 753 or the beginning of 754: Karrābī was reigning in 754 because the assassination of Togha Timur by the latter's order took place on Dhu'l-Ka'da 16, 754 = Dec. 14, 1358, as is testified by the poem quoted in Dawlat-shāh, p. 237—238). Karrābī became chief of the Serbedārs while Kaṣṣāb became *sipāh-salār*. The new ruler was a devout man but a bloody tyrant in whom there were thought to be signs of madness. A quarrel soon broke out between the Serbedār and Togha Timur because Karrābī did not acknowledge the suzerainty of the Khān. On the occasion of a meeting at Sulṭān Duwīn, Karrābī had Togha Timur assassinated by an officer of his suite. One can hardly imagine that this attempt could have succeeded if the Serbedār had not had allies among the nobles of Timur's kingdom. With the latter's death the suzerainty of the descendants of Čingiz Khān in those regions came to an end. The Serbedārs, the Djānī Kurbānī and the Kurts of Herāt divided the empire of the Khān. Karrābī took Tūs from the Djānī Kurbānī. He paid a great deal of attention to the water-supply of this town and to that of Mashhad. Karrābī, like his predecessors, came to a violent end. 'Alā' al-Dawla, his brother-in-law, assassinated him (759 = 1358). Kaṣṣāb then placed on the throne a brother (or cousin) of the dead ruler, the insignificant Zahir al-Dīn. The *sipāh-salār* was, of course, the actual master of the kingdom and this was not altered when Zahir al-Dīn renounced the throne (Radjab, 760 = May/June, 1359). Kaṣṣāb himself took the reins of government, but it was not for long. While he was besieging the rebel Naṣr Allāh Bāshṭīnī (perhaps brother of Mas'ūd) in Asfarā'in he met his end, the victim of a conspiracy instigated by his own *sipāh-salār*, Hasan Dāmghānī (Rabī' II, 761 = Feb.—March, 1360). Hasan concluded a treaty of peace with Naṣr Allāh;

the throne returned to the old dynasty. Luṭf Allāh b. Mas'ūd was proclaimed king while Dāmghānī and Naṣr Allāh appointed themselves his guardians (*atabeg*), i.e. the actual holders of power. The faintest Luṭf Allāh only retained the throne as long as he pleased the *Sipāh-sālār*. As soon as a difference arose — à propos of nothing at all — between Mas'ūd's son and the Atabeg the latter had him thrown into prison, and shortly afterwards ordered him to be put to death (Radjab, 762 = May-June, 1361). Henceforth Hasan Dāmghānī reigned in his own name. Disorder was not long in breaking out. The dervish 'Aziz, a follower of Djūri, stirred up a rebellion which Dāmghānī was able to put down: 'Aziz had seized Tūs but the Serbedār king recaptured it and banished 'Aziz from his territory. The latter went to Iṣfahān. From the point of view of policy Dāmghānī had made a grave mistake in preserving the life of the dervish out of religious scruples. Besides, things were becoming worse in this part of the empire of Togha Timur which now obeyed Serbedār authority. Amīr Walī, son of an officer of Togha Timur, drove the Serbedār governor from Astarābād and routed the army sent to assist the latter by Dāmghānī. The Serbedārs seem to have lost the town of Tūs about the same time. One of Mas'ūd's old officers, Naḍīm al-Dīn 'Alī Mu'ayyad, hastened to take advantage of the troubles. He seized the town of Dāmghān and summoned the rebel 'Aziz from Iṣfahān. One part of the Serbedār army, which had been beaten by Amīr Walī, joined him. This took place while Dāmghānī was away from Sabzewār, because he was besieging the stronghold of Shaḳḳān. Mu'ayyad and 'Aziz were able to enter Sabzewār where they put Dāmghānī's vizier, Yūnus Sammānī, to death and made a *ta'ziyat* for Luṭf Allāh b. Mas'ūd. The military officers were exhorted to desert Dāmghānī in letters full of threats and promises. When the army besieging Shaḳḳān received a similar message the soldiers took the side of Mu'ayyad, and soon Dāmghānī's head was sent to Sabzewār (766 = 1364/1365). Mu'ayyad, who succeeded Dāmghānī on the throne, was the last Serbedār king. According to the historians, he was generous and pious, an ardent Shi'ī (this appears also from the inscriptions on the coins, struck by him; see Frāhn, *Recensio Numorum Muhammedanorum*, p. 632—633). But his devoutness did not prevent him ridding himself of the dervish 'Aziz, who had been so bold as to disobey an order from his sovereign. Mu'ayyad, in any case, hated the dervishes of Djūri's sect. He desecrated the tomb of Khalīfa, Djūri's *murshid*, and that of Hasan Djūri himself. The last Serbedār also had ambitions to extend his dominions: among his conquests Tarshiz and Kūhistān are mentioned. In the war that he had to wage with Malik Ghiyāth al-Dīn of Herāt (on which see *J. A.*, 1861, Series 5, vol. xvii. 515—516) he lost Nishāpūr. The relations of the Serbedār with Amīr Walī, ruler of the former kingdom of Togha Timur, were not in general very friendly. It appears that, in course of hostilities, Mu'ayyad held Astarābād for a time, as we know of a coin struck by him here in 755 (1373/1374; cf. Howorth, *History of the Mongols*, iii. 737). On the other hand, Walī helped the Serbedār king to reconquer his kingdom when the latter had been driven from Sabzewār by the dervish Rukn al-Dīn, a rebel who had secured troops to help him from the ruler of Fārs (780 = 1378/1379).

Later, troubles broke out once more. At the siege of Sabzewār by Walī's forces, Mu'ayyad sought the help of the great Timur (783 or rather 781; cf. Dorn, *Gesch. Tabaristans*, p. 186, note 2). This meant that the Serbedār had to abandon all idea of independence and that his kingdom became a part of the great Mongol conqueror's empire. Mu'ayyad lived on for some time at the court of Timur. He was assassinated in 788 (1386/1387). His body was taken to Sabzewār and buried in the town.

Here ends the history of the Serbedārs, although in 807 (1404/1405) there was again a rising by a son of Mas'ūd, Sultān 'Alī, against Shāh Rukh, son of Timur, a rebellion which was duly suppressed. As a panegyrist of the Serbedār kings Dawlat-shāh mentions the poet Maḥmūd b. Yamin al-Dīn Faryumadi.

(V. F. BÜCHNER)

SERDĀB (Pers. *serd-āb*, "cold water"; the *Kāmūs* has wrongly *sirdāb*), in Baghdād, a kind of rather large vaulted cellar, more or less decorated sunk four or five feet into the ground where the heat does not rise above 77°—80° F. while that of the rooms is from 92°—95°. It is supplied with a ventilator, a kind of chimney turned to the north side which ends at the highest part of the house; the air is also kept fresh, morning and evening, with the help of several small windows; in the summer the people of the house spend the time from 11 a. m. till sunset there. This arrangement is also found in the southern parts of Persia where it is called *sir-samin* "subterranean"; the ventilator is called *bād-gir* "wind-catcher". The name is extended to cover any kind of subterranean room or road (Ibn Baṭṭūta, Paris 1853, i. 264; Dozy, *Suppl.*, i. 647).

(CL. HUART)

SERDESİR (P), a cold place or a summer habitation in high grounds. The Persian *ferheng's* cite verses where the word occurs (e.g. *Ferheng-i Shu'ū'i*). The opposite is *germesir* [q.v.].

At present both words are used for the northern and southern part of the province of Fārs, corresponding to the division in Sarūd and Djurūm by the Arabic geographers (Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 249).

SERES. [See **SERRES**.]

SERRES (*Seres*, Turk. *Sirōz*), capital of the former sandjak of Sirōz in the wilayet of Salonika, situated on the edge of a broad well-watered fertile plain, not far from the Struma, on the Salonika-Dede-Aghaç railway. Serres has a castle, called Dragota in the middle ages, built on a steep hill, numerous mosques and Greek churches. The number of inhabitants is nearly 30,000, the majority Bulgarians. In the country around much rice, fruit, wine, tobacco and vegetables are cultivated, and a big export trade is carried on in tobacco, cotton and cloth. — Serres is the ancient Siris or Serrhai, a settlement of the Siropaeoni which existed even in the time of Xerxes.

The date of the Ottoman conquest, about which the Turkish chroniclers make inaccurate and contradictory statements (Sa'd al-Dīn, *Tādī al-Tawārīkh* [probably following Neshrī], i. 92, gives 776 = 1374/1375, whom J. v. Hammer, *G.O.R.*, i. 180, apparently follows; Leunclavius, *Hist. Musulm.*, p. 243, 53 sqq.: 787 = 1385/1386 [codex Verantianus], = Giese, *Anon. Chron.*, p. 26, 11, 12; 'Ashīk Pasha Zāde, *Tārīkh*, Stambul 1332, p. 61: between 783 [or, according to codex Mordtmann-Cayol, p. 45: 784] and 787; Hādjdjī Khalifa, *Rumeli und Bosna*, ed. v. Hammer, Vienna 1812, p. 73 sqq.: 784 = 1382/1383), is known from several contemporary Greek sources, which unanimously give September 19, 1383 (cf. Miklosich-Müller, *Acta et Diplomata*, i. 77—79; Sp. P. Lampros, *Nécs* 'Ελληνισμῶν, viii. 403, 407, Athens 1912; cf. P. N. Papageorgiou in *Byz. Zs.*, 1894, iii. 292). On this day the castle was taken by Deli Balaban and the Lala Shahin Pasha, who had hastened to his assistance. That the town was securely in Turkish hands a few years later is known from the contemporary evidence of two Athos chronicles (cf. L. Petit-W. Regel, *Actes d'Esphigménou*, p. 42, xxi., and L. Petit-Korablev, *Actes de Chilandar*, p. 335, No. 158).

Seres and the surrounding territory fell as a fief to the celebrated Ewrenos Beg [q. v.] and the neighbourhood was settled with Yürüks who were transplanted from Şarukhān (cf. Leunclavius, *Hist. Musulm.*, p. 244, 25 sq.; Giese, *Anon. Chron.*, 26, 26). Henceforth Serres was an important Ottoman mint: the first coins were struck there in 816 = 1413/1414. The dangerous rising, half religious and half political, stirred up by Shaikh Badr al-Dīn Maḥmūd and his follower Bürklüdjī Muṣṭafā came to a tragic end in Serres, in the neighbourhood of which the rebels had assembled for their last stand, with the execution of the ringleader in the late autumn (cf. *Islām*, 1921, xi. 63 sq.). In the xvth century at the beginning of which the French zoologist Pierre Belon passed through Serres, the inhabitants were mainly Greeks; he found German and Spanish-speaking Jews there but the country people spoke Greek and Bulgarian. Hādjdjī Khalifa (*Rumeli und Bosna*, Vienna 1812, p. 73 sqq.) following closely, almost literally, Mehmed 'Ashīk, *Menāzīr ül-Ewālim* (Vienna MS., fol. 240a sq.; Berlin MS. [inaccessible to me], fol. 246a — 247b), describes Serres in the xvth century as a town with 10 mosques, 7—8 baths, fine khāns, a besestān, kitchens for the poor and pleasant gardens. Ewliyā Çelebi also visited the town; his account is found in the eighth, still unprinted volume of his *Seyāhet-nāme*. Serres never attained particular importance in the history of the Ottoman Empire; only in the xviiith and xixth

century it was the seat of a Derebey [q. v.] of whom Ismā'il Bey was the most prominent (cf. E. M. Cousinéry, *Voyage dans la Macédoine*, Paris 1831, i. 157, [130]—166). Since the treaty of London (1913) Serres has belonged to Greece. — A favourite excursion from the town is to the pleasantly situated Hişārardı outside the gates of Serres (cf. *Rumeli und Bosna*, p. 74). Here is buried the author of the work, very important for the history of Adrianople, *Enis ül-Müsāmirin* (cf. G. Flügel, *Orr. Hss. Wien*, ii. 259, where — wrongly — *Müsāfirin* is given), 'Abd al-Rahmān b. Ḥasan called Hibrī (d. about 1550; cf. Brusali Mehmed Tāhir in *Türk Yordū*, third year, vol. 6, part 27, 8. 2225).

regarding the مارغریت (= Margarita?) monastery near Serres, probably taken from the *Tārīkh* by Rūhī [q. v.]. (FRANZ BABINGER)

SERT. [See **SE'ERD**.]

SERVET. [See **TAHIR BEY**.]

SETH. [See **SH'ITH**.]

SEVILLE, in Spanish SEVILLA, Arabic *ISHBİLĪYA* (ethnic *Ishbili*), a large city in Spain with over 150,000 inhabitants at the present day and capital of the province of the same name, formerly capital of the kingdom of Seville situated at an average height of 45 feet above sea level in a vast plain, on the left bank of the Guadalquivir (Arabic al-Wādī 'l-Kabir = Wād al-Kebir = the "great river"), which separates it from the suburb of Triana (Arabic Taryāna; cf. Yāqūt, *Mu'djam al-Buldān*, q. v.). Although 60 miles from the sea the town has all the advantages of a seaport on account of the very gradual fall of the river; the tide is perceptible up to above Seville (cf. the *aequoreus annis* of the Latin poet Ausonius). The climate is dry and warm.

The province of Seville in the Muslim period comprised all the low valley of the Guadalquivir, and stretched to the east as far as the Sierra d'Arcos and Gadiz, to the west as far as the valley of the Guadiana (Wādī Ānā) in a very wealthy region fertilised by the great river. The slopes of Aljarafe (or Axarafe, Arabic *Djabal al-Sharaf*) in the immediate vicinity of the capital are specially favoured, and their groves of fig and olive trees were famous for their fruit throughout Muslim Andalusia. The Arab geographers were never tired of marvelling at the natural wealth of the country. It was the only district in the peninsula to produce cotton, the exports of which were important. Other

characteristic products were saffron and sugar-cane. The population of the country was of great density; no less than 8,000 villages, according to al-Iḍrīsī, were dependent on the capital.

The name *Ishbiliya* is derived from the ancient *Hispalis*, a name of Iberian origin which the Romans retained for the town. It was of great importance under them after its capture in 45 B.C. by Julius Caesar, who made it "Colonia Julia Romula". Under the empire it was alternately with Baetis (Cordova) and Italica (Arabic *Tālika*) the capital of the province of Baetica. It then became that of a Vandal kingdom (411) and from 441 the residence of the Visigothic kings, until in 567 Athanagilde transferred to Toledo the seat of his government.

It was in the spring of 94 A.H. (712) that Seville after the fall of Medina Sidonia and Carmona fell in its turn into the hands of the Muslims after a month's siege, according to some historians, but probably longer if we may believe the more detailed account of the capture of the town given by the anonymous chronicle entitled *Akhbār Madīnat al-Andalus*. A section of the Christian population took refuge in Beja (*Bādja*) and the conqueror, Mūsā b. Nuṣair, installed a Jewish colony in the city, left a garrison there under the Medinese ʿIsā b. ʿAbd Allāh al-Ṭawil as governor, and then laid siege to Merida. An attempted rising by the Christians in Seville, aided by their co-religionists of Beja and Niebla (*Labla*) in July of the same year was promptly put down and the town definitely re-captured by the son of Mūsā b. Nuṣair, ʿAbd al-ʿAzīz, who massacred the rebels. When his father left for the east, ʿAbd al-ʿAzīz became governor of Muslim Andalusia, and chose Seville as his capital; he there married the widow (and not the daughter, as is often said) of the Visigoth Roderick, Egilona (the Ailo of the Arab historians) and installed himself in the old church of St. Rufina, opposite which he built a mosque. It was there that he was killed by his soldiers in Rajab, 97 (March, 716), at the instigation of the Caliph of Damascus, Sulaimān.

After his death, the seat of the Arab administration was moved to Cordova; Seville nevertheless remained one of the richest cities of al-Andalus. Indeed, it escaped more than any other the influence of the conquerors and there is no doubt that its population only abandoned their old religion for Islām slowly, as much from policy as of necessity. It was in great part Roman or Gothic, and the names of notable citizens of Seville for long preserved the memory of this double origin. The spread of Islām in the Peninsula made commerce and agriculture still more active and the importance of its harbour augmented.

When residences and fiefs were allotted in al-Andalus to the *djund*'s of Syria and Egypt, Seville fell to that of Hims (Emesa) which was established in 125 (742) by the governor Abu 'l-Khaṭṭār al-Husām b. Dirār al-Kalbī, at the same time as the *djund* of Damascus was given Elvira, that of the Jordan Reyyo (Malaga), that of Kinnasrīn Jaen, that of Palestine Sidonia and that of Miṣr Tudmir (Murcia). The name of Hims was even sometimes applied to Seville (cf. Yāqūt, *Muḍjam al-Buldān*, s. v. Hims at the end).

When the Umayyad Caliphate of Spain was established in the reign of ʿAbd al-Rahmān I b. Muʿāwīya al-Dākhil and his successors, Seville was

entrusted to his governors (for example the energetic ʿAbd al-Malik b. ʿUmar) and, like the other large towns of the country, was often the scene of rebellions. In 149 (766) two risings, those of Saʿīd al-Yaḥṣubī al-Maṭarī of Niebla and Abu 'l-Ṣabbāḥ b. Yahyā al-Yaḥṣubī, were quelled in turn. In 156 (773) the Caliph had again to suppress an attempt at independence by the governor ʿAbd al-Ghāfir (or ʿAbd al-Ghaffār) al-Yamanī and Ḥayāt b. Mulāmis (or Mulābis).

The town was surrounded by a fortified wall by ʿAbd al-Rahmān II. He also had a great mosque built in it. It was in the reign of this sovereign that Norman pirates captured Seville for the first time in 230 (844). It was stormed after a short siege, and the Caliph had to mobilise his forces to regain it and put the invaders to flight at the decisive battle of Ṭalyāfa. As a precaution against another attempt at landing by the Madjūs (Normans) he built an arsenal at Seville and constructed swift ships, which did not prevent his entering into friendly relations with the king of the Normans and even sending him an ambassador, Yahyā b. al-Hakam al-Ghazāl. In the reign of his son Muḥammad, in 245 (859), Spain was again attacked by the Normans, but the latter, who landed at the mouth of the Guadalquivir, probably did not go up to Seville but went direct to seize the town of Algeciras. Ibn Khaldūn and al-Nuwairī nevertheless suggest there was a Norman landing in Seville at this time (cf. particularly R. Dozy, *Les Normands en Espagne*, in *Recherches*³, p. 256-263 and 279-284).

In the reign of the Caliph ʿAbd Allāh, Seville was for a long time perturbed by the ambitions and proceedings of the two great families of Yamanī origin, the Banū Khaldūn and the Banū Ḥadjdjādī. These Arabs had large domains throughout the country and numerous clients, and hated the Islamised Spaniards of Seville as much as the Umayyad Caliphs of Cordova. The head of the first family, Kuraib b. Khaldūn, soon after the accession of ʿAbd Allāh, raised the whole country of Aljarafe and rallied to his flag of rebellion the chief of the Banū Ḥadjdjādī family and other Arab or Berber chiefs of the south of Spain. He ravaged all the territory of Seville with fire and sword and later on, sometimes assisted by the caliph himself, he ruined completely the renegades of Seville (278 = 891). In the town the Arabs became all-powerful and it was not till four years later that the sovereign decided to send an expedition against them.

In 286 (899) the heads of the two families, who had hitherto been at peace, quarrelled, and Ibrāhīm b. Ḥadjdjādī was victorious and slew Kuraib. After an alliance with the famous rebel ʿUmar b. Ḥafṣūn [q. v.] he finally submitted to the Caliph of Cordova while retaining practically unlimited power in Seville. There he set up as a regular sovereign and poets of talent and the famous singer Kamar were ornaments of his court. His return to loyalty to the Umayyad dynasty was the beginning of the return of order in al-Andalus. In the reign of the great caliph ʿAbd al-Rahmān III, Seville, without, however, rivalling Cordova in importance, entered upon an era of peace and prosperity and remained loyal to the central power.

But its most brilliant epoch, and the most important from the political point of view also, was that which followed the fall of the Umayyad Caliphate, when it became the capital of the independent dynasty of the Banū ʿAbbād or ʿAbbāids (cf.

above, i., p 7) from 414 = 1023. The founder of the kingdom, the *Qāḍī* Abū 'l-*Qāsim* Muḥammad I, was the son of an illustrious Andalusian jurist of Lakhmid origin, Ismā'il b. 'Abbād. He seized the power, at first recognising the suzerainty of the Ḥammūdīd sovereign Yahyā b. 'Alī, but was not long in repudiating this suzerainty which was quite nominal. At his death in 434 (1042) his son, Abū 'Amr 'Abbād, known by his honorific surname of al-Mu'taḍid, succeeded him and during a reign of 27 years his policy was marked by deeds of cruelty and treachery. He increased his kingdom at the expense of the neighbouring principalities of the west and south and only found a serious opponent in Bādīs, the Zirid king of Granada. He died in 461 (1068). His son, Abū 'l-*Qāsim* Muḥammad II al-Mu'tamid, is renowned for his poetic taste and talents. In his reign Seville became the rendezvous of the best scholars of the period. He took Cordova from the Banū *Djawhar* but soon came in conflict with the ambitions of the King of Castile, Alfonso VI, and then had to appeal for help to the new sultān of the western Maghrib, the Almoravid Yūsuf b. Tāshfin. The latter crossed over to Spain with his troops and on *Radjab* 12, 479 (October 23, 1086), won the great victory of *Zallāka*. When the Almoravids returned to Morocco the Christians resumed the offensive and al-Mu'tamid had to go in person to the Lamtūni sultān to ask his assistance once more. Yūsuf granted it, but was not long in depriving him of his kingdom to seize its wealth. Seville along with Cordova, Almeria, Murcia and Denia, was taken in 484 (1091) by Yūsuf's general, Sir b. Abī Bakr b. Tāshfin. The Berber troops sacked the town from attic to cellar, and pillaged the palaces of the 'Abbāḍids and the unfortunate al-Mu'tamid was taken prisoner and exiled to Morocco, where he died at *Aghmāt* in 488 (1095) after giving expression to his misfortunes in elegies which came to enjoy a well merited reputation among literary Muslims: he left the reputation of a generous, chivalrous and cultivated prince. — All the texts relating to Seville in the 'Abbāḍid period have been collected by Dozy in his *Scriptorium Arabum Loci de Abbāḍiis*, 3 vols., Leiden 1846—1863.

The Almoravid general, Sir, governed Seville for his master and the town, like the rest of Muslim Spain, continued under the yoke of the Maghribī Sultāns. In *Radjab*, 526 (May, 1132), a Christian force from Toledo invaded the country round Seville. In the course of an engagement the governor of the city, 'Umar b. Makūr, was killed.

It was with satisfaction that the people of Seville heard of the decline of the Almoravids in Africa and the rise of the Almohads. Barrāz b. Muḥammad al-Masūfī, general of Sultān 'Abd al-Mu'min, after conquering the south-west of the peninsula, laid siege to Seville and took it in *Shā'ban*, 541 (January, 1147), putting to flight the Almoravid garrison. Next year a deputation of notables of Seville went to the Almohad sultān to give him the homage (*ba'ī'a*) of their fellow-citizens, led by the *Qāḍī* Abū Bakr b. al-'Arabī, who died at Fās on the way back (cf. above, i. 362b). 'Abd al-Mu'min appointed governor of the town the Almohad Yūsuf b. Sulaimān and in 551 (1156), at the request of the inhabitants, his own son, Abū Ya'qūb Yūsuf. The latter kept this post till he succeeded his father in 558 (1163).

Under his reign Seville became the headquarters of the Almohad forces in Spain. Abū Ya'qūb stayed

there from 568 (1172) to 571 (1175), and on his departure left as governor his brother, Abū Ishāq Ibrāhīm, with the general Muḥammad b. Yūsuf b. Wānūdīn and the admiral 'Abd Allāh b. *Djāmi'*. It was also in Seville that Abū Ya'qūb made his preparations in 580 (1184) for the Santarem (*Shantarīn*) expedition in which he met his death. His son, Abū Yūsuf Ya'qūb al-Manṣūr (580—595 = 1184—1199), who succeeded him, brought back the Almohad army to Seville and returned to Morocco, leaving the *Hafṣid* chief Abū Yūsuf as governor of Seville. Summoned by the latter he returned to Seville in 586 (1190) to retake *Shilb* (Silves) from the Christians, who had taken it by force of arms. After the brilliant victory of Alarcos (Arabic al-Ark, cf. above, i. 205a) won on *Shā'ban* 8, 591 (July 19, 1195), over Alfonso VIII of Castile, the Sultān made a long stay in Seville, and it was during this period that he imprisoned the famous Cordovan philosopher, Ibn Ruṣhd (Averroes). He did not return to Morocco till 594 (1198), a year before his death.

In the course of the reigns of these two Sultāns Seville rivalled the glories of the most flourishing periods of the 'Abbāḍid dynasty. It had at this date more inhabitants than Cordova. The Almohad sovereigns and the great dignitaries of the court built palaces there, and the number of mosques, baths, caravanserais and markets increased considerably. It was in the reign of Abū Ya'qūb that the new great mosque was built on the site which the present cathedral was later to occupy in the xvth century. The *Rawḍ al-Kirfās* (ed. Tornberg, p. 138) gives 567 (1172) as the date of building this *djāmi'*, the anonymous chronicle entitled *al-Ḥulal al-Mawṣhiya* (ed. Tunis, p. 120) 572 (1176/1177). According to Ibn Abī Zar', it only took eleven months to build, which seems improbable. The same author mentions the building at Seville in the same year of a bridge over the Guadalquivir, of two *ḡaṣba's*, of ramparts and moats, of quays along the river and an aqueduct. Nothing now survives of the great Almohad mosque of Seville but the *ṣaḥn* (now *Patio de los Naranjos* "court of the orange trees"), with the gate known as "Puerta del Perdon", and most notable of all the celebrated minaret, called *Giralda* (because a statue of Faith which surmounts it "turns" [Spanish *girar*] at the least wind). This tower, as a whole less successful than its twin sisters, the tower of Ḥassān in Ribāṭ al-Faṭḥ (Rabat) and that of the *Djāmi'* al-Kutubiyīn at Marrākush, built at the same time, has a base 43 feet square. It is built of brick; its walls, about seven feet thick, are pierced by numerous windows with Arab and Visigothic capitals. The lantern-tower which rose from the platform of the tower has been replaced by a campanile; the total present height is over 300 feet.

In 609 (1212) al-Manṣūr's successor, the Almohad Muḥammad al-Nāṣir, collected under the walls of Seville the great army which was to reconquer the part of al-Andalus then in the hands of the Christians. It was defeated on *Ṣafar* 15 (July 16) of the same year at las Navas de Tolosa and the Sultān and his forces returned to Seville utterly routed.

It was a little later, in the reign of the Almohad Yūsuf II al-Mustansir, in 617 (1220), that the governor, Abū 'l-'Ulā had built on the bank of the Guadalquivir a tower intended to protect the

royal palace (now the Alcázar, rebuilt in the xvth century by Pedro the Cruel) and the river. It has retained in a Spanish translation its Arabic name Burdj al-Dhahab ("Torre del Oro" "Tower of Gold"); the lower part, which is in twelve superimposed sections and is crowned with battlements, and the smallest tower at its top are still standing.

Some years later Seville again became the headquarters of the Almohad Sultān Idris al-Ma'mūn, and on his departure for Morocco in 626 (1228-1229) the town passed under the domination of the rebel Muḥammad b. Yūsuf b. Hūd, who ended by driving the Almohads out of Spain. Strengthened by the alliance which he had made with the first Naṣrid dynasty of Granada, Muḥammad I b. al-Aḥmar, Ferdinand III laid siege to Seville in 1247 and after blockading it for sixteen months took it on Sha'bān 1, 646 (November 19, 1248) (or four days later, according to some authors). The Muslim population was spared and allowed to emigrate to that part of Andalusia which still remained Muḥammadan and to Africa. The attempts of the Marinid Sultāns of Morocco to recapture the town from the Christians in the years following met with no success. In 674 (1275) Sultān Abū Yūsuf Ya'qūb b. 'Abd al-Ḥakḥ, after his victory over the troops of General Don Nuño de Lara, laid waste the country of Seville and Jerez (Sharish); but he had soon to abandon his siege of the capital. On his second campaign in Andalusia in 676 (1278) he again came up to the walls of Seville and pillaged the district of Aljarafe. He continued these raids, which are recorded in detail in the *Rawḍ al-Kirfās*, down to 684 (1285), and Don Sancho had to seek a truce which lasted till 690 (1290) in the reign of Abū Yūsuf's successor, his son Abū Ya'qūb Yūsuf. In the end, after the defeat of the Sultān of the same dynasty, Abū 'l-Ḥasan 'Alī, under the walls of Tarifa, the Muslims abandoned all hope of retaking Seville.

It would take too long here to give the names of all the famous Muslims who were born or lived in Seville. It is sufficient to mention the poets Ibn Ḥamdis, Ibn Hānī, and Ibn Kuzmān, the traditionalist Ibn al-'Arabi, the biographer Abū Bakr b. Khair, and to refer the reader to the separate articles on them.

(E. LÉVI-PROVENÇAL)

SEZAY, a Turkish poet. Shaikh Hasan (Dede) Sezay Efendi was a Greek by birth, a native of Kordos (the old name for Corinth), who spent the greater part of his life in Adrianople. He belonged to the order of Gülshenī there, first as a disciple of the Shaikh Mehmed La'li and after his death as his successor. According to some sources, he was also head of a Gülshenī monastery in Constantinople. Ramadān, 1151 (end of 1738 or beginning of 1739), is given as the date of his death, the only date known of his career. His tomb is in a *derkäh* which bears his name.

We still possess several of Sezay's works. His *Diwān* is of a mystical and allegorical nature and is remarkable for the beauty of its language, so that Ottoman critics sometimes actually describe him as the Ḥafiz of Turkish literature. There is a MS. of the *Diwān* in the Vienna Hofbibliothek and in the Gibb collection (see Gibb, *A History of Ottoman Poetry*, ii. XXII below), and it has been printed at Constantinople. It begins with a series of *ḥazida*'s, on the works of the different kinds of the mystic path, the *Wasf-i Athār-i Aṭwār-i Ṭariqat*. Then come 333 *ghazal*'s, a few *takhlīs*, *tasdīs*, *rubā'ī*'s and other shorter pieces including a chronogram on 'Ushshakī Ṣadiq Efendi (d. 1094 = 1683). Among other works by Sezay, his *Mektūbāt* and his commentary on a *ghazal* of al-Miṣrī are mentioned. There are commentaries on some of Sezay's *ghazal*'s, including some of quite modern date. Among Sezay's pupils are mentioned Mehmed Ḥasib Bey, the author of a poem called *Gülshen-i Ebrār*, which deals with the *silsile* of Gülshenī, and the Turkish poet Mahwī Efendi and Mehmed Fakrī Krimī, who translated the *Menāzil al-Sā'irīn* of al-Anṣārī into Turkish.

Sezay is also the name of a modern Turkish novelist; cf. Horn, *Geschichte der türkischen Moderne*, Leipzig 1902, p. 43 sq.

SFAX (SFĀḲES or SFĀḲEŞ), a town in Tunisia, on the eastern coast to the north of the Gulf of Gabes on the site of the ancient Taparura. Built on a flat piece of ground the native town, beside which the European quarter has grown up, is of an unusually regular plan. It is quite rectangular in shape (600 by 400 yards) and its streets are at right angles to one another. In the centre is the Great Mosque built about 275 (849), rebuilt at the end of the tenth century and several times since restored. The first wall built in the Aghlabid period was of clay and bricks. Parts that decayed were repaired in stone. Al-Bakrī describes it as built of stone and bricks. It was frequently repaired either by princes or by the gifts of pious individuals. This wall was flanked by square towers and, according to al-Tidjāntī (beginning of the xiiith century), it was a double one. Several *ribāṭ* defended the adjoining coast.

During the anarchy that followed the Hilālī invasion, Sfax was from 1095 to 1099 the capital of a little independent principality protected by the Arabs. In 1148 it was taken by Roger of Sicily. 'Abd al-Mu'min retook it in 1159. By then it had, however, lost much of its former splendour. The Arabs had almost entirely destroyed the plantations around the town. Before the invasion, Sfax had indeed been of a remarkable economic importance. It was one of the principal centres for the cultivation of the olive. Muslim and Christian ships exported the oil, particularly to Italy. In the tenth century the Pisans established a *funduq* here. Sfax was also noted for its manufacture of cloth, which was full of the processes used in Alexandria but with more perfection. Fishing was also an important source of income.

Sfax in 1881 was one of the few centres of resistance to the French occupation. A squadron came to bombard it. Since then it has begun to enjoy a new prosperity. It is a town of 75,000 inhabitants which exports sponges collected in the Gulf of Gabes and is surrounded by a double girdle of gardens and olive groves. The latter, planted according to methods improved during the sixteenth century, cover a depth of about 30 miles.

SHABAK, a religious community of Kurdish origin in the wilāyet of Mawṣil. English statistics estimate the number of Shabaks at 10,000; the Muslims give them the nickname *a'wadj* ("turbulent", "disloyal"). The Shabak live in the villages in the Sindjār district ('Alī-rash, Yangidja, Khazna, Tallāra etc.). They are related to their neighbours, the Yazidis, most of whose assemblies and places

of pilgrimage they attend. On the other hand, if we may rely on Kather Anastase, they show a particular devotion to 'Alī whom they call 'Alī-rash (*rash* in Kurdish = "black"). Another statement connects them with the extremist Shī'īs, the Ahl-i Ḥaḳḳ (cf. the art. 'ALĪ-ILĀHĪ). The Shabak never cut their moustaches "which are proverbial in the country" (see Cuinet); in eating they hold them up with the left hand so that the food may not soil them. As is the case with all the secret sects, popular stories credit them with abominable practices; once a year they are said to assemble in a secret cave and spend the night in feasting and debauchery. This night is called among them, as among the Šārlī (cf. the art. ŠĀRLIYA), *lailat al-kafsha*.

The Šārlī who claim to belong to the Kurdish tribe of Kāka'ī are also found in the wilāyet of Mawṣil on the lower course of the Great Zāb (villages of Tell-Laban, Basātliya, Kabarlī, Kharrāb al-Sulṭāna) and in the district of 'Ashā'ir-i Sab'a. Their present chief, Ṭāha Koshak (Koṭak?), lives in Wardak. There are Šārlī in Persia in the border districts. The sacred book of the Šārlīs is said to be in Persian. Their name is explained as *šārat li* ('*l-djannatu*) "Paradise has been acquired by me" for the Shaikhs of the Šārlī are said to sell them places in Paradise at 25 madjidiyas the ell (*dharā'*). The Šārlī permit divorce and polygamy. Their Shaikhs also never cut their moustaches and grow enormous beards. The *lailat al-kafsha* among the Šārlī is accompanied by agapes (*aklat al-muḥibbati*) for which every married man kills a cock. The Shaikh blesses these offerings which are dressed with wheat or rice and proclaims a blessing on every child conceived that night. The candles are then extinguished and an indescribable orgy ensues. The Šārlī of Father Anastase evidently correspond to the *Khorūs-Kushān* ("cock-killers") and *Čirāgh-Kushān* ("candle-extinguishers") of other travellers.

Father Anastase mentions a third secret sect in the same region: the BAḌJÖRĀN; they are Kurds and call themselves "Allāhī" (Alī-allāhī?). They live in the villages of 'Omar-kān, Toprakh-ziyarat, Tell-Yaḳūb, Baṣḥpita etc. There are also a few in Persia near the Turkish frontier. The Baḏjörān venerate particularly the prophet (*imām*?) Ismā'īl. During the month of Muḥarram (*ashūrā*) they lament the death of Ḥusain and collect provisions which on the ninth day (of the month?) are distributed under the name of *shashshā*. When the chief visits a community of the faithful each man offers him seven fresh eggs; the Shaikh cuts each into seven pieces and places them in a jar. Those present drink wine. The Shaikh pronounces a prayer, offering the eggs to Ismā'īl as an expiatory sacrifice (*kurbān*). No one can eat them without forthwith confessing his sins.

Attention may be called to the links connecting these Kurdish sects with one another and with Persia, their devotion to the Shī'ī Imāms ('Alī, Ḥusain, Ismā'īl), the rites resembling the communion, the syncretist tendencies. The Shabak seem to be a link between the Yazidis and the extremist Shī'īs. Finally we may mention that a document coming from Ahl-i Ḥaḳḳ circles and found in Khurāsān by W. Ivanov mentions Malak-Ṭā'as, the great saint of the Yazidis.

As to the "night of *kafsha*", Father Anastase explains this word from the Arabic root meaning "to seize" (?). Perhaps we have simply to deal with the Persian *kafsh* alluding to some part said to

be played by the shoe in the course of the ceremony. For *shashshā* we may recall the name *lailat al-ma'shush* which al-Shabushī gives to the alleged nocturnal feast and orgy of the Nestorian nuns; cf. Hoffmann, *Ausszüge aus syrischen Akten persischer Märtyrer*, 1880, p. 127.

(V. MINORSKY)

SHA'BĀN, name of the eighth month of the lunar year. In classical *ḥadīth* it has already its place after Radjab Muḍar. In British India it has the name of *Shab-i barāt* (see beneath), the Atchehnese call it *Kandūri bu* and among the Tigrē tribes it is called *Maddagen*, i. e. who follows upon Radjab.

In early Arabia the month of *Sha'bān* (the name may mean "interval") seems to have corresponded, as to its significance, to Ramaḍān. According to the *ḥadīth* Muhammad practised supererogatory fasting by preference in *Sha'bān* (Bukhārī, *Ṣawm*, b. 52; Muslim, *Ṣiyām*, trad. 176; Tirmidhī, *Ṣawm*, b. 36). 'Ā'isha recovered in *Sha'bān* the fastdays which were left from the foregoing Ramaḍān (Tirmidhī, *Ṣawm*, b. 65).

In the early-Arabian solar year *Sha'bān* as well as Ramaḍān fell in summer. Probably the weeks preceding the summer-solstice and those following it, had a religious significance which gave rise to propitiatory rites such as fasting. This period had its centre in the middle of *Sha'bān*, a day which, up to the present time, has preserved features of a New-Year's day. According to popular belief, in the night preceding the 15th the tree of life on whose leaves are written the names of the living is shaken. The names written on the leaves which fall down, indicate those who are to die in the coming year. In *ḥadīth* it is said that in this night Allāh descends to the lowest heaven; from there he calls the mortals in order to grant them forgiveness of sins (Tirmidhī, *Sunan*, b. 39).

Among a number of peoples the beginning or the end of the year is devoted to the commemoration of the dead. This connection can also be observed in the Muslim world. For this reason *Sha'bān* bears the epithet of *al-mu'azzam* "the venerated". In British India in the night of the 14th people say prayers for the dead, distribute food, among the poor, eat *halwa* (sweetmeats) and indulge in illuminations and firework. This night is called *lailat al-barā'a* which is explained by "night of quittance" i. e. forgiveness of sins.

In Atchēh this month is likewise devoted to the dead; the tombs are cleansed, religious meals (*kandūri*, q. v.) are given and it is the dead who profit from the merits of these good works. The night of the middle of *Sha'bān* bears a particularly sacred character as is testified by the *kandūris* and the *ṣalāts* which are called *ṣalāt al-ḥādja* or, on account of certain eulogies, *ṣalāt al-iṣābiḥ*. During the last days of the month, a market is held in the capital.

At Makka Radjab, not *Sha'bān*, is devoted to the dead. Here, in the night of the 14th *Sha'bān*, religious exercises are held; in the mosque circles are formed which under the direction of an *imām* recite the prayer peculiar to this night.

In Morocco on the last day of *Sha'bān* a festival is celebrated which resembles a carnival. A description of it is to be found in L. Brunot, *La mer dans les traditions et les industries indigènes à Rabat & Salé* (Paris 1921), p. 98 sq.

SHA'BĀN AL-MALIK AL-AṢHRAF, a Mamlūk Sulṭān, was chosen Sulṭān on *Sha'bān* 15, 764 (May 30, 1363), through the influence of the all-powerful Atabeg Yelboghā al-ʿUmari when only ten years old. His father Ḥusain was passed over because the ambitious Atabeg Yelboghā wished to rule himself and therefore preferred the ten-year-old son, the grandson of Muhammad al-Nāsir. His reign was marked by frequent attacks by Frankish fleets on Mamlūk seaports like Alexandria and Tripolis in Syria. For example at the beginning of 767 (1366) ships of Pierre de Lusignan, king of Cyprus, together with Venetian, Genoese and Rhodian ships appeared before Alexandria which they plundered, but withdrew on the approach of the Egyptian troops, carrying off, according to the sources, 5,000 prisoners. The Christians in Egypt and Syria had to pay the ransom for the captive Muslims, and also pay for the building of a fleet which was to invade Cyprus. The negotiations with Egypt were not successful, as Yelboghā was not really anxious for peace but was planning a landing on Cyprus with his fleet. But troubles at home prevented his plan from developing. The king of Cyprus, however, took the offensive and sent a fleet to Syria to take the harbour of Tripolis and the town of Aiyās in the south of Asia Minor. His fleet was able to land raiding parties but had to withdraw before the superiority of the Muslim forces, as had another Frankish fleet which appeared before Alexandria. Peace was only concluded in the beginning of 772 (August, 1370). The Egyptians later exacted vengeance for these Frankish raids by falling upon the kingdom of Little Armenia, which was an ally of the king of Cyprus (776 = beginning of 1374), and conquering the towns of Aiyās, Sis and the rest of the kingdom; the king was brought a prisoner to Cairo and his land became permanently a Muslim possession.

A conspiracy broke out in 768 (1367) against Yelboghā, whose Mamlūks could no longer stand his harshness and cruelty. The Mamlūks wanted to take him prisoner, but receiving timely warning he was able to escape to an island on the Nile, and to hold out there, and soon afterwards to return to Cairo and appoint *Sha'bān*'s brother Önük Sulṭān. *Sha'bān*, however, who was now sixteen, was forced by the Mamlūks to put himself at their head and Yelboghā was forced to retire again to his island on the Nile. *Sha'bān* then succeeded in seizing the fleet newly built by Yelboghā; the latter had to leave his place of refuge and fly to Cairo. There he was taken by the Mamlūks who had in the meanwhile returned to the citadel, and soon after-

wards killed by a Mamlūk while attempting to escape. Yelboghā's Mamlūks now terrified the people and did not obey their new leader, the emir Esendemir. Constant fighting was the result, which ended by a great number of Yelboghā's Mamlūks being banished to Syria and interned in Kerak. They later played an important part in the Mamlūk Kingdom. After several changes in the person of the regent the emir Aḳtemir al-Ṣahābī came to power, and held his position till the death of the Sultān. The Sultān had transitory success in the south of the kingdom, in Nubia. The king of Nubia recognised the suzerainty of the Sultān of Egypt. But as a result of Aḳtemir's cruel treatment of prisoners, the Nubians rebelled again and destroyed the frontier town of Aswān.

The Sultān's idea of making a pilgrimage to Mekka in these troubled times was quite a mad one. In order to be secure against conspiracies of his relatives he had his brothers and cousins brought to Kerak and sent his regent to Upper Egypt to protect the frontier against the Beduins; but he had too little authority over his own Mamlūks to be able to risk such an expedition. The avaricious Mamlūks mutinied at 'Aḳaba and as the Sultān would not yield to their demands they threatened him with death so that he had to flee secretly to Cairo, but the Mamlūks had accomplices there who were hostile to the Sultān. He was able to remain concealed in Cairo for a short time in the home of a singing-girl but was soon recognised and strangled. He was lamented by the people as he had abolished burdensome taxes and in general treated his subjects with mildness. The main reason for the terrible state of the country was the insubordination and cruelty of the Mamlūks who ill-treated and oppressed the people.

Bibliography: Ibn Iyās, ed. Būlak, i. 213—338; Weil, *Gesch. der Chalifen*, iv. 510—530, where the European printed texts and the Oriental MSS. are given; Muir, *The Mamluke Dynasty of Egypt*, p. 97—101; on Yelboghā see *Manhal al-Sāfi*, ed. Cairo, v. 162, fol. 432^b—434^a. (M. SOBERNHEIM)

SHA'BĀN AL-MALIK AL-KĀMIL, a Mamlūk Sultān, son of al-Malik al-Nāṣir Muḥammad [q.v.], brother of al-Malik al-Ṣāliḥ Isma'īl [q.v.], ascended the throne on Rabī' II 4, 746 (Aug. 4, 1345), after having won over during the illness of his brother the emirs of influence, notably his step-father, the Emir Arghūn al-'Alā'ī. He is said to have used threats as to what he would do to them if not elected. He forced his brother's widow to marry him and soon after also married the daughter of another Emir and, indeed, women always played a great part in his life. His main occupations were all kinds of gladiatorial contests, racing and cock-fighting. His court was marked by great extravagance and the very slave-girls wore jewels on their dresses in his and his brother's reigns. Offices were sold quite openly and shamelessly; the Sultān invented a special tax on the appointment to fiefs and offices, as his biographer al-Ṣafadī (see below) tells us. An edict issued in his reign has been preserved in the citadel of Tripolis (Syria) and in a fragmentary state in Kaḻat al-Ḥiṣn; by this certain overpayments to the Mamlūks resulting from the difference between the lunar and solar years, which in case of their death before the end of their period of service could be claimed by their heirs, were left to the latter (see *Bibliography*).

He had two of his brothers and two of his most important emirs murdered. Yelboghā al-Yahyawi, governor of Damascus, ran a similar risk. He therefore arranged with the other Syrian governors to send a letter to the Sultān in which he threatened him with deposition and reproached him vigorously with his wickedness. Sultān Sha'bān then sent an apologetic reply in which he promised to reform but made preparations against the rebels. When he wanted to put to death two more of his brothers he was prevented by their mother and his step-father. Other emirs who had once been friendly to him but who now saw arrest threatening them collected their followers and other malcontents in the neighbourhood of Cairo until the Sultān in the end had only 400 horsemen at his disposal. He took refuge with his mother in the citadel where he was discovered and taken prisoner. He was murdered two days later on *Djumādā* II 3, 747 (Nov. 20, 1346). In his brief reign he had proved himself one of the most worthless rulers who ever sat on the throne of Egypt.

Bibliography: Weil, *Geschichte der Chalifen*, iv. 462—469. His biography in al-Ṣafadī, Berlin Ar. MSS., N^o. 9864, f. 51^a, and *al-Manhal al-Sāfi*, MS. Paris, Ar. 2070, f. 152^a. On the edict see M. Sobernheim in *Matériaux pour un Corpus Inscriptionum Arabicarum*, Syrie du Nord, p. 94—103, and thereon Becker, *Isl.*, i. 97—99, who interprets the inscription somewhat differently; also al-Makrizī, *Khitaṭ*, ii. 217, 10 from below; on the new taxation on fiefs see Ibn Iyās, i. 184, and *Manhal*, loc. cit.

(M. SOBERNHEIM)

SHABĀNKĀRA, name of a Kurdish tribe and their country. Ibn al-Athīr has *Shawānkāra*; Marco Polo: *Soncara*. According to Ḥamd Allāh Mustawfī, the realm of Shabānkāra is bounded by Fārs, Kirmān and the Persian Gulf. Nowadays it forms part of Fārsistān; modern maps show a village of the name of Shabānkāra on 30° N. Lat. and 51° E. Long. Mustawfī says that the capital was the stronghold of Ig; other localities of the province, which was divided into six districts, were: Zarkān (near Ig), Iṣṭabānān (or Iṣṭabānāt), Burk, Tārum, Khāira, Nairiz, Kurm, Rūniz, Lār and Darābdjird. As for particulars and identifications it suffices to refer to the notes of G. le Strange on his translation of Mustawfī's *Nuḥat al-Kulūb* (G. M. S., XXIII/ii. 138/139); for Darābdjird cf. also the article (above, i. 960) and P. Schwarz, *Iran im Mittelalter*, ii. 92 etc.). As for the climate, Shabānkāra is reckoned among the warm countries (*garmsir*); but it encloses also regions of a moderate temperature (*hawā-i mu'tadil*). The products of Shabānkāra consist chiefly in corn, cotton, dates, (dry) grapes and other fruits; at Darābdjird mineral salt is found. Among the most fertile districts are those of Zarkān and of Burk. The revenues (*huḳūḳ-i dīwānī*) during the Seldjūḳ rule amounted to more than 2,000,000 dinārs, but at the time Mustawfī wrote ($\pm 740 = 1340$) they only came to 266,100 dinārs. The country abounded in strong places, e. g. Ig, Iṣṭabānān (destroyed by the Atābeg Cāwuli, rebuilt later on), Burk. At the time of Mustawfī, the fortifications of Darābdjird were ruined, but the mountain-pass of Tang-i Ranba, to the east of the town, had a strong castle. In the chapter on the Muzaffarid dynasty, intercalated in the manuscript of Mustawfī's *Tārīḫ-i Guzida*, facsimilized by Browne (G. M. S., XIV/i.

665/666), there is also mention of the fortifications of *Shabānkāra*, the fertility of that country ("beautiful and cultivated like the garden of Iram"), its mills, *bāzārs*, etc.

The *Shabānkāra* tribe were Kurds; in Ibn al-Balkhī's time (early sixth [twelfth] century) there were five subdivisions of them, viz. the *Ismā'īlī*, the *Rāmānī*, the *Karzuwī*, the *Mas'ūdī* and the *Shakānī*. They were herdsmen, but also intrepid warriors, who more than once, in the course of history, became a power to be reckoned with. Their chiefs boasted descent from *Ardashīr*, the first *Sāsānīan*, or even from the legendary king *Minūtīhr*. Leaving aside the exploits of the *Shabānkāra* in *Sāsānīan* times (as e.g. the fact that *Yazdedjird III* is said to have taken refuge among them at the time of the Muslim invasion), the history of the *Shabānkāra* begins at the epoch of the decline of *Būyid* power.

The *Ismā'īlīs* were regarded as the most noble in descent; their chiefs are said to descend from *Minūtīhr* and to have held in *Sāsānīan* times the function of *Ispāhbads*. The first time, so far as we know, this tribe came into collision with a great Muslim power was in the days of the *Chaznawid Mas'ūd* (421/1030—431/1040), whose general *Tāsh Farrāsh* drove them from the environs of *Isfahān*; so they were compelled to remove southward. But now they came within the sphere of *Būyid* influence. The *Būyids* not suffering their presence, they had to migrate once more, until they settled in the *Darābdjird* district. Ibn al-Balkhī gives the history of their ruling family at some length. It may be sufficient to state that in the course of the quarrels which arose among the kinsmen one of them, *Salk b. Muḥammad b. Yahyā*, called to his aid the mighty *Faḍlūya* of the *Rāmānīs*; at the time Ibn Balkhī wrote, *Salk's* son *Ḥasūya* was the ruler or the *Ismā'īlīs*, but his kinsmen contested his supremacy.

The *Karzuwī Shabānkāra*, taking advantage of the decline of the power of the *Būyids*, obtained *Kāzerūn* but were driven out of it by *Čawulī* when he made his expedition in *Fārs*. The *Mas'ūdīs* also came to some power in the days of *Faḍlūya*; the *Karzuwī* chief *Abū Sa'd* had also served under that *Rāmānī* ruler. For some time the *Mas'ūdīs* possessed *Firūzābād* and part of *Shāpūr Khura*, but they were no match for the *Karzuwīs*, whose chief, *Abū Sa'd*, defeated and put to death *Amīrūya*, the *Mas'ūdī* prince. When, later on, *Čawulī* ruled *Fārs*, he installed *Amīrūya's* son *Vištāsf* as ruler of *Firūzābād*. The *Shakānīs*, rapacious mountaineers of the coastland, present no historical interest. They also were subdued by *Čawulī*.

Historically the most important tribe is the *Rāmānīs*, to whom belonged *Faḍlūya* (Ibn al-Athīr, x. 48, calls him *Faḍlūn*), the mightiest Amīr of the *Shabānkāra*. This man, the son of a certain 'Alī b. al-Ḥasan b. Aiyūb, who was the chief of his tribe, rose to the rank of *Sipāhsālār* in the service of the *Šāhib 'Adil*, the wazīr of the *Būyid* ruler of *Fārs*. Even before this time the *Būyids* had been troubled by the *Shabānkāra*. The *Ta'rikh-i Gusiḍa* (ed. Browne, p. 432) mentions an insurrection of a certain *Ismā'īl* of *Shabānkāra* against the king al-Imād li-Dīn-Allāh *Abū Kālīndjār* (416/1025—440/1048). This prince was succeeded by his eldest son *Abū Naṣr*, who died in 447 (1055) and left the throne to his younger brother *Abū Maṣṣūr*, the royal master of the *Šāhib 'Adil*.

Abū Maṣṣūr put to death this wazīr, whereupon *Faḍlūya* rose in rebellion. He succeeded in capturing the king himself and his mother, the *Saiyida Khurāsūya*. *Abū Maṣṣūr* was confined in a stronghold near *Shīrāz*, where he was murdered in 448 (1056); the *Saiyida* was, by order of *Faḍlūya*, suffocated in a bath. The *Shabānkāra* chief, now ruler of *Fārs*, soon came into collision with the *Seldjūq* power. After fighting without success against *Kāwurd*, the brother of *Alp Arslān*, he submitted to the latter, from whom he received the governorship of *Fārs*. *Faḍlūya* afterwards revolted; the stronghold of *Khurshah*, to which he had betaken himself, was besieged and taken by the great *Nizām al-Mulk*, and *Faḍlūya*, after many vicissitudes, captured and executed (464/1071). Such is in substance the account of Ibn al-Balkhī, a younger contemporary. Ibn al-Athīr represents these events somewhat differently (x. 48/49; the *Kurd Faḍlūn*, who, according to Ibn al-Athīr, ix. 289, held part of *Ādharbaidjān* and raided the *Khazars* in 421/1030, cannot, of course, be identified with the *Shabānkāra* chief). With the *Faḍlūya*-affair is connected without any doubt, the expedition of *Alp Arslān* to *Shabānkāra* of the year 458/1066, mentioned by al-Rāwandī, *Rāḥat al-Šudūr* (G. M. S., New Ser., vol. ii.), p. 118.

The *Shabānkāra* were to be for many years a nuisance to the countries of *Kirmān* and *Fārs*. In 492 (1099), supported by the prince of *Kirmān*, *Irān-Šāh b. Kāwurd*, they defeated the *Amīr Unar*, who was wazīr of *Fārs* from the part of the *Sultān Barkiyārūkh*. About these times the struggles of the *Atābeg Čawulī* with the *Shabānkāra* begin. This prince, *Fakhr al-Dīn Čawulī*, who died in the year 510/1116 (the *Ta'rikh-i Gusiḍa* wrongly places his death under the rule of *Mas'ūd b. Muḥammad b. Malik-shāh*), governed *Fārs* on behalf of the *Seldjūq* ruler of *Irāk*, *Muḥammad b. Malik-shāh*. The *Shabānkāra* *Amīr al-Ḥasan b. al-Mubārīz Khusrāw* refused to pay homage; thereupon *Čawulī* attacked him suddenly. *Khusrāw* had a narrow escape, being saved by the help of his brother *Faḍlū*. Now *Čawulī* subdued *Fasā* and *Djāham* in *Fārs*; thereupon he besieged for some time the stronghold where *Khusrāw* had taken refuge, but perceiving that the siege would be a long and hard one he came to terms with the *Shabānkāra* chief. Later *Khusrāw* accompanied the *Atābeg* on his expedition to *Kirmān*, the king of which had sheltered the prince of *Darābdjird*, *Ismā'īl*. In this connection Ibn al-Athīr mentions the fact that *Čawulī* requested the king of *Kirmān* to hand over some *Shabānkāra* forces who had taken refuge to him.

After these events the *Shabānkāra* seem to have kept quiet during the rule of *Muḥammad b. Malik-shāh*, but new troubles arose when under the following king, *Maḥmūd b. Muḥammad* (511/1117—525/1131), the wazīr *Nāṣir b. 'Alī al-Darkazīnī* began to illtreat these tribes also. This caused an insurrection during which the *Shabānkāra* wrought great damage. For the time up to the *Kirmān* affair there may be noted the following data: In the service of the *Salghārī* *Atābeg Sunkur*, the *Kurd Muḥammad Abū Tāhīr*, who afterwards became the first independent sovereign of the Greater *Lūr* dynasty (he died 555/1160), made himself meritorious by a victory on the chiefs (*hukkām*) of *Shabānkāra*. In 564/1168 the *Shabānkāra* sheltered *Zangī b. Daklā*, who was expelled from *Fārs* by the ruler of *Khuzistān*.

We now enter on the most glorious period of *Shabānkāra* history, which, however, lasted only a few years. The *Shabānkāra* chief Kutb al-Dīn Mubārīz and his brother Nizām al-Dīn Mahmūd, Amīrs of Īg, availed themselves of the disturbances which arose in Kirmān after the extinction of the ruling Seldjuk dynasty of that country. They responded to the call of the wazīr Nāsiḥ al-Dīn, who solicited their aid against the Ghuzz. Contrary to the intention of the wazīr, but assisted by the citizens, they occupied before giving battle to the Ghuzz the capital Bardasir and so secured the dominion of Kirmān (597 = 1200/1201). The two Amīrs now defeated the Ghuzz, but the strained relations between these rulers of Īg and the Atābeg of Fārs compelled them to return to their realm after having appointed as their *nā'ib* one of the nobles of Kirmān. Thereupon the Ghuzz appeared once more to repeat their ravages. One of the Kirmāni Amīrs, Hurmuz Tādī al-Dīn Shāhān-shāh, concluded a treaty with them. Nizām al-Dīn marched against him from Īg; in the battle which ensued Hurmuz fell and his Turkish allies were routed. Shortly after, Nizām al-Dīn entered Bardasir again. He made himself, however, by his debauchery and his rapacity odious to such a degree that a plot was laid against him. In the night the conspirators took him prisoner with his sons (600 = 1203/1204). They intended thereby to compel the commanders of Mubārīz's garrisons to surrender. These commanders, however, remained in their strongholds and the latter had to be besieged. In the meanwhile a new actor made his appearance on the political stage viz. 'Adjam Shāh b. Malik Dīnār, a protégé of the Khwārizm-shāh [q.v.]. 'Adjam Shāh had concluded an alliance with the Ghuzz who assisted him in his attempts to secure the realm of Kirmān. In short, the course of events was as follows. The prisoner Nizām al-Dīn was sent to the Atābeg of Fārs, but if 'Adjam Shāh expected to remain in the quiet possession of Kirmān, he was disillusioned by a polite message from the Atābeg, Sa'd b. Zangī, to the effect that Sa'd was sending his general 'Izz al-Dīn Faḍlūn to accelerate the reduction of the garrisons mentioned above (600). The troops of Fārs duly arrived and delivered Kirmān definitively from the *Shabānkāra*. An expedition which Mubārīz undertook in revenge had no results except bringing about once more sore devastations.

In 658 (1260) Hūlāgū destroyed Īg and killed the *Shabānkāra* Amir Muẓaffar Muḥammad; afterwards, in the year 694/1295 we find *Shabānkāra* among the countries which, according to the treaty between Baidū Khān and Ghāzān Khān, fell to the lot of Ghāzān. For the year 712/1312 mention is made of an insurrection of the *Shabānkāra* against the authority of Uldjāitu Khān. It was repressed by Sharaf al-Dīn Muẓaffar, who later became the first historically important member of the Muẓaffarid dynasty. It was the princes of that house who definitely put an end to the power of the *Shabānkāra*. In the year 755 or 756 (1354 or 1355) the last *Shabānkāra* ruler, the Malik Ardashīr, refused to obey the orders of the Muẓaffarid Mubārīz al-Dīn. The latter sent his son Mahmūd with an army to chastise the Kurdish prince. Mahmūd subdued the country and obliged Ardashīr to fly. From this time onwards *Shabānkāra* forms a part of the Muẓaffarid empire; incidentally, in the year 765 (1363/1364), we hear of a *ḥakīm* of *Shabān-*

kāra on behalf of the Muẓaffarid kings (G. M. S., XIV/i. 698). After the time of this dynasty mention is found of *Shabānkāra* as one of the fiefs (*kif*) held by Bāisonghur Bahādūr (Dawlat-shāh, *Tadhkira*, ed. Browne, p. 351).

AL-SHĀ'BI, ABU 'AMR 'AMIR B. SHARĀḤIL B. 'AMR AL-SHĀ'BI, traditionist, was one of the many South-Arabians who gained prominence in the early days of Islām. He was descended from the clan Shā'b, which is a branch of the large tribe of Hamdān, and was born in al-Kūfa, where his father Sharāḥil was one of the foremost of the *ḥurrā'* or *Qur'ān* readers. There is a great divergence in the dates assigned as the year of his birth, but we may assume that the date which he himself gives is approximately correct. He stated that he was born in the year of the battle of Djalūlā', which took place in the year 19/640, but, according to another statement, his mother was one of the captives made after that battle, so that the year 20 given by other authorities may be more accurate. He himself tells us that when al-Ḥādjdjādī came as governor to al-Kūfa in the year 75 he had him called to enquire from him about the conditions of the city and finding him well-informed he made him spokesman (*'arif*) of the tribesmen of Hamdān and settled a salary upon him. He kept in favour with al-Ḥādjdjādī till the time of the rebellion of 'Abd al-Rahmān b. al-Ash'ath (in 81/700) when several of the chief *ḥurrā'* of the city came to him telling him that he, as the foremost of their class in the city, ought to take part in the rising and finally persuaded him to join them. He actually went so far as to address the opposing armies and overwhelm al-Ḥādjdjādī with reproaches. The latter when informed about it said:

"Do not be surprised at this Sha'bi, the villain; if God grant me that I get hold of him, I shall make this world narrower for him than a camel's hide".

Soon after, the army of Ibn al-Ash'ath was defeated (in 83 A. H.) at Dair al-Djamādim and al-Sha'bi to preserve his life went into hiding. When he learned that al-Ḥajjīdādī had granted an amnesty to all who joined the army of Ḳutaiba b. Muslim, which was being raised to be sent to Khurāsān, he obtained through a friend a donkey and provisions and went to Farghāna. Here he remained unknown but was able to get into favour with Ḳutaiba who employed him as secretary. From one of his letters al-Ḥajjīdādī guessed that it was al-Sha'bi who was the composer and commanded Ḳutaiba to send him back to him without delay. Al-Sha'bi had been for a long time on friendly terms with Ibn Abī Muslim, the chamberlain or al-Ḥajjīdādī, and the latter had probably spoken in his favour before al-Sha'bi arrived before the governor. Ibn Abī Muslim and other friends advised al-Sha'bi what excuses to make, but when he came before al-Ḥajjīdādī he silently endured the many reproaches of ill-rewarded favours which he made and then admitted his guilt and stupidity. Al-Ḥajjīdādī, who must have valued his learning perhaps more than his position among his tribesmen, readily forgave him.

His reputation must have reached the caliph 'Abd al-Malik for he sent to al-Ḥajjīdādī to send al-Sha'bi to him and he spent the next few years at the court in Damascus. It is difficult to credit the account of the three years till the death of 'Abd al-Malik as, on the authority of al-Sha'bi himself, we are told that he was employed on two very important missions, one to the Greek emperor to Constantinople and the other to the caliph's brother 'Abd al-'Aziz who was governor of Egypt. The first mission related by al-Sha'bi himself was remarkable on account of the fact that the emperor tried to make the caliph suspicious against his ambassador, in which he was not successful on account of the straightforwardness of al-Sha'bi. The mission to Egypt was of the most honourable character, the caliph recommending the ambassador in flattering terms to his brother. The favour of the caliph did not confine itself to the person of al-Sha'bi, but we are told that thirty other members of his family were with him and all received salaries. After being present at the caliph's death-bed he appears to have gone after the decease of 'Abd al-Malik back to al-Kūfa and died there a short time before the death of al-Ḥasan al-Baṣrī, who died in 110/728. Here again the dates given by various authors differ very much; every year from 103 to 110 is mentioned, the latter being probably the right one.

As regards his personal appearance, al-Sha'bi was a slim, little man and he himself attributed it to having been born a twin. His mental qualities must have been great, and in contrast with other theologians he had a sense of humour. The celebrated traditionist al-A'mash was asked why he did not go to hear traditions from al-Sha'bi; he replied: "Because as soon as he sees me coming he makes fun of me and says: Does this look like a man of learning? He looks just like a weaver!" But Ibrāhīm al-Nakha'i received him with honour.

Al-Sha'bi is said to have stated that he had heard traditions from more than 500 Companions and the general judgment of critics is very favour-

able as regards his trustworthiness. Among his many pupils was the great lawyer Abū Ḥanīfa whose oldest authority he was, and it is not surprising that his authority is cited no less than 37 times in the *Kitāb al-Kharāj* of Abū Yūsuf, the chief pupil of Abū Ḥanīfa. The passages in which he is cited in the canonical books of traditions are too numerous to be counted. Though he himself did not claim to be a lawyer it was the custom of lawyers in al-Kūfa to go to him for advice. He himself said: "I am not a *faqīh*, but I deliver those principles which have been handed down to me and they judge in accordance with them." He was a strong opponent of judging by analogy (*ra'y*) and examples are quoted by several of his biographers of his refutations of the principles of analogy. It is, however, not only in traditions that he handed down information; we owe to him a great amount of our knowledge of the history of the time of the Umayyads; a glance into the index of the annals of al-Ṭabarī will suffice to confirm this. He himself said that he could recite poetry for a month and not exhaust the store of his knowledge in this branch of learning. He did not compose any books — the time had not yet come —, and he is stated to have said that he had never put a single line in black and white but related all from memory. This can only apply to the transmission of knowledge, as we have from him himself the admission that he acted as secretary to Ḳutaiba.

Bibliography: His name is mentioned in nearly every book dealing with early Islām; the principal sources for his biography are: *Kitāb al-Aghānī*, Index; al-Ṭabarī, ed. de Goeje, Index; Ibn al-Kaisarānī, *Djam' baina 'l-Rid'āl*, Haidarābād 1323, p. 377; al-Sam'ānī, *Ansāb*, ed. Margoliouth in *G.M.S.*, 1912, fol. 334 recto; Ibn al-Kaisarānī, *Homonyma*, ed. Leiden 1865, p. 201; Ibn Khallikān, *Cairo* 1310, i. 244; Ibn Ḥadjar, *Tahdhīb*, Haidarābād 1328, v. 65–69; al-Dhahabī, *Tadhkirat al-Huffāz*, Haidarābād, i. 69–77. (F. KRENKOW)

SHABIB b. YAZID b. NU'AIM al-SHAIBĀNĪ, a Khāridjī leader. He belonged to the region of al-Mawṣil, to which his family had migrated from the oasis of al-Laṣaf in the Kufa desert, and was born in Dhu 'l-Hijja 25 (Sept./Oct. 646) or 26 (Sept./Oct. 647). In the beginning of 76 (695) he joined Ṣāliḥ b. Musarraḥ, the leader of the Khāridjīs in Dārā between Naṣībīn and Mārdīn and when the latter was slain on 17th Djumādā I (2 Sept. 695) in battle against the troops of al-Ḥajjīdādī [q. v.] under al-Ḥārith b. 'Umayra al-Hamdānī at the village of al-Mudabbadī between al-Mawṣil and al-'Irāq, Shabīb assumed command and with the little body that survived fought his way through to the border country belonging to al-Mawṣil. During the whole of the war with the government troops he showed himself a master of guerrilla warfare. He never remained long on the same spot but continually changed his place of abode and was on good terms with the Christian inhabitants of the country. He was therefore easily able to find shelter for his force which was always very small, although the statements of the Arab historians regarding the smallness of the number of his followers in contrast to the strong bodies of government troops seem somewhat exaggerated, and he was always well informed regarding the enemy's movements. After his defeat

of the 'Anaza and the Banū Shaibān, he took his mother who lived on the slope of Mount Sātidamā near Mawṣil and went farther south. Sufyān b. Abi 'l-Āliya al-Khath'amī was defeated at Khānikin and Sawra b. Abdjar (al-Hurr) al-Tamīmī at al-Nahrawān, whereupon al-Ḥajjāj b. al-Asad collected a new army and put al-Djāz b. Sa'īd al-Kindī in command. The latter showed the greatest caution in following up his dangerous enemy, was always on his guard and ready for battle, and entrenched himself at night. An attack made by Shabīb failed. Al-Ḥajjāj b. al-Asad wanted a speedy end to the long struggle, then appointed Sa'īd b. al-Mudjalid al-Hamdānī and ordered him to attack at once, but he was killed. His successor Suwaid b. 'Abd al-Rahmān al-Sa'dī could do nothing and suddenly Shabīb appeared before Kūfa on the same day as al-Ḥajjāj returned from a journey to Baṣra. In the night Shabīb even entered the town and knocked at the gate of the citadel with a mighty blow from his mace, but on the following morning he had disappeared again. Al-Ḥajjāj then sent a body of cavalry under Zahr b. Kais al-Djufī against him; Zahr was however defeated at al-Sailāḥūn and when Zā'ida b. Kudāma, who succeeded him had fallen at Rūdhbar, Shabīb threatened the town of al-Madā'in. A new army was at once equipped and the command given to 'Abd al-Rahmān b. Muḥammad b. al-Ash'ath al-Kindī [q. v.] who pursued the same cautious tactics as al-Djāz. As he did not succeed in gaining a decision, al-Ḥajjāj became impatient and replaced him by 'Othmān b. Katan al-Hārithī, who was defeated and killed in 'Dhu 'l-Ḥijjdja 76 (March 696) on the river Hawlāyā. While Shabīb was spending the next three months in the mountains, al-Ḥajjāj again collected a strong army the command of which was given to 'Attāb b. Warḳā' al-Riyāḥī. In the meanwhile al-Madā'in fell to Shabīb without a blow being struck. Soon afterwards he attacked the troops sent against him at Sūk Ḥakama near Kūfa. 'Attāb was killed and Shabīb was once more victorious. He therefore again threatened Kūfa; al-Ḥajjāj, however, had already appealed to the caliph for help. 4,000 men under Sufyān b. al-Abrad al-Kalbī soon arrived and there was again a battle at Kūfa, in which Shabīb had the worst of it and had to take to flight to save himself. After an indecisive fight at al-Anbār he went to Djūkḥā, i.e. the region of al-Nahrawān, did not stay long there but went to Kirmān. When the Syrians pursuing him approached he went to meet them, crossed the Dūdjal into al-Ahwāz to attack Sufyān but was forced to retreat after a desperate struggle and was drowned while crossing the river (probably at the end of 77 = spring of 697). Shabīb's appearance was in keeping with his almost legendary exploits. He was very tall and is said to have possessed extraordinary physical strength.

(K. V. ZETTERSTÉEN)

SHABWA, a town in South Arabia, 6 hours journey from al-Sifal in the Wādī Djerdān and 2 days' journey (in Ibn al-Mudjāwir 9 parasangs) S.W. of al-'Abr, about 3850 feet above sea-level. The town is mentioned as early as the Ḥaḍramūt dedicatory inscription Osiander 29.6 (הגרהן שבח), Pliny (*Nat. Hist.* vi. 28, 154; xii. 14, 52) knows it by the name of Sabota as the capital of Ḥaḍramūt. According to him it was built on a high hill and had 60 temples within its walls. According to the authorities from whom C. Landberg got his information about Shabwa, the old town is actually on a hill called Karn, the only elevation in the wide plain, close to the modern settlement. Ruins on a great scale still exist on the top of the hill, enclosed by a wall; large buildings with columns and statues are still standing. Glaser also describes Shabwa as the centre of many ruins between Baiḥān and Shibām.

Al-Bakrī alone among the Arab geographers describes Shabwa as the first town in Ḥaḍramūt; the others transfer it to the region between Baiḥān and Ḥaḍramūt so that they do not include it in the latter. A. Sprenger (p. 306) suggested that this limitation of the geographical conception of Ḥaḍramūt was a natural result of the Ḥimyarite conquest. Shabwa indeed is actually described as a Ḥimyar town. Al-Hamdānī says that the people of Shabwa left the town during the war between Maḍḥidj and Ḥimyar and settled in Ḥaḍramūt. The new settlement was called Shibām after them, originally Shibāh; a *mim* was put in place of the *hā*. According to L. Hirsch this town is 6 days' east of the ancient Shabwa. D. H. Müller in the critical notes to his edition of al-Hamdānī (p. 89) has however described the connection of Shibām and Shabwa as sheer imagination on the part of South Arabian scholars. In any case there is evidence for Shibwa as a second pronunciation alongside of Shabwa. That the latter is older may well be deduced from Pliny's Sabota.

In ancient times Shabwa was the centre of the frankincense trade and of the trade between Egypt and India, which brought to Rome via Ghazza (Gaza) the rarest products of Arabia and China. Shabwa is still connected by three caravan routes with the north. One leads from Nadjrān via 'Elaiḥ, al-Setima, Ruwaik, Šafir, 'Irḳ Musabbāḥ to Shabwa, a second from Nadjrān via Khabb, the Djawf Mārib, 'Irḳ Dukhaim to Shabwa and the third via Mārib, Wādī Ḥarīb, al-Ayādim, Djaww el-Kudaif to Shabwa. The town however no longer plays an important part in commerce and is only of importance for its salt trade. Even in al-Hamdānī's time Shabwa was famous for its salt deposits. The salt-hill called Ḥaid el-Meleḥ, is two hours west of Shabwa and is still being worked; the diggings are open and still confined to the foot of the hill so that there is salt here for centuries still.

The ancient ruins of the city have given rise to many legends. Al-Makrīzī says that there is the tomb of a giant in Shabwa, whose bone from knee to foot measured 13 ells. Yāqūt (iv. 184) mentions that the tomb of the prophet Šāliḥ [q. v.] — which others say is in Mekka — is here and that the footprints of the Prophet's she-camel were to be seen there. As, according to C. Landberg (*Arabica* v. 248) Shabwa has nothing to do with the Sahwa visited by von Wrede — the latter is identified with a Saḥwa in a valley a considerable distance from Shabwa — this tomb cannot be identical with the Ḥimyar tomb described by von Wrede (p. 245). Yāqūt (iii. 257)

besides knows a castle on mount Raima (now the Djebel Rēma) in Yemen also called Shabwa.

SHADD (or RAṬṬ AL-MIḤZAM), "ligature", "knot", "girt which is bound"; this is the most important rite in the initiation ceremony practised since at least the twelfth century A. D. in the guilds of artisans (*ḥirfa*, cf. *ṣiṇf*) as well as in certain mystical congregations (cf. *ṭarīqa*). At his initiation before the body of initiates, the candidate (*maṣḥūd*) if he is a Muslim, takes part if required in the recitation of the *fātiḥa*, the 7 *salām*'s, the *naṣḥāʾid* in honour of the Prophet, the latter preceded by his taking a preliminary oath. Then comes the *shadd*; the novice bends down and is "bound" by the initiator (*naḥīb*, *shādd*), either on the body, the head, or the shoulder (cf. the Turkish miniature in *Islam*, vi. 171), with a knot of material, a shawl of silk or wool (*miḥzam*), a cloth handkerchief (*fūṭa*, *mandīl*, *ghaiba*, *zunnār*), or a simple piece of string (*maṣṭūl*). Several successive twists, knots or turns are made in the cord, usually 4 (sometimes 3, 7 or 8); prayers are recited at each twist invoking some patron saint: when there are four of them, the prayer is in honour of the *maṣḥūd*, Gabriel, Muḥammad, ʿAlī and Salmān; in this case, two supplementary knots are added (called *gharṣa*, *shakla*) in honour of Ḥasan and Ḥusain.

The *shadd* is characteristic of the solemn initiation *ʿalā bisāʿ Allāh*, *fī maidān ʿAlī*, *bayn al-fityān*; it binds the initiate, whether he be Muslim, Christian or Jew to the corporation as a body, as the *ʾahd al-ḥirfa* of the mystics binds one to the whole brotherhood; on the other hand, the *takḥāwī*, called "pact without a knot" is a private

pact of brotherhood binding to a single individual only by a kind of foster-brotherhood (cf. *ʾahd al-yad wa ʾl-iḥtād* or *talḥīn*, for the novice mystic).

After the *shadd*, the initiate is sometimes partially shaved (forelock, moustache or beard); then he puts on a special dress (*libās*, *sarāwīl*) in the old guilds; *ḥirḥa* on the shoulders and *ʿādī* [*kuṭāh* or *ḥurmus*, according to Bakrī as early as 570 (1174) or *tāḥiya*] on the head, in the congregations. The initiate's solemn pledge is then taken (*ʾahd*, *bayʿa*, *mubāyaʿa*, *mithāk al-ikhā*), certain esoteric instruction on his new duties is given him with permission to make use of it (*idjāza*). He then takes his place with this brethren on the carpet of initiation (*bisāʿ*, *saḥḥāda*), for the traditional meal (*taṣṭīḥ walīma*).

During the last forty years this rite has begun to disappear with the gradual disappearance of the old guilds. Some congregations (*Risāʿiya* and *Bakfāshiya*), however, have still preserved the solemn *shadd*.

Thorning was the first to study and classify methodically the esoteric manuscripts relating to the guilds, or *kutub al-futuwwa*, which describe this ritual (they are a kind of catechism of initiation, like the masonic handbooks, compiled in vulgar Arabic with some Persian terms: *dastūr* "by your leave", *pīr*, *kār*); the earliest manuscript is dated 844 (1440) but the text is of the xiiith century; an inscription found by van Berchem in Egypt alludes to them as early as 771 (1369); the Caliph Nāṣir (d. 622/1225) is remembered for having based his attempt at an order of chivalry (*libās al-futuwwa*) on the rite of *shadd*, which is found even earlier in 578 (1182) among the *Nubuwwiya* of Damascus, and in 535 (1140) in a guild of thieves of Baghdād (cf. also Ibn al-Djawzī, *Tabṭis Ibtis*, ed. Cairo 1340, p. 42¹).

Its origins are still more remote, if we remember the significance from the fourth century A. H. among the mystics of the words already mentioned *bisāʿ*, *fūṭa*, and especially *futuwwa* [q. v.], this "knightly honour" which no threat nor prayer could turn from regarding their oaths (like Satan damned for his fidelity to the monotheistic pact, which he had taken, according to Ḥallādj, *Ṭawāṣin*, vi. 20—25, Abū Ṭālib al-Makrī, *Kut al-Kutub*, Cairo 1310, ii., p. 82, 1, 8—; Aḥmad Ghazālī quoted in Ibn Djawzī, *Kuṣṣaʿ*, Leiden MS., cod. Warn. 998, f. 117^a sgg.). The appropriation to the *shadd* of *Qurʾān*, vii. 171 and xlviii. 10 seems to be more modern. But certain elements of the ritual itself are ancient, probably of extremist Shīʿa origin. It is not by chance that the sect of the Nuṣairīs who practice initiation as reformed by Khāṣībī and Ṭabarānī in the fourth century A. H., already credits Salmān with the same qualities as initiator as do the guild catechisms describing the *shadd*; besides the oath of secrecy and the right to initiate non-Muslim monotheists point to the Karmaṭians.

SHADDĀD, BANU. The Banū Shaddād, of whom there is little record, ruled over Arrān from 340—468—951/952—1075/1067 when most of the country was conquered and annexed by Malik-Shāh. Members of the family continued, however, to hold governorships in various districts, such as Gandja and Ānī, which they purchased from the Seldjūks, at any rate down to the end of the vii/xiii century. They were probably Kurds. The principal towns included in Arrān were Nakhčuwān, Gandja, Tiflis, Damirkapu and Karabāgh. The inhabitants were called لَشْكَر or Lesghians.

In 337/948 the Musāfarid ruler of Ādharbāidjān, the Sallār Marzubān Muḥammad, was captured before the gates of Raiy, whereupon that country was thrown into confusion and any chief who had a following set himself up as independent governor of some town or district. Among these was a certain Muḥammad b. Shaddād b. Kartū, who, having first made himself master of Dabīl by 340/951, became practical ruler of Ādharbāidjān, which he apparently held intact until 344/955 when his power began to decline, and in 360/970 his son succeeded only to the province of Arrān. There was about this time a ruler of Gandja named Faḍlūn who was possibly a brother of Muḥammad b. Shaddād. The son of Muḥammad b. Shaddād b. Kartū was Abu 'l-Ḥasan 'Alī b. Dja'far Lashkarī, who reigned for eight years and was succeeded by his brother Marzubān, who after a reign of seven years was killed by another brother named Faḍl b. Muḥammad while out hunting. Faḍl, by his good government, made himself loved of the people, and among his memorable acts was the building of a vast bridge across the river Araxes. He died in 422/1031 after a reign of 47 years and was succeeded by his son Abu 'l-Faṭḥ Mūsā, who, after a reign of three years, was succeeded by his son Abu 'l-Ḥasan 'Alī b. Mūsā Lashkarī, who reigned down to his death in 440/1048. This Abu 'l-Ḥasan was one of the patrons of the poet Kaṭrān [q.v.] in Gandja. He was succeeded by his son Nūshirwān, who, dying three months later, was succeeded by Abu 'l-Aswār Shāwir b. al-Faḍl, of whom more is known than of the other members of this dynasty, for he is mentioned more than once by Kābūs in his *Kābūs-nāma*, and Ibn al-Aṭhīr tells us that he swore allegiance to Tughril when the latter visited Gandja in 446/1054 after his conquest of Tabriz. Abu 'l-Aswār died in 459/1067 and was succeeded by his son al-Faḍl II Minūcihr. Kābūs (*op. cit.*) writing in 468/1075 refers to Faḍlūn b. Abu 'l-Aswār in the past tense, and it would appear that with the death of this Faḍlūn and the annexation of Arrān by Malik Shāh the independence of the Banū Shaddād came to an end, and from this point it is very difficult to follow the history of the family. This Faḍlūn was presumably the patron of this name so often addressed by Kaṭrān, and is also the subject of several anecdotes in the *Kābūs-nāma*. He apparently ruled over Gandja, Ānī and Tovīn.

According to Khanikoff (*Bull. Acad. Petr.*, 1849, vi. 195), al-Faḍl II Minūcihr had two sons, Faḍlūn, who was Amīr of Gandja when that city was captured by Malik Shāh in 481/1088, and Abu 'l-Aswār II Shāwir, who was Amīr of Ānī when that city was captured by King David the Restorer in 518/1124. This Abu 'l-Aswār II Shāwir had a

son Maḥmūd, who had a son Kai-Sultān, of whom we know from an inscription found in Ānī bearing the date 595 (1198), where he calls himself Kai-Sultān b. Maḥmūd b. Shāwir b. Minūcihr al-Shaddādi.

(E. DENISON ROSS)

AL-SHĀDHILĪ, ABU 'L-ḤASAN 'ALĪ b. 'ABD ALLĀH b. 'ABD AL-DJABBĀR AL-SHARĪF AL-ZARWILĪ, a celebrated mystic, founder of the Muslim religious brotherhood or *ṭarīqa* [q.v.] known as the *Shādhilīya* [q.v.], which has itself given rise to some fifteen other brotherhoods like the *Wafā'iya*, the *'Arūsīya*, the *Djāsūliya*, the *Hafnawīya* etc. etc.

He was born, according to some, at Ghemāra near Ceuta about 593 (1196/1197); others say he was born at Shādhilā, a place near the Djabal Zafrān in Tunisia from which he would take his *nisha* of al-Shādhilī. In any case the ethnic al-Zarwīlī would suggest a Moroccan origin. His disciples attributed a nobler origin to him and trace his descent back to the Prophet through the line of al-Ḥasan.

From his youth al-Shādhilī had devoted himself to study with such ardour that he contracted a serious disease of the eyes; perhaps he became blind. Henceforth he devoted himself completely

to the doctrines of the mystic Ṣūfīs (cf. the art. TAṢAWWUF). In Fās he had attended the lectures of the adepts of the great eastern mystic Ḍjunaid, particularly those of Muḥammad b. 'Alī b. Ḥir-zihim, himself a pupil of Abū Midyān Shu'aib of Tlemcen. But it was only under the influence of the Moroccan Ṣūfī 'Abd al-Salām b. Maṣhish that the subject of our article went to Ifrīkiya to the reign of Tunis to spread his doctrines. Persecuted for his teaching and especially for his influence on the people, he took refuge in Alexandria in Egypt where his popularity extended and increased. According to some of his biographers, he could not leave his house without being followed by crowds. He made many pilgrimages to Mekka, on the last of which he died at Homaithirā while crossing a desert in Upper Egypt (656 = 1258). His tomb, which was an object of great veneration and pilgrimage, is surmounted by a dome, the gift of a Mamlūk Sulṭān of Egypt (Cf. al-Batanūnī, *Rihla* p. 29). Silvestre de Sacy gives another tradition (*Chrestomathie*, ii. 233), according to which he is buried in the region of Mokhā.

Al-Shādhilī led the life of a *Shaiikh* [q. v.] *Sā'ih* or religious man seeking through a wandering life of meditation constant union with the divinity, eternal ecstasy. He taught his disciples the entire devotion of life to the service of God. He recommended them to pray at all hours, in all places and in all circumstances and the practice of *taṣawwuf*; his profession of faith was the *tawhīd*. His immediate pupils had no *khalwa* (a kind of hermitage), nor monastery, nor noisy practices nor juggleries. Among his many disciples the most famous were in Egypt Tādj al-Dīn b. 'Aṭā' Allāh and Abu 'l-'Abbās al-Mursī; in the North-west of Africa the most of the Muslim religious brotherhoods claim to follow his teaching.

Al-Shādhilī left a number of works of which the majority are *ḥizb* [q. v.], a kind of formula of prayer for recitation, either regularly or in case of need. They are entitled:

1. *al-Muḥaddima al-ghasiya li 'l-djam'a al-azhariya*; 2. *Kitāb al-Ukhwa*; 3. *Ḥizb al-barr*; 4. *Ḥizb al-baḥr*; 5. *Ḥizb al-kabir*; 6. *Ḥizb al-ṭams 'alā 'uyūn al-aidā*; 7. *Ḥizb al-naṣr*; 8. *Ḥizb al-lutf*; 9. *Ḥizb al-faṭḥ*, also called *Ḥizb al-anwār*; 10. *Salāt al-faṭḥ wa 'l-maghrib*; 11. various prayers or litanies; 12. lastly a *Waṣiya*, a kind of religious charge to his disciples.

(A. COUR)

SHĀDHILIYA, or **SHĀDHALIYA**, pronounced in Africa *Shāduliya*, Ṣūfī sect called after Abu 'l-Ḥasan 'Alī b. 'Abd Allāh al-Shādhilī, whose title is variously given as Tādj al-Dīn and Taḳī al-Dīn (593–656 A.H.). For the life of this personage see the art. AL-SHĀDHILĪ.

His system. Al-Shādhilī does not appear to have composed any large work, but many sayings, spells and an ode are ascribed to him, and since some of the first are recorded in the work of his

disciple's disciple, Tādj al-Dīn al-Iskandarī, composed in 694, they may be to some extent genuine (see the art. AL-SHĀDHILĪ). The best known of his productions is the *Ḥizb al-Baḥr* "Incantation of the Sea", which was reproduced by Ibn Baṭṭūṭa (i. 41), whence the translation is copied by L. Rinn (*Marabouts et Khouan*, p. 229). Extraordinary powers are ascribed to it by Ḥājjī Khalifa (iii. 58), and its author thought it might have prevented the fall of Baghdād; several commentaries on it are enumerated. Several other incantations and prayers are given in the *Laṭā'if* (ii. 47–66) and the *Mafākhīr* (p. 135 sqq.). The latter of these works also contains fairly lengthy discourses, in some of which the stages through which the *murīd* should pass are described in detail, though the language is, as usual in such cases, not intelligible to the ordinary reader. It would appear from these that al-Shādhilī's aim was in the main the inculcation of the higher morality, such as is found in the works which he approved, viz. the *Iḥyā' 'Ulūm al-Dīn* and the *Kūt al-Kulūb*; and indeed the five principles (*uṣūl*) of his system are given as (1) fear of Allāh in secret and open; (2) adherence to the Sunna in words and deeds; (3) contempt of mankind in prosperity and adversity; (4) resignation to the will of Allāh in things great and small; (5) having recourse to Allāh in joy and sorrow.

It would seem unlikely that it was his intention to found an order in the sense which afterwards became attached to the word *ṭarīqa*. He desired his adherents to pursue the trades and professions in which they were engaged, combining, if possible, their normal activities with acts of devotion. Anecdotes are recorded of men who offered to abandon their employments and follow the saint, who urged them to continue working at the same. Mendicancy was discouraged and even government subsidies for their meeting-houses were, it is asserted, refused. Indeed the erection of *ṣāwīya*'s and similar buildings does not seem to have been contemplated by al-Shādhilī or his successor Abu 'l-'Abbās, who is praised by his biographer for never placing stone on stone. Even the holding of high office with ample emoluments and a luxurious mode of living was not discouraged; and this doctrine, as will be seen, survived till recent times among adherents of the system.

Doubtless the ultimate aim of al-Shādhilī was, as with other Ṣūfīs, *al-fanā*, and the method pursued was the usual one of the religious exercises called *awrād* and *adhkār*. Formulae, as usual, were selected and their repetition a stated number of times enjoined. Lists of these with the ritual appertaining to them are given in the *Mafākhīr* (p. 125, 126). The *shaiikh*, indeed, is said to have adapted his recommendations to the needs of each *murīd* and to have given each permission to follow some other *shaiikh*, if he found his methods more effective. The use of such formulae, however, is not easily separated from the supposed acquisition of miraculous powers, which are described in the *Mafākhīr* (*loc. cit.*): "The least of their (the *Shādhilis*) messengers are blindness, crippling and desolation", but there was some doubt whether they were justified in sending them on their enemies.

Apart from their mysterious knowledge the leaders of the system claimed to be strictly orthodox, and, indeed, when a revelation which one

of the adherents received conflicted with a *sunna* he was told to reject the former in favour of the latter. In spite of this some of al-Shādhilī's assertions incurred the censure of Ibn Taimīya, whose supporters in this matter in their turn incurred the censure of the historian al-Yāfi'ī (iv. 142).

The three specialties which the members of the sect claimed were: (1) that they are all chosen from the "well-guarded Tablet", i. e. have been predestined from all eternity to belong to it; (2) that ecstasy with them is followed by sobriety, i. e. does not permanently incapacitate them from active life; (3) that the *Kuṭb* will throughout the ages be one of them.

Spread of the system. The absence at the first of religious buildings renders it difficult to trace the progress of the community. It seems clear that the first group of adherents was formed in Tunis; al-Shādhilī's successor, however, Abu 'l-'Abbās al-Mursī (d. 686) lived 36 years in Alexandria, "without once seeing the face of the governor or sending to him" (*Laṭā'if*, i. 128), and, as has been seen, did not lay stone on stone; still 'Alī Pasha Mubārak (*Khiṭaṭ Dīdīda*, vii. 69) records the existence there of a mosque bearing his name (restored 1189 = 1775/1776), doubtless built by his disciples; also of one called after his disciple Yaḳūt al-'Arshī (d. 707) and a third called after their joint disciple Tādj al-Dīn b. 'Aṭā al-Iskandari (d. 709; author of the *Laṭā'if*). The first of these is called a *djāmi'* and is richly endowed. There are *mawlid* celebrated in honour of the first two of these persons. The Pasha states that the mosques are chiefly frequented by Maghrebines; he mentions a mosque belonging to the order in Cairo, which, however, is in ruins. It is probable that the adherents of al-Shādhilī were at all times to be found chiefly to the West of Egypt; but H. H. Jessup (*Fifty-three Years in Syria*, ii. 537) asserts that they were in his time numerous in Syria and advocated the reading of the Old and New Testaments and fraternisation with Christians. In 1892 a lady adherent, "from Koraun in the Bukaa, North of Mt. Hermon", set out on a preaching tour in Syria; she advocated reform and an upright life and insisted that all, Muslims, Christians and Jews, are brothers. She preached in the mosques in Damascus, Hasbeia, Sidon, Tyre and other cities, rebuking the sins of the people. It would seem certain that religious toleration of this sort by no means coincided with the views of the founder of the order.

It was reported by C. Niebuhr (*Reisebeschr. nach Arabien*, i. 439; French transl., i. 350) that in Mokhā in S. Arabia *Shaiḫh* al-Shādhilī was regarded as the patron saint of the place and, indeed, the originator of coffee-drinking; and S. de Sacy afterwards (*Chrest. Arabe*, ii. 274) produced from the *Djīhān-numā* a passage relating how al-Shādhilī came to Arabia in 656, and the series of miracles which led to the production of coffee becoming the staple industry of Mokhā. It is more probable that the patron of Mokhā is a later member of the sect, 'Alī b. 'Umar al-Kurashī (whose verses are cited in the *Mafāḥhir*, p. 7), a disciple (and probably cousin) of Nāṣir al-Dīn Muḥammad b. 'Abd al-Dā'im b. al-Mailaḥ (d. 797), head of the order in his time (Ritter, *Erdkunde, Arabien*, ii. 572). It is not clear from Niebuhr's account how far the people of Mokhā in his time observed the Shādhilī ritual or be-

longed to the community. Since Niebuhr's time the place has seriously diminished in importance, being now "a dead-alive mouldering town whose trade as a port for coffee and hides has been killed" (G. Wyman Bury, *Arabia Infelix*, 1915, p. 24).

The main seat of the Shādhilī community appears then to have been Africa west of Egypt, and chiefly Algeria and Tunisia. Materials for the religious history of this region are at present scanty; from a MS. called *Ṭabaḳāt Wad Daif-ulla*, written 1805 A. D., MacMichael produces the following excerpt relating to a *shaiḫh* who died A. H. 1155 (*A History of the Arabs of the Sudan*, ii. 250):

"It was characteristic of him (*Khogali* b. 'Abd al-Raḥmān b. Ibrāhīm) that he held to the Book and the Law [*sunna*] and followed [the precepts and example of] the Shādhaliya Sayyids as to word and deed. And he used to wear gorgeous raiments, such as a green robe of Baṣra, and upon his head a red fez [*ṭarbuṣh*], and round it as a turban rich muslim stuffs. For footwear he wore shoes [*ṣarmūga*]; and he fumigated himself with India-wood [*el 'ūd el hindi*], and perfumed himself, and put Abyssinian civet on his beard and on his clothes. All this he did in imitation of Sheikh Abu' el Ḥasan el Shādhali And it was remarked to him that the Qādirīa only wear cotton shirts and scanty clothes, and he replied 'My clothes proclaim to the world "We are in no need of you," but their clothes say "We are in need of you".'

The same notice contains the names of some important members of the order; the *shaiḫh*'s conduct, as will be seen, agrees exactly with the anecdotes recorded in the *Laṭā'if*, and the same is the case with what is told in the next paragraph:

"It was also characteristic of him that he never rose up to salute any of the great ones of the earth, neither the *AWLĀD 'AGIB*, the rulers of his country, nor the kings of GA'AL, nor any of the nobility, excepting only two men, the successor [*Khalifa*] of Sheikh Idrīs and the successor of Sheikh Ṣuḡhayerūn".

In the nineteenth century the order received considerable extension through the efforts of one "Si Maisum" Muḥammad b. Muḥammad b. Aḥmad, born about 1820 among the *Gharib*, a tribe located halfway between Bogar and Miliana, whose biography is given in detail by A. Joly in the *Revue Africaine*, 1906, 1907. After studying under certain provincial teachers he went to Mazouma, the centre of Muslim studies in Algeria. Having acquired what was to be learned there, he went back to the *Gharib* among whom he founded two mosques, in one of which he taught the *Kur'ān* and *Fikh*, in the other Grammar and Logic. Having associated with members of different orders, he hovered between the Madaniya and the Shādhiliya; in 1860 he visited the shrine of 'Abd al-Raḥmān al-Tha'ālībī near Algiers, and this saint having been a Shādhilī, Si Maisum became attracted to their doctrine; a member of the order advised him to join it and visit the *Shaiḫh* of the order, Adda, at Djabal al-Luḥ in Walad Lakreud. There he stayed for a time, after which he returned to the *Gharib*. By special providence he had been spared the preliminary trials imposed on other aspirants, and instead of starting his career in the order as a *muḥaddam*, he was elevated shortly

after joining to the dignity of *Shaikh*. About 1865 he founded a *zāwiya* at Bogari and divided his time between the *Ḡharib* and Bogari, to the latter of which he ultimately withdrew. In 1866 owing to the death of Adda he became *Shaikh* of the *Shādhiliya* in Central Algeria, though at first he had to contest it with Adda's son. He was offered the headship of a government madrasa at Algiers, but declined. This invitation, however, brought him the acquaintance of European officials, whose respect he enjoyed till his death in 1883. By this time his sphere of influence had extended over the greater part of the Tell Oranais and the whole of Western Algeria. Places where he had *khulafā'* were Mustaghanem, Mascara, Relizane, Nedroma, Oran, Tlemcen. After his death some of these *khulafā'* made themselves independent and the unity of control which he had established came to an end.

Statistics for the end of the last century are given by Depont and Coppolani (p. 454), whence it appears that the number of adherents in Algiers and Constantine did not reach 15,000, with 11 *zāwiya*'s. The communities which split off from the *Shādhiliya* are there given as 13 in number, and among these the *Shaikhīya*, *Taibiya* and *Der-kāwiya* are said to be the most numerous.

Although when the community started there appears to have been little in the way of organisation contemplated and the connection between adherents was loose, it is evident that in course of time the normal organisation of a *ṭarīqa* was introduced.

Literature of the Order. It is noticed that neither *Shādhilī* himself nor his successor Abu 'l-'Abbās al-Mursī published any treatises, whereas his disciple Yāqūt al-'Arshī seems to have composed *Manāḳib*, and their joint disciple Tādj al-Dīn al-Iskandarī was the author of several works, of which two, *Laṭā'if al-Minan*, dealing with the first two heads of the sect, and *Miftāḥ al-Falāḥ wa-Misbāḥ al-Arwāḥ*, are printed on the margin of the *Laṭā'if al-Minan* of al-Sha'rānī (Cairo 1321). The former of these is the main source of our knowledge of al-*Shādhilī*'s career. A biography of al-*Shādhilī* which cannot have been much later was the *Durrat al-Asrār* of Muḥammad b. al-Kāsim al-Ḥimyarī b. al-Ṣabbāgh, which is excerpted in the *Mafāḥkir*. Another biography called *al-Kawākib al-Zahira*, by Abu 'l-Faḍl 'Abd al-Kādir b. Mu'azil (d. 894), was excerpted by Haneberg (*Z.D.M.G.*, vii. 14 sqq.). The general account of the system called *al-Mafāḥkir al-'Alīya fi 'l-Ma'āthir al-Shādhiliya* (printed Cairo 1314) by Ibn Iyāḍ is later than al-Suyūṭī. For doctrine this work refers to two *Risāla* called respectively *al-Uṣūl* and *al-Ummahāt* by Sīdī Zarrūk (Shihāb al-Dīn Aḥmad al-Fāsī, d. 896). Haneberg, *loc. cit.*, mentions the *Shādhilī* poet 'Alī b. Wafā' (d. 807) and his father Muḥammad Wafā', author of certain mystical works, and a "diwan, of which the odes breathe for the greater part the spirit of joyous devotion to Allah, without disturbing admixture". A poem called *Hāl al-Sulūk* by the Nāṣir al-Dīn who has already been mentioned is noticed by Ḥādījī Khalīfa. A *Shādhilī* writer, Dāwūd b. 'Umar b. Ibrāhīm of Alexandria (d. 733), is mentioned by al-Suyūṭī in *Bughyat al-Wu'āt*, p. 246.

The chief European literature has been noticed above.

(D. S. MARGOLIOUTH)

SHADJAR AL-DURR is famous as the only woman to sit on the throne of Egypt in the Muslim period. She was the favourite slave of Malik al-Ṣāliḥ Aiyūb [q. v.] who had her sent to his cousin al-Malik al-Nāṣir Dā'ūd in 620 (1223) during his imprisonment. After she had born a son named Khalīl, she became Sultāna with the title *Umm Khalīl* (mother of Khalīl). Khalīl died when about 6 years old. When Aiyūb died in Maṣūra in 647 (1249) during the war with Louis IX of France, she concealed his death and had his son al-Malik al-Mu'azzam Tūrān Shāh brought back from Mesopotamia. Sultān Aiyūb's death was not announced till his son's arrival. In place of being grateful to her for her help Tūrān Shāh treated her shamefully. Since he had come of age he had not lived for any considerable period at a time in Egypt and he could not come to terms with the Mamlūks, as he was incapable of serious work in those difficult times and led an extravagant life with his own Mamlūks whom he had brought from Mesopotamia. He particularly brought down the wrath of Shadjar al-Durr on himself by demanding from her an account of Aiyūb's wealth, which she said she had spent for the war against the Franks. The general discontent led to a conspiracy against Tūrān Shāh as a result of which he was killed at the beginning of 648 (1250). The followers of Shadjar al-Durr had such confidence in her wisdom and ability that they put the government in her hands. She accepted their choice and on coins and edicts called herself al-Mu'ṭaṣimiya (vassal of the Caliph al-Mu'ṭaṣim in Baghdad), al-Ṣālihiya (the slave of Ṣāliḥ Aiyūb), Umm Khalīl (from her deceased son), 'Iṣmat al-Dunyā wa 'l-Dīn (preservation of the world and of religion, i. e. with the sovereign title), Malikat al-Muslimin (queen of the Muslims). The Emir Aibak with whom she was already closely associated was appointed her Atābeg (commander-in-chief). While she was recognised in Egypt, the Syrian Emirs declined to do so and handed over Damascus to Malik al-Nāṣir Yūsuf II. The Caliph took the side of the Syrians and ordered the Egyptian emirs to chose a Sultān. The latter could not evade this command and in the same year chose the Atābeg 'Izz al-Dīn Aibak who thereupon married Shadjar al-Durr. Her period of sole rule had lasted 80 days. As the Aiyūbid princes in Syria were not yet pacified, a scion of their family, Mūsā, a great-grandson of Kāmil was elected Sultān along with him. He was a boy of six and had of course no influence at all, but his name appeared on coins and edicts. Four years later he was banished and went to Constantinople where he received a friendly welcome from the Emperor.

While Aibak was almost entirely occupied with campaigns against the Sultān of Aleppo or rebel Mamlūks and lived in the town of al-Ṣālihiya near the Syrian frontier, his queen reigned uncontrolled at home. She had only to deal with the shameless greedy Mamlūks of her first husband, even when it was against Aibak's interest. In her thirst for power, she prevented the latter from visiting his first wife and his son and when later she heard that he was thinking of ridding himself of her and seeking the hand of a Mesopotamian princess of the Zangid house, she decided to anticipate him and offered her hand to the Sultān of Aleppo. It was to some extent a race between

the two to see which would get rid of the other first. By a great display of affection she managed to dispel Aibak's suspicions and to entice him into her palace in the citadel of Cairo. There he was murdered in his bath (655 = 1257) by two Mamlūks devoted to her. When he was attacked and called to her for help, she is said to have struck him with a wooden shoe. Others say that she repented and vainly tried to prevent the murder. But she did not succeed in finding a Mamlūk officer who would share the responsibility with her; all turned in disgust from the murderess. She was seized by the other party and beaten to death with wooden shoes by the slave women of Aibak's first wife. Her body was thrown into the castle moat and lay unburied for days. Later it was placed in the little mausoleum which still stands in Cairo. She was the most vigorous woman that the Muslim period in Egypt had seen but she did nothing good during her reign.

Bibliography: Abu 'l-Fidā' in *Recueil des historiens des croisades. Hist. Orientaux*, vol. i., passim; al-Makrizi, *Khitāṭ*, ii. 237—248; Sulūk, transl. by Quatremère, i. 72 sqq.; Weil, *Geschichte der Chalifen*, iii. 483—487; iv. 4—8. On her tomb see *M.I.F.A.O.*, xix. 111 sqq., 728 (with some important notes on the Sultāna by European writers in *Anm.* 3), 730.

(SOBERNHEIM)

SHAFĀ'A (A.), intercession, mediation. He who makes the intercession is called *Shāfi'* and *Shafī'*. The word is also used in other than theological language, e. g. in laying a petition before a king (*Lisān*, s. v.), in interceding for a debtor (*Bukhārī*, *Istikrād*, bāb 18). Very little is known of intercession in judicial procedure. In the *Ḥadīth* it is said: "He who by his intercession puts out of operation one of the *ḥudūd* Allāh is putting himself in opposition to Allāh" (Ibn Ḥanbal, *Musnad*, ii. 70, 82; cf. *Bukhārī*, *Anbiyā'*, bāb 54; *Hudūd*, bāb 12).

The word is usually found in the theological sense, particularly in eschatological descriptions; it already occurs in the *Qur'ān* in this use. Muḥammad became acquainted through Jewish and more particularly Christian influences with the idea of eschatological intercession. In Job xxxiii., 23 sqq. (the text is corrupt) the angels are mentioned who intercede for man to release him from death. In Job v. 1, there is reference to the saints (by whom here also angels are probably meant) to whom man turns in his need. Abraham is a mortal saint whom we find interceding in the Old Testament (in the story of Sodom and Gomorra).

In the apocryphal and pseudepigraphical literature we again find the same classes of beings with the same function. The angels (*Test. Adam*, ix. 3), the saints (2. *Maccab.*, xv. 14; *Assumptio Moisi*, xii. 6). In the early Christian literature the same idea repeatedly occurs, but here we have two further classes of beings; the apostles and the martyrs (cf. Cyril of Jerusalem in Migne, *Patrologia Graeca*, vol. xxxiii., 1115; patriarchs, prophets, apostles, martyrs; cf. vol. xlvi., 850; lxi: 581).

In the *Qur'ān* intercession occurs mainly in a negative context. The day of judgment is described as a day on which no *shafā'a* will be accepted (*Sūra*, ii. 45, 255). This is directed against Muḥammad's enemies as is evident from *Sūra* x. 19:

"they serve not Allāh but what brings them neither ill nor good and they say these are our intercessors with Allāh"; cf. also *Sūra* lxxiv. 49: "the intervention of those who make *shafā'a* will not avail them".

But the possibility of intercession is not absolutely excluded. *Sūra* xxxix. 45 says: Say: the intercession belongs to Allāh, etc. Passages are fairly numerous in which this statement is defined to mean that *shafā'a* is only possible with Allāh's permission: "Who should intervene with Him, even with His permission" (*Sūra* ii. 256, cf. x. 3). Those who receive Allāh's permission for *shafā'a* are explained as follows: The *shafā'a* is only for those who have an '*ahd* with the Merciful (*Sūra* xix. 90) and xliii. 86: "They whom they invoke besides Allāh shall not be able to intercede except those who bear witness to the truth". XXI, 28 is remarkable where the power of intercession is evidently credited to the angels: "they say the Merciful has begotten offspring. Nay they are but His honoured servants who and they offer not to intercede save on behalf of whom it pleaseth Him". It appears that the angels are meant by the honoured servants. *Sūra* xl. 7 (cf. xlii. 3) is more definite: "Those who bear the throne and surround it sing the praises of their Lord and believe in Him and implore forgiveness for those who believe (saying) "Our Lord; who embrace all things in mercy and knowledge; bestow forgiveness on them that repent and follow Thy path and keep them from the pains of Hell".

Such utterances paved the way for an unrestricted adoption by Islām of the principle of *shafā'a*. In the classical *Ḥadīth* which reflects the development of ideas to about 150 A. H. we already have ample material. *Shafā'a* is usually mentioned here in eschatological descriptions. But it should be noted that the Prophet even in his lifetime is said to have made intercession. 'Ā'isha relates that he often slipped quietly from her side at night to go to the cemetery of Bakī' al-Ḡharkad to beseech forgiveness of Allāh for the dead (Muslim, *Ḍiḥā'iz*, trad. 102; cf. Tirmidhī, *Ḍiḥā'iz*, bāb 59). Similarly his *istighfār* is mentioned in the *ṣalāt al-djānā'iz* (e. g. Ibn Ḥanbal, *Musnad*, iv. p. 170) and its efficacy explained (*ibid.*, p. 388). The prayer for the forgiveness of sins then became or remained an integral part of this *ṣalāt* (e. g. Abū Ishāk al-Shirāzī, *Kitāb al-Tanbih*, ed. J. W. T. Juynboll, p. 48) to which a high degree of importance was attributed. Cf. Muslim, *Ḍiḥā'iz*, trad. 58: "If a community of Muslims, a hundred strong, perform the *ṣalāt* over a Muslim and all pray for his sins to be forgiven him, this prayer will surely be granted"; and Ibn Ḥanbal, iv. 79, 100, where the number a hundred is reduced to three rows (*ṣufuf*).

Muḥammad's intercession at the day of judgment is described in a tradition which frequently occurs (e. g. *Bukhārī*, *Tawhīd*, bāb 19; Muslim, *Imān*, trad. 322, 326—329; Tirmidhī, *Tafsīr*, *Sūra* xvii., trad. 19; Ibn Ḥanbal, i. 4) the main features of which are as follows: On the day of judgment Allāh will assemble the believers; in their need they turn to Adam for his intercession. He reminds them, however, that through him sin entered the world and refers them to Nūḥ. But he also mentions his sins and refers them to Ibrāhīm. In this way they appeal in vain to the great apostles of God until 'Isā finally advises them to

appeal to Muḥammad for assistance. The latter will gird himself and with Allāh's permission throw himself before Him. Then he will be told "arise and say, intercession is granted thee". Allāh will thereupon name him a definite number to be released and when he has led these into Paradise, he will again throw himself before his Lord and the same stages will again be repeated several times until finally Muḥammad says: "O Lord now there are only left in hell those who, according to the Qur'ān, are to remain there eternally".

This tradition is in its different forms the locus classicus for the limitation of the power of intercession to Muḥammad to the exclusion of the other apostles. In some traditions it is numbered among the charismata allotted to him (e.g. al-Bukhārī, *ṣaḥīḥ*, bāb 56).

Muḥammad's *shafā'a* then is recognised by the *idjmā'*; it is based on Sūra xvii. 81: "Perhaps the Lord shall call thee to an honourable place"; and on xciii. 5: "and thy Lord shall give a reward with which thou shalt be pleased" (al-Rāzī's commentary i. 351; cf. earlier, Muslim, *Imān*, trad. 320). Muḥammad is said to have been offered the privilege of *shafā'a* by a message from his Lord as a choice; the alternative was the assurance that half of his community would enter paradise. Muḥammad, however, preferred the right of intercession, doubtless because he thought he would get a considerable result from it (Tirmidhī, *Ṣifat al-Kiyāma wa 'l-Rak'ah* wa 'l-wara', bāb 13; Ibn Ḥanbal, iv. 404).

The traditions describe very vividly how the "people of hell" (*djahannaniyūn*) are released from their fearful state. Some have had to suffer comparatively little from the flames; others on the other hand are already in part turned to cinders. They are sprinkled with water from the well of life and they are restored to a healthy condition (e.g. Muslim, *Imān*, trad. 320).

In another class of traditions it is said that every prophet has a "supplication" (*da'wā*) and that Muḥammad keeps his secret in order to intercede with Allāh for his community on the day of judgment (cf. e.g. Ibn Ḥanbal, ii. 313; Muslim, *Imān*, trad. 334 sq.).

Quite in keeping with the Christian view already mentioned, Islām, however, was not content with Muḥammad as the advocate. Along with him we find the angels, the apostles, the prophets, the martyrs and the saints. (Bukhārī, *Tawhīd*, bāb 24; Ibn Ḥanbal, iii. 94 sq., 325 sq., v. 43; Abū Dā'ūd, *Dihād*, bāb 26; al-Ṭabarī, *Tafsīr*, iii. 6 on Sūra ii. 255; xvi. 85 on Sūra xix. 90; xxix. 91 on Sūra lxiv. 49; Abū Ṭālib al-Makkī, *Kuṭ al-Kulūb*, i. 139).

Finally after all these classes have said their word, there is still Allāh's *shafā'a* (Bukhārī, *Tawhīd*, bāb 24; cf. Sūra, xxxix. 44). Muḥammad's pre-eminence remains inasmuch as he is the first to intercede for his community (Muslim, *Imān*, trad. 330, 332; Abū Dā'ūd, *Kitāb al-Sunna*, bāb 13).

Finally the question for whom intercession is effective is discussed. While it is generally said 70,000 will enter paradise through the intercession of one man of Muḥammad's community (e.g. Dārimī, *Rikāḥ*, bāb 87; cf. Ḥanbal, iii. 63, 469 sq.), the answer is already given as early as classical tradition that *shafā'a* holds good for those who ascribe no associate to Allāh (Bukhārī, *Tawhīd*, bāb 19;

Tirmidhī, *Ṣifat al-Kiyāma*, bāb 13). To this group also belong those who have committed great sins (*Ahl al-Kabā'ir*). "The prophet of God said: My intercession is for the great sinners of my community" (Abū Dā'ūd, *Kitāb al-Sunna*, bāb 20; Tirmidhī, *Ṣifat al-Kiyāma*, bāb 11). This view, however, is not shared by the Mu'tazila (cf. Zamakhsharī, *Kashshāf* on ii. 45; no *shafā'a* for the *uṣūl*). Al-Rāzī deals very fully with the Mu'tazilī view in his commentary on the Qur'ān (i. 351 sqq., vi. 404) according to which there is no such thing as *shafā'a*, as no one is released from hell who is once thrown into it. For the denial of *shafā'a* they appeal to some of the verses of the Qur'ān already quoted above.

(A. J. WENSINCK)

AL-SHAFĀḤ (A.), also AL-SUBḤ and AL-FADJR, dawn and twilight, which are of special importance in the Muslim world and in Muslim astronomy because they settle two of the principal times for prayer. Al-Bīrūnī gives an excellent description of the phenomena in the Mas'ūdī *Kānūn* (Maḡ. 8, bāb 13). In the morning a long thin column of light appears first, which is more or less inclined to the horizon according to the latitude of the place. This is called the false dawn *al-Subḥ al-Kādhīb* or *al-Fadjr al-Kādhīb* or from its shape *Dhanab al-Sirḥān* "wolf's tail" also "dog's, or gazelle's tail". This is followed by the true dawn *al-Subḥ al-Ṣādīq*, first as a faint white light which gradually extends in the form of a crescent along the horizon; it marks the time for the beginning of the fifth or morning prayer. Next comes the red dawn. The same phenomena occur in the evening but in the reverse order. That the *Dhanab al-Sirḥān* is not so frequently noticed in the evening as in the morning is, according to Muslim scholars, due to the fact that in the evening people are going to rest while in the morning they are beginning work; Redhouse has definitely shown that first false dawn corresponds to the zodiacal light; he also shows that it is mentioned as early as Qur'ān, ii. 183, i.e. about 630 A. D. and in al-Djāwharī's dictionary and elsewhere. It was therefore noticed earlier in the east than in the west. Numerous Persian verses deal with the dawn and twilight (cf. Redhouse, *op. cit.*). He also gives the Persian and Turkish names.

Shāfi'is, Mālikis and Ḥanbalis all agree that the end of the third and beginning of the time of the fourth prayer occurs at the moment when the red shimmer *al-Shafaḥ al-Aḥmar* disappears, while Abū Ḥanifa relies on the white one. His pupils Abū Yūsuf and Muḥammad al-Shaibānī follow other schools.

Various Arab astronomers have pointed out how much the depression D of the sun in which

the above phenomena appear depend on the atmospheric conditions (fog, etc.), the presence of moonlight, or the sharpness of the eyesight. Different scholars give therefore varying values for D which lie between 16° and 20° . According to Šibt al-Māridīnī (1423—1494/1495) the general opinion in his time was that for al-Shafaḥ $D = 17^\circ$, for al-Šubḥ $D = 19^\circ$. Abū ʿAlī al-Ḥasan al-Marrākūshī (d. c. 1262) had taken 16° and 20° and said that dawn lasts longer than twilight. The time between sunrise and sunset i. e. between the two times at which the depression of the sun is e. g. 18° depends on the inclination of the sun's path to the horizon. The Muslims took a particular interest in calculating the day on which dawn and twilight coincided. For places in the latitude of 48° for example, this happens when the sun is at the beginning of Cancer. The „arguments" (*ḥissa*) of Šafaḥ and Faḍr are the chords of the ecliptic between the Western or Eastern horizon and Šafaḥ or Faḍr.

Astronomical calculations for the beginning of the dawn from Ibn Yūnus (d. 1009) and Abū ʿAlī al-Marrākūshī are given by C. Schoy in the *Naturwissenschaftliche Wochenschrift*.

To explain the varying phenomena in the dawn it is assumed by Kutb al-Dīn al-Šīrāzī and similarly by others that the earth is surrounded by a ball of vapour which contains earthy and watery parts. These are thicker in the lower strata than in the upper. Around the veil of vapour is a ball of pure air. The sun's rays throw a shadow into these balls from the earth. The parts lying outside the shadow reflect the light and seem to shine; the observations result from this more or less accurately.

On the planes of the astrolabe and on certain forms of quadrant and clepsydras lines are drawn which are used to fix the time of morning and evening prayer; on the other hand such lines are not found on the universal plane nor on the Zarkālī plane.

That we so frequently find among composers of astronomical works the *Muwaḥḥit* of mosques, time-keepers and summoners to prayer such as Djamāl al-Dīn al-Māridīnī, Šibt al-Māridīnī b. al-Šāṭir (1375/1376) etc. is explained by the fact that it was the duty of these officials to calculate the hours of prayer exactly and make the necessary observations.

(E. WIEDEMANN)

AL-ŠĀFIʿĪ, AL-IMĀM ABU ʿABD ALLĀH MUḤAMMAD B. IDRIS, the founder of the Šāfiʿī school of law. A great mass of legend has grown up around his life and it is difficult to sift out the really historical matter. The chronology in particular offers great difficulties. The early sources are very scanty. Al-Masʿūdī (d. 345) is the first historian to mention him. The only authentic documents are the Waḳf grant of his two houses in Mecca of Šafar 203 (Aug. 818; *Umm*, vi. 179 = Kern in *M.S.O.S. As.*, 1904, p. 55), his will of Šaʿbān 203 (Feb. 819; *Umm*, iv. 48 = Kern in *M.S.O.S., As.*, 1904, p. 59) and the Waḳf grant of his house in Fuṣṭāṭ (*Umm*, iii. 281) which although the names and the dates are omitted is undoubtedly by al-Šāfiʿī himself. His later biographies are, it is true, based on old *Manāḥib*'s such as that of Dāʿūd al-Zāhirī (d. 270), al-Sādīq (d. 307), Ibn Abī Ḥatīm (d. 327) and others but here already there is much that is legendary. For example al-Khaṭīb al-Baghdaḍī (d. 403) already gives on the authority of Ibn ʿAbd al-Ḥakam (d. 257) the legend of his birth which connects it with the planet Jupiter rising over Egypt (cf. Ibn Khallikān).

Al-Šāfiʿī belonged to the tribe of ʿQuraish; he was a Ḥāshimī and thus remotely connected with the Prophet. His mother belonged to the tribe of Azd, but some say that she was an ʿAlid. Born in 150 (767) in Ghazza (al-Iṣṭakhri, p. 58) he lost his father early and was brought up in very humble circumstances by his mother in Mecca. He spent much time among the Beduins and acquired a thorough knowledge of the old Arab poets (e. g. Zuhair, Imru ʿl-Kais, Djarir etc., cf. *Umm*, i. 174; v. 118, 142 etc.). The philologist al-Aṣmaʿī learned from the youthful Šāfiʿī the songs of the Banū Hudḥail (cf. also *Umm*, ii. 167; iv. 133) and the *Diwān* of al-Šanfara. In Mecca he studied ḥadīth and fiqh with Muslim al-Zindī (d. 180) and Sufyān b. ʿUyaina (d. 198); he knew the *Muwaḥḥit* by heart. When about 20 he went to Medina to Mālik b. Anas and remained there till the latter's death in 179 (796). He then took an appointment in Yemen. Here he was involved in ʿAlid intrigues, — he secretly paid homage to the Zaidī Imām Yaḥyā b. ʿAbd Allāh (v. Arendonck, *Opkomst van het zaidetische Imamaat*, p. 60 and 290) — and with other ʿAlids was brought a prisoner to the Caliph Ḥarūn al-Rašīd to Raḳqa (187 = 803). He was pardoned and then became intimate with the celebrated Ḥanafī Muḥammad b. al-Ḥasan al-Šaibānī (d. 189 = 805), whose books he had copied for himself. But as he did not dare challenge al-Šaibānī, a man influential at court, he went in 188 (804) via Ḥarrān and Syria to Egypt where he was at first well received as a pupil of Mālik. It was not till 195 (810/11) that he went to Baghdād and set up successfully as a teacher there. Here he attached himself to ʿAbd Allāh, son of the newly appointed governor of Egypt, ʿAbbās b. Miṣā and came to Miṣr on Shawwāl 28, 198 (June 21, 814; al-Kindī, ed. Guest p. 154). As a result of disturbances he very soon went to Mecca, from which he returned in 200 (815/816) to settle definitely in Egypt. He died on the last day of Raḍjab 204 (Jan. 20, 820) in Fuṣṭāṭ and was buried at the foot of the Muḳaṭṭam in the vault of Banū ʿAbd al-Ḥakam. Šalāḥ al-Dīn had a great and roomy madrasa built here (Ibn Djuḥair, *Riḥla*, p. 48). The dome

on the tomb was built by the Aiyūbid al-Malik al-Kāmil in 608 (1211/1212). It was always a favourite place of pilgrimage.

Al-Shāfi'ī may be described as an eclectic who acted as an intermediary between the independent legal investigation and the traditionalism of his time. Not only did he work through the legal material available but in his *Risāla* he also investigated the principles and methods of jurisprudence. He is regarded as the founder of the Uṣūl al-Fiḥh. Unlike the Ḥanafis he sought to lay down regular rules for *Ḳiyās* (*K. al-Risāla*, Cairo 1321, p. 66 and 70) while he would have nothing to do with *Istiḥsān* [q. v.]. The principle of *Istiḥsān* seems to have been first introduced by the later Shāfi'īs (cf. Goldziher, *Zāhiriten*, p. 20 sqq.; do., in *E. I.*, vol. ii. 109 and Bergsträsser, *Anfänge und Charakter des juristischen Denkens im Islam*, in *Isl.*, 1924, xiv. p. 76, 80 sq.). In al-Shāfi'ī two creative periods can be distinguished, an earlier (Irāqī) and a later (Egyptian). Al-Ḥakīm (d. 405) for example says this of the *Risāla* (al-ʿAsḳalānī, p. 77), which, however, only survive in the later recension (printed at Cairo 1321 etc.). These two periods are also often marked in the *K. al-Umm* as well as in the variant teachings of the later Shāfi'īs.

His writings in which he makes a masterly use of dialogue, with opponents usually unnamed, we have had transmitted to us by his pupil al-Rabī' b. Sulaimān (d. 270 = 884). A list of them is to be found in the *Fihrist*, p. 210, another of al-Baihaḳī (d. 458) in al-ʿAsḳalānī, p. 78, a third in Yāqūt, p. 396—398. The most of the titles mentioned there are parts of the *K. al-Umm*, a collection of writings of Shāfi'ī (printed at Cairo in 7 volumes: 1321—1325, in part from a manuscript of the celebrated Shāfi'ī Sirādj al-Dīn al-Bulḳīnī). The title of this collection can hardly be old. As far as I know, it is mentioned for the first time by al-Baihaḳī (in al-ʿAsḳalānī, p. 78) and al-Ghazālī, *Iḥyā* (Cairo 1327), ii. 131. In the work itself it is mentioned only in such passages as appear to be glosses (e. g. *Umm*, i. 158). Several recensions of this work must have existed. As late as the fifth century another recension different from that of al-Rabī' was known to al-Baihaḳī for he gives some of the separate chapters of the *Umm* in a different order. This may perhaps have been al-Buwaiṭī's recension, which al-Rabī' seems to have used along with that of Ibn Abī 'l-Djārūd (cf. *Umm*, i. 96, 157; ii. 52; vii. 389 etc.). In the present printed text of the *Umm*, a number of larger and smaller glosses seem to have been incorporated; for example al-Ghazālī, Ibn al-Ṣabbāgh (d. 477), al-Māwardī, etc., are quoted (cf. *Umm*, i. 114 sq., 158).

According to al-Ghazālī (*loc. cit.*) this collection was arranged by al-Buwaiṭī and published by al-Rabī' with his own additions. Final inquiry into the origin of the *Kitāb al-Umm* cannot be based upon the printed edition, as the editor has followed the MS. of al-Bulḳīnī without recording the variants of the other MSS.

The present components of the *Umm* are writings quoted by al-Baihaḳī as separate works: *Ḍimā' al-ʿIlm* (*Umm*, vii. 250 sqq.), *K. Ibtāl al-Istiḥsān* (vii. 267 sqq.), *K. Bayān al-Farq* (vii. 262 sqq.), *K. Sifat al-Amr wa 'l-Nahy* (vii. 265 ?), *K. Ikhtilāf Mālik wa 'l-Shāfi'ī* (vii. 177 sqq.), *K. Ikhtilāf al-Irāqīyain* (vii. 87 sqq.) i. e. Abū Ḥanīfa

and Ibn Abī Laila († 148), *K. Ikhtilāf ma'a Muḥammad b. al-Ḥasan* (vii. 277 sqq. = *K. al-Radd ʿalā Muḥ. b. al-Ḥasan*) and *K. Ikhtilāf ʿAlī wa ʿAbd Allāh b. Masʿūd* († 32); vii. 151 sqq.). The *K. Ikhtilāf al-Ḥadīth* is printed on the margin of *Umm*, vol. 7, the *Musnad* on the margin of vol. 6. This contains traditions which have been collected from the different writings, including those that have not survived but are mentioned in the *Fihrist* and in Yāqūt, e. g. *K. Ahkām al-Ḳurʿān*, *K. Faḍā'il Kurāish*, etc. The *K. al-Mab-sūt fi 'l-Fiḥh* (*Fihrist*, p. 210) must have been another large law-book, which was still available to al-Baihaḳī, and is also called *al-Mukhtaṣar al-kabīr wa 'l-Manḥūṛāt*. There has also survived a profession of faith by Shāfi'ī entitled: *K. Waṣīyat al-Shāfi'ī* (mentioned in Yāqūt, ed. by Kern in *M. S. O. S.*, As., 1910) while the *K. al-Fiḥh al-akbar* (Cairo 1324 etc.) is a short treatise on dogmatics of the Ash'arī period. A few poems bear witness to his command of language (al-Masʿūdī, *Murūj*, viii. 66; Ibn Khallikān, i. 448; al-ʿAsḳalānī, p. 73 sq.).

The main centres of his activities as a teacher were Baghdād and Cairo. The most notable of his pupils were al-Muzanī († 264), al-Buwaiṭī († 231), al-Rabī' b. Sulaimān al-Murādī († 270), al-Za'farānī († 260), Abū Thawr († 240), al-Ḥumaidī († 219), Aḥmad b. Ḥanbal († 241), al-Karābīsī († 248) etc. In the course of the third and fourth (ix. and x.) century the Shāfi'īs won more and more adherents from these two towns as centres, although from the first they had a difficult position in Baghdād, the centre of the *Ahl al-Ra'y*. In the fourth (xth) century Mecca and Medina were their chief centres next to Egypt. By the end of the third (beg. of the tenth) century they had already successfully disputed Syria with the Awzā'īs so that from Abū Zur'a onwards (302 = 915), they always had the office of *Kāḍī* in Damascus. In the time of Muḥaddasī the Shāfi'īs exclusively held the judgeships in Syria, Kirmān, Bukhārā and the greater part of Khurāsān; they were also in considerable strength in Northern Mesopotamia (Aḳūr) and Dailam (Egypt by this time was Sh'f.). In the fifth and sixth (xi. and xii.) century there was frequently street fighting with the Ḥanbalis in Baghdād, with the Ḥanafis in Iṣfahān while on the other hand they won the Ghūrīd princes to their side (Snouck Hurgronje, *Verspr. Geschr.*, ii. 306). In Egypt under Ṣalāḥ al-Dīn (564 = 1169) they again became the predominant *Madhhab*. But in 664 (1265/1266) al-Malik al-Zāhir Baibars appointed one Ḥanafī and Mālikī one judge alongside of the Shāfi'ī (cf. al-Subḳī, v. 134). In the last centuries before the rise of the Ottomans the Shāfi'īs had attained absolute preeminence in the central lands of Islām. Even in Ibn Djubair's time (*Rihla*, p. 102) the Shāfi'ī Imām conducted the prayers in Mecca. It was only under the Ottoman Sultāns at the beginning of the x (xvth) century that they were replaced by Ḥanafis, who were sent from Constantinople to fill the judgeships, while in Central Asia with the rise of the Ṣafawids (1501) they were lost to the Sh'f'a. Nevertheless in Egypt, Syria and the Hidjāz, the people followed the Shāfi'ī *Madhhab* (Snouck Hurgronje, *Verspr. Geschr.*, ii. 378/379). The Shāfi'ī teaching is still eagerly studied to-day in the Azhar mosque. It is still predominant in South Arabia, Bahrain, the Malay Archipelago, the former German East Africa,

Daghustān and some parts of Central Asia.

Among famous and important Shāfi'is were: The traditionist al-Nasā'ī († 303 = 915), al-Ash'ari († 324 = 935), al-Māwardī († 450 = 1058), al-Shīrāzī († 476 = 1083), Imām al-Haramain († 478 = 1085), al-Ghazālī († 505 = 1111), al-Rāfi'ī († 623 = 1226), al-Nawawī († 676 = 1277) etc. On them cf. the separate articles and Snouck Hurgronje, *Verspr. Geschr.*, iv/i. p. 105.

Islāmic law according to the Shāfi'ī school is given by L. W. C. van den Berg, *De beginselen van het mohammed. recht*, 3 ed. (Batavia 1883; cf. thereon Snouck Hurgronje, *Verspr. Geschr.*, ii. 59—221), French transl. by R. de France de Tersant entitled; *Principes du droit musulman*... Algiers 1886: Ed. Sachau, *Muham. Recht* (Stuttgart and Berlin, 1897; cf. thereon Snouck Hurgronje, *Verspr. Geschr.*, ii. 367—414); Th. W. Juynboll, *Handbuch des islāmischen Gesetzes*, Leiden 1910 and 1925, Italian transl. with suppl. notes by G. Baviera entitled: *Manuale di diritto musulmano*..., Milan 1916.

(HEFFENING)

SHAFSHĀWAN (popularly Chechaouen, ech-Chaoun, in Spanish Xauen; the original of the name is no doubt the Berber plural *Ishefshāwen*), a little town in Northwest Morocco, 35 miles south of Tetuan. It lies at the foot of the mountain of Sidi Bū-Hādja (a spur of the massif of Bū-Hāshem) on a tributary of the Wādī Lāu; it now lies within the lands of the tribe of el-Khmās, but it used to belong to the Banū Zadjal, a tribe belonging to the Ghumāra group.

In 1918 the population was about 7,000, who lived in a thousand houses in the six quarters: el-'Onsar, Rif el-Andalus, el-Kharrāzīn, es-Sök, es-Swēka, Rif es-Sebbāni. There is an important Jewish colony in it of Spanish origin. The ghetto (*Mellāḥ*), originally on the edge of the Wādī 'l-Dmāni, was later brought into the interior of the town. It contains 22 houses with about 200 inhabitants and 2 synagogues, one very luxurious. Almost all the houses have sloping tiled roofs, for the winter brings heavy falls of snow. The town is surrounded by walls and has eleven gates; there are twelve mosques, nine zāwiyas (including 3 Derkāwa and 3 'Isāwa) and eight notable sanctuaries, the chief of which is that of Sidi 'Alī b. Rāshid, founder of the town. In the citadel (*kaṣba*) are the government buildings and the madrasa.

The Muslim population consists mainly of Shorfā and Andalusian refugees, possessing the culture and amenities of town life but fanatical and uncompromising in character.

The surroundings, fertile and well watered, produce wheat, barley, fruits, olives and grapes in abundance; the town also has 21 watermills and 13 oil presses. The forests of the surrounding mountains supply wood for carpentry and furniture making (a speciality of the place is artistically painted woodwork); tan-bark is abundant and supplies the wants of 5 tanneries. Woollen cloth for djellābas (cf. DJELLĀB) is made on many looms.

The Jews are mainly occupied in trading in imported cloths and have constant dealings with their co-religionists in Tetuan with whom they are connected by common Spanish origin. They are also jewellers and saddlers, a despised trade which the Muslims leave to them.

Lying at the intersection of the roads from Tetuan, el-Kṣar, Wazzān and Fes, in the middle of the land of the Djebāla, Shafshāwan is a great centre of supplies for the latter to which they come to get the produce imported from Tetuan (cotton goods, sugar, tea and candles); but the well-nigh permanent state of anarchy in which the surrounding tribe el-Khmās lives, makes business difficult.

Shafshāwan was founded about 876 (1471—1472) by a descendant of the great saint 'Abd al-Salām b. Mashīsh [q. v.], the 'Alawī Sharif al-Hasan b. Muḥammad, known as Ibn Djum'a, who wished to make it a place of refuge and centre of resistance for the Djebāla against the Portuguese. The latter, taking advantage of the weakness of the dynasty of the Banū Waṭṭās [q. v.] had seized Ceuta (1415), al-Kaṣr al-seghir (1458 q. v.), Tangier (1471) and Arzila (1471); from these ports they raided the country for over 50 miles inland, terrorised the mountaineers and brought the Andjera and various tribes of the Habṭ, including the Banū 'Arūs under their sway. It seems that, oppressed and harassed by the Shorfā, these tribes were quite ready to submit to Christian rule; a holy war was therefore an excellent pretext for the Shorfā to endeavour to regain their profitable prestige and authority.

Al-Hasan founded Shafshāwan on the bank of the river of the same name, in an excellent situation within easy reach of Tetuan and Ceuta in the northwest and el-Kṣar and el-Habṭ in the southwest. He died before completing his enterprise; having gone during the holy war to the people of al-Kharrūb not far from Arzila, the latter were bribed by the Portuguese and set fire to the mosque in which he was performing his evening prayers; he perished in the flames.

His work was continued by his cousin the Sharif 'Alī (b. Mūsā) b. Rāshid who succeeded him as leader of the holy war (*ka'id al-djihād*). 'Alī lived among the Banī Ḥassān, a tribe to the north of Shafshāwan; when the latter rebelled against the tyranny of the Shorfā, he went over to Andalusia, where fighting sometimes in Christian pay and sometimes for the king of Granada, he became an expert in military matters. Returning to Morocco, he collected a body of horsemen belonging like himself to the Shorfā and began to fight the Portuguese. The Waṭṭāsīd Sultān of Fes, Abū Sa'id, then sent him a few horsemen and cross-bowmen, with whose help he was able to hold his own against the Portuguese. He used his force also to subjugate the mountaineers and restore the supremacy of the Shorfā. But rendered vain by his successes he went so far as to refuse to send

his tribute to the Sultān who came to attack him with a large army. Judging resistance impossible, 'Alī b. Rāshid submitted; the Sultān pardoned him out of respect for his Sharifi origin and confirmed him in the government of Shafshāwan which became one of the marches of the empire of the Banū Wattās.

'Alī b. Rāshid built on the other bank of the Wādī Shafshāwan a citadel which he filled with members of his family and clan; people from the country round also came to settle there. 'Alī b. Rāshid is credited with the building of the rampart from the Bāb eṣ-Ṣūr to the Bāb el-Mukāf; it is from his time that the es-Swēka and Rif eṣ-Ṣebbānī quarters date. After the capture of Granada (1492) and the general expulsion of the Muslims from Andalusia and Castile (1501—1502) numerous Spanish Muslims came and settled here so that by the death of 'Alī in 917 (1511—1512) a regular town had been created; Leo Africanus who was travelling through Morocco at this time, describes it as "a little city full of merchants and artisans".

The prestige of 'Alī b. Rāshid was still further increased by the brilliant attacks on Ceuta, Tangier and Arzila in which he fought along with al-Mandari, whom he had aided to install himself on the ruins of Tetuan with a colony of Spanish refugees.

'Alī (d. 1511) was succeeded by his sons, Ibrāhīm (d. 1530), then Muḥammad who was destined to be the last prince of the dynasty of the Banū Rāshid. In 948 (1511) the Wattāsīd Sultān Abū 'l-'Abbās Aḥmad married the sister of the Amir, al-Ḥurra; the marriage was celebrated in Tetuan. Muḥammad b. Rāshid had quarrels with the following Wattāsīd, Abū Ḥassūn, whose fief of Bādīs in the Rif adjoining his own territory. When with the help of the Turks of Ṣālah Ra'īs, Abū Ḥassūn had taken Fes in 961 (1554) and, when he had quarrelled with the Turkish chief, Muḥammad b. 'Alī arranged with the latter to proclaim Abū Bakkār b. Aḥmad Sultān; when Fes was evacuated by the Turks, Abū Ḥassūn had the Amir of Shafshāwan arrested but on the death of the Sultān, the latter was released and resumed his governorship.

The Sa'dians then replaced the Wattāsīds in northern Morocco. In 969 (1561) the Sa'dī Sultān 'Abd Allāh al-Ghālīb billāh, fearing that the warlike activities of the Amīrs of Shafshāwan might prevent him from concluding with the Spanish an alliance against the Turks which he was planning, sent against the town his troops commanded by the vizier Muḥammad b. 'Abd al-Qādir, grandson of Sultān Muḥammad al-Shaikh: being strenuously besieged Muḥammad b. Rāshid fled through the mountains with his family during the night and reached the port of Targha among the Ghumāra; from there he sailed for the east and took refuge in al-Medina where he died; some of his descendants were exiled to Marrākush. The fief of Shafshāwan was then given to the grandson of Mu'min b. al-'Ildj; the latter's grandfather Yaḥyā (or Muḥammad) al-'Ildj was a Genoese merchant who had become a convert to Islām and had married the beautiful daughter of the semi-independent chief of the Teijeut region in Sūs. On the death of his father-in-law, the Genoese merchant was chosen chief of the people and gained the favour of the Sa'dian Shorfā by allowing them to cross his territory to reach the Hāḥa; his eldest son Mu'min had entered the service of the Sa'dians and was one of their most faithful supporters.

In 986 (1578) the Portuguese were crushed at the battle of Wādī 'l-Makhāzin; they had to abandon their hopes of occupying the interior of the country and the struggle against the Christians became localised round the occupied ports and on the sea. Shafshāwan then lost its strategic importance which passed to Tetuan its rival, which had been raised from its ruins by 'Alī al-Mandari and had been peopled by Andalusians who soon made it a regular nest of corsairs. On the other hand the religious prestige of the town, based for a large part on the successes of the holy war, also began to decline especially after the installation at Wazzān of the Sharifi family of Mawlay 'Abd-Allāh al-Sharif (d. 1089 = 1678) whose influence continued to increase.

After the government of the grandson of Mu'min al-'Ildj, the town seems to have returned under the authority of the Shorfā. In 1028 (1618—1619), we actually find the Sharif al-Ḥasan b. 'Alī b. Raisūn (buried in Shafshāwan) having Muḥammad b. al-Shaikh called Zaghūda proclaimed as Sultān by the people of Habṭ.

In the beginning of the 'Alawī dynasty and during the struggle between Sultān al-Rashīd and his brother Muḥammad, the northwest of Morocco was under the domination of an independent chief al-Khaḍir Ghailān, whose capital was el-Qṣar el-Kbir and whose power extended over the lands lying between Tangier and Ceuta, Tetuan and Shafshāwan.

In 1667, M. al-Rashīd, lord of Fes, subdued the Banū Zarwāl and went to Tetuan after putting Ghailān to flight; he appointed the Muḥaddim al-Taiser, governor of the town, and the latter's sons succeeded him there.

On the death of Mawlay Ismā'il the northwest of Morocco passed under the rule of a leader in the holy war, the Pasha Aḥmad b. 'Alī b. 'Abd Allāh al-Rifi (d. 1156 = 1743) who built at Shafshāwan, inside the citadel built by 'Alī b. Rāshid, the government-house and the madrasa.

In 1171 (1757—1758), a murābiṭ of the tribe of al-Khmās, Muḥammad al-'Arabī al-Khumṣī, called Abū's-ṣukhūr, rebelled against the Sultān Muḥammad b. 'Abd Allāh who captured him and sent his head to Fes. He then appointed the Pasha al-'Ayyāshī governor of the Ghumāra, al-Khmās and Shafshāwan. He was succeeded by governors appointed by the Sa'dian Sultāns down to the rebellion of the ṭalib Muḥammad b. 'Abd al-Salām called Zaitān, who raised all the tribes of this region in 1208 (1793—1794). Defeated and pardoned he was restored to the governorship of Shafshāwan and al-Khmās. After him the town was governed by local chiefs, then by the pashas of Tetuan who sent a khalifa there.

In 1306 (1899) the Sultān M. al-Ḥasan visited the town on his way to Tetuan.

Since the establishment of the Spanish protectorate the town has been under the influence of the famous 'Alawī Sharif 'Aḥmad al-Raisūnī of Tāzrūt. On Oct. 4, 1920, it was taken by a Spanish army from Tetuan; on Nov. 15, 1924, the Spaniards evacuated it. It was then occupied by the Rifs under the rebel Muḥammad b. 'Abd al-Karīm and since the capture and death of the al-Raisūnī, it became their political and strategic centre from which they dominate the Djebāla and can raid the districts of Tetuan, el-Qṣar and Wazzān; their tyranny has driven away many of the inhabitants of the town, which has been several times bombarded by French and Spanish aeroplanes.

(G. S. COLIN)

SHĀH (P.), "King". a. Etymological. The old Persian *Khshāyathiya* is probably formed with a suffix from an unquotable substantive from the Old Iran. verbal root *khshay* (meaning to "rule" etc.); cf. Sanskr. *ḥayati* = "he rules", *ḥayadvīra* = "ruler of men (or heroes)", an epithet of the gods in the *R̥veda*. From the same root comes Old Persian *Khshath(r)a* ("kingdom") = M. P. *Shahr*; cf. *shahryār* ("king, ruler") from an unquotable root *khshath(r)aāra*. The word *khshāyathiya* is therefore originally an adjective: it is found as such once in the Bisutūn inscription while in all other passages it means "king" (Bartholomae, *Air. Wörterb.*, col. 553/554). The modern Persian *pādīshāh* is regarded as a compound of *Shāh*; this may be so as regards the modern usage. For a noteworthy attempt to give another explanation of *pādīshāh* see Bartholomae, *Zum sāsānidischen Recht*, i. 5, note 5. (S. B. Ak. Heid., *Hist. Phil. Kl.*, 1918, Abh. 5). In Pahlavi the word already means *shāh*. Whether in the second syllable of the inscriptional form of the name *Shāpur*: שפיפור the yod is a remnant of the second syllable of the old Persian word (*Grundr. d. Iran. Phil.*, i. 269) or a sign of an old oblique case, is not easy to decide. The modern form *shāhīnshāh* shows with its i Turkish influence in the declension (*Grundr. d. Iran. Phil.*, i. b. 24); this combination might perhaps show a remnant of the original second syllable in the form in which it is found on Indo-Scythic coins (with the ending *-iano* in the first word; *Grundr. d. Iran. Phil.*, i. 269, but cf. p. 284; there is a good reproduction of one of these coins in Rapson, *Indian Coins*, Pl. ii. 12). The Indo-Scythic word is due to borrowing (but cf. also Konow in *Z. D. M. G.*, lxviii. 93 sqq.).

b. Lexicographical. In Vullers' *Lexicon*, pp. 392/393 the statements of the later lexicographers are collected. The derivation given in the *Burhān-i Kāfi* (*aṣl u-khudāwand*) is, at least as concerns the *aṣl*, not supported by the etymology. The meaning given under (5) (*via aperta et lata e qua aliae derivantur*) is perhaps more closely connected with that given under (4) (*magnum quodvis et excellens in suo genere*, in words like *shāhbāz* or *shāhparr*), although the author's view that simple *shāh* is also found with the meaning of *shāhrāh* may be deduced from the text of the *Burhān-i Kāfi* (p. 552); so far as I know this use of the word does not occur. The other meanings (a chessman, animal in Hindūstān etc.) need not be discussed; an (independent) meaning *dāmād*, *shāwhar-i dukhtar* found not only in more recent lexicons like the *Burhān* and *Shuʿūrī*, but as early as Shams-i Fakhri (see Salemann, p. 114), is perhaps not so certain as it appears in the lexicographical tradition. In the two passages from poets which *Shuʿūrī* gives for it, the word *shāh* is associated with *ʿarūs*: this would be simply: "lord of the bride" = "bridegroom", which can of course, be expressed by *dāmād* so that only

one meaning derived from the main sense would be present. The verse which is quoted by Vullers, s. v. *shāhāda* out of *Shuʿūrī* as evidence of a meaning *pūsar-i dāmād* (a peculiar combination in any case) is not absolutely convincing.

c. Historical. The usual title of the Achaemenids is *Khshāyathiya*; on their inscriptions they call themselves *khshāyathiya vavrka khshāyathiya khshāyathiyānām* ("great king, king of kings"): Pahlavi and Modern Persian *shāhān shāh* (also M. P. *shāhanshāh*) corresponds to *Khshāyathiya khshāyathiyānām*. *Shāhānshāh* regularly occurs in the titles of the Sāsānian kings, e.g. *mazdēn baghe artakhshtar shāhān shāh(i) Ērān* ("the worshipper of Mazda, the god Ardashir, king of kings of Irān"); it is written with the ideogram מלכאן *malkān malkā*.

Ardashir's father Pāpak is given the title *shāh* (מלכא) on a coin of his son (E. Thomas, *Nuismatic and other antiquarian illustrations of the rule of the Sassanians in Persia*, p. 16), and in inscriptions and this is also the designation of the rank of some pre-Sāsānian dynasts of Persia (*Grundr. d. Iran. Phil.*, ii. 487).

The Sāsānian crown princes in their father's time were often given the title *shāh* of a certain province, cf. Hamza, *Taʾrikh*, ed. Gottwaldt, p. 50/51; (cf. Nöldeke, *Ṭabari*, p. 115; Agathias, iv. 24 and 26 where we have *σαα*). Bahram III and IV before their accession were thus called *Sagānshāh* or *Karmānshāh*; Hormizd III had also the former title as Crown Prince (Nöldeke, *Ṭabari*, p. 115). The word *sagānshāh* wrongly appears as *shāhānshāh* in some Arab writers: not only in Ṭabari (Nöldeke, *loc. cit.*) but also in Ibn Kutaiḇa (*K. al-maʿārif*, p. 322), Eutychius (ed. Cheikhō, i. 113) and Thāʿalibi (*Hist. des rois des Perses*, ed. Zotenberg, p. 507).

In Muslim lands, where Persian is spoken *shāh* remains the usual word for king, a title also given in literature to rulers who have an Arabic title, e.g. the Amīr Maḥmūd of *Ghazna* in Firdawsī. The regular panegyrists are of course very liberal with the term *shāhānshāh*; when for example Minūcihri VIII, calls the Amīr Masʿūd of *Ghazna* *Khusrāw-i shāhānshāh-i dunyā*, this is only one example out of many. The term is further found frequently in kings' names in such a way that we can hardly speak of it as a title, e.g. we have among the Yemenī Aiyūbids a Turānshāh and in a Mongol dynasty an ʿArab-Shāh (see Lane-Poole, *Mohammedan Dynasties*, p. 98 and 239). The word was already not unusual in personal names in Pahlavi; besides the name *Shāpur* (*shāh* + Pahlavi *puhr*, son) cf. the names of the Sāsānid princes in Hamza, *Taʾrikh*, ed. Gottwaldt, p. 61. Many rulers of the Seldjūk dynasty used the term in such a way that it may be regarded as a title. From an examination of the names (e.g. Lane-Poole, op. cit., p. 153) we see that the combination may have as its first component the name of a people (Turān Shāh, Irān Shāh, i.e. on the Sāsānian plan), or a personal name (Arslān Shāh, Bahrām Shāh), or we may even have a combination with other words meaning ruler (Malik Shāh, Ruknuddīn Sulṭān Shāh). Analogous formations are found among the Atābegs. On a case of rulers who did not have the title *shāh* having adopted it at a definite time, cf. H. F. Amedroz, *The Assumption of the title Shāhānshāh by Buwaihīd*

Rulers, Num. Chron., 1905, iv., Ser. v., p. 393 *sqq.* There were Shāhs of Armenia from 493—604 A.H., and of Khwārizm about the same time (\pm 470—628 A.H.; see Lane-Poole, *op. cit.*, p. 170, 176); there have been Shāhs of Persia since the accession of the first Safawid (907/1502). In India we find the term among the rulers of Ahmadnagar, Bidar, Bērār, Bidjāpur and Golkonda; Shāh occurs as the first or second component of the name of several Mughal Emperors (Shāh Djahān, A'zam Shāh).

(V. F. BÜCHNER)

SHĀH 'ĀLAM was the title borne, before his accession, by Kutb al-Dīn Muḥammad Mu'azzam, third son of the Mughal emperor Aurangzib ('Ālamgīr I), but on ascending the throne of Dīhlī the prince took the title of Bahādūr Shāh [q.v.].

The only Mughal emperor who bore the title while on the throne was 'Alī Gawhar, son of 'Aziz al-Dīn 'Ālamgīr II, who succeeded his father in 1759 and in 1761 was recognised as emperor by Ahmad Shāh Abdālī, who had then crushed the power of the Marāṭhas at the third battle of Pānīpat. Shāh 'Ālam was, throughout his forty-seven years' reign, a puppet in the hands of others, and on two occasions factions selected rivals from among his kinsmen and proclaimed them as emperors, viz. Shāh Djahān III in 1759 and 1760 and Bidār Bakht in 1788. Together with Shudjā' al-Dawla, the Nawwāb-Wazīr of Awadh, Shāh 'Ālam gave a half-hearted support to Mir Kāsim, the Nawwāb-Nāzim of Bengal, who was defeated by the British at the battle of Baksar (Buxar) in 1764 but after the battle submitted and signed a treaty under which the Nawwāb-Wazīr became a vassal and he himself a pensioner of the victors. In 1765 he signed a treaty conferring on the East India Company the *diwānī*, or control of the revenues of Bengal, Bihār and Orissa (Uṛīsa), but the duties and responsibilities of the appointment were not accepted by the Company until seven years later. Shāh 'Ālam afterwards, in order to facilitate his return to Dīhlī, threw himself on the protection of the Marāṭhas and transferred to them the districts of Ilahābād and Kara, which had been assigned to him for his support. By this alliance he forfeited the Company's friendship and the tribute or allowance of Rs. 2,600,000 which had been assigned to him. In 1788 Mahādājī Sindhya, who was ordinarily held responsible for the emperor's personal safety, was in a critical position owing to attacks by Rohilla chiefs, and the ruffian Ghulām Kādir captured Dīhlī and plundered the palace. He flogged the princesses and throwing the emperor on the ground sat on his chest and blinded him with his dagger. Sindhya recaptured Dīhlī and Ghulām Kādir was taken prisoner and suffered death by torture. In 1803 the East India Company formally made itself responsible for the emperor's personal safety and in 1806 Shāh 'Ālam died.

(T. W. HAIG)

SHĀH DJAHĀN was the title conferred by the Mughal emperor Djahāngīr on his third son, Khurram, as a reward for his successes in the Dakan in 1616. Khurram was

born in 1592; in 1622 he caused his eldest brother, Khusrāw, whom his father had placed in his care, to be murdered, and afterwards rose in rebellion. Having been defeated in 1623 he became a fugitive, but occupied Bengal and Bihār. In 1625 a peace was patched up between him and his father. When Djahāngīr died, in October, 1627, Khurram was at Dīwannār in the Dakan, but his father-in-law, Āṣaf Khān, caused his younger brother, Shahryār, to be blinded at Lāhor and proclaimed as a stop-gap Dāwar Bakhsh (Bulāḳī), the son of Khusrāw, whom he afterwards permitted to escape to Persia when the other males of the imperial family were put to death by Shāh Djahān's orders. In 1628 Shāh Djahān ascended the throne in Āgra, and soon had to deal with the rebellions of the Bundelas and Khān Djahān Lodī [q.v.], which he crushed. In 1631 his dearly loved wife, Mumtāz Maḥall, died in childbirth at Burhānpūr, and he afterwards erected over her remains, at Āgra, the beautiful Ṭādj Maḥall [q.v.]. In 1632 he captured Dawlatābād and swept away the last vestiges of the kingdom of Ahmadnagar, and shortly afterwards compelled the two remaining kingdoms of the Dakan, Golkonda and Bidjāpur, to acknowledge his suzerainty. In 1632 also Hūgli was besieged and taken from the Portuguese, and the Christians were cruelly persecuted for two years. In 1636 Aurangzib, the emperor's third son, was appointed viceroy of the Dakan, and in 1638 'Alī Mardān Khān, who held Kāndahār for the Shāh of Persia, treacherously surrendered it to Shāh Djahān's officers, but the Persians recovered the town in 1649. In 1638 Badakhshān and Balkh were occupied but Aurangzib who, having been recalled from the Dakan, was sent to retain them, failed to hold them and was obliged to retreat. In 1652 the same prince and in the following year his eldest brother, Dārā Shikūh, failed to recover Kāndahār from the Persians. In 1653 Aurangzib was again sent to the Dakan, where his aggressive policy was checked by his father, who ordered him to make peace with 'Abd Allāh Kutb Shāh of Golkonda whom he had attacked, but in a campaign against 'Alī 'Ādil Shāh II of Bidjāpur, who had succeeded Muḥammad 'Ādil Shāh, he captured Bidar and Kaliyāni. In 1657 reports of the failure of Shāh Djahān's health caused Aurangzib to rebel and a contest for the throne began between him and his three brothers. Aurangzib defeated Dārā Shikūh at Samūgarh and Sulṭān Shudjā' at Khajwa, treacherously imprisoned and executed Murād Bakhsh and having imprisoned Shāh Djahān ascended the throne in Āgra on July 21, 1658. Shāh Djahān never regained his liberty and on January 2, 1666, died in the Āgra fort at the age of 74.

Shāh Djahān, the wealthiest of the "Great Mughals", displayed his taste and magnificence in his restoration and adornment of Āgra, in the construction of his city of New Dīhlī or Shāh-djahānābād, where he spent the greater part of a luxurious old age, and in the famous peacock throne, which was seven years in the making. He had little military ability and was cruel, treacherous and unscrupulous. A redeeming feature of his character was his deep love for his wife, Mumtāz Maḥall, of which her splendid tomb is a lasting memorial, but she died early in his reign and after her death he sank into unbridled

licentiousness. His rule was oppressive and tyrannical and he ill deserves the favourable treatment which he has received at the hands of some modern historians.

(T. W. HAIG)

SHĀH MĪR, an adventurer who founded the first dynasty of Muḥammadan kings of Kashmīr, settled in that country in A.D. 1315—1316 and, having ingratiated himself with the *rājā*, Simhadeva, who was perhaps impressed by the stranger's pretensions to descend from Arjuna, the Pāṇḍava, entered his service. Kashmīr suffered two invasions during Simhadeva's reign, that of Dulā, a Turk from Kāndahār, and that of the Bhautta of Thibet, Rīncāna, both of whom entered the country by the Zōđjī-lā. Rīncāna usurped the throne, made Shāh Mīr his minister and, according to Muḥammadan accounts, was converted to Islām by him. He succeeded on his death by a relation, Adnideva, under whom Shāh Mīr retained his office and extended his power. On the death of Adnideva Shāh Mīr contested the sovereignty with his widow, Kotā, and having defeated and captured her compelled her to marry him. Shortly after the marriage she retired to, or was imprisoned in, the fortress of Dīyapūra and was there put to death by her husband's orders in 1339. In 1341—1342 Shāh Mīr ascended the throne of Kashmīr under the title of Shams al-Dīn and caused the *khuṭba* to be said in his name. The rule of the Hindu *rājā*'s had been oppressive and extortionate and the people were the gainers by the usurpation of the adventurer who limited the demands of his treasury to one sixth of the gross produce of the land. He established order with a firm hand, and though he probably encouraged his people to accept his religion, his rule was tolerant and beneficent, and the forcible conversion of the inhabitants to Islām was not effected until the reign of his grandson, Sikandar Butshikan. Shāh Mīr is said to have accepted the claim of the Čakk and Mākārī tribes to precedence over the other tribes of the country and to have employed them in the principal posts both in the army and the civil administration. It was by the Čakk tribe that the dynasty which he founded was overthrown about two centuries later. He died in 1349 and was peaceably succeeded by his eldest son, Dīamshīd.

SHĀH NAWĀZ KHĀN. [See ŠAMSĀM AL-DAWLĀ].

SHĀH SHUDJĀ', DĪJĀLĀL AL-DĪN B. MUḤAMMAD B. AL-MUẒAFFAR, a MuẒaffarid. After Muḥārīz al-Dīn Muḥammad, lord of Fārs, Kirmān and Kurdistān, had been deposed and blinded in Ramaḍān

759 (Aug. 1358), he was succeeded by his son Shāh Shudjā' but within a couple of months Muḥammad, whose sight had not been entirely destroyed, seized the citadel of Kal'a-i Sefīd [q.v.] where he had been placed, and fortified himself in it. Peace was soon afterwards made between him and Shāh Shudjā', the terms being that Muḥammad should go to Shīrāz and have his name mentioned in the *khuṭba*; further no business of state was to be decided without his approval. After some time his followers decided to seize Shāh Shudjā' and put him to death; but they were betrayed whereupon Shāh Shudjā' had the conspirators put to death and his father imprisoned. The latter died at the end of Rabi' I 765 (Jan. 1364). Shāh Shudjā' had next to fight with his brother Shāh Maḥmūd. In 764 (1362/1363) his officials had raised a claim to tribute upon the town of Abarkūh, although it was governed along with Isfahān by Shāh Maḥmūd. This excited Shāh Maḥmūd's distrust and he invaded Yazd and seized this province. On his return to Isfahān he was besieged by his brother; but soon a friendly arrangement was come to, as a result of which he recognised the suzerainty of Shāh Shudjā'. In 765 (1363/1364) however, he made an alliance with the Djalā'irid Uwais, lord of Baghdād and Tabriz, and invaded Fārs. Shāh Shudjā' took the field against him; the final encounter was not decisive; Shāh Maḥmūd then succeeded in taking Shīrāz after eleven months' siege, but lost it again in Dhu 'l-Ka'da 767 (Aug. 1366). After the death of Shāh Maḥmūd on Shawwāl 9, 776 (March 13, 1375), Shāh Shudjā' who had recognised the 'Abbāsīd Caliph of the day in 770 (1368/1369), also became lord of Isfahān. He also wanted to extend his rule over Ādharbāidjān because the notables there had become discontented with Husain, successor of Uwais, who had died in 776 (1364/1365). With this object Shāh Shudjā' set out with a large army, took Kazwīn, defeated Husain and advanced successfully up to the neighbourhood of Tabriz. The former surrendered and Husain had to retire to the south. But when Shāh Shudjā' returned home a couple of months later, Tabriz was again occupied by Husain and as the former had also to fight his nephew Shāh Yahyā, he had to make peace with Husain. To seal the treaty Shāh Shudjā's son Zain al-'Abīdīn married Husain's sister. Nevertheless hostilities soon afterwards broke out again. When 'Adil Aghā, one of Husain's emirs, usually called Sārīk 'Adil, equipped an army in 781 (1379/1380) to invade MuẒaffarid territory, Shāh Shudjā' went to Sulṭāniya to anticipate him, but was surprised and only escaped with difficulty. When he himself took the offensive, however, he succeeded in putting to flight Sārīk 'Adil's troops, who were busy plundering the camp. He then laid siege to al-Sulṭāniya, whereupon Sārīk 'Adil had to surrender. In the meanwhile *Shāikh* 'Alī, a brother of Husain, after the murder of the governor of Baghdād, who ruled the city in Husain's name, was proclaimed lord of Baghdād, which again provoked hostilities. To strengthen his position he made an alliance with the governor of Shustar, Pīr 'Alī Bādak, who had been supported by Shāh Shudjā'; *Shāikh* 'Alī and Pīr 'Alī had however to take to flight when Husain and Sārīk 'Adil approached in 782 (1380/1381); but when the latter had departed, they came back and now it was Husain's turn to fly. Soon afterwards — the usual date is Djumādā II,

783 (Aug.-Sept. 1381) — the latter was killed by his brother Aḥmad b. Uwais who then ascended the throne. He had first of all to defend his position against Shaikh 'Alī and Pīr 'Alī; these two were defeated and killed but the third brother Bāyazīd then came forward as a pretender. When he sought help from Sāriḳ 'Alī, Aḥmad appealed to Shāh Shudjā' who at once occupied al-Sultāniya then belonging to Bāyazīd and appointed the latter his governor. Shāh Shudjā's officers, however, were soon expelled and al-Sultāniya passed into Aḥmad's hands. When Timūr soon afterwards approached, Shāh Shudjā' sent him all sorts of valuable presents to gain the friendship of the threatening conqueror. As a pledge of fidelity, Timūr demanded a daughter of Shāh Shudjā' for one of his sons. Shāh Shudjā' died, according to the usual statement on Sha'bān 22, 786 (Oct. 9, 1384), aged 53 years two months. The poet Ḥāfiẓ lived at his court.

(K. V. ZETTERSTÉEN)

SHAHĀDA, (A.), testimony, whether in the ordinary sense of the word, the statement of an eye-witness (from *shāhāda* „to see”), or in the religious and legal sense.

1. In the religious use of the word *shahāda* is the Muslim profession of faith: „there is no god but God; Muḥammad is the Prophet of God” (cf. TASHAHHUD); and by extension it is the testimony one gives in fighting for Islām, and more particularly in dying for it in the holy war. The Muslim who falls on the battlefield is called *Shahīd* [q. v.] „witness, martyr”; e.g. Eyub, Sultān Murād I, killed after the battle of Kossovo. *Meshhed*, the tomb of a martyr, *meshhed* 'Alī, *meshhed* Ḥusain. This idea of the Muslim martyr is not explicit in the Qur'ān.

2. In the civil and legal sense, the witness is called *Shāhid*: e.g. the witnesses of a marriage who accompany the relatives before the Imām; the witnesses in a case of adultery; Sūra, iv. 19: „If your wives commit the act of infamy, call four witnesses”.

On the theory of evidence in law consult the article SHAHĪD.

(CARRA DE VAUX)

SHAHĀRA, a town in South Arabia, mentioned by Yāqūt among the fortified places in the district of Ṣan'ā', on the Djabal Shahāra. A second place distinguished from the preceding as Shahārat al-Faish lies quite near it, a little to the east on the same hill, which lies due north of the town of Ḥabūr. Al-Hamdānī already knows this town as the source of the stone used in rings called *sa'wānī*, a red onyx with white veins, also called *'arwānī*. The town frequently played an important part in the history of South Arabia. The Amir Dhu 'l-Sharafain Muḥammad b. Dja'far, the last descendant of al-Ḳāsim al-'Aiyānī died here in 478 (1085/1086) and was buried here. His tomb

is widely celebrated and the place was called Shahārat al-Amīr after him. The Saiyid al-Ḳāsim b. Muḥammad, who raised the Yamanī rebellion against the Turks about 1630 was born and lived here. When he had succeeded in expelling the Turks he retained Shahāra as his capital. He was the ancestor of the Imāms of Ṣan'ā'. When the Turks began to regain their hold on the Yaman in 1871—1872 Shahāra was taken by Muṣṭafā 'Āsim Pasha in a bold campaign and the house of the ringleader in the anti-Turkish movement, Saiyid Muḥsin al-Shahārī destroyed; the latter had for years been at war also with the Imām of Ṣan'ā' Muḥsin Mu'izz. Saiyid Muḥsin had to retire to Wāda'a and in 1884 the notables of Ḥabūr, Ṣa'da and Shahāra were forced to submit to the then governor of Yaman, 'Izzet Pasha. In the wars following Shahāra was again lost to the Turks and became the centre of all the elements hostile to Turkish rule.

(ADOLF GROHMANN)

SHĀHĪ, a small coin of the Shāhs of Persia. It was the smallest of the silver coins in the xviith and xviiith centuries and weighed 18 grains (1.17 grammes); it was worth $\frac{1}{4}$ of an 'abbāsī or $\frac{1}{2}$ mahmūdī or ten copper kāzbeḡis; in Faṭh 'Alī's reformed coinage 20 shāhīs were equal to the new silver unit, the *ḡarān*. Under Naṣir al-Dīn the shāhī was a copper coin = 5 centimes; the 2 shāhī piece and $\frac{1}{2}$ shāhī were also issued in copper.

(J. ALLAN)

SHAHĪD (A.), witness, martyr (pl. *shuhadā'*) is often used in the Qur'ān (as is *shāhid* [q. v.], plur. *shuhūd*, from which it is not definitely distinguished) in the primary meaning of witness. The following examples are typical of the various contexts in which it occurs: Sūra, ii. 127: „Or were ye eye-witnesses when Jacob was at the point of death and he said to his sons”.... Sūra, xxiv. 6: „Those who slander their wives and have no witness except themselves”... Sūra, ii. 137: „And thus we have made you a people in the middle that ye may be witnesses in regard to mankind and that the Prophet may be a witness in regard to you”; Sūra, i. 20: „(On the day of judgment) every soul shall come, with an urger and a witness”. (On the expression: to give evidence from belief, etc., see the articles SHAHĀDA and TASHAHHUD). *Shahīd* frequently occurs as referring to God, e.g. Sūra, iii. 93: „God is the witness of your deeds”; Sūra, v. 117: „Thou art the witness of all things”. *Shahīd* is therefore also one of „the most beautiful names” (*al-asmā' al-ḡusnā*, cf. the article ALLĀH).

The meaning martyr is not found for *shahīd* in the Qur'ān. It is only later commentators that

have tried to find it in Sūra, iv. 71. The Qur'an always uses circumlocutions to express this conception, e. g. Sūra, iii. 151: "If ye be slain or die on the path of God, then pardon from God and mercy is better than what ye have amassed". Sūra, iii. 161: "Consider not those slain on God's path to be dead, nay, alive with God; they are cared for". Sūra, xlvii. 5—7: "And those who fight for the cause of God, their works He will not suffer to miscarry. He will guide them and bring their heart to peace and lead them into Paradise which He has told them of".

The development of meaning of *shahid* to martyr (there is not the parallel development in *shahid*; this never means anything but witness, namely in a court of justice, cf. the article *SHAHID*), took place under Christian influence, cf. the Syriac *sāhdā* for the N. T. Greek *μάρτυς*.

Wensinck's monograph on martyrdom in the east shows that the development in Christianity and in Islām runs parallel down to minor details and that the doctrine of martyrdom in both religions in the last resort goes back to old oriental (Jewish) and Hellenistic ideas. The old meaning *shahid* = witness, later became so forgotten in Islām that false etymologies are regularly given for it (e. g. from *sh-h-d* to look, etc.).

The martyr who seals his belief with his death, fighting against the infidels is *shahid* throughout the *Ḥadīth* literature and the great privileges which await him in heaven are readily depicted in numerous *ḥadīths*. By his sacrifice the martyr escapes the examination in the grave by the "interrogating angels" Munkar and Nakir, nor does he need to pass through the "purging fires of Islām", *barākāh*. Martyrs receive the highest of the various ranks in Paradise, nearest the throne of God; the Prophet sees in a vision the most beautiful abode in Paradise, the *Dār al-shuhadā'*. The wounds of the *shahid* received in the *Ḍjihad* become red like blood on the day of judgment, and shine and smell of musk. None of the dwellers in Paradise could ever come back to earth, except the *shahid*: for on account of the very special privileges which are granted him in Paradise he still wishes to suffer martyrdom another ten times. Martyrs are freed by their death from the guilt of all sins so that they do not require the intercession of the Prophet, and indeed in later traditions we even find them interceding for other men. They are already pure, and therefore alone among men are not washed before their burial, a view which has found a place in the *Fiḥ* (cf. A. J. Wensinck, *Handbook of early Muhammadan Tradition*, s. v. *Martyrs*).

In the *Fiḥ* books the *shahid* is dealt with in the section on *ṣalāt* in connection with the prayer for the dead, and the differences of opinion in the schools (the reasons for them are sometimes very interesting) centre mainly round the question whether the *shahid* is washed, whether the prayer for the dead is uttered over him, whether he is to be buried in his bloodstained garments, or not, etc. In them we find the distinction made whether the *shahāda* has been for this world for the next or for both, for as an ethical action it must be judged according to its *nīya*; on the other hand we find the different kinds of *shuhadā'* in the wider sense, detailed below. The case of *shahid* in the legal sense does not occur if the man concerned survived the battle in spite

of his wounds and was able to arrange his affairs before his death. We sometimes find sections, *fi ṣaql al-shahāda* in the book of *Ḍjihad*, where martyrdom is praised quite in the style of the *ḥadīth*.

The praise of *shahāda* led to a real longing to meet a martyr's death and according to some traditions, even Muhammad and 'Omar longed for it. This *ṭalab al-shahāda*, however, was by no means encouraged by orthodox theology but rather deprecated, perhaps — according to a suggestion of Wensinck — because this kind of self-sacrifice looked very like suicide, always condemned in Islām. Therefore peaceful moral duties are represented as equal to or even better than voluntary death, such as fasting, regularity in prayer, reading the Qur'an, gratitude to one's parents, honesty as a tax-collector, learning: these are all deeds on the path of God, *fi ṣabil Allāh* (this expression with the gradual cessation of the wars of conquest undergoes the same change from a warlike to a peaceful ethical meaning as *shahid*, cf. the article *SABIL*) and may enable men to share in the rewards otherwise promised for the *shuhadā'*. But the conception of *shahid* itself underwent an important extension which may be partly already seen in *ḥadīth's*, so that in the end almost anyone who had died any violent death and aroused pity was considered by the general public to be a martyr and soon was actually regarded as a saint. An important factor in bringing about this development was the very old tendency of the people to worship holy men generally, cf. the article *WALI*. In this sense, for example, anyone who dies of disease, like the plague and the "diseases of the stomach", is considered a *shahid*; anyone who dies a violent death, e. g. from starvation, thirst, drowning, being buried alive, burning, poison, a lightning stroke, being killed by robbers or wild beasts, or a mother who dies in child-bed; also one who dies during the performance of a meritorious action, e. g. on the pilgrimage or in a foreign land, where no friend or relative is with him, or on a journey which is *summa* or while visiting a saint's tomb or while in the act of prayer, or as a result of continuous ablutions, or in the Friday night, or in the search for the knowledge of the faith: *fi ṭalab 'ilm al-Din*, or in defending the right against injustice: of the *amr bi 't-ma'rūf wa 'l-nahy 'an al-munkar* against the *ẓālim*: whoever loves and remains chaste and does not betray his secret and dies, dies a *shahid* and anyone who meets his death fighting against his own impulses in the *Ḍjihad akbar*, is *shahid*.

The tomb of such a *shahid* is considered *mashhad*, enjoys the reverence of the pious and becomes an object of pilgrimage. In many of these *mashāhid* it can be proved that we have pre-Islāmic local cults which have been continued in this form under Islām. This side of the survival of the ancient in the nearer East has been illuminated by van Berchem's study of the inscriptions, but only after further material is available will a final verdict be possible. The phrase found as early as tombs of the third century A.H.: *hādḥā mā jashhadu bihi wa 'alaihi*, with which the term *mashhad* might perhaps be connected (according to a suggestion by M. Hartmann, *Z.D.P.V.*, xxvi. 65²; cf. however, Ritter in *Isl.*, xii. 148—150), is interesting. When we further find Sultāns called *shahid* in inscriptions, the word here has lost its

real significance and is no more than a pious term for deceased. In many cases the name *mashhad* was transferred to rites of local cults, which have nothing to do with a *shahīd* and in Turkish *shahīdlik* and *meshhed* (also pronounced *meshat*) is a name for cemetery in general (see Mordtmann, in *Isl.*, xii. 223). The inscriptions also show that frequently the Muslim builders of *mashāhid* built them in their own lifetime, apparently in order to share in the blessings of their good deed while still here on earth (cf. *MASHHAD*).

In Cairo there used to be celebrated a festival in commemoration of martyrs, in which Muslims took part up to the VIII/xivth century (Makrizi, *Khīṭaṭ*, i. 68 sq.; Mez, *Die Renaissance des Islam*, p. 399 sq.).

In contrast to orthodoxy the various sects often kept rigidly to the original sense of *shahīd*; for example the *Khawāridj* fanatically sought death fighting against the government, which they considered unrighteous, while the orthodox theologians taught that rebellion against the government was not a *djihād* with a prospect of martyrdom.

Martyrdom plays a special role of peculiar importance for the *Shī'a*. For them *Ḥusain* is the *shahīd* par excellence, the king of martyrs, *shāh-i shuhadā* (much as the favourite martyr of the *Sūfis* is al-Hallāj). In keeping with the character of the *Shī'a*, *Ḥusain* is sometimes endowed with features which almost recall the passion of Christ or sufferings of St. Francis (deliberate self-sacrifice, transmission and inheritance of the divine light in the family of the Prophet, immortality etc., cf. the articles *SHī'a*, *MUḤARRAM*, *ḤUSAIN*). There is a rich literature of martyrologies describing very fully the sufferings of *Ḥusain* and other members of the family of the Prophet, a speciality of the *Shī'a*; for example there is a famous work entitled *Rawḍat al-Shuhadā* by *Ḥusain* b. 'Alī al-Wā'il al-Kāshifī, which has been translated into Turkish (by *Fuzūlī* with the title: *Ḥadiqat al-Su'adā*) and into Eastern Turkish and several times also abbreviated.

The worship of *shahīds* has attained noteworthy developments in parts of India where there is a gigantic *Shahīd gandī* said to be the tomb of no fewer than 150,000 *shuhadā*.

SHAHĪD (A., pl. *shuhūd*), witness. The statement (*shahāda*) of a witness, is a declaration on a legal claim in favour of a second person against a third, which is based on an accurate knowledge of the state of affairs and is made before the judge in prescribed form (*ashhadu bi-kadhā wa-kadhā*). The following main principles have grown up, based on the *Kur'ān* and Tradition and perhaps also influenced by the legal opinions in the Talmud and are in the main common to all *madhāhib*; there are of course numerous differences in points of detail which cannot be dealt with here.

The taking and giving of evidence (*shahāda*) is a *farḍ* 'ala 'l-kifāya; but if only one person was present on the scene, there is an absolute obligation on him to give evidence (*farḍ al-'ain*). In the case of a *ḥaḳḳ* *Allāh* it is, however, left to the discretion of the witness whether he cares to bring the culprit before the *qāḍī* or spare his Muslim co-religionist and remain silent; the last course is usually recommended as the more meritorious. The witness must: 1. have accurate knowledge ('ilm) of what he is talking of and have perceived it with his own eyes and ears (cf. *Sūra*, v. 11); 2. be *mukallaf* [q. v.]; 3. be a free man; 4. be a Muslim (if he is giving evidence in a case brought against a Muslim); 5. be in full possession of his mental faculties; 6. be 'adl [q. v.] (cf. *Sūra*, v. 105, and lxxv. 2; *dhawā' adlīm*); he must also not have been previously punished with *ḥadd* for slander (cf. *Sūra*, xxiv. 4); 7. lead a decent and moral life (*murū'uwa*); thus for example a witness is rejected, if he enters the bath without a shift or is devoted to gambling (chess, *nard*) or eats in public; 8. be above suspicion; he must not for example get any advantage for himself from his evidence or avert any injury to himself; he must not be on bad terms with the accused, if he is giving evidence against him. Nor can those who have a claim for maintenance give evidence against one another, like parents and children, husband and wife, master and slave.

The following regulations concern the number and sex of the witnesses: 1. In *zinā* four male witnesses are required (cf. *Sūra*, xxiv. 2 sq. and iv. 19). 2. In all other cases, which do not concern *māl*, like theft, murder, marriage and divorce, release of slaves etc., two male witnesses are required (cf. *Sūra*, ii. 282 sq. and v. 105 sqq.); in cases which, as a rule, women alone are competent to deal with (child-birth, unchastity in women, etc.), four women are sufficient according to the *Shāfi'* teaching (two for the *Malikis* and only one for the *Ḥanafis* and *Zaidis*). 3. In cases which concern *māl*, like claims arising out of contracts and bonds or accidental homicide, two men or one man and two women are required as witnesses (cf. *Sūra*, ii. 282 sq.). In these cases one male witness is usually sufficient along with the oath of the accuser.

Except in criminal cases, it is allowed to replace one original witness (*shāhid al-aṣl*) by two male deputy witnesses (*shuhūd al-far'*), the

so-called *shahāda* 'alā *shahāda*; but only when the original witness is dead or cannot appear before the court on account of severe illness or is three days' journey or more from the place of trial.

The witnesses may withdraw their evidence before the judge; but if sentence has already been passed, they are liable for the injury done. If a statement is withdrawn, which affirmed *zinā*, the witnesses are punished with *ḥadd* for slander (*ḥaddhf*). False witness (*shahādat al-zūr*) is already censured in the Qur'ān (Sūra, xxv. 72; ii. 283) and Tradition. Witnesses are frequently purchased in the east (cf. E. Lane, *Manners and Customs of the Modern Egyptians*⁵, 1860, p. 100, 114; Ch. White, *Three Years in Constantinople*, 1845, i. 103).

The most difficult point in the above rules is undoubtedly the question of 'adāla; the witnesses must either be personally known as 'adl to the *qāḍī* or their 'adāla must first of all be established. From the end of the second (eighth) century an assistant to the *qāḍī*, the *ṣāhib al-masā'il* or *muzakkī*, was appointed to conduct these often tiresome investigations. As Muslim procedure does not recognise documentary evidence as proof but only the oral evidence of eye-witnesses, such people were preferred for the verification of legal matters whose 'adāla had already been proved. Thus permanent "witnesses" came into existence: at times their numbers rose to thousands but usually there were only a few. They were officials of the *qāḍī*, and were appointed and dismissed by him. Thus arose the body of notaries, who were called *shuhūd* in Cairo and Baghdād, in the east and the Maghrib 'udūl. Besides verifying legal matters they also decided smaller disputes independently. They were as a rule young lawyers who later received judicial appointments. Muslim writers frequently complain of the corruption among these people. Their development began in the iith (viiith) century (the first reference is in Cairo in 174 A.H.: al-Kindī, *Governors and Judges*, ed. Guest, p. 386) and they were abolished in the ivth (xth) century. These "witnesses" are properly to be regarded as a revival of the Roman-Byzantine notaries. — For the present conditions see Lane, *op. cit.*, i. 117; Vassel, *Über marokkanische Prozesspraxis in M. S. O. S. As.*, 1902, v., p. 175 sq.

(W. HEFFENING)

SHĀHINSHĀH. [See SHĀH].

SHAHR (P.), a town. It is etymologically the same word as old Persian *khshathra* — (cf. skr. *ṣatṛa* —); the old Persian word, however, means only: "dominion, reign", and also: "empire"; this old significance the Pahlawī *shahr* (written ideographically: 𐭮𐭲𐭩𐭭) originally retained, but it means also: "a district, a large town". The Armenian loan-word *ashkharh* denotes: "a province, a land", also: "the world" (անոթ, օրհորհան, cf. also the compound *ashkharhakal* = աստղաբան). It seems to have been borrowed from the older (Arsacidian) middle-Iranian. The modern Persian *shahr*, which signifies "a (large) town", originally comprised the old meaning ("empire, realm") besides. It can be seen in phrases like *Irān shahr*, *Shahr-i Kābul*, etc., which belong to the poetical style; cf. also the derivative *shahryār* (from *khshathra-dāra* —), "a ruler, a king".

It is perhaps no mere fortuity, that in old Persian there seems to be a trace of a similar semiological transition in the case of the word *wardana* —, which in that idiom signifies "a town". In the Babylonian texts of the inscriptions of the Achaemenids, this word is rendered by *ātu*; the old Persian term for "land, district" (*dahyāuš*) is translated into Babylonian by *mātu*; now in Bīsutūn 2,6 (= § 25 Weissbach), Babylonian *ātu* corresponds to Persian *dahyāuš* and a Babylonian duplicate of a portion of the Bīsutūn inscription (cf. Weissbach, *Die Keilinschriften der Achämeniden*, p. xiii.) has 2,12 (= § 31 Weissbach) *mātu* for Persian *wardanam*, whereas Bīsutūn 3,13 (= § 49 Weissbach), Persian *dahyāuš* is rendered in the Elamite text by the ideogram for "town". That the old Persian here may have influenced the Babylonian, is not impossible, as one could suppose, that also the later Babylonian use of the verbal form *iddin(u)* (lit. "he gave") for: "he created", which is found, e.g. in the Elwend-inscription of Darius, might have originated by the influence of Persian *adā* = he created (the Äryan roots *dā* and *dhā* no more being phonetically different in Irānian); cf. Delitzsch, *Assyr. Handwörterbuch*, p. 451; Weissbach, *Keilinschr. der Achäm.*, p. 100, note a. It seems probable, then, that already in old Persian the meanings "a district" and "a large town" were inclined to fade one into the other. This is not very surprising, taking into consideration the fact, that in later times also several large cities in Persia had their dependent localities, which were reckoned to belong to the town, so that the ideas of "town" and "district" in some cases might cover each other.

The modern Persian, according to the lexicographers, has also the collateral form *shār*.

The word *shahr* occurs in several names of towns, e.g. *Shahrābād*, and, more often, in *iḍāsa*-construction, as *Shahr-i Bīlkīs*, *Shahr-i Rustam*, etc. (cf. Le Strange, *The Lands of the Eastern Caliphate*, Index); in personal names it retains its old meaning: "empire", as in the (already Pahlawī) names *Shahrwarāz*, or *Shahrbānū*.

The word passed into Osmanli under the form of *shahir*; town-names, in which it enters, are numerous, e.g. *Akshahir*, *Yeñi-shahir*, etc.; see for this word and its derivations Barbier de Meynard, *Dictionnaire Turc-Français*, s. v.

Shahrangiz or *Shahrāshub*, in Turkish and Persian literature, denotes a kind of poetical composition, which satyriizes or praises the inhabitants

of a certain town (*madh u-dhammī kih shu'arā ahl-i shahr rā kunand*: cf. Vullers, *Lexicon*, s. v. *shahrāshūb*; Browne, *Persian Literature in Modern Times*, p. 237/238; Gibb, *Hist. of Ottoman Poetry*, II, 232 etc.). (V. F. BÜCHNER)

SHAHRASTĀN or **Shahrīstān** (P.), a derivation from *shahr* with the suffix — *stān*. Collateral forms are *shahrastāna*, *shūristān* (and, metri causa, *shūrisān*). In Pahlawi the word also occurs, written ideographically 𐭮𐭲𐭮𐭲𐭮𐭲; the meaning is, both in Pahlawi and in modern Persian: a town, especially a fortified one, or a capital (cf. Vullers, s. v. *shūristān* and *shahrīstān*; I.e. Strange: *The Lands of the Eastern Caliphate*, p. 203, note 1). The principal part of several Persian towns is therefore named by this term, as was the case with that quarter of Barwān (according to al-Muḳaddasī, the capital of Dailam), where the governor resided; also with the eastern part of the city of Djurdjān, the inner part of the city of Ḳazwīn; the (new) city of Kāth [q. v.], according to al-Muḳaddasī, also bore the name of *Shahrīstān*, and during the Middle Ages, the old (eastern) city of Isfahān was known as *Shahrastāna*; otherwise, this latter locality was named *Djāy*, or simply, *Madina*, which term seems to be nothing but the Arabic translation of *Shahrastāna*.

There are some cities and villages, which are designated by this name, either exclusively, or optionally, viz.:

1) *Shahrastān-i Yazdigird*, a fortified town, built by the Sāsānian king Yazdigird II (438—457 A. D.) against the inroads of the Turks; the king resided here from the fourth to the eleventh year of his reign. The town must have been situated in the province of Djurdjān.

2) A town in *Khurāsān*, at a distance of three days from Nasā (Nisā), on the border of the desert. This locality seems not to have been of great importance; it had textile industry, and was the birth-place of the well-known al-*Shahrastānī* [q. v.].

3) A village in *Sidjīstān*, situated near the ruins of the medieval capital of the province, *Zarandj*.

4) *Shahrastāna*, a village near *Hamadhān*.

5) The city of *Shāpūr* [q. v.] in *Fārs* also bore the name of *Shahrastān*, as was the case with

6) *Rūyān*, a city in the district of the same name belonging to *Tabarīstān*.

AL-SHAHRĀSTĀNĪ, MUḤAMMAD B. 'ABD AL-KARīm, the principal historian of religions in the oriental middle ages, was born in *Shahrastān*, a town of *Khurāsān*, in 469 (1076); the date of his birth is also given as 467 and 479. He studied jurisprudence and theology at *Djurdjāniya* and *Nisābūr*; his teacher in scholastic theology was Abu 'l-Ḳāsim al-Anṣārī. According to Ibn *Khallikān* he belonged to the *Ash'arī* school but *Sam'ānī* says that he adopted the dreams of the *Ismā'īlīs* and that in his conversation and discussions he only spoke of the philosophers and took no interest in religious law. He made the pilgrimage however and returning after having spent 3 years in *Baghdād*, he settled in his native town where he died in 548 (1153).

He wrote several books, of which the most famous is the treatise on religions and sects: *Kitāb al-Mīlāl wa 'l-Nihāl*; among the others we may mention, on speculative theology: *Nihāyat al-Iḳdām fi 'Ilm al-Kalām*, another on metaphysics, the title of which: *Muṣāna'at al-Falāsifa*, the duel of the philosophers, recalls that of the *Tahāfut* of *Ghazālī*, and one on "the history of the learned": *Ta'rikh al-Huḳamā'*, which has the same title as the well-known work of Ibn al-Ḳiftī (d. 1248), written about a century later.

The treatise on religions and sects, one of the most remarkable documents of the philosophical literature of the Arabs, was written in 521 (1127). The author in it passes in review all the philosophic and religious systems that he was able to study and classes them according to their degree of remoteness from Muslim orthodoxy. He therefore begins with the Muslim sects, *Mu'tazila*, the *Shi'a* and the *Bāṭinis*. He next deals with the "people of the book", those who have a revealed book recognised by *Islām*, i. e. the Christians and Jews; next those who have revealed books either doubtful or false, e. g. the Magi and the Dualists, after whom come the Sabaeans who worship the stars. Leaving the sects founded on a revelation, he goes back to pagan antiquity and gives articles on the principal philosophers and sages of Greece, after which he gives an exposition of Arab Scholasticism as a derivative from Hellenism; the last part of the book is devoted to the religions of India.

The book is preceded by prolegomena, of which one chapter, the fourth, is an account of all the differences which broke out in *Islām* in the last moments of Muḥammad's life and which, influencing religion on the one hand politics on the other, gave rise successively to the sects of *Shi'a* and *Mu'tazila*. This is a very fine section. In another chapter of these prolegomena *Shahrastānī* deals with arithmetic and makes some pretensions to be a mathematician; but these are not justified in the result. *Shahrastānī*'s mind is essentially and almost exclusively a philosophic one. He is interested only in ideas, he gives few biographical details, almost no titles of books, little chronology and no dates. As an analyst of the systems, he is very subtle and in general very objective. He has not the primarily apologetic character which the lost work of al-Ash'arī on the sects for example must have had.

The most important parts of the work of al-*Shahrastānī* are those which deal with the *Mu'tazila*, the *Shi'a*, the Dualists and the Sabaeans. For the *Mu'tazila*, hair-splitting theologians and subtle thinkers, whose works have not come down to us, he is the one of the most important sources with al-*Iḏjī*; the article on *Ash'arī* and the *Ash'arī* school which fixed Muslim orthodoxy, is interesting for the same reason. The articles on the *Shi'a*, *Khāridjīs*, *Murdjīs*, divided into numerous sects political in character, which differed in the theory of the imāmate, are very interesting; but the author is rather brief on the *Ismā'īlīs* and *Bāṭinis*. He is equally short on the Jews. As to the Christians he knows three principal sects: the Melkites, the Nestorians and the Jacobites; he contrasts St. Paul with St. Peter (*Simon al-Ṣafa*), saying that Paul came to disturb the arrangements made by Peter and to mingle philosophic ideas in the teaching of Christ. He knows a little about the Christian scriptures but does not criticise them so acutely as Ibn Ḥazm.

The references to the Dualists, Manichaeism, Manes, Mazdak, Bardesanes, Marcion, are of course very valuable; the opposition between light and darkness plays a considerable part in them as in the philosophy of *Ishrāk*. It is the same with the long section on the Sabaeans; Shahrastānī puts in it a dialogue in which an orthodox Muslim argues with a Sabæan, opposing the idea of prophecy to that of the spirits of the stars, disputing the existence of the latter and criticising the conception of them.

At the present day, Shahrastānī appears quite ignorant of Greek philosophy; but he has quite a good article on Plato, whose theory of ideas he understands and another interesting one on Pythagoras, in which he gives an exposition of the theory of number and of geometrical ideas conceived as principles of beings. The article on Aristotle is derived from Avicenna and the commentary of Themistius. The very long article on Arab scholasticism is in the main a résumé of the *Nad̲jāt* of Avicenna. Lastly the section on India contains some curious passages. We know that Arab authors as a whole knew very little about India. Nevertheless we find in Shahrastānī some accurate notes on Buddhist psychology and doctrine, on the Bodhisattvas and the successive Buddhas and on certain practices of Hinduism — the worship of the goddess Kālī, whose idol (Mahākālī) is described, ablutions in the sacred rivers, religious suicides etc. Shahrastānī seems to regard Pythagoras as the founder of intellectual thought in India.

(CARRA DE VAUX)

SHĀHRĪR, the name of the sixth Persian month, which has 30 days like every Persian month. The older form of the name found also in al-Bīrūnī is *Shahrivar*. As the name is also that of the fourth day of every Persian month, the month and day are distinguished by the addition of *māh* or *rūz*. The 4th Shahrir, on which the name of day and month are the same is called *Shahrīgān*.

(M. PLESSNER)

SHĀHRŪD, 1. Name of two rivers belonging to the system of the Kizil Ūzen (Safidrud: this other name, however, which in the Middle-Ages designed the whole Kizil Ūzen, at present belongs to its lower course, from Mandjil to the Caspian, cf. Andreas in Pauly-Wissowa, *Realenz.*², i., col. 1736; Monteith, p. 16). The most important of the two Shāhrūds is that, which at Mandjil (± 36° lat., 49° long.) joins the main river. This Shāhrūd takes its rise in the mountain-system of the Alburz, and its direction is from the South-East to the North-West. According to Mustawfi al-Kāzwinī, who gives a concise, but tolerably clear description of this river (*Nuzhat al-Kulūb*, text, p. 217/218;

transl. p. 210), the Shāhrūd rises from the confluence of two streams in the Rūdbār-district of Kāzwin, one originating from the Ṭaliḳān hills, the other from the „Nasr and Takḥmas mountains”, as Le Strange construes the text, which is uncertain, as it presents some variants. Hād̲j̲d̲j̲i Khalifa, who, in his *Djihānnumā* (p. 304), as often, copies the *Nuzhat*, reads here: *Kūh-i Shīr* (cf. the variants in Le Strange's edition, p. 217, N^o. 4).

The Shāhrūd, according to Mustawfi, passes Alamūt, while flowing through the Rūdbār-district, and unites in the district of Bara, „which is of the two Tārums”, with the Safidrud. From its origin to its junction with the last-named river it measures 35 leagues (*farsang*); its water, but for a small degree, is not used for field-irrigation. With these last words, the statement of the same author, that most of the lands of the district of Rustamdār are watered by the Shāhrūd (text, p. 160, transl. p. 157) should be compared or contrasted.

The Shāhrūd, not being navigable, has no significance for traffic. Although the Kizil Ūzen is well-known in antiquity under the name of Amardus, there seems to be no mention of the Shāhrūd before the Middle Ages. It is noticed by the Armenian geographer, translated and annotated by J. Marquart, in his *Erānshahr*, p. 126; this authority mentions its rising in the mountains of Ṭalakān. On the infrequent mentions of the Shāhrūd in Arab geographers, Andreas' article on the Amardus in Pauly-Wissowa, *Realenz.*², i., col. 1734 etc. may be consulted. In the nineteenth century, the river became known by the travels of Monteith and Rawlinson. The first, the account of whose journey dates from 1832, explored the valley of the Shāhrūd, starting from Mandjil (or, as he calls it, Menjile), in search of the ruins of Alamūt. He first notices the height of Menjile (800 feet above the sea), and gives the names of some localities, situated on the Shāhrūd: they are (retaining the orthography of the original): at 2 miles (from Mandjil): Loushan; at 28: Berenzini; 36 miles from Berenzini: Jirandey, „just where the stream from the mountains of Ala Mout in Mazanderan . . . joins the stream of Kherzau, coming from the mountains behind Kasbine”. In this region there were found ruins, which were considered to be the ruins of the renowned stronghold of al-Ḥasan b. al-Ṣabbāḥ. Returning by the same route, Monteith visited, at 12 miles distance from Mandjil, the alum-mines near the village of Surdar.

In the account of Rawlinson's journey from Tabriz to Gilān (1838) the Shāhrūd is also mentioned, but the last named traveller does not give a detailed account of it.

The other Shāhrūd, as appears from Kiepert's *Nouvelle carte générale des provinces asiatiques de l'Empire ottoman*, 1884, joins the Kizil Ūzen between Senna and Miyānsarāy; the locality, mentioned by Monteith (pp. 13 and 20) under the name of „Berendeh”, must be the „Berinda” or Kiepert's map, to the North of Senna. This „Berendeh” might be compared with the „Bara” in the passage of Mustawfi, were it not, that the description of that author cannot but relate to the river of Mandjil. One might, however, suppose, that Mustawfi has, in this place, mistaken the one Shāhrūd for the other. The second, or lesser Shāhrūd, called formerly the river of Shāl, which

receives some small tributaries (of, as it seems, unknown names) from the East, rises in the Shāl hills, and passes some localities, e. g. Shāl (see below), flowing almost parallel to the Kizil Uzen to the east; then, east of Berinda (which lies on what seems to be a western tributary to the lesser Shāhrūd), it takes a curve to the South-West, to merge into the Kizil Uzen, joining it, therefore, from the north-east. To assume, as Ritter does, in his *Erdkunde*, three Shāhrüds, is not necessary.

II. A district described by Mustawfī as belonging to the Tālīsh-districts (طوالیش). Among its villages, he mentions Shāl, Kalūr, Hims, Darūd and Kilwān. We see, then, that it is the region of the lesser Shāhrūd. The climate, according to our authority, is temperate, and the soil produces good corn, but not much fruit. The people are Shāfītes, but, as the author observes, only by name, for they do not care much about religion. The revenues, in Mustawfī's time (middle of the viiith = xivth century), amounted to 10,000 dīnārs.

III. Name of a city in the West of Khurāsān, not far from the frontiers of the province of Astarābād. It lies to the South of Bistām; according to Fraser, its geographical position is lat. 36° 25' 20", long. 55° 2' 23"; its height above the sea is 3500 feet. The town is a trade-centre; from it to the city of Astarābād there are two ways. The geographers of the Middle Ages make no mention of it.

SHÄHRUKH MİRZÄ, the fourth son of Timūr and the first of the Timūrid sovereigns, born at Samarqand on the 14th Rabi' II, 779 (20th August, 1377) and thus named, according to the legend, because his father heard of his birth in the middle of a game of chess, when the knight "rukḥ" was on the point of checking the king "shāh". He received also the titles of *Bahādūr*, "valiant", *Khāḡān-i Sa'id*, "fortunate sovereign". Married at the age of eleven, governor of the Empire during the Kīptāk campaign [q. v.] at the age of thirteen, he was sent back to Samarqand during the great Persian expedition, but was called to the army in 795 (1392). At the age of seventeen he distinguished himself at the siege of Qal'c-i Sefid [q. v.], cut off the head of the enemy leader, Shāh Maṣūf, and acted as mediator at the siege of Takrit, became governor of Samarqand and of the country around in 796 (1393/1394); and three years later, he took part in the expeditions to Persia, Syria and Asia Minor, and held important commands at the siege of Aleppo and at the battle of Ancyra. Chalcondylas, who calls

him Σαχρὺχος, speaks of him with admiration. His presence being necessary at Herāt, he did not go to the *kuriltay*, which decided upon the Chinese expedition, and he contracted then a new marriage.

On the death of Timūr, Shāhrukh was recognized as sovereign of the provinces which he was governing (Ramaḡān 807 = March-April 1405). The other princes, very much divided, finally adopted the proposal of Pir Muḡammad to rally around Shāhrukh, who would probably be content with a formal recognition and certain marks of respect. Shāhrukh showed himself touched by the deference of his brothers.

One of the latter, Khalīl Sultān, dispossessed by the emīr Barandak, had taken his revenge by seizing Samarqand. Shāhrukh departed at once with his army for Transoxiana; he was conciliatory and his envoy, Shaikh Nur al-Dīn, concluded a peace leaving Khalīl sovereign of the country. Soon after, war broke out between Khalīl and Mīrzā Pir Muḡammad. The latter was assassinated by his vizier, Pir 'Alī Tāz. Rebellions deprived Khalīl of any authority. On the other hand, the Djala'irids and Kara Yūsuf seized Baghdād and Adharbaidjān; Pir 'Omar was dispossessed and killed by his kinsman Iskandar. Shāhrukh then intervened, defeated Iskandar and annexed to his states 'Irāk 'Adjami and contrary to the promise he had given, Khalīl's lands were given to Ulugh Beg; Khalīl received as compensation the governorship of 'Irāk, and Shāhrukh restored to him his love, Djawhar Shād, who had been insulted and maltreated by the rebels. In the same year (809 = 1406—1407), Māzandarān was finally conquered.

In the following year Mīrānshāh, the brother of Shāhrukh, was killed in a battle against Kara Yūsuf. The sons of Kara Yūsuf's enemy, Abū Bakr and Muḡammad 'Omar, survived him only a short time, and Kara Yūsuf, following up his conquests, founded a vast empire embracing Tabriz, Adharbaidjān and the 'Irāk. Shāhrukh, desirous of avenging his brother, attacked him in the year 823 (1420). Kara Yūsuf died suddenly at the moment of giving battle, his troops were disbanded and his corpse treated with indignity.

Several expeditions took place in the year 810 (1407—1408); one against Balkh in which Pir 'Alī Tāz was conquered and put to death; one against Pir Pādīshāh, who had rebelled at Astarābād. War broke out between Pir Muḡammad and Rustam, who was victorious, and made his entry into Isfahān where he behaved with moderation. Abū Bakr and Iskandar were at war in Kermān; Sīstān was conquered by Shāhrukh. Pir Muḡammad had a reconciliation with Iskandar, but 'Alā' al-Dawla revolted; his father, sultān Aḡmad, pursued him and Kara Yūsuf made him prisoner. At the end of 811 (1409) Samarqand was under the power of Shāhrukh.

In the year 812 (1409—1410) there was an expedition against a rebel emīr, Khudāidād, whose head was sent by a Mongol Khān to Shāhrukh. The revolt of Shāh Bahā' al-Dīn in Badakhshān was put down and Transoxiana, after being conquered, was reorganized. Marw was rebuilt, the ancient course of the Murghāb was restored and the dikes repaired. During the two succeeding years Shāhrukh had to return to Transoxiana in order to put down in that country the revolts of the

Emir Shaiikh Nür al-Din, who was killed in Mongolia. New troubles broke out in Kermān, where Iskandar supplanted Mirzā Rustam. Under the rule of Khalil, the Tatars brought back from Asia Minor by Timūr, had fled from Transoxiana into Khwarizm, which they laid waste and they wished then to return to their native land. A first expedition sent against them in 815 (1412/1413) was a failure. Much affected by this lack of success, Shāhrukh sent another against them and, once master of Khwarizm, handed it over to an able administrator, the Emir Shāh Mulk.

In 817 (1414/1415) the revolt of Mirzā Amīrak Aḥmad took place; Ülugh Beg departed to besiege Akhsi. The Emirs of Iskandar revolted and placed themselves under the authority of Shāhrukh, who offered Iskandar an honourable peace. This offer was rejected. After a long siege Ishfāhān was taken by assault and laid waste. Shāhrukh intervened, undertook the defence of the inhabitants and gave them Rustam as governor. He also ordered Iskandar to be treated with clemency. No attention was paid to his orders and the prince was blinded. The latter assisted by the Emir Sa'd-i Waḳkās, the ally of the Turkomans, had helped the revolt of Baikara Mirzā at Shirāz (818 = 1415/1416). Besieging this town, Shāhrukh pardoned Baikara and sent him into the district of Qandahār; after another revolt, he was exiled to India with Mirzā Amīrak Aḥmad; another suspect, Mirzā Ilangar, was sent into remote exile. Two other rebels, Sulṭān Uwais of Kermān and the Emir Bahlūl Barlās of Qandahār made their submission.

In 820 (1417—1418) Baisanqor, the son of Shāhrukh, was placed at the head of the government and he abolished the hated exactions of the vizier Saiyid Fakhr al-Din, whom he made disgorge some of his ill-gotten gains. The death of this Emir, which took place soon after, was considered a blessing from heaven.

On 23 Rabi' II, 830 (Feb. 21, 1427), Shāhrukh was the victim of a plot in the great mosque of Herāt, where the Darwish Aḥmad Lor, who had come under the pretext of presenting a petition, tried to stab him. He was immediately lynched by the crowd. The consequence of this plot was that many arrests and executions of suspected people took place. Iskandar, aided by his brother Djihānshāh, had rebelled again against Shāhrukh in 832 (1429). After being in revolt for six years, Djihānshāh submitted and became governor-general of Adharbāidjān. Iskandar, who had fled, was assassinated a short time after at the instigation of his son. In Ramaḍān 838 (March 1435) the plague laid waste Herāt and its suburbs. Hundreds of thousands are said to have died at this time.

Shāhrukh died at Fishāward, in the province of Ray on the 25th Dhu 'l-Hijja 850 (March 12, 1447). Of the five sons that he had — Ülugh Beg, Abu 'l-Fath, Ibrāhīm Baisanqor, Suyūrghatmish and Muhammad Djūki — only the eldest survived to succeed him.

Historians are of one accord in eulogising Shāhrukh as a munificent sovereign, peaceful and void of ambition, loving peace without fearing war, in which he was always successful, and endeavouring to repair the damage done by Timūr. He rebuilt Marw, fortified and embellished Herāt. A zealous Muslim, he was believed even to have the gift of working miracles. Himself a poet and artist, he was the patron of writers, of artists and of scholars,

whom he attracted to Herāt, where he founded a magnificent library. Djāmi and the mystic poets Saiyid Ni'matu'llāh Kirmāni and Kāsim al-Anwār [q.v.] lived at this time. Turkish poetry began to rival Persian. Shāhrukh, who was particularly interested in historical studies, inspired or encouraged the works of Nizām al-Dīn Shāmī, Sharaf al-Dīn, 'Alī Yazdī, Fāsihi, 'Abd al-Razzāk, Samarqandī, as well as Ḥafiz Ābrū, whom he commissioned to write a great work on geography. His sons, Ülugh Beg, the learned astronomer, and Baisanqor, the noted artist, who gave a great stimulus to painting and to calligraphy, followed his example.

With other states Shāhrukh maintained peaceful relationships. He exchanged embassies with China, the suzerain of the family of Timūr, who paid her tribute. India recognized his authority, at least nominally. In 824 (1421) Khidr Khān, the sovereign of Delhi, sent him an embassy and we have the story several times published or translated of the embassy of 'Abd al-Razzāk Samarqandī to China and India. Deferential to China, Shāhrukh was, on the other hand, arrogant with the Turks. His correspondence with Muhammad I is the proof of this. With Egypt his relationships were sometimes difficult. In 824 (1421) Tibet sent him an embassy.

On the death of Shāhrukh the decline began. The Timūrid princes, who all aspired to power and found followers, exhausted themselves in struggles which hastened on the rise of the Ṣafawis and the formation of the Üzbek Empire.

Bibliography: The *Maṭla' al-Sa'dain wa-Maḍjma' al-Bahrain* of 'Abd al-Razzāk al-Samarqandī is the most important work to consult; unfortunately it has never been published completely. Galland made a French translation still unpublished (*Bibl. Nat.*, fonds français, Nos. 6084—6087) and Quatremère has taken from it his *Mémoires historiques sur la vie de sultan Schah-rokh* (*J. A.*, 1836, ii. 193—233 and 338—364), which revised and continued until the year 924 (1421) resulted in the *Notice de l'ouvrage persan qui a pour titre Matla-assadein*...., Paris 1843 (*N.E.*, xvi/1). Numerous passages of lost parts of Ḥafiz-i Ābrū have been preserved by the *Maṭla'* which contains besides the substance of Sharaf al-Dīn Yazdī and other historians of Timūr. Mirkhwānd, vi. 180—223 and Khwāndamīr III, 178—214 are important. The *Tadhkira* of Dawlatshāh gives but very scattered literary information; see on the same subject Mir 'Alī Shir, *Maḍjālis*, book vii. (*J. A.*, 1861, xvii. 285/286). The story of the plot is found in Barbier de Meynard's *Extraits de la Chronique persane d'Herat* (*J. A.*, 1862, xx. 268—272).

Munadjjim Bashi, *Saḥā'if al-akhbār*, Constantinople 1285, iii. 57 is important for the relations with the 'Osmānlis. Consult also: — Price, *Chronological Retrospect*, London 1821, iii. 485 sq.; Sédillot, *Sur un sceau de Schah Rokh, fils de Tamerlan, et sur quelques monnaies des Timourides de la Transoxiane* (*J. A.*, 1840, x. 295—319) and reprinted in *Matériaux pour servir à l'histoire comparée des sciences mathématiques chez les Grecs et les Orientaux*, i. 243—269; Browne, *Persian Literature under Tartar Dominion*, p. 379—387, and Bloch, *Introduction à l'histoire des Mongols*, p. 248—265 (on the relations of Shāhrukh with China).

(L. BOUVAT)

SHĀH-SEWAN, the name of several groups of Turkish tribes in Persia. The term means in Turkish "those who love the Shāh". Persian historians write: *shāhī-sewan*, thus indicating the Turkish accusative (*shāhī*) and the Turkish closed *e*.

History. According to Malcolm, Shāh 'Abbās I (995—1037 = 1587—1628), in order to reduce the turbulent Turkish tribes known as *kīzl-bash* (= "red-heads"), who played the part of praetorians, invited the men of all the tribes to enrol themselves in a new body which was called Shāh-sewan. Entirely devoted to the Šafawī family, this tribe enjoyed the particular favour of the sovereign. At one time they must have numbered 100,000 families, but this number diminished in time.

Malcolm quotes the *Zubdat al-tawārikh* and his version has been adopted by later historians. The European travellers, who were contemporaries of the Šafawīs (R. du Mans, D. Garcias de Silva Figueroa, Chardin, Olearius), however, do not mention the tribe of Shāh-sewan and the known facts somewhat complicate Malcolm's story.

I. The 'Ālam *ārāyi* 'Abbāsī frequently uses expressions like "*shāhī-sewan*" *kardan*, *šalāyi-shāhī-sewani* in the sense of "to make appeal to the faithful." Thus the father of Shāh 'Abbās, Shāh Sulṭān Muḥammad, had already used this procedure in the rebellions of 989 and 992. "Shāh Muḥammad", says Iskandar Munshī, "having launched the (appeal) *shāhī-sewān*, ordered that all those of the Turkoman tribe who were servants and partisans of this hearth (*ghulam wa-yakdijhati in dūdman*) should rally round His Majesty". These ad hoc appeals played upon the religious sentiments of the adepts of the Šafawī family (*dūdman*, *odjakh*). The sovereigns of this dynasty not only traced their origins to the *Shi'i imāms*, but even claimed to be the incarnations of the latter (cf. *KHATĀT*). In the time of Shāh 'Abbās there was in Turkey a sect which regarded the Persian sovereign as its *murshid*. In our own day, the Ahl-i Ḥaqq (cf. the article 'ALI-ILĀHI) give a place in their theophanies to the Šafawī kings. The formula called of Shāh-sewan thus recalled to political recalcitrants their obligations to their superiors.

In 996, in the first year of the reign of Shāh 'Abbās, the *Kīzl-bash* rebelled against the authority of the majordomo Murshid Kulī Khān. The Shāh had recourse to the process of "*shāhī-sewan*" and the faithful arrived en masse. A few days later the rebels were captured and put to death. This decisive blow dealt to the truculence of the *Kīzl-bash* must have made an impression on his contemporaries, for in the firm reign of Shāh 'Abbās, it was rarely necessary to resort to unusual measures. Iskandar Munshī says nothing about the permanent results of the appeal of 996. He only adds that the Shāh-sewan who came at the king's call "mounted guard till morning".

II. On the other hand, Shāh 'Abbās continued vigorously and successfully the policy of regrouping the great tribes. His grandfather, Shāh Tahmāsp [q.v.], about 936 (1529) had already reformed one of the most important *Kīzl-bash* tribes: the Tākkālu (Malcolm, i. 506), remnants of which are still to be found in Kermān. The new military corps (*kullar*, *tufangchī*) made unnecessary the *Kīzl-bash Kurī* (Chardin V, 292). Another way of weakening the old praetorians was to dilute them with new elements personally devoted to the sovereign.

These newcomers seem to have been particularly proud of the name of Shāh-sewan as is shown by the history of the Shāh-sewan of Ardabil. To sum up then, it may be doubted if a single regularly constituted tribe was ever founded by Shāh 'Abbās under the name Shāh-sewan.

The Shāh-sewan of Ardabil. Although the inhabitants of this *hukumat* all use the "Āzari" Turkish dialect and are all *Shi'is*, the Shāh-sewan, even when settled, form a group apart, distinguished by its tribal organisation. According to their traditions the Shāh-sewan came from Asia Minor under their chief Yunsur (?)-pāshā who had obtained permission to do this from Shāh 'Abbās I. Yunsur is said to have brought 3,300 families (hearths), a section of whom migrated later to Khurāsān.

Among these Shāh-sewan three groups are distinguished: (1) the tribe of Yunsur-pāshā, which later broke up into clans bearing the names of the descendants of the chief: Šaru-khān [q.v.], Qodja-bēg, Band 'Alī bēg, Pūlād bēg, Damir bēg, Kuzāt bēg, etc., with other later ramifications; (2) the tribe brought at the same time by Qurd bēg, of which following clans still exist: Tālīsh mikailu, Khalīfelu, Mughānlu, Udulla, Murādlu, Zargar, etc.; (3) the tribes which arrived in the time of Yunsur-pāshā, but independently of him: Inanlu ('Ālam *ārā*: *imānlu*, evidently from the Mongol *iman* "goat") with the clans: Pir-Eiwatlu, Kalāsh, Kūr (Kör?), 'Abbāslu, Ge'iklu, Yurtēi, Dursun Khodjalu, and Begdillu with the clans: Adjirlu, Khodja-Khodjalu, Veddi Oimak, 'Arablu, Čakhrlu, Kabādlu. As to the Begdillu, the 'Ālam *ārā* (p. 762) mentions the different fiefs (*tiyūlat*) held in Ādharbāidjān by the *Kīzl-bash* chief Gündoghmuḥ Sulṭān Bēgdili, "who with his tribe and their tents dwelled at Tā'uk near Kirkūk. Having become Shāh-sewan in the first Baghdad campaign (1032 = 1622), he presented himself to the Shāh and received the rank of Sulṭān". Alongside of these two tribes, mention is made of isolated groups, the Rizā bēglu, Sārwanlar ("camel-drivers") and Giamushchī ("buffalo-breeders").

Šaru-khān succeeded Yunsur-pāshā. Among the descendants of the latter is mentioned Badr Khān, who accompanied Nādir Shāh on his campaigns. His sons, as the result of a quarrel, divided all the Shāh-sewan into two parties. The Ardabil section took the side of the Īl-bēgi descended from Nazar 'Alī Khān and the Mishkhin section those descended from Küçük Khān.

The arrival of the Russians in Transcaucasia reacted on the fortunes of the Shāh-sewan. Between 1728 and 1732 several clans leading a nomadic life on the Kura (Kurr) recognised Russian supremacy. The peace of Gandja (1813) established the Russians north of Mughān. The frontier fixed on the Turkman-čai (1828) and always rigorously maintained separated the Shāh-sewan from a great part of their winter-quarters. The Russians for a considerable time did not prevent the tribes from continuing to enjoy their pasturages, but there were continual incidents. In 1867, the Rizā-bēglu and Qodja-bēglu were refused access to Russian Mughān. On their side the Persian authorities burned the village of the Qodja-bēglu, Barzand [q.v.], and in 1876 the tribe was deported to Urmia, from which it has little by little regained its old home.

From 1869 a mixed commission was created on Russian territory at Bīlasuwār (on the river

Bolghārū) with the task of settling amicably the mutual claims of Russian and Persian subjects. In 1884, the Russian frontier was definitely closed to the Shāh-sewan and at the same time the Russian nomads (Perembel, Darwishlu) were forbidden to descend into Persia. This measure dealt a blow to the prosperity of the Shāh-sewan, but did not put a stop to their incursions. On the other hand, it encouraged the Shāh-sewan to settle down and they had to cultivate their lands more intensively.

The governors of Ardabil had made very little impression on the Shāh-sewan. Only the expedition of 1910 undertaken against the turbulent tribes by the leaders of Persian revolution attained a notable success. Towards April of 1923, Riḍā Khān Sardār Sipāh succeeded in disarming the Shāh-sewan.

At the beginning of the nineteenth century, there were the following groups in Mughān; (1) Tarākama (Turkomans) 1,500 families of settlers; (2) Shaḡaḡi 8,000 families of nomad Kurds (?); (3) 10,000 families of Shāh-sewan nomads.

The Shaḡaḡi later withdrew into the interior of Persia. Before the Russian frontier was closed, fourteen clans of Persian Shāh-sewan, numbering 3,500 families, arrived in Russia, while 27 clans with 2,600 families remained in Persia.

Before 1914 the position was as follows: In the canton of Mishkhin on the northern slopes of the Sāwalān [q. v.], N. E. E. of Ardabil, from which it is separated by the river Dodjūkh (a tributary of the Kara-ṣu), there were over 5,000 hearths of the Shāh-sewan divided into 37 clans governed by their hereditary chiefs. The latter in turn were subordinate to an Il-bēgi. The Shāh-sewan of Mishkhin are nomads. They spend the summer on the high plateaux of Sāwalān and winter in Persian Mughān. The limit of their migration is about 120 miles. On this stretch they have villages inhabited by peasants, who have come from the interior of Ādharbāidjān, who till the soil, receiving a third of the produce.

The number of Shāh-sewan in the canton of Ardabil was over 6,000 hearths divided into 12 clans, whose chiefs did not have an Il-bēgi in common. Among these clans only two are nomad; they go to Mughān of the eastern road (Barzand-Bilasuwār). Four clans are becoming settled (*takhtakapu* "the gates of wood"), especially in the S.E. and S. W. of Ardabil (the strongest clans are the Pulādlu and Yurtči). In all there are over 11,000 hearths at Shāh-sewan residing in the *ḥukūmat* of Ardabil and they must number at least 75,000 souls.

The Shāh-sewan are Shī'is. The conversion of Yunsur-pāshā, who was at first a Sunnī, is said to have taken place when Shāh 'Abbās passed through Mughān. Since then the house of Yunsur-pāshā has been regarded as an *odjakh* ("hearth") by which the tribes swear when taking an oath. The Ḳodja-bēglu are suspected of Sunnī leanings. One clan of Shāh-sewan consists entirely of *saiyids* (Seiyidlar). Like the majority of nomads, the Shāh-sewan are rather indifferent in matters of religion.

The language of the Shāh-sewan does not differ from the "Āzari" dialect spoken by the rest of the population of Ardabil, but it is said that the Zargar also use a Čaghatai dialect.

In the tribes a distinction is made between the clan of *bēg*'s and that of *bēg-xāda*, the latter being descended from lateral lines. The hired peasants

who till the earth on behalf of the tribes, are called *hamrā(h)* ("companions").

The Shāh-sewan of Sawa. This group consists of two tribes: A. Baghdādi, 800 families living between Sāwa [q. v.] and Ḳum and governed by an Il-khānī and four Il-bēgi. The tribe is said to have come from Shirāz in the time of Shāh 'Abbās I. It consists of 14 clans: Kālvānd (the most important), Kūselar, Ḳara ḳoyunlu, Mukhtabandlu, Yārdjānlu, Aḥmadlu, 'Alī ḳurtlu, Saiflu, Ḳutlu, Ḳāsimlu, Suldūz, Husein khānlu, Dūḡar, Nilkāz, Maḥdilu; B. Inānlu, 1000 families wintering between Teheran (Tihṛān) and Ḳum south of the river Karādj; summer quarters (5½ months from April) at Parwāna in the province Ḳhamsa (Zandjān).

The tribe used to live in Mughān, whence they were transported by Nādir Shāh (?) to Ḳhamsa to form a bulwark against the incursions of the Bilbās Kurds (cf. SAWDĪ BULAK).

Other groups. In the province of Ḳhamsa [q. v.] the Doweirān, who dispute the power with the local Afshār, call themselves Shāh-sewan; they came from Mughān at the same time as the Inānlu. On the other hand, a tribe of this last mentioned name (Hādjdjī Mirzā Hasan Fasā'i, *Fārs-nāmāyi Nāsirī*, Tihṛān 1313, ii. 309: *Il-i Inānlu*), numbering 5,000 families, forms a part of the confederation of the five tribes (*Ḳhamsa*) in the eastern part of Fārs. Of at least one of the 25 subdivisions of these Inānlu, viz. of the Gök-pār, it is reported by Hasan Fasā'i that, after having proclaimed themselves Shāh-sewan, i. e. "friends of the king (*shāh-dūst*)", they had separated from the tribe Gök-pār in the time of Shāh 'Abbās. Zain al-'Ābidin Shīrwānī mentions the existence of Shāh-sewan even in Kābul and Kashmīr where they had gone in consequence of the dispersion policy practised by Nādir-shāh with regard to the Shāh-sewan (cf. J. Morier).

(V. MINORSKY)

SHAÏ' (A.), a thing, anything, in Arab algebra the name for the unknown quantity in an equation. The expression is first used in the *Algebra* of Muḥammad b. Mūsā al-Khwarizmi (about 820) and probably goes back to the Indian *vāvat-lāvat*. In the mediaeval Latin translations, it is translated by *res*, latterly *causa*, Ital. *cosa*, from which developed the name *cosa* given to algebra. P. de Lagarde's attempt to trace the *x* of algebra to *Shai'*, which has found some credence among Orientalists, is untenable.

SHAIBA (BANU), the name of the keepers of the Ka'ba (*Sadana*, *ḥadjaba*) whose authority does not extend over the whole of the sanctuary (*masdjid al-harām*), nor even as far as the well of Zamzam and its annexes. They are the *Banū Shaiba* or *Shaibiyin* and have as their head a *za'im* or *shaiikh*.

Modern works only give brief references to them. Snouck Hurgronje gives the days on which they open the door of the Ka'ba. He notes that they only admit the faithful on payment of a fee and quotes the witty Mecca saying: "The B. Shaiba are wreathed in smiles; this must be a day for opening the Ka'ba". — They find a further source of revenue in the sale of scraps of the covering of the holy house, which is replaced every year by their care. The embroidered parts reserved in theory for the sovereign are given more or less gratuitously to the great personages who represent him at Mecca and on the *ḥadj*. The remainder in accordance with custom (*Chroniken d. Stadt Mekka*, iii, 72) is the perquisite of the *Shaibiyin*, who sell it in the little booths at the Bāb al-Salām (Batanūni, p. 139), the ancient Bāb B. Shaiba, the principal gate of the mosque. They also sell there the little brooms made of palm leaves, which are all alleged to have been used for cleaning the floor of the Ka'ba, a solemn ceremony in which the greatest personages glory in participating (Ibn Djubair, p. 138; Batanūni, p. 109). They also have the charge and care of the offerings made by the faithful, which adorn the interior of the holy house. This treasure comprise the most diverse objects, articles of gold and of silver, precious stones, lamps richly adorned, foreign idols, the offerings of converts in distant lands. This treasure has regularly been plundered by the Amirs of Mecca, by the governors, by its guardians and even by the *Shaibiyin* themselves (Gaufrey-Demombynes, *Le Pèlerinage*, p. 57) although according to tradition, the grand-master *Shaiba* is said to have defended it against the attempts of the Caliph 'Omar (*Usd al-ghāba*, iii, 8). They have charge of the interior curtains of the Ka'ba. They had at one time the care of 'he *Maḥām Ibrāhīm* which was considered a dependence of the holy house; but do I not know what is the present rule.

The possession of these diverse functions by the *Shaibiyin* is now so generally recognised that it attracts no attention. They evoked a more lively interest from earlier authors and especially from the pilgrims. The principal narratives are those of Ibn Djubair in 1183 and of Nāṣir-i Khosraw in 1276. The visit to the Ka'ba accompanied by

a *ṣalāt* of two *rak'a* made if possible, at the very spot where the Prophet performed them on the day of the taking of Mecca, is a pious act, which is not a part of the rites of the pilgrimage, but one from which the pilgrims themselves hope to acquire further merit although the people of Mecca seem to attach but slight importance to it. The dates of the public opening seem to have varied a little (*Le Pèlerinage*, p. 60 sqq.) but the ceremony has remained unchanged. The *za'im* alone has the key of the Holy House, the history of which I shall deal with below. When the gangway (*daraḍj*), which gives access to the door which is above the ground level, has been put into position by the *Shaibiyin*, their chief advances and, while he is inserting the key, one of his acolytes hides it from the gaze of the faithful. In the 12th century (Ibn Djubair, p. 93; *Pèlerinage*, p. 59), he held a black cloth (the 'Abbāsid colour) in his extended hands. In the thirteenth century (Nāṣir-i Khosraw, p. 209), there was a curtain on the door which a *Shaibi* lifted to allow the *za'im* to pass and which he let fall again behind him. The Prophet had veiled (*satarahu*) the door on opening it (Ya'qūbi, *Ta'rikh*, ed. Houtsma, ii, 61). In imitation of the Prophet the *za'im* enters alone or with 2 or 3 acolytes, prays the two ritual *rak'a*, then opens the door to the public whose admission he regulates. The Persian pilgrim as well as the Spanish made a visit to the Ka'ba and they have both noted the miracle, which allows this very small building to hold at one time such a large number of the faithful. Nāṣir-i Khosraw counted 720 in it at the same time as himself. Ibn Djubair was particularly interested in the Ka'ba and its *ḥadjaba*. He was present at the reception of Saif al-Islām Tughtekin, the brother of Saladin (p. 146 and 147), on whose left hand the *za'im* of the *Shaibiyin* solemnly entered the mosque; the *za'im* Muḥammad b. Ismā'il b. 'Abd al-Rahmān was his chief informant (p. 81). He tells us that during his sojourn the Amir of Mecca, Mukthir, arrested the *za'im* Muḥammad and, accusing him of such baseness of conduct as was "unworthy of the guardian of the holy house", confiscated his goods and set up in his place one of his cousins, whom popular report accused of the same vices. Then some time after, he saw the *za'im* Muḥammad, after paying 500 dinārs to the Amir, re-established in his office, strutting proudly before the gate of the Ka'ba (p. 163, 164, 166, 179). This act of violence does not prove that there was any exact custom which regulated the relations of the Amir with the B. Shaiba. Under al-Mutawakkil (847—861), they sent delegates to the Caliph at Baghdād to assert, in opposition to the proposals of the governor of Mecca, their right to decide what works it was necessary to undertake at the Ka'ba; the master of works sent by the Caliph was to apply only to them. When he came to make his first enquiry the master Ishāk was, however, accompanied by the *ḥadjaba shaibiyin*, and also by the governor, by pious individuals and by the *Ṣāhib al-barid* (cf. the art. BARID, "the postmaster", in reality the redoubtable intelligence officer of the sovereign (*Chron. d. Stadt Mekka*, i, 210/211).

The privilege of the B. Shaiba is very old; the historians of the ninth century Ibn Hishām, Ibn Sa'd, Ya'qūbi and the compilers of collections

of ḥadīths confirm this; but they pile up proofs of its legitimacy in a way that makes one think it was recent and disputed. We know what obscurity prevails in "spite of the texts" on the history of the "Arab kingdom" at the time when so many things were being organised of themselves.

According to tradition, Koṣaiy, the ancestor of the Koraish, had reserved the guardianship of the Ka'ba (*ḥidjāba*) for 'Abd al-Dār and his descendants. At the time of the conquest of Mecca, it was in the hands of 'Othmān b. Talḥa b. Abī Talḥa 'Abd Allāh b. 'Abd al-'Ozza b. 'Othmān b. 'Abd al-Dār (Ṭabarī, iii. 2378; *Usd al-ghāba*, iii. 7 and 372 etc.). Ibn Sa'd (Ṭabaḳāt, v. 331) has a variant story which casts doubts upon the near relationship of 'Othmān and Shaiba, while the genealogy given by the *za'im* to Ibn Dījūbair (p. 81) intercalates an ancestor Shaiba unknown to the other authors. 'Othmān by a happy foresight was converted at al-Hodaibiya with other notable personages of Mecca, although several members of his family had perished at Uḥud in the ranks of the Koraish (Ṭabarī, i. 1604; Aghāni, xv. 11; Ibn Sa'd, v. 331 etc.). On the day of the taking of Mecca, he accompanied the Prophet to the Ka'ba and the latter demanded the key from him; in general the authorities say that he gave it up, but according to one tradition (al-'Aini, *umda*, iv. 609; *Chroniken*, i. 187), 'Othmān, a new convert, had to get it from his mother, an infidel, who had charge of it and who refused to give it up. 'Othmān had to threaten to kill himself before her eyes. According to another authority (*Chroniken*, i. 185), she heard in the court-yard of the house the threatening voices of Abū Bakr and of 'Omar before she decided to give it up (cf. Ibn Khaldūn, *Ibar*, ii. 44). But another tradition which does not assume the conversion of 'Othmān in the year 8, shows him on the terrace of the Ka'ba holding the key in his hand and shouting to the Prophet: "If I were sure that he is the messenger of God I would not refuse it to him". 'Alī climbed up, held it hand out, took the key and himself opened the door; here 'Alid bias is evident (Rāzi, *Mafatih*, ii. 460; Kalkashandī, *Ṣubḥ*, iv. 264). — The general tradition is that the Prophet, in possession of the key, opened the door and entered with 'Othmān, Bilāl and Usāma, prayed two *rak'as* in a spot which is to-day held sacred and went out holding the key in his hand. At this point the traditions differ once more in detail, but end in the restoration of the key to 'Othmān; according to one account, the Prophet either on his own motion or because of the appeals of al-'Abbās or of 'Alī, leant on the posts of the door of the Ka'ba and made a speech which ended: "Everything is under my feet except the *sidāna* and the *ṣikāya* of the pilgrims, which are going to be restored to those to whom they belong". He gave the *ṣikāya* to al-'Abbās and returned the key to 'Othmān; according to the other tradition, the Prophet came out of the Ka'ba uttering verse 61 of Sūra iv., which according to an opinion which Ṭabarī (*Tafsīr*, v. 86) accepts as only of secondary value, was revealed at this moment and applies to the *Sidāna* and the *Ṣikāya* (Yāqūt, *Mu'djam*, iv. 625; Rāzi, *Mafatih*, ii. 460; *Chroniken*, i. 186).

But 'Othmān, master of the *sidāna* and of the key, did not exercise his rights: he followed the Prophet to Medina and died there in the year 42

(662—663) or he was killed at Adjnādīn in 13 (634). No one mentions him further and authors take the precaution of making the Prophet say that he returned the *sidāna* to 'Othmān and to Shaiba, and to the Banū Talḥa (Abu 'l-Mahāsīn, i. 138; Nawawī, p. 407; *Usd*, iii. 372; *Chroniken*, i. 184).

This attempt to make the cousin german of 'Othmān, Shaiba b. 'Othmān b. Abī Talḥa, be present at the taking of Mecca is unfortunate. Shaiba was not yet a Muslim, although some late authors have tentatively tried to convert him at the taking of Mecca. They are not able to escape the legend, which has grown up round the conversion of Shaiba at Honain a month later. Shaiba searches out the Prophet in the middle of the combat in order to take vengeance for the death of his father, who had been killed at Uḥud by Ḥamza, but from the Prophet a light emanates causing him to lose heart. Muḥammad puts his hand upon his heart and causes the demon to depart from him. Shaiba is converted (Yāqūt, ii. 64; Ibn Hishām, 845; Ibn Sa'd, v. 331; Ṭabarī, *Annales*, i. 1661, 3; *Usd*, iii. 7; *Chroniken*, ii. 46; etc.) and without the writers knowing why, Shaiba becomes the keeper of the Ka'ba; all his family hasten to come to his assistance; his brother Wabb b. 'Othmān, the sons of 'Othmān b. Talḥa, those of Musāfi b. Abī Talḥa who was killed at Uḥud: "It is then", concludes al-Azraqī (*Chroniken*, i. 67), "all the descendants of Abū Talḥa who in general exercise the *ḥidjāba* (*Chroniken*, i. 67)". But according to all the traditionists, it is Shaiba who is their chief. It is he who had the power to demolish the houses dominating the Ka'ba (*Chroniken*, iii. 15). It is he who came into conflict with Mu'āwiya about the sale of a house and who at the time of the second pilgrimage of the Caliph, not wishing to be disturbed, sends his grandson Shaiba b. Dījābir to open the door of the sanctuary (*Chroniken*, i. 89). It is he who arbitrates between the two ḥājjī chiefs, the partisans of 'Alī and those of Mu'āwiya (Ṭabarī, *Annales*, i. 3448 and iii. 2352; *Murūdj*, ix. 56/57); one of his sons 'Abd Allāh or Talḥa was a victim of the "abominable" al-Qasrī (*Chroniken*, ii. 37, 38, 175). It is he who appears in one of the versions of the ḥadīth where 'Ā'isha wishes to have the Ka'ba opened (*Chroniken*, i. 220, 222, 223). There are discussions with 'Ā'isha which settle that it is lawful for the Shaibiyyin to sell parts of the covering (*kiswa*) but only for the maintenance of the poor (*Chroniken*, i. 180, 182 and iii. 70—72; al-Kalkashandī, iv. 283); in spite of the efforts of the makers of ḥadīths, the question is discussed by jurists and in 621 (1224) al-Malik al-Kāmil, the nephew of Saladin, purchased from the Shaibiyyin for an annual fixed sum, the revenues that they drew from the opening of the Ka'ba and forced them to open it free of charge (*Chroniken*, i. 266). Shaiba died in 57 (676—677) or under Yazid b. Mu'āwiya (Ṭabarī, *Annales*, iii. 2378; Ibn Sa'd, v. 331; *Usd*, iii. 8).

The tradition which gave to the Shaibiyyin the *ḥidjāba* of the Holy House is an ancient one. It is still perpetuated in the name of the archway, which, beside Zamzam, marks the ancient boundary of the wall of the *masjid al-ḥarām*. When the former had been enlarged, the new gate, called at the present time Bāb al-Salām, which was in a line with the Ka'ba and the ancient arcade, was

called in its turn Bāb Banī Shaiba (*Pèlerinage*, p. 132 and 133). But for this institution as for many others the period when it was established and merged in an anti-Islamic institution, remains obscure.

Bibliography: See the works cited in the article. (GAUDEFREY-DEMOMBYNES)

AL-SHAIBĀNĪ, ABŪ 'AMR IŠHĀḲ B. MĪRĀR, who, according to Abū Maṣṣūr al-Azhārī, had the nickname al-Aḥwaṣ, was descended from Persian country gentry, but being a client (*mawlā*) of some person of the tribe of Shaibān was called al-Shaibānī. He was the foremost of the Kūfī grammarians. We are told that he was called al-Shaibānī because he was instructor to those sons of the caliph Hārūn al-Rashīd who were under the care of Yazīd b. Mazyad al-Shaibānī. The date of his birth can only be ascertained approximately, but if the age at which he is said to have died is correct, he must have been born shortly after the year 100 (719–720). The date of his death is also uncertain, the years 205, 206 and 213 being given; the latter date is probably correct, as he is said to have died on the same day as the poet Abū 'l-ʿAtāhiya and the singer Ibrāhīm al-Mawṣilī who died in that year. Abū 'Amr was not only celebrated as a grammarian, but has also the reputation of a trustworthy transmitter of traditions (*ḥadīth*), and is quoted as an authority in the *Musnad* of Aḥmad b. Ḥanbal. He studied under the most celebrated masters of the Kūfī school and spent a long time among the nomad Arabs collecting poetry and linguistic data. In later life he removed to Baghdād. Earlier in life he compiled his large collection of the poetry of the Arabic tribes. This collection, which has not been preserved to us, contained the poems of some eighty tribes and was extensively used by later editors of ancient Arabic poetry. We find his name regularly mentioned, especially when poems are cited which were not known to other grammarians. He surpassed his colleagues, with the exception of Abū 'Ubaida, in taking an interest also in the historical allusions found in ancient poems, about which many others, like the Baṣrian al-Aṣmaʿī, seem to be particularly ignorant or uninterested. Although a pious man, he was at times addicted to drink. It is not surprising that he gives at times in good faith spurious poems as genuine, as for instance the 66th poem in the *Diwān* of al-Aʿshā (ed. Geyer), where the borrowings from the Qurʾān are too evident. Only one of his works has come down to us, the *Kitāb al-Djīm*, which was intended to be a dictionary of the Arabic language but was never completed. No doubt the *Kitāb al-ʿAin* of al-Khalīl b. Aḥmad had given him the impulse for this undertaking. It is arranged according to the ordinary Arabic alphabet, but only completed to the letter *ḍīm*. It is preserved in a unique copy in the library of the Escorial and being one of the earliest books in the Arabic language deserves special study (brief description in Cat. Derenbourg, No. 572).

His biographers tell us that he would not dictate his *Kitāb al-Djīm* to anyone and that in consequence copies were taken only after his death. The scribe of the Escorial MS. whom I have not identified so far, belongs to a much older period than is stated by Derenbourg; he used a copy made by the grammarian al-Sukkārī [q. v.], but as some leaves were missing in that copy he compared it with

one made by Abū Mūsā al-Ḥamīd. The book is not a lexicon as the biographers would have us believe, though in a rough way the words are arranged in four chapters comprising words commencing with the first four letters of the alphabet. There are frequent errors due to the author himself. The particular value of the book lies in the fact that it is a large collection of expressions peculiar to certain tribes; on the first 27 pages no less than thirty different tribes being mentioned, and there is not the least doubt that Abū 'Amr extracted the unusual words from the 80 old *Diwān*'s of Arab tribes which he had collected. This is evident when he quotes e.g. the poet Kuṭḥaiyir four times in succession. A diligent search in the *Lisān al-ʿArab* reveals also that the book had not been used by the lexicographers whose works form the basis of that work. The authorities and poets quoted are in many cases not cited elsewhere and I hope to prepare an edition of the complete work, which is the greatest monument of the Kūfic school of grammarians.

Biographers mention in addition the following works of Abū 'Amr all of which seem to be lost: *Gharīb al-Muṣannaf*, *Kitāb al-Khalīl*, *Gharīb al-Ḥadīth*, *Kitāb al-Kuttāb*, *Kitāb al-Lughāt* and especially the *Kitāb al-Nawādir*, a miscellany which has been freely extracted, generally without acknowledgment, by later authors. Among his most prominent pupils were the Kūfī grammarians Thaʿlab, Ibn al-Sikkīt, Abū 'Ubaid al-Kāsim b. Sallām and his own son 'Amr. The indices of the *Mufaḍḍaliyyāt* and the *Naḳū'id* give us only a faint idea of how often he is quoted as an authority for the earlier literature. Ḳālī mentions him several times, e.g. i. 136, 211 and 238.

(F. KRENKOW)

AL-SHAIBĀNĪ, ABŪ 'ABD ALLĀH MUḤAMMAD B. AL-ḤASAN B. FARQAD, Mawlā of the Banū Shaibān, a Hanafī jurist, born at Waṣīt in 132 (749/750). Brought up in al-Kūfa, he studied at the early age of fourteen under Abū Ḥanīfa, under whose influence he devoted himself to *ra'y*. At twenty he is said to have lectured in the mosque of al-Kūfa. He extended his knowledge of *ḥadīth* under Sufyān al-Thawrī (d. 161), al-Awzāʿī (d. 157) and others and especially Mālik b. Anas (d. 179), whose lectures he attended for over three years in Medina. His training in Fīqh, however, he owed mainly to Abū Yūsuf, but he soon began to threaten the latter's prestige by his own lectures, so that Abū Yūsuf tried to get him a judgeship in Syria or Egypt, which, however, al-Shaibānī declined. In 176 (792/793) he was consulted by the Caliph Hārūn al-Rashīd in the affair of the Zaidī imām Yahyā b. 'Abd Allāh. On this occasion he lost the Caliph's favour through his own fault and became suspected of being a supporter of the 'Alids (Ṭabari III, 619; Kardari II, 163 *sqq.*). He was, it is true, like some of his teachers a Murjīʿī (Ibn Kūtaiba, *Maʿārif*, p. 301; Shāhrastānī, ed. Cureton, p. 108), but he seems

to have kept clear of Shī'a activities (*Fihrist*, p. 204). It was not till 180 (796) at the earliest — in this year Hārūn made al-Raḡḡa his capital (Tab., iv. 645) — that Hārūn made him kāḍī of al-Raḡḡa. After his dismissal (187 = 803) he stayed in Baghdād till the Caliph commanded him to accompany him on his journey to Khurāsān (189 = 805) and appointed him Kāḍī of Khurāsān (according to Abū Ḥazim (d. 292) in Kardari ii, 147). He died there in the same year at Ranbu-waih, near al-Raiy.

He belonged to the moderate school of ra'y and sought to base his teaching wherever possible on ḥadīths. He was also considered an able grammarian. Among his pupils are mentioned the imām al-Shāfi'ī [q. v.], who nevertheless wrote a polemic against him (*Kitāb al-Radd 'alā Muḥammad b. al-Ḥasan in K. al-Umm*, Cairo 1325, vii. 277 sqq.). It is to Shaibānī and Abū Yūsuf that the Ḥanafī *Madhhab* owes its first spread of popularity. His writings, which have had frequent commentaries made on them, are the oldest that enable us to judge the teachings of Abū Ḥanīfa, although they differ in many points from the ideas of Abū Ḥanīfa. The most important are: *Kitāb al-Aṣl fī 'l-Furū'* or *al-Mabsūṭ*; *K. al-Djāmi' al-kabir*; *K. al-Djāmi' al-saghīr* (pr. Būlak 1302 on the margin of Abū Yūsuf, *K. al-Kharāj*); *K. al-Siyar al-kabir* (pr. with the commentary of al-Sarakhsī in 4 vol., Haidarābād 1335—1336), *K. al-Aṭḥār* (lith. in India).

We also owe to him an edition, with many critical additions, of the *Muwatta'* of his teacher Mālik b. Anas, which differs widely from the usual version (cf. Goldziher, *Muh. Studien*, ii. 222, sq.; now printed in Kazan, 1909).

SHAIBĀNĪ, ABŪ NAṢR FAṬḤ-ALLĀH KHĀN of Kāshān, a Persian poet of the sixth century. His father Muḥammad Kāzim was the son of the Muḥammad Sani Khān who had been governor of Kāshān, had fought successfully against the nomad Turkomans and was fond of the society of men of distinction. The poet lived at the court of Muḥammad Shāh and then retired from the world. He wrote a work in prose and verse entitled *Maqālāt* „discourses” containing dithyrambs in honour of his patron Nāsir al-Dīn Shāh, the prime Minister Ḥādjdī Mirzā Āḡās, Feridūn Mirzā, governor of Khorāsān, etc. A large selection of his poems was published in Constantinople in 1308, for the Akhtar press, 312 p.

al-fusahā, Teheran 1295, ii. 224—245; E. G. Browne, *Persian Literature in Modern Times*, p. 344. (CL. HUART)

SHAIBĀNIDS, descendants of the Mongol prince Shaibān, a brother of Bātū Khān [q. v.]. The names of the twelve sons of Shaibān and their earlier descendants are given by Rashīd al-Dīn (*Djāmi' al-Tawārikh*, ed. Blochet, p. 114 sqq., with notes by the editor from the anonymous *Mu'izz al-Ansāb*; on its importance as a source see W. Barthold, *Turkestan v epokhu mongolskago nashestviya*, ii, 56). Later writers give information on Shaibān and his descendants which is more legendary than historical; the bias of these tales is decided by the political conditions of the countries concerned. For example, Ütemish Ḥādji, writing in Khwārizm under Shaibānī rule, tells how Čingiz-Khān heaped distinctions on his grandson Shaibān at the same time as Bātū, but paid no attention to their brother, Tughai Timur; in contrast to this Maḥmūd b. Wali, writing in Bukhārā under the rule of the descendants of Tughai Timur, says that Bahādur, son and successor of Shaibān, always regarded the descendants of Tughai Timur as his suzerains. (*Zap.* xv. 231 and 256).

According to Abū 'l-Ghāzī (ed. Desmaisons, p. 181), Bātū granted his brother Shaibān the land between his own territory and that of his eldest brother Orda-Içen; the land between the Irghiz and Ural mountains and along the east bank of the Yāyīk was allotted him as summer residence and the lands on the Sīr-Daryā and the lower course of the Ču and Sarī-Su as winter residence. These statements are in general corroborated by the account of Plano Carpini, a contemporary of the three brothers (Engl. transl. by W. W. Rockhill, *Hakl. Soc.*, Ser. ii., N^o. iv. p. 15).

According to Abū 'l-Ghāzī, the sovereignty in the house of Shaibān regularly passed from father to son for several generations; the names of the princes concerned were Bahādur, Djinī Bugha, Badakul, Ming-Timur and Fulād. After the death of the latter his kingdom was divided between his two sons, Ibrāhīm and 'Arabshāh, but the brothers remained together. Their summer-quarters were on the upper Yāyīk, their winter abode on the lower Sīr-Daryā.

On the other hand, according to both the *Mu'izz al-Ansāb* and the *Tārikh-i Abū 'l-Khair-Khānī*, the sovereignty immediately before the accession of Abū 'l-Khair (a grandson of Ibrāhīm) was in another line, the descendants of Fulād's brother Tungā; according to the *Mu'izz*, in 829 (Nov. 1425/1426) there was ruling there a prince named Yumaduk (in the *Tārikh-i Abū 'l-Khair-Khānī*: Djumaduk), a great-grandson of Tungā, although his father Süfi was still alive. For the names of the two brothers Ibrāhīm and 'Arabshāh, the ancestors of the later rulers of Mā warā al-Nahr and Khwārizm, the Özbek used the compound Isā-'Arab (according to Abū 'l-Ghāzī, p. 182). The people ruled by the descendants of the two brothers called themselves Özbek, presumably after the famous ruler of the Golden Horde under whom the rule of Islām on the Volga was definitely established.

The conquest of Mā warā al-Nahr by the Özbek took place under Muḥammad Shāh Bakht or Shāhī Beg (also Shaibak Beg) known as a poet under the name Shaibānī, which is also frequently given him by historians, a grandson of Abū 'l-Khair. The capital Samarkand was occupied by him

towards the end of the year 905 (1500) and definitely the next year. After Shaibānī had fallen in battle against Shāh Ismā'il, the founder of the modern Persian kingdom, at Merw (Ramaḍān 27, 916 = November 29, 1510), Bābur succeeded for a brief period in restoring the rule of the Timurids in Mā warā al-Nahr, but he was defeated in 918 (1512) and had to abandon Bukhārā and Samarqand and in 920 (1514) also his last possessions in Mā warā al-Nahr (cf. BĀBER). Mā warā al-Nahr now remained under the rule of the Shaibānids (as descendants of Shaibān and not of Shaibānī, after whose death the suzerainty passed not to his sons, but to other princes of the house of Abu 'l-Khair) or Abu 'l-Khairids (Howorth, *History of the Mongols*, ii., 1880, p. 686 sqq.). Cf. the names and dates of the members in Lane-Poole, *Mohammadan Dynasties*, 1894 (21925), No. 98; additions and corrections in the Russian translation by W. Barthold; and a few additional facts in W. Wyattkin, *Spravocnaya Knizka Samarh. Oblast.*, vi. 242 sq. from the inscriptions on the tomb of the Shaibānids in Samarqand. On the most important ruler of this house, 'Abd Allāh, cf. the article 'ABD ALLĀH B. ISKANDAR; on the latter's father, cf. the article ISKANDAR. Central Asiatic sources always give as the last ruler of Mā warā al-Nahr the son and successor of 'Abd Allāh, 'Abd al-Mu'min, e.g. Abu 'l-Ghāzī, p. 183; Muḥammad Yūsuf al-Munshī in J. Senkowski, *Supplément à l'histoire générale des Huns*, etc., p. 30; Maḥmūd b. Wali in W. Barthold, *Zap.*, xv. 260; Welyaminow-Zernow in his work on the coins of Bukhārā and Khiwa also calls 'Abd al-Mu'min the last Khān of the house of the Shaibānids (*Trudī Vost. Arkh. Obshch.*, iv., 1859, p. 402); also W. Barthold, under 'ABD ALLĀH B. ISKANDAR. On the other hand, in the *Tarikh-i Ālam Arā-i Abbāsī* of Iskandar Munshī, a successor to 'Abd al-Mu'min is given, namely Pīr Muḥammad, "a relative of 'Abd Allāh and a prince of the house of Djānī-Beg". This statement is quoted by Welyaminow-Zernow in his later work on the Tzars of Kasimow (*Trudī*, etc., x. 345 sqq.) and this Khān identified with Pīr Muḥammad b. Sulaimān, a grandson of Djānī-Beg, mentioned in the *Abdallāh-nāma*. Pīr Muḥammad was soon overthrown by Bākī Muḥammad, the founder of the new (Astrakḥān) dynasty, taken prisoner and killed (end of 1007 = June/July, 1599). Therefore in Howorth (ii. 739 sqq.) and Lane-Poole the history of the Shaibānids ends not with 'Abd al-Mu'min, but with Pīr Muḥammad II.

Western European and Russian scholars restrict the term Shaibānids to the rulers of Mā warā al-Nahr, and do not apply it to the rulers of Khwarizm, although the descendants of Shaibān ruled for a considerable time in Khwarizm. Khwarizm, like Mā warā al-Nahr, was conquered by Shaibānī (Rabī I 21, 911 = Aug. 22, 1505).

After the death of Shaibānī, it passed not to Bābur, but directly to the Persians. Soon afterwards (according to Abu 'l-Ghāzī, p. 197, as early as the year of the sheep 1511, — the Hijra date 911 given is certainly wrong) the Persians were driven out by another branch of the house of Shaibān, the descendants of 'Arabshāh. Khwarizm remained under the rule of this dynasty till the end of the seventeenth century; on one of the last rulers, Abu 'l-Ghāzī and his historical work, see the article ABU 'L-GHĀZĪ BAHĀDUR KHĀN. The son

and successor of Abu 'l-Ghāzī, Anūsha Khān (1663—1687) also had considerable power; after the conquest of Meshhed, he took the title "Shāh"; from this the great canal, which he dug and which still exists, takes the name "Shāhābād". He was followed by his two sons, Khudādād and Muḥammad Erenk; the year of the latter's death is usually given as 1099 (1687/1688); in the still unpublished history of Mu'nis, the historiographer of Khwarizm, 1106 (1694/1695) is given. After this for a considerable period there was no longer a dynasty until the foundation of the house or Kunghrat. The Özbek aristocracy installed as rulers only for periods princes of the line of Čingiz Khān.

On the history of the Shaibānids of Khwarizm, cf. especially Howorth, *History of the Mongols*, ii. 876—905; Weselowski, *Očerki istoriko-geografičeskikh swed'enij o Khivinskom Khanstve*, 1877, p. 101—157; S. Lane-Poole, *The Mohammadan Dynasties*, No. 101 and the genealogy in the Russian translation by W. Barthold, p. 304.

According to Abu 'l-Ghāzī, p. 177, the princes of Siberia driven out by the Russians about 1003 (1594/1595), were also descendants of Shaibān.

(W. BARTHOLD)

SHAIBĀNĪ KHĀN, ABU 'L-FATH MUḤAMMAD, also called Shāhī Beg Ūzbek, or better Shāh Beg Khān Ūzbek and also Shaibak, a corruption of Shāhbakht, a name given him by his grandfather Abu 'l-Khair (the kunya Abu 'l-Fath is only found on his coins), Khān of the Ūzbeks and conqueror of Transoxiana, over which he reigned from 906 (1500/1501) to 915 (1509/1510). Born in 855 (1451) the son of Shāh Budāk and Āk Kūzī Begum, in 873 (1468) he lost his father, who was surprised and decapitated by Yūnus, Khān of Mongolia, who had come to the help of the Qazaqs [q. v.]. Entrusted to the guardianship successively of the Atabek Uighūr Khān, the Emīr Qarāčīn Beg and Kāsim, Khān of Astrakḥān, in the troubled period that followed the death of Abu 'l-Khair, he waited till he had sufficient followers to avenge his father. He attacked and defeated Burke Sultān, whom a devoted follower endeavoured to save at the cost of his own life, but Burke was soon discovered and put to death. Defeated near Sabrān by Irānčī, son of Djānī Beg, Shaibānī took refuge in Bukhārā, then in Samarqand. The Khān of the Manguts (Noghāis) Mūsā, promised him the sovereignty of Kīpčāk [q. v.], but did not fulfil his promise, saying that the people were opposed to it. Resuming the struggle, Shaibānī defeated the Qazaq Barandak, was defeated by Maḥmūd Sultān, son of Djānī Beg, and received the hospitality of the Emīr of Khwarizm, 'Abd al-Khālīk Firuz Shāh.

In the struggle between Aḥmad Mirzā Khān of Transoxiana and Maḥmūd Khān of Mongolia, Shaibānī declared for the former, but by his defection at the battle of Shīrr (893 = 1488) secured the victory of Maḥmūd, entered the latter's service, and received from him the town of Turkistān, again defeated Barandak, but failed in his siege of Urgendj (Kīhiwa). The people of Sabrān, having rebelled, replaced their governor by Maḥmūd, brother of Shaibānī, but handed him over to the Qazaqs, who laid siege to the town. Maḥmūd escaped, rejoined his brother who was besieging Yāsī, the governor of which, Mazīd Tarkhān, was made prisoner; restored to liberty, Mazīd made an alliance with the Qazaqs against Shaibānī, who had

previously offered him his services. Peace was concluded with Barandaq, who besieged Otrār, which was defended by Muḥammad Timūr, son of Maḥmūd Sultān; the treaty was sealed by a marriage.

Entering Transoxiana in 900 (1494/1495), Shaibānī four years later was master of almost the whole of this region as well as of Khorāsān; in 906 (1500), the conquest was completed. Baisanqor Mirzā, the Timūrid sovereign of Samarqand, having demanded his assistance against Bābur in 904/905 (1498/1499), he came, but withdrew on seeing the enemy in force and went to raise a large army of mercenaries with which he took Samarqand, abandoned successively by Bābur and by Sultān 'Alī, brother of Baisanqor, in 906. Zuhra Begum, mother of Sultān 'Alī, is said to have offered to hand over the town to Shaibānī if he would promise to marry her. The town was taken by assault. Khwādja Yahyā, who defended it, was executed with his sons and Sultān 'Alī is said to have met the same fate. According to another story, Sultān 'Alī was killed by Shaibānī. He is also said to have been accidentally killed.

Aided by the inhabitants, Bābur regained Samarqand by a bold stroke. All the country rose and the Ūzbeks were massacred. Shaibānī, who only retained Bukhārā and the neighbourhood, resumed the offensive some months later, seized Kara Kūl and Dabūst, inflicted a disastrous defeat on Bābur at Sar-i Pul [q.v.] and starved Samarqand into surrender. By the terms of the capitulation, Khānzāda Begum, sister of Bābur, was to marry the victor.

In 908 (1502/1503), Shaibānī quarrelled with his protector, Maḥmūd Sultān, laid waste the region of Shāhrukhiyā and Tashkent and left it before Bābur arrived. After a raid against Ūratipā, he gave his assistance to Sultān Aḥmad Tambal, who had rebelled against Maḥmūd Sultān, and recognised Shaibānī as suzerain of Farḡhāna. Not strong enough to engage in battle, the enemy army stole away. Shaibānī surprised it and scattered it near Akhsī. Bābur escaped, but Maḥmūd Sultān and his brother Aḥmad were made prisoners. They were well treated, but had to agree to the cession of Tashkent and Shāhrukhiyā, to the incorporation of 30,000 of their subjects in the army of Shaibānī and to several marriages with the family of the conqueror. Returning to his estates, Maḥmūd Sultān died soon after, poisoned, he said, by Shaibānī.

In the same year took place several expeditions in the south of Transoxiana, in which Khusraw Shāh of the Kīpčāk, had taken several towns. Balkh, which was governed by the Timūrid Badī' al-Zamān, was besieged. Aḥmad Tambal had entrenched himself in Andīdjan; obliged to surrender, he was executed with his brothers, but pillaging was forbidden. Khusraw Shāh fled without fighting, leaving Shīrīn Čahra to succumb in Ḥiṣār after a heroic resistance, and abandoned Kūndūz, which had supplies to last for twenty years.

In 911 (1505) Shaibānī set out to conquer Khwārizm, with an army of 30,000 former subjects of Maḥmūd Sultān, undisciplined and dangerous, whom he tried to set at variance by suppressing their chiefs. Besieged for ten months, Ūrgendī, valiantly defended by Čīn (or Husain) Šūfī, was only taken by treachery. Khusraw Shāh, arriving too late to help him, was massacred with his seven hundred men. Kitīk Bī was made governor of

Khwārizm, and the relatives of Shaibānī were given important posts.

Next year Shaibānī repelled the incursions of the Kazaqs. The Kīpčāk at that time had two rulers: one *de jure*, Barandaq, who died in exile in Samarqand, the other *de facto*, Kāsim Beg. The latter was so dreaded that the rumour of his arrival caused a panic in the Ūzbek army. At the end of 912 (spring of 1507), Shaibānī took the offensive against the kingdom of Herāt. Ḥusain Bāikarā summoned the help of his sons, who hurried up, except Muzaḥfar Mirzā, but he died soon afterwards. Coming to the help of the Timūrids, Bābur, indignant at their apathy and their rivalries, soon left them. Crossing the Oxus, Shaibānī entered Andīkhūd, which was surrendered by Shāh Maṇšūr Bakhshī, defeated Bābā Khākī and routed Dhu 'l-Nūn Arghūn, who was put to death. The Timūrids fled to Herāt, but left it in a few hours, leaving their harems and treasures in the palace of Ikhtiyār al-Dīn. Shaibānī entered Herāt on Muḥarram 11, 913 (May 24, 1507), and levied a contribution of 100,000 *taḡha*'s on it, but reassured the inhabitants by his humanity. Two or three weeks later, he entered the palace. Falling madly in love with Khānzāda Khānum, wife of Muzaḥfar Mirzā, he married her by force, without even observing the legal interval. Troops were sent in all directions against the Timūrids, who were tracked down and put to death; Badī' al-Zamān alone escaped, through the protection of Shāh Ismā'īl.

Two years were occupied in new expeditions against the Kazaqs, a demonstration against Kābul and the siege of Qandahār, held by Nāṣir Mirān-shāhī, which had to be abandoned. At this time Shaibānī massacred the Dughlāt princes, Sa'īd Čaghataī, Maḥmūd Khān, and his six sons, Muḥammad Ḥusain Mirzā, etc. (914 = 1508/1509). Then posing as the champion of the *Sunna*, he next year summoned Shāh Ismā'īl to return to orthodoxy. The Persian ruler paid no heed to his threats and protested against the aggressions of the Ūzbeks; Shaibānī then sent him a dervish's *kashkūl* (wooden bowl) and ironically invited him to follow the profession of his ancestors. Shāh Ismā'īl promised to go on a pilgrimage to Meshhed, where he would meet his adversary, and at once took the offensive. Shaibānī at this time was busy putting down a revolt at Firūzkūh; the Kirghiz had just inflicted a disastrous defeat on his son Muḥammad Timūr, and Shaibānī took refuge behind the walls of Marw. There he received an ironical letter from Shāh Ismā'īl on his way to meet his adversary, who had not kept his promise to come to attack him in his own country. The battle was fought on the banks of the Murghāb. Surrounded by 17,000 Persians, who had destroyed the bridges, the Ūzbeks, having lost half their fighting men, succumbed after a desperate struggle. Shaibānī left the field to die of his wounds in an abandoned farmhouse. It has been said that his skull, mounted in gold, became Shāh Ismā'īl's drinking cup, that the skin of his head, stuffed with straw, was sent to Bāyazīd II, and his right hand to Akā Rustam, prince of Māzandarān, who had always wanted his support. His tomb in the madrasa, which he had founded some months before in Samarqand, became a place of pilgrimage. The most probable date of his death is Shaibān 29, 915 (December 2, 1510). Cf. *Bābur Nāme*, transl. Beveridge, p. 350 note.

Shaibānī has rightly been reproached for his complete lack of scruples and for his cruelties; he only thought of extending his dominions and for him the end justified the means. But he was not the unlettered and boastful barbarian, extravagant and coarse, that Bābur shows us, giving lessons to theologians, correcting the works of artists and having his own bad verses recited before an audience (*Bābur Nāme*, ed. Beveridge, p. 206^b and transl. p. 325—326). He knew Persian and Arabic well and has left notable productions in Turki. His official poet, Mullā Binā'i, had ability. He helped and encouraged men of letters, artists and scholars, sought their society and founded several madrasas. The last of the founders of great empires to arise in Central Asia, Shaibānī brought Uzbek power to its apogee; his successor, Kūčkūndjī Khān, was able to restore it again and successfully resist the Persians and Bābur; but the death of Shaibānī, with the separation of the Shī'īs of Persia from the Sunnis of Transoxiana, marks a far-reaching change in the situation in Central Asia (cf. Vámbéry, *Gesch. Bochara's* ii. 64).

Shaibānī had married Mir Nigār Čaghatai, daughter of Yūnus Khān, Khānzāda Khānum, whom Shah Ismā'il sent back to her brother Bābur with great honour and Zuhra Begi, who handed over Sāmārkand to him. In addition to Muhammad Timūr, he had a son Khurram, who died young.

Bibliography: Mirkhwānd, *Rawdat al-Safā*, vii. 61, sqq.; Khwāndamīr, *Ḥabīb al-Siyar*, iii. 284 sqq.; Bāber, *Mémoires*, years 906 up to 915; This work, often biased, has a much needed complement in the *Tārikh-i Rashīdī* of Mirzā Muḥammad Haidar Dūghlāt (cf. especially p. 116—123, 158—169, 175—180, 190—211 and 221—237); Mrs. Beveridge also calls attention to the importance of the *Tawārikh-i Guzīda Nuṣrat Nāma* (British Museum, Or. 3222), a Turkish work dated 908 (1502/1503) of which the *Shaibānī Nāma* publ. by Bérézine, Kazan 1849, is only a synopsis. The epic of Muḥammad Šāliḥ Mirzā with the same title is a long panegyric of Shaibānī; it has been published with a German translation by Vámbéry, Vienna 1885, and re-edited by Melioransky and Samoilovitch, St. Petersburg 1908. The genealogical history of the Turks by Abu 'l-Ġhāzī, often transl. or edited from Bentinck 1726 and Desmaisons 1874, devotes its viiith book to him: *The Tadhkire-i Muḥim Khānī* of Moḥammad Yūsuf al-Munshī only contains the main events (*Mélanges asiatiques*, iv. 259). Véliaminoff-Zernoff, *Khāns de Kāsımoff*, p. 234—249; Erskine, *History of India* (cf. esp. 184—192, 203—206, 295—325); Howorth, *History of the Mongols*, ii. 691—713; Vámbéry, *Geschichte Bochara's*, ii. 35—65, 191—193, 250—268.

(L. BOUVAT)

SHAIKH. This word means one who bears the marks of old age, who is over fifty (cf. *Lisān*, iii. 509). It is applied to aged relatives; the Shaikh is the patriarch of the tribe or family.

In pre-Islāmic antiquity the title *Saiyid*, the chief of the tribe, was frequently given the epithet *Shaikh* meaning full maturity in years and therefore of mental powers. The moral influence of the Shaikhs over the Beduins was considerable and the term came to mean chiefs having a long career behind them, the glorious veterans.

In the history of the Muslim period, it has

frequently the sense of supreme chief, especially among the royal pretenders seeking to revive Arab traditions. Thus in the fourth (tenth) century the reformer Abū Yazīd calls himself *Shaikh al-Muminin*, i. e. Shaikh of the Believers (Dozy, *Bayān*, i. 225, transl. Fagnan, i. 315). Ibn Baṭṭūṭa (ii. 288—289) mentions a governor of a town with this title. It is also the title of the governor of Medīna *Shaikh al-Haram*. Ibn Khaldūn (*Mokaddima*, ii. 14 and 165 of the transl.) tells us that at the Hafṣid court of Tunis the first minister, regent of the empire, who appointed all the officials was called *Shaikh* of the Almohads. Muḥammad, the founder of the Wattāsīd dynasty took the title *al-Shaikh* as did Muḥammad al-Mahdī founder of the dynasty of Sa'dī Sherifs.

The title, at the present day, at once a term of polite address and a sign of importance, respected, venerated, which all who govern, administer or hold a share of public authority are happy to have, whether in the spiritual or political sphere, in the mystic as well as the social life, is borne with unconcealed pride. It is given to the head of a family, to the political head of the section of a tribe called *dwar* (in North Africa) and comprising a group of common origin. It is given to high dignitaries of religion, to teachers, scholars, to men of religion without distinction of age, to all persons respected for their office, their age or their morals. Thus we have the Shaikh al-Islām, the title of the Grand Mufti, the Pontiff of Islām, the Shaikh al-Dīn, Minister of Religion, Shaikh al-Madīna, Chief of police, Shaikh al-Balad, the mayor of a town. Al-Bukhārī and Muslim are the two Shaikhs par excellence (Ibn Khaldūn, *Mokaddima*, ii. 165); the official leader of the pilgrimage is called in Egypt *Shaikh al-Djamal* (Perron, *Précis de jurisprudence Musulmane*, ii. 641).

But it is particularly in the Muslim religious brotherhood or *ṭarīqa* [q. v.] that the title *Shaikh* has an importance of its own. (A. COUR)

SHAIKH AL-ISLĀM is one of the honorific titles which first appear in the second half of the fourth century A.H. While other honorific titles compounded with *Islām* (like *ʿIzz*, *Djālāl*, *Saif al-Islām*) were borne by persons exercising secular power (notably the viziers of the Fātimids, cf. van Berchem, *Z. D. P. V.*, xvi., p. 101), the title of *Shaikh al-Islām* has always been reserved for *ʿulamā* and mystics, like other titles of honour whose first part is *Shaikh* (e.g. *Shaikh al-Dīn*; the surname of *Shaikh al-Fatyā* is given by Ibn Khaldūn to the jurist Asad b. al-Furāt; cf. *Mokaddima*, transl. de Slane, i., p. lxxviii.). Of all these titles only that of *Shaikh al-Islām* has been extensively used. Thus in the fifth century the head of the Shāfi'ī theologians in Khurāsān, Ismā'il b. 'Abd al-Rahmān, was called by the Sunnis the *Shaikh al-Islām* par excellence (cf. also Djuwainī, *Djihan-Gusha*, ii. 23, where there is a reference to the *Shaikh al-Islāmī-i Khurāsān*), while at the same period the partisans of the mystics Abū Ismā'il al-Anṣārī (1006—1088) claimed this title for him (al-Subkī, *Ṭabaṭāʾat*, Cairo 1324, iii. 117; Djāmī, *Nafakhāt al-Uns*, ed. Lees, Calcutta, 1859, p. 33, 376). In the sixth century Fakhr al-Dīn Rāzī was called *Shaikh al-Islām*. Other examples in the centuries following are the mystic *Shaikh* Šafī al-Dīn of Ardabil (cf. Browne, *Persian Literature in Modern Times*, p. 33), and the theo-

logian al-Taftāzānī. In Syria and in Egypt, however, Shaiḫh al-Islām had become a title of honour (but not an official one) which could only be given to jurists and more particularly to those who by their *fatwā's* had attained a certain fame or the approval of a great body of jurists, especially at the beginning of the Mamlūk period. Thus in the polemics provoked by the teachings of Ibn Taimiyya, his adversaries refused him the title of Shaiḫh al-Islām, given him by his partisans (cf. the article IBN TAIMIYYA, where in the *Bibliography*, Muḥammad b. Abī Bakr al-Shāfi'i's treatise, *al-Radd al-wāfir 'ala man za'ama anna man sammā Ibn Taimiyya Shaiḫh al-Islām kāfir*, is quoted). The modernists of our day who are under the influence of Ibn Taimiyya and Ibn Kaiyim al-Djawiyya, represent these two jurists as religious leaders who really deserve the title Shaiḫh al-Islām (*al-Manār*, ix. 34, according to Goldziher, *Die Richtungen der islamischen Koranauslegung*, p. 339). Towards 700 (1300) Shaiḫh al-Islām had thus become a title which each *muftī* of some authority could claim for himself. Maḥmūd b. Sulaimān al-Kafawī (d. 1582) in his biographies of Ḥanafī jurists, *al-'Alām al-akhḫār min fuḳahā' madhhab al-Nu'mān al-Mukhtār* (Brockelmann, *G.A.L.*, ii. 83) says that among the *muftī's* those are called Shaiḫh al-Islām who settle differences and decide questions of general discipline (according to 'Alī Emīrī in *Ilmiye Sālnāmesi*, p. 306). We thus find that in Egypt and in Russia down to the present day, and in Turkey till the xviiith century (cf. Ewliyā Çelebi, *Siyāhatnāma*, passim) *muftī's* (*Shī'* is as well as Sunnis) of any importance may be given this title. In Persia the development of the title has been different; here the Shaiḫh al-Islām has become a judicial authority who presides in each important village over the ecclesiastical tribunal, composed of Mollas and Muḍṭahids. In the time of the Ṣafawids he was appointed by the Ṣadr al-Ṣudūr (cf. Tavernier, *Les six voyages*, Paris 1676, i. 598, who calls him Scheik el-Selom and Curzon, *Persia*, London 1892, i. 452, 454).

But the title gained most glory after it had become applied more particularly to the *Muftī* of Constantinople, whose office in the Empire of the Ottoman Sultāns in time acquired a religious and political importance without parallel in other Muslim countries. In the early centuries of the Ottoman Empire the influence of the 'ulamā' had been greatly surpassed by that of the mystic shaiḫhs and after the reconstitution of the empire by Muḥammad I, we see a furious struggle between the new Sunni orthodox influences and mystic-*Shī'a* influences (e. g. the incident of Badr al-Dīn Maḥmūd), a struggle that ended in the victory of orthodoxy under Selīm I. Historical pragmatic tradition seems to have ignored this development and must be accepted with a good deal of reserve, while the older sources give but little information. Thus the collection of biographies *al-Shaḫā'ik al-Nu'māniya* (written under Sulaimān I) is compiled from quite the orthodox point of view, but it is quite evident from it that the majority of the older jurists in Ottoman countries had studied in Egypt or Persia or had Arab or Persian teachers; some of the first *muftī's* of Constantinople were themselves foreigners like Fakhr al-Dīn al-'Adjamī (*muftī* from 1430—1460) and 'Alā' al-Dīn al-'Arabī. Later tradition makes Shaiḫh Ede Bālī, father-in-law of 'Othmān, already the

the first *muftī* of the Ottoman lands ('*Ilmiye Sālnāmesi*, p. 315). They also claim that a *Muftī* al-Anām was appointed as early as under Murād II, with authority over all the other *muftī's* (*Sijill-i 'Othmānī*, i. 6), and that Muḥammad II after the taking of Constantinople gave the official title of Shaiḫh al-Islām to the *muftī* of the new capital, Khidr Beg Celebi, who was at the same time given authority over the two *kāḍī* 'asker (d'Ohssoon, von Hammer), but there is nothing to show that the *muftī* was already so important a personage at this time. According to the *Shaḫā'ik*, this Khidr Beg was only *kāḍī* of Stambul, while Fakhr al-Dīn al-'Adjamī was the *muftī* (*op. cit.*, p. 111, 81). If we later find that the biographer of the Shaiḫh al-Islām in the *Dawḥat al-mashā'ikh* (see *Bibl.*), begins his biographies with the *muftī* Muḥammad Shams al-Dīn Fenārī (d. 1430), this seems to be purely conventional. It is only under Selīm I that the great influence of the *Muftī* of Constantinople begins to manifest itself during the 24 years in which the office was held by the famous Zembilli 'Alī Djemālī Efendi [q. v.]. In the time of the latter (he was *Muftī* from 1501 to 1525), the two *kāḍī* 'asker still had precedence over him because they sat in the Imperial *Dīwān*, while the *Muftī* did not (*Shaḫā'ik*, p. 305), but on the other hand we are told that the same Djemālī Efendi refused to accept from Sultān Sulaimān I the two *kāḍī*-*askerliks* combined which were offered him (*Shaḫā'ik*, p. 307). It is only in the reign of Sulaimān that the *Muftī* of Constantinople seems to have acquired undisputed authority over all the 'ulamā' of the empire, including all grades of judges. According to d'Ohssoon and von Hammer, this *muftī* was Ćiwi Zāde Muḥyī al-Dīn Efendi [q. v.]; it should be noted, however, that the latter was also the first *Muftī* who was relieved of his office by the Sultān (in 1541).

The growth in importance of the *Muftī* of Constantinople was in any case spontaneous and not caused by the sovereign will of the Sultāns, expressed by the conferring on his part of the title of Shaiḫh al-Islām, which at this period was borne by many *muftī's* (see below). To explain this development, we may investigate in several directions. There is the tempting hypothesis of M. Gaudefroy-Demombynes who sees a striking analogy between the position of *Muftī* of Constantinople and that of the 'Abbāsīd caliph at the court of the Mamlūks, before the conquest of Egypt by the Turks (*La Syrie*, Paris 1923, p. xxii.). On the other hand, the organisation of the 'ulamā' of the Ottoman empire under a religious chief may be in some way influenced by that of the Christian hierarchy in the empire under the Oecumenical patriarch. Lastly we may perhaps see in the Shaiḫh al-Islām a survival of the ancient mystical religious tradition in the Ottoman state, a tradition which demanded alongside of the secular power, a religious authority having no judicial powers but representing, so to speak the religious conscience of the people.

This last hypothesis would explain the tenacity with which the Shaiḫh al-Islām maintained his position through the centuries that followed in spite of the power of the Sultān to dismiss the holder of the title, a power of which they make frequent use. 'Othmān II (1618—1622) went so far as to deprive the *muftī* of all his

prerogatives — on account of his refusal to issue a *fatwā* legalising the fratricide — but under his successor all these prerogatives were restored. Murād IV had the *muftī* Akhī Zāde Husain (1632) put to death, without the dignity of the office itself being compromised. Sixteen years later it was the *muftī* 'Abd al-Rahīm Efendi who took the initiative in the dethronement and execution of Ibrāhīm I, although this cost him his office. The last *muftī* who was able to retain his position for a long series of years was Abū 'l-Su'ūd (1545—1574). After this time they succeeded one another at intervals averaging three to four years. Since the end of the xvth century it has been possible for the same person to become *muftī* several times. The frequent change of *muftī*'s became more and more connected with the political intrigues of the grand viziers, of the imperial harem, of the Janissaries, intrigues by which the *muftī*'s themselves were sometimes gravely compromised, e.g. the famous Kara Çelebi Zāde [q. v.]; the majority, however, were men of integrity, although their political independence became for the most part quite illusory.

Since the beginning of the xvth century, the *muftī*'s have all been natives of Ottoman countries and, like all 'ulamā', have belonged to Muslim families; in this they have been distinguished from the high officers of state and of the army who were frequently children of Christian parents, recruited by the *dewshirme*. Later the *muftī*'s sometimes belonged to different generations of one family. They usually acquired the *mashyakhāt-i islāmīye* (the usual Turkish pronunciation, however, is *mashikhāt*) after having gone through the higher offices of the judicature; the majority of the *muftī*'s therefore had been *kādī* 'asker before their appointment. This custom gave rise to an esprit de corps among the 'ulamā' and their chief which often comes out in history. Unlike the usage which gradually became established for the high judicial offices, the title of *Shaiikh al-Islām* was not given to an individual without his actually accepting the office (there are only two exceptions).

The eminence of the *Shaiikh al-Islām*'s position in the state found its expression in the ceremonial. As, according to the *Kānūn* on ceremonial, he was regarded as the Abū Ḥanīfa of his time, only the Grand Vizier was higher in rank than he. In the xviii century the *muftī* was obliged to pay visits only to the grand vizier. The formalities of his visits to the latter and to the Sultān were minutely regulated. The duties and prerogatives of the *muftī* on the occasion of religious ceremonies, the burial of the Sultān, the taking of the oath to the new sovereign (*ba'at*) and the solemn installation of the latter were equally defined. In addition to *Shaiikh al-Islām* he had several more titles, the oldest of which *Muftī al-Anām* was the most used; others were *'Alam al-'Ulamā'*, *Baḥr 'Ulūm Shattā', Asās or Afḍal al-Fiḍalā', Ṣadr al-Ṣudūr, Mesned-Neshin-i Fetwā*. His dress was always characterised by simplicity; the early *muftī* Molla Khosraw (q. v., d. 1480) wore a little turban over the *tādī* of the Imām A'zam (*Shakā'ik*, p. 137). In later times he wore a white *kaftān*, trimmed with fur and a turban with a band of gold brocade (there are many pictures of the dress, e.g. in Choiseul Gouffier, *Voyage pittoresque de la Grèce*, ii. 49).

The political function of the *Shaiikh al-Islām* was formerly confined to his power of issuing *fatwā*'s. In supplying the demand for *fatwā*'s to private individuals, he was soon replaced by the *Fetwā Emīnī* (see below) but enormous importance was attached to *fatwā*'s relating to questions of policy and public discipline. To the first category belong for example the *fatwā* of 'Alī Djemālī on the war against Egypt (1516) and that of Abū 'l-Su'ūd on the war against Venice (1570). Under 'Othmān II the *muftī* Es'ad Efendi declined to authorise by *fatwā* the fratricide of the Ottoman princes. *Fetwā*'s regarding public discipline were for example, that of Abū 'l-Su'ūd authorising the drinking of coffee (see KAHWA), that of 'Abd Allāh Efendi on the establishing of a printing-press (in 1727, cf. Babinger, *Stambuler Buchwesen*, Leipzig 1919, p. 9) and that of Es'ad Efendi authorising the Nizām-i Djedid of Selim III [q. v.]. By their *fatwā*'s the *muftī*'s also collaborated in imperial legislation by legalising by their *fatwā*'s the different *Kānūnnāme*'s (e.g. the *Kānūn* of Sulaimān I all had the approbation of Abū 'l-Su'ūd, cf. *Milli tetebbü'lar medjmu'ası*, 1331, i., Nos. 1 and 2). Besides, it was the custom to consult the *Shaiikh al-Islām* on all political matters of any importance. In the majority of cases the *muftī*'s thus exercised a beneficial influence on public affairs, although by their personal interference they had often to suffer from the Sultān's arbitrary measures. The decline of the Ottoman empire has sometimes been attributed to the reactionary spirit of the institution of the *Shaiikh al-Islām*; it should be noted, however, that in many cases the *muftī*'s have shown themselves less reactionary than the majority of the clergy and that through their intervention they were able to prevent fanatical and arbitrary acts (e.g. Abū 'l-Su'ūd's opposition to the forced conversion of all the Christians). Although in the Ottoman empire of the xixth and xxth centuries the *Shaiikh al-Islām* no longer played this important political role, appeal was occasionally made to the traditional authority of this institution when policy required it, as on the occasion of the deposition of 'Abd al-Hamīd in 1909, the proclamation of the *djihad* in 1914 and the *fatwā* against the nationalists of Angora in 1920. The *fatwā*'s of 1914 are not only concerned with the policy of the Ottoman empire but are addressed to the whole Muslim world. This fact reveals a new, and more general, pan-islamic conception of the function of the Ottoman *Shaiikh al-Islām*. It is a conception which seems to have developed in Turkey in the course of the xixth century, probably in connection with new theories of the caliphate. And just as is the case with these latter theories, the idea of the central importance of the *Shaiikh al-Islām* for all the Muslim world is first found in Christian European authors. The xvth century travellers (e.g. Ricaut) already compare him with the Pope. Volney (*Voyage en Syrie*, Paris 1789/1790, ii. 371) regards him as the representative of the spiritual power of the Caliph to the whole Muslim world. Legally speaking, it is true, the *fatwā* of a *Muftī* is addressed to every Muslim who wishes to follow it, but it was only in 1914 that the attempt was made to take advantage of the universal spiritual authority, which was attributed at the time by Christians as well as by Muslims to the *Shaiikh al-Islām* in Constantinople (cf. Snouck Hurgronje, *Verspreide Geschriften*, iii. 272).

As head of the hierarchy of the 'ulamā', the Mufti had acquired the right of recommending to the sultān persons, who should be nominated to the six higher grades of the judiciary. He himself only very rarely acted as a judge.

When towards the end of the xviiith century the administration of the Ottoman empire began to be modernised, there was gradually formed an administrative department with the Shaikh al-Islām at its head. By this time there were already several personages who assisted the Mufti in his many duties, such as the *keṭkhoda* or *kjāya* who could represent the mufti, the *tel-khiṣḍji*, who was his agent in the government, the *mektūbdji* or general secretary and the *fetwā emāni* whose duty it was to prepare and give out the fetwās asked for by the public. All these functionaries had their own offices. In the period of the *tanẓimāt*, this departmental organisation was consolidated. The Shaikh al-Islām was given as his official residence the former residence of the Agha of Janissaries; it was in this office henceforth called Shaikh al-Islām Kapısı or Bāb-i Fetwā (cf. the article Constantinople), that the offices of his department were housed till its abolition. The department dealt with the administration and management of all institutions having a religious basis, except the administration of the *evkāf*. The Shaikh al-Islām thus became the colleague of the heads of the other ministerial departments, which were created in the course of the xixth century. He became a member of the Ministry and as such his tenure of office was limited by the life of the cabinet of which he was a member. He retained his precedence over the other ministers; this priority was laid down in Art. 27 of the Constitution of Midhat Pasha of 1876, in which it is enacted that the Sultān is to choose the Grand Vizier and Shaikh al-Islām directly while the other ministers are appointed by the Grand Vizier. As early as the xviiith century the Grand Vizier and the Shaikh al-Islām were the only officials who received their investiture in the presence of the Sultān.

In proportion as the secularisation of the institutions of the Ottoman empire advanced, the influence of the Shaikh al-Islām in the State declined. The institution in 1839 of a Council of State (*Shūrā-yī Dewlet*) deprived him of much of his influence on domestic politics; then the creation in 1879 of new civil and penal tribunals under a new Minister of Justice (*Adliye Nezāreti*) took away another large share of his influence. A series of legislative measures was passed which defined the competence of jurisdiction according to the *sharī'a* and *niẓāmiya* tribunals. This development filled a prominent part in the religious reforms of the Young Turks (cf. e.g. the poem *Meshikhat* of Zia Gökalp, p. 62 of *Aus der religiösen Reformbewegung in der Türkei*, by Dr. A. Fischer, Leipzig, 1922) and was brought to its logical conclusion, when in 1916 the Young Turkish government removed the administration of all the *maḥākim-i shar'iye* to the Ministry of Justice and that of the *madrasas* to the Ministry of Education. This step was justified by appeals to modern public law. The declared object was to avoid the mistakes made at the time of the *tanẓimāt* and to make the *meshikhat-i islāmiye* a department for purely religious matters (cf. e.g. the *Ṭanin* of Oct. 31 and Nov. 2, 1916). It was in the same spirit that

an office was established in 1917 at the Shaikh al-Islāmāt, the *dār al-ḥikma al-islāmiya*, of a propagandist character. But after the armistice of Mudros (Nov. 2, 1918) the Young Turkish reforms were revoked by the new government. But by this time, however, the life of the Shaikh al-Islāmāt was nearing its end, for in November 1922 after the victory of Turkish nationalisation all that remained in Constantinople of the old government institutions of the Ottoman empire was abolished. Their functions were taken over by the officers of the new government at Angora. This government no longer included the Shaikh al-Islāmāt. At the constitution of the new government, it is true, a *shar'iya wekāleti* had been instituted but the anti-clerical spirit of the Grand National Assembly did not allow this imitation of the Shaikh al-Islāmlik to survive; it was replaced by a modest *diyānet işleri re'isliyi*, by a law passed on March 3, 1924, the day on which the Ottoman caliphate was abolished.

The fullest description of the office of Shaikh al-Islām towards the end of his existence is found in the *İlmiye Sālnāmesi* published in 1334 (1916) by the Shaikh al-Islāmāt which was then under the vigorous direction of Muṣṭafā Khairi Efendi. The principal departments which composed it, were the *fetwā-khāne*, 'the *medjlis-i tedkikat-i shar'iye*, a kind of court of cassation for the *maḥākim-i shar'iye*, an office for the administration of the medreses (*ders wekāleti we-medjlis-i maṣālih-i talebiye*), an office which superintended the printing of Ku'rāns and legal works (*tedkik-i maṣāliḥ we-mi'ellesfāt-i shar'iye medjlisi*), an office dealing with the mystical orders (*medjlis-i meshā'ikh*) and the administration of the *bait al-māl* or *emwāl-i aytām*. There were also administrative departments dealing with the archives, correspondence and accounts. As in other government offices, there was an under-secretary of state (*muṣteshār*). The Shaikh al-Islām Kapısı also contained the great *shar'iya* tribunals of the *kāḍi 'asker*, the *ḥassām* and the *İstambul kādisi*. Finally a large number of committees (*endjümen*) whose advice was asked on different matters, including a committee for the nomination of judges had their homes there. For further details see the *İlmiye Sālnāmesi*.

Bibliography: The biographies of 108 Shaikh al-Islām are given in *Dawḥat al-Mashā'ikh* by Rifat Efendi, lithogr. at Stambul n.d.; the last biography is that of 'Ömer Ḥusām al-Din Efendi (d. 1288/1871). A *dhail* has been written by 'Ali Emiri Efendi. Following these two sources the *İlmiye Sālnāmesi*, p. 322—641 gives the biographies of 124 Shaikh al-Islām down to Muṣṭafā Khairi Efendi (held office till Nov. 1916), edited by the historians Aḥmad Refik and 'Ali Emiri Efendi. The latter contributed to the same *Sālnāme*, p. 304—320, a *Mashyakhat-i Islāmiye ta'rikhçesi*. At Vienna there is a manuscript of the *Dawḥat al-Mashā'ikh* of Mustakim Zade (Flügel, ii., p. 409 sqq.). Many western writers on Turkey have notices in their books of the Shaikh al-Islāmāt: Ricaut, *The history of the present state of the Ottoman empire*,^o London 1686, p. 200 sqq.; D'Ohsson, *Tableau Général de l'Empire Othoman*, ii., Paris 1790, p. 256 sqq.; J. von Hammer, *Des osmanischen Reiches Staatsverfassung*, Vienna 1815 ii. 373 sqq.; other descriptions: Dr. Stephan Kekule, *Über Titel*,

Amter, Rangstufen und Anreden in der offiziellen osmanischen Sprache, Halle s/l p., 1892, p. 16 sqq.; G. Young, *Corps de droit ottoman*, Oxford 1905, i. 285 sqq.; A. H. Lybyer, *The Government of the Ottoman Empire in the Time of Suleiman the Magnificent*, Cambridge 1913, p. 207 sqq. (J. H. KRAMERS)

SHAIKH 'ADĪ. [See 'ADĪ].

SHAIKH SA'ID, a seaport in South Arabia on the strait of Bāb al-Mandab, 2 miles from the island of Perim. It lies on a cape whose cliffs 850 feet high dominate this island. Two volcanic hills which lie on a peninsula 6 miles long by 4½ broad here form the extreme south-west corner of Arabia. Between the latter and Perim runs the so-called Little Strait, called Bāb al-Manhali or Bāb Iskandar by the Arabs, because Alexander is said to have built a town here; there are actually ruins south of the cape. A. Sprenger and E. Glaser have — probably rightly — identified Shaikh Sa'id with the ancient Ocelis or Acila mentioned by Pliny, *Nat. Hist.*, vi. 23, § 104, 28, § 152, Ptolemy, i. 7, and the *Periplus Maris Erythraei*, § 25. It took about 20 days to reach here from Berenice. The name Ocelis, as Glaser suggests, probably conceals some name like Ukail. The harbour originally belonged to the kingdom of Katabān [q. v.], then passed to the Gebanites and finally to the Himyarites. In the ivth (xth) century it belonged to the Banū Maǧǧid b. Haidān b. 'Amr b. al-Hāf b. Kudā'a. The modern name of the place comes from the tomb of Shaikh Sa'id, who is buried on the north side of the cape. But the harbour is now of no practical significance. It is a so-called monsoon harbour, which may become very dangerous for shipping at the turn of the monsoon.

The unusually favourable strategic situation of the place prompted the French Admiral Mahé de Labourdonnais as early as 1734 to acquire the cape from a native Sultān. Louis XVI is even said to have kept an agent there. Shaikh Sa'id continued to be a French sphere of interest. No less a person than Napoleon Bonaparte wished to garrison the place, a proposal also suggested to Mehemed 'Alī in 1828 by the French government. But, when in 1838 he was actually preparing to put the plan into force, he encountered the resolute opposition of England who occupied 'Aden in 1839 and Perim in 1857. Not long afterwards the French again became actively interested in the place. After long negotiations a Marseilles firm bought the territory for 50,000 francs from the native sultān to whom it belonged. It was not till 1871 that this purchase was confirmed to the Société de Bab el-Mandeb, founded by Rabaud-Bazin. During the Franco-German War, the port was used as a coaling station by the French. But after the war French interest in this harbour declined and in 1873 an agreement was come to between England and Turkey in which the latter recognised England's sovereignty over Cape Bāb al-Mandab. In 1884 Shaikh Sa'id was occupied by the Turks. The French had to reconcile themselves to this, especially as the Turks had planted fortifications in the Cape. It was not till 1896 that the French Chamber again began to take an interest in the harbour. France is even said to have declared the territory of Shaikh Sa'id to be a French Colony. Later repeated attempts to enforce France's claims in a practical fashion

have always come to nought. Turkey continued to occupy the place and in time made it a well defended fortress which, although bombarded by the English in 1914, was strongly supported next year by the troops of the Imām Yaḥyā Ḥamid al-Dīn and was even able to bombard Perim and close the straits for a time. The military collapse of Turkey in the world-war resulted in the restoration of the place to the native population. Like Mokhā, Shaikh Sa'id is an important coast-town in the independent imāmate of the Zaidī lord of Yemen, which is of all the more value as coal and iron are found there.

SHAIKHĪ, followers of Aḥmad Aḥsā'ī [q. v.], dissenting Shī'a theologians of Persia. Their teachers are the pupils and successors of the founder: Saiyid Kāẓim of Resht, teacher of Ḥādījī Muḥammad Karīm Khān of Kirmān and Mollā Muḥammad Māmakānī, a theologian who was one of the commission which tried and condemned the Bāb at Tabriz towards the end of 1847. Their doctrines definitely prepared the way for those of the Bāb. They are opposed to those of the Akhbārī, who follow pure tradition; they protest against the immoderate number of traditions and the complete absence of criticism with which they are adopted; from this particular point of view they approach the Sunnī way of thinking.

They give new explanations of the principles of religion and of ḥadīth. The twelve Imāms are the effective cause of creation, being the scene of the manifestation of the divine will, the interpreters of God's desire. If they had not existed, God would not have created anything; they are therefore the ultimate cause of creation. All the acts of the divinity are produced by them but they have no power in or of themselves; they are only organs of transmission. Hence we have the charge of *tafwīd* (delegation of God's powers) wrongly brought against the Shaikhī by the Shī'a theologians. God being incomprehensible and escaping the thought of every created being, He can only be understood through the intermediary of the Imāms, who are in reality hypostases of the supreme being; to sin against them is to sin against God. The *lawḥ mahfūz* is the heart of the Imām, which embraces all the heavens and all the worlds. The Imāms are the first of created beings and have preceded them all.

In eschatology the *Shaiḫī* have been charged with denying the resurrection of the material body. They reply that man possesses two bodies; one is formed by temporal elements: "like a robe which a man sometimes puts on and sometimes takes off"; it is this which dissolves in the grave; the other which subsists when the first has crumbled to dust, is a subtle body which belongs to the invisible world (*ḡism huwarḡiliyāʾī*); it is this which is resurrected on this earth and then goes into paradise or hell.

Their thought became later more definite for they admitted two *ḡasad* and two *ḡism* (these Arabic words both mean "body"); the first *ḡasad* is composed of the four visible elements, it is it which is perceptible in this world below and does not share in the future life; the second *ḡasad* persists and reappears in the other life; the first *ḡism* is the body which the spirit reclothes in *barsakh* (purgatory); from the moment of death till the first sound of the trumpet, the second *ḡism* subsists pure: it is in it that the spirit becomes incarnate which directs itself towards the second *ḡasad*; it is it and the latter which come out of the grave entirely purified.

Knowledge of God. For God there exist two kinds of knowledge; one is essential knowledge and has no connection with contingencies: the other is a new knowledge created (*muhḡadh*); this knowledge is the actual being of the known and the Imāms are the gates (*bāb*) which give access to this knowledge. The world is eternal in time and new in essence; for accidents without substances, forms without any substratum cannot come into existence. Accidents are transitory novelties, sometimes they exist, sometimes they disappear; they were nothing and they return to nothing. Substance on the contrary is not a transitory novelty; in consequence matter is a novelty in essence; it is eternal in the future, but not in the past; otherwise the future life would have an end; paradise and hell would disappear. Paradise is the love of the people of the House, the members of the family of the Prophet, the Imāms. Paradise and hell are created by the acts of men.

The material bodies of the Imāms after their death fall into decay in the grave; while it is true that these bodies are subtle they show themselves under the human form, created of the four elements; as soon as their human body is no longer useful to men, they return it whence they have taken it and each of its molecules returns to its source: while the *Shīʿīs* believe that the bodies of the Imāms are not subject to the injuries of time.

It is not possible for known things to be eternal; they must therefore then be new and contingent; they are different to the essence of God but knowledge existed before the objects of knowledge. There are two kinds of knowledge; essential knowledge and newly created knowledge, the latter is of two kinds, that of possibility *ʿilm imkānī* and that of beings *ʿilm akwānī*; the first is used of beings before their existence, and the second once they exist. This second acquired knowledge is not an attribute of God, it is present before Him.

They attribute particular importance to the order given by God (*amr*) which is the first class of created things and precedes the creation in the strict sense of the word (*ḡhalḡ*); the first constitutes a fixed world without change: it is through

it that time exists and in consequence the latter can exert no influence on it. The knowledge of other creatures is preceded by ignorance, while this is not the case with God; this knowledge is new in the creature, it cannot be so for God. It is by the reflection of phenomena that man gains the apprehension of the world which surrounds him. This reflection does not exist for God who knows beings by their essence. Just as beings are manifold and varied as regards their existence, so there exists in God's knowledge of beings plurality and multiplicity.

They condemn *Ṣūfism* and its pantheism with such sayings as: "It is impossible for the essence of God to be the being of multiple things". They explain the miracles of the Prophet (ascension by night, the split moon) not in a material sense but figuratively and with rationalistic interpretation.

At the beginning of the reign of Nāṣir al-Dīn Shāh, troubles broke out in Tabriz in 1266 (1850) because a *Shaiḫī* was forbidden to enter the public baths as a result of a decision of the *Mudjtahid*. The governor succeeded in quieting the disturbance and made peace between the two parties. Later persecutions were several times directed against the members of the sect.

(CL. HUART)

SHAIKHI (pronounced: *Sheikhi*, in two syllables, *nisba* from *Shaiḡh*, q.v.), nom de plume (*takhalluṣ* or *makhlaṣ*) of a considerable number of Turkish poets. V. Hammer mentions sixteen of them in his "*Geschichte der osmanischen Dichtkunst*". (See the index s. v. Scheichi). The most important by far was *Shaiḡhī Ćelebi*, alias *Mevlānā* (*Mawlānā*) Yūsuf Sinān Germiānī, a Turkish "Romantic" poet. Born at Kütahia (Cotyaecum in Phrygia), the capital of the Germiān, he flourished at the beginning of the 15th century. He is sometimes called *shaiḡh al-shuʿarā*, "The *sheikhs* of the poets".

It is difficult to form an exact idea of his life. Information is not lacking either from the "*tezkere-nūwis*" (the authors of poetical biographies) or from the historians, but none of them was contemporary with *Shaiḡhī*, and their information is vague and they are sometimes difficult to reconcile with one another. V. Hammer and Gibb — the latter without even citing his sources — have combined the different data so as to obtain a continuous narrative, but one that does not give a great guarantee of truth.

Here we give a résumé of the biography of the poet according to Sehi, an author less often cited than Laṭīfi but having, nevertheless, the advantage of being of an earlier date (he wrote between 1520 and 1548): Yūsuf Germiānī went to Persia where he studied under Saiyid Sharif Djurdjānī [q. v.], showing a marked preference for medicine, whence the name of Hekīm (doctor) Sinān by which he was equally well known. The Emīr Süleimān (the son of Bāyazid I, who ruled at Adrianople, then at Brussa from 1402 to 1410 and who was the patron of letters and of art) having noticed his poetical ability, *Shaiḡhī* entered into favour with

the Ottoman sovereigns and later Murād II wished to make him a vizier. Some envious individuals persuaded the Sultān to put Shaiḵhi's talent to the proof by imposing upon him a very difficult task, the translation of the "Five" Poems (*Khamṣa*, q. v.) of the Persian Nizāmī. Shaiḵhi having chosen the poem called Khusrāw u-Shīrīn began by presenting the first 1000 verses of it to Murād who rewarded him generously. On his return into his own country, the poet was assailed and robbed by brigands whom his enemies had placed in wait for him. This was the occasion of his writing a well-known satire called *Khār-nāme*, "Laus asini". He was buried at Germiān (Kütahia).

According to *Taṣhköprüzāde*, Shaiḵhi had been initiated into Ṣūfism by Hādjdjī Bairām, the founder of the Bairāmī order, who was born and buried at Angora, in 833 (1429—1430). Shaiḵhi was actually at Angora, to which he was called to the court of Sultān Mehmed I (according to Rieu, wrongly Mehmed II) in 818 (1415—1416), (according to the *Taḍj al-tewāriḵ* of Sa'd al-Dīn) in his capacity as doctor to the prince of the Germiān, who had been seized with a lethargy. The poet-doctor is said to have declared that an entertaining romance would suffice to dispel the melancholia. The following verse taken from a *nā't-i sharif* of Shaiḵhi, which is quoted in the *Fā'ik Reshād* (p. 86) seems to confirm this detail:

lafe-ñ müferrîhi maraz-ı ruh-a dîr shefâ.

"The entertaining word is the remedy for the sickness of the soul".

Shaiḵhi is said to have been rewarded for his medical services by the title of physician in ordinary to the Sultān (*ser ṭabīb* or *heḵīm-baṣhî*) which he is said to have been the first to hold officially. The author of the *Sedjill-i 'Oṭhmāni* in recounting this anecdote calls our poet Sināi instead of Sinān (iii. 113 and iv. 721) and also gives the date of his death as 829 (1425—1426), which would make him die at a very early age, if it is true that he was born under Bāyazid I (whose reign began in 1389). An anecdote which almost all the authors repeat and which resembles a folk-lore tale, tells how a patient with solemn countenance one day doubled the sum which he was giving to "doctor", Shaiḵhi in order to enable him to buy something to cure his own eyes, which were affected.

The sojourn and medical practice of Shaiḵhi at the Ottoman court seem very different to reconcile with the continuous stay which he is said to have made at Kütahia according to *Taṣhköprüzāde*. One is at times given the impression that two persons have been confused. From the point of view of the history which is so little known of the local Turkish dynasties, which the Ottoman dynasty, particularly jealous of its own greatness, had absorbed and effaced, it would have been interesting to have had more precise ideas on the relations of Shaiḵhi with the Germiānoghlu. [q. v.] In the preface to his interminable *Shāhnāme*, Firdawsī Tawil, who, having lived during the time of Bāyazid II (1481—1512), is anterior to Sehi himself, tells us that Shaiḵhi had begun Khusrāw u-Shīrīn not for the Sultān Murād II, but for a prince of the house of Germiān called Muṣṭafā. The historian 'Alī tells (iv/i. 191) that the bucolic sovereign (*hākim-i rūstāyi*) of the Germiān, unable to appreciate the beauty of the "*ḡaṣida*" of Shaiḵhi wearied quickly of his company. One day he greatly upset

the poet by showing, by his generous gifts, his preference for the following verses which an "*nuzan*" (popular bard) had recited to him.

*Benim döwletli Sultānım, 'aḵibātın (sic!)
ḵhayır olsun,
Yedüyün balla ḵaimaḵ, yürüdüyün çayır olsun.*

"Fortunate Lord that thy end may be happy, may you have only honey and cream for fare and may you tread on your way, only on the meadows".

The necessities of the metre (*hezeḍj*) made it necessary to read '*aḵibātın* instead of the correct '*āḵibetīn* and *ḵhayır* (metrical value: √-) instead of *ḵhair* (-√). The pronunciation *ḵhayır* was in conformity with the vulgar Turkish usage but indescribably shocked men of letters.

The works of Shaiḵhi: the most important is the poem already mentioned, Khusrāw u-Shīrīn. All the authors say that it was left incomplete and that it was Shaiḵh-zāde (Shaiḵh oghlu) Djemālī who finished it. In reality the addition consists of 111 verses, in which the subject dealt with in very vague terms is the death of Shaiḵhi and in which we find a new eulogy of Murād II. The first verse of the addition is: *gelün ey bilü djamīn nüşh edenler; bu ḵikmet sözlerini gush edenler*.

According to the MS. Anc. f. t. 322 in the Bibliothèque Nationale of Paris, Djemālī had as his prenomén Bāyazid ben Muṣṭafā (fol. 273). The MS. 328 follows this hint with the words *Aḵmed al-tarḍjumāni al-Aḵshahri*. It is known that the poem attributed to Ferhād, the lover of Shīrīn, the bas-reliefs of Bisütün (cf. Hammer: *Hist.* ii. 169). The work of Shaiḵhi is not the first Turkish translation of the poem. See a translation into Kıpçak Turkish of 1383, mentioned in J. Deny's *Gram. de la langue turque*, Paris 1920, p. xx.—xxi.

The satire called *Khār-nāme* was due, according to certain authors, to reasons other than those mentioned by Sehi. The district where Shaiḵhi is said to have been the victim of brigands was called *Doḡuzlu*.

Shaiḵhi also composed *ghazels*, as well as *nā't* and *terdjī-i bend*, and a certain number of *ḡaṣida* of which a few were dedicated to the house of Germiān, others to the Emīr Süleimān, which were discussed above. It seems difficult to admit that there is here, as in the case of the poet Aḵmedī — see Gibb, i., p. 265 — a confusion with the prince Süleimān of the family of Germiān the date of death († 790 A.H.) of the latter rendering the same hypothesis improbable.

Like his predecessor and compatriot (?) Aḵmedī [q. v.] but with greater authority, Shaiḵhi naturalized in Turkey the methnewī metre (which is that of Khusrāw u-Shīrīn). He was, moreover, greatly influenced by mysticism which pervaded the methnewī par excellence, that of Mawlānā Djālāl al-Dīn Rūmī. Shaiḵhi was considered the greatest of the Turkish poets of the epoch before Aḵmed Pasha, who accustomed the Turks to a language more refined. Too learned for the taste of the prince of Germiān, Shaiḵhi was, however, criticised by Latīf for his "oghuzāne" style, this ethnic here meaning "vulgar". Certain Turkish critics, even modern ones, give vent again to these complaints, reproaching Shaiḵhi with the use of Turkish "archaisms". It is certain that in the eyes of Turks to-day these peculiarities are only an

additional merit, and that the relative simplicity of his poetry in which words truly Turkish are not systematically banned, is appreciated more and more.

Of other Turkish personalities of this name, there is to be mentioned the author of a supplement (*Dheil*, 1780 bibliographies up to the reign of Ahmed III) to the *Ḥadā'ik al-Ḥaḳā'ik* by 'Atā'i, who composed a continuation of Tāshköprüzāde's work (cf. the *Bibliography*). Another Shaikhi ('Abd al-Qādir, † 1002) was Shaikh al-Islām in the reign of Murād III.

Bibliography: Oriental authors: the different *Tadhkirat al-shu'arā* (*teskeret-üş-shu'arā*) are easy to consult, being arranged in the alphabetical order of the names of the authors. (See those of 'Ashik Çelebi, Hinnāzāde or Kīnāzāde, especially). Here are, however, a few more precise references for the printed *tesākir*: Sehi, *Hesht Bihisht*, edited by Mehemed Shükri (Library of Amid) 1325 (1909), p. 52 sqq.; Latifi, *Teskere-i-Latifi*, ed. Ahmed Djewdet (Library of the İkdām), Constantinople 1314, p. 215 sqq.; do. in German: *Biographische Nachrichten von vorzüglichen türkischen Dichtern, nebst einer Blumenlese aus ihren Werken, aus dem türkischen des Mowla Abdul Latifi und des Ashik Hassan Tshelebi übersetzt von Thomas Chabert*, Zürich 1800, p. 219 sqq. (less complete); Tāshköprüzāde, *al-Shakā'ik al-nu'māniya*, transl. into Turkish by Edirneli Mehemed Medjidi Efendi, Constantinople 1269 (1853), p. 128—129; 'Ali Efendi, *Kühül-Akhhbar*, Constantinople 1277, iv/i., p. 190; sqq.; Fāik Reshād, *Eslāf*, Consple. 1311, p. 36 sqq.; do., *Tārikh-i edebiyāt-i 'osmāniye*, Consple. n.d., p. 80 sqq. Mus. by Rieu, p. 165. (J. DENY)

SHAIKHĪYA. Name of a sub-division of the Shādhiliya-order [q. v.], which deserves the name of a brotherhood rather than that of an order. It was founded by 'Abd al-Qādir b. Muḥammad (951—1023 = 1544—1615), who bore the title of Sidi Shaikh. He was a lineal descendant of the caliph Abū Bakr and belonged to a branch that emigrated from Arabia to Egypt in the 1st century A. H., and from there to Tunisia where it resided from 699—802 A. H.; from this date onward it had its quarters in the Maghrib, where it was known under the name of Bū Bakriya or Ūlād Bū Bakr.

Sidi Shaikh was *muḳaddam* of the Shādhiliya-order. He retained the rite of this order with the addition of a thrice repeated *fātiha* at the end of

each of the five daily *ṣalāt*'s. His piety and character made him the chief of his people in matters spiritual and temporal. In order to procure accommodation for his many visitors, he built a *ḳṣar* at al-Abyaḍ which to the present day is one of the five *ḳṣūr* of the Shaikhi's. His position became hereditary in his family for some generations. In the second half of the xviiith century, however, a schism took place in consequence of which the Shaikhiya became divided into two groups, the *Shēraga* and the *Gheraba*. The further history is dominated by this schism.

In the sixth century a certain Bū 'Amama ('Amāma?) tried to unite the factions under his authority, which he based upon his being divinely appointed successor of Sidi Shaikh. His personal attitude resembled that of the popular derwishes and was moreover marked by hatred of Christians. He extended the rite by the addition of a *dhikr* and a *du'ā*.

The Shaikhiya has its centre chiefly in the southern borderland between Algeria and Morocco. Apparently it never spread abroad.

Bibliography: L. Rinn, *Marabouts et Khouan*, p. 349 sqq.; O. Depont and X. Coppolani, *Les confréries religieuses musulmanes*, p. 468 sqq. Cf. also the art. **TARIKA**.

SHAIKHZĀDE, pronounced *Sheikhzāde*, a compound Persian word signifying "son (or descendant) of the Shaikh" [q. v.], synonymous with the Turkish expression *Sheikh-oghlu*. The word *sheikh*, pronounced in vulgar Turkish, *Shēkh*, means according to Turkish usage "preacher in a large mosque; the head of a religious brotherhood". This expression must not be confused with *shēh-zāde* (vulgar secondary form for *shāh-zāde*) "prince imperial".

Sheikhzāde is a patronym of the same kind as *Imāmzāde* or *Imām-oghlu*, *Mū'edhdhinzāde* or *Mū'ezin-oghlu*, *N.-Pasha-zāde*, *N.-Bey-zāde*, *N.-Efendizāde*. The Arabic synonym *ibn al-Shaikh* is not used in Turkish; expressions like *Ibn-i Kemāl* for *Kemāl Pasha-zāde* are exceptional.

The patronymic *Sheikhzāde* or *Sheikh-oghlu* has been employed as a proper noun in the names of the following Turkish personages:

I. The author of the *Khurshid Nāme*, which was completed about May 20, 1387. It is in the preface and in the epilogue of this work that we find information about the poet *Sheikh-oghlu* or *Sheikhzāde*, and at the same time about his patron, Süleimān Shāh, the prince of the German. (The quotations which follow are from the manuscript A. F. T., No. 314 of the Bibliothèque Nationale in Paris.)

Sheikh-oghlu was born about the year 1340. He was in fact "about fifty years" of age when he finished his book (*bu shimdi elli-ye yaklaşad? yashim*, fol. 304, b. l. 9). By birth on both his father's and his mother's side he was of high descent (*iki bashdan benüm aslum ulu-dur*; l. 2). His ancestors were powerful (*devlet isri*), men of learning (*'ilm issi fākhir beyler*), Muslims of note. Süleimān Shāh had absolute confidence in him (*Hem it-idüm ara hem tash-idüm ben, Ne kilsam neylesem sabash (shābāsh) idüm ben*; ibid., l. 6) and had granted him the right of acting as secretary as well as High Treasurer (*nishān u defter u māl u khasine*; fol. 6, l. 7). This entirely confirms Sehi, who says that *Sheikh oghlu* was *nishāndji* and *defterdār* of the prince of the German.

It is also to this prince that he intended to dedicate his poem. He says in fact:

*Süleimān-shāh zemānī-di ki evvel,
Usatdīm bu kitabı düzmeğe el,
Ki shāhi-di temāmet Germiyanun
Hem ulu oghl-yidi Ğaghshadanun
(MS. N^o. 355: Ğaghshadanun).*

"It was in the time of Süleimān Shāh when I first
"stretched out my hand to compose this book;
"he was the Shāh of all the Germiyan
"and the elder son of him who makes the
weapons clash".

But this prince died when the author was in the middle of his work (fol. 16, l. 10). Sheikh oğlu then entered the service of Yıldırım Bāyezid, the son-in-law of Süleimān Shāh, still prince imperial, having already received as an appanage the capital of the Germiyan (see article GERMİYANOĞLU), and it is to Bāyezid that the poem is dedicated in recognition of the benefits which he had heaped upon the author in his turn (fol. 18, l. 1). This combination of circumstances explains how the poet could at the same time write a eulogy of his former master. He could not forget indeed that the latter must be eclipsed and over-shadowed by his powerful namesake, who was equally a patron of the Ottoman House (the Emīr Süleimān, son of Bāyezid). His name has only been preserved on inscriptions and coins (Khalil Edhem, *Al-i Germiyan kitabeleri*, *Revue de l'Institut d'Histoire Ottomane* [in Turkish], i. 112—128; Ahmād Tawhīd, ... *Kütahyede Germiyan [Kermiyan] Beyleri*, ii. 505—513).

In the eulogy of Bāyezid, "young in age but old in knowledge" (*Yigit-dür ömrile, aklile pır*; fol. 18, b. l. 11), this prince is described in different ways in the different manuscripts. That of Berlin, the oldest, styles him: "Bāyezid Bey, son (= descendant) of Orkhan Bey". In the MS. 314 of Paris (fol. 16, b. l. 1 and 2), he is the son of the Sultān Shāh (*Sultān oghludur Shāh*), these words being followed by this qualification: *Ne (Na) Sultān ibn-i Sultān ibn-i Sultān, Shehinsheh Bāyezid ibn-i Murād Khān*. The same formula is found in the manuscript 355, fol. 4, l. 4, but in place of *Shehinsheh*, etc. there is: *Ėelebi Bāyezid, ol Shir-i merdān*. It will be noted that the imperial princes actually bore the title of Ėelebi up to the reign of Mehemed II (*Sidjill-i othmāni*, i. 89). The surname İldırım (the form in old Osmanlı for Yıldırım) appears in the verse: *savaşda İldırım dirlerse hakık-dür*, fol. 16, b. l. 5.

In the same preface it is said that the work was finished in the time of Bāyezid (*devletinde*, fol. 17, l. 10) and further on, the author expresses the hope of living long enough to finish under the name of the same prince (*Sheküm adile*) an *İshk Nāme*. The end seems to be a eulogy of a minister (the Grand Vizier 'Alī Pasha, cf. fol. 19, l. 10). All these differences and variations make one surmise that the preface was entirely remodelled at a later date, perhaps by the author himself. A critical edition would be desirable, but whatever may be the version adopted as definitive, one can adopt as certain the date of the completion of the work (May 20, 1387) given in the epilogue. This date is thus formulated (fol. 304, l. 13) *yidi yüz seksen doküdan — Ki takht vurmış-ıdi Ğhurshid ökünde —* "in 789 when the sun had raised his throne under (the sign of)

Taurus". Then a description of spring follows, which concludes thus . . . *rebī ul-ākhirün* (sic) *ākhir zāhir — Bu Ğhurshid Nāme oldu evvel ākhir* (sic). "It was evidently at the end of the Rabi' II (spring), That the *Ğhurshid Nāme* was finished (ibidem, l. 2)". Now the lunar month of Rabi' II, 789 extended from 21st April to 20th May, and that corresponds exactly with the passage of the sun to the zodiacal sign of Taurus. Such an exact coincidence, which is in contrast to the usual lack of precision in Ottoman chronology excludes the possibility of error. The poem then is older than is usually believed.

It follows from what has been said that Süleimān Shāh had already been dead for some time in the year 789 (cf. the article GERMİYANOĞLU). We may notice also that according to the eulogy of him by Sheikhoghlu, Süleimān Shāh was so devout that the dervishes forgot the respect due to a great prince (*ulu Shāh*) and did not salute him first (*selām önürmez-ıdi*, fol. 15, b. l. 13). As regards the epithet *ğaghshadan* which is given in a passage quoted above to the father of Süleimān Shāh (Germiyanoghlu Mehemed) and which we have translated by "he who makes the shields clash", it is obviously the regular participle in *-(y)an* of a causal verb of onomatopoeic origin *ğagh(ı)-sh-a-t-mak* (*ğaghshatmak*), synonymous with the metathesis of *ğagh(ı)sh-a-t-mak* or *ğaghshatmak* (whence no doubt comes the proper name Fach Schad, wrongly given by v. Hammer, *Gesch. d. osm. Dichtkunst*, i., p. 110, note 1; we shall correct the other errors in the same quotation). The verb *ğaghshamak* is given by Mahmūd Kāshghāri, *Diwān lughāt al-Turk*, iii. 212, below in the sense of "to jingle (little pebbles), to tinkle, in speaking of toys or other objects". (Cf. also J. Deny, *Gram. turque*, § 850, rem. 4 and note; add the words *ğaghshad*, from the *Burhān-i kātib* in Turkish, p. 626, l. 24; *ğaghshamak*, from the Dict. of Redhouse, p. 722, b.; *ğaghshak*, from Kāshghāri, i. 390, l. 12—15; and *ğaghsha sh-mak*, Vambéry, *Altosm.*, p. 185).

The *Ğhurshid Nāme* describes the loves of Ğhurshid, the daughter of the king of Persia Siyāwush and of Feraḡshād, son of the king of Maghrib (see the analysis in Hammer, *loc. cit.*). It is a poem of 7,640 verses (with two rhyming hemistichs of 11 syllables), that is to say it is a *mathnawī* like the *Khosrew-u Shirin* and in the same metre, the *hesedj* (— — — | — — — | — — —). This poem is called *Ğhurshid-u Ferrukhshād* by Sehi and *Feraḡ Nāme* by Hādjijī Khalifa (iv. 412), v. Hammer, Gibb, and, following them, other authors pronounce it *Ferrukhshād*, and Gibb corrects the editor of Hādjijī Khalifa by reading *Ferrukh Nāme*. In the Paris manuscripts quoted, this name is always written Feraḡshād and this reading ought always to be retained as the only one compatible with the metre (— — —). The word is found indeed either at the beginning or at the end of the hemistich (fol. 70, 72 b., 73, 78, 78 b., 76 etc.) where *Ferrukhshād* (— — —) would be inadmissible. This last word besides does not occur either in the *Shāhnāme* or in Justi, *Iranisches Namenbuch*, Marburg 1895, and seems due to a confusion with *Ferrukhzād* and *Ferrukhrüz* (cf. an analogous confusion in the popular story of *Ferrukhshād*, *Ferrukhrüz* and *Ferrukhnāz*, translated into French by the Jeune de Langues Maltor in 1742, Bibliothèque Nationale of Paris, Suppl. turc., N^o. 945).

Sehi identifies *Sheikhoghlu* with the "nephew", on his mother's side, and continuer of *Shaiḫi*. The historian 'Alī who makes the same confusion, calls him *Djamālī Sheikhzāde* (Hammer: *Djemālīzāde*). The dates contradict this identification (*Shaiḫi*, who wrote under Murād II, was still alive in 1421), and it is difficult to believe that he could have for his continuer a nephew born in 1340. Two different individuals must therefore be distinguished.

Köprülü Zāde Mehemed Fu'ād notes in N^o. 124 of the bibliography to his *Türk edebiyâtında ilk müteşşavîfler*, Stambul 1918, an autograph and unique manuscript belonging to him of a work entitled *Künz ül-küberā* by *Sheikhoghlu* "extremely important from the point of view of the history of language and literature", but without more detailed information, it is impossible to say if it is here a question of our author.

Bibliography: See especially Gibb, *History of Ottoman Poetry*, London 1900, i. 427 sqq.; The manuscripts of the Bibliothèque Nationale in Paris are: A.F.T., N^o. 314 (a fine vocalised *nesḫi* MS. of 882), 315 and 355 (the last two incomplete). The Berlin copy (Pertsch, N^o. 365) is of Rabī' I, 807 (Sept. 7—Oct. 6, 1404).

II. The author, or rather the translator, of the *Ḳırk Wezīr* (*Wazīr hikayisi*, "the history of the forty viziers"). Only the little which is given in the preface of this work is known about this writer. The text also varies according to different manuscripts. In some one finds only *Shaiḫzāde*, in others only *Aḥmed-i-Miṣrī*. Gibb thinks it is one and the same person, the translator of the *Ḳırk Wezīr* from Arabic into Turkish, from a work which has been lost, entitled *Arba'in ṣabāḥ wa-masā*, "The Forty Days and Forty Nights". This translation is dedicated in the great majority of manuscripts to Sulṭān Murād II (1421—1451), and this indicates approximately the epoch in which our author lived (according to Pertsch he is said to have written the *Ḳırk Wezīr* in 850 = 1446). It is to be noted, however, that according to the text of *Belletête* (which is in agreement with one of the manuscripts of Vienna) *Shaiḫzāde* is the name of an author who wrote *in Arabic* for the Sulṭān of Egypt (*Miṣr* and *Maṣr* in place of the *ʿaṣr* of other manuscripts), and it is an anonymous writer speaking of himself in the first person who wrote the Turkish translation, ornamenting it with diverse flowers of diction and quotations. According to other manuscripts, we might suppose that *Sheikhzāde* (or *Aḥmad Miṣrī*) made the first translation and that an anonymous writer improved upon it. *Fleischer*, *Behrner* and *Gibb* reject the reading *Miṣr* as wrong, but the change of person (which passes from the third to the first) in the text of the preface remains none the less a puzzle. It is important then to set up a critical text from the different manuscripts of the *Ḳırk Wezīr* in order to establish even the name of the author.

Like the *Bakhtiyār-nāme* [q. v.] or the "History of the Ten Viziers", "The Forty Viziers" are a ramification of the "*Sindbād Nāme*" [q. v.] or the "History of the Seven Wise Men" (seven viziers in the Arab version). The framework of "The Forty Viziers" may be summarized as follows: There was in Persia a sovereign called *Shāh-i Khāfīkayn* (of the east and of the west), whose young wife fell in love with her stepson, a prince

of marvellous beauty and of great virtue. Solicited by the Queen (*Khātun*), the prince (*Shehzāde*) follows the advice which his tutor (*khodja, astād*) had given him, who after consulting his horoscope, recommends him to maintain, whatever happens, the silence of a mute, during a dangerous period which will last forty days. Irritated by the indifference of the prince, the queen slanders him to the king, who orders his son to be put to death. It is at this moment that the forty viziers intervene and the first of them in the presence of the executioner tells a story (that of *Shaiḫ Shihāb al-Dīn Maḳtūl*, who died the victim of a woman's ruse), at the end of which the king consents to postpone the execution of the prince until he has obtained further information. In the evening the queen on her part tells a story calculated to revive the anger of her husband, who again summons the executioner on the following morning. But the second vizier intervenes in his turn and so on until the forty stories of the viziers alternate with the forty stories of the queen. Finally, on the forty-first day, when the king was just going to give credence to the queen by putting his son to death and throwing the viziers into prison, the tutor, who had disappeared during this time, comes back and relieves the prince of the silence imposed by the omens. Then the prince reveals the intrigues of the queen. The latter, confounded by the testimony of her servants, is attached to the tail of a horse, which shatters her to pieces dragging her over stones and rough roads.

The stories of the forty viziers are most frequently localized in Egypt, which is in accordance with the indications in the preface as to the place where the collection is said to have been written (*Aqḥid* [*Aḫshid*], the Sulṭān of Egypt, of one of the tales — cf. *Chauvin*, p. 123 — is probably *Iḫshid*).

Bibliography: A very full bibliography of the Forty Viziers is given in V. Chauvin, *Bibliographie des ouvrages arabes*, Liège and Leipzig 1904, viii. (*Syntipas*), p. 18—21, 112 sq. (and extracts publ. by Smirnov, *Chrestomathie Ottomane* [Russian title], St. Petersburg 1903, p. 220—223. We might also note that a young Turcologist of Prague, M. Duda, is preparing an edition of the Forty Viziers.) The manuscripts of the Bibliothèque Nationale of Paris are: A.F.T. 378, 388 to 392; Suppl. turc. 428 to 434, 1392 to 1394, 644. For the other manuscripts and editions printed in Turkey, cf. *Pertsch*, Berlin, Catalogue No. 454, 437, 438; Gotha, Catalogue No. 230 and esp.: *Rieu*, British Museum p. 216, a. 3. Muḫyī al-Dīn Muḥammad b. Muṣliḥ al-Dīn Muṣṭafā al-Ḳūdjawī, called *Shaiḫzāde*, died in 951 (March 25, 1544—March 14, 1545), wrote a gloss in Arabic on the Commentary of *Baidāwī*, the *ḫaṣīdat al-burda* and other texts.

Bibliography: *Hādījī Khālifa*, *Kashf al-Zumūr*, vii., Index, No. 6432; *Brockelmann*, *G.A.L.*, i. 265—417; *Dozy*, *Catalogue* . . . bibl. *Ac. Lugduno-Bataviae*, 1851, ii. 82.

4. 'Abd al-Raḥmān b. al-Shaiḫ Muḥammad b. Sulaimān, called *Shaiḫzāde* (in *Hādījī Khālifa*: *Shaiḫhi zāde*), d. in 1078 (June 23, 1667—June 11, 1668), finished in 1077, *Maḍma' al-anhur*, commentary (Arabic) on the *Multaḳā al-abhur*, a treatise on Ḥanafī law by *Ibrāhīm al-Ḥalabī*; see *AL-ḤALABĪ*. The Turkish translation

of this work by Mawḳūfātī is at the root of d'Ohsson's *Tableau général de l'empire Othoman*. This commentary was first published in Constantinople in 1240 (1824/1825) and again in 1305, 2 tomes in one large volume in-4°.

On other individuals who have had the surname Shaikhzāde see: Rieu, *Cat. of Turk. MSS.* in the *British Museum*, 82, b. and 120b; Dorn, *Das asiatische Museum*, St. Petersburg 1846, p. 219.

(J. DENY)

SHĀ'IR (A.), poet. The word is probably derived from the word *shī'r* "poetry" or "poem", which may be of ancient Semitic origin, for we have in Hebrew *shir* for a solemn hymn, and it is most unlikely that the derivation is from the Arabic verb *sha'ara* "to know", as Arabic philologists explain it. The very fact that the verb is not used in the meaning of composing verses seems to speak against such a derivation. [Goldziher in his *Abhandl. z. arab. Phil.*, i., 17, has explained *shā'ir* as "the one with inspired knowledge"]. The origin is lost in the remotest antiquity and though to my knowledge no ancient Arabic inscription contains any metrical verse, we cannot argue from this that poetry did not exist at those times. The remarkable fact remains that the oldest specimens of Arabic poetry which we can consider genuine have already fully developed rules as to metre and rhyme. That a poem must rhyme is imperative, but the *shā'ir* in some of the earliest specimens of his art which are preserved employs metres which the critics of the second century of the Hīdjra did not acknowledge and did not know (e.g. poems by 'Abid, Imru' al-Ḳais and 'Amr b. Ḳamī'a). Also in early times it was probably more frequent than we can now ascertain that the metre was not always correct, even if it corresponded with one of the 16 metres evolved by Ḳhail and al-Akhfash, for one verse of Zuhair has several syllables too many which the grammarians have not been able to amend.

It is also important that the earliest specimens of Arabic poetry are by men who held an honourable position in their tribe; the time had not come when poor men, like al-Ḥuṭai'a, practised the art. Some authorities wish to emphasise that the *shā'ir* and the *kāhin* were probably identical, a view which I cannot endorse, as Arabic poetry as a rule in early times holds aloof from all that is religious. It is a strong point that it is as a rule strictly concerned with worldly affairs.

The short *raq'as* metre may have been the first which was practised in the *hīd'ā* or "leading the moving string of camels", but we have no ancient specimens of the *hīd'ā*, the earliest being preserved in the *Diwān* of al-Shammākh who lived during the time of the rise of Islām.

The earliest poets of whom we have any knowledge lived in Eastern Arabia and in their poetry they employed only very few of the 16 metres, and it is significant that even such late poets as Djarīr and Farazdaq never use the shorter metres, which seem to have originated later in the Hīdjāz. Djarīr only uses the metres *raq'as*, *ṭawīl*, *wāfir*, *basīf*, *kāmīl* and *mutakārib*, the poet al-A'shā adds to

this number only the metre *khafīf*. As later poets in various parts of Arabia employ all other metres, the fact mentioned might point to the existence of some unknown cause for this peculiarity. The *shā'ir* was considered to be possessed of some special knowledge communicated to him by a kind of familiar spirit which inspired him, and he had in his company one or more real persons whose business it was to remember his verses and to recite them in other camps. While the familiar spirit may only have been fictitious, the reciter of the poet, named *rāwī*, was very real and we have many names of such *rāwī*'s mentioned in the *Kitāb al-Aghānī* and by the poets themselves in their poems. More important, however, is that in many cases the *rāwī* himself became a poet of note in the next generation. Among the *rāwī*'s of repute the following may be named. Ṭufail al-Ghanawī had for his *rāwī* Aws b. Ḥadjjar, whose *rāwī* was the poet Zuhair. The latter was also *rāwī* of his uncle Bashāma. The *rāwī*'s of Zuhair were his son Ka'b, al-Ḥuṭai'a and al-Shammākh. Such chains of poets who recited each other's poems could be mentioned in greater numbers than is generally realised. This points to a kind of school for poets and the *rāwī* at the same time made attempts at own composition, which he submitted to his master; this also accounts for finding in certain parts of Arabia a prevalence not only of specific metres, but also of special themes. It is not an accident that Abū Dhū'aib, Sa'ida b. Dju'aiya and al-Mutanakhkhul, the Hudhali poets, specialise in the description of bees; they were one the *rāwī* of another and not only used similar metres but also the same subjects which they had learned from their masters. This also explains why we find a line word for word in a poem of Ṭufail, Aws b. Ḥadjjar and Zuhair. "The unfettered horses of passion" was an idea which the *rāwī*'s of Ṭufail could not omit from their verses.

The poet of the early times loved to fill his poems with fine words and it is specially in the earlier times that a large quantity of foreign words were used to adorn the poems, a practice which ceased after the first century of the Hīdjra. At this time the calling of the *shā'ir* had altered entirely. In the earlier times the poet stood for the honour of his tribe; he had to mourn his relations or the valiant men of his clan or sing the defiant *hīdjā* against the enemies of his tribe. Now the poet had sunk to be a beggar for favours from the mighty and rich; to this he added lampoons against rivals, who made his work of extorting presents more difficult, and new themes for the edification of drunken gatherings, poems on boys and obscene ditties. We have no Persian poetry as old, but Ibn Djinī tells us (*Khazā'ir*, i. 252) that in Persia also poetry flourished and that they were very diligent in avoiding the use of any Arabic word in their poetry which was by critics considered a serious fault. We do not know the contents of this class of poetry, but we may assume that the lighter poetry in the Arabic language as represented by the poems of Bashshār and Abū Nuwās reflects the themes of Persian verse. The earliest authentic Persian poetry dates from the fourth century of the Hīdjra and the specimens preserved agree remarkably well with the kind of verse composed in Arabic by their contemporaries like Abū 'l-Faṭḥ al-Bustī, who wrote in both

languages. Since then the *shā'ir* has never died out, but the art which seems so fresh in the earliest specimens has seldom been able to leave the old path and like sheep and cows the poets, whether Arabic, Persian, Turkish or Urdu, have been chewing the cud to this day.

The Prophet took a special stand against the poets. He was accused of being a *shā'ir*, which brought about the answer at the end of Sūra xxvi., which has been entitled "the Poets" from these verses. "The poets are liars and those who follow them have gone astray". The poets, however, were too well established in Arab civilisation and the traditions know that the Prophet's immediate successors were well versed in ancient poetry; especially 'Alī is credited with many verses, all of which are probably spurious. Though the Prophet would not be called a poet himself, he made full use of several poets, especially Ḥassān b. Thābit, who composed biting verses against the Mekkian adversaries. The method the *shā'ir* had to use for such verses to reach the hostile camp was to teach the verses to a *rāwī* who recited them in another place before a neutral audience, which had, however, sufficient interest to repeat the verses to the party attacked. As regards the art of the poet I am inclined to doubt that all ancient poems were originally complete poems; often the *shā'ir* could only get from his familiar spirit the inspiration for part, and, like Zuhair, had to work for a whole year on a single poem or recite it before it was complete, according to the rules which Ahlwardt e.g. has laid down for every poem. We have ample evidence that many poems were at all times only fragments, for an Arabic (or Persian) *ḥasīda* with the same rhyme going through a great number of verses is a very unreal thing.

(F. KRENKOW)

SHAIṬĀN, Satan. (See also *ḌINN*, *IBLIS*). "Every proud and rebellious one among *ḍinn*, men and animals" is the meaning given in the dictionaries. As applied to spirits *shaiṭān* has two distinct meanings with separate histories. The sense of devil goes back to Jewish sources and that of superhuman being has its roots in Arab paganism, though the two meanings interact. In the stories about Solomon a *shaiṭān* is nothing more than a *ḍinn* superior in knowledge and power to other *ḍinn*. But even their powers are limited. Closely connected with this is the use of the word in the sense of genius. "He made up his mind, when they died, to hunger and disappointment, but his Demon said to him — Thou hast the charge of a household to meet" (*Mufaḍḍaliyyāt*, xvii. 68). Belonging to the same order of ideas is the belief that a poet was possessed by a *shaiṭān* who inspired his words. Later writers knew the names of these familiar spirits. There is some evidence that the pagan gods of Arabia were afterwards reduced to the rank of demons. Ṭabarī says (*Tafsīr*) that the *shaiṭān* are those whom the infidels obeyed while disobeying God. The bow of Kuzāḥ was afterwards called the bow of *Shaiṭān* and the two horns of *Shaiṭān* is a name for a phenomenon accompanying sunrise. Similarly old superstitions are preserved in the belief that a *shaiṭān* eats excrement and all manner of filth and frequents the borderline between shade and sunlight.

The word is common in the *Qur'ān* but in the Sūras of the first Makkian period the indefinite

singular alone is found and that only once. It is not till the second period that the definite form occurs, suggesting that the prophet had found or remembered another idea. *Shaiṭān* is tacitly identified with Iblis who is obviously borrowed from Judaism. Thus al-*shaiṭān* is the chief of the evil spirits and *shaiṭān* is a spirit, though not necessarily evil. There is no fixed tradition as to the relation of al-*shaiṭān* with the *shaiṭāns* and other *ḍinn*. One account says that he is their father; another makes him produce eggs from which they were hatched and another says that God first created the devil then his wife and from the union came three eggs from which the various sorts of *ḍinn* were hatched. The *Qur'ān* says that *Shaiṭān* is made of fire; the commentators refine on this and say that the angels are made of light, *Shaiṭān* of fire or of the smoke of fire. It is not settled whether the *shaiṭāns* have no bodies at all or have bodies of some very subtle substance. The punishment of *Shaiṭān* for resisting God is postponed to the end of the world when he will receive his reward in hell-fire. He is not the lord of hell; according to the *Qur'ān* Mālik is lord of hell. His standing epithet *raḍīm* is derived by tradition from the stoning of the devil by Ibrāhīm at Minā; according to Prof. Nöldeke it is derived from the Abyssinian word meaning accursed. Other names for *Shaiṭān* are *Ṭaghūt* and *Ḍjānn* which is said to mean the father of the *ḍinn*. The serpent which helped *shaiṭān* to tempt Adam was punished by being deprived of its legs but the peacock, the intermediary, seems to have escaped scot-free. Perhaps there is some connection with the Malik Tā'ūs of the Yazidis.

In religious thought *Shaiṭān* is the power that opposes God in the hearts of men. He whispers his insidious suggestions in their ears and makes his proposals seductive to them. The *Qur'ān* ascribes this activity now to one *shaiṭān* now to several. Later it is said that one *shaiṭān* is attached to each man so that it is possible for everyone to speak of "my *shaiṭān*". There are no exceptions to this rule for even Yahyā b. Zakariyā (the Baptist) had his *shaiṭān* though he was too good to listen to its insinuations. The union between a man and his *shaiṭān* is as close as that between a man and his blood. But there is no hint of dualism for a *shaiṭān* has no real power over man, he owes his success to craft alone. He cannot exploit that success for he is afraid of God and leaves men in the lurch as soon as he has persuaded them to sin. The activities of *Shaiṭān* are summarized in the following tale. He complained to God of the privileges granted to men and was thereupon given similar ones. Diviners were his prophets; tattoo marks his sacred books; lies his traditions; poetry his religious reading; musical instruments his muezzins; the market his mosque; the baths his home; his food was everything on which the name of God was not invoked; his drink all intoxicating liquors and the object of his hunting women. The popular view is that every man is attended by an angel and a *shaiṭān* who urge him to evil and good deeds respectively. Ḥasan al-Baṣrī is reported to have said: — They are two thoughts that rush into the minds of men. He thus reduced these spirit forces to mental states.

Shaiṭāns were of both sexes and ugly. They could appear in human form without anything

unnatural betraying their identity. Many had names. Those of the familiars of some poets were known. Farazdaq's demon was 'Amr. The shaiṭāns of India and Syria were among the most powerful and the names of their chiefs are given. Diseases, particularly the plague, were their weapons. Some said that the shaiṭāns were bound during the month of Ramaḍān and a cock was supposed to be a protection against them.

Attempts were made to reduce these ideas to some system. An unbelieving *djinn* was a shaiṭān; one strong enough to move buildings and overhear the divine plans was a *marid* (rebel) and one capable of more than that was an *'ifrit*. Spirits who attacked boys were called *arwāḥ*. Some men had power over the various kinds of spirits, but this power was not for all. The body of the *makhḍūm* had to be a fit temple (*haika'*) for spirits if a man was to control them.

The Arab philologists accepted shaiṭān as a native word and derived it from the root *sh-t-n* though some preferred the root *sh-y-ṭ*. The word is very rare in early poetry. Umayya b. Abi 'l-Ṣalt uses it in connection with the throwing of the stars at the devils. 'Adī b. Zaid tells of Iblis being punished in fire. It might be urged that he was familiar with the idea but not with the word shaiṭān. Umayya also has the participle *shāṭin* in the sense of rebellious spirit. It almost looks as if he were experimenting to find a suitable word. The form shaiṭān used by Belāḍhori seems to be an attempt to represent the Greek form of the word. As the idea is obviously borrowed, it is probable that the word — a regular Arabic form — is also borrowed from the Ethiopic which is in turn derived from Hebrew.

Shaiṭān is also the name of a snake and has some metaphorical meanings.

(A. S. TRITTON)

SHAIYĀD, a term used as a synonym of the word *kalender* and meaning a certain kind of dervish. The word has been derived from the root *sh-y-d*, which means "to perish", according to the translation of the *Ḳāmūs* by 'Āṣim. The same author defines *ishāda* as follows: "to cry something with a loud voice; to raise (a building) to a great height; to mention some one loudly, i.e. to praise him openly and make him famous; to cry a lost article". Thus etymologically we might translate *shaiyād* by "some one who loses himself; who does not hesitate to annihilate himself on the path of Truth; who continually proclaims the Truth in a loud voice". This comes near Zenker's translation (p. 554). Ṭaiyār Efendi in his *Rehber-i Gulistān* (Maṭba'a-i 'Āmir, 1308, p. 156) gives the meaning impostor (*kadhḍāb*), but this is due to the fact that the word *shaiyād* is used as a synonym of *'aiyār* — which is also an old Sūfi term — and is not a translation (the *'aiyārs* formed a special body which played a part in politics in Baghḍād towards the end of the second century A. H. and whose influence long survived; they contributed a great deal to the spread of

Sūfism in other lands of Islām and laid the foundations for the development of the *futuwa*, cf. *Kashf al-Maḥḍjūb*, transl. Nicholson, p. 100, 183; *Tadhkirat al-Awliyā'*, ed. Nicholson, i. 332; R. Hartmann, *As-Sulamī's Risalat al-Malamatiya, Der Islam*, viii. 190—191. In the third century, we find in Khorāsān and in Transoxiana similar groups which in Khorāsān are called *ghāziyān* or *fityān* and in Transoxiana *djawālīka*; [cf. Köprülü Zāde Fu'ād, *Türkiye Tāriḫi*, i. 81—82].

We find this term — which is synonymous with *kalender*, *haidarī*, *abdāl* — in general use from the seventh century A. H. onwards and especially in Asia Minor. We know that there was a Sūfi named Shaikh 'Abd al-Raḥmān Shaiyād, a contemporary of Djalāl al-Dīn Rūmī, in Ḳonya (*Les Saints des Derwichs Tourneurs*, transl. Huart, i. 113); Sa'dī, in the *Gulistān*, speaks of a *shaiyād* with dishevelled hair who claimed to be 'alewī and referred a *ḡaṣida* of Enwerī to himself. In the seventh century and later, we find Turkish poets like Shaiyād Ḥamza [q. v.] and Shaiyād 'Isā, author of a romantic poem called *Ṣaṣal-nāme* (in the *Bibl. Nat.* there is a Turkish MS. No. 1207, entitled *Ṣaṣal-nāme* by a Turkish poet called Ibn Yūsuf). The references in Faḳīrī, a poet of the tenth century, in his *Risāle-i ta'rīfāt* (on this book cf. the bibliographical index to my *Ilk Muteṣawwifler*) show that these shaiyāds still existed in his time and that, both in their manner of living and in their mystic life, they did not differ from the groups of heterodox dervishes who had much in common and were closely connected with one another, like the *abdāl's*, *haidarī kalender's*, *djāmī's*, *edhemī's*, *bābā's* and *bektāshis* (for historical information, regarding them, cf. my *Anadoluda Islāmīyet*). In the *Ālam-ārāy-i 'Abbāsi*, among the events of 1029 A. H., there is mention of a shaiyād (cf. Dorn, *Auszüge aus Mohammedanischen Schriftstellern*, 1858, p. 370; the note which Dorn gives in his introduction on the word *shaiyād* is of no importance; cf. p. 18).

(KÖPRÜLÜ ZĀDE FU'ĀD)

SHAIYĀD ḤAMZA, a Turkish poet who lived in Asia Minor in the seventh century A. H. He was one of the Baṭīnī [q. v.] *bābās*, who spread throughout Asia Minor in this century under different names like *kalender*, *abdāl*, *bābā's*, *yesewī* and *haidarī*, and taking the opportunity of the material and moral crisis caused by the invasion of the Mongols, went from village to village, trying to spread their teaching among the people (on the religious situation and movements in Asia Minor at this time see my *Anadoluda Islāmīyet*, p. 36—90). This explains the surname of Shaiyād [q. v.] which he took. The only information regarding his life is found in certain legendary biographies written in the tenth century. It is certain that he was the author of mystical-religious poems written in the language of the people in syllabary metre (*hidjā wezn*) in preference to the *'arūd* but these poems are lost like many of the literary products of this period. The only remnant that survives is a *mathnawī* of 15 *bait's* preserved in the *Djāmī' al-naṣā'ir*, composed in 918 by Egerdirli Hādjirī Kemāl (the only known MS. of this work is in the *Kütübkhāne-i 'Umūmī*; for further information cf. the bibliographical index to my *Ilk Muteṣawwifler*); this *mathnawī* has been published by me. Shaiyād Ḥamza the memory of whom and his works sur-

vived till the tenth century, did not, like Yūnus Emre, have a powerful poetic personality but, like his predecessors and contemporaries whose names are now forgotten, he had an influence on the development of Yūnus (on the character of and formative elements in Turkish literature at this time cf. my *İlk Muteşavvifler*, Ch. vii., p. 205—286). Nevertheless after gaining some fame at the period when this style of poetry was adopted by Yūnus Emre and his successors to the popular taste, the works of Saiyād Ḥamza gradually lost their popularity and became completely forgotten from the tenth century onwards.

Bibliography: Besides the sources mentioned above: Köprülü Zāde Fu'ād, *Seldjükkiler dewrinde Anadolu kış'irleri, I, Shaiyād Ḥamza*, in *Körösi Csoma Archivum*, i, N^o. 3, 1922, p. 18—19. (KÖPRÜLÜ ZADE FU'AD)

SHAIZAR, a town in Northern Syria, the ancient Σαῖζα, Byzantine τὸ Σαῖζ. It is mentioned as early as the inscriptions of Thutmosis III and in the 'Amārna tablets. Seleucus I settled colonists here from Larissa in Thessaly and gave it the name of this town; but the new name could not drive out the old, which soon came into general use again in the Muslim period in the form *Shaizar*. It is mentioned as *Shaizarā* along with *Ḥamā* by Imru 'l-Kais and 'Ubaidallāh b. Kais al-Rukaiyāt (Imru 'l-Kais, *Diwān*, xx. 40, ed. Ahlwardt, *The Diwans of the six anc. Arab. Poets*, p. 130; Kais al-Rukaiyāt, *Diwān*, liv. 9, ed. Rhodokanakis, *S. B. Ak. Wien*, phil.-hist. Kl., cxliv., Abh. x., p. 240).

In the year 17 (638), the people of the town received Abū 'Ubaida with open arms. They went out to meet him with music, and were satisfied with the same general terms of peace as had been offered to the people of *Ḥamā*, namely payment of the poll and ground-tax (*djizya* and *kharāj*). *Shaizar* later became a district (*iklim*) of the military province (*djund*) of Himṣ. Towards the end of the ixth century, the people were Kindis (al-Ya'qūbī, ed. Houtsma, ii. 324). When Nicephorus Phocas advanced on Ḥalab, Saif al-Dawla retired to *Shaizar*, but fell very ill there and was brought back dying to his capital (356 = 967). In the following year Nicephorus took *Shaizar* and burned down its chief mosque. In the treaty between him and Karghūya of Ḥalab (Šafar 359) the town was included in the latter's territory (Kamāl al-Dīn, *Zubda*, transl. Freytag, *Z. D. M. G.*, xi. 232 = Migne, *Patrol. Graeca*, cxvii., Col., 1023). On the 16th Raddjab 383 (Sept. 6, 993), *Shaizar*, which then belonged to the Ḥamdānīd Sa'īd al-Dawla, was taken by the Egyptian general Bandjutakin who guaranteed the commandant Sūsan, an old officer of Sa'īd al-Dawla, security of life and property. When Sa'īd al-Dawla appealed to the Emperor Basil for help against the Egyptians, the latter came up and besieged *Shaizar*; the commander appointed by the Caliph, Maṣṣūr b. Karādīs, was bribed by him and handed over the fortress, which received a strong Greek garrison (383 = 994/995). But it again passed — apparently as a result of the defeat of Damianos Dalassenos at Afāmiya (998) — who installed Ḥamlān (or Ḥalmān) b. Karādīs as governor there (who can hardly be identified with the above mentioned Maṣṣūr as Rosen, *Zapiski Imp. Ak. Nauk.*, xlv., p. 311, note 266 and Schlumberger *Épôqée byzantine*, ii. 151, note 3, suppose; rather his brother). Basilios however attacked *Shaizar* the very next year (999),

began hostilities on October 28 and destroyed the aqueduct which supplied the fortress with water. An attempt to bribe the commander failed, but want of water finally forced him to offer to surrender, if he and his troops were allowed to march out freely, without the usual proskynese before the Emperor, and the citizens were guaranteed security of life and property; the Emperor accepted these conditions; in spite of this, many citizens left the town with the garrison, and Basilios repopulated it with Armenian colonists.

The town remained for the next eighty years in the hands of the Byzantines. In the year 395 (1004/1005) a certain Aḥmad b. al-Ḥusain al-Aṣfar of the tribe of Taghlib appeared as a fākir and advanced against *Shaizar* with a prominent Arab named al-Ḥamālī, to drive the Greeks out of it. They defeated a Byzantine detachment and were only driven away by an Egyptian army sent in reply to an official complaint by Basil to the Caliph al-Ḥākim (Yaḥyā al-Anṭākī, in Rosen, *op. cit.* p. 41 [transl. p. 43] and Kamāl al-Dīn, *ibid.* p. 342 sq.; in Müller, *Historia Merdasidarum*, p. 2, *Sizaram* should be read for *Caesaram*, cf. his note p. 95). About 1025 Šālīh b. Mirdās [q.v.] granted the Munqidhīs of the tribe of the Banū Kināna the land round *Shaizar*, which however itself still remained in the hands of the Byzantines. The Munqidhī Muḥallad was ruling over Kafartāb in 1041; he was the ancestor of Usāma Abu 'l-Mutawwaḍj Muḥallad b. Naṣr b. Munqidh, who extended his territory down to the Orontes, and probably built the fortress Djisr banī Munqidh at the bridgehead below *Shaizar*. When he died in January 1059, he was succeeded by his son 'Izz al-Dawla Sadīd al-Mulk Abu 'l-Ḥasan 'Alī, who in 1078, by arrangement with the last Mirdāsīd of Ḥalab, Šābiḳ, rebuilt the fortress above mentioned and the suburb of *Shaizar*, Ḥiṣn al-Djisir, in order to cut off the fortress from supplies and support from the Greeks, and thus force it to surrender. In the same year he gave shelter in this fortress to the Turkomans under Aḥmad Šāh, who were fleeing before Tādj al-Dawla Tutuṣh (Kamāl al-Dīn, *Hist. Merdas.*, p. 85, 90; Derenbourg, *Ousāma*, p. 20), but was able to win the favour of Tutuṣh again, and later of Šaraf al-Dawla, who took Ḥalab on June 18, 1080. On December 19, 1081 he succeeded in getting possession of the citadel of *Shaizar* which had hitherto belonged to the Emperor Alexius Comnenus, by a treaty with the Bishop of al-Bāra, who resided in it. The Greek garrison were allowed to depart. Šaraf al-Dawla who envied him the possession of the fortress, and in vain endeavoured to take it from him, was appeased by rich presents from the Munqidhī. The latter died next year (towards the end of 1082); he was succeeded by his pious son 'Izz al-Dawla Abu 'l-Murhaf Naṣr, a peaceful, art-loving prince, under whom the territory of *Shaizar* for a time also included Afāmiya, Kafartāb and al-Lādhiḳīya till he had to cede these towns in 1086 to Malik-Šāh of Iṣfahān. *Shaizar* was several times besieged during his rule, but always unsuccessfully. He died childless in 1098, shortly after the conquest of Anṭākīya by the Crusaders (Oct. 1097). He had destined as his successor his younger brother Maḍjd al-Dīn Abū Salāma Murshid (1068—1137), father of Usāma; but this hunter and calligrapher declined the emirate in favour of his youngest brother 'Izz al-Dīn Abu 'l-'Asākir Sulṭān.

Madjd al-Dīn Mu'ayyid al-Dawla Abu 'l-Muẓaffar Usāma (d. 1188), the celebrated author of the *Kitāb al-Fitbār* (born July 4, 1095), gives in this autobiography a valuable account of life and activities in his native town, which however he left in 1129 and never saw again after his father's death (May 30, 1137).

The fortress (*Ḥiṣn, Kal'a*) was built on a steep ridge running north and south, called 'urf al-dik ["cock's comb"] (Dimashki, ed. Mehren, p. 205). The Nahr al-'Aṣī flowed round it on north and east; on the south side it was cut off by a deep trench from a high plateau which formed its continuation. The upper town (in Usāma: *balad*, in European sources: *praesidium, oppidum, pars superior civitatis*) lay within this citadel, the fortifications of which were presumably strongest at the north and south ends, and therefore are still best preserved here. It had only three gates; through the north gate one crossed over a sloping stone bridge of several arches, which crossed a brook and formed the only entrance to the fortress, to the stone bridge Dīsr Banī Munkidh, leading straight across the Nahr al-'Aṣī, over which lay on the south side of the river the lower town (Usāma: *Madīna*, in European sources: *suburbium, pars inferior civitatis*), which was called al-Dīsr after it (*Gistrum, Γίστριον*) and was defended by a fort which probably lay on the right bank (*Ḥiṣn al-Dīsr*). The neighbourhood of Shaizar was well-watered and had a luxurious vegetation. It was particularly rich in pomegranate-trees.

During Sulṭān's rule, Shaizar was frequently threatened by raids of the Banū Kilāb of Ḥalab, the Franks and other enemies, without their being able to take this stronghold. The Emperor, John Comnenus, who laid siege to the fortress from the Djabal Dīsuraidjis opposite on the east bank of the Orontes for 24 days (April 29,—May 21, 1138), and bombarded it for ten days in succession, had finally to retire with no success, in spite of the fact that he had already promised it in the preceding year to Fulco of Antioch as a fief. Sulṭān died in 1154, or a little before that. He was succeeded by his son Tādī al-Dawla Nāṣir al-Dīn Muḥammad, who perished in the middle of a festival in a terrible earthquake with almost all the members of his house (1157). In October of this year the Franks endeavoured to seize the ownerless shattered fortress, but were driven back by the Isma'īlis, who had held the region of Maṣyād since 1140. Nūr al-Dīn, however, took Shaizar from them, restored the citadel and placed it under his foster-brother, Madjd al-Dīn Abū Bakr b. al-Dāya. He also repaired Shaizar after a second earthquake which devastated a considerable part of Northern Syria on June 29, 1170. In the same year Abū Bakr died, and was succeeded by his brother Shams al-Dīn 'Alī. Ṣalāḥ al-Dīn who took Northern Syria in 1174 after Nūr al-Dīn's death from his eleven year old son, Isma'īl, made Ṣabīḡ al-Dīn 'Uḥmān, his vassal in Shaizar; he was succeeded by his son 'Izz al-Dīn Maṣ'ūd and later by his grandson Shihāb al-Dīn Yūsuf under the suzerainty of the Aiyūbids of Ḥalab. Malik 'Azīz of Ḥalab deprived the latter of his fief for insubordination in 630 (1233). Four years later, however, we again find him described as lord of Shaizar; but it is doubtful if he was still living there. In 638 (1240/1241), Shaizar was again occupied by a Ḥalabī army. When the Mongols invaded Syria in 1260, Malik Nāṣir al-Dīn Yūsuf of Ḥalab fled

before them, and razed his fortresses to the ground as he went; Shaizar was among these, Baibars had it rebuilt when he ascended the throne, after the expulsion of the Mongols in 1261. He visited the town in 1268 on a tour through the country. Under Sulṭān Qalā'un, Shaizar belonged for a year (1280—1281) to the rebel emīr Sunḡur al-Aṣḡar of Dimashk. Henceforth it was a *niyāba* under the *nā'ib* of Ḥalab (cf. the inscriptions of Shaizar of the time of Barsbāi, published by Littmann). After the troubles stirred up by Mīntāsh and al-Nāṣiri (1389), nomad tribes occupied this *niyāba* (Kalkashandi, *Ṣubḡ al-A'shā*, iv. 227, 17). About 1450 Khalīl al-Zāhiri uses the modern form of the name, Saidjar, for the first time. No deduction can be made from the fact that al-Dīr'ān Abu 'l-Baḡā' in his description of Kāitbāi's journey (1477) through Northern Syria, does not mention Shaizar (cf. Devonshire's edition in *B.I.F.A.O.*, xx., Cairo 1921), as the Sulṭān's route did not take him near the town. With Turkish rule or even before it began the gradual decay of the stronghold, which is still going on.

SHAKĀK (**SHAKKĀK**), a Kurdish tribe on the Turco-Persian frontier. In Persia to the west of Lake Urmia before the war they occupied the cantons of Brādōst, Somāi [q. v.], Čehriḳ (cf. **SALMĀS**) and Kōtūr; in Turkey, the eastern districts of the wilāyet of Wān: Sarāi (Mahmūdī) and Albak (Bashkal'a), i. e. the territory which in the xvth century belonged to the Dumbuli tribe (*Sharaf-nāma*, i. 313—314).

The name of the tribe is written by Yūsuf Diyā al-Dīn: **Shikākān** and by Shīrwānī: **Shakāk**; Khurshid Efendi writes "**Shikāki** or **Shikāki**". To the south of Lake Urmia in the canton of Bahi we have a village Kāni-Shakāk ("the source of the **Shakāk**"), which not being far from Bulak-Shikāki (cf. **SHAKĀKĪ**) may be evidence of contact between the two tribes, if it is not a phonetic variant of the same name.

Among the Persian clans, the principal are: Kardār and Delān (Somāi and Brādōst) and 'Awdō'i (Čehriḳ und Kōtūr). There were in all about 2,000 families of **Shakāk** in Persia who formed the warrior caste (*'ashirāt*); their subjects (*ra'yat*) were the remnants of tribes who have disappeared.

The 'Awdō'i have played a prominent part in local politics. Their ancestor is said to have arrived in Diyār Bakr at Urmia about 1700. The first known chief was Ismā'il Āghā (d. 1231/1816) whose stronghold and tomb are on the river Nāzlu-čai (N.W. of Urmia). The 'Awdō'i harassed by the Afshar then entrenched themselves in Djūnī (Somāi) from which they went northwards to Čehriḳ. Dja'far Āghā, sometimes frontier-commissioner and sometimes rebel and brigand, was killed at Tabriz in 1905 by order of the governor-general. His brother Ismā'il, better known by the Kurdish diminutive of Simkō (Simitkō) succeeded him and operated between Čehriḳ and Kōtūr. He trimmed carefully between Persians, Turks and Russians, holding a practically independent position. As a result of his numerous crimes (e.g. the assassination of the Nestorian patriarch, Mār-Shimūn, and the massacres of Muslims at Urmia), the Persian government undertook several expeditions against Simkō who in 1922 was driven towards Turkey and Mesopotamia.

On the Turkish side, the principal clans are: Mukūrī, Milān, **Shamsiki** and Taḳurī (at Mahmūdī) and Merziki (at Bashkal'a). The Turkish government used to recruit 5 "Hamīdiye" regiments from among these clans. About 1900 these clans numbered 2,000 families, but the war must have severely reduced their numbers.

(V. MINORSKY)

SHAKĀKĪ (**SHĪKĀGHĪ**), a tribe of Kurdish origin. According to Yūsuf Diyā al-Dīn, the word *shikāki* means in Kurdish a beast which has a particular disease of the foot. According to the *Sharaf-nāma* (i. 148), the **Shakāki** were one of the four warrior tribes. (*'ashirāt*) in the nāhiya of Finik of the principality of Djazīra. According to the Ottoman *sāl-nāma*, there were Kurdish **Shakāki** in the nāhiya of Sheikhler in the qaḍā of Kīllis in

the wilāyet of Aleppo (cf. Spiegel, *Eran. Altertums-kunde*, i. 744). The nāhiya **Shakāk** of the *Djihān-numā* (between Mukus and Djulāmerg) is certainly only a mis-reading for **Shatākḥ**. As a result of certain movements, probably in the time of the Ak-Koyunlu, we find the **Shakāki** leading a nomadic life on the Mughān on the frontier of Transcaucasia (cf. **SHĀH-SEWAN**). At the beginning of the xixth century there were 8,000 families on Russian territory. Dupré speaks of 25,000 hearths of **Shakāki** among the tribes speaking Kurdish. About 1814 J. Morier numbered them at 50,000 grouped along the Tabriz-Zandjān road in the districts of **Hashtarūd**, **Garmarūd** and **Miyāna** as well as at **Ardabil**. 'Abbās Mirzā drew from this tribe the main cadres of his infantry drilled in European fashion. According to Morier, the **Shakāki** spoke Turkish. Shīrwānī puts the summer and winter quarters of the 60,000 families of **Shakāki** in the region of Tabriz-Sarāb (on the road from **Ardabil**) and adds that it is a Kurdish tribe whose language is Turkish, which forms part of the *Kīzlī-bash* (*min tawābi-i kīzlī-bash*), which evidently means that the tribe is **Shī'a** as is also suggested by its association with the **Shāh-sewan**. The importance of the tribe may be judged from the fact that at the beginning of the xxth century the Persian government recruited four regiments from the **Shakāki**: we do not know the connexions that may exist between the **Shakāki** and the Kurdish **Shakāk**, but all indications point to their being a Turkicised Kurdish tribe (like the Kurds of **Gandja**). In the toponymy of the region south of Lake Urmia (cf. the article **SĀWĀJ-BULĀK**), we find traces of the passage of the **Shakāki** (the village of **Kīshlak-Shikāki** at **Suldūz**).

(V. MINORSKY)

SHAKAR-GANDJ, Indian saint, whose real name was FARĪD AL-DĪN MAS'ŪD, was born in 569 A.H. (1173 A.D.). He was a disciple of Khwāja Kūtb al-Dīn Bakhtiyār Kākī and settled in Adjwadhan, better known as Pākpatan, in Multan and died there on Saturday, Muḥarram 5, 664 (October 17, 1265), at the age of 95 years. It is said that by continued fasting his body had become so pure that whatever he used to put into his mouth to allay the cravings of hunger, even earth and stones, used to turn immediately into sugar; hence he derived his title of **Shakar-gandj**, "sugar-store".

At the tomb of this saint there is an annual fair on the fifth day of Muḥarram, and Muslims in considerable numbers come there to pass through a narrow gate-way known as the *Bihishtī Darwāza* or "Gate of Paradise", which leads to the mausoleum and is opened only once a year.

His teachings were collected by his famous devotee Badr al-Dīn Ishaḳ b. 'Alī al-Dihlawī under the title of *Asrār al-Awliyā*.

(M. HIDAYAT HOSAIN)

SHAKĪKAT AL-NU'MĀN (A.), the blood-red *Anemone hortensis* or *A. conoraria*, which is a native of the Mediterranean lands and nearer Asia. According to al-Kazwīnī, *al-Adjā'ib al-Makhlūqāt*, i. 288, it is also called *Khadd al-Adhrā'*, "the virgin's cheek", and Persian *Lālah* (cf. Vuller's, *Lex.*, ii. 1074: "any wild flower and especially the tulip and anemone"). It opens by day and closes at night and turns towards the sun. Nu'mān b. al-Mundhir (reigned 482-489 A.D.) is said to have said as he passed a spot covered with anemones: "any one who pulls up one of these, will have his shoulder torn out". *Shakika*, however, was also the name of Nu'mān's mother. Others say the name comes from *shakika* "summer-lightning" and *nu'mān* "blood", which is probably truer. According to de Lagarde, *ἀνεμώνη* is the Greek transcription of *an-nu'mān*; according to Dozy, *Glossaire des mots espagnols*, p. 373, it is the other way round and *an-nu'mān* comes from *anemone*. Ibn al-Baitār gives a detailed description of the plant; the medicinal uses of it and its root are numerous.

SHAKUNDA, arabicised form of Secunda, name of a little town opposite Cordova on the left bank of the Guadalquivir. According to al-Maqqārī and Ibn Ḥalīb it was originally surrounded by a rampart. It was here that a decisive battle was fought in 747 A.D. between the Ma'addī clan under Yūsuf al-Fihri [q. v.] and al-Ḥumail b. Ḥātim [q. v.] and the Yamani clan commanded by Abū 'l-Khaṭṭār who was defeated. Later at the zenith of the Umayyad caliphate, Secunda became one of the richest suburbs of Cordova and was also called the "southern suburb" (*al-rabaq al-djānūbi*). The celebrated Abū 'l-Walid Ismā'īl b. Muḥammad al-Shakundī, the most famous man of letters in al-Andalus in his day was born in Secunda; he was appointed Kādī of Baeza and Lorca by the Almoḥad Sultān Ya'qūb al-Manšūr and died in 629 (1231/1232). It was he who wrote the famous epistle (*risāla*) on the merits of his native country as a companion piece to that which the author Abū Yahyā b. al-Mu'allim of Tangier had composed on the excellence of North Africa. The text is given almost in full by al-Maqqārī in his *Nafḥ al-Tib*. On him see especially: F. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898, No. 234, p. 276-280.

Dozy, *Histoire des Musulmans d'Espagne*, i. 286 sqq. (E. LÉVI-PROVENÇAL)

SHAKŪRA, a Spanish Arabic place-name corresponding to the Spanish Segura. This last name is now only applied to the river which waters Murcia and Orihuela and flows into the Mediterranean near Guardamar. In the Muslim geographers this river is usually called the "white river" (*al-nahr al-abyaḍ*). It rises like the Guadalquivir in the range called Djabal Shakūra, but on the eastern slope. The mountains to which this name was given are of considerable extent. They were, according to the Arab geographers, covered with forests and had no fewer than 300 towns and villages and 33 strongholds. They corresponded apparently not only to the Sierra de Segura still called on the maps Sierra de Segura, but also to those called del Yelmo, de las Cuatro Villas, de Castril and de Cazorla. The highest points are the Yelmo de Segura (6,000 feet) and the Blanquilla (6,100 feet).

Shakūra was also the name in the Arab writers of a fairly important town in the district, clustered round a castle reputed to be almost inaccessible. It was here that Ibn 'Ammār, the vizier of the 'Abbādid al-Mu'tamid, came to seek refuge with Ibn Mubārak, lord of the town, who handed him over to his master. At the end of the Almoravid dynasty, Segura was the usual residence of Abū Ishāk Ibrāhīm b. Hemoshko, lieutenant and vassal of the famous king of Murcia, Abū 'Abd Allāh Muḥammad b. Mardaniṣh.

LÉVI-PROVENÇAL)

SHALTĪSH (sometimes SALTĪSH), Spanish Saltes, is the name which the Arab geographers give to the little island situated in the estuary of the river Odiel opposite the modern Huelva (Ar.: Walba). A fairly minute description of it is given by al-Idrisī: it almost touches the mainland on the west coast, for the arm of the sea which separates it is only half a stone's throw in width. This island has no spring of drinking water; there was a little town on it in the period of Muslim rule. It is a fishing centre of some importance; according to Ibn Sa'īd, the fish caught here were salted and sent to Seville. Saltes formed part of the province of Sīdona (Arab.: *Shadhūna*) and in the middle ages shared the destinies of Huelva. This island was the last possession of the Bakrī ruler Abū Mus'ab 'Abd al-'Azīz after in 1051 he surrendered his capital to the 'Abbādi sovereign al-Mu'tadīd.

AL-SHALYĀK, the usual Arabic name for the constellation of the Lyre (Lyra), is the arabicised form of the Greek word *χέλυς* (= lyre), as the Arabs usually reproduce the Greek *χ* by *sh* (cf. Arshimides, Eutoshios) and are fond of adding a *k* to such foreign words (E. B. Knobel, see below, thinks the meaning of *shalyāk* is unknown). The word *Sulḥafā* is a second name for the Lyre occurring in Ulugh Beg; it again corresponds to the Greek *χέλυς* in its original meaning of "turtle". *Al-Lūra*, the form taken from the Greek *λύρα*, is also found quite early in the Arab astronomers, e.g. in al-Bīrūnī, in the form *ṣūrat al-lūrās wa-huwa al-ṣandj* (*al-ḵānūn al-Maṣ'ūdī*, Berl. MSS. Or., 8^e. 275, fol. 196^b) and not for the first time in Ulugh Beg (as L. Ideler thinks). The word *al-ṣandj* (= cymbal, harp) comes from the Persian *zang*, *sang* or *čang* (= Persian harp).

The constellation of the Lyre is a northern one, but is not circumpolar in the latitudes of the Muslim world. It thus contains stars, one of which is particularly striking for its brightness and its white light. This is α Lyrae or Vega. The full name of the star is: *al-nasr al-wāḳi* ("the falling eagle"). The last component of this expression was changed in course of time into Vega through the influence of the Spanish. The star Vega was classed by the Greeks and Arabs as of the first magnitude; as a matter of fact its magnitude is 0.1.

AL-SHA'M, Syria. From time immemorial the Beduins, troublesome neighbours of Syria and Palestine have been attracted by the fertility of this land, "a land of wine and leavened bread". They succeeded sometimes by whole tribes, sometimes by dribbles in slipping into the districts bordering on the desert. They founded there from the beginning of the 2nd century before Christ principalities at Ḥims, at Palmyra and at Petra. They did not take long to adopt the Syrian language and civilization. In the fifth century A.D. the Ḡhassānid phylarchs (cf. ḠHASSĀN) were entrusted with the defence of the Syrian *limes*. They soon embraced Christianity. So also did the tribes, which in the sixth century roved up and down the steppes which separated Syria from Arabia: the Banū Kalb, the Banū Lakhm, the Banū Djuḍhām [q. v.]. As is attested of the Banū Kalb (*Aghāni*, xx. 127), these Syro-Arabs spoke a sort of *sabir*, a mixture of Arabic and Aramaic, related without doubt to the Ṣafaitic dialect. Thus any of these groups before the Ḥidjra might have given a name to the Arab Parnassus. They all believed themselves to be Syrians and had only commercial relations with the Arabs of Naḡjd and the Ḥidjāz. At Mūta [q. v.] they fought with the Byzantines against the invaders from Medina.

The Arab conquest: The death of Muḥammad (June 8, 632) and the election of Abū Bakr, was the signal in Arabia for the *ridḍa*, the defection of the tribes. A year after that date bands were formed around Medina amongst the Beduins who had taken part in the bloody sup-

pression of this revolt. They undertook the government of Syria, in conformity with an order of the Prophet or simply with the object of ravaging this land now without defenders. Thinking he had only to deal with an ordinary raid of pillaging Beduins, Sergius, commander in Caesarea, hurried to meet them with several hundred hastily equipped soldiers. He came upon the Arabs assembled in the valley of al-'Araba, to the west of the Dead Sea. Overcome by numbers, the Byzantines retired in disorder, and suffered a second defeat at Dāthina. Sergius fell in the débâcle (Feb. 634). The imperial troops collected reinforcements, and the Arabs received reinforcements from Medina. Under the command of Ḳhalid b. al-Walid [q. v.] who had hurried from the Irāk, they inflicted on the enemy the disastrous defeat of Adjnādain (July 30, 634) between Jerusalem and Baitḍjibrin. The defeated forces tried to reform behind the marshes of Baisān. Dislodged, they crossed the Jordan, to be again defeated at Fihl (Pella). Palestine was definitely lost to the Empire.

In March 635, the Arabs took up their position under the walls of Damascus. Abandoned by the Greek garrison, the citizens capitulated in the following September. The army collected by Heraclius to raise the siege arrived too late. The Arabs established themselves in Djabīya, then retired to entrench themselves behind the Yarmūk, the eastern tributary of the Jordan. A mutiny of Armenian troops broke out in the Byzantine camp. Abandoned by the Syrian Arabs in the middle of the battle, the imperial forces were completely routed. This battle (Aug. 20, 636) settled the fate of Syria. The conquest of the north and of the Phoenician coast was simply a route-march. Everywhere the towns, abandoned by their garrisons, paid contributions. Nowhere was a serious resistance encountered. This was literally the *falḥ yasir*, easy conquest, as Balāḍhūrī tactfully calls it. Jerusalem did not surrender till 638, and Caesarea after a more or less continuous siege of seven years, in 640, thanks to the treachery of a Jew. After the surrender of the last coast towns of Palestine, the conquest could be regarded as complete.

Shortly before the capitulation of Jerusalem, the Caliph 'Omar arrived in Syria, to preside over the congress or "Day of Djabīya" [q. v.]. The question of the organization of Syria was debated. The year 18 was marked by the plague of 'Amwās [q. v.]. Yazīd b. Abī Sufyān, governor of Damascus, perished in the epidemic and was replaced by his brother, Mu'āwiya. 'Omar rigorously maintained the political inequality of the conquerors and conquered. The latter formed the *dhimmī*'s. The privileged race of Arabs was to furnish the framework of a military and salaried aristocracy. Syria was divided into *djund* or military districts: Damascus, Ḥims, Palestine, al-Urdunn or the Province of Jordan. Yazīd I later added the *djund* of Kinnisrin for the north of Syria. From their military cantonments — the chief of which was Djabīya — the conquerors controlled the country and collected the taxes. Besides the land tax, the *dhimmī*'s paid a personal or poll-tax. In Syria, as in the other conquered provinces, "organisation was confined to a military occupation for the exploitation of the natives. The Arab government was confined to finance; their chancellery was an audit office" (Wellhausen, *Das arabische Reich u. sein Sturz*, p. 20).

At the beginning of his administration, which under 'Othmān extended over all Syria, Mu'āwīya realised the necessity of getting the support of the Beduin tribes, politically more developed than the Beduins of the peninsula. For his military operations see the article MU'ĀWĪYA.

'Alī, 'Othmān's successor, wanted to dismiss him, but the Syrians took the side of their governor. The encounter between Syrians and 'Irākīs on the battlefield of Šiffin [q. v.] being undecided, arbitrators were appointed to decide between the two parties. The conference at Adhroḥ [q. v.] proclaimed the overthrow of 'Alī (Jan. 658). Profiting by this diplomatic success, Mu'āwīya sent 'Amr b. al-ʿĀs, his lieutenant, to conquer Egypt. On January 24, 661, 'Alī fell a victim to a Khāridjī dagger, and the field was left clear for his rival.

Omayyad Syria: Mu'āwīya had only been awaiting this day to found a dynasty, that of the Omayyads. The elder branch is called Sufyānid, from Abū Sufyān [q. v.], father of Mu'āwīya. The younger line begun by Marwān b. al-Ḥakam took from him the name Marwānid.

Mu'āwīya was acclaimed Caliph at Jerusalem by the troops and emirs of Syria. By taking up his residence in Damascus, he made it the capital instead of Medina, or Kūfa. Whether deliberate or not, this step displaced the centre of gravity of the caliphate to the advantage of Syria. It dealt the unjustified supremacy of the Beduins a blow from which it never recovered. Mu'āwīya made the Syrian Arabs supreme, and under the Omayyads they held all the principal offices. He twice tried to besiege Constantinople. For a verdict on the policy and character of the sovereign, who was with 'Omar I the real founder and organiser of the Caliphate, see the article MU'ĀWĪYA. He died at Damascus in April 680 (aged 75).

His son and successor, Yazīd I, had to face a rebellion, which the ability of his father had been able to prevent breaking out. Ḥusain b. 'Alī and 'Abdallah b. al-Zubair [q. v.], nephew of 'A'isha, the prophet's widow, refused to recognise Yazīd and took refuge on the inviolable territory of Mecca. Ḥusain left the sanctuary to fall in the massacre of Karbalā' (cf. MASHHAD ḤUSAIN); on October 10, 680 Medina quarrelled with Syria, and its inhabitants proclaimed Yazīd deposed. After futile negotiations recourse was had to arms. Victorious on the day of al-Ḥarra [q. v.], the Syrians marched on Mecca, where Ibn al-Zubair had declared himself independent. His headquarters were in the great mosque. A scaffolding of wood covered with mattresses protected the Ka'ba from the Syrian catapults. The carelessness of a Meccan set it on fire (Nov. 683). The news of the death of Yazīd (Nov. 11, 683) decided the Syrian army to retreat. Yazīd was not a worthless sovereign, still less the tyrant depicted by anti-Omayyad annalists. He continued his father's policy. The patron of artists and poets, and himself a poet, he completed the administrative organisation of Syria by creating the *djund* of Ḳinnisrīn (cf. above). He perfected the irrigation of the *Ghūta* [q. v.] by digging a canal which was called after him. The *Continuatio Byzantino-Arabica* calls him "*jucundissimus et cunctis nationibus regni ejus gratissime habitus . . . cum omnibus civiliter vixit*". Beloved of his subjects, he lived *civiliter* like a private citizen. "No Caliph", says Wellhausen, "ever had such praise: it comes from the heart".

His younger son, the valetudinarian Mu'āwīya II had but a transitory reign. He was apparently carried off by the plague which was raging in 684. His brothers were all very young. The fact that they were minors compelled the Syrian chiefs to give their support to Marwān b. al-Ḥakam [q. v.], first Caliph of the Marwānid branch (June 22, 684). The Syrian Ḳaisīs having refused to recognise him, were defeated at Mardj Rāhiṭ [q. v.]. His reign was a continual series of battles. A rapid campaign secured him Egypt. Exhausted with his exertions, the septuagenarian Caliph returned to Damascus to die on May 7, 685. His eldest son 'Abd al-Malik [q. v.] succeeded him. He had to retake the eastern provinces and Arabia from the anti-Caliph Ibn al-Zubair, and at the same time repel an invasion of the Mardaīs or Djurādjima [q. v.]. In Jerusalem we owe him the building of the mosque of al-Aḳṣā. His reign marks the beginning of the nationalisation or arabicising of the administration, which had remained in the hands of the individuals of the conquered races. He succeeded, if not in substituting Arabic for Greek, in getting it used alongside of Greek in the keeping of the official accounts and registers. He was the creator of Arab coinage. 'Abd al-Malik died in Oct. 705, after a reign of 20 years.

His successor, Walid I, brought to the throne an autocratic temperament and a display of religious fervour unknown in his predecessors. He was the great builder of the dynasty. According to the earliest evidence it seems that the Christians of Damascus had been allowed to retain the splendid Basilika of St. John. Walid took it from them and turned it into a mosque. In his reign the Arab empire attained its greatest extent. Walid was singularly successful in his enterprises. His autocratic mood revealed itself in a diminution in tolerance to the conquered peoples. The great administrative offices were definitely taken from the Christians. By his fondness for magnificence, Walid secured undisputed popularity with the Arabs of Syria. He died on February 23, 715.

His brother, Sulaimān b. 'Abd al-Malik [q. v.], founder of al-Ramla [q. v.] in Palestine, succeeded him. He perished at the disastrous siege of Constantinople. He was succeeded (Aug. 717) by his cousin 'Omar II b. 'Abd al-'Azīz [q. v.] who died on February 9, 720, and was replaced by the incapable Yazīd II. From the time of Walid I the Omayyads had begun to forsake Damascus; the official capital, it ceased to be the Caliph's residence. The decline of the dynasty set in after the death of 'Omar II. Hishām, who succeeded Yazīd II, vainly endeavoured to revive the prestige of the Syrian caliphate. The conquests ceased. In France the Arabs suffered the disastrous defeat of Poitiers, Oct. 732. Hishām allowed the Melkite patriarchs of Antioch to reside in Syria. His greed, the failure of his military plans, and finally the way in which he shut himself up in his desert palace of Ruṣāfa, made this ruler unpopular, though he was the most hard-working of the Omayyad caliphs. He was succeeded in February 743 by his nephew, Walid II, son of Yazīd II. This prince, an artist and poet, lived contentedly in the desert, where he began the building of the splendid palace of Mshattā [q. v.]. He died at the hands of an assassin before finishing it (April 744). His successor, Yazīd III, was the

first caliph born of a slave. He died five months later, having designated as his successor his insignificant brother, Ibrāhīm, who did not succeed in getting himself acknowledged.

In the midst of the general anarchy, there came on the scene the energetic governor of Mesopotamia, Marwān b. Muḥammad [q. v.], grandson of the caliph Marwān I. The victory of 'Aindjarr in the Bkā' broke the resistance of his adversaries, the Syrian Yemenis. Becoming caliph in December 744, Marwān II made the mistake of moving the capital to Ḥarrān (Mesopotamia) which alienated the Syrians from him. He exhausted himself in putting down their rebellions and those of the Khāridjīs. The 'Abbāsids, were now secretly conspiring against the Omayyad dynasty. Taking advantage of the disaffection in Syria, Abu 'l-'Abbās al-Saffāḥ [q. v.] had himself proclaimed caliph at Kūfa (Nov. 749). After his defeat on the great Zāb (Jan. 750) Marwān had to evacuate Mesopotamia, and then Syria. Abandoned by the Syrians, he took refuge in Egypt where he died at Abūšir in August 750. The Omayyads were everywhere pursued and exterminated, their tombs desecrated, and their ashes scattered to the winds. The Syrians tried in vain to regain their lost ground. They raised the "white flag" of the Omayyads in opposition to the "black flag" of the 'Abbāsids. They found too late that by indifference to the fall of the Omayyads they had thrown away the future and supremacy of Syria. They hoped henceforth for speedy coming of al-Sufyānī [q. v.], a national hero and champion of Syrian liberty. As his name shows, al-Sufyānī, was to be a descendant of Abū Sufyān. He was to bring back the golden age and the happy days of the dynasty, the memory of which his name perpetuates.

Immediately after the conquest, the tribes of Syria had to learn the dialect of the Ḳuraish, now promoted to be the classical language. Among the Syrian Arabs, distracted by foreign conquests and the suppression of revolts in the provinces, intellectual activity under the Omayyads had been confined to poetry. The chief representatives of this literary renaissance were, next to the Taghlibi Christian Akḥṭal [q. v.], the Caliphs Yazid I and Walid II. Arts and liberal professions remained the monopoly of the subject races, like banking and commerce. The Ḳadari movement [q. v.] which seems to have started in Syria, shows that the Arabs of Syria were beginning to take an interest in the philosophical problems to which they had been introduced by their Christian compatriots.

Agriculture remained flourishing in spite of the greed of the exchequer. As a result of the war with Byzantium, maritime trade had considerably diminished. On the other hand the fall of the Persian empire had opened up Central Asia to the Syrians, but they were soon to meet the competition of the commercial cities of the 'Irāk, notably Baṣra. Syrian commerce, so active in the time of Justinian, became dormant under the Arabs. When maritime relations were resumed, it was the western peoples who secured the advantage from it, at the time of the Crusades. From the time of the Marwānids, the great towns of eastern Syria — Damascus, Ḥims, etc. — began to be islamised as a result of the abolition of the military cantonments. The subject races learned Arabic, without, however, abandoning Aramaic

or Greek. Decimated by epidemics, famine, civil strife and foreign wars, the Arab population of Syria grew slowly. If we neglect local outbursts of fanaticism, there is no evidence of systematic persecution or proselytising encouraged by the authorities. The latter only exercised pressure on the Christians of Arab race, the Tanūkh and Taghlib. The Banū Kalb and other Syrian tribes had adopted Islām soon after the conquest.

In spite of their position as political helots, this was a period of marked tranquillity and tolerance for non-Muslims, if we compare it with the troubles that awaited them under the 'Abbāsids. For the Arabs, paid and fed by the State, it was a golden age, a continual feast. Their chiefs, growing rich in exploiting the provinces, acquired enormous fortunes. What favoured the success of the 'Abbāsid conspiracy was the incapacity of the latter Marwānid caliphs, excluding of course Hishām and Marwān II.

Then came the grave and continuous dissensions, after Mardj Rāhiṭ, between Ḳaisis and Yemenis, and lastly the refusal of the conquerors to grant political rights to the non-Arabs, who were their intellectual superiors.

'Abbāsid and Fātimid Syria. With the fall of the Omayyads, Syria lost its privileged position, and ceased to form the centre of a vast empire. It found itself reduced to the rank of a simple province, and jealously watched on account of its attachment to the old régime. The capital of the caliphate was moved across the Euphrates. Straining under a power, the hostility of which they never ceased to feel, the Syrians found themselves systematically excluded from all share in government affairs, as they were henceforth to be under the Fātimid and succeeding rules. The caliphs of Baghdad only intervened in Syria to make it feel its position of inferiority by inflicting increased taxation on it. Driven to extremes by the exactions of the caliph's agents, the Christians of Lebanon attempted without success to gain their freedom in 759—760. On the occasion of the pilgrimage or of the war against the Byzantines, the Caliphs al-Manṣūr, al-Mahdī, Hārūn and al-Ma'mūn passed through Syria. In the midst of the troubles that preceded the accession of al-Ma'mūn (813—833), the position of the Christians became intolerable and many of them migrated to Cyprus.

The misfortunes of their country, the loss of its autonomy, could not decide Ḳaisis and Yemenis to forget their regrettable differences, which ended by weakening the Syrians and dooming to failure their efforts to shake off the 'Abbāsid yoke. A descendant of Mu'awiya, 'Alī b. 'Abdallāh al-Sufyānī, raised the "white standard" which had become the symbol of Syrian independence. But to get the support of the Kalbis, he alienated the Ḳaisis (809—813). Another rising was no more successful. An Arab of obscure antecedents, named Abū Ḥarb of Yemeni origin, proclaimed himself the Sufyānī (cf. above). The indifference of the Ḳaisis once again brought about his defeat in the reign of the Caliph al-Mu'tasim (833—847). Yielding to caprice the moody caliph al-Mutawakkil (847—861) thought of shifting his capital and living in Damascus. A mutiny in his guard forced him to return to Mesopotamia. His reign was a period of severe trial for the Syrians. From his reign dates for the most part the intolerant legislation, which it has been proposed to attribute

to 'Omar I: the wearing of a special dress, the prohibition of riding on horseback etc. Numerous churches were turned into mosques. At this date there were no longer any Christians of Arab stock in Syria. Under the Omayyads, the Banū Tanūkh had resisted all advances of the government. The Caliph al-Mahdī (775—785), however, forced them to apostatise.

It is to the early 'Abbāsids, that the Syrian military marches owe their origin, the *'awāsim* and *thughūr* [q.v.], lines of forts built to check the progress of the Byzantine invaders. In 906 an agitator claiming to be the Sufyāni was arrested. This was the last attempt at an Omayyad restoration; it failed before the apathy of the demoralised Syrians. A Turkish Mamlūk, Aḥmad b. Ṭūlūn [q.v.], already master of Egypt, invaded Syria under pretext of defending it against the Byzantines. He declared himself independent there. The dynasty which he founded had only an ephemeral existence (875—905), as had that of the Ikshīdids (875—905) who repeated the experience of the Ṭūlūnids. In the interval, Syria had been devastated by the Karmatians [q.v.] who left behind them the germ of Ismā'īlī doctrines. From the time of the Ṭūlūnids, the country may politically speaking be considered lost to the 'Abbāsids. Their power was only felt there during a few brief periods of restoration.

In their turn the Beduin tribes wished to take their share in plundering an empire in decay. A Taghlibī clan, the Banū Ḥamdān [q.v.] found themselves entrusted with the reconquest of Syria for the Ikshīdids and checking the Byzantine advance. They installed themselves as masters of the south of the country, without however breaking with the 'Abbāsīd caliphate. The most famous of these Ḥamdānīd emirs was Saif al-Dawla [q.v.], who in his court at Aleppo, showed himself an enlightened patron of arts and letters (949—967). After the fall of the Ḥamdānīds (1003/1004) in spite of a brief 'Abbāsīd reaction at Damascus (975—977), Syria fell into and remained for over a century (977—1098) in the hands of an 'Alid dynasty, or more accurately Ismā'īlī, that of the Fāṭimīds [q.v.].

Having conquered Egypt, the Fāṭimīd armies invaded Syria (969), and conquered Palestine and then Damascus, without encountering any particular resistance. In the centre and north it is difficult to say what form the Egyptian conquest took. The direct authority of the Fāṭimīds was enforced so long as their troops occupied the region. After their departure, the local Emīrs did as they pleased without openly breaking with the suzerain in Cairo. Fāṭimīd rule was only kept up in Syria by continually dismissing the agents to whom it was forced to delegate its authority, thus perpetuating administrative instability. In Palestine it had to reckon with the Banū 'l-Djarrāḥ. These Emīrs of the tribe of Ṭayy arrogated to themselves for over a century a regular hegemony over the nomad Syrians. In the reign of al-Ḥākim (996—1020), the Banū 'l-Djarrāḥ amused themselves by appointing an anti-caliph, and then sending him back to Mecca, whence they had brought him. In Tyre a humble boatman succeeded for a time in declaring himself independent (997).

Taking advantage of the anarchy the Emperor Nicephorus Phocas (963—969) had conquered Northern Syria. His successors, Tzimiscēs (969—976) and Basil II (976—1025), easily con-

quered the valley of the Orontes and the Phoenician coast. Of all these conquests all that the Byzantines were able to keep for over a century was the "duchy" of Antioch, which included northern Syria, except the emirate of Aleppo. We have already mentioned the Caliph al-Ḥākim [q.v.] with whom is connected the origin of the Druses [q.v.]. This moody prince quarrelled with the Christians and ordered the Basilika of the Resurrection in Jerusalem to be destroyed. Syria gradually detached itself from Egypt. In the midst of the political disorders, the pernicious influence of the Beduins increased. About 1023, the Banū Mirdās of the Kaīsī tribe of Banū Kilāb established themselves in Aleppo, and held it with interruptions till 1079.

By this time the Saldjūks [q.v.] had already gained a footing in Syria. The provinces of Syria fell into their power, Damascus in 1075. At Jerusalem a Saldjūk Emīr Ortoḡ, founded a local dynasty (1086—1087). In 1084, the Greeks lost Antioch, their last possession in Syria. Syria was now divided into two Saldjūk Sultānates, that of Aleppo and that of Damascus. Saldjūk Emīrs more or less independent commanded at Aleppo and Ḥims, all at war with one another. At Tripoli, a humble *Ḳādī* founded the dynasty of Banū 'Ammār. To the south of this town the towns on the coast remained in the hands of the Egyptians. Into the midst of this confusion, this piecemeal distribution of territory, came the armies of the Crusaders.

The persistent hostility shown by the 'Abbāsīds to the intellectuals of Syria, the political anarchy, the rule of Turkish and Berber adventurers, unlettered and greedy masters, were all circumstances unfavourable to the progress of ideas. A few poets had gathered at the court of the Ḥamdānīds and Mirdāsīds of Aleppo. The patronage of Saif al-Dawla encouraged the preparation of the celebrated *Kitāb al-Aghani*. The reader may be referred to the articles on Abu Tammām, Abu 'l-'Alā' al-Ma'arrī, al-Mutanabbī, a native of Kūfa, but a Syrian by education and upbringing, al-Maḳḍīsī, one of the most justly esteemed of Arab geographers. Less tolerant, more irritating than the Omayyads, the authorities began to encourage conversion to Islām. Arabic slowly began to take the place of Syriac as the spoken language of the subject races, who began to write in it. Profane sciences, especially medicine, began to be cultivated, mainly by Jews and Christians. The end of this period coincides with the institution of the Madrasas [q.v.] which grew up under the stimulus of the Saldjūks, especially in Aleppo and Damascus. The lack of respect into which the 'Abbāsīd caliphate had fallen reacted on orthodox Islām: it favoured the rapid growth of sects practising initiation and following the *Shī'a*: the Druses, Ismā'īlīs, Nuṣairīs and Mutawālīs [q.v.].

The exactions of the 'Abbāsīd and Fāṭimīd agents diminished without however destroying the great vitality of the country. In 311, a governor of Damascus was sentenced to pay 300,000 dinārs to the treasury. The country began to become depopulated and agriculture languished. Its complete decline was only checked by the introduction of new crops: sugar-cane and the orange. Cotton-growing was developed and cotton was used for the manufacture of paper. In the tenth century there was a paper factory in Damascus. One should

read the sketch of the commerce of Syria in al-Maḥḍisī's geography, *Aḥṣan al-taḥāsim* (p. 180, 184), to get an idea of the varied resources of a country which centuries of oppression and the most deplorable administration had not been able to impoverish.

Syria under the Franks. On October 21, 1097, the army of the Crusaders appeared before the walls of Antioch. After a very laborious siege, they entered it on June 3, 1098. Then following the valley of the Orontes through the mountains of the Nuṣairis and along the coast, the Franks, now reduced to 40,000 men, debouched before Jerusalem. The city, which the Fāṭimids had just retaken from the Ortokids, was taken by assault on July 15, 1099, and Godfrey of Bouillon elected head of the new Latin state (1099–1100). But the first Frank king of Jerusalem was really his brother and successor, Baldwin I. He conquered the towns on the coast, Arsūf, Caesarea, Acre, Ṣaidā, Bairūt and Tripoli (1109–1110). This brave leader, the most remarkable of the crusading sovereigns, died during an expedition against Egypt (1118). His successor, Baldwin II du Bourg, captured Tyre in 1124; he failed before Damascus, but the town had to promise to pay tribute.

It was towards 1130 that the Latin kingdom attained its greatest extent stretching from Diyārbakr to the borders of Egypt. In Syria its frontier never crossed the valley of the Upper Orontes, nor the crest of the Anti-Lebanon. The great cities of the interior, Aleppo, Ḥamā, Ḥimṣ, Baalbek, Damascus while agreeing to pay tribute, remained independent. The kingdom consisted of a confederation of four feudal states: 1. On the east, the county of Edessa lay along the two banks of the Euphrates. 2. In the north the principality of Antioch included in its protectorate Armenian Cilicia. 3. In the centre the county of Tripoli stretched from the fort of Margat (Marḡab) to the Nahr al-Kalb. 4. Lastly came the royal domains, or kingdom of Jerusalem, strictly speaking. It included all cis-Jordan Palestine and in Transjordan, the ancient districts of Moab and Edom, which became the seignury of Crac (Kerak, q.v.) and of Montréal (cf. SHAWBAK) "in the land of Oultre-Jourdain". For a time it had a dependency, the port of Aila-^cAḡaba. To defend these possessions the Crusaders built strong castles: the Crac des Chevaliers (Ḥiṣn al-Akrād, q.v.), Chastel-Blanc (Ṣafīṭā), Maraclea (Marāḡiya), Margat (Marḡab) and in southern Lebanon, Beaufort (Shāḡif Arnūn). Lastly in Transjordan the two massive fortresses of Crac and Montréal.

After the death of Baldwin II (1131) the decline of the Latin state began; it was hastened by the isolation of the Crusaders and their lack of unity. The Byzantines claimed the rights of a suzerain over the north of the kingdom. The Armenians sought to form a national state for themselves in the region of the Taurus. Instead of coming to an agreement, Franks, Byzantines and Armenians only succeeded in enfeebling one another to the advantage of the Muslims, who were gathered round remarkable leaders like Zangī, Nūr al-Dīn and Ṣalāḥ al-Dīn [q.v.]. Baldwin III (1144–1162) resumed the siege of Damascus (July 23–28, 1148) without any more success than his predecessors. Already Lord of Aleppo, Nūr al-Dīn installed himself in Damascus. Amaury, king of Jerusalem from 1162, formed the bold project of seizing the

heritage of the dying dynasty of the Fāṭimids. He was anticipated by Nūr al-Dīn. The latter sent his lieutenant, the Kurd Ṣalāḥ al-Dīn, to Egypt. On the death of the last Fāṭimid Caliph, Ṣalāḥ al-Dīn proclaimed himself independent in Egypt, and founded the Aiyūbid dynasty there, then seized Damascus from the sons of Nūr al-Dīn. On July 4, 1187, at Ḥaṭṭīn between Tiberias and Nazareth, the whole Christian army under Guy de Lusignan fell into the hands of Ṣalāḥ al-Dīn. Jerusalem capitulated on October 2 following. Deprived of their defenders, the other cities, except Antioch, Tripoli and Tyre, had to surrender.

The preaching of the third crusade brought to the camp before Acre, which the Franks had been besieging two years, Philip Augustus of France and Richard Coeur-de-Lion of England. The town surrendered on July 19, 1191. A truce between the belligerents ceded the coast from Jaffa to Tyre to the Crusaders. In default of Jerusalem, which they had been unable to reconquer, Acre was henceforth the capital of the kingdom. The death of Ṣalāḥ al-Dīn produced dissension among his numerous heirs. The Emperor Frederick II took advantage of the discord to negotiate with al-Malik al-Kāmil, Aiyūbid Sulṭān of Egypt, for the cession of Jerusalem and other places of no strategic importance. Threatened by the sons of Ṣalāḥ al-Dīn, who had made an alliance with the Franks, their uncle al-Malik al-Kāmil called in the help of the Khwārizmis who crushed the combined Syrian and Frankish forces near Ḥazza (1244) and enabled the Egyptians to occupy Jerusalem, Damascus and Ḥimṣ.

The seventh crusade brought St. Louis to Syria after the check to his expedition to Egypt. For four years (1250–1254) he was engaged in fortifying the towns of the coast. It was the Mamlūk Sulṭāns, Baibars, Ḳalā'ūn and al-Malik al-Ashraf, son of the latter, who dealt the last blow to the Latin kingdom. Acre fell (May 31, 1291) after a heroic defence. In the course of the next months, Tyre, Ḥaifā, Ṣaidā, Bairūt and Ṭarṭūs were taken or evacuated. 'Athlith [q.v.] the imposing fortress between Ḥaifā and Caesarea was the last to surrender (Aug. 14, 1291). The Frankish colonies in Syria were at an end.

The Crusades introduced into Syria the feudal organisation of contemporary Europe. The elective character of the kingship soon gave place to dynastic succession. The king only ruled directly the Palestinian kingdom of Jerusalem. His authority was limited by the privileges of the three orders: the clergy, nobility and bourgeoisie. "He cannot", notes Uṣāma b. Munḡidh, "annul the decisions of the Court of Seigneurs". The authority of the great feudatories within their principalities was circumscribed in the same way. Agricultural serfdom was retained, as had been the custom in Syria. The name "poulains" (*pullani*) was given to the issue of marriages between Franks and natives: the etymology of this word is still obscure. The army was recruited not only from Franks but also from Armenians and Maronites. The Turcopoles were the Muslim auxiliaries. The position of Muslims and Jews recalled that of the *dhimmi*'s [q.v.] in Muslim lands, with this difference that they were not so heavily taxed. According to Ibn Dju-bair, his co-religionists did not conceal their satisfaction with Frankish rule.

Every principality had its own silver coin.

There were also gold ducats, "besants sarracénats", or "sarrasins" with Arabic inscriptions. Commerce, more or less dormant since the Arab conquest, again became active as a result of maritime relations with the west, which were never greater. The principal ports were Acre, Tyre and Tripoli. In the principalities of the north, the terminus for continental trade was La Liche (Lādhikiya) or Soudin (Suwaydiya) now called Port St. Simeon. We have to go back to the time of the Phoenicians to find a period of so great economic activity.

The state of war hampered, but did not put a stop to intellectual activity among the Muslims of Syria. In Damascus, al-Ḳalānisi was busy with his history, and Ibn 'Asākir finished his monumental encyclopaedia, *Tārīkh Dimashq*, devoted to individuals who had a more or less remote connection with Syria. At the end of his troubled career, the Emir Usāma b. Munqidh, produced an autobiography which is very valuable for the study of the relations which existed between Franks and Muslims. Barhebraeus, Syrian and Mesopotamian, wrote Arabic and Syriac with equal elegance. It was in this last language that the Jacobite patriarch wrote a voluminous *Chronicle*. Muslims, Christians and Jews studied medicine with success. Never except in the Roman period had there been so much building. The fortresses built by the Crusaders are wonderful specimens of mediaeval military architecture. Among the churches which they built, we mention that of Djubail, the monumental basilika at Tārtūs, the graceful cathedral of John the Baptist, now the great mosque of Bairūt, with its walls once covered with pictures. Many crusading lords had adopted Syrian customs (*taballādū*, [Usāma]). In the collaboration of Franks and natives was hailed, as by Pope Honorius III, a "Nova Francia", the dawn of a new civilisation. The destruction of the Latin kingdom destroyed any hopes based on it. The coming of the slave dynasty (Mamlūks) opened a period of anarchy, such as Syria had not yet seen.

Mamlūk Syria. We have already given a resumé of the exploits of the early Mamlūk Sultāns against the Frank principalities. Fearing a return of the Franks and the warships of the European navy, which ruled the Mediterranean, the Mamlūks began to lay waste the towns of the coast, not even excepting the most prosperous, Acre, Tyre and Tripoli; they demolished the citadels at Ṣaidā and Bairūt. Tripoli was rebuilt two miles from the coast. From the administrative point of view, they retained the old Aiyūbid appanages and divided Syria into six main districts called *mamlaka*, or *niyāba*: Damascus, Aleppo, Hamā, Tripoli, Ṣafad and Kerak (Transjordania).

The past history of Damascus assured its *nā'ib*, or viceroy, not only authority over his Syrian colleagues, but a special prestige of his own. This high official had little difficulty in persuading himself that he had the same rights to the throne as his suzerain in Egypt. To guard against the ambition of the Syrian *nā'ib*'s, Cairo took care to change them continually (Ṣāliḥ b. Yahyā). Never did instability of government and greed of rulers, uncertain of the morrow, attain such proportions. Lebanon continued to enjoy a kind of autonomy. The dissenting Muslims of the highlands — Druses and Mutawālīs — took advantage of the troubles of the Mamlūks, occupied with the Franks and Mamlūks, to proclaim their independence. All the

forces of Syria had to be mobilised, and a long and bitter war endured (1293—1305) which ended in the complete destruction of the rebels and the devastation of Central Lebanon.

The Mongol Khāns of Persia were burning to avenge the military defeats which the Mamlūks had inflicted upon them. The most energetic of these sovereigns, Ghāzān (1296—1304), in 1299 secured the support of the Armenians and Georgians as well as of the Franks of Cyprus, and routed the Mamlūks near Hims. The troops occupied Damascus, and advanced up to Ghazza. The Egyptians having again invaded Syria, Ghāzān recrossed the Euphrates to meet them, but he was defeated in 1303 at Mardj al-Ṣuffar near Damascus. Syria had nothing to gain by the coming of the Burdjīs, who in 1382 replaced the Bahrī dynasty. They "preserved" Ibn Ayās tells us, "the old laws", that is to say the anarchical rule of their predecessors. Sultan Farāj (1392—1405) had to begin the reconquest of Syria no less than seven times. The year 1401 coincided with the invasion of Tīmūr [q. v.]. After the capture of Aleppo which they sacked, his hordes appeared before Damascus. The town having agreed to surrender, the Tatars plundered it methodically. The majority of the able-bodied inhabitants were carried off into slavery, especially artists, architects, workers in steel and glass. They were almost all taken to Samarḳand. Fire was then set to the city, to the mosque of the Omayyads and other monuments. Tīmūr led back his army and left Syria a prey to epidemics and bands of brigands. Meanwhile on the plateaus of Anatolia, the power of the Ottomans was gathering. The capture of Constantinople (1453) had increased their ambition. Death alone prevented Muḥammad II from invading Syria. His successors did not cease preparations. Ḳā'itbāy (1468—1496) and Bāyazīd [q. v.] signed a treaty of peace, but it was only to be a truce.

The destruction of Baghdād by Hülāgū and the fall of the 'Abbāsīd caliphate had shifted the centre of the Muslim world to the west of the Euphrates, Arabic literature found in the land of the Mamlūks an asylum, at best precarious. No encouragement was to be expected from ignorant and brutal sovereigns, many of whom could not even sign their own names. The intellectuals lived in the past, their activity lacks originality. It was the golden age of epitomizers, compilers, authors of handbooks and encyclopaedias. They were interested in collecting knowledge and learning it by heart. Among the encyclopaedists a special place must be given to the worthy Shihāb al-Dīn b. Fadlallāh al-'Omārī, author of the *Masālik al-Aḥbār*, a voluminous compilation of a historical, geographical and literary character for the use of officials of the Mamlūk chancellery. We may next mention Abu 'l-Fidā' [q. v.], historian and geographer, the geographer Shams al-Dīn al-Dimashqī (d. 1327), markedly inferior to his predecessor al-Maḳḍisī [q. v.]. The versatile al-Dhahabī [q. v.] was born in Mesopotamia but lived and died in Damascus (1353). Ibn 'Arabshāh (d. 1450) was the author of a history of Tīmūr. Al-Ṣafadī [q. v.] compiled a great biographical dictionary (1296—1383), Ṣāliḥ b. Yahyā (d. 1436), the author of the *Tārīkh Bairūt*, has left us in this work on the Emirs of the Ghārb the best contribution to the history of the Lebanon and a valuable supplement to the annals of the Frankish states. Ibn Taimiya [q. v.]

and his pupil Ibn Kaiyim al-Djauziya are among the most original figures of this period. Their activities covered the whole field of Muslim studies. Indefatigable polemicists with a keen scent for heresies, they have had the peculiar good fortune to be exalted both by the Wahhābīs and the modernist Muslims of to-day.

The departure of the Crusaders marks the end of a period of astonishing economic prosperity. Syrian commerce fell back into stagnation. Little by little, however, necessity forced the resumption of relations with Europe. The decline of Acre, Tyre and Tripoli, ruined by the Mamlūks and the fall (1347) of the Armenian kingdom of Cilicia, to which western merchants had first gone, were to the advantage of Bairūt. For over a century this town became the principal port of Syria. Near Damascus and opposite Cyprus, — the kingdom of the Lusignans and rendezvous of the European shipping — Bairūt was every year visited by ships of the Venetians, Genoese, Catalans, Provençals and Rhodians. These various communities had henceforth consuls as their representatives, officially recognised by the Mamlūks and receiving a grant or *djama'kiya*. On the other hand the Cairo government regarded them as "hostages" [*rahina*] (Khalil al-Zāhiri); it held them responsible not only for those under their jurisdiction, but also for acts of hostility by Corsairs. The consuls protected pilgrims and intervened if required on behalf of native Christians. Thus we already have the system of capitulations which was to be developed in succeeding centuries.

Syria under the Ottomans. With the opening of the XVIth century the rule of the Mamlūks had begun to break up. Their exactions had exasperated the populace. The Ottomān Sultān Selīm I. [q. v.] resolved to take advantage of the occasion to invade Syria. Taking the initiative, the Mamlūk Sultān, Qānsūh al-Ghūrī [q. v.] mobilised his forces, and marched via Damascus and Aleppo towards Anatolia. The two armies met at Dābiq, a day's journey north of Aleppo. The Turkish artillery and the Janissary infantry scattered disorder through the Egyptian ranks. Ghūrī disappeared in the disaster of Dābiq (Aug. 24, 1516). Aleppo, Damascus and the towns of Syria opened their gates to the conqueror who went on to Egypt and put an end to Mamlūk rule. The Turks retained at first the territorial divisions or *niyāba*. The Mamlūk Ghazālī, *nā'ib* of Damascus, had gone over to the Ottoman camp after Dābiq. The renegade was in return given the administration of the country except the *niyāba* of Aleppo, which was reserved for a Turkish Pasha.

On the death of Selīm I (1520), Ghazālī had himself proclaimed Sultān under the name of al-Malik al-Ashraf. He was defeated and killed at Kābūn at the gates of Damascus (Jan. 1521). Before the end of the 16th century, Syria had become divided into three great pashaliks: 1. Damascus, comprising ten sandjaks or prefectures, the chief of which were Jerusalem, Ghazza, Naplus, Šaidā and Bairūt; 2. Tripoli, including the sandjaks of Hims, Hamā, Salamiya and Djabala; 3. Aleppo, including all North Syria, except 'Aintāb, which was included in the pashalik of Mar'ash. In the century following, the pashalik of Šaidā was created to include Lebanon. In its main outlines, this administrative division lasted till the middle of the xviiith

century, when the centre of government of Šaidā was moved to Acre.

The Diwān of Stambul was only interested in Syria in so far as it enabled it to watch Egypt and Syria, and to levy upon its resources contributions to the expenses of the palace and for foreign wars. The taxes, which were put up to auction went to the highest bidder. According to a Venetian Consular report, the pashalik was worth 80,000 to 100,000 ducats (probably the silver ducat, the Venetian *grosso* whence *kirsh* plur. *kurush*, or piastre = 5 francs). The Pashas only administered directly the important towns and their immediate neighbourhood. The interior of the country was left to the old feudal tenants whose number and influence had increased since the Mamlūks: — Bedouin emirs, Turkomans, Mutawālīs, Druses, Nušairīs. The Porte only asked them to pay the tribute or *miri*, without worrying if it saw them fighting with its own representatives. Every year the Turkish Pasha at the head of his artillery and janissaries set out to collect the taxes. The force lived on the country and laid it waste if resisted. Is it remarkable that agriculture, the principal resource of Syria declined, the population diminished, the country districts emptied in favour of the Lebanon and mountainous districts where the harassed people sought an asylum?

The instability of their position increased the rapacity of the Turkish functionaries. Damascus saw 133 Pashas in 180 years. This period saw the rise of Fakhr al-Dīn [q. v.], the champion of Syrian independence (1583—1635), the Mutawālī emirs, the Banū Harfūsh, lords of Ba'albek and al-Bkā', the Banū Manšūr b. Furaikh, Beduin Shaikhs, who carved out for themselves an appanage in Palestine and in the region of Naplus. These feudal lords were fairly well organised in spite of their cupidity, and they were able to defend their gains from the arbitrary Turk. By sending round the Cape the traffic of the middle East, the Portuguese occupation of India proved fatal to Syria. The harbour of Bairūt remained empty. Tripoli at first, then — thanks to the initiative of Fakhr al-Dīn — Šaidā attracted European ships which came for cargoes of silk and cotton. Aleppo, thanks to its situation between Mesopotamia, the sea, and the Anatolian provinces whose market it was, the principal depot on the direct route to the Persian Gulf, remained for three centuries the chief commercial centre of Northern Syria.

In the second half of the xviiith century, the doings of three individuals suddenly attracted attention to the town and region of Acre. These were Dāhir (Syrian pronunciation of Zāhir) al-'Omar, Djazzār and Bonaparte. Dāhir, a Beduin Shaikh, lord of the land of Šafad, extended his authority over Galilee, and settled at Acre which he fortified and raised from its ruins. He resisted the Porte (1750—75) with assistance lent by the Egyptian Mamlūks 'Alī Bey and Abu Dhahab and a Russian squadron cruising in Syrian waters. Besieged in Acre by the Turks, he died there in 1775. His successor Djazzār [q. v.] held out for three months (March—May 1799) against the military genius of the youthful Bonaparte. Pasha of Damascus and of Acre, he remained the arbiter of Syria for nearly 40 years (1775—1804), in spite of his exactions and his cruelty.

The four million inhabitants of Syria and Palestine at the time of the Arab conquest were reduced

to one and a half after three centuries of Turkish rule. The cultivation of cotton, which with that of silk, formed one of the main sources of Syria's wealth had completely declined, when Muḥammad 'Alī [q. v.] of Egypt, decided to attract to Egypt the disheartened Syrian planters. It was this state of anarchy that enabled the Lebanon emir Baḥr [q. v.] to intervene in Syrian politics. Down to about 1840 we continually find him mixed up with the history of Syria. Even the great Turkish officials sought his intervention. Yūsuf, Pasha of Damascus (1807—10) implored his help against a threatened invasion of the Wahhābis. Baḥr presided in Damascus at the installation of Sulaimān, Pasha of Acre and successor-designate of Yūsuf Pasha. In the middle of the general confusion however Muḥammad 'Alī of Egypt was watching for an opportunity of adding Syria to his governorship of Egypt. 'Abdallāh Pasha who succeeded Sulaimān at Acre (1818) undertook to give it him. He refused to allow the extradition of Egyptian fellāḥin and the repayment of a million piastres. Summoned to contribute towards this sum by the Pasha of Acre, under whom the Lebanon was, the Christians of the Lebanon refused to pay. The rising of the Christians was a new feature in Syrian politics, but it was not to be the only one. Through contact with the Europeans the Christians were becoming enlightened and they were learning their own strength. Taking as a pretext the refusals of 'Abdallāh Pasha, Muḥammad 'Alī sent his son Ibrāhīm Pasha [q. v.] into Syria at the head of an army trained on European lines. Acre surrendered on May 27, 1832, after a siege of seven months. On July 8 at Ḥims, Ibrāhīm routed the Turks. A little later he forced the pass of Baillān and entered Anatolia. A treaty (May 1833) assured Egypt temporary possession of Syria.

The new rule proved tolerant. It admitted Christians to the communal councils; it favoured the abolition of measures humiliating to non-Muslims. It endeavoured to reform the police and the tribunals. On the other hand it provoked discontent by introducing forced labour and conscription even in the semi-independent regions of the Lebanon. Rebellions broke out among the Druses of the Lebanon and of the Ḥawrān, among the Nuṣairis and in the never properly subjected province of Naplūs. Ibrāhīm exhausted himself in suppressing these risings. The Turks thought the moment had come for the re-conquest of Syria. They were completely defeated (June 27, 1839) at Nizib, north of Aleppo. European diplomacy then intervened at the instigation of England, which was disturbed by the ambition of Muḥammad 'Alī. Until the expedition of Bonaparte, England had taken no interest in Egypt. Thenceforth she was continually occupied with Egypt and the Red Sea. Her agents stirred up the whole of Lebanon. An allied fleet bombarded Bairūt (Sept. 1840). On Nov. 2, Acre surrendered and Ibrāhīm Pasha had to agree to evacuate Syria. Shortly before, the Emir Baḥr had gone into exile.

From the reign of Maḥmūd II. [q. v.] the Porte had inaugurated a policy of administrative centralisation, and decreed the abolition of local autonomies and feudalities. After the departure of the Egyptians, it moved to Bairūt, whose importance was steadily increasing, the administrative centres of the ancient pashaliks of Acre and Ṣaidā, in order to prepare for the annexation of Lebanon. With the

same object it declared the old line of princes of the Lebanon, the Shihāb Emirs, deposed. The only result was to perpetuate anarchy there. The Christians who had fought against the Egyptians claimed to be treated on terms of equality to the Druses. In the southern Lebanon several had acquired the confiscated lands of the Druse chiefs banished by Ibrāhīm Pasha. The latter, coming back from exile, demanded a return to the *status quo* and the restoration of their ancient privileges. In taking their side, Turkey paved the way for new conflicts and sanguinary fighting. The Syrian Muslims showed no less animosity to the Christians, whom Egyptian rule had partly enfranchised. They took no account of the intellectual and material progress made by the Christians, nor of the political equality promised by the *khatt* of the Sultan. The *khatt-i ḥumayūn* [q. v.] of Sulṭān 'Abd al-Majīd [q. v.] communicated to the congress of Paris (1856), and tacitly placed under the guarantee of the Powers, scandalised Muslim opinion, but inspired confidence among the Christians. At Damascus and in the large towns they took advantage of the occasion to enrich themselves. A secret agitation began to stir up the Druses and Muslims, and waited for the events of 1860 to burst forth.

The Druses of the Lebanon combining with their co-religionists of the Wādī 'l-Taim and of the Ḥawrān, scattered fire and death through the villages of the Maronites, who were at sixes and sevens, as the result of an agrarian dispute. The anti-Christian movement reached Damascus, which the Muslims pillaged and then set fire to the prosperous Christian quarter, after massacring its inhabitants. In this city, in the Lebanon, and in Bairūt, the Turkish authorities intervened only to disarm the Christians, and watched the butchery inactively, powerless or abetting it. Under a mandate from Europe, France disembarked at Bairūt (Sept. 1860) a body of troops „to help the Sulṭān to restore peace.” Taking the initiative, the Porte had sent Fu'ād Pasha [q. v.] with discretionary powers to Syria. He began to inflict summary judgment. Sentences of exile pronounced against the Turkish leaders and the most compromised Druses, faced Europe with the *fait accompli*: French intervention, though paralysed by the cunning of the Turks and the distrust of England, nevertheless restored confidence to the Christians, and preserved their native land for the people of Lebanon. The latter, given an autonomous organisation under the direct supervision of Europe (cf. LUBNĀN) thus gained half a century of peace and prosperity.

After 1864 Syria was divided into two wilāyets: Aleppo and Damascus. In 1888 Bairūt, the chief port, the centre of the commercial life of Syria, was made a separate wilāyet. Falling into stagnation after the shocks of 1860, the country saw with indifference the fall of Sulṭāns 'Abd al-Azīz and Murād, the coming of 'Abd al-Ḥamīd [q. v.] and the granting of a constitution in 1876 (soon withdrawn). Between 1881 and 1883 we have the foundation of the first Jewish agricultural colonies in Palestine, which paved the way for Zionism. The latter received official recognition by the Balfour Declaration (Nov. 1917). It has been incorporated in the text of the British mandate over Palestine (1922).

Under 'Abd al-Ḥamīd also, emigration began to assume disquieting proportions. Having no room for development at home, exploited by a greedy

and untrustworthy power, the Syrians began to emigrate. Among the just complaints of the Syrians, was the indifference of the Turkish government to public works. France, with its capital, came to the relief of Syria, now left to herself, and having suffered a further economic blow by the opening of the Suez Canal. With the exception of the Syrian section of the Baghdad railway and the Damascus-Medina railway — the work of 'Abd al-Hamid, the Syrian railway system is in the main a French creation. These enterprises have considerably increased the wealth and productivity of Syria, by linking it up with an extensive series of connections, the Taurus, Anatolia and Constantinople on the north, and Arabia and Egypt on the south.

The Turks took even less interest than the Mamluks in furthering intellectual progress. 'Abd al-Hamid showed himself frankly hostile to Arabic literature, and instituted a system of turkicising. In spite of all obstacles the Christians of Aleppo in the xviith century succeeded in resuming contact with Arabic studies, which had been practically closed to them for centuries. We owe to them the establishment of the first printing press in the Lebanon (1610) and in Aleppo. It is to their beginnings that we owe the literary revival of the xixth century when Syria became the centre of Arabic studies. Under the stimulus of foreign missions, French, Americans, etc., Syria became covered with schools and printing-presses which published newspapers, reviews and standard editions. Bairūt took the lead in the intellectual life of Syria, less by its own energy than under the stimulus of Europe. Still more efficaciously than the American mission, the Society of Jesus, with its very well organised printing-press, contributed to the renaissance of Arabic letters and no less to the diffusion of European culture. Bairūt and Syria in general thus produced a large number of young literary men. Their native land soon becoming too small for them (Brockelmann, *G.A.L.*, ii. 492), some migrated to Egypt. Among them we may note the two Yazidji, Nasif [q.v.] and his son Ibrahim (d. 1906) and Butrus al-Bustāni [d. 1883, q.v.]. Turkey took no part in the movement for the education of Syria. Here it was again foreigners, particularly French and Americans, who made up for official indifference. They developed education in all three grades. In 1878 the Jesuits founded the Université St. Joseph at Bairūt. The older Syrian Protestant College of the Americans at Bairūt has recently been made a university (1923).

Syria of to-day. A revolution prepared secretly by the young Turkish party overthrew 'Abd al-Hamid and set up in his place his brother Reshad (April 1907). The Constitution of 1876 was re-established, and the Parliament which had been closed by the Sultan was reopened. Syria hailed with enthusiasm the revolution as the dawn of a new era. This illusion was of short duration. The young Turks, whom the Syrians had trusted, were not long in resuming once more the process of turkicising begun by 'Abd al-Hamid. With more method and continuity they declared war against all who were Arab by race or language. They insisted everywhere in Parliament and in the government offices on the employment of Turks only, and removed the Syrians from high offices and important military commands. This provocative policy

brought together for the first time Muslims and Christians in Syria. It awakened amongst all the desire to come to an understanding in regard to a common policy and to take joint action. Their demands were limited to reforms of a decentralizing nature. They asked that in the allotment of public offices, regard should be had to the progress which had been made by Syria, the most civilised province of the Empire, and that in the imposition and spending of taxes regard should be paid to the needs of their country. They thought the time had come to grant it a certain administrative autonomy. It was the obstinacy of the young Turks in rejecting these moderate demands which opened the door to separatist ideas, and finally convinced the Syrian nationalists that there was nothing for it but to rely upon their own efforts and upon the sympathies of Europe.

On the 29th of October 1914, Turkey entered the Great War. It began by suppressing the administrative autonomy of Lebanon, and imposing on it a Turkish governor. Djamāl-Pasha took into his own hands the government of all Syria with discretionary powers. He at once proceeded to hang the principal patriots whether Syrian, Muslim or Christian. Hundreds of others were sent into exile. Soon afterwards famine and disease decimated the population, principally of the Lebanon. Energetic but presumptuous, dreaming of the conquest of Egypt, Djamāl proceeded very unsuccessfully to attack the Canal of Suez (Feb. 1915). After the repulse of the second attack (August 1916), the English, commanded by Allenby, advanced as far as Ghazza. By November 1917 they had become masters of the southern portion of Palestine, and on the 11th of December, they entered Jerusalem, which the Turks had evacuated. The latter defended themselves for a further nine months on a line extending to the north of Jaffa as far as the Jordan. The decisive action took place on the 19th of September, 1918, on the plain of Saron near Tulkarm. The forces of Allenby broke the Turkish front. It was a rout. At the end of the month the English, without meeting with any resistance, arrived in the neighbourhood of Damascus. The advance was delayed for a few days, in order to allow the Emir Faïsal, the son of the Grand Sherif of Mecca, time to hasten from the remote end of Transjordan and to make on the 1st of October his entry into Damascus at the head of a body of Beduins. On the 31st of October, the Turks signed an armistice. A week later, the last of their soldiers had repassed the Taurus.

The English occupied the country with a military force. The French contingent, which had brilliantly contributed to the victories in Palestine, established itself on the Syrian side. During the course of the war the allies, in order to secure the help of Husain b. 'Ali, Grand Sherif of Mecca, had promised to support the establishment of a federation of Arab states "with reservation of the rights acquired by France". The Emir Faïsal took advantage of these equivocal formulæ to claim the whole of Syria, and organised a form of government at Damascus. This town became a hot-bed of intrigues, from which hordes of bandits and assassins went out to perpetuate the insecurity in Syria. On March 7th, 1920, an alleged "Syrian Congress" at Damascus proclaimed "Faïsal I, King of Syria". General Gouraud, appointed High Commissioner of the Republic of Syria, called upon

Faṣāl to produce his credentials. When the ultimatum received no response, the French, after a few hours fighting, scattered at Khān Maisalūn in the Antelebanon, the bands who opposed their advance (24th of July 1920). On the following day they entered Damascus; Faṣāl had taken to flight. On August 10th following, the Treaty of Sèvres separated Syria from Turkey, in order to form provisionally an independent state, on condition that the councils of a mandatory should guide its administration until such time as it should be capable of independent government. Previous to this, the Congress of San Remo decided that the mandate should be confided to the French government. On the 1st of September 1920 at Bairūt, Gouraud solemnly proclaimed the constitution of "Grand Liban" (v. LUBNĀN). Thereafter the "Federation of Syrian States" composing the three independent states of Damascus, of Aleppo and of the "territory of the 'Alawīs" (the name officially adopted for the Nuṣairīs) was formed. The administrative centre of this last state is Lādhikiya. A fourth state was formed for the Druses of the Ḥawrān. Like the people of Lebanon they had been allowed to remain outside the Syrian Federation. The latter had as its chief a Syrian president. Native officials, with the help of French advisers, assumed the government of these states. Representative councils were entrusted with the discussion of affairs of general interest and settling the budget.

Syria, placed under French mandate, adjoins Turkish Anatolia. The Northern frontier is defined by a line running from Alexandretta, crossing the Euphrates to the south of Djerāblus, and ending at Djazīrat b. 'Omar on the Tigris. On the west Syria is bounded by the kingdom of 'Irāk, on the south by Transjordan and English Palestine. This part of the frontier runs on irregularly from Rās al-Naḡūra between Tyre and Acre. On the East it goes round the Lake of Tiberias, traverses the valley of Yarmūk, leaves the town of Darā (Ḥawrān) on the north and after crossing the desert reaches the district of Djazīrat b. 'Omar by way of Abū Kamāl on the Euphrates.

The following are the approximate results in round figures of the census of 1921—1922, the first taken in Syria since the Arab conquest. The nomads in the district of Aleppo and of Damascus are not included in it. The state of Aleppo, comprising the independent sandjak of Alexandretta had 604,000 inhabitants. This number was made up as follows: 502,000 Sunnīs, 30,000 'Alawīs, 52,000 Christians of diverse denominations, 7,000 Jews, 3,000 foreigners. The state of Damascus contains 595,000 inhabitants, of which 447,000 were Sunnīs, 8,000 Isma'īlīs, 5,000 'Alawīs, 4,000 Druses, 9,000 Mutawālīs, 67,000 Christians of different denominations, 6,000 Jews, 49,000 foreigners. In the state of the 'Alawīs, there were 60,000 Sunnīs, 153,000 'Alawīs, 3,000 Isma'īlīs and 42,000 Christians of different denominations, in all 261,000 inhabitants. The state of Ḥawrān was remarkable for the homogeneity of its population. There were 43,000 Druses against 700 Sunnīs, and about 7,000 Greek, Catholic, or orthodox Christians. For the population of Grand-Liban, see the article LUBNĀN.
